PREFACE.

WHILE preparing *The Principles of Sociology*, Mr. Herbert Spencer collected and classified as bases of induction large quantities of facts relating to societies of different types, ancient and modern. The work commenced in October, 1867, with the help of several competent assistants. Although designed in the first instance solely to facilitate his own work, Mr. Spencer ultimately decided to publish some of the sections. The facts, arranged for easy reference and convenient study of their relations, were presented in such a manner as to enable students of Social Science to draw their own conclusions uninfluenced by the hypotheses or prejudices of other persons.

The general plan of the *Descriptive Sociology* may best be told by Mr. Spencer himself in the words of his Provisional Preface:—

> "The work consists of three large Divisions. Each comprises a set of Tables exhibiting the facts as abstracted and classified, and a mass of quotations and abridged extracts, otherwise classified, on which the statements contained in the Tables are based. The condensed statements, arranged after a uniform manner, give, in each Table or succession of Tables, the phenomena of all orders which each society presents — constitute an account of its morphology, its physiology, and (if a society having a known history) its development. On the other hand, the collected Extracts, serving as authorities for the statements in the Tables, are (or, rather will be, when the Work is complete) classified primarily according to the kinds of phenomena to which they refer, and secondarily according to the societies exhibiting these phenomena; so that each kind of phenomenon, as it is displayed in all societies, may be separately studied with convenience.
>
> "In further explanation I may say that the classified compilations and digests of materials to be thus brought together under the title of *Descriptive Sociology*, are intended to supply the student of Social Science with data standing towards his conclusions in a relation like that in which accounts of the structures and functions of different types of animals stand to the conclusions of the Biologist. Until there had been such systematic descriptions of different kinds of organisms, as made it possible to compare the connexions, and forms and actions, and modes of origin, of their parts, the Science of Life could make no progress. And in like manner, before there can be reached in Sociology, generalizations having a certainty making them worthy to be called Scientific, there must be definite accounts of the institutions and actions of societies of various types, and in various stages of evolution, so arranged as to furnish the means of readily ascertaining what social phenomena are habitually associated.
>
> "Respecting the tabulation, devised for the purpose of exhibiting social phenomena in a convenient way, let me add that the primary aim has been so to present them that their relations of simultaneity and succession may be seen at one view. As used for delineating uncivilized societies, concerning which we have no records, the tabular form serves only to display the various social traits as they are found to co-exist. But as used for delineating societies having known histories, the tabular form is so employed as to exhibit not only the connexions of phenomena existing at the same time, but also the connexions of phenomena that succeed one another. By reading horizontally across a Table at any period, there may be gained a knowledge of the traits of all orders displayed by the society at that period; while by reading down each column there may be gained a knowledge of the modifications which each trait, structural or functional, underwent during successive periods.
>
> "Of course, the tabular form fulfils these purposes but approximately. To preserve complete simultaneity in the statements of facts, as read from side to side of the Tables, has proved impracticable: here much had to be inserted, and there little; so that complete correspondence in time could not be maintained. Moreover, it has not been possible to carry out the mode of classification in a theoretically complete manner, by increasing the number of columns as the classes of facts multiply in the course of Civilization. To represent truly the progress of things, each column should divide and sub-divide in successive ages; so as to indicate the successive differentiations of the phenomena. But typographical difficulties have negatived this: a great deal has had to be left in a form which must be accepted simply as the least unsatisfactory."

The three Divisions, constituting the entire work, comprehend three groups of societies:—(1) *Uncivilized Societies*; (2) *Civilized Societies—Extinct or Decayed*; (3) *Civilized Societies—Recent or Still Flourishing*. By 1881 these Divisions reached the following stages:—

DIVISION I.—*Uncivilized Societies.*—Lowest Races, Negrito Races, and Malayo-Polynesian Races, by DR. DAVID DUNCAN (1874); African Races, by DR. DAVID DUNCAN (1875); Asiatic Races, by DR. DAVID DUNCAN (1876); American Races, by DR. DAVID DUNCAN (1878).

DIVISION II.—*Civilized Societies—Extinct or Decayed.*—Mexicans, Central Americans, Chibchas, and Peruvians, by DR. RICHARD SCHEPPIG (1874); Hebrews and Phœnicians, by DR. RICHARD SCHEPPIG (1880).

DIVISION III.—*Civilized Societies—Recent or Still Flourishing.*—English, by JAMES COLLIER (1873); French, by JAMES COLLIER (1881).

The eight parts mentioned above occupied fourteen years to prepare and were published at a net loss to Mr. Spencer of £3,250. He found the expense of production too much for his means, and brought the publication to a close in 1881, when he publicly stated: "Should the day ever come when the love for the personalities of history is less and the desire for its instructive facts greater, those who occupy themselves in picking out the gold from the dross will perhaps be able to publish their results without inflicting on themselves losses too grievous to be borne—nay, possibly receive some thanks for their pains." The continuation of the undertaking was one on which he was bent with characteristic tenacity of purpose, and being unable to carry out his wishes in his lifetime he resolved that after his death the residuum of his estate should be devoted to complete the work closely after the plan of the parts already published. In his will he appointed the late Hon. Auberon Herbert, Dr. Charlton Bastian, F.R.S., and Dr. David Duncan as his Trustees, requesting them to appoint as the first superintendent of the publication and general Editor "Henry R. Tedder, secretary and librarian to the Athenæum Club." After the death of Mr. Spencer immediate steps were taken to prepare for the work. The Trustees and the Editor have been fortunate in securing the services of a number of highly qualified scholars who were willing to undertake the laborious task of compiling, extracting and classifying facts relating to the various civilized societies not yet included in the *Descriptive Sociology*.

The compiler of the present volume on Chinese Civilization, Mr. E. T. C. Werner, H.M.'s Consul at Foochow, was engaged on his laborious task long before Mr. Spencer's death. The Trustees are much indebted to Mr. Werner for the painstaking enthusiasm with which he has devoted the scanty leisure of many years of strenuous official life to this important addition to the Descriptive Sociology. As the volume describes a civilization of vast topographical area and unequalled length of development it will form the most extensive section of the whole series. The method has been to obtain the necessary facts from authoritative native and foreign sources, so that the information, collected and criticized by the most capable among eastern and western students, may be fully represented and, it necessary, compared. The extracts from the Chinese books, which number nearly 800, were specially selected and translated by Mr. Werner, while the extracts from western literatures are taken from 238 books, ranging from Marco Polo to authors of our own day. The total number of quotations and abridged extracts, which are encyclopædic in range of information and systemative in the method of their presentation, extends to upwards of 10,000. Care has been taken in the precise classification of these extracts and their adjustment in proper chronological order; and equal attention has also been given to the nine elaborate Tables and the Scale of Progress, which describe "the morphology, the physiology, and the development" of the civilization under review.

As regards transliteration of Chinese characters, Mr. Werner desires it to be stated "that whilst in the Tables Wade's system of romanization of Chinese characters has been adopted (except in the names of places, etc., which have become stereotyped in their present form), in the extracts the system of each author has not been interfered with except where the meaning would otherwise be unintelligible."

A complete list of the works quoted is appended (page 307) and the Trustees and the Editor have the pleasure to thank the following publishers for their courtesy in allowing extracts to be made from books published by them, or in which they have an interest: Messrs. Asher & Co.; A. & C. Black; Cassell & Co., Ltd.; Century Co. (N.Y.); Chapman & Hall, Ltd.; The Clarendon Press; The Columbia University Press (N.Y.); J. M. Dent & Co.; W. Glaisher, Ltd.; William Heinemann; Hodder & Stoughton; Kelly & Walsh; P. S. King & Son; The Leadenhall Press, Ltd.; Longmans, Green & Co.; Sampson Low, Marston & Co., Ltd.; Luzac & Co.; Macmillan & Co., Ltd.; John Murray; David Nutt; Oliphant, Anderson & Ferrier; S. W. Partridge & Co.; Kegan Paul, Trench, Trübner & Co., Ltd.; G. P. Putnam's Sons; Religious Tract Society; The Fleming H. Revell Co. (N.Y.); Charles Scribner's Sons (N.Y.); Swan Sonnenschein & Co.

The following authors have also freely granted the permission to quote from their works: Lord Avebury, Mr. Demetrius C. Boulger, Sir R. K. Douglas, Professor A. Forke, Professor H. A. Giles, Professor J. J. M. de Groot, Professor F. Hirth, Sir Henry H. Howorth, Mrs. Archibald Little, Mr. W. A. P. Martin, Mr. H. B. Morse, the editor of the *North-China Herald*, Professor E. H. Parker, Dr. A. H. Smith, and Rev. W. Gilbert Walshe.

The Trustees and Editor desire to offer their special acknowledgments for permission to make extensive quotations from the following works: D. C. Boulger's *Short History of China* (W. Glaisher); H. A. Giles, *A Chinese Biographical Dictionary* and *A History of Chinese Literature* (W. Heinemann); Archdeacon Gray's *China: a History of the Laws, Manners, and Customs of the People* (Macmillan); J. J. M. de Groot's *Religious System of China* and *Sectarianism and Religious Persecution in China;* Professor F. Hirth's *Ancient History of China to the Chou Dynasty;* S. Johnson's *Oriental Religions* (Trübner); J. Legge's *Religions of China* (Hodder & Stoughton); and *The Li Ki* (Clarendon Press), and the representatives of the late Dr. J. Legge for *The Chinese Classics* (Clarendon Press); P. G. von Möllendorff's *Family Law of the Chinese;* E. H. Parker's *China: Her History, Diplomacy, and Commerce; Sacred Books of the East*, translated, edited by F. Max Müller (Clarendon Press); Miss E. J. Simcox's *Primitive Civilisations, or Outlines of the History of Ownership in Archaic Communities* (Swan Sonnenschein & Co.); S. W. Williams's *The Middle Kingdom* (Ch. Scribner's Sons); and Sir H. Yule's *Book of Ser Marco Polo* (John Murray).

CHINESE.

TABLE I.

INORGANIC ENVIRONMENT.

General Features.—In the earliest times China, comprising a territory lying between lat. 35° and 40° N. and long. 110° and 120° E., was bounded on the N. by Mongolia, on the W. by the modern province of Kansuh, on the S. by the modern provinces of Shensi and Honan, on the S.E. by the modern province of Shantung, and on the N.E. by the Gulf of Pei Chih-li and the modern province of Chih-li. By the time of the Manchu Period its limits had increased so as to embrace all the territory lying between lat. 18° and 40° N. and long. 98° and 122° E. (known as China Proper or the Eighteen Provinces), with the addition of the outlying territories of Manchuria, Mongolia, Ili (comprising Sungaria and Eastern Turkestan), Koko-nor, Tibet, and Corea, with suzerainty over Burma and Annam (total, 5,300,000 square miles in 1840). The Eighteen Provinces (measuring 1,474 miles from N. to S. and 1,355 from E. to W., with an area of nearly 2,000,000 square miles) are bounded on the N. by Mongolia, on the W. by Tibet and Burma, on the S. by Burma, Tongking and the China Sea, and on the E. by the China Sea, Pacific Ocean, and Yellow Sea. In form this area approaches a rectangle, and is of varied elevation, rising generally from the E. towards the W. Two principal islands on coast (one on W. and one on S.); two promontories; two gulfs; many excellent harbours; numerous bays. N. presents large plain; W. generally mountainous, sloping eastwards; S. and E., level plains interspersed with hills. Three chief ranges of mountains: Pei Ling, Yün Ling, and Nan Ling. Three great, and about thirty large, rivers flow into the sea, their numerous tributaries (mostly navigable by native craft) reaching every part of the country; six large, and several smaller, lakes; many swamps and marshes.

Geological Features.—Great plains alluvial, resting upon granite, new red sandstone, or limestone. Loess formation in N. In S. succession is (1) granite, (2) grits and slates; these are covered by old limestones, supporting another series of limestone strata: Passage from S. to N. is generally from older to newer rocks; from E. to W. a similar series of rocks is found, the granites being overlaid by crystalline schist, and gneiss and quartzites, over which again lie carboniferous beds, with patches of volitic rock yielding fossil fishes. Some volcanic features in W. and S. Coal and iron are the chief minerals. Gold, silver, copper, lead, tin, jade, etc., also mined. Salt in some parts mined, in others obtained from lakes and artesian wells, or evaporated from soil.

Climate not uniform. In N. winter long and vigorous, summer hot and dry; in S. summer long, hot, and moist, winter short and cool. Thermometer generally low for latitude. Climate said to be more moderate than in early periods, except in N., where it was milder. Mean rainfall, N. 16, S. 70, inches, with variations in other parts. Mean temperature, N. 52° 3′ F., S. 70° F. Typhoons in S. between July and October.

ORGANIC ENVIRONMENT.

The *vegetal* productions, abundant and most varied, comprise rice (in S.), wheat, barley, maize, millet, and other cereals, bean, yam, sweet and common potatoes, tomato, egg-plant, ginseng, cabbage, cotton, hemp, silk, tea, sugar, pepper, indigo, camphor, tallow, varnish, tobacco, ground-nuts, poppy, bamboo, water-melon, ginger and medicinal plants, dye-woods. Among fruit trees, pear, apple, grape, date, mulberry, orange, lemon, pumelo, persimmon, lichi, pomegranate, peach, plum, apricot, pineapple, fig, cherry, chestnut, cocoanut, mango, banana. Excellent timber for ship-building and carpentry. Among wild *animals* are tiger, panther, leopard, tiger-cat, weasel, sable, civet, tree-civet, stoat, marten, otter, lemur, ape, monkey, brown bear, black bear, badger, wolf, raccoon, fox, at least 27 species of ruminants, and numerous species of rodents. Rhinoceros, elephant, and tapir said still to exist in forests and swamps of Yünnan. Commonest domestic animals are horse and oxen (dwarfish), ass, mule, camel (in N.), sheep, goat, pig, cat, dog, water-buffalo (in S.). Fowls, ducks, geese very abundant. Among birds (about 700 species) are falcon, kite, vulture, eagle, sparrow-hawk, night-hawk, swallow, kingfisher, hoopoe, cuckoo, bee-eater, nuthatch, wren, chat, peacock, parrot, mino, woodpecker, crow, pigeon, magpie, lark, thrush, canary, nightingale, gold, silver and other pheasants, partridge, grouse, teal, quail, sand-snipe, curlew, plover, crane, heron, egret, ibis. Fish: mackerel, gobi, herring, shark, ray, and saw-fish on coast, sturgeon (in Yang Tzŭ), torpedo, cod, carp, tench, perch, pomfret, sole, mullet, shad, eel, bream, gudgeon, saurus ("silver-fish"); gold-fish and paradise fish; lobsters, mussels, oysters. Honey bee and silkworm extensively reared.

SOCIOLOGICAL ENVIRONMENT.

On the arrival of the Chinese, relations with aboriginal tribes hostile. Latter were exterminated, absorbed, or gradually driven south with the spread of Chinese rule. Some still half-absorbed islanders bringing tribute from S., and of tattooed tribes from part of Yüeh (modern throughout greater part of history. Military activity in 2nd cent. B.C. opened up West to China. Tradal intercourse with Hsiung Nu, N. Corea, and Tunguses. Extension of empire with Rome, Parthia, Turkey, Mesopotamia, Ceylon, India, Indo-China, and, in 7th cent., with also intercourse with Tangut and S. Corea. From 10th to 13th cent. N. occupied by Kitans and Nüchêns, and whole empire under Mongol sway for 88 years in 13th and 14th cent. By 13th cent. regular intercourse, viâ Cochin China, with Sarbuza (Palembang in Sumatra), Java, and Borneo. Relations of a commercial and religious nature with neighbours and others during 14th, 15th, 16th, and 17th cent. Regular diplomatic intercourse with Western from alliances, and was generally averse to foreign intercourse. Portuguese settled at Macao populated by Chinese), Mongol Tunguz and Tibetan tribes on W., Burmese (under British since 1886), Shan tribes, Annamese (under French since 1885), and British at Hongkong (1841–2) on S., and Wei-hai Wei (1898) in N., Germans at Kiao Chou (1897) in N., Portuguese at Macao in S., Japanese (transmarine) and Koreans on E., and with foreign the coast and rivers.

PHYSICAL CHARACTERS.

Chinese complexion generally pale-yellow, tawny, or olive, ranging from light lemon and almost white shade in N. to deep brownish hues in S.; eyes almond-shaped, usually small and more or less oblique upwards and outwards, vertical fold of skin over inner canthus, orbits far apart, iris black; nose normally square and concave, but often large and straight, especially among the upper classes; stature generally under average (5 ft. to 5 ft. 4 in.); forehead low, receding, narrow; weight of brain considerably below average; proportion of cerebrum to cerebellum as five to one (average 8½ to 1); brachycephalic; prognathous; cheek-bones high and prominent; features square, angular, and flattened; neck short and thick set; mouth large, with thick lips; chin small and receding; hands and feet small; hair lank, black, coarse, cylindrical; beard black, scanty, or absent. *Mongols* generally stout, squat, swarthy, ill-favoured; high and broad shoulders, short, thick neck, brachycephalous, black, lank, coarse, cylindrical hair, broad, flat features, prominent cheek-bones, small, messorhine nose, eyes black, elliptical, unsteady, with "third lid," mesognathous jaw. *Manchus* of lighter complexion and somewhat larger than Chinese, same conformation of eyelids, straight nose, rather more beard, and in a few cases brown hair. *Aboriginal tribes* not yet completely ethnologized.

EMOTIONAL CHARACTERS.

Chinese gregarious, mild, frugal, sober, industrious, of remarkable endurance, cowardly, revengeful, very cruel, unsympathetic, mendacious, thievish, libidinous, not ungrateful, excessively courteous and ceremonious amongst themselves; very high sense of mercantile honour. Variations from normal in different parts of empire. *Manchus* generally similar, but lazy, proud, and prone to drunkenness. *Mongols* lazy, cowardly, much addicted to drunkenness, kind, simple-minded.

INTELLECTUAL CHARACTERS.

Chinese non-progressive, slaves to uniformity and mechanism in culture, and following ancient stereotyped forms in every department of thought and action, unimaginative, uncreative, imitative, lacking free individuality and original force, slow in organizing, torpid, lacking reflection and foresight, incapable of grasping a subject in a comprehensive and practical manner, inaccurate, "talent for misunderstanding and indirection," suspicious, superstitious, vague in expressing thoughts. *Manchus* more intellectual, with more determination and largeness of plan than the Chinese. *Mongols* similar to Chinese.

EARLY FEUDAL PERIOD (*c.* 2357 TO 1122 B.C.).

STRUCTURAL.

OPERATIVE.

OPERATIVE:

Division between sexes: Men took care of farms and women of mulberry orchards. Women generally did weaving and embroidery.

Specialization of trades: Specialized trades were potter, carriage driver, makers of earthen vessels, carriages, bells, boats, astronomical instruments, musical instruments, robes, baskets, workers in metal, stone, skins, brewers, builders, carvers, coffin-makers, etc.

Localization: People who lived on the water were ordered to occupy themselves only in fishing. Tsê was noted for its salt and fish; Yen Chow for its varnish and silk.

There were no slaves: "Elders employed the younger, and the well-to-do the ill-to-do."

Labour of subjects was at absolute disposal of sovereign. Imperial funereal monuments were erected by statute labour.

Amount of forced labour exacted varied according to goodness or badness of harvest. The duty of rulers was conceived to consist in securing to free labourers the enjoyment of the fruits of their labour, and also in making labour itself as remunerative as possible. No man was allowed to have an occupation different to that of his father without the king's permission. All of one occupation were put in streets by themselves. Specialization was also generally enforced and high officials, etc., restrained from trading or competing for wealth with the people.

REGULATIVE.

Land: Held in common under the earliest chiefs, who, on election, parcelled it out amongst their officers (the people, with few exceptions, not being allowed to hold any real property), land became, under Yü the Great (*c.* 2205 B.C.), hereditary in the family of the king, who bestowed upon his relatives appanages from which they derived their revenue, in the same way as the king derived his maintenance from the royal tenure. The feudal tenure existing under the Hsia dynasty took definite shape under the Shang. Outside the royal domain the feudal states were all hereditary. Each feudatory prince, etc., could parcel out his estate to sub-feudatories, who stood in the same relation to him as he to the king. As regards the mass of the people, every man was assigned by his lord a piece of ground sufficient to maintain him and enable him to pay his taxes. This territorial system, which was in force under the Hsia dynasty (2205–1766 B.C.), was known as *kung*. Under it each family cultivated its allotment or individual holding of 50 *mu*, and paid ⅒th of the produce to the king or overlord as the case might be, or cultivated ⅒th (known as *kung-tien*, or public field) of his allotment for his superior, similarly paying to him the produce of that portion. The *kung* system gave place, under the Shang dynasty (1766–1122 B.C.), to that known as *chu*, by which an area of 630 *mu* was divided into 9 *chia* allotments of 70 *mu* each. The middle *chia* was state-owned; the rest, owned individually, contributed *corvée* to the State field. The State thus took ⅑th of the total produce.

The king could transfer cultivators from place to place at his pleasure. Land was grouped in three classes according to quality. The kind of tax depended on the greater or less distance from the centre. Woods and waters were free.

Ranks: (1) *Agriculturists* (*Nung*), (2) *Artizans* (*Kung*), (3) *Merchants* (*Shang*). These three classes were distinctly separated and a very marked gulf existed between them and the *shih* (officer) class next above them. Only 3 *nung* and one *kung*, ever reached a higher rank.

Labour of subjects was at absolute disposal of sovereign. Imperial funereal monuments were erected by statute labour.

Amount of forced labour exacted varied according to goodness or badness of harvest. The duty of rulers was conceived to consist in securing to free labourers the enjoyment of the fruits of their labour, and also in making labour itself as remunerative as possible. No man was allowed to have an occupation different to that of his father without the king's permission. All of one occupation were put in streets by themselves. Specialization was also generally enforced and high officials, etc., restrained from trading or competing for wealth with the people.

POLITICAL.

CIVIL.

DOMESTIC.

MARITAL. The rite of marriage had been substituted for capture. Marriage was permitted with members of the same clan. The bride was accompanied by *ying*, lady's maids, of the honour, consisting of the bride's brother's daughter, and of maids of presented by two States of the same surname. Polygamy prevailed, and was a constant source of disorder. Some evidence of polyandry. Imperial palaces contained hundreds of concubines. Prostitution is mentioned as having existed in the earliest times. There are allusions to unnatural crime.

FILIAL. Some philological evidence apparently indicates that descent was at first traced through the mother. Later succession was in the line of eldest son. Adoption took place among children to parents the same surname. Devotion extreme.

PUBLIC.

GENERAL.

RANKS:—General division — King and people. I. *King:* Under the patriarchal rule of Yao and Shun the ablest citizen was elected by the sovereign to succeed to the chieftainship, but with Yü (2205–2197 B.C.) succession in the male line of the king's family was established. The sovereign was regarded as holding his appointment by the will of heaven (*pi*), amputation of the nose and as the parent of the people. He was the chief priest and commander-in-chief. He held his place, however, only so long as the prosperity of the kingdom and the people indicated the approval of heaven. When this failed, it was were rebellion, murder, the duty of the most virtuous and powerful of der, wounding, burglary, and adultery. Punishment sometimes modified to banishment (*liu*). Lighter crimes were punished by whipping (*pien*) and flogging (*p'u*), modified to the infliction of money or loss of fines (*chia shu*). Yü instituted the punishment of mutilation (*jou*). *Hai*, mincing, and slaying children as well as the criminal, were occasionally resorted to, but under Yao, Shun, and Yü "punishments did not reach to descendants." Imprisonment of followers of chief criminals were spared.

Under Yü there were *lien*, general regulations about government, and *tsê*, special rules about sacrifices, penal laws to meet the disturbances caused by barbarians (or subject tribes).

The tyrant Chieh (1818–1766 B.C.) inflicted cruel punishments, and dismemberment, in this time children were included in the death penalty of their parents. Ministers who did not try to correct dissipation, etc., of the sovereign were punished with branding.

The reaction against the cruelty and licentious extravagances of Chou Hsin and his concubine T'an Chi (*c.* 1123 B.C.) was met by the introduction by the latter of two new forms of the torture, clasping a red-hot piece of iron (or embracing a heated copper pillar) and walking on a greasy pole so as to fall into a burning pit. These were abolished 3 years later.

The military punishment (in use by Yü's son and by T'ang) of putting to death the children of soldiers who failed in their duty was carried by Chou into the civil administration, parents, brothers, wives, and children suffering with the offender. Under King Wên of Chi, however, wives and children were not involved in their guilt.

standard (*t'ao*) to every Eight "travelling officers" for traitors, promoted harmony amongst the men, and scrutinized the enemy's movements. Ranks were adjusted after each advance of a few paces and after every few blows. Enemies who submitted were not slain, but taken as servants.

LOCAL. Local apparently not differential from general government.

LAWS. *Laws and punishments:* Punishments were branding (*mo*), amputation of the nose (*yih*), castration (*kung*), and capital crimes for which the punishment was death (*ta p'i*). Capital punishment could not be relaxed without the approval of heaven. When this failed, it was were rebellion, murder, the duty of the most virtuous and powerful of der, wounding, burglary, and adultery. Punishment sometimes modified to banishment (*liu*). Lighter crimes were punished by whipping (*pien*) and flogging (*p'u*), modified to the infliction of money or loss of fines (*chia shu*). Yü instituted the punishment of mutilation (*jou*). *Hai*, mincing, and slaying children as well as the criminal, were occasionally resorted to, but under Yao, Shun, and Yü "punishments did not reach to descendants." Imprisonment of followers of chief criminals were spared.

Under Yü there were *lien*, general regulations about government, and *tsê*, special rules about sacrifices, penal laws to meet the disturbances caused by barbarians (or subject tribes).

The tyrant Chieh (1818–1766 B.C.) inflicted cruel punishments, and dismemberment, in this time children were included in the death penalty of their parents. Ministers who did not try to correct dissipation, etc., of the sovereign were punished with branding.

The reaction against the cruelty and licentious extravagances of Chou Hsin and his concubine T'an Chi (*c.* 1123 B.C.) was met by the introduction by the latter of two new forms of the torture, clasping a red-hot piece of iron (or embracing a heated copper pillar) and walking on a greasy pole so as to fall into a burning pit. These were abolished 3 years later.

The military punishment (in use by Yü's son and by T'ang) of putting to death the children of soldiers who failed in their duty was carried by Chou into the civil administration, parents, brothers, wives, and children suffering with the offender. Under King Wên of Chi, however, wives and children were not involved in their guilt.

MILITARY.

The multitudes of the people were liable to become its army when occasion required. Reviews and manœuvres took place when the fields were clear of crops.

2205 B.C. Flags and banners were used to distinguish superior and inferior ranks.

Spirit tablets (of ancestors of spirits of the land) were carried on warlike expeditions. Disobedient warriors were put to death in front of them.

Chariots were much used in warfare. Each contained an archer on the left, a soldier armed with javelins and pike or spear on the right, and a charioteer in the centre.

The "Six Armies" (*liu chün*) composed the military force of the emperor, and were under the "six high nobles" (*liu ch'ing*). The troops were assembled and addressed by the emperor, who probably took the field in person.

Martial law was severe.

Under the Shang dynasty the king conformed to address the troops before battle. He led the army after offering special sacrifices. There was a black silk 500 men, watched

1122 B.C.

FUNCTIONAL.

REGULATIVE.

SENTIMENTS.

ÆSTHETIC. Early poetry showed development, specialized æsthetic sense.

MORAL. It is said that there were laws, and no occasion to exact penalties. Houses doors were left open at night, lost property was left for the owner. "All was virtue, happiness and prosperity." Men and women were not allowed to touch each other's hands as a safeguard of morality. Yao, Shun, and Yü were staunch upholders of temperance. All questions were decided by moral right and justice. The king was presumed not to set an example of indolence and dissoluteness. Exemplification of the blessings of peace were used to bring disobedient princes to submission. There was an idea of the connection between right and happiness and wrong and misery.

Yet in spite of high precepts and some noble examples it is said that the people of Hsia, Shang, and Chou dynasties "exceeded in lewdness." The prevalence of drunkenness and of various kinds is shown by the exhortations against them. Wanton cruelty in warfare, cannibalism, luxury, and drunkenness prevailed. Under the Shang the public morality is said to have deteriorated greatly. The prevalent state of morality is shown by Wên Wang's lifelong remonstrance against the cruelty and corruption of the age. Lust, excess of hunting, wine, music, and luxurious dwellings were regarded as the prelude to ruin both in the family and State.

IDEAS.

RELIGIOUS. The *soul*, at first regarded as single, and abiding with the corpse, was later supposed to be duplicate, the *hun* going to heaven and sage of stars the *p'o* to earth (*kuei*). Burial beneath a layer of earth, in coffin, usual mode of disposing of dead, replacing earlier method of simply covering corpse with clay and brambles. Coffins sometimes of earth, but also of various kinds of wood. Soul supposed to remain by grave, and to pervade both coffin and earth surrounding it. Food and drink and other articles as well as most of deceased's possessions placed in grave. Size of grave regulated by position of deceased. Mourning for father or mother for three years. During this period music forbidden. Mourners fasted. Grave-clothes prepared during period of life. Corpse dressed and coffined in place of honour. Brick enclosures built over coffins.

Coffins, and grave-vaults of wood — though these may only have been used by ruling classes. Mourning same as in following period. Mourners dwelt in mourning sheds, who mourned third year resigned office after burial.

KNOWLEDGE. *Astronomy:* Simple astronomical observations with the Stars named. Length of year and division of eclipses known. Mergodian passheaven and sage of stars observed to the earth fix seasons. with the Zodiac dibody. Both vided into parts were 28 constellasacrificially tions. Places worshipped of sun and sun determined by position stage of re- among ligion was a stars, but monotheistic worship remarkable of God, deficiency in regarded as generalizathe father tion of the of the family, with in- Astroworship of nology ancestor spirits — an ancestor worship originating in belief in survival and existence of the dead. The "Supreme Ruler" and "Heaven" were synonymous. Next to this Ruler of Universe was anthropomorphic, the "Six Honoured Ones" were sacrificed to; then the hills and rivers and the host of spirits. There seems to have been a belief in a heaven for good sovereigns and ministers, but no conception of a hell, purgatory, or fate of men generally. Ancestors mentioned. Sacrificial feasts, dancing (*ku tsung*). Libraries. There were 2 classes of almshouses (*tsung*) for old men, near the Imperial palace.

LANGUAGE.

Origin and relationship of language undetermined, and history not yet fully investigated. Originally polysyllabic and expressed grammatical relation otherwise than by word-order. Words formed by addition of agglutinative elements, some of which may have had function of cases, etc. Later assumed monosyllabic, isolating, uninflected form, grammatical relations being indicated by position. From the earliest form of speech, several subordinate vernacular languages arose in various districts, and from these sprang local dialects, etc. Earliest changes of spoken language impossible to trace. Development of tone distinctions led to carelessness of articulation and multiplication of what without the tones would be homonyms. Two tones from 2500 to 1800 and three from 1800 to 200 B.C. In oldest speech vowel endings rare, surd initials common. Old Chinese characterized by extreme elliptical concise- ness, and restricted force of expression. Discrimination of parts of speech difficult owing to non-inflection and paucity of grammatical word forms. Apart from context words can only be classed as substantive words ("dead") and phenomenon-words ("living"). Any word may be used as predicate-word. Grammatical particles (greatly developed through tendency to abstraction and generalization, together with desire for logical clearness) only used when necessary to avoid ambiguity. Imitative and "empty" (formwords formed part of vocabulary. Prepositions generally phenomenon- words. Order of sentence was from general to special.

Structure of language and infinite marks of intellectual power and activity. It combined Roman brevity with Greek love of clearness and moderation of expression, but showed none of the imaginative and poetical qualities reflected in most Aryan languages. It never personified. Linguistic instinct highly abstract and generalizing.

Names taken from localities in which families settled.

Writing had passed from the alleged original system of knotted cords, through successive stages of notches on wood and rude outlines of natural objects, to the phonetic system, upon which the written characters (*ming* or *wên*) are based. They are symbols, non-agglutinative and non-inflexional, and were written in vertical columns, possibly from having originally been cut on strips of bark.

Written memorials presented to sovereign.

FUNCTIONAL.

OPERATIVE.

PROCESSES.

DISTRIBUTION. *Commerce* on a small scale early developed. Earliest mention barter of products between districts and exchange of superfluous goods for merchandise of neighbouring countries. Traditions of institutions of the Tsin dynasty bringing to Yüeh bringing goods for sale or barter. Each province supposed to bring to metropolis super- fluity of produce, receiving in return. In earliest times no markets. Goods sold at well-known side. After- wards fairs established at convenient places. Exemplification of the blessings of peace used to bring disobedient princes to submission.

EXCHANGE. *Barter:* Barter of goods for wheat and rice. Gold, silver, cloth, salt, arms, etc., exchanged for cloth and rice.

PRODUCTION. Human labour. Oxen and horses drew carts and chariots. Pestle and mortar. Potter's wheel. Iron-mines.

ARTS. Yeast and malt used in spirit making; salt and prunes in boiling soup. Metallurgy. Bronze vases cast. Pottery improved by Shun. White lead used. Weaving.

AGRICULTURE, ETC. Available land practically all under cultivation. 20 kinds each of *liang, tao, shu, su*, and *kuo* are mentioned. There was no rice at this time. Grain and flax were cultivated and the mulberry tree planted for the rearing of silkworms.

PRODUCTS.

LANDWORKS. Shun deepened the rivers. Yü, in order to drain off waters of great flood, hewed down woods, deepened channels and canals, conducting them to streams, and opened passages for streams, constructing them to sea. He "divided the 9 continents, made the 9 roads, enclosed the 9 marshes, and surveyed the 9 mountains." Wells dug. Bridges formed of a single beam of wood.

HABITATIONS. Lived in winter in artificial caves and in summer in huts made of branches. The caves were probably excavated in the loess banks of the river beds. Afterwards these gave way to huts of clay constructed by help and to have walls, were thatched, had ridge-beam and projecting roof, and contained double chambers and upper rooms. Palace of king more elaborate, but varied. Yao and Shun built palaces with thatched roofs and clay steps. In Yao's time the low walls of palaces and houses were not white-washed, the main pillars, rafters, etc., not carved, and the straw of the thatched roofs not trimmed. Yü built "low" and "mean" palaces. Halls with double windows are mentioned. Large stables and sheepfolds. Village consisted of clustered groups of houses.

FOOD. *Food:* The earliest inhabitants seem to have eaten fruits, the uncooked flesh of birds and animals, and to have drunk blood. Yao and Shun, Yü and his followers taught the use of grain as food and addition to flesh. Herb soup, wild goose soup, pheasant soup, wild boar soup, venison soup, and seasoning. The ed vegetables, cuttle-fish condiments, went, paws, and leopards' wombs mentioned. Foods were sometimes spiced. *Beverages:* An ardent spirit, distilled from black millet, was drunk.

CLOTHING. First clothing was skins and garments made of feathers, and the feet were uncovered. Later, simple cloth worn in summer and lambskin in winter. Headdress was a band folded round head and formed of the same materials. Hair-pins, plain and ornamented. Clothing seems to have reached an advanced stage at an early date. Upper and lower garments often embroidered, trousers, shirts, caps, belts and ornamented girdles, gowns, stockings or gaiters, shoes of various kinds, and court dress are all mentioned as in use before the end of Yü's reign.

IMPLEMENTS. Bamboo baskets, vases, ropes, string, stoves, lamps, lanterns, wax-candles, varnish, ivory chop-sticks, drinking-gourds, goblets, cups, steamers (for cooking rice), cauldrons, pestles and mortars, dishes, wash-basins, jars, drums, bells, mats, tables, screens, pillows, rugs, hair-pins, "head-scratchers," brushes, mirrors, fans, dust-pans, brooms, clepsydras, boats with sails, masts, anchors, etc., carriages drawn by horses, carts, sedans, bamboo stylus, watchman's rattle, hoes, spades, earth-basket, rammer, baler, etc.

WEAPONS. *Offensive:* Sword, dagger, battle-axe, lance or spear of various lengths and number of points, bow and arrow, bow-case and arrow-tube. *Defensive:* Shield, leather cuirass.

AESTHETIC PRODUCTS. *Object-decoration:* Earthenware unvarnished. Inscriptions, poetical and other, attached to articles of daily use. Official robes embroidered with figures of sun, moon, etc. Feather-mosaic used for ornament.

Personal adornment: Face-powder used. Finger-rings, bracelets, and artificial flowers worn.

Architecture primitive. Yao's dwelling was a hut with roof of earth and straw. Imperial temple showed increasing richness and dignity. The roof was made double and the hall larger.

Painting was reckoned among the fine arts. Little is known as to its origin.

Literature: Oldest monuments of literature are in verse. In poetry both measure and rhyme used, but in very irregular manner. Lines occasionally of all lengths; rhyme subject to little rule and sometimes absent. Burden usually melancholy. No general literature.

Music was cultivated as a special study based on system of 12 notes separated by hemitones — the 12 *lü*, or pitch-pipes. It was sacred and intimately connected with religion and the constitution of the State, but probably, like that of later times, wanting in variety and completeness.

Chief instruments were reed-organ, flute, lyre, pipes, hand-drum, common drum, wooden tapper, sonorous lion, earthen-egg, pipe or ocarina, bell, sonorous stone, pipe, 25-stringed lyre, etc. Their compass did not extend beyond one octave and they were tuned by ear.

Dancing was represented by a kind of solemn posturing, forming part of religious worship.

CHIEF PERSONS.

EXECUTIVE. Tang Yi Yao (2357). Yü Ti Shun (2255). Wu Ping (physician). Yo Hsiung (philosopher). Chi Tzŭ (author). Wên Wang (philosophical politician and humanitarian). Chou Kung (ditto and legal codifier).

INGENIUM. Kun. Kŭ i. Lung. Po I. Kao Yao. Chung Huí. I Yin. Fu Yüeh. T'ai Kung (Lü Shang).

ECCLESIASTICAL.

Priests, etc.: The earliest traces of a priesthood are to be found in the chanting and dancing exorcists (*wu*). There was no sacerdotal class. Worship of Heaven could only be performed by emperor. The Minister of Religion was called "Arranger of the Ancestral Temple."

Sacred places: There were altars to ancestors and ancestral temples with spirit-tablets.

Sacrifices and observances: Sacrifices made on undertaking government, before and after great undertakings, by king at halting places on tour of inspection, etc. They were offered to God, the 6 Honoured Ones, hills and rivers, and the host of spirits, but were not so numerous as they afterwards became. Worship of Heaven consisted of offerings and prayers, without images. In sacrificing a piece of silk containing written prayer was burnt. Spirits used only in sacrifices to Heaven, Earth, and Ancestors. King sacrificed, fasted, and prayed for removal of calamities.

Connection with State: Not completely separated from political. King or "Head of the State" was "Head of the Church" ("Lord of all the Spirits").

Rites: Dancing held a conspicuous place in worship. Idols said to have been first made in 1197–1194 B.C.

PROFESSIONAL. Physicians and blind musicians are mentioned. Painters (?)

ACCESSORY INSTITUTIONS.

There were schools and colleges. The "Great Learning" was given in the Higher School, Eastern College, and Right College, and the "Primary Learning" in the Lower School, Lower College, and Left College, in the times of Shun, Yü, and the Yin dynasty respectively. The Prince of Têng established schools for archery (*hsün*), superior schools at the capital (*hsüeh*), and local elementary schools (*hsiao*). Under the Shang dynasty, boys entered the lower school (*hsiao hsüeh*) at 15 and the upper (*ta hsüeh*) at 18. In this dynasty there were also special schools for music and dancing (*ku tsung*).

CEREMONIAL.

MUTILATIONS. Skulls of babies were flattened, by means of a stone, so as to taper at the top. Hair and nails were cut as a sign of grief. Cutting off the nose, the ears, the feet, castration, and branding were punishments.

FUNERAL RITES. Dead besought to return by shouting from house-tops. Corpse fed and food placed by its side, burial being delayed in hope of revival. Cave dwellings, etc. or huts. *Ceremony:* Ceremonies deserted Cere- and left monies at first under the very simplified by the Later Feudal Period. Kings and Ministers did obeisance with face to hands and head to ground. *Presents:* "Articles of introduction" and presentswere brought by feudal princes to the king's court. Part of furniture for emperor's ancestral temple given to a deputed noble. *Forms of address:* Deceased emperors were addressed by special titles. The son of an emperor received a special title. Emperor referred to himself in relation to the people as "the one man," and in relation to God as "the little child." It was the custom of Shang to flatter superiors.

LAWS OF INTERCOURSE. *Concrete distinctions:* Ranks distinguished by different head-dresses, garments, badges, writing-tablets, number of attendants, horses, etc. *Ceremony:* Ceremonies under the Shang characterized by simplicity compared with the Yin were those of the Later Feudal Period.

HABITS AND CUSTOMS. *Public:* The Mid-Autumn Moon Feast originated in Hsia. "Li's" eating one of his cakes of immortality and fleeing to the moon. This developed into an annual festival about 2,500 years later. There were festivals of harvest-thanksgiving in the 12th moon and at the Spring cultivating. Drums beaten on occasions of eclipses. Coronation speeches made.

Sports and games: First games were those of bow and arrow and festival gatherings for purposes of archery. Competition and rewards. To these succeeded exercises partaking of a military character. Catapult. Hunting. "Game of war (*wei ch'i*), kind of chess, said to have been invented by Yao. *Private:* Eating part of food set aside for the benefit of the inventor of cooking. Two meals a day.

EVENTS.

2297. Great flood.

2278. Yü completed the regulation of the waters.

2221. Yüsent on an expedition against the Yu Miao.

2205. Hsia dynasty founded.

2195. Great battle at Kan (in Shensi) against Yu Hu.

2068. Overflow of Yellow River.

2067. Yüeh founded by Wu Yü.

1996. Six barbarian nations submitted.

1837. Barbarous tribes submitted.

1783. T'ang's expedition against Ko.

1767. Slip of Mount T'ai, earthquake, Rivers I and Lo (in Honan) dried up.

1766. Kie defeated at Ming T'iao in Shansi. Shang dynasty founded.

1766–1760. Drought.

1751. T'ai Chia returned to Po.

1557. Country plundered by the Lan barbarians.

1401. Title of Shang dynasty changed to Yin.

1324. Six tribes of the Southern barbarians tendered submission.

1293. Three years' war with the Kuei Fang, a Hun tribe.

1124. Success of Chi-li of Chou against the Jung.

1177. Earthquake in Ch'i (Chou).

1140. Earl of Chou's expedition against Ts'ung (near Si-ngan).

1123. Earl of Fa vanquished Li in Shansi.

1122. The king of Chou defeated Chou Hsin.

LATER FEUDAL PERIOD (1122 TO 221 B.C.).

TABLE II.

DATES

1122 B.C.

OPERATIVE.

Division between sexes: Women had care of silkworms, spinning, weaving, and did embroidery.

Men did agriculture and husbandry, and practically all work mentioned under *Specialization.*

Specialization: Class known as "hundred artizans" included metal-workers, clay-workers, cartwrights, thill-makers, boat-builders, masons, tanners, founders, carpenters, furniture-makers, leather-workers, basket-makers, makers of writing-knives, arrow-heads, javelins, swords, bells, and measures of capacity, leather-armour, drums, and 3 kinds of cabinet-makers.

Dyers, silk-dressers, colour-workers, indecorticaters and polishers, potters, and moulders of ordinary utensils specialized trades. Chariot-making characteristic industry of period. Workers in precious woods for musical instruments also made wood, on targets and handles of pikes and javelins.

Bow-makers formed separate class. Work of quarter-right included making ploughs. Makers of pitfalls and traps for wild beasts, cow-herds, sheep-herds, husbandmen, farmers, weavers, cabinet makers also mentioned.

Localization: Excellence of knives of Lu, swords of Chêng, two-edged swords of Wu and Yüeh, and axes of Sung attributed to "emanations" of earth, and of bows and arrows of other parts to quality of material foundthere.

Jade cases produced at K'un Shan, cutlery at T'ai Yüan Fu, agricultural implements in Yüeh, armour in Yen, long spears in Chin, and bows and carriages in Hu.

Certain quarters assigned in towns and cities to mechanics, and all of one art required to have shops together.

REGULATIVE.

LAND.—Ownership of land remained in king. He, princes, and officials all had their private lands, titles and appanages being hereditary. Feudal system attained great development.

Land was inalienable and reverted to the government at 60. Feudal lords owned their states under nominal authority of "Son of Heaven."

Chiang system was *chu* system developed and universalized. There were 9 squares of 100 *mou* each, of which central square formed public field, cultivated for benefit of State by united labour of 8 farmer-families around it, from produce of whose private fields nothing was levied. Area of State field was levied. Area of State field was however, reduced by deducting ground required for separate houses and gardens of 8 families, public land being thus 800 *mou* and private 820. Hamlet of 25 families was unit in this system of common cultivation or "mutual aid," which formed essential feature of régime of period.

No duties levied on travellers, nor produce from fields assigned to younger sons nor from holy fields (which supplied animals for sacrifices). Only 8 days' labour required by State from people in year. Cultivators lived on land for 6 months, villages being for that time deserted. Officers on land divided in new fields received impartial treatment. In populous districts *kung* method of Hsia, in less densely peopled *chu* method of Shang used. Forced labour was exception.

Taxes levied on non-cultivating occupiers and on woods and marshes, and poll-tax on unemployed. Non-agricultural produce paid in kind.

In 594 B.C. additional tithe levied on village lands, probably by tithing valuable homesteads property.

960–336 B.C. Land ceded [in Ch'in State] for first time in absolute ownership [see also foll. Period]. Vacant lands sold in freehold. Waste lands (unlike village lands) freely saleable. Taxes on persons being greatly increased, and State ceasing to provide all with lands, poorer cultivators became dependent upon holders of large estates. Families grouped by fives and tens for maintenance of order by mutual responsibility; idleness punished; and skilled artizans exempted from great corvées. Separation of families forbidden during father's lifetime, and scattered families brought together and settled in townships (thus tending to restore rather than abrogate former system).

With institution of private property in land same demand made upon all, to ruin of poorest.

RANKS.—Ranks remained as in previous period: (1) Agriculturists (*Nung*); (2) Artizans (*Kung*), and *Merchants* (*Shang*). All were under governmental direction.

Domestic service: Rich had housework done by hired servants, men and women (see also *Slavery*). These paid no taxes, but as regards punishments had no distinction between them and tax-paying classes.

Natives of wild tribes employed at funerals, etc. Skinners, cooks' assistants, fan-wavers, and door-keepers were meanest class.

Slavery: Only slaves "public slaves" condemned to penal servitude for crime (high officials, men over 70, and young children exempt). Could change domicile at pleasure. Sons of male slaves supplied class of lictors and official menials, daughters being domestic servants. Eunuchs (1100 B.C.).

In all periods except Tang and Sung (Table V) freed slave passed without intermediate stage into condition of free citizen.

INDUSTRY.—Sons followed fathers' and wives husbands' occupation, or sewing or spinning. Ruling idea was employment should be hereditary. Each adult registered as following lawful pursuit. Government considered large displacement of industry matter for regulation to prevent disturbance of social order. Individuals or household having "neighbourhood" received pass and were introduced to new chief. Provisions regarding internal commerce and markets as full and elaborate as those relating to agriculture. State trading continued. Six kinds of public trades, each minutely regulated. Markets under provosts with extensive duties, including regulation of weights and measures, etc., and equalizing of quantity and prices of goods offered for sale (*cf.* duties of superintendents of agriculture). Rent charged for stances in market-places, but wares not taxed.

7th cent. B.C. State purchases and sales of grain, followed by establishment of State granaries, became in time serious tax.

Trading guilds numerous and energetic.

DOMESTIC.

MARITAL. FILIAL.

Age for man 20; girl 15. Celibacy limit since 30th and 20.

Unmarried at 30 and 20 urged officially to marry.

Patriarchal system by which sons brought wives to parental abode, absolute property vested in Ch'in Statesman (350 B.C.).

Consent eldest of parents sought; if son deceased, announce consent ment of marriage had made in ancestral temple. Girls taught duties of wife 3 *ying* and months before marriage.

Impediments: Unmarriageable women: Daughter of rebellious house; disorderly house; criminal house; leprous house; and daughter who had lost father and elder brother. Man-piety" rigae with those of were to same surname now dignify forbidden. Marriage and sup- of wife could not port; take place within 3 parents. years of mourning. This Posthumous marriages forbidden, but apparently ineffectively.

Betrothal: Intervention of matchmaker and marriage presents indispensable.

Conclusion of marriage was progress of very bride from home of minute parents. Prince's and daughter accompanied by *ying*, bride's lady's maids. formed After short interval various bride visited parents. menial Marriage not consummated. Parents plete until this period ended. After 3 and son months wife pre- could not sented in ancestral visit on temple.

Concubinage, etc.: Elder The higher the rank, children, larger was number of wives, concubines and hand- only subsidiaries maids in addition to subject to wife proper. King constitumarried 9 women (including consort, wife, Princes had consorts, titled wives, wives, had to and concubines. consider Feudal princes might in private bring daughters of life-time 3 states as wives. ests and Polygamy limited in- riod. clination only by means; conditions of sidered prejudicial to State. Prostitution common.

Relation between husband and wife: Rich had housework done by hired servants, men and women (see also *Slavery*). These paid no taxes, but as regards punishments had no distinction between them and tax-paying classes.

Natives of wild tribes employed at funerals, etc. Skinners, cooks' assistants, fan-wavers, and door-keepers were meanest class.

Slavery: Only slaves "public slaves" condemned to penal servitude for crime (high officials, men over 70, and young children exempt). Could change domicile at pleasure. Sons of male slaves supplied class of lictors and official menials, daughters being domestic servants. Eunuchs (1100 B.C.).

In all periods except Tang and Sung (Table V) freed slave passed without intermediate stage into condition of free citizen.

INDUSTRY.—Sons followed fathers' and wives husbands' occupation, or sewing or spinning. Ruling idea was employment should be hereditary. Each adult registered as following lawful pursuit. Government considered large displacement of industry matter for regulation to prevent disturbance of social order. Individuals or household having "neighbourhood" received pass and were introduced to new chief. Markets under provosts with extensive duties, including regulation of weights and measures, etc., and equalizing of quantity and prices of goods offered for sale (*cf.* duties of superintendents of agriculture). Rent charged for stances in market-places, but wares not taxed.

7th cent. B.C. State purchases and sales of grain, followed by establishment of State granaries, became in time serious tax.

Trading guilds numerous and energetic.

POLITICAL.

CIVIL.

PUBLIC.

GENERAL. LAWS.

RANKS.—With consolidation of feudal system power of *king* grew. He ruled over his appanage, the his middle kingdom, in same way as feudal princes over their respective states, but received from them revenue and military service. Maintained court of great ministers. *Succession* was to eldest son. Palace was both temple and audience chamber, and king head of military forces. Made tour of feudal states once in 12 years. Central authority waned with increasing power of feudal princes. *Princes*, or nobles, were little kings within own states, with power of life and death. Assigned lands in six districts. Had infeudation required imperial sanction. Presented themselves at Court once in 6 years, during 2 6-year periods, and in following period attended on king during his inspection of their domains. Were classed in 5 degrees with sets of ceremonies on threefold scale. Dukedoms limited hereditarily to 5 generations.

A. *Officers* (*Shih*): Relations between princes and ministers less favourable to latter than formerly. Class included all executive and judicial officers (*ch'ên*) carrying on administrative duties. Rank not hereditary. Officers carefully selected. Princes and officers appointed by sovereign.

Of gentry (*shên shih*) unofficial literati (scholars) occupied place of priests and ministers in western lands. B. *Agriculturists* (*Nung*). C. *Artizans* (*Kung*). D. *Merchants* (*Shang*): remained unaltered. Below them were ranks of *servants* (*Chih Shih*), *bond-slaves* (*Nu Li*), and *eunuchs*.

INSTITUTIONS.—*Executive:* Capital was Hao Chung (1122), Lo Yang (770), and Lo (519–475). *Divisions* were 9 provinces divided into states, unit being *hsiang* or *li*. *Later chin.* Administration: To *San Kung* were now added *San Ku*. Were assistants to *Kung*, but quite subordinate officers of departments. Though principally lords in waiting on sovereign, *Kung* and *Ke* had more or less authority in administration of affairs. This was, however, almost entirely in hands of Six Chief Ministers (*Liu Ch'ing*), viz. (1) Prime Minister (*Chung Tzai*), (2) Minister of Instruction (*Ssü T'u*), (3) Religion (*Tsung Po*), (4) War (*Ssü Ma*), (5) Crime (*Ssü K'ou*), and (6) Works (*Ssü K'ung*). Recorders or annalists (*Shih*) attached to Ministry of Religion, were advisers of Prime Minister and heads of government. Ministry of Instruction, Works, with many subordinates.

Legislative: King alone enjoyed legislative power, ordering laws to be made or altered.

Judicial: Duties of Minister of Crime, and subordinates were judicial, but judicial not entirely separated from executive. Princes had power of life and death in own States. Extreme care against injustice inculcated.

Revenue derived from towns, taxes on land, forests, revenue, customs, salt and iron monopoly, princes' offerings, and tribal tribute. Taxation generally light and rarely exceeded tithe. Nine different Boards of Revenue instituted. Chief minister determined expenditure of State at close of year on 30 years' average. Independent townships coined money.

Military. Councils of war held. Prayers offered to manes of deceased rulers. Practice of taking tablets from temple. Victims on warlike expeditions continued, but condemned by Confucius. Frontier-posts supplied from peasantry, and relieved from year to year. Infantry composed of husbandmen. 3 similar to police. Chariots of strong men, strong women and weak and old respectively. Latter watched while former fought. Those of age to fit on armour went out to war. 6 *hsiang* (district of 12,500 families) called principal army, 6 *sui* (district) auxiliary forces. King had 6 *hsiang* and 6 *sui* forming 12 armies (*chün*), known, however, as "six armies." A large State had 3 *hsiang* and 3 *sui*; smaller States in proportion. King had troops to battle. 6 royal armies commanded by 6 *ch'ing*. Principal element was chariot drawn by 4 horses, containing charioteer, spearsman, and archer. Horses protected by mail, and chariots by "iron rein." Infantry in centre, cavalry on wings. Commander-in-chief appointed for campaign. Military discipline severe. Punishments of brandings and nose amputation stricter; castration and death more lenient. Alternative fines. 3,000 punishable crimes. Undefined cases ended with next higher or lower. Women not punished, but branded nor amputated. Drunkenness connected with treason punishable with death. Stranglings, or hanging, also mentioned, and fetters and manacles, stocks, and cangue, chaining to market stone (for injuring neighbours) in "three-stock" law existed until 529 B.C. *Lex talionis* abolished as accessory duty.

Crimes: Robbers, murderers, unfilial, unbrotherly, unworthy and factious officers punished with death. Capital crimes also included unsettling laws, unauthorized intercourse, etc. Confucius' arrangement of crimes was (1) offences against heaven and earth; (2) reviling; (3) opposing human relations; (4) confusing civilization; (5) insurrection; (6) murder. Ministers slaying ruler or sons fathers were to be lynched.

Mitigations and exemptions: Persons over 90 and children under 7 exempt. Women exempt from taxation, looming face and cutting off feet. Members of king's clan not capitally punished, but branded, shaved. Slayers of robbers, etc., not punished. Letters, etc., discussed in spring.

Laws, codification, etc.: Primitive codification represented by *pa hsing* (8 laws on tripod (581–521). Another attempt made in 4th cent. B.C. This divided into 6 portions, first 3 relating to practice, and last 2 exposition of offences. Under revised code of Lord Yang (351 B.C.) crime involved 10 families and 5 neighbours. Any-one failing to denounce offender cut in two. Several other codes drawn up at various times. Written deeds and agreements in common use.

Procedure: In presence of both parties, with documents and witnesses complete, all judges listened to "five-fold" statements. They adjusted case to one of five settlements or redemption fines for "cases of error." Latter stricter than former. Portcullis period. Punishments with stocks, exposure on public stone, or labour on public roads.

ECCLESIASTICAL.

Priesthood, etc.: King alone had right to sacrifice to Supreme Lord of Heaven, earth, and inferior deities. Was *pontifex maximus*; priesthood of royal princes and civil and military officers. Ranks similar to police.

Wu soothsayers, male and female, had powerful influence and official standing.

Sacred places: Rulers worshipped at "Hall of Light," which was also palace, audience and council chamber.

1001 – 946 B.C. Taoist *Li*.

685–643 B.C. Exorcising priests also temple shrine.

Wu had temples to earth, gods of grain, prayer sun, moon, mak-etc., of spirits ers, of deceased statesmen and eminent scholars, etc., respectively. Paintings of ceremonies, animals, silk, divigrain, jade, ners, etc. Human sacrifices abolished, but monies offered on these occasions. Penalty for neglect of ceremonies attached to conformity, separation and attempts to people to join worship punished by death. Effects of worship and were to dwarf state hierarchy and prevent growth of powerful priestly class and associated hypocrisy. Robes of appropriate colour worn. Ordinary musicians and "eyes and ears," private individuals, in children's alliments, had divination as State function mixed up with other public establishments. Probably elaborate festivals connected with institutions described in *Chou li* never realized in actual life. Associations of scholars formed among Confucius' and Mencius' disciples. Signs of masonry in 700 B.C.; it probably existed at Lu in 540. Provision made for aged, dumb, etc. Corn distributed from king's vaults to friends in times of scarcity.

PROFESSIONAL.

Official physicians had charge of all-seases of people. Private specialists also in children's ailments, and diseases of eyes and ears," "horn - gong." Ancient wooden kite now made of paper. Stilts. Singing and dancing mascottes. Football. Dice-throwing and sealing. Hunting and fishing expeditions. Ball-playing. Boat-racing. Cock-fighting.

Private: Sacrifices to patroness of silk and weaving. Sacrifices to Supreme Spirit at summer and winter solstices. Seasonal sacrifices, *yü ch'ih* (in summer), *ch'ang* (in autumn), and *chêng* (in winter). Sung raised altar of earth to spirits of land. At beginning of year sacrifices offered to same spirits in every district. Analogous sacrifices in autumn. Right to sacrifice to different spirits graduated according to rank, etc. Lower people of country district could sacrifice only to ground and second-ary spirits. Solemnities preceded by fasting and various purifications. Great concourse of feudal princes. Libations, victims, incense, music, feasting, etc.

478 B.C. Temple erected to Confucius; sacrifices offered at 4 seasons.

424 B.C. Annual sacrifice of maiden to God of Yellow River stopped.

Buddhist books and Buddhas introduced. Heresy persecuted.

ACCESSORY INSTITUTIONS.

A system of schools, academies, colleges and universities obtained in villages, districts, departments and principalities. Public instruction as State function mixed up with other public establishments. Probably elaborate festivals connected with institutions described in *Chou li* never realized in actual life. Associations of scholars formed among Confucius' and Mencius' disciples. Signs of masonry in 700 B.C.; it probably existed at Lu in 540. Provision made for aged, dumb, etc. Corn distributed from king's vaults to friends in times of scarcity. Public granaries established in all districts. Hospitals for foundlings, diers, and 25 other follow-ers, to look after baggage, cooking, etc., but whole force of kings of Chou only amounted to armies of 12,500 men each. "thousand chariots" was regular. Large regular army (300 chariots) had advanced guard of 10 chariots. Ox-waggons bearing provisions followed. Chariots formed round place of encampment. Warriors wore buskins on legs. Beacon fires. Drum used. Dividing into 6 portions, first 3 relating to practice, and last 2 exposition of offences. Under revised code of Lord Yang (351 B.C.) crime involved 10 families and 5 neighbours. Anyone failing to denounce offender cut in two. Several other codes drawn up at various times. Written deeds and agreements in common use.

Procedure: In presence of both parties, with documents and witnesses complete, all judges listened to "five-fold" statements. They adjusted case to one of five settlements or redemption fines for "cases of error." Latter stricter than former. Portcullis period. Punishments with stocks, exposure on public stone, or labour on public roads.

CHIEF PERSONS.

EXECUTIVE. LEGISTATIVE. JUDICIAL.

CEREMONIAL.

FUNERAL RITES.

MUTILATIONS.

Ears cut from bodies of slain. Instances of amputation of arms, feet, nose, etc. Children had hair cut and done in top-knot; adults apparently only cut hair in Yüeh. Shaving head substituted for castration as punishment for criminals. People bit or cut their arms to pledge oaths. Flesh cut from thigh or arm to feed sick persons or occasionally superiors in difficulties. Men practised tight-lacing in Chu (539–528).

Dying removed from sick - bed to floor or "water-bed," and clothes changed. Death-howl had become a studied rite, sometimes accompanied by stamping feet and beating breast. Howling in public prohibited. Soul recalled from house-top. Corpse washed and cleansed on "water-bed," covered with shroud, and lights placed by side. Furniture removed. Visits of condolence paid by kinsmen and friends, who presented grave - clothes, performed ceremonies of leaning over corpse, "laying-on of hands," and other marks of respect. Rulers accompanied on these visits by exorcists and invokers. Mouth of dead filled with cowries and other articles to arrest decomposition. Dress-ing, coffining, and burial delayed as long as possible in hope of revival. Grave-clothes numerous and elaborate. Various mourning and sacrificial ceremonies performed before burial. Corpse carefully preserved from mutilation. Coffins of great solidity, sometimes several; but no trace of embalming. Ropes, straps, wooden and bone pegs used in fastening the coffin-lid. Vaults in most cases of wood, but not considered indispensable for burial. Both coffins and vaults objects of great solicitude; often prepared during life-time. Enclosed bodies stored in dwelling, artizans' tools provided, and sacrifices performed on leaving dwelling and on way to grave. Funeral processions headed by *ying* (pennon) which "clears the way" (*k'ai-lu shên*), and accompanied by music, presents sent by friends, linen banner, etc. Catafalques wheeled and curtained, decorated with insignia of rank, and drawn to tomb by large numbers of men, generally closely allied to deceased. Many sacrificial articles, including food, silk, clothes, implements, weapons, valuables, etc., placed in tomb; now regarded more as receptacles to manes which resided with corpse, and placed on instead of in grave. Moderation began to be adopted, substitutions being made of coarse for fine implements and weapons, of straw and other images of men, wives, slaves, and of horses, for real sacrifices formerly made. Human immolations still, however, occasionally took place, practice being limited by Sutteeism, which gradually spread and finally took its place prior to being itself modified into permanent and after-wards merely temporary dwelling upon tomb. Post-mortem weddings also took place. Mausoles and grave-mounds sometimes of enormous size, graduated according to rank, and surrounded by tumuli of monarchs. Ramparts and battlements built, guards established on site, and grave-trees planted, both for concealment from enemies and by means of *yang* influences to prevent decay.

Mourning: Mourning slightly less oppressive but still severe. Body bared but raiment not surrendered to dead; head-gear abandoned and hair tied in knot. Washing or shaving beard and cleansing body prohibited. Comforts generally relinquished. Mourners screamed, wailed, stamped feet and beat breasts. Chanting and howling at house belongings to defunct and removed to mourning-sheds of clay, eating only rice gruel, sleeping on straw with clod for pillow, and speaking only on subjects of death and burial. No ornaments worn. Mourning garments undyed and unbleached materials, of 5 degrees. People over 80 exempted. Fasting and mourning rites practically confined to same clan. Office and public duties resigned; music, sexual intercourse, marriage, and separation from clan prohibited. Rulers and teachers mourned by ministers and pupils in same degree as fathers by sons. Contact with mourning harmful. Fasting slightly less rigorous.

Forms of address: King styled "Son of Heaven," etc. By feudal princes called "King by grace of Heaven." Various forms for various occasions.

Laudatory expressions addressed by Court dignitaries to sovereign; also by guests to master of house.

Honorary posthumous titles first given in 684.

Addresses to teacher or father equally elaborate.

War and peace: Loser provided feast on conclusion of treaty of peace.

LAWS OF INTERCOURSE.

Courtesy distinctions: King's palace - walls, carriages, bows, arrows, etc., distinguished from those princes, etc.

Different ranks marked by number of carriages, robes, etc., conferred by king.

Practice as regards ornaments on official robes, colour of bow cases etc., underwent considerable change.

National colours introduced *c.* 1000 B.C. All classes anciently carried staff, but about 500 B.C. right restricted to men of rank.

Ceremonial observances pushed to extreme limit; they were "the greatest of all things by which men live"; but mainly confined to proceedings of princes, courts and courtiers *vis-à-vis* imperial court and each other and to daily life of persons-ages of leisure and social standing.

Emperor's personal and official life regulated by minute ceremonial. Investiture accompanied by gifts and ceremony.

Daily life of people also subject to strict ceremonial. On roads, men took way Demo- of Mountains, this afterwards superseded by lettie- off ing up pic- charms.

During ex- drums beater- bows and arrow- discharged tree- cue sun or moon.

Ceremony of Oppressive governments denounced; "superior man" only received reward for services done. Cruelty, growth of pride, indulgence of desires, gratification of will, excess of pleasure and deceit denounced. Affection towards parents insisted on. Bravery shown in hunting.

Revenge prescribed according to wrong inflicted. Unnecessary killing denounced with certain "sporting" tendency and constraint shown towards animals and even insects.

Soldiers described as feeling sorrow on leaving homes and anxiety respecting welfare of parents.

Honesty in official administration and friendly relations with neighbouring states recognized as essentials to national prosperity.

Taoists practised fasting, discipline, worship, etc., to bring out higher part of man's nature.

Generally exalted nature of precepts of time, however, probably directed at growing immorality. Continued prevalence of drunkenness alluded to. Sons frequently killed and sometimes beaten by fathers. Towards end of period relaxation of morality deplored. Men are drunken and debauched and women immodest.

HABITS AND CUSTOMS.

Public: Gags applied to stop tumultuous cries on public occasions.

On New Year's Day magpie's nest burnt to scare away. King prayed for good year.

In spring king in person inaugurated agriculture.

Festival of Dragon-boats (*lung chou*) (450 B.C.). Roly-poly playthings. Paintings or images of Chang, founder of magic, put on doors.

Festival of *Chün* Stone or 3rd and moon 5th days also called *Hsia Chih*.

Eating cold things. Free not kindled in memory of Chieh Tzŭ-tui, who was burnt in forest. People pro-hibited from each other pat-ting ducks' eggs.

At Festival, meats and sweets under trees, etc.

Newly - married Doctor of Law gave entertainment: also to and ball-playing parties.

At winter solstice millet dumplings sacrificed to heaven and ances-tors, and reverence and congee to wax off fierce demons.

On 13th day of 12th moon ram- boos burnt to cave- away Demon

Customs: Various kinds of obeisances for meetings, feasts, congratulations, etc. When congratulating, the head bowed to ground, and

Baths taken every 5th day

Collections of curiosities made.

Fashions: Women wore false hair.

SENTIMENTS.

ÆSTHETIC.

A constitutional delight in flowers shown by Odes of *Shih ching* and other works. Hills beautified with flowers and shrubs. Highest place given to art of music, to it being regarded as means of softening relations between different ranks of society. "In olden times" poets celebrated even more than sages.

Slender eyebrows, eyes with black and white well defined, tapering fingers, slender neck, teeth like moon seeds, white rounded temples, black hair "in masses like clouds," fragrance, and countenance "like flower of cephalanthus hedge-tree," were signs of female beauty. In men, a highly-coloured complexion admired.

MORAL.

Temperance in use of spirits admired, vocated, showing intemperance indulged in. Itand concubinage regarded as sources of disorder. Attitude towards women despotic. Men and women not supposed to bathe in same room or sit together. Moral principles pervaded earliest classical writings and formed base of law.

Chou li enjoined family affection, reverence for age, kindness to strangers, etc. Forbearance root of harmony. filial piety and fraternal affection, submission cause of prosperity. Book of Poetry contains no hint of decency. Oppressive government denounced; "superior man" only

IDEAS.

RELIGIOUS.

Soul still regarded as able to leave body; reality of death not yet established.

Dreams acted upon.

Ancestor-worship dominated and influenced whole nation. Dead chiefs possessed great power and could control lives and fortunes of kindred on earth. Spirits of departed heroes worshipped and protection invoked. There was hier archy of spirits headed by Shang Ti. There was no object to which in a tutelary spirit might not be ascribed and no place where approaches of spiritual beings might not be expected. Pro-tecting favour of departed could be lost by bad conduct. Incense burned before family shrine. As time on worship of the remoter ancestors exchanged for that of recently dead. Various animals, etc., propitiated.

Chief *deities* were Shang-ti (God), spirits of hills, rivers, stars, and almost everything animate and inanimate in heaven and earth.

Taoism originally compendium of customs and practices framed upon prevailing ideas concerning human soul; epicurean in doctrine and as yet free from superstitions and extravagances.

Confucianism: Heaven, earth and saints or sages (*shêng jên*) formed triad of equal powers, but knowledge professed re-specting gods, immortality of soul, future rewards and punish-ments, or future state. Virtue and vice received with indifference. Man considered as of visible body (*hsing*) and spirit (*ch'i*), separation of which was death. Latter part of system but not yet recognized.

Cosmogony started with Nothing, which became Unity or Great Monad (*T'ai Yi*), which split into two principles (*Yang* and *Yin*), one active, the other passive, the other negative, light and darkness, male and female. Interaction of these two produced all things. The Rationalist gave no definite shape to this early cosmogony, showing how P'an Ku chiselled Universe out of Chaos, and having formed heaven and earth, died, his body becoming mountains, his breath wind and clouds, etc.

Mythology: People were not naturally inclined to mythological invention. Legends introduced from abroad.

Myths and religious romance very rare before 300 B.C., very abundant 500 to 100 B.C.

Foreign elements assimilated by early Taoism.

Superstitions: Strange prodigies recorded births of remarkable men. *Chi-lin* supposed to appear at birth of sages. Dragons, etc., also mentioned.

Divination generally practised. Plancheite, kidney-shaped pieces of wood, and bamboo slips used. "Possession." Messages obtained from other world.

Cosmogony: Supported on 4 feet of monster. Breaking of pillars of heaven caused earth to list to S.E., rivers to flow into sea.

Geography: Ocean round world (400–200 B.C.), dwarfs, giants, etc.

Geography: This earth was round and suspended in space w foreign knowledge not widely accepted. Slight knowledge of foreign countries. Map-making and division of provinces briefly described.

Meteorology not separated from astrology.

Botany: Fruits said to be transformed by climate.

Medicine: Quasi-scientific efforts at healing. Diseases classified under 4 seasons. Jade supposed to prevent deterioration of body. Sulphate of soda panacea for most sicknesses. Acupuncture and cauterising. Action of pulse and effect of various articles on different organs, recognized. Treatment classified as "internal," "external," and as counteracting "over-indulgence." Mesmerism.

Anatomy: Metal models said to have been used.

Political economy rudimentary.

Ethics, etc.: Taoism was merely "path" of immediate and as yet free from mysticism.

Confucius' ethical doctrines dwelt chiefly on social duties having political bearing; included obedience, filial piety, deference to superiors, and subordination, maintained sufficient foundation in nature for government in sense of relations of society, and that art of government lay in economical use of revenues. Relations of sovereign and minister, father and son, etc., gave rise to certain duties. It only needed that sacredness of those relations be maintained and that people belonging to them faithfully discharged, to produce universal peace and happiness.

Mo Tzŭ (Mo Ti, philosophical writer). Kung-sun Chih (dialectician). Kung Ch'ih (Ch'ih), Chuang Chou (philosophical critic). Hsün K'uang (ethical philosopher). Ch'êng Mao (inventor of lesser seal character, etc.).

Mo Tzŭ (Mo Ti, philosopher). Mêng K'o (Mencius) (teacher and criminal law, etc.). Hsün Ch'ing (Hsün Yüeh) (philosopher). Han Fei (writer on criminal law, etc.).

Shih Chou (historical writer). Lao Tzŭ (teacher). Kung Ch'ih (district). Kuo-liang Ch'ih (district). Yang Chu (philosopher). Wei Liao (military writer). Meng K'o (Mencius) (teacher and philosopher). Tsou Yen (writer on cosmology).

Chiao Ts'ai (Chiao). Chao Tun (Chao). Hsün Hsi (Chao). Fan Li (Yüeh). Mi Pai-chia (Wei). Tien Jao (Ch'i). Yüeh Yang (Ch'u). Wu Ch'i (Ch'u). Wei Yang (Ch'in). Shên Pu-hai (Chao). Shih Ch'ü (Yen). Chang I (Wei). Pai Ch'i (Ch'in). Wu Ch'i (Ch'u). Wei Ch'ing (Ch'in). Shang Yang (Ch'in). Hsün Hsi (Chao). Fan Li (Yüeh

ABSOLUTE MONARCHY (221 B.C. TO A.D. 221).

DATES.

221 B.C.

A.D. 221

OPERATIVE.

Sexual: Men planted grain and women mulberry trees. The latter reared silkworms and did weaving.

Specialization: The advantages of specialization were recognized. Under Ming Ti it was forbidden to engage in two occupations. Occupations of shepherd, swineherd, fisher, hunter, horse-breeder, butcher, dog-butcher, screen-maker, varnisher or painter, builder of pagodas, weaver, carpenter, knife- and sword-maker, etc., are mentioned, as well as most of those previously existing.

Fishermen made their own nets, hooks, etc.

Silk brocade making was a specialized monopoly.

Localization: Figures for embroidery were produced in Hsiang Yi.

The iron industry and trade were localized in Liang, that of cinnabar and woollen cloth in Lung and Shu, of skins and hides (or leather), bone and ivory ware in Ching and Yang, of wood and bamboo arrows in Ching Nan, of fish, salt, rugs, and furs in Yen and Ch'i, of varnish, silk, and hemp- or grass-cloth in Yen, Yü, and Ho.

REGULATIVE.

LAND.—The system of private ownership was extended to the whole empire. Each family had to pay both the land tax and the personal tax, but numerous *corvées* were nevertheless still exacted. Pressure of taxation caused the poor to become tenants of the rich, thus creating a crowd of petty lords and agglomerations of property distasteful to the sovereign. An attempt to make land once more inalienable, however, failed; and Wang Mang, who usurped the throne in A.D. 9, tried to restore the *ching*, declared himself as emperor sole landlord, and disposessed by edict all private proprietors. This was revoked 3 years later, and the second Han dynasty re-established the taxation-system of the first.

In A.D. 78 land was divided into 3 classes according to productiveness, and the *chu* tax (to be paid in hemp-cloth and silk-stuff) regulated. In A.D. 165 and 185 the tax was tripled if not quintupled.

RANKS.—(a) *Nung*, agriculturists. Burdens of cultivators somewhat relieved by sale of rank and fine commutation by rich criminals.

(b) *Kung*, artizans.

Shang, merchants. Having prospered during the war, traders were suppressed by additional taxation as well as by sumptuary prohibitions. Later, when these restrictions were withdrawn, sons of traders were still disqualified from holding official rank.

Hired labourers were servants, waiters, clerks, several kinds of manual labourers, and office runners.

Slaves: In 204 B.C. parents might sell their children. Under the Han dynasty slavery became a recognized institution. Distinction of ranks became, under the first Han, much more marked, and the slave was scarcely included within the pale of the law. Rebels with their families were condemned to be slaves of the State. Criminals were always punished with slavery. During the Later Han, prisoners made during the civil wars became State slaves; afterwards they were freed, and re-entered the class of the people. *Private slaves* were (1) prisoners of war; (2) persons who sold themselves or were sold; (3) children of slaves. Wu Ti (140–86 B.C.) deprived masters of the right of killing their slaves at pleasure, and Ai Ti (B.C.–A.D. 1) limited the number and the age of slaves belonging to the principal dignitaries. No one under 10 or over 60 could be a slave. Kuang Wu Ti (A.D. 25–58) freed by many edicts even private (as well as government) slaves; forbade the killing and branding of slaves; and abolished a law which condemned every slave who had wounded a person with an arrow to be beheaded. But he did not allow a slave to buy his freedom by his own labour. The maintenance of the State slaves was a serious burden, and they were at times emancipated in large numbers.

Mausolea of emperors and high officials were constructed by statute labour.

INDUSTRY.—Literary property was restricted to works on medicine, divination, and husbandry from 213–202 B.C.

Multiplication of occupations was forbidden.

"Iron-masters" were appointed in several districts to superintend the iron-works.

During drought trade in wine was prohibited.

Wang Mang imposed vexatious duties on trade.

Minting sometimes a trade.

POLITICAL.

DOMESTIC.

MARITAL.

Marriage: In Kuang Tung, adultery was forbidden and marriage ordered between persons of suitable ages. In the State of I, women married travellers. More than 2,000 poor people of Chiu Chên were married through the pecuniary help of the local officials. A custom, first adopted as an expedient in cases of emergency and afterwards continued as a common rite, of marrying by reviving the husband of the lady's brother-in-law, arose at this time.

Age, impediments, betrothal, etc., remained as before. The marriage laws were relaxed during the usurpation of Wang Mang owing to the large number of forbidden persons condemned to slavery.

Connubium, etc.: The emperor had 12 wives including the empress; nobles and officers, 9, including the consort. Princes could not legally have more than 40 concubines. A "great minister had a wife and 2 concubines. A scholar, 1 wife and 1 concubine. When a wife was absent, a concubine could not presume to take her place.

Dissolution of marriage: Instances occur of divorce of wife on ground of her being daughter of rebel, of stealing neighbour's dates, etc., and of a wife leaving her husband on account of his poverty.

Re-marriage: Divorced lady's maids and concubines were allowed to re-marry. The usual number of instances occur of widows preferring death or mutilation to re-marriage.

Prostitution: Camp prostitutes for the soldiers were instituted by the Emperor Wu.

FILIAL.

Inheritance and succession: An unbroken succession in the male line was established as the greatest blessing (or sign of righteous happiness). Eunuchs were at first allowed to adopt sons as heirs to their hereditary nobility, but the adoption of sons of distant relatives or those bought in the market was deprecated as opposed to the law of the country and family.

Relation between parents and children: It was a mark of high sense of duty on the part of children to live with their own hands large mounds over their parents' graves, and to plant trees thereon.

Numerous instances are given of filial devotion (sometimes supernaturally aided or recompensed) of children to parents, and of imperial rewards to mothers for special care of their children.

GENERAL.

On the ruins of the old feudal system the First Emperor laid the foundations of a coherent empire. Many wars were fought with the Mongolian tribes. The Gobi desert was crossed and Hami made the frontier fortress of the empire.

A general disarmament of the provinces was effected to aid the carrying out of the system of government.

Treachery, however, shortly brought the Ch'in dynasty to an end.

Feudalism revived, but was supressed by the military skill of the founder of the new dynasty (Han). Chinese influence now began to penetrate southwards. Frequent incursions of the Hun tribes sustained military activity within the empire.

The King of Nanhai tendered allegiance. By 179–156 the Prince at Canton recognized the imperial sway, a civil war being thus averted. The Hun agan caused much trouble and frequently met with success. The empire, however, in spite of these disturbances and wars with the Turkish tribes on the West, made much progress towards tranquillity and prosperity. Some of the Huns were won over. The wild tribes of modern Yünnan were subjected and their territory annexed. Fukien province was added to the empire by Wu Ti. The policy of China was to subject the Tartars, but first attempts were unsuccessful. Süch'uan was meanwhile annexed and the ruler of Manchuria rendered submission. The ancestors of the Scythians evacuated Kansu. Liaotung was conquered and added to the empire. The stability of the dynasty had greatly increased. In 73–48 B.C. all the tribes of Central Asia as far as the Caspian sent tribute to the Chinese sovereign. During the usurpation of Wang Mang (A.D. 9–23) due to the weakening of the sovereign power by the eunuchs, the Huns resumed their incursions. The Queen of Kao-chi (Annam) was overthrown. The dynasty (now styled Later or Eastern Han) was firmly established again by A.D. 57. The imperial authority was maintained over the Huns, who were at length successfully driven from the frontiers, the Chinese carrying their victories as far as Khiva and the Caspian Sea. It is possible that the Chinese general came into contact with the Roman Empire at this time. Several rebellions in 126–45 threatened the extinction of the dynasty. In the reign of Huan Ti (147–68) the Sienpi tribes were defeated, but after the death of this sovereign the dynasty rapidly declined. Dissensions arose in the Han family, and after many changes of ruler the imperial power, which was latterly disputed for by the generals rather than emperors, was usurped by Ts'ao Ts'ao, a successful general, and his son, who founded a new dynasty. During the consolidation of the empire by the Hans Cochin China became a vassal state.

PUBLIC.

LAWS.

The Ch'in "laws" were complex and punishments strict." The laws of the abolished and new ones made. Crimes involved the criminal's family as well as his 5 neighbours. Ministers dismissed for treason were cut in two at the waist and their 3 clans exterminated. Slandering the government was punished by execution of the criminal and his whole family. Anyone who discussed a book or poem was executed and his body exposed.

The laws of the Ch'in were repealed by the Han and in their place the "Three Laws" instituted, under which 3 penalties were imposed—for murder, death, and assaulting and robbery in proportion to the act committed.

Codes or revisions were issued in 200 B.C., A.D. 89, and 196.

Punishments were branding (tattooing), amputation of the nose, amputation of and the knee-cap, castration, and death. *Yu* ished the punishment of bruising the legs by driving a cart over them, is also mentioned. Prisoners were sometimes allowed to die from cold (*shon*).

Crimes punished with death were rebellion, illegal acts towards parents, etc., selling people as slaves, etc.; with shaving the head or compressing the feet, housebreaking, wounding, adultery, receiving bribes, etc.; with tattooing, adulteration of coining-metal; with fetters, casting implements or boiling salt illegally; etc. 500 crimes were still punishable by amputation of the feet (or knee-cap).

In 187 B.C. the punishment of execuating the "three clans" was abolished. In 179 B.C. the Emperor Wên abolished the law by which sons were involved in their fathers' crimes. In 167 B.C. the punishment of mutilation was abolished, and flogging (probably more severe until reduced) substituted. In 157 B.C. the punishments of having the body cut open (*tsê*) in the market place was changed to that of public execution. In 33 B.C. the death penalty applied to only 34 crimes, but in 6 B.C. to 81, in 42 of which mitigation was permitted. It was said that leniency had produced increase of crime, and the throne was memorialized to revert to the old standard. Imprisonment for using enticing words, which formerly involved 3 related clans, was abolished in A.D. 86.

Exemptions were favourites of emperor, men of 80 (except false accusation and murder), etc., robbers who killed a robber, sons concealing crimes of parents, etc.

Commutation by fine or purchase of rank was decreed in 194, 150, and 96 B.C., and by contribution of grain in 179 B.C.

LOCAL.

Ten *ching* made a *hsiang*, under the *San Lao*, Three Elders. The *Sê Fu* decided lawsuits and collected taxes, the *Ting Chang* regulated education, and the *Yu Hsi*, *Wu Chang*, and *Shih Chang* decided police jurisdiction, and *Li* and *Li Kʻuei* rewarded the good and punished the bad.

MILITARY.

To pacify the country a general disarmament was ordered, and a standing army formed of men of exceptional physical strength who had no fixed profession. Very large armies were occasionally placed in the field.

All the people as well as scholars and great ministers practised the military art. the former acting as soldiers and the latter as generals. There was thus no necessity for a permanently mobilized force.

Wu (140–86 B.C.) divided the N. army into 8 *hsiao* divisions for the safety of the capital.

A bodyguard of skilled archers and horsemen was formed in 137–52 B.C. B.C. 25–58 the N. army was reduced by 3 *chiao*.

Tactics showed skill. Troops arranged so that only old soldiers and lean animals were visible to enemy. Columns formed with open intervals. Troops formed in concentric circles to hem in enemy. Enemy's grain intercepted. Emperor (the "Highest General") wore mail and rode on horseback.

160 B.C. Their strong mail, sharp swords of various lengths, and crossbows, gave the files of 5 and 10 men advantage over the Hsiung Nu.

Trumpets, bells, drums, cymbals, etc., were used to convey commands and signals. Many banners and ornamented flags.

Generals had orders cut on seals for rapid circulation among the troops. Chariots with spy - towers drawn by several oxen are men - tioned. A brass peck - measure was carried before the troops when they advanced. Cowards and laggards were executed. Bodies of dead soldiers encoffined and returned to their families, and their sons and grandsons provided for.

ECCLESIASTICAL.

Priesthood: The *wu* were the priesthood proper. They were chiefly women, and employed by all ranks.

217 B.C. Buddhist priests arrived, but were imprisoned.

A.D. 67. Two Indian Buddhists arrived as a result of the mission sent to the West six years before. The Chinese generally were not allowed to become priests.

Priests wore distinctive dress.

Sacred places and temples: There were village temples to ancestors, gods of thunder, rain, wind, grain, agriculture, and the Great Bear.

140–86 B.C. Imperial monastic series became abundant.

A.D. 26. Altar built in Lo Yang to Gods of Land and Grain.

A.D. 58. Monasteries were also built.

A.D. 67. On the introduction of Buddhism, Buddhist monasteries were built, and the *miao* changed to *ssü*.

A.D. 166. Altar to Lao Tzü built at Lo Yang, at which emperor worshipped in person.

A.D. 200. Buddhist temples built in various parts of the empire.

Sacrifices and observances: 178 B.C. Rite of imperial ploughing revived.

166 B.C. Scapegoat abolished.

140–87 B.C. *Fêng* and *Shan* sacrifices to Heaven and Earth established.

Prayers for burning were now written on paper instead of on silk.

The worship of Confucius extended from the country of Lu to the principal territorial divisions of the empire. In this worship he was associated with the duke of Chou. Emperors sacrificed at his tomb.

Sheep were sacrificed on altars to the founder of silkworm rearing.

Buddhist books, translated from Sanskrit, were read and chanted in the temples.

To the "god of Chin Jên" (Buddha) no animal was sacrificed, only incense burnt and prostrations made by worshippers.

CHIEF PERSONS.

EXECUTIVE.

Rulers.

Mao Chiao. Sung I. Mêng Tien. Li Sêu. Chang Ch'ien. Hua Hsin. Hsiao Ho. Ch'ên P'ing. Chao Tʻo. Kung-sun Hung. Ho Ch'u-ping. Chi An. Fu Chieh-tzü. Yin Hsien. Kuang Hêng. Chang Ch'ang. Wang Mang. Têng Yü. Wu Han. Tou Kʻo. Chang Pao-lung. Yang Chün. Liang Chi. Kuan Yü. Mao Yen-shou (painter). Chiao Kan (philanthropist and writer). Sêng-ma Hsiang-ju (poet). Sêng-ma Ch'ien (historian). Kao Tsu (206 B.C.). 4 Empresses to Wu Ti (140 B.C.). 7 to Wang Mang (A.D. 9) (usurper). 1 to Kuang Wu Ti (25). 12 to Hsien Ti (190).

ACCESSORY INSTITUTIONS.

Literary associations: Schools of literati called together by the princes discussed literary, philosophical, and religious subjects. Poetical or literary clubs (*e.g.*, "Seven Sages of the Bamboo Grove") are mentioned in the 3rd cent. A.D. Secret societies known as "associations of friends" were numerous in the reign of Hsien Ti (A.D. 189–202).

Charitable aid was bestowed by the Emperor Chang (A.D. 76–89) upon pregnant women.

Literary degrees were established in this period.

Libraries attached to the imperial palace, or otherwise, were numerous. Lecture-halls were built.

Education: After harvest unmarried youths went at 15 to lower, and at 18 to higher school. At winter solstice they left school for 45 days to prepare for the labours of cultivation. Lads at 15 learnt music and the Rites. Scholars were numerous and education prospered. Ming Ti (A.D. 58–76) instituted a system of examinations.

The High College was re-established (25) and the other colleges repaired (126–45).

The new Imperial Academy was built in 132.

In 203 an officer of instruction was appointed to each district of 500 families.

CEREMONIAL.

MUTILATIONS.

The number of eunuchs greatly increased. They were employed in the palace.

Flesh cut from body for filial purposes.

Widows mutilated themselves to prevent re-marriage.

Head-flattening of infants continued.

FUNERAL RITES.

Style of funeral rites became more magnificent. Temples and parks were attached to imperial mausoles, being probably developments of their prototypes of former ages. *Buddhistic* were constructed on tombs to shoot at trespassers. Mirrors, torches, and bamboo tablets were placed in the crypt. Living people still buried with the dead up to 209 B.C. Imperial grave-mounds were of enormous size.

Dead still fed, etc. Coffins less substantial with scarcity of timber. Interval between death and burial gradually grew shorter. Some instances of final home-burial still occurred. Exorcists accompanied funeral procession, in which the decorated catafalque (*shih*) had its place. Clothes, sacrificial garments, boxes of jade, books, and the deceased's insignia were buried with him. Suttee ism, which took the place of human immolations, was frequent and considered honourable. Custom of dwelling upon graves became more general, owing probably to the cessation of human sacrifices, which also accounts for the numerous clay, wooden, and straw effigies placed in the grave. Pines and cypresses planted on graves, and stone figures erected.

Mourning: Mourning minutely regulated in every detail. Officials resigned office. Marriage during mourning considered improper by orthodox, but not by bulk of people. Ministers and high officials mourned for sovereign and pupils for teachers. Fasting.

LAWS OF INTERCOURSE.

Concrete distinctions: King's apartments, carriages, horses, flags, robes, gems, food, utensils, etc., differed from those of his ministers and others. He had more city gates and towers than a prince. Imperial seal now of jade.

National colours continued to be in use. Traders forbidden to wear silk or ride in carriages.

Titles: Shih Huang Ti abolished the rule as to post-humous titles.

179 B.C. A *kuo hao*, or dynastic designation or name was first assumed by the sovereign on ascending the throne. Some of the earlier succeeding monarchs changed it several times during their reigns.

A.D. 1. Honorary designations began to be conferred on Confucius.

Ceremony: Ruling classes wished long life to Emperor on New Year's Day with wine prepared from cypress leaves.

It was contended that soldiers under arms were exempt from ceremonial observances. Ceremony generally remained as before.

Forms of address: The term *ta jên* (lit. "great man"), = elder," "you," "your Excellency," was first used in A.D. 25–58.

Before A.D. 100 princes were often spoken of by the names of their appanages.

HABIT AND CUSTOM.

Public: On New Year's morning, good or bad, the year predicted from direction of wind. ● "Peach charm" placed on doors. Ruling classes wished long life to emperor, by "sowing the heavens" on 20th of 1st moon.

On opening of spring, officials dressed in black with black banner escorted earthen ox and plough to the city gate. People also swallows made of silk pastel slips of paper on the door- to welcome the spring"; and ate salad, syrup, and congee. Spring also welcomed with singing and dancing.

Peach-charms pasted on doors originated in two gods (Shên Tu and Yü Lei) who lived under a peach-tree being supposed to be able to swallow devils and evil spirits.

On 5th day of 4th moon offerings made of vegetables to Buddha image, which was bathed with 5-coloured water.

Cakes also offered by childless women to Goddess of Nine Children.

Ploughing ceremony. Emperor ploughed and then his ministers.

Feasts at close of year. Cost astrologers.

Sports, games, etc. Hunting wild animals was a form of amusement. Cock-fighting. Horse-racing. Female musicians, dancing elephants, and marionettes afforded diversion.

Plan-chettes used. Chess. Game of "cash-guessing." In game of *tzŭ yu*, people butted at one another with ox-horns worn on their heads. Paper kite. Football. Swing introduced from North; used by women. Magic lanterns. Tiddly-winks.

SENTIMENTS.

ÆSTHETIC.

Sense of beauty well shown in paintings and poetry.

MORAL.

The prevalent morality was not of a high standard. Officials were corrupt. Luxury spread. Cannibalism obtained to a large extent, especially with regard to enemies, for whose heads rewards were offered. Yet leniency is said to have been shown towards prisoners in trying circumstances.

The laws against sacrilege were made severe by Shih Huang Ti.

Wên Ti was a strong advocate of peace. A work of the period aimed at elevating female character.

Re-marriage of an emperor was discountenanced as tending to fewness—"giving up virtue for beauty."

IDEAS.

RELIGIOUS.

Soul was supposed to be present near the corpse. This belief led to celebration of succession to throne in imperial presence of deceased monarch.

Numerous *deities*, male and female, were worshipped, including Wên Ti, the God of Literature, Kuan Ti, the God of War, etc. The worship of the Fire Goddess, adopted in 133 B.C., afterwards became that of the Kitchen God.

The worship of the Five Emperors was more developed, and became imperial.

Taoism was epicurean in doctrine, but in attempting to find the elixir of life degenerated into a superstitious alchemy. There was a Taoist Triad, the nominated the "Three Pure Ones," presiding in heaven, whence benevolence and mercy were promulgated in the lower world. Lao Tzŭ's doctrines, originally philosophical, assumed a religious nature by being placed in rivalry with Buddhism. The founder was considered an impersonation of the ultimate principle (*tao*), which all things sprang, and became incarnate at various times. Only the priests of the sect were regarded as its members. They studied astrology and professed to have dealings with spirits, and walked barefoot through fire as a test of sincerity of mind. A great variety of idols were worshipped, the pantheon including genii, devils inferior spirits, and numberless other objects of worship. The organization of the sect, which has been called Rationalist, was a regular hierarchy, under the supervision of the government. Succession to the headship was determined by casting a piece of iron into a well which when it floated had the required name written on it.

Buddhism found in China a popular religion, the chief characteristics of which were serpent and tree worship, the ethical system of Confucianism with its ancestor-worship, and Taoism, now greatly degenerated.

It took the side of popular superstition and Taoism against Confucianism. It accepted first on philosophical grounds a belief in extinction, but, giving way to popular sympathy, taught a happy future state. Its power lay in its ability to supply the lack of certainty in the popular notions respecting this future state and the nature of the gods. It enjoined obedience to its ten command-ments, celibacy, contemplation, prayer, fasting, and almsgiving, the reward being attainment of purity and the serene nirvana. The progress to power of the priesthood was checked by the scholastic literati, who had in the classics a higher standard of ethical philosophy. Until officially recognized (A.D. 62) it met with little success. In spite of its defects, its salutary influence on the national life cannot be denied.

Judaism obtained a footing, but did not attract much serious attention.

Christianity said to have been preached and a church built.

The effect of Babylonian thought was said to be apparent in Buddhist *mythology* and cosmogony in China.

Charms rapidly multiplied on the introduction of paper. Seals were used as amulets. *Magic arts* were practised. *Supernatural powers and qualities* ascribed to men and things. Believed in existence of elixir of life. *Sorcery, witchcraft*, etc., common.

Divination continued to be practised.

KNOWLEDGE.

Mathematics: Arithmetic studied. Hindu processes in algebra known. Decimal system of notation adopted.

Chronology: The old method of determining duration of the national history by the lengths of the sovereigns' reigns was replaced by a chronological scheme in which the old cycle of 60 was employed. The calendar was reformed and an annual almanac published. The cycle was now used to chronicle years as well as days, and a duodecimal division of the day was adopted.

Publication of annual almanac began 104 B.C.

Magnetism, etc.: A.D. 1. Property of polarity was known but not applied.

100. Magnetic needle said to have been used in imperial boats and carriages.

150. *Alchemy.*

Astronomy: Knowledge of the epoch of Calippus and that the moon shines by borrowed light were brought from the West. Bronze astrolabes used to observe stars.

Sunspots and "sun-shadows" recorded 28 and 20 B.C. and A.D. 188.

Geography: Indistinct views were held respecting the antipodes.

Special officers were sent, in this and later periods, to trace the Ho (modern Yellow R.) to its source.

Khoten first mentioned.

An office for map-making.

Botany: Ideas respecting nature and growth of plants unscientific.

Anatomy, medicine, surgery, etc.: Some indistinct ideas as to effect of environment. Nature of organs little understood. Effects of various fruits recognized.

Various medicines. Anæsthetics invented. Trepanning suggested. Acupuncture with needle and surgery practised. Various treatises on medicine, etc.

Political economy: Problems of wealth and poverty, poverty and crime, etc., discussed.

Political science was affected by the foreign element of thought.

Ethics: Man's nature neither good nor evil. Development wholly dependent upon environment.

Confucian ethics predominant.

History took a mature form. It was sober, conscientious, and free from supernaturalism.

Learning: There was a general revival of learning and authorship greatly aided by the invention of paper.

LANGUAGE.

Characters (now called *tzŭ*) underwent certain modifications and orthographical improvements. Sounds began to receive attention.

Many new words, chiefly technical, came in with Buddhism.

Imparting tone commences with vowel finals.

c. A.D. 100. The *hsing shu*, "running hand," and *tsʻao tzŭ*, "grass character," forms of writing were introduced. They caused confusion and later on reversion to ancient form.

The *Fang Yen* recorded the dialectical varieties existing in 1st cent. B.C.

The *Shuo Wên*, a dictionary and lexicon of lesser seal characters, compiled to preserve original form of characters.

c. A.D. 200. *Li shu* style of writing.

It was the style of official attendants and used in engrossing documents.

It differed but little from the ordinary writing.

PROCESSES.

DISTRIBUTION.

Trade: Trade with other countries began. Two N. and S. of the Tien Shan. The trade route by the Canton River and the Hu Nan Hsiang R. had been used long before 196 B.C. In 134 B.C. a regular junk trade existed between Yün Nan, Kuei Chou, and Canton. But some of the river routes to Canton were only discovered about 100 B.C.

Silk and iron went by land until driven to sea by Parthian cupidity 2 centuries later. Over 50 kinds of produce imported from Ta Tsʻin. 5 to 10 caravans sent annually to Ili and Ferghana. Communications with India and Central Asia were first opened 140–86 B.C. By 115 B.C. a regular intercourse with the 36 States of the Western regions established.

The Hans permitted the Hsiung Nu to carry on a regular border trade during the greater part of this period. There was some trade with Corea.

The backbone of internal trade consisted of grain, salt, iron, horses, provender, carts, silk for clothing, wadding, and copper—almost entirely subserving military purposes.

Frontier fairs and even clandestine trade are mentioned as early as 140 B.C.

A.D. 50. Chinese products and manufactures were imported into Egypt.

94. Parthians and other West Asian nations acted as intermediaries between Chinese and Roman Empires and prevented direct intercourse. In the 1st cent. A.D. there was a brisk trade in silk between China and Rome. The Parthians trying to monopolize it, the Romans had recourse to the sea route.

136. Carthaginians and Romans maintained regular commercial intercourse with the Chinese.

220. There was irregular communication with Persia and India. The silk trade with those countries was carried on in face of formidable obstacles, raising its market value.

Nine markets were established in Ch'ang An.

Means of conveyance: Prisoners were conveyed in a van resembling a cage.

The system of transporting the revenue in kind was burdensome.

Other means were the same as before.

EXCHANGE.

A uniform *system of currency*, which lasted 400 years, was established.

The golden coins (*chʻien*) were the principal media of exchange.

Precious stones and shells were perhaps still formed part of the monetary system.

Certain articles obtained money value by being impressed with the official seal.

Copper coinage good. Cowry disappeared (c. 200 B.C.).

Characters inscribed on coins (200 B.C.).

The *measures* and standards of length and capacity were unified.

Measures were adjusted in the 2nd month of autumn.

Measures of length:

Chʻih measured 9 *tsʻun* and 9 *fên*. It is calculated to have been equal to 11·17 in.

1 millet seed	=	1 *fên*.
10 *fên*	=	1 *tsʻun*.
10 *tsʻun*	=	1 *chʻih*.
10 *chʻih*	=	1 *chang*.
10 *chang*	=	1 *yin*.

Land measure:

100 *pu*	=	6 *chʻih* = 1 *pu*.
100 *mʻu*	=	1 *fun*.
3 *fu*	=	1 *ching*.

Area:

Apartments measured by *chʻi* (small tallies).

Palaces	"	*pʻu* (mats).
Wildernesses	"	*kuan* (8 feet).
Roads	"	*pʻu* (paces).
	"	*Yüeh* (tracks).

chʻi = 5 feet.
pu = 6 " "
kuei = 7 " "
kuan = 8 " "

Capacity:

10 *kuei*	=	6 *sʻai* (grains) = 1 *kuei*.
10 *kʻo*	=	1 *chʻi ʻo*.
10 *chʻi ʻo*	=	1 *kʻo*.
10 *chʻi ʻo*	=	1 *hu*.

and

2 *sʻai*	=	1 *ko*.
10 *ko*	=	1 *shêng*.
10 *shêng*	=	1 *tou*.
10 *tou*	=	1 *hu*.

The *shêng* and *tou* were larger than in ancient times.

PRODUCTION.

Oxen said to have first substituted for human labour in ploughing in 2nd cent. B.C.

"Production at a standard" first carried use of horse.

A hydraulic machine to cast agricultural implements. A sowing-machine mentioned.

ARTS.

Manufacture of porcelain said by some to have begun between 185 B.C. and A.D. 85.

Wine-making was introduced in the 2nd cent. B.C.

Paper-making introduced from the West (A.D. 200). Skin and silk.

Paper were stamped with seals. Vermilion mixed with oil was used for printer's ink.

Salt was evaporated in the sun.

The people of Wu Yüan taught weaving and spinning by Tsʻui Shih.

Candles made from the oil of the *cassia tignea*.

Walls made of earth pounded between wooden frames.

AGRICULTURE, ETC.

178 B.C. the rite of imperial ploughing was revived to guard against neglect of agriculture.

The walnut, cultivated grape, knotty bamboo, and hemp were brought to China in the 2nd cent. B.C.

Horses, pampered in accordance with the luxurious spirit of the age, degenerated, and there was a large mortality.

Levelling: A great high road was constructed from the centre of the empire to Singnan on the western frontier. A decree was issued to governors of provinces ordering roads to be made in all directions.

Raising: The Great Wall, 1,400 miles in length, 22 feet in height, and 20 feet in thickness, was completed by connecting several shorter walls previously existing. Cities said to have been first surrounded by walls. Suspension bridges invented; one 150 yards long. Numerous stone bridges, high stone terraces, towers, walls of different kinds, dams, and raised paths.

A memorial pyramid erected.

PRODUCTS.

LAND-WORKS.

Many great public works (roads, bridges, canals, and aqueducts) were constructed.

Excavating: A canal joined the Huang Ho and the Yang Tzŭ. A dyke, 30 miles long, was constructed for relief of the Huang Ho. Many canals (some to convey river-water to cities), moats, dykes, channels, sluices, large ponds for irrigation purposes, trains, and wells are mentioned. Rivers diverted to water wastes.

Levelling: A great high road was constructed from the centre of the empire to Singnan on the western frontier. A decree was issued to governors of provinces ordering roads to be made in all directions.

Raising: The Great Wall, 1,400 miles in length, 22 feet in height, and 20 feet in thickness, was completed by connecting several shorter walls previously existing. Cities said to have been first surrounded by walls. Suspension bridges invented; one 150 yards long. Numerous stone bridges, high stone terraces, towers, walls of different kinds, dams, and raised paths.

A memorial pyramid erected.

HABITATIONS.

Houses probably remained much the same as in previous period, though palaces were more elaborate. Windows of *liu-li* (glass-like substance) are mentioned. Cellars with windows.

kung was now re-served for the emperor's palace.

FOOD.

Food: Principal articles remained the same as in previous period, Horse-deer, wolf-, ox-flesh, mutton, pig's liver, ribs of bacon, roast goose, boiled fish, mon-key, snake, "dried meat," "fried meat"; intestines of fish, fish, preserved fish; mutton-dog-, owl-, and camel-hoof soups; rice, dried or parched, meat (of various kinds), vermicelli, beancurd; white salt, rock salt, salted beans, condiments, sauces, and vinegar; cakes of various kinds, various kinds. Cooks or stock-ings, grass, hemp, silk

DATES.

221.

OPERATIVE.

Sexual: Empresses did weaving. The imperial maids at Fang Lo did the work of butchers and wine sellers. A female iron-worker is mentioned.

Specialization: Instances occur of soldiers serving as shipbuilders and of a magistrate trafficking in iron. In Ho Tung, there being a superfluity of traders, many were converted to farmers. Cultivation of the lake-fields in Yü Yao, Mou, and Yin originated profitable occupation for people without property. Fishermen and hunters sometimes also reared silkworms.

Dog-butchers, shepherds, costers, fowlers, fishers, makers of temple utensils, iron- and steel-workers, bricklayers, engravers on stone, etc., are mentioned.

Localization: Chamæropes shoes were produced in Shu. A hill near Ch'ang An was famous for medical herbs. Grain was plentiful at Tung Ling, and silver ore in the Li and Pai Têng hills of Ch'ang An. Ching-Tê Chên was devoted to the manufacture of pottery from 557.

REGULATIVE.

LAND.—In Wei two taxes, the land-tax (*chu*) and family-tax, both in kind, were levied, the total being perhaps $\frac{1}{20}$th of the gross produce. A certain minimum of land was secured to each individual, and additional allotments granted according to the amount of tax paid (regulated by number of able-bodied males). In 328, another system called *tou*, levying $\frac{1}{10}$th of the gross produce, was introduced. In 377 this was abandoned and the *chu* system re-introduced. Officials were allowed a certain number (not exceeding 40) of *serfs* or "foreign cultivators" on their estates, who were exempt both from land-tax and government *corvées*. During the Minor Dynasties, the power of the large land-holders and the number of their tenants grew. The tax was represented, no longer by land, but by a fixed quantity, but, as in ancient times, by the variable produce of a portion of land. The State was the owner of a certain quantity of land which it leased to its subjects and which the latter, consequently, had no right to sell. Only land held in excess of the allotments could be sold.

Lands were held only so long as the occupiers were able to cultivate them. The size of holdings varied with the number of persons in a family.

Slavery: The class of slaves was largely supplied by poor cultivators who placed themselves and their lands under the protection of powerful individuals. During the E. Chin (317–419) the protected husbandmen appear as very serfs, freed by law from taxes and personal service. Their number was limited in proportion to the rank of their lord, who was obliged to inscribe them on his domestic register, and was assessed in proportion. [See also *Land, supra.*] Under the second Wei dynasty (386–535) all labour, even on small properties, was done by slaves, the master refusing to work. Married proprietors were allowed 8 persons (male and female); unmarried ones, 4. Ten oxen were considered as equal to 8 slaves. There was forced labour on public lands.

Except in times of great distress (and particularly after the Wei and Later Chou invasions of the 6th cent.), the slave was not usually ill-treated.

State slaves over 65 years of age were (in 566) declared to be free. Under Kuang Wu prisoners of war were often sold. In consequence of the invasion of the northern kings, a great part of the population of the south were made prisoners and slaves.

INDUSTRY.—Liquor making was forbidden under the Chin. Officers of the 7th rank and upwards might not sell tea.

POLITICAL.

DOMESTIC.

MARITAL.	FILIAL.
Marriage: The law against endogamous marriages was re-affirmed. Inter-marriage between the royal families of the States became the practice.	*Adoption:* Adoption was common. It sometimes took place when the adopter was on the point of death.
Impediments: Royal family, scholars, and common people forbidden to marry out of their own class. Menial families were not allowed to inter-marry with those of scholars.	*Succession:* Sister's grandson was an improper heir.
Betrothal: A custom was in vogue of selecting partners for daughters from the list of successful graduates at examinations. There were instances of pre-natal or womb-betrothal. On the proposal being made by the man's family, the woman made a "betrothal present," as a proof of contract.	*Relation between parents and children:* A large number of instances occur of filial devotion occasionally supernaturally aided.
Widowhood: Widows continued strenuously to resist re-marriage. Marrying a widow was considered an act of unchastity.	
Prostitution: Prostitutes were given as presents to victorious warriors.	

CIVIL.

The result of the general disunion, military contests (Tibetan invasion, revolt of the "Yellow Turbans," etc.) and palace intrigue was the establishment of three separate kingdoms, ruled by successful generals. One of these, held at Sŭch'uan, then called Shu; another governed the southern provinces (Wu); and a third the central and northern provinces (Wei). Of these, the last gradually acquired supremacy. The methods of administration were similar in all the States. Wu and Shu extended the influence of the Chinese race, and assisted its emigration.

Though temporarily re-united under the Chin dynasty, the empire did not become really consolidated.

In 290–307 the Tartar chiefs drove the enfeebled Chin rulers south, where they established their capital at Nanking. The invaders, however, were obliged by disunion to remove their capital from Pingyang to Singnan, and though the disintegration continued, the Chin dynasty was unable to regain its former splendour, and was shortly afterwards replaced by the Sung.

The Sung dynasty never possessed exclusive power amongst the Chinese. It was soon engaged in a struggle for existence with the King of Wei on the north. The object was first the recovery of Honan, which Wei had overrun. This was attained, but the province was shortly retaken by the Wei. A succession of murders put an end to the line.

The Ch'i dynasty made no change in the political nature of the empire.

The Liang dynasty had its capital at Nanking, and was soon brought into collision with Wei, which, after ruling from Pingching, had transferred the seat of government to Honan. Success was predominantly on the side of Wei, and Wu Ti was at length completely overthrown, his successors sharing a similar fate.

The Ch'ên dynasty replaced the Liang in 557, and the Wei disappeared about the same time, being merged in the Chou, which also speedily extinguished the Ch'ên.

The empire was greatly enlarged towards the close of this period by annexations in the west. Diplomatic relations were opened with Japan and an embassy was sent to the court from Cochin China.

A project to re-unite the empire was formed by the Wei commander-in-chief, who revolted against the Queen, but was assassinated without fulfilling his object. Nevertheless success still attended the Wei dynasty in its contest with Wu, and the power of the latter was reduced to a shadow.

PUBLIC.

GENERAL.

RANKS.—There was no change in the principle of hereditary *succession to the throne.* In practice, however, usurpations were frequent. The sovereign was at times in the hands of his ministers, and eunuchs interfered in government affairs.

Officials (Ch'ên): The nobles held their rank on the system of the Later Feudal Period. They were afterwards divided into 6 by the Ch'ên in 260, and from 550 into 5, classes. Nobility was conferred for military service. The official administration seems to have been demoralized, until reformed by Hsiao Wên Ti (471–500).

In Wei women were for the first time admitted to official posts. The right of relatives of the queen to hold office was, however, soon taken away by law. Salaries were paid instead of land grants from 484. Scholars were numerous. Their position and that of the *agricultural and industrial classes* remained the same.

INSTITUTIONS.—Lo Yang, Ch'êng Tu, and Kien Kang were the capitals of Wei, Shu, and Wu; afterwards, chiefly Lo Yang and Kien Yeh. The *divisions* were into provinces (19), *chün*, and *hsien*.

The *executive* system was generally the same as under the Hans. The Chin adopted economical measures, abolishing 700 officials.

During the period of the Three Kingdoms, the *San Kung* were the same as under the Later Han. In 227 an additional post, *T'ai Pao*, was instituted. The duties of the *Ta Ssŭ Ma*, *T'ai Wei*, and *Ta Chiang Chün* were of a military character. On the establishment of the Wei King-dom the post of *Ch'êng Hsiang*, Prime Minister, was changed to *Sŭ T'u*. In Wu, there were Left and Right *Ch'êng Hsiang*, and Wên Ti (of Wu) re-established the post. *Shu Chien Ling*, who, together with the *Ch'êng Hsiang*, transacted secret affairs of State. Next to the *Chung Shu Chien Ling* were the *Chu Tso Shang Shu*, Secretaries of all the Boards. At the head of the Chin dynasty officials were the *Pa Kung*, Eight Officers. They were all appointed at the same time, determining the government policy and guiding the affairs of the nation, there being no Prime Minister. The other government ministers were the *Chu Tso Shang Shu*, Presidents of all the Boards. *Ch'i Pu Shang Shu*, President of the Board of Works (only appointed when required), and *Kuo Tzŭ Chi Chiu*, President of the Imperial Academy. Under the several minor dynasties which followed the Chin, the official system, like that of the latter dynasty, and of the Three Kingdoms, was framed very largely on the lines of that obtaining under the Hans. The largest number of officials were appointed under the Later Wei (7,764) and the smallest under the Ch'i (2,103).

The provinces were at first, as before, under *Chou Mu*, but later on under military Governors.

The *laws* were frequently revised by order of the emperor.

Judicial administration continued in the hands of executive and of special judicial officers. The *T'ing Wei* was a hereditary office for the aristocratic class.

Revenue was derived from the land and poll-taxes, and miscellaneous imposts (percentage on sales, market-tax, etc). In 506 the salt monopoly in the Ho Tung area was abolished. There was no material change in the financial system. Exemptions on the ground of youth, age, government service, etc., continued.

LAWS.

A.D. 233. The old laws of Ch'in and Han hitherto in use were replaced by revised laws which abridged and simplified. The punishment of castration was abolished in Wei in 248. Flogging to death substituted for decapitation. Adulterers put in "silkworm room," and robbers had feet amputated. A system of alternative punishments—amputation of the right foot for death, having the head for tattooing, etc. — saved many lives. In Wei a married woman was not involved in the death penalty of both her father's and husband's families; and the punishment for killing others through oppression was mitigated from death to slavery in the imperial household.

Under the Chin, the new law was amplified, and in 268 Chia Yün adopted the "Nine Laws" of the Han, adding 11 sections, making 630 articles or clauses. Decisions were arbitrary. The law as to plundering and seizing was subdivided. In Wei in 265–290 the punishment of amputation of the feet was changed to putting in wooden fetters. Regicides and traitors — at least in the south—had their eyes gouged out and face skinned. The Emperor Min (313–7) changed the law as to fines. Men might be fined, but women had increased flogging. Crimes might be redeemed by the criminals becoming government menials. Fugitives had their feet, and robbers their hands, cut off, and licentious people were castrated. Criminals punishable by various punishments

LOCAL.

With minor alterations the system was the same as under the previous period.

MILITARY.

A series of military tactics, called the "Eight Dispositions," was improved and perfected by Chu Ko-liang. The importance of previous strict training was recognized. The people were to be taught for 7 years so that they might be employed in war. Generals were to instruct their subordinate officers in the evolution of drill, movements, and the meanings of flags. Military exercises practised. Single file columns were first formed and others built up with them.

If attacked on both sides, troops protected themselves by chariots and waited for the enemy. If in a defile, the "saw tooth" column was formed.

Chariots were used to stop the onrush of the enemy, to convey food and weapons on the march, and to form a ring round the camp.

Drums, gongs, cymbals, and flags continued in use.

The period of the Chin dynasties (265–420) was the age of strategy rather than of hard fighting. Military science was taught in the national college. In Wu iron chains and spikes laid in rivers. Men of straw on rafts used to deceive enemy.

Ma Lung (A.D. 300) followed the system of Chu Ko-liang. For fighting in narrow defiles chariots were made with upper storeys. He also stayed armoured troops by the use of powerful lodestone. Forces of 20,000 cavalry are mentioned. Bags of earth were used (324) to dam river to flood out besieged city. Armed troops were regularly drilled and reviews held. Troops were trained for forest warfare.

Fu Têng (344–95) distributed the strength of his forces equally, mixing the strong with the weak. He used the square and circle formations. His soldiers were armed with long spears (used on horseback) and hooked swords.

352–99. Flying columns of cavalry are mentioned and stress laid on the weakness of disunion of forces.

397–419. Farmers were used as garrisons in autumn and winter.

Pæans played on victory.

The remains of an enemy were mangled or destroyed.

Yang Yün-chang in Kao Ti's reign (479–83) commanded 700 skilled archers.

A more systematic division of troops obtained under Wu Ti.

After the conquest of Wei the *Tzŭ Shih* (Viceroys) were no longer in command of soldiers, 100 military officers being assigned to a large province and 50 to a small one.

Scouting columns are mentioned. Forts.

The drill grounds were repaired and military regulations promulgated.

ECCLESIASTICAL.

	PROFESSIONAL.
Priesthood: The *wu* were very powerful. In 472 they were excluded from State religion, and further restricted in 484.	Many eminent physicians. The profession was hereditary. Exorcising priests practised medicine. Actors were officially controlled.
Chinese novices began to take the vows for the Buddhist priesthood and monasteries were endowed for their reception.	
Nunneries were introduced under the E. Chin, and in 434, under Wên Ti, of the Sung, nuns began to receive monastic injunctions.	
The people were at times forbidden and at times allowed to enter the priesthood.	
In 501 a Buddhist priest became pope with 4 jurisdictions.	
Sacred places and temples: Buddhist temples, monasteries and altars built in various parts.	
550. Temples to the goddess of Mercy (represented as a man) erected on Puto under government patronage.	
Sacrifices and observances: Fasting and prayer for happiness of deceased in Hells below.	
Sacrificial victims were ordered to be made of dough by Wu Li of Liang (464–549), in order to avoid taking life.	
In 485 a thanksgiving was first ordered by imperial decree to form part of the Confucian ceremonies.	
Sectarianism: The White Lotus Society attempted to restore the church of Buddha to its former glory.	
Heresy: Buddhism and all unorthodox sects were rigorously persecuted. Christianity was introduced by the Nestorians in 505.	
Connection with State: Several emperors were devout Buddhists, and encouraged the doctrine by building temples, etc. Tao Wu Ti (386–409) bestowed a posthumous title on a deceased Buddhist priest.	
In 424, under Wên Ti of the Liu Sung, a priest was consulted on government matters and had political power.	
In 442 the custom of emperors receiving written Taoist charms originated.	
Kao Tsu built the T'ung T'ai monastery and became a slave to be redeemed by valuable offerings to the Buddha.	
Conversion: At the beginning of the Wei dynasty many Chinese became Buddhist priests.	
In Chao the patronage and respect of the Prince towards a Buddhist priest from India brought many converts to that faith and caused the erection of many temples.	
The Emperor Shih Tsu, after being a staunch Confucianist and prohibiting Taoism and divination, was converted to Buddhism in 381.	
Buddhism was popularized by the translation of the sûtras, etc., especially in 405–12.	
The pilgrim Fa Hsien returned with Buddhist scriptures in 414.	
In 520 the patriarch Bôdhidharma arrived with the sacred bowl of the Patriarchate and was honourably received by the Governor of Canton and summoned to Nanking by the Emperor.	

ACCESSORY INSTITUTIONS.

Education: Education declined. Not 1 in 40 Court dignitaries could write. State Colleges degenerated into boarding-schools for privileged idlers. Private schools were refused official countenance, the discouragement injuriously affecting education.

In 318 *hsün ts'ai* and *chü jên* were ordered to undergo examinations in the Classics.

In 352 all the students at the metropolis were dismissed.

Colleges and schools: In the Chin dynasty the colleges in Po Yang were repaired and education encouraged. In 502 Wu Ti, 1st Emperor of the Liang dynasty, established colleges in every district. In 466, District Colleges were instituted with 20 scholars under 1 Director and 2 Sub-Directors. In 505 five classical colleges were abolished by Wu Ti, but in that year many colleges were built, and Doctors appointed to teach the Five Classics. Scholars were very numerous. Colleges of a great prefecture had 2 Doctors, 4 Preceptors, and 100 students; of medium and small prefectures in proportion.

In 506 the *Chi Yu* college was established; in 541 a *shih lin* college built at the west of the Imperial palace; and in 552 a department college, with Directors of Studies, in the Confucian Temple.

Literary associations were formed. In the 3rd cent. the poetical association known as "The Seven Sages of the Bamboo Grove" flourished.

Libraries: In 220 a library was established by Wên Ti of Wei, but was little patronized owing to the stringent conditions imposed. An instance of a private lending library occurs; a "Hall of Sacred Literature" was established by Ming Ti in 227.

Poor relief: Six buildings under ecclesiastical auspices for the sick poor were founded (479–501).

CEREMONIAL.

MUTILATIONS.	FUNERAL RITES.	LAWS OF INTERCOURSE.
Similar to previous period.	Waste in connection with burials discountenanced. Gold used in filling mouth of dead. Corpse treated with gold and jade to arrest decay. Many valuables were placed in the grave, but the practice of burying valueless counterfeits gained ground. Howling done by slaves and concubines. Recalling of soul not always essential. Practice of dwelling upon tombs common. Placing stone figures on graves forbidden (278), but stone tablets and pillars erected. Tumuli covered large areas. Mausolea contained temples. Sacrificial temples often very beautiful. Honorary gates and tablets began to be conferred upon suitees. Post-mortem marriages, at first not frequent, took place in increasing numbers towards the end of the period.	*Concrete distinctions:* There were distinctions in the number and size of the military flags, streamers, swords etc., belonging to persons, princes, ministers, etc. Scholars, soldiers, and workmen could only wear green, black, or white shoes; servants (male and female) black only. Criminals were distinguished by differently coloured head-dresses, garments, shoes, etc. There was now no arch in front of the palace door.
	Mourning: A new code based on the *Li chi* was adopted. Officials resigned their duties, but the still-extant prohibitions against marriage were not regarded as binding. The 27 months' period was re-established. Private apartments of deceased were avoided by sons and their wives. Mourning for sovereign strictly enforced. After 400 it ceased on completion of burial. Mourning involved fasting. There were many instances of its being rigorously carried out; it was, however, not officially imposed.	*Ceremony:* Ceremonial observances apparently irksome. Concubine's salutation now returned by consort.
		Titles of Confucius changed.
		Laws of intercourse generally remained unchanged.

CHIEF PERSONS.

EXECUTIVE.	LEGISLATIVE.	EXECUTIVE.
Rulers.	Ts'ao Chih (writer). Wang Shu (commentator). Wang Pi (ditto). Ch'iao Chou (author). Yüan Chi (poet and musician). Huang-fu Mi (author). Hsün Hsü (artist and editor). Hsiang Hsiu (poet and commentator). Liu Lang (ditto). Liu Shao (critic and author). Ma Chün (mechanic). Meng K'ang (commentator). Wei Yao (scholar and writer). Sun Shu-ao (philologer). Wang Su (commentator). Fan Hsüan (classical writer). Fan Hsüan (musician). Tsun Sêng (astrologer). Kuo Hung (ditto). Li Ch'ung (calligraphist, etc.). Sun Ch'o (poet). Fa Hsien (antiquarian writer). Kuo Po (geomancer, etc.). Kuo Pu (geomancer). Wang Hsi-chih (calligraphist). Ch'ên Shou (ditto). Ssŭ-ma Piao (historian, etc.). Hsieh Shêng (scholar). Liu Hsiao-piao (scholiast). Wang Chien (author). Shên Yo (historian).	Shun: Chün Lieh Ti (221) and Hou Chu, Wei (265–6). Wu Ti (266) and 4 emperors to 317. Chin: Yüan Ti (317) and 16 emperors to 420. Sung: Wu Ti (420) and 9 emperors to 479. Ch'i: Kao Ti (479) and 6 emperors to 502. Liang: Wu Ti (502) and 5 emperors to 557. Ch'ên: Wu Ti (557) and 5 emperors to 589.
Chao Yün. Chu-ko Liang. Shih Ch'ung. Liu Yuan. Chang Kuei. Yao I-chung. Mu-jung Ch'ui. T'an Tao-chi. Wang Hsi. Han Ch'in-hu.		

SENTIMENTS.

ÆSTHETIC.	MORAL.
Enjoyment of natural beauty marked. Ornamental plants introduced.	The period 291–300 was characterized by a collapse of public morality and a greed for wealth.
	Men were generally given to adultery, but the women more so. "Before the night of her marriage a woman bade farewell to her adultérers." The more numerous they were, the more she was esteemed by her husband. Adultery after marriage, however, was punished.
	Revenge was taken even on the dead. Cannibalism continued as late as the 5th cent.
	Drunkenness apparently became rarer after the introduction of the tea-plant about A.D. 350.
	The Court was in rigid subjection to the Rites. Regular hours and attention to duties were required of the sovereign.
	Rebellion was regarded as so serious a crime that even a prostitute would not serve a rebel.
	Instances occur of discountenancing of extravagance at marriage, assisting poor, leniency towards prisoners, bearing hunger for sake of parents, fraternity, bravery, sacrificing own son to save brother's, condemnation of unchastity, etc.

IDEAS.

RELIGIOUS.	KNOWLEDGE.
An impulse was given to the spread of *Buddhism* by the works brought back by pilgrims and expeditions sent to India at various times for that purpose. It became completely established and received much imperial patronage. In spite of occasional persecutions it had, by the middle of the 6th century, spread over practically the whole of the empire. Confucianism for a time lost much ground.	*Mathematics:* Counting was done by the aid of bamboo slips. From this time onwards works on arithmetic were exceedingly numerous. 442. Latitude determined by measuring shadow on S. side of gnomon at summer solstice.
Buddhist emissaries were sent from Tibet, the Church of that country being officially recognized.	*Geography:* Some knowledge of the Roman Empire was acquired through the Hindus.
Soul co-habited with body after death, but its existence was doubted by some writers. Destruction of corpse prevented return of manes.	*Chronology:* A new calendar was constructed in 445. The sidereal was distinguished from the tropical year. Various corrections made in estimate of sun's movement. Various observations on movements of planets. Day now divided into 940 parts.
Dreams treated as presages of future events.	*Alchemists* often mentioned.
Early toleration of *Christianity* due to indifference. Nestorianism. Persecutions in 699 and 715.	*Chemistry* was studied. Charcoal combined with sulphur and saltpetre.
Bamboos were burnt to exorcise evil spirits. Jade could render man immortal. Swords had super-human powers. Numerous deities. Genii, elfs, sprites.	*Astronomy:* Many calculations were made respecting the distance of the heavens, diameter of the sun, etc., with ludicrous results. 300–350. Procession of the equinoxes discovered. First observation of undoubted sunspot, 301. Many sunspots and sun-shadows observed and recorded from 300 onwards, with intervals. 438. Steel orrery constructed.
	Meteorology: Fall of "red rain" recorded.
	Medicine, etc.: Drugs, acupuncture, and counter-irritants used, professedly with good results, but medical knowledge rudimentary. Cæsarian operation performed 285. Numerous medical works continued to be written.
	Philosophy: Philosophical thought practically stationary. Hindoo sciences.

LANGUAGE

Characters classified according to sounds. Departing tone completed with final consonants. 345. Calligraphy. Old forms of written character no longer in ordinary use. The *k'ai shu*, or pattern style of writing, became established, being gradually formed by improvements in good writing. c. 500. Tones first consciously discriminated. Four tones recognized in native works. First appearance of colloquial mandarin. 500. The *yün hsieh*, system of spelling was introduced by Buddhists. 543. Radicals numbered 542. They were not uniformly placed. Characters were grouped according to sound or composition. Several "market languages" are mentioned.

PROCESSES.

DISTRIBUTION.	EXCHANGE.
Trade with Persia (chiefly silk) and various kingdoms bordering the desert continued. Land traffic was safer and quicker than sea. A brisk trade was maintained with Ceylon, India, became established, being gradually formed by improvements in good writing. c. 500. Tones first consciously discriminated. Four tones recognized in native works. First appearance of colloquial mandarin. 500. The *yün hsieh*, system of spelling was introduced by Buddhists. 543. Radicals numbered 542. They were not uniformly placed. Characters were grouped according to sound or composition. Several "market languages" are mentioned.	Numerous new coinages were issued. Barter at times reverted to. Civil troubles favoured counterfeiting. In 500 the 2 belts separated by the Mei Ling represented the weight and coinage regions. Silver came from Burma and from the Arab traders.
	Measures of length: The *ch'ih*, being a *fên* longer than in ancient times, was reduced by $\frac{8}{10}$ths to make it equal to that of the Chou dynasty. The *Su chien ch'ih* was equal to 1 *ch'ih* 2 *fên* of the Chou.
	Capacity: In the Wei and Ch'i dynasties the *tou* was equal to 2, and in the Chou and Sui to 3, of ancient times.

PRODUCTION.	ARTS.	AGRICULTURE, ETC.
Water-mills. Hand and animal labour.	*Hunting* was much indulged in by emperors, but under restraint.	Agricultural processes probably similar to those of previous periods. 350. Tea shrub cultivated for the infusion of its leaves. It grew only south of 35° lat.
	Fishing: Monkey's hair put on nets as a snare.	
	Cooking: Wax candles used as fuel.	
	Weaving: Hempen cloth woven from fibre of grass-cloth nettle.	
	Pottery: 220–264. Manufacture of porcelain established at Si-ngan Fu. 265–419. Blue porcelain made in Chekiang Province.	

PRODUCTS.

LAND-WORKS.	HABITATIONS.
Wells, dykes, ponds, and canals were made. Large dykes constructed or military purposes. The Huang Ho was banked at Mong-tsin. Towers, bridges, altars, walls and ramparts round cities, stone dams, locks, and embankments were numerous.	Palaces and imperial buildings were of costly construction and highly ornamented.

FOOD.	CLOTHING.
Food: Rice, dried meat, seasoned mince-meat, pre-served meat, hashed and pickled fish, dogs, dump-lings, etc., continued to be eaten. Roast-ox-heart, frogs, sliced swine's neck, roast gold-finch, steamed pork, steamed bear's flesh, duck soup, lambs' eyes soup, cress soup, etc., are mentioned. Salt and various condiments, etc., were used. Several kinds of congees.	Cloth-ing generally had changed little, either in shape or materials. Girdles and girdle-orna-ments continued to be worn. Hemp stock-ings, shoes (mostly of grass), and a large variety of hats, caps, and headker-chiefs.
Man t'ou, dough stuffed with meat, first made. Various cakes ("ring cake," "Tartar cake," etc.).	
Syrups, honey, and numer-ous fruits.	
Beverages: Tea was first made from the shrub, and became the national drink. Several wines and spirits.	

IMPLEMENTS.	WEAPONS
The *chi*, stool, now distinct from the *an*, low table or bench. Among implements mentioned in the literature of this period are beds, bedsteads, mattresses, quilts, pillows, screens, curtains, curtain-poles and hooks, mosquito-curtains, mats, rugs, boxes, chests, bags, purses, lanterns, bells, locks, needles, flat-irons, stoves, candles, wicks, oil, copper-pens (writing-brush), writing-paper of various kinds, ink, inkstones, chopsticks and chop-stick-vases, drinking-cups, plates, dishes, teapots (earthen-ware and tin), strainers, steamers, wine-warmers, pans, saucepans, pestles and mortars, pounding-sticks, spittoons, mirrors, mirror-cases, hair-pins, artificial flowers, ornaments, finger-rings, bracelets, face-pow-der, rouge, ointment, fragrant oil, oil of roses, salve, combs, comb-cleaners, perfume-bags, hand-kerchiefs, walking-sticks, staffs, dry-ing-frames, incense-urns, incense-spoons, sceptres, carriages, saddles, bridles, horse's leather breast-plates, etc., mud-guards, boats, junks, punting-poles, sails, halyards, hawsers, anchors, weather-cocks, rafts, and numer-ous agri-cultural, sericul-tural, weav-ing, hunt-ing, and fish-ing im-plements. The um-brella is first men-tioned in 300. It came into use in the 6th century. Fans were not allowed to be made of silk (c. 400).	*Offensive:* Swords of many kinds used. Axe men-tioned. Three-pointed halberds, "cock-crow lance," hooked spear, etc. Large bows used on foot and on horse-back. Cross-bows dis-charging 10 iron arrows simul-tane-ously. Arrow-stands. Bow-cases. Stone-hurling ma-chines. From this period the men-tion of machines for dis-charging stone projec-tiles becomes fre-quent. "Crack-ling" or "explod-ing staves." Mounds of earth and high towers con-structed for attacking purposes. War-junks, with turrets, holding 2,000 men.
	Defensive: "Tiger-head" shields. Mail of rhino-ceros-horns worn to counter-act attrac-tion of load-stones placed in passes by enemy. Iron spikes hidden in shallow rivers.

ÆSTHETIC PRODUCTS.
Object-decoration: Military standards richly ornamented and soldiers' jackets embroidered. Swords and scabbards adorned. Palace walls white-washed. Stools carved, varnish-ed, and painted with figures of flowers.
Personal adornment: Girls adorned themselves with white flowers.
Architecture: Pagodas, often built without wood, were erected in large numbers from this time on-wards. Their curling eaves were probably the prototype of those which be-gan to appear on the roofs of other buildings.
Painting: Plum flower began to be fa-vourite subject in painting.
Literature: In classical and general litera-ture there were produced essays, biographies, works on the Classics, music, philosophy, as well as numerous agri-cultural, sericultural, weaving, hunting, and fishing im-plements. The um-brella is first men-tioned in 300. It came into use in the 6th century. Fans were not allowed to be made of silk (c. 400).
Poetry flourished. It showed "energy and substantial reality." Its main themes were unity, friendship, and gallantry. Love-lyrics were most fully developed. Refinement, however, some times ran to affectation. An epicurean type of verse arose, and generally though the ideas were good, the ability to express them well was lacking, with the result that allusions and figurative expressions abounded. Under the Liang, the antique method was reverted to, but without its simplicity. Pieces stamped with the Buddhist spirit began to appear in fairly large numbers. Introduction of the tonal system and more exact definition of the rhyming endings originated the growth of the much-prized forms of versification which completed their development during the following period.
Music: Political disorder caused music to be neglected in the north, though attention was given to it in the southern provinces. Foreign music was introduced from Turfan and by Buddhists from India. A time-baton (*p'o pan*) was used. The *lü* were no longer made of bamboo, but of copper, marble, or jade-stone.
Dancing: Indian gymnasts introduced pantomimic dances and acrobatic performances.

EVENTS.

221. Minor Han dynasty established in Shu (Sŭ Ch'uan).

222. Emperor Liu Pei leading his army of 700,000 in person defeated by Sun Ch'üan's general Lu Sun at I Ling (Ichang).

Wu dynasty founded S. of Yang Tzŭ R.

228. Chu Ko-liang defeated by Wei at Chieh Ting (N.W. of Kingchou).

234. Earthquake at Lo Yang. Further earthquakes at various places in 237, 429, 513; droughts in 368, 415; a famine in 503; and a flood in 513.

265. Establishment of W. Chin dynasty.

294. Revolt of the Ti Chiang tribe in Shensi.

317. Establishment of E. Chin dynasty.

381. A Buddhist temple built in the Imperial palace.

386. Establishment of N. Wei dynasty.

399. Fa Hsien started on his journey to India, returning in 414.

405. General adoption of Buddhism.

420. Establishment of (Liu) Sung dynasty.

442. Sung repaired the temple of Confucius.

446. Destruction of all Buddhist temples, books, and priests in kingdom of Sung.

450. King of Wei sacrificed to Confucius in Lu.

479. End of Sung and establishment of Ch'i dynasty.

492. Emperor personally worshipped the ancient kings.

502. Establishment of Liang dynasty.

505. First temple to Confucius built in Liang.

509. Buddhism much in vogue in Wei; many temples built.

516. Buddhist temples and pagodas of great size and splendour built by Empress Hu.

518. Buddhist books brought from Turkestan.

520. Arrival of Bodhidharma at Canton.

534. Establishment of E. Wei dynasty.

535. Establishment of W. Wei dynasty.

550. Establishment of N. Ch'i dynasty.

555. Emperor decides in favour of Buddhism against Taoism.

557. Establishment of Ch'ên and N. Chou dynasties.

574. Taoism and Buddhism prohibited and their scriptures and images destroyed.

579. Taoist and Buddhist idolatry revived by Emperor Ching.

DATES.

589.

907.

960.

OPERATIVE.

Specialization: Butcher, wine-trader, tree-planter, plasterer, maker of satin, woodsman, paper and pen-maker, paster, workers in silver, earth, bamboo, makers of carriages, musical instruments, arrows, hats, helmets, varnisher, carpenter, embroiderer. Making legs of bedsteads was separate work from that of cabinet-makers.

Localization: Porcelain was made at Pien. On the foundation of the imperial manufactory at Chang-nan Chên (afterwards Ching-Tê Chên) this place became almost the only centre of porcelain manufacture. A special kind of light gauze was produced only at Fo Chou.

Sexual: Women wore military dresses and "circulating sentences" or palindromes.

REGULATIVE.

LAND.—All subjects, from highest to lowest, received land (called *ching nieh t'ien*; one *mu* to every 3 persons, the divisions being made according to the number of able-bodied males) to cultivate for the State. There were now three distinct charges—*ch'u, ko,* and *yung* (payment in commutation of *corvée* labour).

624. A new agricultural system was introduced, under which each person constituting a separate household received one piece of land (made up of 100 *mu* to maintain the family and 20 *mu* to cultivate for the State) as a perpetual possession, and every able-bodied person in addition another piece for temporary occupation. The former (of which traders and mechanics received half shares or none) was saleable and mortgageable under certain conditions. Of the latter, every man at the age of 18 received 80 *mu*, which he kept till his 60th year; children, old men (over 60), invalids, or widows—if occupying a separate household—40 *mu*. Soldiers were exceptionally treated. This land could never be sold, mortgaged, or handed over to others for cultivation. The limits on purchases were evaded by rich men who bought land in the name of agents or farmers, and the practice of sub-letting, which reached a considerable development under the Sung Period, originated at this time. Every man (*ting*) paid a fee-farm rent (*tsu*: 20 bushels of millet) and a percentage on personal property (*tiao*: the tax paid on the *ching nieh t'ien*) in cotton or silk fabrics, according to the products of the land. A *corvée* tax of 20 days in the year (with 2 extra for intercalary months) was added, with an alternative of paying 3 ounces of silk as a direct tax rate per day (*yung*). (These *tiao* and *yung* taxes were revived in 720.) Certain portions were remitted under certain circumstances.

In course of time, however (after various attempts to reach a satisfactory system of equality, during which taxation per head considerably increased), through growth of population, etc., the old inequality was restored. In 780 a new edict was issued regulating taxation, not according to land property or capacity to work, but simply according to property of every kind, and for this purpose the whole people were divided into 9 classes according to property. They were also free to choose their trade and change their dwelling-place. From this time the right of unlimited property in land remained unchanged for over 1,000 years.

The first result of the new edict was the decay of agriculture and the increase of trade. The *tsu, ko, yung,* and *tiao* had by it been replaced by "summer" and "autumn" taxes, and in 806 three new extra taxes (*shang kung*, offering to the emperor; *sung sui*, present; and *liao chou*, part kept back for the districts) were imposed. The distress caused by these taxes was only partly relieved (836) by attempted remedial measures ordering them to be paid in grain and stuffs without valuation, and in 841 a general exemption from taxes for 5 years was granted to tillers of barren lands and drainers of marshes. At the end of the 5 years they were to pay in kind as under the edict of 835. In 854, the taxes additional to the "summer" and "autumn" ones were suppressed, but the system of valuation was partly restored.

RANKS.—(1) *Agriculturists:* Scarcity partly supplied from class of freed slaves.

(2) *Artizans:* Neither these nor merchants were to have civil or military employment.

(3) *Merchants* increased with the development of commerce.

Military castes were instituted. *Soldiers* and *priests* were objected to as being non-producers.

Corvée: One able-bodied man was required from each family, in addition to the army, to construct canals.

Slavery: There were first 2 and later 6 classes. Rebels were enslaved, but private slaves were very numerous, and the government freed many State slaves in order to provide cultivators.

After the conquest of the southern provinces, prisoners who had become private slaves were freed by authority by a note under the hand of their master, who was the arbiter of their liberty. Slaves 70 years of age were freed by right. Rebels, when made State slaves, only obtained full pardon through three successive steps, gained by their labour. (This arrangement was peculiar to this period.) Slaves who accused their masters of treason or rebellion were executed. Domestic slavery was of a mild character. There were some negro slaves.

On the confiscation of the convent lands (841–64) 150,000 slaves were freed, and became liable to the land and labour taxes.

INDUSTRY.—Increase was rather in commercial activity than in industrial prosperity. Government interference hampered both commerce and industry. Official exactions and popular ridicule of provincials in the capital led to the formation of *gilds* (*hui kuan*, and later *kung so*), which spread to the provinces.

Land continued to be heavily taxed. Under the Hou T'ang the *tsu, ko,* and *liao* taxes were restored.

In 951, under the Hou Chou, the exportation of leather was forbidden.

DOMESTIC.

MARITAL.	FILIAL.
Marriage: The emperor sometimes bestowed wives. Instances are given of wives selected by lot. In 627, men of 20 and women of 15 were ordered to be married by the magistrates, and the rich were to help the poor with the same object.	*Succession:* See *Public.* *Guardians* (even strangers) were appointed by will. *Relation between parents and children:* The sale of parents, sons, and daughters was common in times of scarcity, to require a law prohibiting it. Female *infanticide* by Chu Chi was checked by the efforts against rich dowries. Several cases of filial devotion.
Betrothal. The go-between was necessary for indispensable. In Shang Tung large presents were demanded and marriage was called "marriage by sale." "Limbo" marriages took place as before. *Relation between husband and wife:* Many instances of the rule of wife's fidelity. Wives could be divorced. *Re-marriage:* Wives of officers of the 9th and higher ranks and children of officers of the 5th and higher ranks were forbidden to re-marry. Instances are given of widows refusing to re-marry. *Prostitution:* Prostitutes supported idlers.	

POLITICAL.

PUBLIC.

GENERAL.

RANKS.—*Sovereign:* The imperial authority was consolidated. The control of the Court over the provincial governors was re-established (814–9) and extended (841–7). The gradual decay of the imperial authority towards the end of the period began with the surrender of direct influence over the peasantry. *Succession* was hereditary, but violent usurpations the rule. The eldest son succeeded from 763.

A. The influence of the *literati* was restricted by that of Buddhists and Taoists and by their standing outside the sphere of the political struggles.

Of *nobles* there were first 9 and then 3 and then again 9 ranks. Under the T'ang, nobility was for life and not hereditary. A new system of *officials* was instituted in 605, but the laxity of the ruling classes created disorder, and wars depleting the Treasury, official ranks were offered as rewards or sold. Scholarship was ill-paid.

B, C, and D. *Artizans* and *traders* were forbidden to take high official rank in 596. These classes were largely recruited in 841–64 by about 4/0,000 inmates of monasteries. But only 3/5ths of the population were producers. *Eunuchs* exercised political power.

Women were less secluded. The people could still be moved in a body from one part of the land to another.

INSTITUTIONS.—1. *Executive:* The Sui *capital* was Ch'ang An and the T'ang, Lo Yang and Tai Yüan Fu. *Divisions* were, first, provinces (*chou*) (9), *chün*, and *hsien*, and later, provinces (10 and 15), *tao, fu, chou,* and *hsien*.

Ministers: The *San Shih* were soon replaced by the *San Kung*—the Great Pacifier, and Ministers of Instruction and Works. Following them were the Imperial Historiographer and Imperial Promulgator, and the Directors of Archery controlling the decisions of the Six Boards (*Liu Pu*) of Civil Office, Ceremonies, War, Punishments, People (Revenue), and Works. The T'ang re-instituted the *San Shih*, adopting also the *San Kung* and the Six Boards, each under a President (*Shang Shu*). Under the direction of the Presidents were 24 *Ssŭ* and 6 *Shih Lang*, Vice-Presidents. The *Nine Ministers* (*Chiu Ch'ing*) were the same as under the N. Ch'i. The Censorate remained as in the Han. The Grand Court of Revision laid cases of offence before the Board of Punishments. The *Han Lin* College was founded in 712. The Imperial Academy of Learning (*Kuo Tzŭ Hsüeh*) was called *Kuo Tzŭ Chien* in 605, and an Office of Transmission (*Kuei Shih Yüan*) established in 685–9.

The *provincial administration* was conducted by Governors-General and Governors, with subordinate officials over smaller provincial districts.

In 583 the *chün* were abolished and the *chou* put over the *hsien*. The *Hsün Ch'a*, Inspectors, now instituted, were the prototype of the *Shou Tao* and *Hsün Tao* of later times. The T'ang system differed but little from that of the Sui. The *Chien Yün Shih*, Provincial Treasurer (the modern *Pu Chêng*), being an important innovation.

By 835 the power of the eunuchs had so increased that all affairs were discussed and decided in their tribunal, the rest of the government discharging purely ministerial functions.

Entrance to the public service was obtained by means of a public examination-system instituted about 600.

2. *Legislative* remained as before. The emperor proclaimed the laws to the people and ordered the revision of existing codes.

3. *Judicial:* Justice appears to have been administered with great strictness during the greater part of the period, but, in spite of Tê Tsung's measures, had become corrupt by 877. The head of the judiciary was the President of the Board of Punishments.

4. *Revenue and taxation:* Kao Tsu lightened the burden of taxes; the rich paid in money and the poor in labour. The T'ang imposed poll, labour, salt, liquor, house, and other taxes in addition to the land-tax. In 793, a tax was levied on tea.

Similar to previous period.

Li Tsun-hsin, the son of the Turkish chief Li Keyong, who had supported Hsüan Tsung, extinguished the Liang dynasty, the first of the five ephemeral dynasties which followed the close of the T'ang, and established the Later T'ang dynasty. This, after a brief existence was followed by the Later Chin dynasty, which existed only on the sufferance of the Khitan ruler of Liaotung and Manchuria. The Later Han and Chou dynasties terminated a long period of disunion.

The Five Dynasties followed the T'ang system. The throne was hereditary, and the arrangement of classes similar to that of previous period. The first of the Emperor of the Hou T'ang dynasty allowed comedians to supplant eunuchs in his favour. One was appointed to an important governorship. Executive and other institutions were also framed on the T'ang model. The capital was at Pi, and the country divided into States (9), *chou*, etc. The subdivision of provincial governorships, while it increased the number of government employés, lessened each governor's power of making himself dangerously formidable. In 955, magistrates were ordered to personally investigate judicial cases. Taxes were imposed on the leaven of liquor and on agricultural implements.

Revisions took place in 910, 951–8, and 957.

T'ai Tsu amended the method of bringing accusations. In 947 robbers were ordered to be put to death irrespective of the value of booty; and neighbours were equally responsible (957). A case of unjust execution in 955 caused magistrates thereafter to decide criminal cases in person.

Castration was now punishable.

Counterfeiting gold was punished with death.

Local militia.

936. "Volunteers" provided by 1 family in 7 enlisted as warriors. Fowlers and hunters learnt the military art.

944. Village troops to the number of 70,000 men were enlisted by imperial decree.

954. Body-guard system obsolete.

Appliances: Tunnels were dug to attack cities. Army saved by digging 80 wells (907–22). Double city walls and moats. In 907, faces of 200,000 volunteers branded. Two-deck vessels used in naval engagements (909). Lime thrown to blind enemy and beans to make them slip on shipboard (919). Iron ropes sunk in river and raised by windlasses to catch enemy's ships (928, 950). Swimmers dived and fastened ships with iron chains to prevent advance. Flags, armour, and weapons made same colour as horses. Announcement of intended expedition made in ancestral temple and sheep sacrificed.

Land continued to be heavily taxed. Under the Hou T'ang the *tsu, ko,* and *liao* taxes were restored.

In 951, under the Hou Chou, the exportation of leather was forbidden.

Marriage had declined from the classical standard. It was accompanied by musical bands—a custom apparently new.

MILITARY.

The Sui military system was the *fu ping* system of the Later Chou and Ch'i, improved and completed. There were 12 *wei*, divisions, each subdivided into right and left, under the command of a general, with companies of cavalry and infantry.

The massed troops at this time numbered 1,133,800.

A defensive formation was a hollow square of mixed chariots, infantry, and dragoons.

618. The volunteer system was used with success. The imperial troops were the palace soldiers.

Naval warfare was prepared for by practice.

A new army system was inaugurated in 627 based on military circuits, and an efficient standing force of 900,000 men raised. The term of service was from 20 to 60. There were regiments of cuirassiers, archers, halberdiers, shield-bearers, and mounted spearsmen. Cavalry co-operated with infantry. Two families supplied 1 soldier. Women also fought. The emperor took part in reviews and physical exercises of his soldiers.

701. Military graduates established. The system of *t'un tien*, fields allotted to soldiers, was founded.

Appliances: A white horse was sacrificed in front of the army before starting. Garments and head-cloths of uniform colour (black, yellow, etc.) were worn; also armour. Troops dressed in skins of animals to deceive enemy. Fortifications took shape of city, frontier, and river walls, and ditches. Fire beacons. Scaling - towers. Flags were of rich material and of various designs and colours.

Similar to previous period.

The T'ang dynasty allowed comedians to supplant eunuchs in his favour. One was appointed to an important governorship. Executive and other institutions were also framed on the T'ang model. The capital was at Pi, and the country divided into States (9), *chou*, etc. The subdivision of provincial governorships, while it increased the number of government employés, lessened each governor's power of making himself dangerously formidable. In 955, magistrates were ordered to personally investigate judicial cases. Taxes were imposed on the leaven of liquor and on agricultural implements.

Revisions took place in 910, 951–8, and 957.

T'ai Tsu amended the method of bringing accusations. In 947 robbers were ordered to be put to death irrespective of the value of booty; and neighbours were equally responsible (957). A case of unjust execution in 955 caused magistrates thereafter to decide criminal cases in person.

Castration was now punishable.

Counterfeiting gold was punished with death.

Local militia.

936. "Volunteers" provided by 1 family in 7 enlisted as warriors. Fowlers and hunters learnt the military art.

944. Village troops to the number of 70,000 men were enlisted by imperial decree.

954. Body-guard system obsolete.

Appliances: Tunnels were dug to attack cities. Army saved by digging 80 wells (907–22). Double city walls and moats. In 907, faces of 200,000 volunteers branded. Two-deck vessels used in naval engagements (909). Lime thrown to blind enemy and beans to make them slip on shipboard (919). Iron ropes sunk in river and raised by windlasses to catch enemy's ships (928, 950). Swimmers dived and fastened ships with iron chains to prevent advance. Flags, armour, and weapons made same colour as horses. Announcement of intended expedition made in ancestral temple and sheep sacrificed.

ECCLESIASTICAL.

Priesthood: The *wu* might now sacrifice to certain State gods.

Severe restrictions temporarily placed upon Buddhism, and the sect ordered to be abolished (618). In some districts priests had wives ("wives of Buddha"). Taoist priestesses.

The depopulation of the monasteries at the close of the Sui dynasty was made up by the ordination of 18,500 monks and nuns.

In 684–710 many priests did also military and professional duties.

From 710 to 907 priests were now encouraged, now tolerated, now persecuted. The ecclesiastical mandarinate first appointed under the Sui ensured to the government the religious services of the clergy.

Sacred places and temples: Temples and monasteries were numerous, and many contained images of great size and value, but their number was restricted in 626. In 650 there were only 3,716 in the whole empire. 1,700 unorthodox temples were destroyed in 688, and 4,600 Buddhist temples in 841–7.

Sacrifices and observances in 628 the worship of Confucius, his ancestors, etc., displaced that of the Duke of Chou. The homage, amounting to worship, paid to the Sage by the emperors and people could not have been more complete.

650. "Military" added to "civil" dancers.

Sacrifices to Mount T'ai-pai instituted (666).

Written prayers were now burnt in the ancestral temple only.

With the increase of sacrifices wooden horses began to be used instead of living ones. By 713 paper horses had been substituted.

713–56. Temple sacrifices sumptuous.

Necromantic practices by which idols were produced from ground, etc.

Fasting: The custom of abstaining from animal food began at this time.

Cleanness: Buddhist baptism introduced.

Connection with State: Buddhist priests were occasionally appointed to high State offices, both civil and military, received degrees, and were on intimate terms with sovereign In 458 the control of the surviving Buddhist monasteries was put under the Chinese Foreign Office, but the official religion, being part of the internal policy of the realm, was under the Board of Rites.

Heresy: The persecution of Buddhism and Taoism by the orthodox Confucianists was now and hereafter of a kind which ensured the subjection and decadence of those doctrines.

Councils were held for discussing Buddhism and Taoism.

Foreign religion: Nestorian missionaries were allowed to settle in the capital in 636.

Relics: Some bones of Buddha were brought in 818 and 873 and received with homage by the emperor.

Scriptures, etc.: Large quantities of Buddhist books, images, pictures, etc., were brought from the West in 629. The connection between the Buddhist churches of China and Tibet was strengthened.

Priesthood: The *wu* continued to exercise a powerful influence. Shih Tsung (954–60) persecuted the anti-Buddhists, and unauthorized temples were destroyed.

Sacred places: A hall for Taoist idols was built.

Sacrifices and observances: Various priestly practices, such as sacrificing the body, cutting off limbs, hanging up lanterns, wearing the pinching belt, and deceiving the common people were forbidden.

Connection with State: In 935 a Taoist priest was appointed Prime Minister and General. Another was made Duke of Shu.

Conversion: The ruler of Min became a Taoist priest.

Physicians, poets, painters, and musicians.

Though literature and learning were neglected, periodical examinations were held regularly during this period.

930. Poor scholars were oppressed and administrative offices sold.

A college containing a large library was established by Lo Shao-wei.

907. Soldiers branded.

Castration forbidden by imperial decree.

The practice of compressing women's feet is said to have been introduced about 934, though its origin has been placed as early as 583 and as late as 962 and 970. It did not, however, become firmly established for more than a century.

Living persons still buried with dead.

Similar to previous period.

ACCESSORY INSTITUTIONS.

Education, colleges, and schools: Imperial Academy and prefectural and district Colleges. Han Lin College.

601. District and "Upper" Schools abolished.

Confucian and Chou Kung temples attached to State College.

The imperial college consisted of 6 Higher Schools for different ranks (age of admittance, 14–19). Curriculum extended over 10½ years.

A mathematical college was established in 658; a musical college by Ming Huang (712–40), who also, by the Pi Tsung, built the *Li Chêng* College, which became a pattern for the Sung dynasty. Many other colleges were built, and a school established in every department, district, and village in the empire. Scholars received pecuniary assistance from the local magistrates. An edict of 706 practically caused the salaries of teachers to be paid by the scholars instead of by the State. Han Lin College. Literary examinations. Special subjects taught in families by private teachers.

Libraries: Wên Ti (589–605) opened public libraries. An imperial library was founded in the capital in 723. Private existed.

Literary associations flourished.

Poor relief: Arab travellers noticed absence of diseased mendicancy.

Artist in pottery. Court physicians. Priests also generals, artists, men of letters.

CEREMONIAL.

MUTILATIONS.

Arm cut, pierced or marked in confirmation of oath. People maimed themselves to avoid oppressive exactions. Military offenders, serving maids, and concubines were branded on the face, even for slight offences.

Castration of children cut off pieces of their flesh for the benefit of their sick parents. Various similar tokens of sincerity were adopted by widows and others. Head-dattening apparently used at this time.

Mourning: Dwelling in mourning sheds prescribed for all classes. Mourning for emperors reduced to 27 days. Mourning hurtful. Fasting.

FUNERAL RITES.

Soul recalled in accordance with the ancient rules. Jade placed in mouth of corpse. Coffins no longer accompanied owners on journeys. Imperial coffins highly decorated. Noted persons present for burial. Lucky days chosen for interment. Graves richly furnished and clay and wooden counterfeits placed therein or by the Spirit of the Soil and placing stone images given to graves place in the official precedence list. *Presents:* Hsien Tsung in 809 introduced the custom of stopping the presents.

LAWS OF INTERCOURSE.

Conventions: Use of yellow clothes by emperor began with Sui. Round or Square Seals. Ranks distinguished by colour of dress. Precedence of persons. Mourning. Decreed ceremony. *Precedence:* Family of ex-prime ministers ranked first, and then princes, and dukes.

HABITS AND CUSTOMS.

Festivals: On New Year's Day fired crackers, pasted pictures of fowls over door, etc., to frighten away evil spirits. Congratulations. Drinking and feasting.

Festivals of "Welcoming Wealth," "Flower Birthday," "Spring," Opening of Summer," and of Autumn, and 3 or 4 others, besides the following.

On 9th day of 1st moon swept dust and dirt from houses. On 15th day, or 1st full moon (Feast of Lanterns), gambled and rambled; beat drums and lit candles, hung out lanterns, etc. On 16th day they left their occupations and women crossed bridges and leaned on trees.

Tomb-worshipping at the *Han Shih* festival became common.

At *Ch'ing Ming* (2nd or 3rd moon) worshipped at family tombs.

Sports, games, etc.: 627. Hunting. Polo. "Patting the butterflies." Swinging. Shot at wooden rabbits from horseback. Shot at rice-balls with small horn bows.

Tug of war. Rope-performers. *Tang* game: throwing shoe - shaped piece of wood on to another lying on the ground at a distance. Walked on hands and performed with words. "Morra" played; wine forfeits. Chess. "Cash - guessing" (*ch'ien hsi*) or "spreading - cash" (*fan ch'ien*). Masks. Marionettes.

Private: After New Year's Day invited each other to dinner.

On 3rd moon 1st day husbands and wives slept in separate rooms.

Cannibalism said to have been practised on rebels.

Singing girls waited at feasts.

Friendships formally formed as before.

Child named when 1 month old, after ancestral temple had been notified.

756–63. Much extravagance in marriage. Picnics.

Festivals and games similar to above.

Bands played at weddings.

CHIEF PERSONS.

EXECUTIVE. Chiefs. INCENTIVE.

Ch'in Ch'iung. Wei Cheng. Hsieh Shou. Chang Chia-chêng. Chang Shou-kuei. Wu Sang-shê. Kou Hsiao-k'o. Li Lin-fu. Li Hsien. Kuo Tzŭ-i. Yang Yen. Ts'ao Hsüeh-ch'in. Yang Wang-hsin. Wei Kao. Li Hua-hsiang. Chu Ts'ŭ. Chang Chien-fêng. Liu Jo-hsing. Liu Hsü. Fan chih. An Ch'ung-hui. Liu Hsüan-ying. Wang P'u.

Sui: Kao Tsu (589). Yang Ti (605) and 2 emperors to 618. T'ang: Kao Tsu (618). T'ai Tsung (627). Kao Tsung (650) and 2 emperors to 684. Wu Hou (usurping empress) (684). 17 emperors to 907.

T'ai Yang Wang Lun. Wei Kao. Li Hua-hsiang. Chu Ts'ŭ. Chang Chien-fêng.

Posterior Liang Dynasty (907–23): 2 emperors. P. Chin (936–47): 2 emperors. P. Han (947–51): 2 emperors. P. Chou (951–60): 3 emperors. [For Liao emperors see Table VI.]

P. Tang (923–36): 4 emperors.

Ch'ên Tzŭ-ang (poet). Li Ch'i (musician). Chang Po (historian, etc.). Chang Yüeh (poet). Sung Ch'i-ching (writer). Kao Shih (poet). Li Chien (writer). Chang Chiu-ling (statesman and author). Chang Tso (artist). Li Tê-lin (historian). Niu Hsing (scholar). Wang Jung-yen (musician). Ts'ao Hsüeh (philologist). Wang Ch'i (poet). K'ung Ying-ta (classical writer). Ching Po (historian, etc.). Hsüan Tsang (traveller and author). Yang Ch'iung (poet). Sung Ch'i-ching (writer). Li Shih-min (artist). Hsü Chien (writer). Kao Shih (poet). Li Chien (ditto). Yüan Tan (annalist). Ming Hao-jan (poet). Chang Chih-ho (ditto). Wu Ch'êng (historian). Li Shih-chih (poet). Wang Wei (ditto). Li Pi (ditto). Chang Chien (poet). Han Hung (ditto). Chang Ch'ien (ditto). Ch'ên Tzŭ-ang (artist). Li Yung-nien (poet). Li Yung-chi (philologist). Pei Chü (ditto). Sung Ch'i-ching (ditto). Sung Jo-chou (authoress). Chang Chi (ditto). Li Tê-yü (writer on constitution). Chu Shu-ching (poetess). Li Ho (poet). Liu Tsung-yüan (poet). Kung Tzŭ-chên (poet). Li Shên (poet). Yüan Chên (ditto). Li Ch'ün (ditto). Li Shih-min (ditto). Li Ch'i (ditto). Li Shang-yin (ditto). Li Ch'ing (ditto). Li Ho (ditto). Li Yü (ditto). Li Ching (ditto). Li Ch'ung-hui

SUNG PERIOD (960 TO 1280).

TABLE VI.

DATES.

960.

1280.

OPERATIVE.

Sexual: Similar to previous periods.

Specialization: Bamboo-worker, stone-chiseller, moulder in clay, tile-maker, dyer of silk cloth, sericulturist, weaver, embroiderer, medicine-seller, were among specialized trades.

Localization: Porcelain factories at Pien-liang (K'ai-fêng Fu) and Hang Chou. The greatest variety of colours, and the *yao pien*, "transmutation" (*flambé*) vases, were produced at Chin Chou. Brilliant white, purple, and black were made at Ting Chou (1111 to 1126) and afterwards at Hang Chou.

The cotton industry was probably confined to the Kuang Tung, Fu Kien, Shan Hsi and Shên Hsi provinces.

Leaven was only made in the Prefecture of Huai An.

Yellow clay for tile-making found in the hills of Ch'uan Chou and Chang Chou localized that industry in those districts.

Streets received names from the articles most generally sold in them.

KIN. *Specialization:* Clothes-dyeing, figure-designing, clothes-cutting, figure-embroidering, horse-breeding were carried on by workers in special government departments.

REGULATIVE.

LAND.—Private property in land had greatly increased, causing the government to farm out the Crown lands. There were land-owners in their own right and "guests" (farmers on the métayer system). In 961 illegal taxes were abolished in the provinces. Tax on produce only $\frac{1}{20}$th of crop. Attempts to induce cultivators to settle on the land (987–1000). The land surveys in 975, 996, and 1021. By 1052 area of taxable cultivated land had fallen off by half, but much escaped assessment and the tax-paying families multiplied.

1069–85. The reforms of Wang An-shih aimed at substituting State commercial operations for taxation as the source of revenue. Advances were to be made to cultivators on security of crops, money payments substituted for *corvée* labour, etc. The measures were soon abrogated. With the prevalence of sub-letting, laws and customs grew up for the protection of the tenants, which remained in force for at least five centuries. A fair rent and fixity of tenure were secured to the cultivator. Rack-renting was prevented. But this growth of custom forbidding the ended to abolish the distinction between the tax-paying owner and the rent-paying cultivator. But large estates continued to grow, and in 1263 limitation of individual ownership to 100 *mu* was attempted.

Title-deeds came into use.

Hired servants: An ordinance fixed the maximum time for which free people might engage themselves as hired servants at 5 years, and insisted that the engagement should be made in clear and precise terms. Wages were settled by the year or month.

Forced labour: For Wang An-shih's system of money payments see *Land*. The *corvée* system was modified in 1117 and the ancient feudal dues revived.

Slavery: During this and the following periods transportation took the place of government slavery. The government aimed at reducing the number of slaves in the houses of the rich, but did not give the slaves the right of self-redemption.

INDUSTRY.–There were 12 craft-guilds at Hang-chow, each said to have a membership of 144,000. State-trading continued.

LIAO.

People cultivating waste and alluvial lands were exempted from taxation for 10 and 15 years respectively.

In 1024 private workmen were forbidden to melt metal.

KIN.

The people were allowed to sell or pawn their lands. Taxes were paid according to the different crops. Oppression of the people caused cultivation to be generally neglected.

Agricultural colonies, liable to military service, were settled in the central provinces furthest from the seat of the northern government.

1125. Influential families were forbidden to buy poor people as slaves.

Industry was subject to official regulation.

POLITICAL.

CIVIL.

DOMESTIC.

MARITAL. *Impediments:* A civil or military officer could marry when his cemetery was completed and his parents buried.

Blindness after betrothal was not a ground for rescision of contract.

Chastity: Wife esteemed for pre-marital inchastity, but carefully guarded after marriage. Adultery general, especially among women.

Dissolution of marriage: The annulling of pre-serving appearances in divorce, and "divorcing a wife so as to make her marriageable," was upheld.

Cowade obtained in Kuang Si.

KIN. Marriage with women of same surname forbidden and punishable.

Mock-marriages suppressed.

FILIAL. *Inheritance and succession:* There was substantially no change from the organization of the Later Feudal Period. Estates were bequeathed subject to many charges for the benefit of poor relations, etc.

Relation between parents and children: It was considered "unfilial" to be without descendants, and Buddhist priests were accordingly held to be wanting in this respect.

Killing the murderer of a parent was deemed praiseworthy, though contrary to law.

Thesentiment of filial devotion continued as strong as ever. A special office existed to punish children who showed ingratitude towards parents.

PUBLIC.

GENERAL.

The first portion of the Period was one of the most prosperous and peaceable of Chinese history. Later, revolts periodically occurred. The princes of Han was vanquished. Possession was acquired of Honan and Szŭch'uan with 40,000,000 Chinese subjects, and of Canton and its dependent districts and Kiangnan (Kiang-su and Anhui).

976–98. The dynasty became consolidated. The Kitan power in Lino Tung was suppressed. But by 1022 the position and power of the imperial office had greatly impaired, though the people were contented, and the population was over 100,000,000.

Tartar inroads continued. The Nü Chên, having broken with their Kitan allies, vanquished the King of Lisotung, and the Kin dynasty was set up in 1115 by the victor in opposition to the Sung. This was the first appearance in China of the ancestors of the subsequent Manchu dynasty.

The Kins overthrew the Kitans and subsequently claimed and seized all the territory north of the Huang Ho. The Chinese removed their capital to Nanking, but were compelled to flee to Canton. But in the campaigns of 1131–4 the Kin forces gradually retired and the Chinese power revived.

Honan was retained by the Kins, to whom also a large annual subsidy of silk and money was paid. The authority of the Chinese emperor only existed on sufferance. In 1161 a war began ending with the subjugation of the Kins, but before the long contest had been finally decided in favour of either side both were swallowed up by the Mongol inrush.

1211. Genghis Khan, having subdued many desert tribes and concluded an alliance with the Kitans, began the conquest of China. Shensi, Shansi, and Chihli were devastated by his troops.

Yenking (Peking) was captured in 1213, but the Mongol force, being too small to hold it, retreated. Liaotung was recovered by the assistance of Genghis' general Muhula, and the Kins were speedily overthrown. The King of Corea then acknowledged himself a vassal of the Mongol conqueror.

1218–9. Honan was invaded and the Sung emperor ceased paying tribute to the Kins. They were equally unsuccessful in the south, and their ruler resigned the imperial title in exchange for the principality of Honan. The Mongol power at this time was almost universal in Asia. By 1230 further cities had been captured and in 1234 the Kin dynasty came to an end.

The Mongols repudiated the Sung alliance and Honan was captured.

1248. Kublai attached to himself a large section of the Chinese nation with the ulterior object of invading southern China and extinguishing the Sung dynasty. Yünnan, then independent, was taken, the general left in charge immediately extending his operations to the west and invading and annexing Burmah.

The death of Mangu caused the separation of the Chinese empire from the Mongolian. Hangchou, the Sung capital, having fallen, Nanking was taken shortly after. The surrender of the provinces of Kuangtung and Fukien and the capture of Canton completed the Mongol conquest of China.

LAWS.

Ordinary laws underwent little change during this and the following period. A revised code was introduced by T'ai Tsu (960), under which the death penalty had to be confirmed by the throne. *Lex talionis* approved. Among capital punishments were: refusing imperial orders to send astronomers, etc., to Court, altering standard weights, studying astronomy and divination, casting small cash, plundering rich families during famine, concealing weapons, etc. Adultery, law-breaking, and disobedience to parents were punished by driving five carts over the victim, and scolding or reviling superiors by a hot awl thrust into his mouth. Torture was in use, as in false accusation of murder, and other cruel methods of carrying out punishments prevailed, as the *ling-ch'ih* (slicing) and the stomach-cutter, introduced 1023–6.

1127–63, the implements were regulated and some made less cruel. The law of theft was modified in 961–2; killing a stepson was not capital in times of famine after 1053. In 1090 punishments were further systematized and made more lenient. Failing to report crime, illegal coining, selling salt surreptitiously, false accusation, false entries in military registers, etc., were punishable offences, but by 1195 salt-smuggling women were no longer transported. Punishments could be redeemed in certain cases, as by payment of rice (1043), confession in killing under provocation (1068), gifts of old clothes, provisions, etc., and amnesties were sometimes granted, as on New Year's Day. In the 12th century elaborate instructions to coroners were drawn up; wounder had to nurse victim. No extraterritoriality was recognized between Chinese and Kitans.

An instance in 999 shows that a son-in-law might by will be favoured as against a son. In litigation regarding boundaries or fields losing gave one-third of his field to 1234 (10 emperors).

In 1165 a new uniform system of law and procedure was introduced. The Magistrates were to investigate cases strictly according to the law and not to forward cases to the throne for decision.

The droit administratif was in force, but was not absolute. Officials were obliged to study the law.

LIAO.

Punishments severe and not adapted to crime; of 4 kinds: death (by beheading, strangling, and slicing), exile (degrees of distance), banishment (degrees of time), and bambooing (50 to 100 strokes). Death penalty involved enslavement of criminal's family, and exile and banishment, branding on face. Punishments, at first military, were adopted as legal, *e.g.*, shooting prisoners with arrows, and many others. On adoption of Chinese code, punishments more proportioned to crime. In 994 Kitans were to be punished by Chinese law in case of serious offences, and more justice was introduced into legal administration. The *droit administratif* was modified in 1011. Robbery with violence, private persons being prohibited from competing. Taxes on tea and salt, after being removed, were re-imposed. Wang An-shih repealed the laws against the hoarding and exportation of metal, and exempted the poor from all taxation.

The system of *competitive examinations* and literary degrees was more fully elaborated. In 1066 triennial examinations were decreed. Wang An-shih's attempt to make the examinations more practical proved abortive.

LIAO AND KIN.

The Liao *capital* was Liao Yang and (920) Yen Ching (Peking), and that of the Kin, Ta Hsing Fu (Peking). The *Kuo Kung* were the only Liao nobles, but the Kin system resembled that of the Sung. The Grand Secretaries, Executive Boards, and provincial hierarchy were also similar, though the chief posts in the latter were held by military officers.

Judicial: At the beginning of the Liao, justice was loosely administered, but under Shêng Tsung (983–1031) leniency and justice characterized the administration of the laws.

MILITARY.

Much attention was given to the improvement of the army and particularly to the training of officers, who had to pass examinations both in professional subjects and physical exercises. The laws of promotion were rational and equitable. The best soldiers from the provinces were brought to the capital. The object of the new arrangements was to curb the power of the governors. There were 4 principal divisions: State guards, provincial guards, guards formed of men selected from the people, and frontier guards. The emperor held reviews in person. T'ai Tsu forbade slaughter and looting.

976. Registers introduced.

1040. The *t'uan* system instituted. Service was from 20 to 60.

The whole army numbered 1,000,000; being non-productive, it proved a serious financial burden, and was weeded out by Shên Tsung (1068).

1069. An attempt to introduce a universal system of militia was frustrated.

1075. The 6 ways of shooting from horseback were ordered to be taught, to archers. Armies marched in 5 columns.

1127. The army was improved and military resources organized. The successful employment of cavalry by the Kins stimulated its use by the Chinese. A corps of charioteers was formed. The military system consisted of squads (*wu*), (*chia*), (*tui*), battalions (*pu*), brigades (*she*), and divisions (*tu*).

Soldiers did not cultivate the land and 100,000 were dependent upon the magistrature.

Wheel vessels were used in warfare.

In 1161 volunteers were enlisted from families containing 2 males. They were taught military tactics and received an allowance from government.

Special forces were formed in 1195–1225.

The navy of Kan Pu was established in 1205 and increased in 1230.

Appliances: A spy tower was erected on the frontier. Signal flags and banners of various kinds. Impressed soldiers were branded on the hand.

LIAO AND KIN.

The Liao had a force of 200 guns. On going out to war emperor worshipped ancestors. Condemned criminal shot dead before him.

The Kin tactics were superior. Army consisted exclusively of cavalry. Attacks were made from several sides simultaneously. Troops charged at full speed shooting arrows, and when at close quarters fought with swords and pikes. Scouts.

By the latter half of the 12th cent. the Kin had become unwarlike and the troops murmured at their hardships.

In 1130 rockets were used to break the sails of the enemy's ships.

LOCAL.

The Sung adopted the system of their predecessors.

In 982 *ch'ang shih*, superintendents of agriculture, were appointed. They were assisted by the village officers and aged men in encouraging the people to cultivate waste land. They shared in the

ECCLESIASTICAL.

Priesthood: Wu-ism was exterminated S. of the Yang Tzŭ. Nuns were forbidden by T'ai Tsu to live in the monasteries, and from 972 received their injunctions at separate altars. Taoist priests were now ordered to conform to the Buddhist system of celibacy. The celibacy was, however, considered by the people as an offence against the law of filial piety. It required the work of 10 men to support 1 priest. Priests frequently received imperial favours. In 1101–26 Taoist priests were divided into 36 grades, with government allowances. Each Taoist temple had several thousand *ch'ing* of land. The most, and 300 *cash* a day given to priests caused large numbers to join the sect. 26 Taoist officials in 8 grades were established.

Sacred places and temples: Large numbers of monasteries were built, and at least one elaborate temple to house a relic. About 1009 there were very few adherents of Taoism except in Kiang Si, the cult a temple built in that year by imperial decree seems to have given a stimulus to the spread of Taoist idols all over the empire.

Sacrifices and observances: Chên Tsung in 1008 began a series of imperial sacrifices which cost vast sums. Written revelations were frequently received from God and documents lodged in special temples. Auspicious grasses and double-eared stalks of grain were sent in large numbers from the provinces, and general pardons in return for the supposed favour of Heaven became common. Images were prayed to with music for rain, &c. Honorary titles were bestowed. Confucius was likewise honoured and temples to him in all the districts decreed in 1011. The robe and dish of the "6th founder," Ta Chien, were welcomed to the palace in 1031. In 1083 Mencius was constituted "Duke of the Kingdom of Chou," and a temple erected to him. He was also given a place in the temple of Confucius.

Branding the crown, exercising the arm, bleeding, and cutting off fingers, were forbidden in 1110.

Worship of Yü Huang Shang Ti, a member of the Taoist Trinity, was instituted in 1116 under imperial edict.

The 5 commandments of the priests were: (1) do not kill; (2) do not steal; (3) do not commit adultery; (4) do not forget the Word; and (5) do not take meat or wine.

Persecution of unorthodoxy continued unabated.

Foundation: A Sanscrit college was founded by the emperor in 1035.

Relics: The remains of Shih Chia Buddha were brought to the capital in 989 and placed in a costly 11-storied pagoda specially built for them.

LIAO. Great honour was bestowed upon the Buddhist sect. Priests were appointed Presidents of the Boards of Revenue and Works. In 1073, 3,000 people became priests.

ACCESSORY INSTITUTIONS.

Schools and education: Provincial colleges re-organized. A college for Sanscrit (1035) and military schools (1043) opened. The re-established "College of Four Gates" now admitted commoners. Quality of teaching or State colleges poor. Colleges were endowed with land, etc. Many colleges were founded or re-organized and a law college established (1074). Many schools were opened in every village and hamlet and lane. They were apparently less conservative than the colleges. Under Southern régime letters, etc., were more popular than ever. All the Classics were collected and printed (1065–1275). Only men of good character and well read in the Classics were allowed to be nominated for the public examinations.

There were many well-endowed *hospitals* at Kinsay (Hang-chow) "founded by the ancient kings."

Orphan asylums provided for large numbers every year.

Charity: Wayside pavilions and drinking implements mentioned (in Kuangsi).

Storehouses: Lofty stone towers were built for the storage of articles for safety from fire.

Associations: Ch'i Yung Hui, an "association of old and virtuous Ministers," was founded in imitation of the *Chiu Lao Hui* or "Nine Ages Society." There were also "schools" of disciples attached to prominent men.

Libraries: At the beginning of the period 10,000 books were collected from the conquered States and housed in 2 libraries built by T'ai Tsung (976–98).

A library of 100,000 volumes is mentioned.

There was an imperial *museum* containing many curiosities and objects of value, including the Stone Drums of the Choudynasty.

CEREMONIAL.

MUTILATIONS. The practice of compressing the feet was gradually adopted by girls and women of all classes of society, and became generally established (1074). Many schools were opened for the process — and Ch'êng Yi, a famous philosopher, was begun during infancy. People under Southern régime letters, etc., were more popular than ever. All the Classics were collected and printed (1065–1275). Only men of good character and well read in the Classics were allowed to be nominated for the public examinations.

There were many well-endowed *hospitals* at Kinsay (Hang-chow) "founded by the ancient kings."

Orphan asylums provided for large numbers every year.

Charity: Wayside pavilions and drinking implements mentioned (in Kuangsi).

Storehouses: Lofty stone towers were built for the storage of articles for safety from fire.

Associations: Ch'i Yung Hui, an "association of old and virtuous Ministers," was founded in imitation of the *Chiu Lao Hui* or "Nine Ages Society." There were also "schools" of disciples attached to prominent men.

Libraries: At the beginning of the period 10,000 books were collected from the conquered States and housed in 2 libraries built by T'ai Tsung (976–98).

A library of 100,000 volumes is mentioned.

There was an imperial *museum* containing many curiosities and objects of value, including the Stone Drums of the Choudynasty.

FUNERAL RITES. Sons performed the ceremony of "buying water" to wash the corpse. Men sent to attend the roof of authority and along the roads to recall the soul: "some and have in this way become enfranchised." The custom is fast becoming obsolete, the recalling being done in the back-chamber or court-yard. Coins placed in the mouth of the corpse. Vaults little used. The burial of valuables discountenanced. Counterfeits generally substituted, but black and scarlet silk allowed. Occasional cases of living being buried with dead. Dwelling upon tombs much practised. *Post-mortem* marriages concluded. Sacrifices performed on grave at time of burial. Imperial mausolea had subterranean tunnels as entrances and were built by forced labour of serfs. Grave-trees and stone figures placed on graves. Empresses buried in emperors' tombs.

Mourning: Mourning institutions were those of previous period with slight modifications. Fasting held its place as a rite but was evaded in some parts of the empire.

LAWS OF INTERCOURSE. *Concerted distinctions:* A banner with scallops was enabled to distinguish the number of authority. The recall the number and grades of ranks, robes, of which is fan, by pearls, by plumage, gold thread etc., assigned to the names, being were the marks of distinction. Officers of 7th and higher rank when in service attend Scholars wore when in full dress. Occasional ants. Women of the 3rd and higher classes of nobility had special carriages differing from those of their husbands. Officers without a degree and the common people were not allowed to wear thin silk or gauze.

Ceremony: T'ai Tsu issued an amendment of ceremonial rules. Complimentary tea served at Court.

Towards superiors: Up this subject might be a sentence or two.

HABITS AND CUSTOMS. *Public:* Armour and personal spoils of enemies were offered up in temples of ancestors.

On New Year's Day and Winter Solstice punishments were interdicted for three days.

On 15th day of 2nd moon ("Flower Birthday") local officials went to waste lands to encourage cultivation.

Feast of Lanterns (15th day of 1st moon) lengthened to five nights.

Chung Yüan and *Hsia Yüan* abolished by T'ai Tsung.

Sports and games: Polo played by army.

"Throwing the brick," or (for children) "the tile," played at *Han Shih* festival.

Cards and "night-passing chart," at present played, introduced by T'ai Tsu.

Dice.

Dominoes.

Private. Family quarrels decided by sitting in "Heaven's Prison," *i.e.*, 12 small pagodas on opposite sides of palace.

Custom of casting child's horoscope by placing various articles for it to choose from continued.

Hermits.

Crackerfiring.

LIAO. Archery. Polo Pigeonshooting.

CHIEF PERSONS.

EXECUTIVE. Rulers.

INCENTIVE. Wei Po-yang (classical writer). P'u Yang-shêng (artist). Hsü Tzŭ-ping (astrologer). Kou Chung-shih (ditto). Hsüan Tsang (translation). Hu Yüan (ditto and teacher). Ts'ai Ch'ên (commentator, etc.). Ch'ên Fu-liang (ditto

DATES.

1280.

OPERATIVE.

Sexual: Weaving continued to be the occupation of women.

Specialization: Palace-painters, variegation workmen, plating workmen, map-makers, etc., are among the trades mentioned. Imperial ornaments, girdles, clothing, etc., were made by the Supervision of Works Office. There was also a weaving and silk-dyeing office. There were 22 specialized classes of workmen in the imperial pottery at Ching-tê Chên. Occupations in the markets and villages were more numerous than in the districts; one-half were farmers and planters of mulberry trees. Many distinct processes of dyeing, not known in later periods, are enumerated. As in most periods, soldiers were cultivators during peace.

Localization: The abundance of cotton trees in Fukien and Kuang Tung gave rise to the industry of *chi pei* cloth in that district. The introduction of the plant into Kiang Su de-localized the industry, causing it to spread from Kuang Tung, Fu Kien, Shan Si, and Shen Si to Hu Nan, Hu Peh, Ho Nan, An Hui and other provinces. Rhubarb was produced principally in the mountainous regions south of Suchou and Kan Chou, ginger in southern Shensi, and musk in western Kansuh. Silk was found in greater plenty at Sunzumatu than at other places. Porcelain painted with flowers came from the departments of Fu Chou and Chien Chang. Harness was made at Yanju (Yang Chou), weapons of war and wine at T'ai Yüan Fu.

REGULATIVE.

LAND.—In imitation of the *tsu, yung, and tiao* of the Tang, the personal was substituted for the land-tax. Land was divided into three classes according to goodness, and each quality assessed at so much per *mu*. This system was afterwards modified: families were taxed by *ting*, or able-bodied individuals, old men and children being exempt. Each person, on reaching full age, paid 10 bushels of grain. Those immediately below it paid 5 bushels. Newly-settled families paid half. Compensations were admitted. Families with much land and few persons of the *ting* age paid the territorial tax. Those in the reverse position paid the *ting* tax. Artizans and bonzes (both Buddhist and Taoist) were liable to the land-tax.

Under Kublai, the taxes were considerably increased (30 and 10 bushels respectively). The difficulties of carriage necessitated the valuation of produce. The cultivation of the mulberry was still the object of special attention on the part of the government, and was the only point in which the Mongol government interfered with the arrangement of the crops.

The Mongols tried to convert the whole country into a steppe and pasture-land. Cultivation was forbidden by edict. Only towards the end of the period was some tillage permitted in the autumn.

The land nearly all came into the hands of the ruling race, who (even down to private soldiers) acquired enormous estates. The power and tyranny of the nobles caused tenancy to be preferred to ownership.

RANKS.—(1) *Agriculturists* were often brought to a state of destitution by rich landowners (*v. supra*). Remedy was sought by the appointment of headmen and by providing for fixed holidays. (2) *Artizans* and (3) *Merchants* occupied much the same position as before. Traders by sea were taxed and restricted as to certain exports. Persons sent on missions to foreign countries were not allowed to trade.

The Grand Canal and other works were executed by *Forced labour.*

Slavery: The Mongol invasion threw a great number of all classes of Chinese into slavery. Actors, actresses, and courtesans were recruited from the children of slaves. The Mongol emperors liberated private slaves only in a few individual cases. Slaves were allowed to remain in the greatest destitution, and were often branded.

INDUSTRY.—Merchants arriving from abroad were prohibited from selling gold, etc., to anyone but the emperor. Gold and silver were not allowed to be exported.

The institution of the hong merchants existed in embryo.

A large imperial pottery was established at Ching-tê Chên. The officials had power to compel people to work in it. Later, the work was done by volunteer workers, who were paid wages.

Various industries were under direct government control.

POLITICAL.

DOMESTIC.

MARITAL.

Polygamy: Kublai Khan had 4 recognized empresses and secondary wives selected from girls sent as tribute. In Kansuh men were said to marry many wives.

Concubage prevailed in W. Yünnan.

Relation between husband and wife: Empress and wives of princes and nobles sat at table with their husbands.

Widowhood: Widows refused re-marriage.

FILIAL.

Relation between parents and children: Sons were, as before, obliged to strictly carry out their parents' instructions. The poor at times exposed their new-born babes.

Succession to real property often jeopardized by oppression.

CIVIL.

The period was one of transition and unrest. An extensive migration of natives took place from the southern portions of the empire, the descendants of the migrating families being the modern Hakkas. Attempts to invade Japan proved unsuccessful. Kublai's rule over his alien subjects was both wise and generous. Burmah was conquered and added to the empire 6 years later. The Mongol conquests extended to the borders of Assam. Attempts on Tonquin and Annam were unsuccessful.

1337. The Chinese rebelled near Canton. An order for disarmament of the people could not be carried out. Palace dissensions weakened the Mongols and gave the Chinese confidence in their efforts to free themselves from the foreign yoke. Chu Yüan Chang in 1356 captured Nanking, and making it the base of his operations, extended his power over Central China. The Canton provinces being subjected in 1366, the country as far as the Huang Ho was overcome in the following year. In 1368 the Mongol supremacy came to an end.

PUBLIC.

GENERAL.

RANKS.—The Mongol conquerors brought with them their *hereditary kingship.* Their rule was vigorous and had beneficent aims. They declared themselves the patrons of Buddhism and learning. The imperial family was exceedingly numerous, and this with the undue influence of Court of women, eunuchs, and ministers of strange religions, was a cause of grievance to the Chinese. A great gulf existed between the rulers and his most independent subjects. The relations of the *literati* with the Mongol Emperors were never cordial. Mongols were introduced into the Han Lin College. A new official system was established by Kublai, but men of ability were neglected. The highest posts were confined to Mongols of birth, the nobles being the emperor's relatives.

Eunuchs were forbidden to hold civil office, but the prohibition was of short duration.

INSTITUTIONS.—(1) *Executive:* The capital was at Cambulac (Peking). The empire was divided into 13 provinces (*shêng*), sub-divided into *tao* or *lu, chou,* and *hsien.* The Chinese system of administration was adopted, but improved by selection from previous systems, ancient and modern. Civil and military administration were not completely separated, officials of the latter being held in most esteem and occupying several of the highest posts. At the head of the administration were the Prime Ministers, Ministers of the Court, etc., and the Presidents of the six Boards: of Civil Office, Revenue, Ceremonies, War, Punishments, and Works. The Archive Office, Censorate, Court of Sacrificial Worship, Grand Court of Revision, Han Lin College, Courts of Imperial Entertainments, Imperial Stud, Imperial Physicians, Board of Astronomy, Imperial Academy of Learning, etc., with other minor departments completed the central Executive system. The *provinces* were under Governors-General, with Governors, Directors of Education, Treasurers, Judges, Taot'ais, Prefects, Department Magistrates, and District Magistrates.

In 1313 the literary examinations were restored, and Chinese admitted in greater numbers to a share in the administration.

(2) *Legislative:* The central departments collected and compiled laws for the emperor's approval.

(3) *Judicial:* The Magistracy was the Court of First Instance for all civil and criminal cases. The Board of Punishments, under 3 Presidents, supervised the criminal law for the whole Empire.

There were prisons and a police system in every principal city, and rules for the protection of travellers.

(4) *Revenue and taxation:* The financial system, owing to official exaction and mismanagement, was unsound. Taxes were remitted in times of distress. Besides the usual sources, revenue was derived from special taxes. There were taxes for the public examinations, medical dispensaries, granaries, and even for the relief of distress, and duties on tea, wine, bamboos, salt (very heavily increased), and fires. In 1293 the number of revenue officials was largely reduced. Priests, Christian, Buddhist, and Taoist, were, in 1308, included in the tax-paying classes. Sale of office was introduced as a means of raising funds in 1344. Southern China was, however, in a more healthy financial condition than the north, and taxation was mainly confined to meeting the legitimate expenses of administration.

LAWS.

No new code was made at the beginning of this period, the laws in force being those of the Kin dynasty. Strangulation was abolished. Buddhist and some other priests received legal privileges. Chinese had practically all the benefits of the old Chinese law; the Mongols were under a special dispensation. The chief modifications enacted by the Mongols were as follows:—New capital offences (*v. infra*) were: secretly casting weapons, etc., forging bank-notes, intentional killing of a son or grandson to incriminate an enemy, and Mongols quitting the jurisdiction. The "linger-cordial" (*ling ch'ih*) was introduced on a regular scale. In 1260, unlicensed traders were forbidden to cross the frontier. In the following year, prunes were ordered not to decide cases themselves but to leave them to the Courts. Secretly casting weapons or not handing them in to the government were made capital offences in 1263, and in 1268 selling poisonous medicines was forbidden, and the punishment for unskilful operators increased. In 1271, appeals in criminal cases were prohibited, except where the Magistrate had decided unjustly. Whipping, branding, and other excessive punishments were abolished three years later. Gambling was made punishable with exile, and the forging of bank-notes with death, and the using of them with bamboozing, in 1276. Selling a wife as a prostitute involved both buyer and seller (1278). Except in cases of rebellion, killing parents, etc., banishment was substituted for the death penalty in 1281. Five years later the Chinese were forbidden to carry arms. In 1291 a new set of laws was put in force. The next year dogging on the back was abolished, the law of theft settled, and the possession of law-books forbidden. In Polo's time the finder of lost property had to take it to the officer's tent. The law concerning robbery was settled in 1295: the chief robber and his colleague were to be executed, and the rest sent to cultivate the fields. Later, it was ordered that no exception was to be made, but that all were to be executed. Accidental killing was punished by a small fine. A law for official criminals was made in 1301, and in 1312 and 1320 comprehensive collections of laws were published as official codes. Intentional killing of a son or grandson in order to incriminate an enemy, was murder. The game laws were relaxed (1314). Crime was pardoned on confession (1324–9). Mongols who quitted the jurisdiction were punished with death. Priests were forbidden to buy the people's lands (1327) and officers receiving bribes were banished. New *Institutes* were issued in 1329. From 1330 the wife and children were not involved. In the next year servants and employés were granted the right to inform against their masters and employers, but only if the crime concerned themselves. Possession of arms was forbidden in 1336 (see 1286 for Chinese). Magistrates were ordered to decide cases of robbery and theft (as well as of murder, etc., as before) without sending to the Record Office (1337), and in 1338 officers were appointed to circuits in charge of capital cases.

LOCAL.

Fifty families formed a *she*, hamlet or society, under an old man acquainted with agriculture as headman. Collections of 100 families were under a *chang*, or chief. Villages with less than 50 families formed a *she* with the neighbouring village. Remote places could form separate *she*. In Cambulac (Peking), the plots assigned to different heads of families. After the bell in the central tower had been struck at nightfall people were not allowed to go out. There were guards of 1,000 men at each city gate. In Kinsay (Hangchow) each bridge was guarded by 10 men. Part of this guard formed a patrol to arrest people out after dark, give alarm of fire, etc.

MILITARY.

The Mongol success was due to discipline and study of the art of war. They improved on all the military knowledge of the time and completely revolutionized tactics.

Kublai had a body-guard of 12,000 horsemen.

Before battle troops sang and played musical instruments. Fight started at sound of Prince's kettle-drum. Gun, cross-bow, and marine forces were some of the divisions used.

Tablets of authority were given to captains, commanders, etc. Rank and salary were proportioned to size of command. The registers were secretly kept by 1 or 2 great ministers, so that the number of soldiers was not accurately known. Military officers had now no control of the people. Soldiers farmed when not on duty and were reduced in numbers in times of peace. Orphans and maimed were allowed to find substitutes. Warriors disguised as merchants and workmen entered the enemy's country as spies. A navy of 5,000 ships was built and manned by 70,000 trained fighters.

ECCLESIASTICAL.

Priesthood: Steps were taken to stop the exacting claims of Buddhist priests. Christian priests, Buddhist bonzes, and Taoist monks were ordered to pay taxes. The White Lily Society was proscribed.

There were 3 classes of Buddhist priests—meditators, chanters, and assistants.

Priests versed in 5 volumes of the Sacred books or who had performed meritorious deeds were appointed Buddhist magistrates, etc.

In 1327 Buddhist and Taoist priests were forbidden to buy the people's lands.

Priests' garments were changed from black to yellow. They used straw mats for beds.

Temples, etc.: Vast sums continued to be spent on Buddhism and images.

In 1270 the Ta Hu Kuo Jên Wang Monastery was built.

Observances: Animals supposed to be souls of the dead were fed in the Monastery at Hangchow.

Connection with State: 1280–95. Kublai was an ardent Buddhist and Confucianist. In 1281 he caused all the Taoist literature, except the *Tao tê ching,* to be burnt.

Priests were appointed by the sovereign Imperial Preceptors, Magistrates, *etc.*

Jên Tsung (in 1314) expended vast sums on Buddhist priests and ceremonies; in 1318 he caused the Canon to be written out in golden characters.

Foreign religions: The Latin friars established their mission in the 14th cent. Foreign sects were allowed to reside and preach in the empire. Some Christian churches and monasteries.

Persecution: The White Lotus sect was persecuted, but powerful. Buddhism had respite under imperial patronage.

Foundation: Grants of lands to temples were made in 1301 and 1324-9. In 1311, 10,000 ingots of gold were subscribed by the government to the Ta Chien Yüan Monastery.

PROFESSIONAL.

Scribes. About 400 artists, including skilful portrait painters. Excellent Chinese mathematicians, one of whom also an engineer. Over 400 physicians in charge of the emperor's health. Physician, astronomer and historian sometimes united.

ACCESSORY INSTITUTIONS.

Education, etc.: Colleges were established in all the provinces. Medical studies occupied a large place in the curriculum. The Imperial Academy was opened in 1283 [or 1287] with 120 students, half Mongol and half Chinese, stationery and board being supplied by the government. Presidents of colleges now began to be appointed. (Colleges with Principals and Overseers of Examinations had, however, been established under Ogdai in 1224.)

Privately-founded school endowed with large library mentioned.

Foundlings and poor relief: 20,000 foundlings per annum were provided for by the King. Clothes were given to the poor, but were provided by means of taxes and corvée labour. (Free dispensaries were established by the Mongols in the North in 1237.) A "charity granary" was established by Chang-Yüan-chên for relieving poor clansmen and neighbours.

Libraries: Large private libraries are mentioned. One was founded in the college at Tung P'ing. Lodging was provided for people from other countries. Glass, china, &c., supplied to picnic parties at Yang Chow. Fireproof towers for the storage of valuables were common.

CEREMONIAL.

MUTILATIONS.

Cutting off flesh, disfiguring the face, and shaving the head (for filial and other purposes continued. Custom of compressing women's feet much in vogue.

FUNERAL RITES.

Mirrors placed inside coffin. Corpse dressed in fur-coat, leather cap, boots, and leather gingas, and a bowl tied to waist. Four belts of gold bound round over the clothing. A female exorcist rode at head of procession and a single horse ("the golden steed for the manes") was led by hand. Coffin made out of two logs, buried deep in ground, and site obliterated by trampling of many horses. Imperial mausolea had no grave-hills. Living women said to have been buried with deceased monarchs. Cases of Suttee-ism by fire and otherwise very numerous. Practice of dwelling on graves common. Marriages between deceased persons also took place.

LAWS OF INTERCOURSE.

Court: Prayers and the extreme forms of reverence were made to the emperor. A strict court ceremonial was drawn up and gorgeous dresses prescribed for those allowed to approach him. Courtiers were required to dress after a uniform fashion. All festivals and wives of nobles sat at table with their husbands. Strangers from foreign states dined at a table set apart for travellers in the presence of the king, who feasted in full gaze of the people. The court showed lavish splendour.

Towards superiors: Whilst still at a distance from the palace Barons preserved quiet men; said to carried small spittoons; and donned buskins of white leather so as not to foul the carpet.

Etiquette was elaborate.

Salutations: They saluted "with a cheerful countenance and great politeness."

Presents: Emperor gave presents of silk to old men of 80 and upwards.

Concrete distinctions: Tablets of authority were of different materials and differently ornamented. Long nails, and small feet in women, signs of gentility.

HABITS AND CUSTOMS.

Sports and games: Chess came into more general use. Games, such as riding and shooting at willows, polo, etc., often accompanied the worship of heaven and earth. Players encouraged by music. Water parties and picnics favourite amusements.

Private: Hot baths taken frequently. Dinners given at restaurants. Bodies of capital criminals eaten.

CHIEF PERSONS.

EXECUTIVE.

Rulers.

Kublai Khan (1280). Ch'êng Tsung (1295). Wu Tsung (1308). Jên Tsung (1312). Ying Tsung (1321). T'ai Ting Ti (1324). Ming Tsung (1329). Wên Ti (1330). Shun Ti (1333). Po Yen. T'o To. Ch'en Yu-liang. Ming Yü-chên. Hsü Ta.

INCENTIVE.

Wu Chih (artist). Wang Ming-tê (classical writer). Tai Fung (philologist). Chang Kou-lin (scholar and poet). Ma Tuan-lin (encyclopædist). Chao Meng-fu (painter and calligraphist). Wu Ch'êng (classical writer, etc.). Yüan Ming-shan (essayist). Ch'ên Li (teacher, etc.). Hsü Ch'ien (classical writer). Ch'ên Hao (ditto). Yang Chih (artist, etc.). Chou Pê-ch'i (scholar and author). Ni Tsan (artist). Lin Chi (poet).

SENTIMENTS.

ÆSTHETIC.

Ate with propriety. Described as cleanly. Artificial wooded hills.

MORAL.

Described as not quarrelsome, honest, truthful, possessed of good-will, and as treating women and foreigners with greatest respect.

Water-parties and picnics accompanied by prostitutes, who were, however, apparently well educated.

Women generally occupied a more elevated position.

IDEAS.

RELIGIOUS.

Mohammedanism spread. Kublai patronized impartially Mohammedanism, Buddhism, Christianity, and Judaism.

There were 4 cathedrals at Cambulac.

A *Christian* missionary (John of Monte Corvino) reached Peking in 1293, was favourably received, and not hindered in his propagandism. Franciscans not interfered with throughout the period. Emperors engaged in constant warfare, indifferent to various forms of religion propagated.

The existing *native religions* apparently remained unchanged.

Souls of human beings continued to pass into animals, etc.

Tree-planting supposed to produce longevity. Arrow striking property unlucky.

KNOWLEDGE.

Chronology: Calendar corrected by a commission, composed partly of Mohammedans and Nestorians. Sunrise, etc., now calculated from Peking. Mongols borrowed cycle from Chinese. Elaborate water-clock and bell and drum struck hour in Peking.

Astrology: There were 5,000 astrologers and soothsayers maintained by the Kaan. They were apparently much resorted to by persons of various creeds.

Astronomy: Sunspots continued to be recorded. Some new views on the solar system propounded.

Geography: The Yellow R. was explored to its source. Maps of empire imperfect.

Physiology empirical. In *medicine* and *surgery* acupuncture and counter-irritants, and operations under the influence of hashih, in use.

History voluminous. Various critical works.

LANGUAGE

Polo refers to the unity of the written, and differences of the spoken languages. Loss of final *m* and initial *b, d, g.* An attempt was made to trace the origin and development of writing and its connection with speech.

PROCESSES.

DISTRIBUTION.

Trade, etc.: The line of overland traffic probably led normally to Mongolia, Peking, and the district north of the Yellow River, while maritime trade stopped in Southern China. The foreign trade interrupted to the close of the Sung period was regularly restored in 1292. In 1312 trade was interdicted for 2 years, after which the 3 ports of Chin Chew, Canton, and Ch'ing Yüan were opened to foreign commerce.

There was considerable commercial intercourse with Arabia and Western countries. Florentine, Venetian, and Genoese merchants traded both by land and sea.

1323. Trade in precious stones denounced.

The post-al service was active. Gravelled bridle-roads by sides of paved highways kept for couriers. Government post-houses at distances of 25 miles on all principal highways and at greater intervals in less inhabited parts. Post-horses provided by nearest city or village.

1293–1328. Priests forbidden to use the courier-horses.

Means of conveyance: Boats with watertight compartments used. Length of vessels used on rivers regulated.

EXCHANGE.

1285. Bank-notes from 50 to 1,000 *cash* made current.

1287. A new paper money, called *pao ch'ao* or "precious bills," a Chinese foot square, made from the bark of the paper mulberry, was issued. New issue of silver and tael notes. First Mongol *cash* coined.

During this period one issue of coins was succeeded by another, which the new names were invented to deceive the people, solemn pledges were given by the government, and many other devices adopted to avert the threatened bankruptcy of the State. Many changes were also made in the system of paper money, which lost much of its credit. The issue by the government of inconvertible paper paralyzed trade and reduced the people to barter.

Weights and measures: Measures of length.—The decimal system was re-introduced and has since prevailed.

PRODUCTION.

Furnaces used in potter's trade. In brick-making clay trodden by men or buffaloes. A kind of black stone used for fuel.

ARTS.

Fishing: Cormorants used.

Also divided into water and caught fish with their hands, putting them into bags and afterwards emptying them into tubs in the boats.

Weaving: Cloth woven from flowers of cotton-tree.

Several of the processes *of dyeing.*

AGRICULTURE, ETC.

Private owners not being allowed to leave their holdings untilled, and the State providing every plot with a cultivating owner, China was the best-cultivated country and in the world.

Cotton-cultivation was extended in spite of the opposition of the silk and hemp growers, mainly through the distribution of seed throughout Kiangnan.

Rhubarb was grown in large quantities in the mountainous region S. of Suchow and Kan-chow, as well as in Shan Si, Shen Si, Ho Nan, and Sha Ch'uan; ginger in S. Shen Si, Fu Kien, and Kiang-ning Fu.

The Mongol demand for horses caused 14 great centres to be maintained to supply horses for the army.

The scarcity of this animal towards the end of the period is attributed to the effects of the damp climate.

Tame yaks were kept as beasts of burden and for ploughing. A cross between the yak and common cow was bred.

Geese, ducks, and fowls were biggest, finest, and cheapest at Canton.

The Fo-chow cocks were the largest in the world. White "woolly" hens are mentioned.

PRODUCTS.

LAND-WORKS.

Grand Canal completed. The Hui L'ung Canal, for grain transport, constructed. Course of Huang Ho directed into one of its deserted beds. Wells. Highways bordered with trees, or (in dry soil) pillars or stones as landmarks. Roads and waterways chiefly used to transport armies or means for their maintenance.

1345. Archway in Nank'ou Pass with Indian ornamentation. Stone dyke built along Ch'ien T'ang River.

HABITATIONS.

Large numbers of people lived in wooden houses built on boats.

FOOD.

Food: Bread, wine, rice, flesh, and fish in abundance. Taking flesh and fish at the same meal was considered "delicate living." The cheapness of pheasants caused them to be largely eaten. Human flesh was eaten during the disorderly times at the end of the period.

Beverages: The Mongols had not acquired a taste for tea. They drank a spiced rice-wine.

CLOTHING.

Officials' and people's dress made distinct by sumptuary regulations. Priests began to wear yellow. Waiters at banquets wore veil. Amongst variety of hats was one to shade eyes from sun's rays.

IMPLEMENTS.

Calabashes, quilts, mats, bracelets, mirrors, sceptres, staffs, clepsydræ, chariots, dog-sleighs, milk-carts, dragon-boats, writing materials, agricultural and weaving implements, etc.

WEAPONS.

Offensive: The composition and forces of gunpowder were evidently understood, but there was no marked advance in the methods of its employment or improvement on the inventions of earlier ages. Powerful mangonels and trebuchets.

Defensive: Coats of mail.

ÆSTHETIC PRODUCTS.

Object-decoration: Porcelain painted with flowers.

Personal adornment: Court ladies decorated themselves with pearls.

In W. Yünnan men gilded their teeth and tattooed their arms and legs with black bands.

Architecture: New types of architectural work were developed.

Painting: Some good paintings of horses.

Literature: There were voluminous contributions to classical literature. An extensive encyclopædia was published. The *San tzü ching,* or "Three Character Classic," destined to be the juvenile educational primer for at least 600 years, appeared.

Novels and historical romances—as distinct from fables and short stories—began to be written.

The decadence of *poetry,* which now set in, was not stayed by the efforts of a few able poets.

Drama: Third dramatic epoch. Plays of the period classified as *yüan pên* and *tsa chü.* Dramatic art reached its highest level. Tone sound. Tendency was on side of justice and morality, and most plays pointed moral purpose. Subjects treated historical or domestic. Characters also drawn from mythology and fable. Scenery absent. Prologue in dialogue often intermingled with verse. Dramas generally divided into 4 or 5 acts irrespective of the incidents of the play. Manners of the age vividly depicted. First attempts to represent selected characters. Great number of plays produced. The *chü chiang,* or *kan chü chiang,* style of dramatic music used.

Music: Mongols introduced a scale and system of notation different from that used by Chinese.

There was a national music besides that played at the sacred games.

Flute (hsiao) began to be used in ritual music.

Porcelain, etc.: Manufacture said to have deteriorated. Hard *chêng* reached perfection. *Lacquered ware* dishes.

EVENTS.

1280. Yüan dynasty established.

1281. Taoist books burnt.

1284. Earthquake at capital; also in various places in 1290, 1295, 1303, 1304, 1305, 1308, 1311, 1313, 1314, 1317, 1322, 1327, 1332, 1333, 1334, 1337, 1338, 1342, 1344, 1347, 1352, 1358; drought, famine, or locusts in 1290, 1295, 1308, 1313, 1320, 1327, 1361; and floods in 1290, 1310.

1289. All Buddhist sacred books deposited in the capital.

1356. Chu Yüan Chang, founder of the Ming, took Nanking.

MING PERIOD: RESTORATION OF CHINESE SUPREMACY (1368 TO 1644).

TABLE VIII.

DATES.

1368.

OPERATIVE.

Division between sexes: Similar to previous periods.

Specialization was carried to a remarkable extent: "Every kind of traffic and commerce is divided into several branches." Dyers formed an especially large division of workers. Barbers combed and dressed, but did not shave, the hair. Workers in bronze and makers of bells, lacquer ware, and cloisonné showed proficiency. Gold, jade, and agate-workers are mentioned.

Localization: Tea was principally produced in Chiang Nan. A special porcelain factory for the palace was established at Ching-tê Chên. Hang Ch'êng seems to have grown vegetables for many other districts.

REGULATIVE.

LAND. — Crown lands formed one-seventh of all arable land; in the west, only one-fifteenth belonged to private owners. Crown lands served to reward favourites, endow pagodas, etc. Farms began to be carried on in the interests of the Emperor's privy purse. These domains increased rapidly. The officials in charge of them frequently enlarged them by absorbing the land of the neighbouring peasants.

No one held land except of the Emperor, and crown grants were only for life, so as to prevent the accumulation of property in a few hands, and the rise of powerful vassals.

Landless inhabitants of towns were removed to colonize depopulated districts. In other parts, soldiers were employed to reclaim waste lands.

The government, apparently, did not reserve to itself any right of directing the way in which land was to be cultivated, nor did it enact any rules for limiting individual ownership. In practice, it respected rights of property consecrated by time, but rights of ownership were not, either then or afterwards, perfectly free.

The quantity of land under cultivation varied greatly.

For agriculturists, see Land.

The *artizan* and *merchant* class included many pseudo-members seeking protection from excessive taxation. In 1522–67 dishonest merchants were bamboozled.

Forced labour: Under the organization for taxing and corvée purposes 110 households were reckoned to a village, the 10 largest taxpayers being counted as chiefs. In the capital the people were in some reigns called upon to provide for the Emperor's stud.

Slavery: Slaves were either (1) prisoners of war, (2) acquired by purchase, or (3) by gift. They could purchase their liberty from their master, who gave them a *p'ingchû*, written guarantee. Male children bought by slave-dealers were apprenticed to some occupation and after having served their master for some time were obliged to be freed and provided with means of livelihood. Slaves could only marry *pi*, female slaves. Free men might on occasion marry the latter.

300 black slaves were presented to Hung Wu and 200 men and women given as a portion of tribute. Black slaves were imported from Sumatra, Cambodia, and other places.

INDUSTRY.–Trades continued to be inherited and to be superintended by government officials. Salt was an imperial monopoly in some places.

DOMESTIC.

MARITAL.	FILIAL.
Marriage took place at an early age. Husband gave wife dowry. Could kill both parties in case of adultery, if caught in act.	*Inheritance, etc.:* Similar to previous periods.
Polygamy: Apparently under certain circumstances two women could have the status of wife. The polygamic system of the Mongol emperors was continued by the Mings.	*Relation between parents and children:* Ditto. Three remarkable instances of filial devotion are recorded.
Degrees excluded: Marriage with sister's or brother's daughter was prohibited and punishable. In Ying Lo's reign marriage was permitted between the military families (*chûn chia*) and families of the people (*min chia*).	

POLITICAL.

CIVIL.

PUBLIC.

GENERAL.

RANKS.—*Succession to the throne* was to the eldest son, but in the case of Wan Li was divided between the sovereign's two eldest sons. Emperor, secluded in palace, was seen of few. Imperial residence magnificent. There was a school for eunuchs within the palace and they continued to occupy prominent positions at court. After 1471 no audiences were given to ministers. For a quarter of a century before 1610 none but eunuchs ever saw the sovereign. Court factions chronic.

The literati were exempted from taxation.

There were 58 principal grades of *officials*, appointed by the emperor with the consent of his council, regard being had to merit not descent, and 5 degrees of *nobles*, but the titles of viscount and baron fell out of use, meritorious ministers having bestowed upon them the ranks of duke, marquis, or earl. Whether the title was to be hereditary or not was determined by the degree of merit of the recipient.

The rule that an official should not hold office in his native province was tentatively adopted.

The *Red Book* was first published about 1580.

The position of *agriculturists, artizans,* and *merchants* remained unchanged.

The position of *eunuchs* at court has been mentioned above. They were now prohibited from holding official posts and now re-appointed as spies on the official staff.

INSTITUTIONS.—1. *Executive:* The capital was at Nanking and (1411) at Peking. The empire was divided into 15 provinces. The civil administration was placed on its old and national basis without a military character. The Supreme Council of the Empire was the *Nei Ko*, Grand Secretariat, or Imperial Chancery, with its *Tu Chhên Shih*, or Grand Secretaries. The *Chung Shu Shêng* was suppressed in 1380 by the *Liu Pu*, or Six Boards. The *Ch'êng Hsiang* were abolished at the same time. The Six Boards were the same as in the previous period. The Board of Civil Office was considered as of more importance than the others. The Nine Ministries were the Censorate, Office of Transmission, Grand Court of Revision, *Han Lin* College, Courts of Sacrificial Worship, Imperial Stud, Banquets, State Ceremonial, and Imperial Academy of Learning.

At the head of the *provincial administration* were *Hsüan Fu Shih*, who became the *Hsün Fu*, Provincial Governors, *Tsung Tu*, Governors-General, or Viceroys, being added in 1439. It became the practice to send eunuchs or other court functionaries on "soothing circuits," and they gradually became a permanent institution as governors, treasurers, and judges. *T'i Chü* were officials appointed by various Boards in connection with the collection of revenue. The *An Kuan Ch'a Shih* were the *Kuan Ch'a* of the T'ang and Sung dynasties.

The administrative unit was the *Hsien Ling*, District Magistrate, ranged in 3 classes according to the amount of taxes paid, with duties of a varied character. This dynasty did not appoint *Chou Tz'ŭ Shih* (the *Chih-li Chou*, Independent Sub-Prefects of Manchu times), but *Chih Chou*, Department Magistrates, *T'ung Chih*, Sub-Prefects, and *P'an Kuan*, Assistant Sub-Prefects, formed part of the administrative machinery. The two latter were only appointed if the *Chih Chou's* district exceeded 30 *li*.

1628. Public examinations for appointments in the government service on the lines laid down by Confucius were organized.

2. *Legislative:* The laws were revised by order of the sovereign.

3. *Judicial:* Though imperfectly differentiated, some speciality of function was shown by the Board of Punishments being a place to administer punishment, the High Criminal Investigation Board to try law-breakers, and the Censorate to watch procedure, correct irregularities, and redress grievances. Accounts of the administration of justice differ. Publicity favoured impartiality. Torture used. Death sentences could not be executed until confirmed by the emperor. Many criminals died in prisons.

4. *Revenue and taxation:* Taxation was regulated, but levied according to the expenditure of the sovereign, in contrast to the adjustment of expenditure to revenue in the earliest times. In 1370, cultivated lands brought in about 29½ million measures of grain. A tithe was imposed on tea (exchanged for horses). In order to escape excessive taxation, people sought the protection of the rich, lived in boats, or pretended to be workmen or traders. Official oppression and corruption prevailed. Many products were twice taxed. Tribute was received from Bengal and Annam. In 1424, the taxes were lightened. The revenue, however, was not on a satisfactory basis, and was constantly interfered with by governmental measures, which, instead of improvement, introduced further confusion. At the close of the 15th century the grain revenue was 260 million measures of 100 lbs. each. In the latter half of the next century the money revenue was 43,000,000 taels. In 1620, mining taxes were abolished. The rate of taxation per head stood higher than during the following period. Wealth and expenditure had both considerably increased, but unsound finance and extravagance soon depleted the exchequer. Ministers of Justice, literati, and soldiers were exempt.

LAWS.

1368. T'ai Tsu published a penal code, abolishing mutilations and other punishments. He also drew up a kind of Doomsday Book regulating taxation, "simplicity and strictness" were the objects kept in view in its preparation. Whipping on the back and castration were forbidden. Self-castration was punished as unfilial. In cases of officers receiving bribes the officer and acceptor were punished and their families transported. In 1373 all the laws, regulations, etc., were circulated to the magistrates. In the same year the law as to relatives concealing one another's crimes was defined. In 1378 the emperor, considering the law was not yet the "happy mean," adopted 606 laws from the T'ang law and had them promulgated. In 1382, complainants passing over the proper officials without reason were punished by banishment. In 1397 the law governing decisions by judges in criminal cases was resettled. It was considered that a knowledge of the Classics was the first requisite in deciding criminal cases. In 1402, people guilty of crimes punishable with death were sent to cultivate the fields of Pei P'ing for 5 years; with banishment, for 3; with transportation, were employed in making Imperial Chancery, with its *Tu Chhên Shih*, or Grand Secretaries. The *Chung Shu Shêng* was suppressed in 1380 by the *Liu Pu*, or Six Boards. The *Ch'êng Hsiang* were abolished at the same time. The Six Boards were the same as in the previous period. The Board of Civil Office was considered as of more importance than the others. The Nine Ministries were the Censorate, Office of Transmission, Grand Court of Revision, *Han Lin* College, Courts of Sacrificial Worship, Imperial Stud, Banquets, State Ceremonial, and Imperial Academy of Learning.

At the head of the *provincial administration* were *Hsüan Fu Shih*, who became the *Hsün Fu*, Provincial Governors, *Tsung Tu*, Governors-General, or Viceroys, being added in 1439. It became the practice to send eunuchs or other court functionaries on "soothing circuits," and they gradually became a permanent institution as governors, treasurers, and judges. *T'i Chü* were officials appointed by various Boards in connection with the collection of revenue. The *An Kuan Ch'a Shih* were the *Kuan Ch'a* of the T'ang and Sung dynasties.

The administrative unit was the *Hsien Ling*, District Magistrate, ranged in 3 classes according to the amount of taxes paid, with duties of a varied character. This dynasty did not appoint *Chou Tz'ŭ Shih* (the *Chih-li Chou*, Independent Sub-Prefects of Manchu times), but *Chih Chou*, Department Magistrates, *T'ung Chih*, Sub-Prefects, and *P'an Kuan*, Assistant Sub-Prefects, formed part of the administrative machinery. The two latter were only appointed if the *Chih Chou's* district exceeded 30 *li*.

1628. Public examinations for appointments in the government service on the lines laid down by Confucius were organized.

2. *Legislative:* The laws were revised by order of the sovereign.

3. *Judicial:* Though imperfectly differentiated, some speciality of function was shown by the Board of Punishments being a place to administer punishment, the High Criminal Investigation Board to try law-breakers, and the Censorate to watch procedure, correct irregularities, and redress grievances. Accounts of the administration of justice differ. Publicity favoured impartiality. Torture used. Death sentences could not be executed until confirmed by the emperor. Many criminals died in prisons.

4. *Revenue and taxation:* Taxation was regulated, but levied according to the expenditure of the sovereign, in contrast to the adjustment of expenditure to revenue in the earliest times. In 1370, cultivated lands brought in about 29½ million measures of grain. A tithe was imposed on tea (exchanged for horses). In order to escape excessive taxation, people sought the protection of the rich, lived in boats, or pretended to be workmen or traders. Official oppression and corruption prevailed. Many products were twice taxed. Tribute was received from Bengal and Annam. In 1424, the taxes were lightened. The revenue, however, was not on a satisfactory basis, and was constantly interfered with by governmental measures, which, instead of improvement, introduced further confusion. At the close of the 15th century the grain revenue was 260 million measures of 100 lbs. each. In the latter half of the next century the money revenue was 43,000,000 taels. In 1620, mining taxes were abolished. The rate of taxation per head stood higher than during the following period. Wealth and expenditure had both considerably increased, but unsound finance and extravagance soon depleted the exchequer. Ministers of Justice, literati, and soldiers were exempt.

LOCAL.

Judicial: The system of mutual responsibility extended to 10 households. Ten days' notice had to be given of intended change of residence. If anyone departed after notice the rest became liable for his debts. Aged men were ordered to take charge of local lawsuits and criminal cases.

MILITARY.

1368. The system of commanders and generals of all divisions was abolished and 17 garrisons established, commanders being placed over divisions of 5,000, 1,000, 100, 50, and 10 men respectively.

1370. 24 naval stations were established, each with 50 war junks and 350 military officers. Marines were increased when ships were sent on an expedition.

1425. The *ying, san ta* three troops, were formed. In 1450 they were changed to 10 *t'uan*, trainband, troops; in 1488–1506 these were increased to 12. Reviews were held. The sovereign took the field in person.

1449. The *shên chi* division used the rifle, but it was feared that it would be inefficient in rainy weather, 6,000 men were detached from the *yu chün*, youths' division, to practise the use of long shield and swords.

1450–7. Owing to the inefficiency and want of coherence of the troops 150,000 soldiers were selected from the whole army and divided into 10 *t'uan*, each under a *tu tu*, attention being paid to drill and general proficiency. The system was, however, abolished by Ying Tsung (1457), who reinstituted the *san ta ying*.

The metropolitan soldiers were sent to the important places in the provinces. Each *wei* consisted of 5,600 soldiers, with sub-divisions in proportion.

Guards (*so*) and garrisons (*wei*) were established on provincial frontiers.

1522. Towers of defence were erected along the coast, and a militia called out to oppose the Japanese.

1569. Seven divisions of chariot troops were established.

1614. The Manchu Eight Banners instituted.

1620. A chain of forts was built, the Liao tung garrison raised to 180,000 men, and the capital of the province strengthened.

Appliances: 1800 single-thilled war-chariots were made in 1372. War-junks, rifles, shields and swords, towers of defence, and forts are mentioned above.

In 1457, military schools were established for teaching archery and horsemanship.

ECCLESIASTICAL.

Priesthood: Priests were held in contempt, chiefly on account of their idle life. Rigorous measures against the *sex* were frequent. Those who practised *sex*-ism were liable to be strangled.

A Tibetan priest, summoned by Yung Lo to say masses on behalf of his parents, became head of the Buddhist faith throughout the empire.

Sacred places and temples: The Hsüan Nu monastery was built.

Statues to Confucius were forbidden lest they be mistaken for idols, and the tablet was restored.

Sacrifices and observances: Emperor fasted and worshipped heaven.

Connection with State: Buddhism and Taoism were made State religions. The Emperor T'ai Tsu was an ardent Buddhist and showed much favour to the priests in opposition to the civil ministers. This caused them to become more unrestrained. Under Yung Lo Buddhist priests were raised to high positions and exerted considerable influence at Court. In 1544 a Taoist priest became Junior Preceptor.

Foreign religions: Jesuit missionaries arrived in 1573, but failed to convert the people, and in 1622 were persecuted under the idea that they were connected with the White Lily Rebellion. This and other sects and religions (Buddhism, etc.) continued to be officially persecuted.

Miscellaneous: A complete edition of the Buddhist canon was procured in 1410.

PROFESSIONAL.

Famous artists, male and female, were numerous. About 1,200 noted names occur.

ACCESSORY INSTITUTIONS.

Education, etc.: An important measure of national free education was passed. Tsu, who had already built the Academy before he ascended the throne, instituted the modern system of examinations for civil posts. In 1369 he ordered a college to be built in every prefecture, department, and district. Colleges were (1382) to provide their own grain from lands granted to them for that purpose instead of being dependent on the State. In 1375 the village schools (*she hsüeh*) were built. 1384. Examinations had become purely literary: law, arithmetics, riding, and shooting had dropped out. In 1385 the first examination for the degree of Doctor and for admission to the *Han Lin* College were held. Private examinations had (1391) to be passed by college students to gain admittance to general examination for degrees. In the middle of the 16th cent. the colleges suffered much from the competition of unattached students.

Education of the young was carried on by private tutors. Unsuccessful candidates for degrees became teachers in the intervals between the examinations.

The number of degrees conferred rose from 500 to over 2,000 per annum.

Schools for Chinese were instituted by the Manchus in 1628.

Examinations on the Chinese model were instituted in 1634. Schools were founded and prizes given for knowledge of Manchu, Mongol, and Chinese.

Libraries: Many public libraries were founded. Private ones also existed.

Poor relief, etc.: Economies in Court expenses were made to provide for the support of the sick and aged among the people. The poor, deformed, etc., were reported to a "justice of the poor" and cared for.

CEREMONIAL.

CHIEF PERSONS.

EXECUTIVE.	INCENTIVE.
Rulers. Ho Wei-yung, T'ang Ho. Chêng Ho. Chien Lê. Hsia Yüan-chi. Yü Ch'ien. Han Yung. Wan An. Liu Chin. Liu Chien. Yang Ching. Liu Chin. Sun Fei-ling. Chang Tsê. Tu-êrh-ko. Li Tê-chêng. Hsiang Ch'ung. Chang Tê-hui. Huang Tao-chou. Tung Tang-hsing. Hsi-fu. Tung-t'ai-hsi. Shih Ting-chu. Wu Sung-kuei.	Hsieh Ying-fang (philosopher). Wu Hsi (scholar). Tê-so Tuan (classical writer). Shih Chung (artist). Ch'in Chan (historian). Hsü Pei (compiler of Li-hsiang (teacher and author). Tung Ch'i-chêng (calligraphist). Liu Tsung-chou (scholar and author). Chang Kang-sun (poet). Sun Ch'i-fêng (writer on Confucianism, etc.). T'ai Ch'ing (classical writer). Shên Chou (painter). Tang Yin (scholar and artist). Yang Shên (scholar and author). Ch'ü Ju-chi (biographical compiler). Chang T'ai Tsu (1368) and 1 emperor to 1403. Ch'êng Tsu (1403) and 5 emperors to 1465. Hsien Tsung (1465) and 2 emperors to 1522. Shih Tsung (1522) and 1 emperor to Shên Tsung (1573). 3 emperors to 1628. Manchu sovereignty establishing itself 1627 (T'ai Tsung Wên) to 1644 (Shih Tsu Chang).

LAWS OF INTERCOURSE.

Ceremony: "No virtue is more important than courtesy." Great politeness shown. Friends not received in "undress." Large visiting cards in use. Ambassadors at this time had to perform abject prostrations before king's palace. Officials in provincial capitals daily did reverence before emperor's portrait; the people every month at new moon.

Concrete distinctions: Litters, with attendants bearing sun-shade, more dignified than riding on horse-back. Girdles of court dress differed with rank of wearer.

Visits: Host accompanied visitor to street door. Large cards used.

Salutations: Left fist clasped in right hand, and both held against breast whilst bowing the head. Official salutations more elaborate.

HABITS AND CUSTOMS.

Public: Custom of conferring imperial surname still existed. Feasting at New Year continued. Complaints were made of the growth of luxury and extravagance. Dramatic representations before idols.

Games: Wei (chess) had now 19 rows and 361 "roads." Game of "horse-striking" (*tu ma*) played with "cash." Boating on Western Lake.

Private: Banquets much indulged in. Women not present. Beverage drunk on taking oath. Ready-made clothes sold at book-binders.

Fashions: The queue was enforced as a sign of subjection.

SENTIMENTS.

ESTHETIC.	MORAL.
Ornamental baskets of gold and silver wire filled with flowers or sweetmeats placed on table. Described as delicate in eating.	1599 Generals ordered to report only successes. Non-combatants spared, also builders, prisoners not maltreated, and quarter given. Fidelity in business engagements. Respect shown to women, who were secluded to prevent vice.

IDEAS.

RELIGIOUS.	KNOWLEDGE.
The orthodox revived of the literati, resting on ancestor-worship and filial piety, aiming at peace, economy, and virtue, was the chief religion. Confucius enrolled among the gods and specially venerated. Advent of Christian missionaries stopped. Nestorian and Roman Catholic Christians died out. Dominican missions founded (1581) in Kuang Tung, Kiang Hsi, Nanking, and Peking. Persecution (1616–22) ended through Manchu wars.	Jesuits continued to render great assistance to all branches of science. *Mathematics:* The use of the abacus spread to the entire nation. Arithmetic and algebra made slow progress. *Chronology:* The national calendar, which had reached a stage of hopeless inaccuracy, was reformed by the Jesuits. The Mings relied upon the incomplete Mongol system, but in 1643 the European system was adopted by imperial decree. *Magnetism:* The dry took the place of the floating compass. Needle exhibited true eastern variation (1150). *Astronomy:* 1580. European astronomy revolutionizes theories. Imperial observatory placed under the charge of the Jesuits. *Geography:* Cartographical knowledge reached its lowest point. Some geographical knowledge gained from foreign sources. Ardour in study of *natural history* shown by numerous treatises published. *Medicine, etc.:* All portions of animals and of human frame supposed to possess healing properties. Preparation was generally ordinary culinary treatment. Animal substances macerated in fermented or distilled liquors were also used. Numerous works on medicine, etc., continued to be published. Medicine still associated with superstition. Vendors of "elixirs of immortality" imprisoned by Mu Tsung. 1520. Revolt against Sung *philosophy.* *History:* Age of collectors and commentators and of detailed study.

LANGUAGE

Tung fzŭ style of writing invented (*circ.* 1600). Dialect of Peking become court dialect in 1411. Radicals reduced to 360, 239, and 214.

PROCESSES.

DISTRIBUTION.	EXCHANGE.	PRODUCTION.	ARTS.	AGRICULTURE, ETC.
Trade, etc.: The transit of salt to provinces where it was scanty was simplified. Commerce greatly facilitated by multiplicity of rivers and artificial waterways. The Yün Ho led into the Grand Canal; part of it becoming impassable (1375), an impetus was given to the sea passage, which it was intended to prevent. The waters of the Yün Ho and neighbouring streams were accordingly concentrated to feed the canal. In the early decades of the period foreign trade at Canton was tolerated, but strictly regulated. Commercial colonies of Mohammedans and Jews settled in China were regarded as naturalized. Horse and tea markets on frontiers (others controlled). A wood market was established in I Chou. The Nutche Tatars, after being nearly crushed, throve by trade in ginseng, horse hair, and furs. Five missions were sent from Samarkand between 1430–49. Chinese trading emigrants were settled at Ispahan. Large trading expeditions went from Shanghai to Kampot (Cambogia) viâ Amoy, Faifo, Binh-thuan, and Pulo-Condor. Eunuchs sent to seek "tribute" (trade) penetrated to Java, Borneo, the Andaman Islands, Aden, Jeddah, Madras, Bengal, and (by land) Nepaul and Tibet. On the seizure of Hami (1488) the Chinese frontier was temporarily closed to Turfan trade. 1511. First European reached China by sea. The intercourse was favourable for piracy. 1517. St. John's Island was the entrepôt of trade between Canton and Malacca. Macao was occupied by the Portuguese as a commercial depôt in 1534–7. Severe restrictions imposed on Chinese leaving their country for trade purposes were removed in 1567. 1403–1559. There was little intercourse with Japan beyond a considerable smuggling trade. Trade in horses with Tatar chiefs prohibited between 1547 and 1571. The frontier horse-fairs, allowed in 1551, were afterwards abolished. Six or 7 great trade routes across the continent are enumerated. 1556–69. Foreign commerce at Canton at this time was insignificant compared with the local and national trade. In 1560–73 the trade of the Canton River was monopolized by the Portuguese established at Macao. Fukien traders were settled in Manila long before the Spaniards appeared there. The annexation by Spain in 1565 apparently partially stopped the trade until 1603, when it was resumed under certain restrictions. 1567–72. Grain transport route reopened. 1601–34. Chinese traders settled in Formosa. The Dutch traders who settled in the Pescadores and at Taiwan were driven out in 1662. 1637. Five English trading ships arrived at Canton from Sumatra. English and Dutch attempts to trade overland unsuccessful. 1638. First tea sent to Russia. Traffic was promoted by religious observances, fairs and markets being free on occasions of festivals held in front of pagodas and temples. *Means of conveyance:* The horse was never really naturalized; it was imported from Tatary, Corea, etc. The number declined during this period. Litters were substituted for wheeled carriages *circ.* 1546. The disuse of horses was largely necessitated by increase of population and pressure on food supply, and also by the reaction against the emperor's horses being maintained at the public expense. Vegetables transported to market by boat. Complainants announced themselves to officials by beating drum placed at *yamên* gate.	Copper coins were cast in each emperor at regular intervals bearing the year-name with the addition of the words *t'ung pao.* From this time the coins underwent but slight variations in weight and form. There were numerous issues of paper money. Coinage department was abolished. Efforts to prevent counterfeiting. Private coining was prohibited in 1373, the copper being bought by the government. Numerous silver pieces began to enter the country through trade at Canton and Amoy. On the introduction of silver official salaries ceased to be paid in cash. In 1576 mints were opened all over the empire. Abuses increased daily, and before long the greater part of the coins were of inferior make and material. *Weights and measures:* *Measures of length.*—The *ch'ao ch'ih, chang chih,* and *chüeh ch'ih* are said to have been equal to 13·42, 12·87, and 12·58 in. respectively.	Salt drained from sea-water in sand-pits. In N. also obtained by evaporation and sun. Coal and gold mines worked by human labour.	*Pottery:* Rich colours used in porcelain manufacture. Earthen vessels made of very strong earth. *Weaving* good. *Block-printing* laid foundation for stereotype of later times. Gunpowder manufactured.	Horticultural skill great. Hot-water pipes used to force growth of plants. Bones and rags gathered and sorted for manure. Wheat, barley, rye, oats, &c., sown. Rice in marshy ground. All these yielded crops annually. Pine and chestnut trees; mulberry and panizo sown between. Lichees, melons, musk-apples, and 3 sorts of oranges cultivated. Sugar, honey, and wax, all of good quality, plentifully produced. Cotton-wool from "dry and tough lands." Seeds of tobacco-plant brought from West; cultivation soon became general.

PRODUCTS.

LAND-WORKS.	HABITATIONS.	FOOD.	CLOTHING.	IMPLEMENTS.	WEAPONS.	ESTHETIC PRODUCTS.
A canal was built from Peking to the Pei Ho, thus connecting the capital with the Yangtzŭ. The Yün Ho was led into the Grand Canal. The decay of high roads is said to have been one of the results which followed the disuse of horses. The Great Wall was repaired along a considerable portion of its course, and in 1547 a well-constructed section reaching from the north of Peking to Shan-hai Kuan (250–300 miles), was added. 1567–72. Breach in Yellow R. closed.	Gates and doors of houses often had trees planted by them. Inside clean. Floors paved with square stones, ceilings of timber. Dwellings of rich and full of flowers and herbs, fish-pools, etc. Recess in drawing-room. Conveniences into streets. Human flesh and dogs were eaten during famines. Salt, vinegar, red vinegar, and eel condiment, were used. Cakes, sugars, honeys, and fruits (fresh and preserved) of numerous kinds. "Honey *chi*," unborn mice soaked in honey. *Beverages:* Various wines and tea. 1431. Practice of opium-smoking introduced.	*Food:* Ordinary articles remained unchanged. Mutton, dried pork with sauce, beef paté with salted beans, suet of egg and butter, "ginger duck," painted eggs, pressed unsalted dried fish, hard-crab-and-sturgeon mince, "jade chop-sticks soup," "jerked mutton gruel," preserved meat and congee, and bean curd are referred to. Human flesh and dogs were eaten during famines. Salt, vinegar, red vinegar, and eel condiment, were used. Cakes, sugars, honeys, and fruits (fresh and preserved) of numerous kinds. "Honey *chi*," unborn mice soaked in honey. *Beverages:* Various wines and tea. 1431. Practice of opium-smoking introduced.	Dress of T'ang dynasty (RESTORATION) re-stored. Dress made longer and wider. Girdles, shoes, caps, hats, head-kerchiefs, and combs.	Folding-chair, 3-legged wooden seat, bed-steads, couches, pillows, quilts, screens, walnut cups, plates, basins, dishes, jars, vases, lanterns, lamp-stands, candles, torches, various oils, charcoal, pens, ink-stones, and ink. Folding fan came from Japan through Corea. Specifics, novel and fire-arms coincided with the arrival of European pioneers. Fire-arms of large size were introduced to the end of the period by foreign instructors. Some were cannon of enormous calibre, bombards, 9 kinds of matchlocks, 14 weapons for vomiting fire, 14 kinds of explosive vessels in the shape of flasks, globes, grenades, etc., rocket arrows of various designs. Swords, infantry and cavalry lances, bows and arrows, cross-bows, and catapults, iron cudgel, and scaling-ladder continued in use. *Defensive:* Mail fastened by straps. Arrow-proof cotton mail worn by Manchu invaders. Long shields. Octagonal helmets. Stockades.	*Offensive:* Its propulsive powers having been recognized, serious attention was devoted to the use of gunpowder in warfare, the success of the Chinese arms being probably in great measure due to its aid. Tubes (afterwards *shên chi*) filled with inflammable material were attached to the bodies of horses in the time of Yung Lo. The rocket and cannon appear at the time of the invasion of Tongking. The use of novel fire-arms coincided with the arrival of European pioneers. The weapons of the Chinese army were introduced to the end of the period by foreign instructors. Some were cannon of enormous calibre, bombards, 9 kinds of matchlocks, 14 weapons for vomiting fire, 14 kinds of explosive vessels in the shape of flasks, globes, grenades, etc., rocket arrows of various designs. Swords, infantry and cavalry lances, bows and arrows, cross-bows, and catapults, iron cudgel, and scaling-ladder continued in use. *Defensive:* Mail fastened by straps. Arrow-proof cotton mail worn by Manchu invaders. Long shields. Octagonal helmets. Stockades.	*Object-decoration:* Many processes of decorating porcelain showed skill, delicacy, and variety. Figures painted on garments. *Architecture:* Chinese art rose to its greatest height, and many fine specimens of architecture were produced. The aim was to produce substantial work in various styles. This is seen conspicuously in the tombs of the imperial family and in the Temples of Heaven and Earth at Peking. *Sculpture* Avenues of colossal monoliths in marble led up to imperial and other tombs. Temples contained statues of great size. *Literature* was copious but less original and varied than that of Sung Period. *Poetry:* Few great poets. Poetical effusions of *hetairæ* published as supplement to dynastic collections. *Drama* degenerated. *Music:* Harmony rudimentary, consisting merely of simultaneous use of those of the eight kinds of instruments which sounded well together. Melody only written. Pentatonic scale. 1372. Musical instruments distributed to the Confucian colleges. *Porcelain* somewhat coarse in make, faulty in shape, and decorated without much care. Great quantities of all kinds were produced, including white censers, red cups of "liquid dawn tint," and egg-shell wine cups. Blue and white predominated. Flowers and insects were the objects of fresh study. Date-marks now placed on porcelain.

EVENTS.

1368. Ming dynasty established.

1375. Breach of Yellow R. at K'ai-fêng. Earthquake at capital. Earthquakes also in various parts in 1399, 1403, –04, –08, –13, –15, –16, –24, –25, –27, –29, –30, –38, –39, –45, –46, –51, –61, –67, –76, –77, –90, –91, –94, 1500, –01, –03, –11, –14, –19, –24, –25, –48, –51, –55, –68, –70, –75, –83, –85, –87, –95, –97, –98, –99, 1600, –03, –05, –08, –15, –18, –23, –26, –27, –28, –40; droughts and famines in 1388, 1416, –28, –36, –38, –49, –50, –57, –65, –70, –72, –73, –84, 1514, –23, –29, –39, –68, –81, –82, –85, –87, –88, –89, –94, –95, –96, –98, –99, 1601, –10, –15, –16, –17, –26, –28, –31, –32, –34, –36, –37, –38, –39, –40; floods in 1378, –84, –92, 1411, –48, –55, –61, –70, –72, –78, –82, –89, –93, 1547, –52, –70, –74, –75, –76, –80, –81, –87, –95, –96, 1611, –13, –16, –24, –26, –28, –32; locusts in 1374, 1442, 1591, 1606, –26, –38, –39; and plague in 1641, –43.

1488. Grand Buddhist monastery repaired.

1454. Revival of Tartar power.

1488. Burning of Taoist books.

1507. 40,000 men became Buddhist or Taoist monks.

1534. Great temple at Nanking burnt.

1536. Macao settled by Portuguese.

1552. Outer wall of Peking built.

1598. End of seven years' war with Japan in Corea.

1602. Barmese revolt against oppression.

1623. Dutch settled in Formosa and took Pescadores.

1624. Dutch took possession of Formosa.

1626. Many temples built to eunuchs.

1627. Manchus conquered Corea.

1629. Foreigners employed as astronomers.

MANCHU PERIOD (1644 TO —).

TABLE IX.

DATES.

1644.

1900.

OPERATIVE.

Sexual: Poorer women laboured in fields, mended old clothes, drilled and sharpened needles, pasted tin-foil, made shoes, gathered and sorted leaves of the tea-plant, did others work, did needlework, silk winding, embroidery, made clothes, reared pigs and fowls, did household work, etc. Also engaged in fishing, dredging, and in some parts drew plough, practised obstetrics, acted as carriers, and paddled boats. Men did most of agriculture, arts, production, distribution, fighting, etc.

Specialization: Special trades: carpenter, stone-squarer, workers in brass, gold, silver, precious stones, blacksmith, riveter, cobbler, seamstress, tailor, shoemaker, shoemender, shoeseller, weaver, huckster, beanpreparer, florist, scavenger, watercarrier, wine-carrier, collector of refuse, paper, etc., makers of lanterns, needles, curiosities, bronze drums, porcelain, lacquerware, barley-sugar, fans, hats, grass-cloth, paper, leather articles, mats, straw-braid, medicines, fireworks, samshu, seed-cakes, tallow articles, varnish, coffins, crier, barber car cleaner, etc., etc.

Detailed division of labour in agricultural pursuits.

Numerous itinerant trades.

Localization: Chi Chou noted for carpenters; Shên Chou for burners of brick-kilns. Carpenters congregated in Chang Ch'iu; bankers in Shansi.

Following products more or less localized or of superior quality in following places: idols, bells, and other religious articles and jewellery at Kiang Miao; silk, linen, cotton goods, works in iron, ivory, wood, horn, glass, lacquered ware, paper, etc., in Su Chou; the best coffins in Liao Chou; ink and lacquered ware in Hui Chou; porcelain in Po Yang Lake district; raw and woven silks in Hu Chou; salt and sweetmeats in Yang Chou; silk in Ningpo; broadstuffs, silk, cotton, manufactured paper, war, and cloth in Hu Pei; banking and teatrading in Siang Tan; nankeen cloth and fine porcelain in Nanking (before 1860); varnish in Che Kiang; earthenware vessels at Shek-wan; tiles at Pak - his - ch'ao; glass-ware at Po-shan; black pottery and paper in P'ing Yang Fu; crape shawls at Pak-kow; altar-cloths, banners, etc., in Chongyune-fong street at Canton. Many districts produced each its special kind of tea. Tea-oil and beancurd prepared in Kuang Tung; sugar cane in Shêkong; indigo in Pak-loo; cotton in Sha-tsoo, etc.; gauzes, silks, satins, etc., in Canton; tobacco in Kuang Tung; etc.

Professional match-makers only found in certain parts.

Sugar, oil, and rice came from South; tea, silk, cotton, and crockery from East; grain and medicines from North; and metals and minerals from West.

REGULATIVE.

LAND.—Tenure continued to be from crown; no allodial property. Land mostly held in clans or families and not entailed. Overgrown estates infrequent. Conditions of common tenure: payment of annual tax, fee for alienation, and money compensation for personal service to government, generally incorporated into direct tax as sc.tage. Proprietors registered and deeds issued.

RANKS remained the same, viz., (1) *Nung*, agriculturists, (2) *Kung*, artisans, (3) *Shang*, merchants.

All 3 admitted to government examinations. Agriculturists most esteemed. Well-being more evenly diffused than in Europe. Merchants noted for integrity. Slaves, fishers, hunters, brothel - keepers, actors, and servile persons excluded from literary examinations.

Hired labour: Service for wages (unless of 5 years duration) insufficient without written or verbal agreement.

Servants employed by lower-middle class, and farm-labourers engaged by year and hired at "statute fairs." Day-labourers, carpenters, etc., hired in streets.

Wages of common people low living cheap. Hours of work long.

Corvée: Every adult male liable to personal service, but most cases commuted for money payment, and added to land-tax.

Slavery (arising from birth, sale or punishment) common, but for State slavery banishment now substituted. Parents sold children themselves, and husbands cucubines. Slavery redeemable by manumission or purchase. Though scarcely more than chattels, slaves had certain rights and could be considered as members of master's family. Public opinion enjoined kind treatment but there was no legal obligation. Employment of eunuchs confined to imperial family and hereditary princes.

INDUSTRY.—Co-operation general. Apprenticeship long. Sons succeeded fathers. Guilds numerous (both in capital and provinces) and powerful. Protected trade highly organized and regulated. Trades arranged disputes often preventing litigation), and compounded for members' taxes. Revenue derived by percentage on sales. Money advanced on cargoes, for funerals, etc. Insubordination met by boycotting.

Allied to these were trades unions, similarly constituted. Though occasionally tyrannical, tended to promote justice. They settled wages, determined hours of work, number of apprentices, etc. Arrangements artificially influence market illegal. Strikes rare and forcibly suppressed.

Mills, forges, etc., private. Mining only with official sanction.

Ancient customs certain in districts checked or prohibited.

POLITICAL.

CIVIL.

DOMESTIC.

MARITAL.

Family (*chia*) embraced all members, without distinction, of same household (by marriage or adoption), under one *paterfamilias* (*chia chang*), to all bore same surname (*hsing*).

Within family four grades of relationship. Slaves included.

Marriage: Essentials: Consent of parents, acceptance of presents, and bringing home bride. Forms: Roman *usus*, *coemptio*, and ritualistic (for wealthy). Principal object: To secure heir to sacrifice to spirits of deceased parents. Subordinate: (1) *Nung*, agriculturists, (2) *Kung*, artisans, (3) *Shang*, merchants.

All 3 admitted to government examinations. Agriculturists most esteemed. Well-being more evenly diffused than in Europe. Merchants noted for integrity. Slaves, fishers, hunters, brothel - keepers, actors, and servile persons excluded from literary examinations.

Hired labour: Service for wages (unless of 5 years duration) insufficient without written or verbal agreement.

Servants employed by lower-middle class, and farm-labourers engaged by year and hired at "statute fairs." Day-labourers, carpenters, etc., hired in streets.

Wages of common people low living cheap. Hours of working long.

Corvée: Every adult male liable to personal service, but most cases commuted for money payment, and added to land-tax.

Slavery (arising from birth, sale or punishment) common, but for State slavery banishment now substituted. Parents sold children themselves, and husbands concubines. Slavery redeemable by manumission or purchase. Though scarcely more than chattels, slaves had certain rights and could be considered as members of master's family. Public opinion enjoined kind treatment but there was no legal obligation. Employment of eunuchs confined to imperial family and hereditary princes.

INDUSTRY.—Co-operation general. Apprenticeship long. Sons succeeded fathers. Guilds numerous (both in capital and provinces) and powerful. Protected trade highly organized and regulated. Trades arranged disputes often preventing litigation), and compounded for members' taxes. Revenue derived by percentage on sales. Allied to these were trades unions, similarly constituted. Though occasionally tyrannical, tended to promote justice. They settled wages, determined hours of work, number of apprentices, etc. Arrangements artificially influence market illegal. Strikes rare and forcibly suppressed.

Mills, forges, etc., private. Mining only with official sanction.

Ancient customs certain in districts checked or prohibited.

Inheritance and succession: Descent, both of real- and personality, to all sons of wives or concubines in copercenary, irrespective of seniority. Failing direct male issue, property devolved to continuator, and if none, escheated to Crown, or passed to daughter. Bastards received half shares. If no other son, natural son received whole, or might divide with chosen representative of family. Members senior to inheritors acted as executors. Estates indivisible by children during life-time of parents or grandparents.

Adoption: A man might adopt a person as son or daughter, or grandchild. Adoption completed upon purchase and contract. Consent of nearest male relatives of former *paterfamilias*, and of elder brothers if alive, requisite for self - arrogation—except in case of father's insanity or poverty. *Filius posthumus* might be adopted. Adopted became in both cases agnates of all agnates of arrogator or adopter, but could not be sold without consent of natural parents. Natural and adopted sons inherited rights of son or daughter, and

SCALE OF PROGRESS.

Sundry of the statements in this Table must be taken as approximate. The positions in which the names of chief men are placed indicate the times of their highest activities, which, of course, can be but indefinitely fixed. In some cases, too, the necessities of typography have prevented accuracy in placing. Living men are omitted.

Ecclesiastical Changes.	Political Changes.	Population. Average under cultivation.	Chief Men.	Discoveries and Inventions.

			Kung-sun Chiao.	
Wu priests official and powerful.				
		500	Confucius (K'ung Ch'iu).	
Temple to Confucius.	Warring States.			
			Tso-ch'iu Ming.	
			Ku-liang Ch'ih.	
			Kung-yang Kao.	
			K'ung Chi.	
Annual sacrifice of maiden to God of Yellow R. stopped.		400		
Buddhas and Buddhist books (?)			Mo Ti.	
			Yang Chu.	
			P'an Kêng.	
			Shên Pu-hai.	
		300	Ch'ü Yüan. Mencius (Mêng K'o).	
Heresy attacked.				
			Chuang Tzŭ (Chuang Chou).	
			Wei Jan.	
Buddhist emissaries from W.			Lu Pu-wei.	
			Hui Tzŭ.	
	Fall of feudalism. Empire unified. Wars with Mongolian and Turkish tribes. Emperor supreme. Provinces disarmed. Empire greatly enlarged.	over 10 mill.	Hsün Tzŭ. Shih Huang Ti. Liu Pang.	
Buddhist priests imprisoned.			Ch'êng Miao.	

LATER FEUDAL PERIOD.

Ecclesiastical Changes.	Political Changes.	Population. Average under cultivation.	Chief Men.	Discoveries and Inventions.
		20	Li Sŭ.	
			Hau Hsin.	
Rite of imperial ploughing revived.			Ch'ên P'ing.	
Scapegoat abolished.	Yünnan, Ssŭch'uan, Kuangtung and Kuanghsi incorporated.			
	Manchuria submitted.		Chao Ch'ung-kuo. K'ung An-kuo.	
Wu-ism priesthood proper.	Conquest of Corea.		Kung-sun Hung. Ssŭ-ma Hsiang-ju.	
Fêng and *shan* sacrifices established.	Cochin China a vassal state.			
		100	Ssŭ-ma Ch'ien.	
Taoist monasteries abundant.				
			Liu Hsiang.	
			Yang Hsiung.	
	Usurpation of Wang Mang.		Wang Mang. Wei Hsiao.	
Worship of Confucius extended throughout Empire.	Satrap system in full vogue.			
			Wang Ch'ung.	
Buddhism introduced. Scriptures translated into Chinese.			Pan Ku.	
Buddhist monasteries.				
Chinese not allowed to become priests.				
	Rebellions threaten extinction of Hans.			
			Chang Chio. Ch'ên Lin.	
	Competitive examinations instituted.		Chêng Hsüan. Ying Shao. Wang Ta'an. Yüan Yü. K'ung Jung. Hsü Kan. Hua T'o.	
Buddhist temples. Numerous scriptures translated.	Rebellion of Tung Cho.		Liu Pei.	Anæsthetics used.
	Rebellion of Ts'ao Ts'ao.		Kuan Yü.	
	Wars of Three Kingdoms.		Ts'ao Ts'ao.	
			Chao Yün.	
			Chu-ko Liang.	
			Ssŭ-ma I.	
			Ssŭ-ma Chao.	
			Ssŭ-ma Piao.	
Chinese began to take vows for Buddhist priesthood. Monasteries endowed for them. Buddhism much patronized imperially.				
			Wang Hsi-chih.	
Wu-ist influence continued.				
			Fa Hsien.	
More Buddhist scriptures and relics brought to China. Buddhist Church of Tibet officially recognized. Nuns received monastic injunctions.			Ku K'ai chih.	
Sectarianism persecuted.				
Buddhist priests and idols annihilated.			Wang Ching-wên.	
Wu excluded from State religion. *Wu*-ism further restricted. Dancing formed part of Confucian ceremonies. Buddhism again tolerated.				
Sacrificial victims made of dough.			Wang Su. Shên Yo.	
Christianity introduced by Nestorians.			Ts'ui Kuang.	
			Wang Hsi.	
			Tou I.	
	Extensive annexations in W.		Yen Shih-ku.	
Buddhist patriarch arrived.				
Buddhism and Taoism suppressed. Monasteries depopulated. *Wu*-ist influence continued.				
	Development of Southern provinces.		Ch'in Ch'iung.	
Extreme homage paid to Confucius.				
			K'ung Ying-ta.	Printing. Mile-recording contrivance for horse-carriages. Greek fire.
Nestorian missionaries settle in capital.	Empire consolidated.			
Mohammedanism introduced.				
	Corea tributary.			
Buddhism again sanctioned and encouraged.				
			Chang Sui (I Hsing).	
Artificial replaced living horses at sacrifices.				
			Li Po.	
	Hsiung Nu rebellion.			
	Uigars gain foothold by helping to suppress it.		Kuo Tzŭ-i. Tu Fu.	
	Decline of empire.		Ssŭ-ma Chêng.	
	Governorships hereditary.			
			Han Yü.	
			Yüan Chên.	
Severe persecution of Buddhists.			Po Chü i.	

ABSOLUTE MONARCHY. B.C. 0 A.D. 593 mill.

PERIOD OF DISRUPTION. 16 mill. 9 mill. 43½ mill. (?)

RESTORATION OF UNITY. 8½ mill. household. 4 mill. households. 43½ mill. 48 mill. 53 mill.

Ecclesiastical Changes.	Political Changes.	Population. Average under cultivation.	Chief Men.	Discoveries and Inventions.
	Yünnan lost.	900	Tu Hsün-hao.	
			Li K'o-jung.	
	Huang Ch'ao rebellion suppressed with Turcoman aid.			Block-printing.
			Chao K'uang-yin.	
Anti-Buddhistic edicts.	Imperial power revived. Lost provinces regained.	1000		
Taoist priests become celibate.				
Large numbers of monasteries built. *Wu*-ism prohibited and exterminated S. of Yang Tzŭ.	Power of provincial governors curtailed.			
	Tartar inroads.			
			Ou-yang Hsiu.	Movable type.
		1100	Wang An-shih.	
			Chou Tun-i.	
			Ssŭ-ma Kuang.	
Temple erected to Mencius.				
			Chang Tun. Chao Pu-chih.	Compass used at sea.
	Appearance of Manchus.			
Worship of Yü Huang Shang Ti instituted. Persecution of Buddhism and Sectarianism continued.	Kins occupy north.		Hu An-kuo.	
	Chinese south of Yang Tzŭ.		Ch'in Kuei.

			Yü Yin-wên.	
			Wei Shêng.	
		1200		
			Chu Hsi.	
			Chou Pi-ta.	
			Yeh Shih. Ts'ai Ch'ên.	
Wu expelled from Confucian worship.	Conquests of Genghis Khan and Ogotai.		Genghis Khan. Ch'ên Tê-hsiu.	
				Gunpowder used in warfare (introd. fr. West).
			Chao Pu.	
Large monastery built.	Conquests of Kublai Khan.		Liu Ping-chung. Ho Chi.	
			Wang Po.	
Taoist literature burnt.			Po Yen. Wang Ying-lin.	
	Burma added to Empire.		Ma Tuan-lin.	
Buddhism, etc., more leniently treated.	Secret societies numerous.			
Buddhist and Taoist priests forbidden to buy land from the people.				
			Ch'ên Yü-liang. T'o T'o.	
Latin friars established mission.			Ming Yü-chên. Hsieh Ying-fang.	
	Struggle between Chinese and Mongols continued. Provinces recovered.		Hsü Ta.	
			Chu Yüan-chang.	
Buddhism restricted.			T'ang Ho.	
Complete edition of Buddhist canon procured.	Tongking annexed (became tributary in 1428).			
			Chien I.	
Hsüan Ni monastery built.				
Buddhism and Taoism made State religions.			Wan An.	
Priests held offices at Court.				
Rigorous measures against *Wu*-ism.			Liu Chin.	
	Portuguese settle at Macao.			
			Chang Ts'ung.	
			Hsia Yen.	
Non-Confucian religions persecuted.				
			Chang Chü-chêng.	
Jesuit missionaries arrived.				
	Manchus manifest military activity. (1573–1620.) War with Japan.		Hu-êrh-han.	
			Tung Ch'i-ch'ang.	
Jesuits persecuted.			Nurhachu.	
Much opposition to Christianity.	Foreign relations assumed importance.		Hsü Kuang-ch'i.	
Tolerance for missionaries obtained by Treaty.	European embassies came to Peking.		Li Tzŭ-chêng. Hsi Fu.	
Wu tolerated as exorcists and soothsayers.	Rebellion of Wu San-kuei.		Wu San-kuei.	
	Conquest of Formosa.		Chu Yu-lang.	
	Treaty of Nerchinsk.		Chêng Ch'êng-kung.	
	Conquest of Central Asia.		Wang Hsi.	
	Russian embassies to Peking.		Chang P'êng-nio.	
Buddhism, etc., recognized, but degenerate.				
			K'ang Hsi.	
			Yin Hui-i.	
	British (Macartney) and Portuguese embassies to Peking.		Huang Shu-lin.	
	War with Burma made it tributary.		Chao Hui. Shao Ch'ang-hêng.	
			Fu Hêng. Wang Hai.	
			Sun Shih-i. Chu Yün.	
	Rise of secret societies.		Shao Chin-han. Ts'ui Shu.	
	British (Amherst) embassy.		Ch'ang Ling.	
			Yeh Ning-shên.	
	First war with England. Treaty of Nanking. Treaty Ports.		Sêng-ko-lin-sin.	
T'aip'ings endeavour to establish Christianity.	T'aip'ing rebellion. Second war with England. Taungli Yamên established. Mohammedan rebellion. Chefoo convention (1875). Ili returned to China (1881). Corea opened by Treaty (1882). War with France (1885). War with Japan (1894). Corea independent. Formosa ceded.		Tsêng Kuo-fan. Hung Hsiu-ch'uan. Yakoob Beg. Tso Tsung-t'ang. Tsêng Kuo-ch'üan. Tsêng Chi-tsê. Chang Chih-tung. Chang P'ei-lun. Li Hung-chang.	
Persecution of missionaries.	Boxer outbreak.

CHINESE.

PHYSICAL CHARACTERS.

[In Mencius, VI. Pt. ii. II. 2 it is said that King Wên was believed to have been 10 cubits high, and T'ang 9 cubits. The speaker in that passage gives his own height as 9 cubits 4 inches. According to the measures of Amyot (Vol. XIII. of the Memoirs by Missionaries), the Chinese cubit, in the time of the Chou dynasty amounted to about 20 *centimetres*. The three preceding numbers therefore correspond to about, in English, 6½ ft., 5 ft. 10 in., and 6 ft. 1 in. Mencius' questioner quotes these heights as remarkable, from which we may presume, with a degree of probability, that man's height has not sensibly varied in China from ancient times.]—*Legge, Ch. Class.*, IV. i. Prol. pp. 144–5. See also *Kang chien*, III. i. 2, Comm.

[In early times, according to the *Chou li*, "the inhabitants of the hills and forests were heavy and square-built or bony; the dwellers in watery and marshy places were black and shiny; the inhabitants of the mountainous districts were round, plump and tall; and the inhabitants of banks and level places were of pale countenance and spare."]

The original "immigrants into North China all belonged to blonde races. . . . The modern Chinese have little left of the immigrant stock. The main element in the modern Chinese is dark, and they are the true representatives in blood of the dark pastoral people who prior to that immigration inhabited the land."—*Rev. of the Far East*, Dec., 1906, pp. 68, 69.

"The physical traits of the Chinese may be described as being between the light and agile Hindu and the muscular fleshy European. Their form is well built and symmetrical; their colour is a brunette or sickly white, rather approaching to a yellowish than to a florid tint, but this yellow hue has been much exaggerated; in the south they are swarthy, but not black, never becoming as dark even as the Portuguese, whose fifth or sixth ancestors dwelt near the Tagus. The shades of complexion differ much according to the latitude and degree of exposure to the weather, especially in the females. The hair of the head is lank, black, coarse and glossy; beard always black, thin and deficient; scanty or no whiskers; and very little hair on the body. Eyes invariably black, and apparently oblique, owing to the slight degree in which the inner angles of the eyelids open, the internal canthi being more acute than in western races, and not allowing the whole iris to be seen. This peculiarity in the eye distinguishes the eastern races of Asia from all other families of man. There is a marked difference between the features of the mixed race living south of the Mei ling and the inhabitants of the Great Plain and in Shansi or further west; the latter are the finer. . . . The hair and eyes being always black, a European with blue eyes and light hair appears strange to them."—*Williams, Midd. King.*, i. 41–2.

"The cheek-bones are high, and the outline of the face remarkably round. The nose is rather small, much depressed, nearly even with the face at the root, and wide at the extremity; there is, however, considerable difference in this respect, but no aquiline noses are seen. Lips thicker than among Europeans, but not at all approaching those of the negro. The hands are small, and the lower limbs better proportioned than among any other Asiatics. The height of those living north of the Yangtsz' is about the same as that of Europeans. A thousand men, taken as they come in the streets of Canton, will hardly equal in stature and weight the same number in Rome or New Orleans; while they would perhaps exceed those if gathered in Peking. Their muscular powers, however, would probably be less in either Chinese city than in those of Europe or America."—*Ibid.* p. 42.

"Certain variations are no doubt presented by the outward traits, such as colour of the skin, ranging from a light lemon and almost white shade in the north, to deep brownish hues in the southern provinces; the eye usually more or less oblique, but occasionally nearly horizontal; the nose normally square and concave, but often large and straight, especially among the upper classes; the stature, which though generally under the average, as with all Mongolic peoples, often presents surprising discrepancies, as seen in the 'Chinese dwarfs' and 'Chinese giants' from time to time exhibited in Europe. But the bony fabric of the Chinese skull, so variable elsewhere, is singularly constant both in its resemblances to and differences from the normal Mongol cranium. In general it is proportionately longer, and, at the same time, higher than that of any other yellow group; its height slightly exceeding its breadth, and the cephalic index falling to about 77·25 (sub-dolichocephaly). The face, in complete harmony with the brain-cap, is always moderately broad, with very high and prominent cheek bones, and jaws developing a slight degree of prognathism."—*Keane, Ethnology*, pp. 321–2. See also *L'Anthropologie*, May–June, 1895, p. 253.

"The Chinese skull frequently shows, firstly, a particular deviation in the formation of the temporal bone, called by Prof. Virchow *Processus frontalis* (Stirnfortsatz der Schläfenschuppe), and, secondly, a noticeable narrowness of the temporal region (*stenokrotaphie*); two phenomena which are generally observed in the skulls of inferior races."—*Vissering, On Chinese Currency*, p. 25.

"To do and fashion after the most obvious, commonplace, realistic, and persistent way,—this is what seems legibly stamped on those square heavy features, so slightly modifiable by time or space: the downward-drawn eyelid, the flattened profile, the uninspired air, the somewhat plump, muscular, enduring physique. Contrast this Chinese mould with the clear bright eye and rapid, graceful motion of the Arab; with the dreamy languor, yet exquisite nervous susceptibility of the Aryan Hindu; with the prominent features, the collected, self-conscious and expectant bearing of the Teuton or the Greek. It is the unchangeable image of the persistent *mental* type which corresponds to it,—so lymphatic, so incurious, so fast-bound in things as they are and have been."—*Johnson, Or. Rel.—Ch.*, p. 6.

"In size, the women are smaller than European females; and, in the eyes of those accustomed to European style of beauty, the Chinese women possess little; the broad upper face, low nose, and linear eyes being quite the contrary of handsome. Nevertheless, the Chinese face is not destitute of beauty, and when animated with good humour, and an expressive eye, and lighted by the glow of youth and health, the features lose much of their repulsiveness. Nor do they fade so soon, and look so ugly and withered when old, as some travellers say, but are, in respect to bearing children and keeping their vigor, more like Europeans than the Hindus or Persians."—*Williams, Midd. King.*, i. 42–3. See also *Davis, Chinese*, i. 263–70; and *Shih ching*, I. v. III. 2.

"The country women [near Fuhchau] are a robust race, and contrast strikingly with the sickly-looking little-footed ladies of the city."—*Williams, Midd. King.*, i. 133.

"The children of Chinese in the upper walks of life are not, as a rule, robust. This circumstance is, I suppose, to be attributed in a great measure to the practice of polygamy; for among the lower orders of society, whom poverty compels to be monogamists, the children are vigorous and active."—*Gray, China*, i. 239.

"In *Brain*, Pt. lxv., is found a description of a Chinaman's brain, the eighth, so far as is known, which has ever been scientifically examined. The author, Mr. C. H. Bond, points out in the brain of people of this nation several variations from the normal. A greater prominence is given to furrows running transversely than to those running front and back. The Chinese brain has quite as much complexity in the convolutions of the brain substance as there are in the normal. In the front lobes the convolutions are rather above the normal average. The weight of the brain studied was 1,182 grammes—that is, 176 less than the weight of an adult male average brain. The cerebrum was to the cerebellum as five to one. This is very much below the average proportion, which is 8½ to one, and goes to show that the sensual part of Chinese nature is very largely developed; and this may account for the wonderfully expanded filial feeling of the Chinese, and the wonderfully developed paternal reliance upon the devotion of sons and daughters seen among the Chinese. Paternal authority is absolute in this country, and filial submission is unbounded. Could this be so without some evident predisposition which a knowledge of the Chinese brain may be found to illustrate? In the chimpanzee the proportion between cerebrum and cerebellum is as 5¾ to one. The feeling of love to offspring, and the corresponding feeling of regard to parents, is thus shown to be decidedly greater in the Chinese brain than in this animal. Of course, it is possible that the eighth brain examined may not be a good type; but Mr. Bond, as reported in *Nature*, May 31st, 1894, thinks that the extremely remarkable size of the cerebellum is worthy of special attention."—*N.-C. Herald*, July 20, 1894, p. 90.

"The Chinese are all born with a round black mark about the size of a penny at the base of the spine. It disappears generally before they reach eight years old."—*Little (Mrs. A.), Int. Ch.*, p. 195.

"The men of the central provinces are very unlike the men of the south—unlike in physical appearance, in speech, in temper. Both are very unlike the men of the north, and, once discriminated, they are never again mistaken for each other. The Chinese habit, hereditary for ages, of reverting to one's native province and native village—considering that alone to be 'home' where one's ancestors are buried—has crystallised different types of Chinese character into lines rigid as adamant."—*Smith, Ch. Char.* (1st ed.), p. 6.

"The people [of Sinju = Kansuh], who are Idolaters [= Buddhists], are fat folks, with little noses and black hair, and no beard, except a few hairs on the upper lip. The women too have very smooth and white skins, and in every respect are pretty creatures. The men are very sensual."—*Yule, Marco Polo* (3rd ed.), i. 275–6.

"A large number of the Chinese here [Chao Tung, Yünnan] claim that their ancestors were Nanking men. They must have intermarried largely with the aborigines, for some of the characteristic Chinese features are considerably modified now. Twelve boys were standing around me a few days ago, all of them strangers to me. Seven of them had fine, brown eyes, quite as distinct from the black celestial type as mine are. You very rarely find a man with really black whiskers. There is a marked trace of the sandy in nearly every case."—*N.-C. Herald*, Dec. 27th, 1899.

"In eating there is no question of indulgence in the case of 95 per cent. of the population: a man shovels down all he can get for his money, and if he can afford to buy more than is necessary a little extra rice does him no harm. 'Indulgence' only exists amongst the mandarin and rich mercantile classes, and the chief idea is to 'feed up to the occasion'; hence the enormous consumption of expensive aphrodisiacs, real and imaginary, such as bird's-nest jelly, sea slugs, ginseng, cats' organs, deers' horns, and a host of other trumpery and even disgusting objects."—*Parker, China*, p. 276.

[The longevity of virtuous kings, etc., is referred to in *Shu ching*, V. xv. 4–6; xvi. 10; xxvii. 1; etc.]

[The reproductive power of the Chinese race, its adaptation to different circumstances, its longevity, and its recuperative power are described by *Smith, Ch. Char.* (2nd ed.), pp. 144–51. The "first impression of a redundant population is everywhere confirmed, no matter in what portion of this broad Empire we set our foot" (p. 144). "So far as appears, the Chinese flourish equally in the subtropical region, the subarctic region, or anywhere between. Whatever differences are observed seem to be due to the character of the region itself and its capacity to sustain the population, rather than to any inherent difference in the capacity of the people to adapt themselves to one region rather than to another. The emigrating portion of the Chinese people come from a relatively minute area in the provinces of Kuangtung and Fukien, but wherever they go, to India, Burma, Siam, the East Indies, the Pacific Islands, Australasia, Mexico, the United States, the West Indies, Central America, or South America, we never hear that they fail to adapt themselves with wonderful and immediate success to their environment, whatever it may chance to be. What we do hear, however, is that their adaptation is so quick and so perfect, their industry and their economy so in excess of those of the natives of these lands, their solidarity and their power of mutual cohesion so phenomenal, that it is necessary for the remainder of the human race that the 'Chinese must go!' Under these circumstances, it is certainly most fortunate . . . that this people does not as a whole take to emigration on a large scale" (pp. 146–7). "Probably all observers would agree . . . that there is no part of China in which old people are not exceedingly numerous" (p. 147). "While vast numbers of people do die every year in China of diseases which are entirely preventable, the fact that the number of such persons is not indefinitely greater argues on the part of the Chinese a marvellous capacity to resist disease and to recover from it" (p. 148).]

"The Chinese are said to suffer little from nervous irritation after injuries or surgical operations, and to exhibit much less sensitiveness than Europeans to affections of the spine."—*Johnson, Or. Rel.—Ch.*, p. 41. See also *Lay, Ch. As They Are*, pp. 225–6.

"The classes of diseases which most prevail in China are ophthalmic, cutaneous, and digestive; intermittent fevers are also common. The great disproportion of affections of the eye has often attracted observation." "Asthma, even in boys, is common at Amoy, and consumption at Canton and Chusan. Intermittent fevers prevail more or less wherever the cultivation of rice is carried on near villages and towns. Elephantiasis is known between Shanghai and Canton, but in the southern provinces leprosy seems to exist as its equivalent." "Diseases of an inflammatory nature are not so fatal or rapid among the Chinese as Europeans, nor do consumptions carry off so large a proportion of the inhabitants as in the United States." Dyspepsia is common, but comparatively rare at Canton. Stone frequent, but almost unknown in Northern China. "The diseases which result from intemperate and licentious habits are not as violent in their effects as in countries where a greater use of animal food and higher living render the system more susceptible to the noxious consequences of the virus." "The existence of tumors and unnatural growths in great abundance and variety is satisfactorily accounted for by the inability of the native practitioners to remove them." "Goitre is very common in the mountainous regions of the northern provinces."

"Asiatic cholera has been a great scourge in China, but does not often become an epidemic anywhere, though sporadic cases constantly occur." "Small-pox is a terrible scath, and although the practice and utility of vaccination have been known for fifty years past at Canton, its adoption is still limited even in that city. . . . The slovenly habits of the people, as well as insufficient protection and unwholesome food, give rise to many diseases of the skin, some of them incurable."—*Williams, Midd. King.*, ii. 129–33. See also *Ch. Rev.*, xviii. 198.

MONGOLS.

"The Mongol tribes generally are a stout, squat, swarthy, ill-favored race of men, having high and broad shoulders, short, broad noses, pointed and prominent chins, long teeth distant from each other, eyes black, elliptical, and unsteady, thick, short necks, extremities bony and nervous, muscular thighs, but short legs, with a stature nearly or quite equal to the European."—*Williams, Midd. King.*, i. 44–5.

Medium height is about 5 feet 4½ inches. Excepting head, body has small amount of hair, especially face. "Owing to their physical strength, little inferior to that of Europeans, their slight sensitiveness to climatic influences and bodily pain, their acute senses, the men of this breed rank among the most capable whom the earth produces. From their movement in the open air, and their simple but strengthening diet of milk or koumiss, these wandering herdsmen acquire broad chests and well-developed muscles."—*Ratzel, Hist. of Mankind*, iii. 313.

"Taken as a whole, the typical Mongol differs from the other [ethnological] divisions mainly in the general yellowish colour of the skin, the broad flat features, with very prominent anteriorly projecting cheek bones, small mesorrhine nose, mesognathous jaws, brachycephalous head, slightly developed superciliary ridges and glabella, somewhat sunken eyes with narrow almond-shaped aperture between the lids, a vertical fold of skin over the inner canthus and outer angle slightly elevated. This oblique eye with its 'third lid' is a highly characteristic trait, constant in the more typical groups, and exclusively found in the Mongol division. The black, lank and rather coarse hair, almost if not quite circular in transverse section, is also a constant but not an exclusive character, being equally common to the American division, and forming the most marked physical link between Homo Mongolicus and Homo Americanus."—*Keane, Ethnology*, p. 297.

"That the calves of the legs are undeveloped is no more than the natural effect of their equestrian habits."—*Ency. Brit.*, ix. 344.

"One of the most prevalent diseases in Mongolia is *itch*." "Other skin diseases are also prevalent." "*Rheumatism* is perhaps the most prevalent disease." "*Eye diseases* are very common." "*Spring diseases* is, perhaps, not a proper term, but it indicates a feature in Mongolian life. Many people tell you that they are well all the year round except in spring." "*Ague* is not common, but not altogether unknown." "*Narry* is the Mongol name for the disease which is brought on by drinking whisky." "Strong, hardy, and healthy as the women look, almost everyone of them who has passed the stage of girlhood has some chronic malady or suffering. There are many exceptions, especially among the richer class, but, as a rule, women suffer more, age sooner, and die younger than the men; and there is little prospect of a change for the better, in this respect, till women are treated more considerately, and have accorded to them a fair share of the meagre comforts of tent life."—*Gilmour, Among the Mongols*, pp. 174–9.

MANCHUS.

"The Manchus are of a lighter complexion and somewhat larger than the Chinese, have the same conformation of the eyelids, but rather more beard. . . . They have fair, if not florid, complexions, straight noses, and, in a few cases, brown hair and heavy beards."—*Williams, Midd. King.*, i. 44.

EMOTIONAL CHARACTERS.

[The fall of the Hsia and Yin dynasties is attributed to want of reverence (*Shu ching*, V. xii. 17–8), and to the dissoluteness and sloth of their later rulers (xiv. 2–19; xviii. 4–19).]

"Now the officers of Yin . . . in the confidence of their prideful extravagance . . . extinguished their sense of righteousness. They displayed before men the beauty of their robes, proud, licentious, arrogant and boastful."—*Ibid.* xxiv. 10.

"The Chinese, though reckless gamblers, like all the Indo-Chinese and Malay peoples, are naturally frugal, thrifty and parsimonius, which, combined with great staying power and capacity for enduring hardships on poor fare, makes them formidable competitors with the Western nations in the labour markets of the world."—*Keane, Ethnology*, p. 323.

"Drunkenness is so rare that it is not regarded as a vice at all, but rather as good form, to get tipsy at a feast. . . . Strong drink is sometimes disapproved of in political or economical philosophy, because it causes anger, and a waste of good grain; never because men get drunk: accordingly, in times of scarcity, distilling is often forbidden or checked. In the extreme north (especially Manchuria) liquor is considered almost a necessity, and there is a good deal of red-nosed tippling among the well-to-do. Occasionally soldiers get flushed and violent, but that is on the same principle that they eat criminals' hearts and livers—to gain pluck. Notwithstanding all this, in a word, neither drunkenness nor 'drinking' exist in China: the exceptions are a minimum quantity."—*Parker, China*, p. 276. For drunkenness in early times see *Shu ching*, V. x, and *cf.* MORAL SENT.

"In the item of sleep, the Chinese establishes the same difference between himself and the Occidental as in the directions already specified. Generally speaking, he is able to sleep anywhere."—*Smith, Ch. Char.* (2nd ed.), p. 93.

"It seems to be a physiological fact that to the Chinese exercise is superfluous. They cannot understand the desire which seems to possess all classes of foreigners alike to walk when there is no desire to go anywhere; much less can they comprehend the impulse to race over the country . . . in such a singular performance as . . . a 'paper hunt.' . . . A Cantonese teacher asked a servant about a foreign lady whom he had seen playing tennis: 'How much is she *paid* for rushing about like that?' On being told 'Nothing,' he would not believe it. Why any mortal should do acts like this, when he is abundantly able to hire coolies to do them for him is . . . essentially incomprehensible to a Chinese, nor is it any more comprehensible to him because he has heard it explained."—*Ibid.* pp. 92–3.

"There is one aspect of this density of population to which we are so accustomed that it fails to impress us as it might. It is the comparative peaceableness of the Chinese race. Perhaps we should not say 'comparative peaceableness,' but superlative peaceableness."—*Ibid.* (1st ed.), p. 46. See also *Yule, Marco Polo* (3rd ed.), ii. 204.

"The order and quiet that prevail—especially by night—in Chinese cities have been noticed by all travellers. The greatest harmony and tranquility reign among the boat-population of Canton (*Davis*, ii. 119). The gates of cities are closed at nightfall, shops are shut, and the people resort to their homes, with little need of local police (*Brooks, Run, etc.*, p. 274). The good temper and even courtesy of crowds are said to be equally striking; long lines wait quietly, and there is no pushing" (*Williams*, ii. 68; *Brooks*, p. 266).—*Johnson, Or. Rel.—Ch.*, p. 33.

"Hübner describes the Cantonese as seeming to be made of cotton wool. When the British Legation passed through Tientsin, 'the streets were crowded for a mile's distance, yet the silence and respect of the populace suggested a sea of heads in a perfect calm' (*Davis, Sketches*, p. 42). The childish curiosity and familiarity shown in other instances give weight to this evidence of their power of self-control. The same orderly habits were recognised by the oldest writers on the Chinese. . . . The Arab travellers in the ninth century are not complimentary, and make severe charges against the religion and life of the Chinese; yet they too praise their administration of justice and their social order (*Renaudot's Version* [1733], p. 73). Marco Polo says that contentious broils are never heard among the people of Kin-sai; and that those who inhabit the same street, from the mere circumstance of neighbourhood, appear like one family (*Marco Polo*, Bk. II, ch. 68). In fact, 'moderation, self-control, self-restraint, absence of excess is the essence of Chinese virtue' (*Wuttke, Gesch. d. Heidenth.*, II. 128). . . . The fear of public opinion and the ceremonial of manners enforce mutual respect. By nothing are they more shocked than by European customs that ignore or outrage the expectations of others. . . . Perhaps the higher mark of real civilization is the disposition to resort to moral, rather than physical, modes of settling disputes, and to recognize the force of reason; and for this the Chinese are conspicuous. They regard passion as indecent and vulgar, and 'bear injuries with an equanimity that would make a European ungovernable' (*Meadows, Notes on Govt., etc., of China*, p. 204). They despise rudeness, instead of being enraged at it. A shopkeeper's patience and politeness are inexhaustible; and stories are told of the endurance of discomfort and injury out of pure good manners, that prove this capacity to be of a heroic type. Lord Macartney's embassy (*Barrow*, p. 186) was impressed by the dignity, politeness, and good humour of all the officials with whom they had to deal."—*Ibid.* pp. 33–34. See also *Davis, Chinese*, i. 252–62; *Meadows, Des. Notes*, pp. 197–227; and *Grosier, Gen. Descr.*, ii. 372–5.

"For aggressive warfare they seem to have little taste."—*Johnson, Or. Rel.—Ch.*, p. 34.

"It is but just to refer to this constitutional defect of sensibility many traits which appear to imply extreme cruelty."—*Ibid.* p. 41.

"Their peculiar passiveness must appear in the tone of all forms and institutions of benevolence, not less than in other products of the national character. This heart worships a fulfilled ideal. It entertains no impulse to radical changes, and is defective in motive power to meet great public calamities with salutary precautions and improvements for the future. Chinese humanity ameliorates, but does not reconstruct. . . . It has an apathetic and languid air, and does not rise to enthusiasm; which, perhaps, we have no right to expect anywhere in Chinese life. More than anything else, it must suffer from the endless pedagogy of moral precept, and from those assumptions of attained wisdom and of the all-sufficiency of words, which are to no small extent involved therein. . . . Those lethargic, almost melancholic, features veil a lively sense of humour and a genial tone of feeling. With all their plodding and routine, these people are fond of festivals and of merry-makings, and, when they break away from task-work, their hilarity is unbounded. They delight in bright colours, gay processions, social reunions, garrulous gossip, friendly discussion; in clubs and associations, in good-natured games of chance and the pleasant excitement of divination and fortune-telling. . . . Marco Polo describes their salutations as made with cheerful countenances and great politeness (ii. XXVI); and modern observers note the easiness of their good breeding, and the ready way in which ceremonious forms are thrown aside (*Williams*, ii. 69). Even the materialism of religious rites is genial, setting out tables for the dead, feasting these gods, transforming tombs into dwellings, and coffins into domestic gifts and treasures; and treating death as a mere transference of the friend into closer dependence on the affection and respect of those who remain in the light of day."—*Ibid.* pp. 47–50.

"His strongest emotion is a plaintive and patient wonder at the transiency of things."—*Ibid.* p. 57.

"The Chinese have placed the term Benevolence at the head of their list of Five Constant Virtues. . . . It is far from being true, as a superficial examination would seem to indicate, that there is among the Chinese no benevolence, though this has been often predicated."—*Smith, Ch. Char.* (1st ed.), p. 68. And see pp. 68–73.

"No one can live long among the Chinese, and watch them at rest or at work, in city or afield, without being especially struck by their immense fund of buoyancy and cheerfulness of disposition. They seem to have acquired a national habit of looking upon the brighter side. They regard death only as a hateful necessity, meeting it with firmness and equanimity when the hour comes. Older persons seek to accustom themselves to the idea by preparing—and often by sleeping in—their coffins for months, and sometimes for years before they are actually needed. The cheery mirth and laughter, even of the more squalid-looking Chinese villagers, must be seen and heard to be believed in. Apart from their professional beggars, who form a not very numerous class and pursue their calling according to fixed regulations, there are none of those grim or sad-looking, hunger-stricken, sometimes drink-sodden, creatures, whose presence is such a blot on our own civilisation at home."—*Giles, Historic China*, pp. 123–4.

"The Chinese have really a very quick sense of the ridiculous, though its associations belong to the experience of an antiquated childhood, as strange to us as the language of tones entirely separated from feeling, which they have invented to aid the poverty of their vocabulary. They are singularly light-hearted, passionately fond of comedy, travesty, and banter; and they have brought political lampooning to a fine art. Their aged and serious expression does not prove absence of the play-impulse, but shows the repressive forces that have, as it were, crystallized it."—*Johnson, Or. Rel.—Ch.*, p. 16.

"A Chinese is dominated by one passion, viz., to look well before his fellowmen. To do this successfully is to have 'face.' To fail or to appear in disgrace is to 'lose face.'"—*N.-C. Daily News*, Sept. 30, 1908, p. 5.

"In order to understand, however imperfectly, what is meant by 'face,' we must take account of the fact that as a race the Chinese have a strongly dramatic instinct. . . . Upon very slight provocation, any Chinese regards himself in the light of an actor in a drama. He throws himself into theatrical attitudes, performs the salaam, falls upon his knees, prostrates himself and strikes his head upon the earth, under circumstances which to an Occidental seem to make such actions superfluous, not to say ridiculous. A Chinese thinks in theatrical terms. When roused in self-defence he addresses two or three persons as if they were a multitude. . . . If his troubles are adjusted he speaks of himself as having 'got off the stage' with credit, and if they are not adjusted he finds no way to 'retire from the stage.' All this, be it clearly understood, has nothing to do with realities. The question is never of facts, but always of form. If a fine speech has been delivered at the proper time and in the proper way, the requirement of the play is met. We are not to go behind the scenes, for that would spoil all the plays in the world. Properly to execute acts like these in all the complex relations of life, is to have 'face.' To fail of them, to ignore them, to be thwarted in the performance of them, this is to 'lose face.' Once rightly apprehended, 'face' will be found to be in itself a key to the combination lock of many of the most important characteristics of the Chinese."—*Smith, Ch. Char.* (2nd ed.), pp. 16–17.

"A characteristic trait is their excessive gregariousness, shown in the tendency to crowd together in large villages and cities."—*Keane, Ethnology*, p. 323.

"There seems to be in the Chinese nature an inherent capacity for combination, united with a powerful tendency to combine, which it might be difficult to equal in any other race. . . . There seems, in fact, to be not cohesion simply, but a kind of chemical union."—*Smith, Ch. Char.* (1st ed.), p. 10.

"Solidarity in a Chinese sense, and individual equality in an Occidental sense, are scarcely compatible."—*Ibid.* p. 11.

"In China a 'private house' is unknown. Anyone can go anywhere, and if there is the least provocation, he will do so."—*Ibid.* p. 13.

Mr. Burlingame said, "speaking of the Chinese '. . . it is a polite people; . . . patient; . . . sober; . . . industrious.'"—*Ibid.* p. 36.

"Industry is the ruling virtue of the Chinese, from the top of the scale to the bottom, but with the not unreasonable qualification that a man must be working for himself. No one is more industrious in amassing pelf than the identical mandarin who neglects to bestir himself to do justice. No one works better than the builder or artisan on a piece job, or worse than the same man on a time job."—*Parker, China*, p. 277.

"It seems to make no particular difference to a Chinese how long he remains in one position. He will write all day, like an automaton. If he is a handicraftsman, he will stand in one place from dewy morn till dusky eve, working away at his weaving, his gold-beating, or whatever it may be, and do it every day without any variation in the monotony, and apparently with no special consciousness that there is any monotony to be varied. In the same way Chinese school-children are subjected to an amount of confinement, unrelieved by any recesses or change of work, which would soon drive Western pupils to the verge of insanity. The very infants in arms, instead of squirming and wriggling as our children begin to do almost as soon as they are born, lie as impassive as so many mud gods. And at a more advanced age, when Western children would vie with the monkey in its wildest antics, Chinese children will often stand, sit, or squat in the same posture for a great length of time."—*Smith, Ch. Char.* (2nd ed.), p. 92.

"A Chinaman works hard all day, but never feverishly; he stops for an occasional snack, swig, or smoke, and is always ready for a running chat. The principle of Chinese industry is to neglect all secured rights and aim at more. Thus, a man will work well for £50 a year; but if you give him £1,000 to do the same work, he will probably neglect it in order to turn £50 more in some fresh way. No matter what takes place, or under what circumstances, a Chinaman, whatever be his rank or position, at once sees money or money-loss in it."—*Parker, China*, p. 277.

"The hunger for gain, so all-prevalent in China, is modified by . . . a thirst for notoriety."—*Smith, Ch. Char.* (1st ed.), p. 33.

"We shall make no approach to comprehending" the Chinese, "until we have it settled firmly in our minds that, as compared with us, they are gifted with the 'absence of nerves.'"—*Ibid.* (2nd ed.), p. 96.

"The same freedom from the tyranny of nerves is exhibited in the Chinese endurance of physical pain. Those who have any acquaintance with the operations in hospitals in China, know how common, or rather how almost universal, it is for the patients to bear without flinching a degree of pain from which the stoutest of us would shrink in terror."—*Ibid.* p. 94.

"It is unquestionable that their courage is of a passive quality, and has its root in a wonderful power of endurance, rather than in that love of military achievement which would have led to discipline and culture in the art of war. It is in suffering that the force of Chinese character becomes most impressive. In those terrible massacres of hundreds at a time, which they call executions, the most cruel pains and the ghastliest anticipations seldom extort a murmur or a groan. The readiness with which whole multitudes resort to suicide rather than fall into the hands of the enemy or survive defeat and disgrace, shows what insensibility to fears or sufferings this force of endurance can attain. It becomes a species of fatalism. In times of great public misery, instead of rising to the active energy demanded by the situation, they kill themselves and their families, with a self-abandonment in singular contrast with their patience in enduring physical sufferings. Suicide is common from the most trivial causes. It is probable that this despair is the natural consequence of the psychological quality to which we have already referred the main points in their character. They are so incapable of separating their ideal faith from the concrete facts of their social and political order, that they cannot exist when these are broken down. Their propensity to suicide is a species of insanity like that of animals removed from temperate to arctic zones, and deprived of the alternation of day and night on which their instincts depend."—*Johnson, Or. Rel.—Ch.*, pp. 39–40.

"In all forms of competition that depend on sustained endeavour, their muscularity or work-power, their cheerful temperament, their fortitude in trying times, and their comparative insensibility to pain insure their success."—*Ibid.* p. 54.

"Revenge is sweet to the Chinese. I have spoken of their readiness to submit to government, and wish to live in peace, yet they do not like to resign even to government the 'inquisition for blood.' Where the ruling authority is feeble, . . . individuals and clans take the law into their own hands, and whole districts are kept in a state of constant feud and warfare."—*Legge, Ch. Class.*, I. Prol. pp. 112–3.

"The whole family life of the Chinese illustrates their lack of sympathy."—*Smith, Ch. Char.* (2nd ed.), p. 198.

"One of the most striking of all the many exhibitions of the Chinese lack of sympathy is to be found in their cruelty. It is popularly believed by the Chinese that the Mohammedans in China are more cruel than the Chinese themselves. However this may be, there can be no doubt in the mind of any one who knows the Chinese that they display an indifference to the sufferings of others which is probably not to be matched in any other civilised country."—*Ibid.* pp. 212–3. See instances, pp. 194–215.

"I think it must be conceded that the Chinese are cruel. Nearly all domestic animals are treated without any consideration whatever—not of an interested nature. If kindness or tenderness is shown, a great parade is made about it. Children are rarely checked in their cruelty to mice, flies, and such creatures. Buddhism has certainly had some mollifying effect, even upon the Chinese heart; for instance, there are societies for 'preserving life,' and dens or keeps for 'letting animals go' in; and some people—especially Mongols—pay attention to Buddha's precepts about not taking even the smallest life, even to the extent of killing a flea. But all that is a mere drop in the ocean of cruelty, or rather callousness. Perhaps one reason is that the standard of bodily comfort is so low in China that the slightest divergence from it in an unfavourable direction means cruelty. . . . The Chinese seem positively to gloat over misery. Where is there a country in the world where you will see, as you may now see in Shanghai, prisoners, surrounded by a jeering crowd, starving to death in the sun and rain, suspended by the neck for days and nights so that the toe-tips just touch the floor? Where was there ever a country (except perhaps Bokhara) where maggots were positively bred up to bore into the wounds of chained prisoners? The callous way in which beggars are left to die in the public streets; the brutal treatment of foreigners when at the mercy of a mob; the contemptuous ignoring of drowning men; the lingering executions; the swarms of lepers left to rot on the roads; the tyranny of gaolers; all these and many other things go to show that the Chinese are undoubtedly as low down as any nation in the scale of downright cruelty."—*Parker, China*, pp. 270–1. See also *Smith, Ch. Char.*, pp. 213–5.

"The Chinese do not treat children well. Japan has been justly described as the paradise of children. China is the reverse."—*Parker, China*, p. 276.

"The Chinese are . . . as a nation curiously callous to suffering either in themselves or others, not taking pleasure in the infliction of it, as is the case with some more highly strung natures, but strangely indifferent to it."—*Little (Mrs. A.), Int. Ch.*, p. 136.

"A Chinaman is universally considered to be a liar. And so he is. . . . [He] generally lies in order to get some petty pecuniary advantage, to save trouble, to conceal neglect, or to spite an enemy. . . . He is not so nice and particular about the truth as we think we are. . . . On the other hand, he is not nearly so hypocritical."—*Parker, China*, p. 264.

"The Chinese have developed an instinct of secretiveness, which is often one of the marked features of their social life."—*Smith, Ch. Char.* (1st ed.), p. 59.

"Thieving is exceedingly common, and the illegal exactions of the rulers . . . are most burdensome."—*Williams, Midd. King.*, i. 835.

"The Chinese are undoubtedly a libidinous people, with a decided inclination to be 'nasty' about it. Herein they differ from the Japanese, who are excessively lax, but very rarely *raffiné*. A check is placed upon this national characteristic by the almost universal practice of early marriage. Moreover, 90 per cent. of the population are too poor even to think of any further indulgence than the possession of a single wife affords. Among the well-to-do classes the civilian mandarins, who never serve in their own province, are forced to lead a secluded and sedentary life, and, in most cases, prefer to leave their first, or legitimate, wives at home, partly on account of the dangers of travel, and partly in order to look after the family graves and honour. Hence concubines are almost recognised as a necessity. Most rich mandarins, however, go beyond necessity, and they are the most profligate class. Next come the wealthy merchants; but these, when living at home, are naturally more bound to decency by family ties than are the mandarins, who move about to temporary habitations with their servants and concubines. Still, amongst all classes and ranks the 'moral sense' is decidedly weak, and there is hardly a Manchu or a Chinese living possessed of that form of 'Puritanical' virtue seen in some Europeans—that condition of mind which shrinks from a ribald or even a *risqué* story; sternly refuses any sexual temptation that may offer, or forces itself to be content with a chivalrous platonic attitude."—*Parker, China*, p. 272.

"Of Chinese women it is less easy to speak than of men, for nearly all respectable ones lead a *purdah* life; but to judge by the language of novels, what one reads of in law cases, and sees in street life, by the jealous behaviour of men, and the brutally cruel customs in vogue for punishing all female lapses, 'every (Chinese) woman is at heart a rake,' and precautions are taken accordingly by their lords and masters."—*Ibid.* p. 273.

"Some provinces have decidedly more 'conscience' than others. The Cantonese, though exceedingly libidinous, disapprove of 'French vice' of all kinds. On the other hand, Fuh Kien has an infamous reputation, possibly owing to its ancient connection with traders from beyond the seas; and, undoubtedly, the morals of the province are made worse by the fearful prevalence of female infanticide, and the consequent scarcity of women in that province. The northerners, more especially the crapulous leisured classes of Peking, openly flaunt the worst of vices. No doubt Tartar influence has had its effect, for from Bokhara to Corea all Tartars seem fashioned from one mould in this respect. Offences which with us are regarded as almost capital—in any case, as infamous crimes—do not count for as much as petty misdemeanours in China; not even in Canton, where disapproved. This easy-going view works both ways: it obtains for the Chinese the mistaken reputation of universally indulging in vile gratifications; but such indulgences, by the mere fact that they are no crimes, soon run themselves out harmlessly in youth, and ridicule suffices to do the rest; and what an old scamp does in his harem concerns no one but himself and his slaves. Anyhow, there is no humbug, concealment, or Mrs. Grundyism. On the whole, I am disposed to say that the Chinese, taken as a whole, are not much worse than Europeans; in each case, some countries (or provinces) being greater sinners than others."—*Ibid.* pp. 273–4.

"The Chinese are said to be ungrateful. This I totally deny. The fidelity of Chinese servants is really extraordinary, if they are treated with even moderate sympathy and consideration; and this, whether it be a native or a foreign master who is concerned. Nothing makes a more powerful impression on the Chinese mind than impartial justice. . . . But . . . when they find that, in addition to . . . justice, they are positively receiving some tenderness or consideration, such as gratuitous medical aid, free assistance in righting a wrong, the present of a coffin to their mothers, and such-like things indicative of disinterestedness, they positively overflow with feelings of respectful gratitude."—*Ibid.* pp. 267–8.

"Excessively courteous amongst themselves, they are rude and aggressive towards strangers, with a deep-rooted feeling of contempt and even hatred of foreigners, and all their ways."—*Keane, Ethnology*, p. 323.

"The Chinese do not simply regard other provincials as outsiders; they treat them with undisguised contempt. The shrewd trader and skilful artificer who lives in Canton thinks of those who come from the northern part of the Empire as northern barbarians; but his contempt is returned in overflowing measure by the men of the north, who always think and speak of the Foochow and Canton men as southern barbarians. Both of them unite in ridiculing their long-headed, but often ill-favoured neighbours who hail from Shansi, whose hands are against every man, and every man's hand against them; but who always seem to prosper, 'caring not for life, but for gain.'"—*Smith, Ch. Char.* (1st ed.), p. 7.

"The most bigoted critic of the Chinese is forced to admit that they have brought the practice of politeness to a pitch of perfection, which is not only unknown in Western lands, but, previous to experience, is unthought of, and almost unimaginable."—*Ibid.* p. 63.

"Chinese politeness is generally termed hollow. Chinamen are not so effusive and formal as the Japanese (old style), and they are much more ceremonious than even the French. It is only given to the few in any race of mankind to possess the instinctive and inborn politeness which comes of kindness taking its own natural form. For most of us fixed formalities are necessary, just as the letter of the Law is found indispensable, with or without the rigid dogmas of religion, to restrain the vast majority of persons who are not sufficiently well-balanced by gift or training to be competent to set up and adhere to their own standard of right. In this sense . . . Chinese politeness is hollow; but it achieves its object, and, being absolutely fixed, like the rules of the Confessional, saves the trouble of thinking, and prevents men from the *gaucherie* of external 'sin' in form. Chinese male simperings and our own 'feline amenities' are cast in much the same mould. The stupid, gawky clownishness, or rudeness, of the English rustic or factory hand is quite unknown in China. There are no *h*'s to leave out, and no man is ashamed either of his own relations or of his friends'. There is a natural ease of manner amongst all degrees, which the 'classified' British mind cannot even conceive. It is akin to the outspoken frankness and ready wit of the French, which contrasts so painfully with our self-consciousness, starchy snobbishness, and *mauvaise honte*. The Chinese are (unlike the Japanese) much given to brawling and coarse language; they are as badly off for respectable adjectives as Tommy Atkins himself. In a word, they are not at heart so kindly and sympathetic as we are, but they certainly are more sprightly and polite, and they rarely 'take social liberties.'"—*Parker, China*, pp. 269–70.

"The habit of yelling to enforce command or criticism is ingrained in the Chinese, and appears to be ineradicable. To expostulate with another in an ordinary tone of voice, pausing at times to listen to his opponent's reply, is, to a Chinese, almost a psychological impossibility. He *must* shout, he *must* interrupt, by a necessity as inexorable as that which leads a dog labouring under great excitement to bark."—*Smith, Ch. Char.* (2nd ed.), p. 219.

"The Chinese have carried to a degree of perfection known only among Orientals the art of reviling."—*Ibid.* p. 219.

"As to mercantile honour, in spite of occasional lapses, such as occur in all countries, it is so universally admitted that Chinese credit stands deservedly high, that I need not say another word about it. It is also a curious fact that, although Government credit *vis-à-vis* of the people stands so low that it could not well go lower, as regards foreign obligations it is, subject to political risks, as good as that of almost any country."—*Parker, China*, p. 271. See also similar testimony of various writers quoted in *Yule, Marco Polo* (3rd ed.), ii. 210–1, note 8.

"Accounts are kept by considerable traders with scrupulous exactitude.'—*Parker, China*, p. 278.

"The peculiar conjunction of qualities observable in Chinese character—of cruelty with gentleness, of peacefulness with irritability, of profound loyalty with incessant discontent and revolt, of extreme dislike to bloodshed with utter unconcern at the torture or decapitation of hundreds of persons at once, of strong love of life with equally strong propensity to suicide under circumstances of discouragement—all point to the same constitutional proneness to hover between two attractions, instead of yielding to either alone."—*Johnson, Or. Rel.—Ch.*, p. 20.

[The "faculty for absorption" is illustrated in *Smith, Ch. Char.* (1st ed.), pp. 18–21; economy, on pp. 26–32; the dread of giving offence, on pp. 57–62; the "talent" for indirection, on pp. 91–7; "flexible inflexibility," on pp. 98–104; "parasitism," on pp. 105–10; the absence of public spirit, on pp. 138–45; conservatism, on pp. 151–60; indifference to comfort and convenience, on pp. 160–76; patience and perseverance, on pp. 177–86; filial piety, on pp. 201–14; respect for law, on pp. 231–44; mutual suspicion, on pp. 244–65; the absence of sincerity, on pp. 265–86; the absence of altruism, on pp. 286–354; and content and cheerfulness, in *ibid.* (2nd ed.), pp. 162–70.]

"The dwellers [in the hilly districts in the south of Chehkiang] . . . form a singularly clannish race . . . each group of villagers suspects and shuns the others. They are sometimes rather turbulent."—*Williams, Midd. King.*, i. 115.

"The citizens of Fuhchau bear the character of a reserved, proud, rather turbulent people, unlike the polite, affable natives further north. They are better educated, however, and plume themselves on never having been conquered by foreigners."—*Ibid.* i. 133.

"Its [Hunan] inhabitants have in general a bad reputation among their countrymen for violence and rudeness."—*Ibid.* i. 147.

"Hunan has a high position for letters; the people are well-dressed, healthy and usually peaceable. The boating population is, however, exceptionally lawless, and forms a difficult class for the local authorities to control. Aboriginal hill tribes exist in the south-western districts, which are still more unmanageable—probably through the unjust taxation and oppression of the imperial officers set over them. In addition to these ungovernable elements, a large area is occupied by the *Yao-jin*, who have possessed themselves of the elevated territory lying between Yungchau and Kweiyang, in the southern point of the province, and there barricaded the mountain passes so that no one can ascend against their will."—*Ibid.* i. 148.

"'As a rule, they [the Hunanese] are manly, brave, intelligent, straightforward, and obliging—not greedy—good companions, and, in a word, more like ourselves in disposition than the Chinese of any other province.' Residents on the Upper Yangtze who employ them are unanimous in describing them as most willing, good-natured, energetic and faithful to their masters above all other Chinese."—*N.-C. Herald*, March 28th, 1900.

"There is an indescribable something in the Hu Nan character which differentiates it from all other Chinese local character. The majority of both civil and military officials throughout the Empire are Hu Nan men, and, speaking generally, no mean action ever comes from Hu Nan. . . . The Hu Nan mind is honest, and the body is honest too; the people are poor and durable, like their native homespun." The roughness of the dialects causes "a certain Scotch clannishness," and, "as a rule, Hu Nan bodies of men (soldiers, etc.) must be commanded by officers of their own province."—*Parker, John Chinaman*, pp. 235–6.

"It [Nanhiung in Kwangtung] is a thriving place, and the restless habits of these industrious carriers give its population somewhat of a turbulent character."—*Williams, Midd. King.*, i. 174.

MONGOLS.

[The Mongols (*mong* = brave) are much addicted to drunkenness. They are very fond and considerate of their animals. Very dirty and lazy, never walking, always riding on horseback; indifferent to personal comfort, addicted to stealing, and great cowards; but, when sober, are kind, friendly, and simple-minded. Bribery and corruption are as prevalent as in China.]—*Prejevalsky, Mongolia; Gilmour, More About the Mongols;* and *Howorth, History of the Mongols, passim*; *Huc, Travels*, i. 145–6; *Gilmour, Among the Mongols*, pp. 82, 111, 251, 299–305, etc. Instances of cruelty are given in *Yule, Marco Polo* (3rd ed.), i. 61*n*, 151*n*, 256*n*, and ii. 181*n*.

"Although the Mongols are not devoid of politeness, they have no term to express thanks, and but few even for saluting each other."—*Rockhill, Land of the Lamas*, p. 146.

"Their honesty is proverbial."—*Ibid.* p. 131.

"Everybody has always found the Mongols proper more sympathetic and simpler than the Chinese. Under Russian and Chinese rule they have laid aside their warlike, rough predatory nature in a higher measure than the Turcomans, who, over a great part of their territory, have not had such powerful neighbours."—*Ratzel, Hist. of Mankind*, iii. 317. See also *Huc, Travels*, i. 135–6.

MANCHUS.

"Of all these Manchus, I should say their chief characteristic was a combination of laziness and pride; but wherever placed with foreigners in the relation of pupil to teacher, as, for instance, in schools, drill grounds, laboratories, &c., their bearing is distinctly less priggish and more gentlemanly than that of Chinese. The specimens of Manchu mandarins (always from Peking) I have met in the provinces have invariably appeared to me to be more jovial, easy-going, accommodating, if not reasonable, impulsive, and careless of consequences, than the Chinese: at the same time less capable of business, less cautious about public opinion, more ignorant and indiscreet. The princes at Peking are, of course, haughty and a trifle sullen, as becomes the degenerate descendants of fine manly fellows like the earlier emperors; for they feel themselves *de jure* entitled to all the deep-felt respect their ancestors exacted, but *de facto* impotent to obtain even a shabby imitation of it. The Manchus, like nearly all northerners, have a tendency to get drunk. Here, again, they differ from the Chinese; but are not so bad as the more simple Mongols. Even at official interviews a Manchu mandarin is occasionally flushed with liquor, in which case he often becomes a braggart. As to bravery, I don't believe a Manchu is by nature either more or less brave than a Chinaman. If it is brave to commit suicide rather than to suffer, then both are equally courageous; if it is cowardly to run when you have no confidence in the honesty or capacity of your officers, then both are equally cowardly."—*Parker, China*, pp. 261–2.

"With the above slight qualifications . . . I should say that the Manchu is indistinguishable in character from the Peking Chinaman, the Peking Chinaman from the northern, the northern from the central, and the central from the southern. In other words, they all run into each other."—*Ibid.* p. 262.

INTELLECTUAL CHARACTERS.

"They seem in some respects to be almost as incapable of progress as the negroes themselves, the only essential difference being that the arrest of mental development comes later in life for the yellow than for the black man. Whether the difference is to be explained by a corresponding retardation in the closing of the cranial sutures, must remain matter of conjecture, at least pending further craniological studies in the direction indicated."—*Keane, Ethnology*, pp. 322–3.

"They serve to warn us by the stunted state of their imagination and ideal faculty, by the lack of free individuality and original force, of the dangers of mechanism and uniformity in culture."—*Johnson, Or. Rel.—Ch.*, p. 61.

"The Chinese creative faculty remains within the plane of certain organic habits, failing to rise from the formalism of rules to the freedom of the idea. Its function is to maintain and multiply; to reproduce, not to reconstruct. It buries itself in its materials, instead of going behind them. Hindu cosmology makes the world issue from mystic thought; Manu forms the creatures by devotion. But the Chinese skips the question of origin, and says that the world has a self-shaping force; or that the first man must have fashioned the world-stuff with hammer and chisel, himself and his tools being already a part of it. Speculation here holds fast by the actual and concrete; takes the human for the divine, and positive visible work for the best part of the human."—*Ibid.* pp. 6–7.

"To the uneducated Chinese any idea whatever comes as a surprise, for which it is by no means certain that he will not be totally unprepared. He does not understand, because he does not expect to understand, and it takes him an appreciable time to get such intellectual forces as he has into a position to be used at all. . . . Thus when a person is asked a simple question, such as 'How old are you?' he gazes vacantly at the questioner, and asks in return, 'I?' To which you respond, 'Yes, you.' To this he replies, with a summoning up of his mental energies for the shock, 'How old?' 'Yes, how old?' Once more adjusting the focus, he inquires, 'How old am I?' 'Yes,' you say, 'how old are you?' 'Fifty-eight,' he replies, with accuracy of aim, his piece being now in working order."—*Smith, Ch. Char.* (2nd ed.), pp. 84–5.

"A prominent example of intellectual turbidity is the prevalent habit of announcing as a reason for a fact, the fact itself. 'Why do you not put salt into bread-cakes?' you ask of a Chinese cook. 'We do not put salt into bread-cakes' is the explanation. 'How is it that with so much and such beautiful ice in your city none of it is stored up for winter?' 'No, we do not store up ice for winter in our city.' If the Latin poet who observed, 'Happy is he who is able to know the reasons of things,' had lived in China, he might have modified his dictum so as to read, 'Unhappy is the man who essays to find out the reasons of things.'"—*Ibid.* p. 85.

"Those who are both very poor and very ignorant, as is the fate of millions, have indeed so narrow a horizon that intellectual turbidity is compulsory. . . . In many of them even that instinctive curiosity common to all races seems dormant or blighted."—*Ibid.* p. 88.

"Another mark of intellectual torpor is the inability of an ordinary mind to entertain an idea, and then pass it on to another in its original shape."—*Ibid.* p. 85.

"Illustrations of these peculiarities will meet the observant foreigner at every turn. 'Why did he do so?' you inquire in regard to some preposterous act. 'Yes,' is the compendious reply. . . . 'Why did you not come when you were called?' you venture to enquire of a particularly negligent servant. 'Not on account of any reason,' he answers, with what appears to be frank precision. The same state of mental confusion leads to a great variety of acts, often embarrassing, and to a well-ordered Occidental intellect always irritating."—*Ibid.* pp. 85–6.

[Want of foresight is shown in many ways.]—*Ibid.* p. 87, etc.

"A Chinese education by no means fits its possessors to grasp a subject in comprehensive and practical manner."—*Ibid.* p. 88.

"The Chinese, as a rule, seem to be singularly insensible to the relative value of evidence, and to be very little aware of the need of it. The result is naturally to make them easy victims of deception, in regard to matters of which we should suppose the means of judging to be within the reach of everyone."—*Ibid.* (1st ed.), p. 42.

"It is most interesting to watch the development of the Chinese character when associated with European affairs. For several years many Chinese have been employed in steamboats as deputy engineers and stokers, and have given great satisfaction [being sober and careful]. As pilots of steam-boats and foreign-rigged vessels, they are excellent, quickly learn sea-terms. . . . Those employed in yachts about the Canton River understand their business so well that full charge is given over to them in regattas. As oarsmen, they are second to none, after a little practice. . . . As boat-builders, few can equal [them] . . . the amateurs in Canton getting 'the lines' from England, or improving upon them. . . . As ship-carpenters, when under foreign superintendence, it would be difficult to find better workmen; and lately some . . . have speedily learnt to perfection the art of rivetting. . . . A ship-captain, who took home some Fokien boatmen as sailors, said, on his return, that they were the best men in his ship."—*Scarth, Twelve Years in China*, pp. 127–8.

"We talk about Jack being a 'handy man,' but he is nothing to a Chinaman. The usual exceptions excepted, every Chinese knows the time without a watch; can at a pinch buy, prepare, and cook his own food; wash, patch, if not make his own clothes; judge the weather, till the fields, carry a pole and its load; indicate the north, manœuvre a punt, sail a boat, catch fish, saddle a horse; tackle animals, birds, and reptiles of all kinds under unexpected circumstances; walk or ride a long distance, sleep anywhere at any moment, take no exercise whatever for any length of time; loaf time away; gain the graces of any woman of any nationality (if she will let him); eat anything, go anywhere, remain without change—and other things innumerable. What a Chinaman can't do may be summed up as follows:—Shave himself; do up his own hair; cure his own maladies; keep off vermin; fight with his fists; manage a steamer; keep military or naval discipline; handle trust money honestly; tell a plain, unvarnished story; be punctual; show nerve in times of sudden danger; eat cheese; or tolerate a female 'master.'"—*Parker, China*, pp. 278–9.

"[Though the construction of the compass is imperfect,] its use in detail is supplemented by the remarkable sense of locality innate in every Chinese, and developed by education. . . . Among the precepts of antiquity for the instruction of youth is the direction that a knowledge of the cardinal points is to be one of the first objects of elementary teaching, and kept up by continual practice. This may be one of the reasons why a Chinese knows his direction in any place and at any time in a way that borders on the mysterious. Although there are words for 'right' and 'left,' they are very seldom used. Quite apart from the streets of a town, where the stranger is directed on a complicated route only by the points of the compass, or such information as is required every day in travelling, people constantly speak of the north hand, the west ear, etc.; the load of a baggage animal is too heavy on the south side, and must be moved to the north, etc. Even when every means of orientation is absent, as on a misty day, or after walking through a maze of streets, a Chinese can always point out north and south with approximate correctness."—*Richthofen, China*, i. 390.

[The disregard of accuracy is illustrated by *Smith, Ch. Char.* (1st ed.), pp. 78–85; the disregard of time, on pp. 74–7; the "disregard of foundations," on pp. 118–24; and the "talent" for misunderstanding, on pp. 86–90.]

"The people [of Kiangsu] have an exceptional reputation for intelligence and wit."—*Williams, Midd. King.*, i. 100.

"The uneducated, mixed character of the inhabitants [of Yünnan] has given an advantage to enterprising leaders to resist Chinese rule."—*Ibid.* i. 181.

[For characters of the inhabitants of each province see *Thoms, Chinese Courtship*, Append. pp. 295–312.]

[For characters of aborigines and other races which have at various times come under the sway of the rulers of China see the parts dealing with those peoples.]

MONGOLS.

[Gilmour describes the Mongols as "foolish and thriftless."—See *James Gilmour of Mongolia*, p. 83.]

"Their guilelessness and gullibility" are "proverbial."—*Rockhill, Land of the Lamas*, p. 131.

"These Mongols are very fond of medicines and use exclusively Tibetan ones, which are generally vegetable substances. One they often spoke to me about as the most valuable . . . was elephant's milk. They said that it was sent to Lhasa from India and sold there at a very high price; they were much surprised to learn that I had never heard of its curative properties."—*Ibid.* pp. 132–3. For further examples see pp. 149, 151, 164, etc.

"The Mongols themselves never wash gold; they say they do not know how."—*Ibid.* p. 169.

[Inexpertness as to figures is inferable from *ibid.* p. 252.]

"Both the Chinese and the Mongol of the desert love long conversations, the subject of which . . . in the case of the latter may be summed up as the well-being or otherwise of his flocks."—*Kreitner, Im Fernen Osten*, p. 580.

"Got a map of the world from my host in the evening and made him cross by affirming that the world was a globe."—*Gilmour, More about the Mongols*, p. 132.

"When in Mongolia, I learned that the Mongolian geography of the world was so much at fault, and that their preposterous statement of the form of the earth was made on the same inspired or divine authority as the rest of the contents of their sacred books, I thought I had found a means of attacking Buddhism. . . . To-day I found this hope a mistake. The lamas, through their contact with Russia, know and admit the shape of the earth, yet hold to their books, which they must know teach the contrary."—*Ibid.* pp. 168–9.

"Thoughtless in their own concerns and careless of their own interests."—*Gilmour, Among the Mongols*, p. 117.

"Careless in the extreme, he is apt to forget anything that can be left behind."—*Ibid.* p. 80.

MANCHUS.

The countenances of the Manchus "indicate greater intellectual capacity [than those of the Chinese]. They seem to partake of both the Mongol and Chinese character, possessing more determination and largeness of plan than the latter, with much of the rudeness and haughtiness of the former."—*Williams, Midd. King.*, i. 44.

DIVISION OF LABOUR.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Division between Sexes.—"Yu Yü Shih [Shun] took care of the south-lying acres, and his wife looked after the mulberry orchard."—*Shih Tzŭ, Yüan chien lei han, c.* 356, *Ch'an yeh pu*, p. 2*b*.

"By the custom in vogue at Hui Chou, the women traded in the market, while the men looked after the house."—*Fêng su chih, ibid. c.* 357, *Ch'an yeh pu*, p. 1*b*.

[Weaving coarse cloth for use at the great sacrifices was the "origin of women's work" (*Li chi*, Bk. IX. 2, 16). This was before the invention of embroidery (see *Shu ching*, Pt. II. Bk. iv. 4).]

"It has been customary for all , . . empresses [from the earliest times], and for the ladies of the Imperial household, to interest themselves in the rearing of silkworms, and to superintend the weaving and embroidery of webs intended to be used as vestments for the principal idols of the Empire."—*Gray, China*, ii. 220. For details see *Li chi*, Bk. XXI. ii. 8, where it is also said that they dyed the thread to make the variously-coloured figures on robes.

Specialization of Trades.—"In regard to Shun, he appears in one place as a farmer, during the early period of his life, in the neighbourhood of Mount Leih, which was not far from Yaou's capital." "In Sze-ma Ts'een and Mencius . . . we have Shun not only as a farmer, but also as a fisherman and a potter."—*Legge, Ch. Class.*, III. i. Prol. pp. 53–4.

[Fu Yüeh, the Minister of King Wu Ting, of the Shang dynasty, was first a *pisé*-mason.]—*Shu ching*, IV. viii. (i.), 3.

[The following were probably also specialized occupations:—御 *yü* charioteer or carriage driver (*P'ao P'u Tzŭ, Yüan chien lei han, c.* 325, *Ch'iao yi pu*, p. 9*a*), makers of earthen vessels (*Shih chi, ibid. c.* 358, *Ch'an yeh pu*, p. 26*a*), of ox-carts, carriages, and chariots (*Shu ching*, II. iv. 1), of bells (III. iv. 3), of boats (II. iv. 8; IV. vii. (ii.) 6), of astronomical instruments (II. i. 5), of musical instruments (II. i. 5, 13; iv. 2, 9), of robes, etc. (II. i. 9; iv. 4), of baskets, etc. (III. i. 19), workers in metals (iv. 3), workers in stone (i. 52, etc.), workers in skins (69), brewers (iii. 6, etc.), builders (*ibid.*; IV. viii. 3), carvers (III. iii. 6, etc.), coffin-makers (*Yüan chien lei han, Ch'an yeh pu, T'ao*, p. 13*b*), etc.]

Localization of Trades.—"In the time of Yao the people who lived on the water were ordered to occupy themselves only in fishing. Also, Shun, fishing in the Lei Marsh, followed his example."—*Shih Tzŭ, Yüan chien lei han, c.* 358, *Shou yeh pu*, p. 3*b*.

"The ancient kingdom of Ts'e was noted for its advantages of salt and fish."—*Legge, Ch. Class.*, III. i. 103, note.

"The whole of Yen-chow was distinguished for its mulberry trees and silkworms, but especially the region about Puh." The province also produced great numbers of varnish trees and silk, giving a special character to the articles made there.—*Ibid.* III. i. 101, notes.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Division between Sexes.—"In the spring days, when warmth begins and the oriole utters its song, the young women take their baskets and go along the narrow paths between the mulberry trees, gathering the tender leaves of the young trees, and stripping the branches, while the young men lop off with axes and hatchets those that are out of reach."—*Simcox*, ii. 47.

[The mulberry leaves served to feed the silk worms (*Shih ching*, I. xv. I. 2, 3), with which business the women were specially occupied (III. iii. X. 4). In each house the women span the hemp and the dolichos, and wove cloth and silken stuffs.]—*Legge, Ch. Class.*, IV. i. 228–9; ii. 562. See also *Chan kuo ts'ê, Yüan chien lei han, c.* 356, *Ch'an yeh pu*, p. 24*a*.

"To sort and put in order raw silks and hemp, and thereby to prepare silks and cloths for use, was the duty of women."—*Chou li kuan chu* (*Gingell*), p. 51.

"So a woman who has nothing to do with public affairs leaves her silk-worms and weaving" [a woman should not occupy herself with public affairs, leaving her proper duties of rearing silk-worms and of weaving].—*Shih Ching*, Pt. III, Bk. iii., Ode IV.; see also *Chan kuo ts'ê, Yüan chien lei han, c.* 356, *Ch'an yeh pu*, p. 24*a*; *Lieh nü chuan, ibid., loc. cit.*

"Good wives and concubines cleaned and sorted raw silks and hemp; men and maids collected and gathered the fruits of trees and plants (water lily, etc.)."—*Chou li kuan chu* (*Gingell*), p. 50.

"Ch'ên Chung-Tzŭ parted from his brother and mother, and lived at Yü Ling, where he himself wove sandals, while his wife made hempen thread to barter for food."—*Yüan chien lei han, c.* 356, *Ch'an yeh pu*, p. 26*b*.

"The husbandmen should be constantly at their business, and women at their proper work. If one husbandman did not cultivate, some people would be in want of food, and if one woman did not weave, some people would be cold."—*Kuan Tzŭ, ibid.* p. 2*b*.

"In sacrificing, husband and wife had their several duties which they personally attended to."—*Li chi*, XXII. 4.

The wife "could carry on all the work in silk and linen, making cloth and silken fabrics, and maintaining a watchful care over the various stores and depositories (of the household)."—*Ibid.* XLI. 8.

"Women did embroidery, and men carving and engraving."—*Mo Tzŭ, Tzŭ shih ching hua, c.* 150, *Po kung*, p. 7*b*.

Specialization of Trades.—"Workers in metal: knives for writing on bamboo tablets [see also LANGUAGE], arrow-heads, javelins, swords, bells, and measures of capacity are made by different workmen. Then follow the makers of leather armour and drum makers. The dyers and silk dressers are treated next, with all who work in colours; then the jade cutters and polishers, the arrow-makers, potters and moulders of culinary utensils—among which we recognise the prototype of a modern patent cooking pot, for preparing food by the use of steam

alone (*Tcheou-li*, ii. 538). The workers in precious wood make the cases for musical instruments. Wooden targets and the handles of pikes and javelins are made by the same class ; and a long and very elaborate chapter [of the *K'ao kung chi*] is given to the manufacture of bows, which were made of wood and bone, cunningly fitted together to form an arc of greater or less curvature according to the strength of the bow, and strung, not like the English long-bow—by the simple bending of a straight sapling—but by a *tour de force*, involving the reversal of the curve, or, so to speak, turning the unstrung, manufactured bow inside out. A list of the workers was kept according to their skill, and extra rations of wine and meat were given to the best."—*Simcox*, ii. 62.

"In the times of the former kings there was not one noble or plebeian male or female person without his or her allotted duty. The *Kaou kung* section observes that the state had six kinds of official duties, and the hundred occupations (all the works) were all under one head. To sit and discourse on principles of reason was said to be the duty of the king and high dukes ; while to apply and put in force was the part of the *Sze* and *Ta foo* ; to examine and put to rights the face of things, and thereby to bring into use the five elements, and to make the different household utensils of the people, was the charge of the *Peh kung*, artificers ; to circulate valuables and curious productions of the four parts, in order to contribute to general support, was the duty of merchants and traders ; to apply the powers of the body to develope the treasures of the earth was the charge of husbandmen" ; the duty allotted to women having been stated *supra*.—*Chou li kuan chu* (*Gingell*), p. 51.

"The six manufactures of the son of Heaven are under the care of (the superintendents of) the workers in earth ; the workers in metal ; the workers in stone ; the workers in wood ; the workers in (the skins of) animals ; and the workers in twigs."—*Chou li, Ch'ü li*, II. ii. 2. 5.

"Officers do not do field-labour ; field-labourers do not fish ; traders and agriculturists, artizans and merchants do not exchange their occupations."—*Yüan chien lei han, Ch'an yeh pu, Shou yeh*, p. 10*b*.

"For the most part there were seven descriptions of workers in wood, six in metal, five in leather, five in colours, five in grinding and two in clay. The workers in wood were 輪 *Lun*, wheelwrights ; 輿 *Yü*, makers of carriage bodies ; 弓 *Kung*, makers of bows ; 閭 *Lu*, makers of spear handles ; 匠 *Chiang*, carpenters in general ; 車 *Chü*, makers of wagons ; and 梓 *Tzŭ*, makers of household furniture. The workers in metal were 築 *Chu*, makers of engraving tools ; 冶 *Yeh*, makers of points of spears ; 鳧 *Fu*, makers of bells ; 桼 *Li*, makers of measures of capacity ; 段 *Tuan*, [? makers of agricultural implements] ; and 桃 *T'ao*, sword makers. Workers in leather were 函 *Han*, armour makers ; [?] *Po*, tanners of hides for binding ; 鞹 *Yün*, tanners of hides for drums ; 韋 *Wei*, workers in leather for shoes, etc. ; and 裘 *Ch'iu*, makers of fur garments. The workers in colours were 畫 *Hua*, drawers of flowers ; 鍒 *Wei*, workers in five colours ; 鍾 *Chung*, dyers of feathers ; 筐 *K'uang*, (unknown) ; and 幐 *Fang*, dyers of raw silk. Workers in grinding, or rubbing or polishing, were 玉 *Yü*, workers in gems, maces, utensils, etc. ; 椰 *Yeh* [misprint for 櫛 *chieh*, makers of combs of jade, ivory and rhinoceros horn] ; 雕 *Tiao*, engravers ; 矢 *Shih*, makers of arrow-shafts ; and 磬 *Ch'ing*, polishers of musical stones. Workers in clay or earth were 陶 *T'ao*, makers of pots or jugs ; 旗 *Fang*, makers or workers in finer sorts of earthenware."—*Chou li kuan chu* (*Gingell*), pp. 52–3. See also *K'ao kung chi*, *c.* 1, pp. 30*a*, 15*a*, etc. ; *K'ao kung chi t'ung*, *c.* 1, pp. 15*a*, 30*a*, 33*a*, 44*b*, 54*a*, 57*b*, 60*a*, 62*a*, 68*a* ; *c.* 2, pp. 1*a*, 31*b*, 58*a* ; *Yüan chien lei han*, *c.* 357, *Ch'an yeh pu*, pp. 5*b*, 6*a*, 10*b*, 13*b*, 33*b* ; and *Shu ching*, V. ii. 1–4 ; iii. 9 ; xxii. 11, 19 ; iii. 3 ; 9 ; xxii. 20 ; vi. 4, 8 ; xxii. 19, 26, 27 ; vi. 9 ; 11 ; vii. 11 ; x. 6 ; xxii. 2, 19 ; 3, 16, 17, 18 ; 10, 14 ; 15, 18 ; 17 ; 19 ; 26, 27, 28 ; xxiii. 1 ; xxv. 1 ; xxix. 4 ; 5.

[The following specialized occupations are also mentioned:—冥氏 *min shih*, maker of pitfalls and traps for wild beasts (*Chou li, Yüan chien lei han*, *c.* 358, *Shou yeh pu*, p. 23*a*) ; 牧牛 *mu niu*, cowherd (*Shan t'ang ssŭ k'ao*, *ibid.* p. 20*b*) ; 牧羊 *mu yang*, shepherd (*Chuang Tzŭ*, *ibid.* p. 17*b*) ; 染人 *jan jên*, dyer (*Chou li*, *ibid. c.* 358, *Ch'an yeh pu*, p. 24*a*) ; 商賈 *shang ku*, traders, travelling and resident (*Chou li*, *ibid. c.* 357, *Ch'an yeh pu*, p. 17*b*) ; husbandman, farmer, founder, carriage builder, (*Mencius*, Bk. I. Pt. ii. xi. 2, etc.) ; and maker of mats (*ibid.* Bk. III. Pt. i. IV. i ; *Shu ching*, V. xxii. 15–18).]

"Tsao-fu was driver to King Mu of Chou."—*Yu hsüeh hsü chih*, *c.* 4, *Chi yi*, p. 9*a*.

"The thill-maker made the thill."—*K'ao kung chi t'ung*, *c.* 1, p. 33*a*.

"The cartwright made the plough."—*Ibid. c.* 2, p. 51*a*.

"In Ch'ung Chow the aborigines of Lai were shepherds. The commentary [says] : 'This is the place now called Lai Chou [in Shantung] ; the aborigines tended cattle for their livelihood.'"—*Shu ching, P'ei wên yün fu*, *c.* 90*b*, p. 24*a*. See also *Legge, Ch. Class.*, III. i. 102.

"The common people laboured at *nung* (農) and *sê* (穡). The commentary [says] that *nung* means sowing and *sê* reaping."—*Tso chuan, Yüan chien lei han*, *c.* 356, *Ch'an yeh pu*, p. 1*b*.

"Wu Shih said : 'Cabinet makers [or wood engravers] were divided into three classes. The official posts of the Chou dynasty were practically the same as those of the Hsia and Shang, but they were rather too many. In that dynasty one clever workman would carry on several arts at the same time. It was thought practicable for one man to occupy himself with several trades.'"—*K'ao kung chi t'ung*, *c.* 2, p. 25*b*.

[*Ti jên* (see REG. OF LABOUR) were employed as menials at funerals, etc.]—*Legge, Ch. Class.*, III. ii. 552, note.

[For the arguments of Mencius in favour of division of labour see KNOWLEDGE.]

Localization of Trades.—"The province 越 *Yue* (*Che kiang*) had no artisans for the manufacture of instruments of husbandry, as all the men of the province could make them ; the 燕 *Yen* (*Che le*) province was without artisans for making armour, for the men of the province could all make it ; the 秦 *Tsin* (*Shen see*) province was without artisans who made long spears, for the men of the province could all make them ; the 胡 *Hoo* (outside Mungoo Tartars) state was without makers of bows and carriages, for all the men of the country were proficient in the art : men of knowledge became inventors, and cunning men imitated."—*Chou li kuan chu* (*Gingell*), pp. 51–2.

Chêng swords, Sung axes, Lu knives, Wu and Yüeh two-edged swords "could not be made equally good when the materials were removed and manufactured at a distance from the place of their production."—*Ibid.* p. 52.

[At T'ai-yüan Fu the most famous cutlery and weapons of war were manufactured.]—*Yüan chien lei han*, *c.* 223 ; see also *Yule, Marco Polo* (3rd ed.), ii. 13, 15, note.

"Jade cases (玉櫝 *yü tu*) were produced at K'un Shan, and moonlight pearls (明月之珠 *ming yüeh chih chu*) from the Four Seas. They were sold in the market, and the Sage bought them, regarding them as one of the 'precious' things."—*Shih chi, Yüan chien lei han*, *c.* 357, *Ch'an yeh pu*, p. 3*a*.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Division between Sexes.—"Men planted grain, and women [the young] mulberry trees."—*Yang Tzŭ, Tzŭ shih ching hua*, *c.* 149, p. 1*b*.

[Women did embroidery.]—*Han Shu Ching Ti chi*, *ibid.* p. 17*a*.

"Women constantly occupied themselves in rearing silk-worms and weaving, so that when fifty years old they might wear silk clothes [instead of waiting till seventy, the age at which they were indispensable for warmth]."—*Shih huo chih, Yüan chien lei han*, *c.* 356, *Ch'an yeh pu*, p. 23*b*.

Specialization of Trades.—"The four classes of people had no right to have two occupations."—*Han shu hsü chuan, P'ei wên yün fu*, *c.* 106, p. 83*b*.

"If a tradesman pursued several branches of business, or a workman occupied himself with several arts, he would certainly become poor and destitute, for his mind would not be concentrated."—*Huai-nan Tzŭ, Yüan chien lei han*, *c.* 357, *Ch'an yeh pu*, p. 18*b*.

"In the time of the Emperor Ming an order was issued forbidding the people to have two occupations. Liu Yi presented a memorial to the throne, in which he said : 'The state officials forbid the people to have two occupations : if a man is a farmer, he has no right to be a fisher.' Now the provinces lying near the rivers and lakes have very few places where they can rear mulberry trees and silk-worms, and the people there depend entirely upon fishing for their livelihood. If they fish during the end of winter and beginning of spring it would not injure husbandry. Moreover, the profits from fishing and hunting do no harm to husbandry—if anything can be done to assist [the growth of] the grain or rice, what harm is there in one man having two occupations ?"—*Hou Han shu, ibid. c.* 358, *Shou yeh pu*, p. 6*a*. See also *Ch'an yeh pu*, p. 11*a*.

"Specialities in art and workmanship are treated as the monopoly of certain families, on which no outsider is allowed to trespass. Such was the case under the Han dynasty with certain patterns of silk brocade."—*Hirth, Anc. Hist.*, p. 117.

"Kung-sun Hung was a native of Tzŭ Ch'uan [in Shantung] ; his family being poor, he tended pigs on the sea coast."—*Shih chi, Yüan chien lei han*, *c.* 358, *Shou yeh pu*, p. 19*a*.

"Nieh Chêng, having committed a murder, escaped with his mother to Ch'i, where he became a butcher."—*Chan kuo ts'ê, ibid.* p. 2*b*.

[Ching K'o and Fan K'uai were dog-butchers.]—*Shih chi, ibid.* p. 2*b*.

"Chou Po got his livelihood by weaving sedge *ch'ü* (曲). The commentary [says] : 'The screen made of sedge [for sun or rain] was sometimes called *ch'ü*.'"—*Yüan chien lei han*, *c.* 356, *Ch'an yeh pu*, p. 27*a*.

"Shên T'u-p'an was a painter or varnisher."—*Hou Han shu, ibid. c.* 357, *Ch'an yeh pu*, p. 28*a*.

[Fishermen made their own nets, hooks, etc.]—*Ibid., Yü kou i*, p. 11*a*.

[Other occupations mentioned are :—Shepherd, horse-breeder (*Shih chi, ibid. c.* 358, *Shou yeh pu*, p. 19*a*), builder of pagodas (*T'ien kuei lu, ibid. c.* 357, *Ch'an yeh pu*, p. 28*b*), fisher and hunter (*Han shu Ti li chih, Tzŭ shih ching hua*, *c.* 150, *Ch'an yeh pu*, p. 15*a* ; agriculturist (*Yüan chien lei han, Ch'an yeh pu, Nung T'ien, passim*) ; weaver (*ibid. Chih, passim*) ; carpenter (*ibid., Po kung san*, p. 10*a*, etc.) ; knife and sword-maker (*Hou Han shu Po kuan chih, Tzŭ shih ching hua*, *c.* 150, *Ch'an yeh pu*, p. 9*b* ; etc.]

Localization of Trades.—[Figures for embroidery were produced by the rivers Tzŭ and Huan, of the Hsiang Yi district.]—*Chên Liu Fêng su chi, Ko chih ching yüan*, *c.* 15, *Kuan fu lei*, p. 4*b*.

[The iron industry and trade were in the hands of the people of Liang (part of Shen Hsi, Hu Pei, Kan Su, and Ssŭ Ch'uan). The districts Lung and Shu (Kan Su, Shen Hsi, and Ssŭ Ch'uan) were noted for cinnabar and woollen cloth ; Ching and Yang (Hu Pei and Chiang Su), for skins and hides (or leather), as well as bone and ivory ware ; Chiang Nan, for wood and bamboo arrows ; Yen and Ch'i (Chih Li and Shan Tung), for fish, salt, rugs, and furs ; Yen, Yü, and Ho (Shan Tung, Ho Nan, and Kan Su), for varnish, silk, and hemp or grass-cloth. Thus, at this time, silk, now supplied from the Canton and Shanghai districts, was chiefly produced in the north-west of China, and skins and hides in Hu Pei.]—*Hirth, Ch. and Rom. Or.*, p. 226, note.

"When his [? the Emperor's] brother Shu was Prefect of Ho Tung many people there were traders, but few were farmers. When Shu took office, he taught the people cultivation for two years. By this means every family of his subjects had sufficient."—*Pei shih Wei tsung shih chuan tsan, ibid. c.* 37*a*, p. 112.

"In the beginning of the reign Ta Ming of Hsiao Wu, people who had no property were sent to the three districts [in modern Chekiang] Yü Yao, Mou, and Yin, to cultivate the lake fields, which became their profitable occupation," *i.e.*, the land was made productive.—*San t'ung k'ao chi yao*, *c.* 1, p. 10*a*.

[Fishermen and hunters sometimes also reared silkworms.]—*Yüan chien lei han, Ch'an yeh pu, Nung wu*, p. 5*b*.

"Wang Ching, in his youth, was a dog-butcher, and traded through the Three Wu. Afterwards he became Prefect of Wu Hsing."—*Ch'i shu, Yüan chien lei han*, *c.* 358, *Shou yeh pu*, p. 2*b*.

"Chang Hsia, when young, was of a poor family, so he followed the occupation of a shepherd."—*Chin shu, ibid.* p. 19*b*.

[In this period shepherds (*Ch'ien yen lu, ibid.* p. 29*b* ; *Chin shu, ibid.* p. 29*b*), casters (*Chin shu, ibid. Ch'an yeh pu*, p. 25*a*), makers of temple utensils (*ibid., Po kung san*, p. 10*a*), iron and steel workers (*Tzŭ shih ching hua*, *c.* 150, *Ch'an yeh pu*, pp. 10*b*, 15*a*), bricklayers (*ibid.* p. 11*a–b*), engravers on stone (*ibid.* p. 12*b*), are mentioned.]

Localization of Trades.—"Chamœrops' shoes were produced in Shu, and made from the rattans grown in the large temple grounds in the south ; but the people of Wu could not make them."—*Yen ch'i yu shih, Ko chih ching yüan*, *c.* 18, p. 16*b*.

"[Han K'ang] gathered medical herbs from a famous hill, and sold them in the market of Ch'ang An."—*Hou Han shu, Han K'ang chuan, P'ei wên yün fu*, *c.* 34*a*, p. 148.

"At Tung Ling there being plenty of grain, the traders' market was established."—*I lin, ibid. c.* 34*a*, p. 147*a*.

"In the Li Shan and Pai Têng Shan of Ch'ang An [Shensi] there were silver mines."—*Wên hsien t'ung k'ao hsiang chieh*, *c.* 5, *Chêng ch'üeh k'ao*, p. 5*b*.

"The town [of Ching-Tê Chên] appears to have been devoted to the manufacture of pottery from the commencement of the Chun [Ch'ên] dynasty in A.D. 557."—*Gray, China*, ii. 235.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

Division between Sexes.—[Similar to previous Period.]

Specialization of Trades.—"The occupation of Mr. T'o was planting trees. All the noble and wealthy families of Ch'ang An who wished to have pleasure grounds competed with the fruit-sellers for his services and welcomed him."—*Ku wên hsi i hsiang chieh, Chung shu Kuo T'o-t'o chuan*, *c.* 13, p. 41*a*.

"A man who trafficked in butchering animals, or trading in wine was called a trader."—*T'ang Liu tien, Yüan chien lei han*, *c.* 357, *Ch'an yeh pu*, p. 18*b*.

[From *Ku Wên hsi i hsiang chieh, Tzŭ jên chuan*, *c.* 13, p. 37*a*, it would seem that cabinet makers would not make the legs of bedsteads.]

[Specialized occupations mentioned are :—Plasterer (*Ku wên hsi i hsiang chieh, Wu chê Wang Ch'êng-fu chuan*, *c.* 12, p. 21*b*), maker of satin (*Shih wu yüan shih, Ko chih ching yüan*, *c.* 27, p. 11*b*), woodsman (*Yüan chien lei han, Ch'an yeh pu, Po kung san*, p. 10*b*), paper and pen-maker and paster (*Tzŭ shih ching hua*, *c.* 150, *Ch'an yeh pu*, p. 9*b* ; *Yüan chien lei han, Ch'an yeh pu, Po kung i*, p. 9*b*), silver-worker, workers in earth, in bamboo, makers of carriages, musical instruments, arrows, hats, helmets, varnisher (*ibid.* p. 9*b*), carpenter (*ibid., Po kung san*, p. 10*a*), embroiderer (*ibid.* p. 10*a*), etc.]

Localization of Trades.—Porcelain "was made in the district of Pien [K'ai-fêng Fu], in the province of Honan." *Cf.* AESTH. PROD.—*Monkhouse, Hist. and Descr. of Ch. Porcelain*, p. 16.

"The most important event in the history of Chinese porcelain" before 960 was "the foundation by imperial decree of a manufactory at Chang-nan-chên [in Kiang Hsi], afterwards called Ching-tê-chên after the Emperor Ching-tê (1004–1008), who established another factory there. . . . Other private factories soon sprang up there, and it gradually became almost the only place where the fabrication of artistic china was carried on."—*Ibid.* p. 17. But see previous Period.

"Po Chou [in Anhui] produced light gauze, which was so light its weight could not be felt. When cut to make garments it looked like smoke or mist. It was made only by two families, who intermarried during successive generations lest the process might become known by others."—*Lu Yu Lao Hsüeh An pi chi, Tzŭ shih ching hua*, *c.* 150, p. 4*a*.

907–960.

Division between Sexes.—"When Chêng T'ien was Governor-General of Fêng Hsiang and Lung Shih, his wife wove military dresses to distribute to his soldiers."—*Yüan chien lei han*, *c.* 356, *Ch'an yeh pu*, p. 26*b*.

"The wife of Mr. Tou T'ao, née Su, was able to weave *hui wên tzŭ*, 'circulating sentences,' a kind of ode which may be read backwards as well as forwards—a palindrome."—*Yüan chien lei han*, *c.* 356, *Ch'an yeh pu*, p. 25*b*.

Period of Disruption (221 *to* 589).—*Table IV.*

Division between Sexes.—"The Empress Ch'ên of the Emperor Hsiao Hsüan, of the Ch'i State, belonged to a poor family, and when young was very diligent in weaving."—*Nan shih, Yüan chien lei han*, *c.* 356, *Ch'an yeh pu*, p. 25*a*.

"Ting, concubine of the fourth rank of the Emperor Wu, of the Liang State, in her youth, was once weaving by moonlight, together with the girls next door. They were all afraid of the mosquitoes, but she did not feel them [being so intent on weaving]."—*Nan shih, ibid.* p. 25*a*.

"The Emperor, when in the Fang Lo pleasure grounds, ordered his maids to do the work of butchers and wine-sellers."—*Ch'i shu, ibid. c.* 358, *Shou yeh pu*, p. 3*a*.

[An instance of a female iron-worker is given in *Shih i chi, ibid., Chên êrh*, p. 6*b*.]

Specialization of Trades.—"In your guard-post on the frontier a hundred soldiers were sent to work as shipbuilders."—*Wei shu Tiao Yung chuan, Yün fu shih i*, *c.* 82, p. 12*a*.

"When [Shih] Pao was magistrate, he was sent on a certain mission to Yeh (in Honan). As the affair was left undecided for a long time, he trafficked in iron in the market."—*Chin shu Shih Pao chuan, P'ei wên yün fu*, *c.* 98, p. 135*a*.

Sung Period (960 *to* 1280).—*Table VI.*

Division between Sexes.—[Similar to preceding and subsequent Periods.]

[In Hainan the women made clothing and silk coverlets.]—*Sung shih, Tzŭ shih ching hua*, *c.* 149, *Ch'an yeh pu*, p. 18*b*.

Specialization of Trades.—"In Kuang Kan there were plenty of bamboos ; the bamboo worker cut them down and levelled their joints in order to make tiles of them."—*Wang Yü-ch'êng Chu Lou chi, Ko chih ching yüan*, *c.* 20, p. 26*a*.

[Dyeing of silk cloth with azure colour (*Yeh t'an, Yüan chien lei han*, *c.* 358, *Ch'an yeh pu*, p. 24*b*), stone-chiselling and moulding in clay (*Hsü Wên hsien t'ung k'ao, ibid. c.* 358, *Ch'an yeh pu*, p. 26*b*), tile-making (*Wang Shih-mou Min pu su, Ko chih ching yüan*, *c.* 20, p. 26*a*), sericulture (*Yüan chien lei han, Ch'an yeh pu, Ts'an i*, p. 5*a*), weaving, embroidering, thread-making (*ibid. Chih i*, p. 5*b*), and medicine-selling (*ibid., Mai mai t'ien*, p. 3*a*) are among the occupations mentioned.]

Localization of Trades.—"During the Sung dynasty, artistic porcelain was still made at many places. Imperial factories were established at Pien-liang, the present department of K'ai-fêng in Honan province, between 1107 and 1118, where pieces

of special quality were made for magistrates, and, when the Court removed south before the advancing Mongols, at the southern capital, Hang-chou in Cheh-kiang province."—*Monkhouse, Hist. and Descr. of Ch. Porcelain*, p. 17.

"The place at which the greatest variety of colours was produced was Chün-chou. . . . Here were also produced variegated vases, called *yao pien*, or 'transmutation' vases, by the Chinese, and *flambé* by the French."—*Ibid.* p. 22.

"The most celebrated of the factories was that of Ting-chou, where brilliant white, purple, and black were produced from 1111 to 1126." Ware of the same description was afterwards made at Hang-chou.—*Ibid.* p. 21.

[Cotton having been first cultivated in Kuang Tung and Fu Kien and about the same time in Shan Si and Shen Si the industry was probably confined to those provinces. See following Period.]

"They make in this city [Calachan, ? in Kansuh] great quantities of camlets, of camel's wool, the finest in the world, and some of the camlets that they make are white, for they have white camels, and these are the best of all. Merchants purchase these stuffs here, and carry them over the world for sale."—*Yule, Marco Polo* (1st ed.), i. 247.

"Within the Empire the only place where leaven was made was the prefecture of Huai An."—*Ta hsüeh yen i pu, Hsü wén hsien t'ung k'ao hsiang chieh, c.* 5*b*, p. 2*a*.

"In Ch'uan [Chou] and Chang [Chou] [in Fukien] the tiler made tiles of the clay of the hill, which was of a yellow colour."—*Wang Shih-mou Min pu su, Ko chih ching yüan, c.* 20, p. 26*a*.

"In the History of Lin An in the reign of Han Shun, it says: 'The vinegar storehouse of Hung T'ing was situated on the east of Ts'ai Shih bridge, on the south of the street facing north. Now it is called 'Vinegar Street.' In the time of the Sung dynasty the wine and vinegar were made by the Government storehouse and a tax paid to the Board of Revenue. In Lin An there were 12 vinegar storehouses. This was one of them."—*Tung ch'êng tsa chi, c. hsia*, p. 10*b*.

KIN (NÜ-CHÊN).

[The collection and breeding of horses, mares, etc., was the special duty of the Department of the Imperial Stud. See GEN. GOVT.]—*Hsü wên hsien t'ung k'ao, Yüan chien lei han, c.* 358, *Shou yeh pu*, p. 19*a*.

[The Office of Works was specialized into a Clothes-dyeing Department, Figure-designing Department, Clothes-cutting Department, Figure-embroidering Department, and others.—See *ibid., Ch'an yeh pu*, p. 24*b*; *Po kung san*, p. 10*a*.]

Mongol Period (1280 *to* 1368).—*Table VII.*

Division between Sexes.—[Weaving continued to be the occupation of women.]—*Yüan shih, Yüan chien lei han, c.* 356, *Ch'an yeh pu*, pp. 25*b*, 26*b*.

Specialization of Trades.—"In the two capitals of the Yüan dynasty there were palace-painters or varnishers (宮殿髹漆 *kung tien hsiu ch'i*), variegation workmen (殿宇藻 *tien yü tsao*), and [gold or silver washing or] plating workmen (裝釜 *chuang wu*)."—*Hsü wên hsien t'ung k'ao, Yüan chien lei han, c.* 357, *Ch'an yeh pu*, p. 27*a*. See also *ibid., T'ao*, p. 13*b*.

[Ornaments for the crown, girdles of various precious substances, and woven and knitted clothes of various figures and colours were made by workmen under the Supervision of Works Office.]—*Hsü wên hsien t'ung k'ao, ibid.* p. 30*b*. Map-makers are mentioned in *ibid., Po kung i*, p. 9*b*.

[Weaving and silk dyeing were carried on under a special government office.]—*Hsü wên hsien t'ung k'ao, ibid. c.* 358, *Ch'an yeh pu*, p. 24*b*. See also REG. OF LABOUR.

[The following were the 22 heads under which the duties of the 5 classes of workmen in the Imperial pottery at Kin-te-ch'êng were classed:—Large ware, small ware, vessels made after the ancient patterns, carved work, vessels made according to moulds, painting porcelain, vessels made after new patterns, vessels on which are representations of dragons in *basso-rilievo*, vases on which are painted Chinese characters, porcelain of various colours, lacquered porcelain, making boxes and cases for porcelain, dyeing, bricklayers' work, carpenters engaged in large works, carpenters engaged in small works, shipwrights, iron-founders, workers with bamboo, rope-makers, coopers, pounders of clay by means of pestles and mortars.]—*Gray, China*, ii. 237.

"The various occupations in the markets and villages were more than those in the districts by nine-tenths, but only five-tenths were farmers or planters of mulberry trees."—*Hsien Ch'êng T'ing pi chi, P'ei wén yün fu, c.* 106, p. 81*b*.

[The names *lai chieh* (來纈), *tan chieh* (檀纈), *shu chieh* (蜀纈), *chiang shui chieh* (漿水纈), *san t'ao chieh* (三套纈), *lü ssü pan chieh* (綠絲班纈) and others were given to various processes of dyeing, which subsequently became obsolete.]—*Tan ch'ien tsung lu, Ko chih ching yüan, c.* 27, p. 19*a*.

"In the 30th year of the reign Chih Yüan an imperial decree was issued stating that the frontiers were quiet, and that our troops should be ordered to cultivate the ground at their stations, and use the produce for food."—*Yüan shih Shih tsu chi, P'ei wén yün fu, c.* 23*a*, p. 202.

Localization of Trades.—"In Fukien and Kuang Tung there were many cotton trees; the natives there competed in planting them. Some had 1,000 trees. The flowers were gathered to weave cloth called *chi pei* (吉貝) cloth."—*Mo k'o hui hsi, Ko chih ching yüan, c.* 27, p. 22*b*.

[The de-localization of the cotton industry from the provinces of Kuang Tung, Fu Kien, Shan Si and Shen Si was probably effected by the introduction of the plant by a lady of the Wang family into Kiang Su, whence it quickly spread to Hu Nan, Hu Peh, Ho Nan, An Hui and other provinces. See *Gray, China*, ii. 142. *Cf.* ABSOLUTE MONARCHY as to movements of silk and skin industries.]

[Marco Polo says (i. 196) that rhubarb is found in great abundance in the mountains of the province of Sukchur (a subdivision of Tangut = Suhchau probably), "and thither merchants come to buy it, and carry it thence all over the world." Yule's note on this passage (p. 197) says: "All the authorities point to the mountainous region south of Suhchau and Kanchau as pre-eminently the source of the real China rhubarb; but it is also produced in Shansi, Shensi, Honan and Szechuen. Ginger was produced, according to Polo, near the river Caramoran [Hoang-ho] (ii. 12), in the province of Acbalec Manzi (probably in southern Shensi, on the upper waters of the Han), where there grows such a quantity of ginger that it is carried all over the region of Cathay, and it affords a maintenance to all the people of the province, who get great gain thereby" (ii. 19); also in Fuju (Fu Kien, ii. 179) and Kelinfu (Kien-ning Fu, ii. 180). The musk-deer was abundant in the province of Sinju (Si-ning Fu, in Western Kansuh), and musk a great article of trade there (i. 242).]

According to Odoric, "at Sunzumatu, which has not been quite conclusively identified, silk is to be found in greater plenty than perhaps any other place on earth; for when silk there is at its dearest, you can still have forty pounds for less than eight groats.'"—*Simcox*, ii. 232.

"Chinese writers speak of porcelain painted with flowers under the Yüan dynasty in the departments of Fu-chou and Chien-chang, and both these descriptions . . . are said to have been preferred to the productions of Ching-tê-chên."—*Monkhouse, Hist. and Descr. of Ch. Porcelain*, p. 25.

At Yanju (Yang Chou) "a great amount of harness for knights and men-at-arms is made."—*Yule, Marco Polo* (3rd ed.), ii. 154.

At T'ai Yüan Fu "they manufacture a large quantity of the most necessary equipments for the army of the Emperor."—*Ibid.* ii. 13.

"In all Cathay this [T'ai Yüan Fu] is the only place where wine is produced. It is carried hence all over the country."—*Ibid.* ii. 13.

Ming Period (Restoration of Chinese Supremacy) (1368 *to* 1644).—*Table VIII.*

Division between Sexes.—[Similar to previous period.]

[Hung Wu's empress, Ma, mended the clothing and shoes of the soldiers in the field.]—*T'ung chien lei tsuan, c.* 2, *Huang ch'in pu*, p. 9*b*.

Specialization of Trades.—"The specialization of employments struck Pinto as carried to a remarkable extent. Every kind of traffic and commerce is divided into several branches; thus, in the trade in ducks, some hatch the eggs and sell the ducklings, others fatten them for eating; some sell the eggs only, others the feathers, and so on. He notices the brisk trade in town sewage, by means of which, used as manure, their grounds bear three crops in a year."—*Simcox*, ii. 262-3.

[Pinto was told that in one town, with a water supply that is supposed to yield the brightest hues for dyeing silk, there were 13,000 dyers at work, who paid 300,000 taels yearly to the Emperor.]—*Ibid.* ii. 262. See also *Yüan chien lei han, Ch'an yeh pu, Chih i*, p. 5*b*.

"The very numerous barbers, he [Semedo] explains, are not employed to shave, but to comb and dress the hair, which both men and women allow to grow long."—*Simcox*, ii. 270.

"In the higher branches of mechanical skill, such, for instance, as gold, silver and ivory work, Chinamen excel, and they are exceptionally proficient in the manufacture of bronzes, bells, lacquer ware and cloisonné. With the appliances at their command, their skill in casting bells of great size and sonorousness is little short of marvellous. The famous bell at Peking weighs 120,000 lbs., and is one of five of the same weight and size which were cast by order of the emperor Yung-lo (1403-25)."—*Douglas, Society in China*, pp. 138-9.

[Gold, jade, and agate-workers are mentioned in *Yüan chien lei han, Ch'an yeh pu, Po kung i*, p. 9*b*.]

Localization of Trades.—"Of the districts which produced tea, Chiang Nan was the principal one."—*Ta hsüeh Yen i pu, Hsü wén hsien t'ung k'ao hsiang chieh, c.* 5*b*, p. 3*b*.

"In 1369 a special [porcelain] factory was established at Ching-tê-chên for the use of the palace, where a ware of specially fine quality was produced for magistrates."—*Monkhouse, Hist. and Descr. of Ch. Porcelain*, p. 25.

[Hang Ch'êng seems to have been a centre for vegetable growers, who sold their products at places as distant as Lin P'ing and Ch'ang An.]—*Tung ch'êng tsa chi, c. hsia*, p. 35*b*.

Manchu Period (1644 *to* —).—*Table IX.*

Division between Sexes.—The women "were generally ill-clad and ugly, apparently labouring in the fields like the men."—*Williams, Midd. King.*, i. 93. See also *Dudgeon, Land Question*, p. 4.

"The condition of the poor women in China is apparent to all visitors, and deplorable enough. They seem to be condemned to an extraordinary share of the hardest labour. They work in the fields, harrowing, hoeing and even ploughing; they work in the shops of carpenters and blacksmiths; they carry burthens through the streets and along the high roads; they work like the men on board the river junks; and they scull or paddle half of the sampans, or wherries, which ply on the river at Canton."—*Corner, China*, p. 195.

"When at Foo-chow in the autumn of 1864 I was much surprised to see females engaged in [the] filthy occupation [of bringing night-soil in pails on their shoulders to be deposited in the pits where it is kept for sale.]"—*Gray, China*, ii. 123.

"The women [Fukien Province] . . . do most of the carrying work . . . " Some were very healthy looking, though others "were poor, miserable creatures, earning a scanty subsistence by cutting grass on the hill sides." These peasant women do not bind their feet, and one of them "will carry two chests of tea from the city [Foochow] to the river, each chest weighing about 100 pounds."—*Scarth, Twelve Years in China*, p. 40.

In the district of Chang-lo, S.E. of Foochow, "we find the women, all of them, of the small-footed class, except some slave-girls. None of the class often seen at work in the fields about Foochow are to be found here."—*Woman's Work in China*, ii. 37.

"The Hakkas are, on the whole, a poor people, and obliged to work hard for their subsistence. This may account for the fact that you never see a Hakka woman with cramped feet. Here in Kong-Kong you see them carry heavy loads, and in the country you meet with numbers of them bringing produce . . . to market in company with the men, and buying and selling on their own account, or . . . in the fields, their trousers tucked up to the knees, and in company with the men doing the planting of the rice or harvesting of the crop."—*Ibid.* ii. 63.

"A few old women may be seen sitting by the side of the streets, earning a scanty subsistence by mending and patching the clothes of people, as poor as themselves. . . . Having all undergone the barbarous operation of cramping their feet during infancy, they are consequently unable to undertake anything but sedentary employment to gain their bread."—*Davidson, Trade and Travel*, pp. 271-2.

"One very common employment of women and children is the pasting of bits of old rag on a board or shutter till they are of the thickness of strong pasteboard, which are dried in the sun, then stripped off the board, and cut up into soles for the common kinds of shoes."—*Cobbold, Pict. of the Ch.*, p. 196.

[The women of a family usually make and mend their own and the children's shoes. At Ningpo there are itinerant women dentists who profess to cure toothache by extracting a worm from the tooth.]—*Ibid.* pp. 193-4. See also *infra*.

"Whatever may be the rank of the woman, she always makes her own shoes."—*Tchéng-ki-tong, Chinese Painted by Themselves*, p. 130.

"With twopence daily, a workman can live, and his wages are never less than tenpence. Generally, in workmen's families, the wife exercises a calling; either she carries on a little trade, or she works by the day in neighbouring houses."—*Ibid.* p. 130.

[In a country household visited by Simon, the men of the family (father, son, grandson, and three men-servants) did the out-door work, and helped the women in the drying, husking, bleaching and grinding of the rice and other grain. The women did all the cooking, washing and house-cleaning, made pickles and preserves, looked after the fowls and pigs, besides helping with the grain (as above)—dressed cotton, spun, wove, and made clothes, while the young girls in addition did embroidery and fancy needlework, sometimes for sale. The only outside work done by the women was tea-picking (in the season). The men made sandals (of straw or rope), and fishing-nets, in the winter evenings.]—*Simon, Cité chinoise*, pp. 354-5.

"Women who compress their feet, if poor, engage in various indoor employments to provide a living. Many of them are employed by needle manufacturers to drill, file, polish, and sharpen needles. Others take in needlework from clothing stores. Some are skilful in silk embroidery. A large number spend almost all their lives in pasting tinfoil upon bamboo paper for superstitious uses as mock money." "The labour of pasting the tinfoil upon paper is almost exclusively done by women and girls belonging to poor families." "Women usually perform the work of running into small moulds the tin used in preparing mock-money."—*Doolittle, Social Life*, i. 61; ii. 276-7, 275.

The task of separating the bad leaves and stems of the tea-plant "is allotted to women and girls, who, seating themselves with the baskets of leaves on their laps, dexterously use both hands in picking out all the stems and bad leaves which the sieve has failed to get rid of."—*Gray, China*, ii. 207.

"The second gathering [of leaves of the tea-plant] varies somewhat according to the latitude—May 15th to June, when the foliage is fullest. This season is looked forward to by women and children in the tea districts as their working time."—*Williams, Midd. King.*, ii. 41.

In the district near Swatow, "the women-folk weave and make the clothing for the family, rear pigs and fowls, and do the housework."—*Journ. N.-C.B.R.A.S.*, N.S. xxiii. 115.

[A Fuh-kien farmer informed Simon that, in his youth, his father's holding was 80 *mao*; the family consisted of 24 persons, and were assisted by four servants, engaged by the year—three men to work in the fields and a woman to help in the house.]—*Cité chinoise*, p. 261.

[Employments of women at Soochow:—(1) embroidery; (2) processes of silk manufacture, especially reeling and winding the thread; (3) making shoes, either complete, on their own account, or in parts for the shops, *e.g.*, the tops of shoes are given out to be made by women in their own houses; (4) sewing—especially mending and patching clothes; (5) making hats; (6) cultivating and selling vegetables, flowers, etc. The Soochow market-women are very numerous; (7) "Some officiate as barbers, removing the eyebrows and front hair of young ladies before marriage. . . . They will also, for a few cash, scarify the necks of [their] customers, when such an operation is required. Besides this, they will wait on brides, watching that the fortunate tapers burn during the wedding night, and performing minor services, [and] are often called in to assist in preparing for the burial rites. . . . They are" paid according to the means "of the family they serve, sometimes receiving several dollars, sometimes only a few cash"; (8) waiting maids. There are also women who keep a kind of registry office where servants, both men and women, are recommended and sent on trial for three days; (9) "small fruit-shops and shops to retail incense, paper money, and numerous small articles are managed by women. Many women are occupied in making the coarser kinds of this paper money"; (10) some women make lamp-wicks from the pith of reeds; (11) others "dabble in the mysteries of medicine and fortune-telling," and profess to extract the worm which is supposed to cause toothache. "I have found women pursuing a variety of small miscellaneous trades to eke out a precarious subsistence, such as painting lanterns and fans, making ornaments for fans, weaving ribbons for girdles, plaiting strings to lengthen queues, making 'switches' of hair, and the like. . . . Making paper boxes to be used in the jewelry of shops . . . an expert hand can make 1,000 boxes in a comparatively short time, but the profit is very small. The girls in a family are taught their mother's trade as soon as possible, and a clever girl can earn at least half as much as her mother. . . . Beggary is the regular profession of many women, in not a few instances from taste rather than necessity."]—*Woman's Work in China*, ii. 98-102.

[Silk-winding and the manufacture of tinsel paper to be burnt for the use of departed spirits are enumerated as occupations followed by women at Hangchow.]—*Ibid.* i. 27.

"Women and girls, carefully selected for the task . . . unwind the cocoons—a process which they make easy by placing them in boiling water. These workers must be deft of hand and expert in the business, fully capable of making the threads of equal size, and of producing them bright, clear, and glossy. . . . Another set of women and girls, who are equally expert, are . . . engaged to unwind the inner layers of the cocoon, called the silk pulp or flesh."—*Gray, China*, ii. 223-4.

"There are many styles [of embroidery], with thread, braid, or floss, and an infinite variety in the quality, pattern and beauty of the work; it is the art of Chinese women, and every young lady is expected to know how to do it."—*Williams, Midd. King.*, ii. 36.

Embroidery "furnishes employment to myriads of men and women."—*Ibid.* ii. 36.

"The finest specimens of embroidery are, as far as my observation goes, done by men, who stand while at work—a practice which . . . [the women] could not imitate, as their feet are small."—*Lay, Chinese As They Are*, p. 276.

"In China women are engaged, as well as men, in the business of catching fish. . . . In dredging for oysters, mussels and cockles, women are also very frequently employed."—*Gray, China*, ii. 301.

"In the province of Kiang-see nothing is more common than to see a woman drawing a kind of light plough, with a single handle, through ground that has previously been prepared. The easier task of directing the machine is left to the husband, who, holding the plough with one hand, at the same time with the other casts the seed into the drills."—*Barrow, Travels*, pp. 141–2.

The small *tan chia*, or ferry boats, at Macao "are invariably guided by women."—*Davidson, Trade and Travel*, p. 234.

Many of the carriers of Nanhiung, in Kwangtung, "are women, who usually pair off by themselves and carry as heavy burdens as the men."—*Williams, Midd. King.*, i. 174.

"The quacks who, in this case [of toothache], advance their specific are all women. I speak of them and their doings as I have seen and known them in the province of Chekeang. . . . They maintain that the usual cause of toothache is a little worm or maggot, which has its nest in the gum under the root. . . . But how he is to be driven out is the secret of their trade, the knowledge of which they confine most rigidly to those of their own profession. . . . This class of women . . . are known by their long umbrellas, their small feet and their very neat head-dress, and have the character of being well able to defend themselves, if rudely attacked."—*Cobbold, Pict. of the Ch.*, pp. 1–9.

"This branch [midwifery] of the profession is almost entirely in the hands of women."—*Williams, Midd. King.*, ii. 123.

Amongst the aborigines of Formosa "the women are forced to attend both to house and field, but share the laziness of their masters, insomuch that they never cut from the growing rice or millet more than enough for the day's provision."—*Ibid.* i. 138.

Specialization of Trades.—"Labourers, sailors . . . hucksters . . . and boatwomen, pursuing their several occupations" [at Canton].—*Ibid.* i. 163.

"The children are the shepherds of China."—*Smith, Observations*, p. 39.

"In China the advantage of division of labour is well understood. Shoe-making, shoe-mending, and shoe-selling are distinct branches."—*Cobbold, Pict. of the Ch.*, p. 191.

"A familiar saw says 'Human occupations are 360 in number.'"—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 170. The following are mentioned in various works:—Carpenter, workers in minerals and precious stones, gold and silver-smiths, makers of curiosities, fans, fireworks, grasscloth, hats, leather articles, mats, medicines, paper, samshu, seed-cakes, strawbraid, tallow, varnish, etc. See also *infra*.

"There are a large number of weavers in Canton who gain their daily bread by weaving the broad ribbons used by Chinese ladies to cover their small feet. They form no small portion of the residents of that city, and of several of the adjacent villages."—*Gray, China*, ii. 229.

"A feature in the workaday life of China is the number of itinerant craftsmen who earn their livelihood on the streets. Every domestic want, from the riveting of a broken saucer to shaving a man's head, is supplied by these useful peripatetics. If a man's jacket wants mending, or his shoes repairing, he summons a passing tailor and cobbler, and possibly, while waiting for his mended clothes, employs the services of a travelling barber to plait his queue; or it may be to clean his ears from accumulated wax. Even blacksmiths carry about with them the very simple instruments of their trade, and the bellows which blow the flame are commonly so constructed as to serve, when required, as a box for the tools and for a seat to rest the owner when weary."—*Douglas, Society in China*, p. 139. See also *Williams, Midd. King.*, i. 740–1.

"Cobblers go about the streets plying their trade, provided with a few bits of nankeen, silk and yellowish sole leather, with which to patch their customers' shoes. It is no small convenience to a man, as he passes along the street, to give his old shoe to a cobbler and his ragged jacket to a seamstress, while he calls the barber to shave him as he waits for them; and such a trio at work for a man is not an uncommon sight."—*Williams, Midd. King.*, ii. 38–9.

[Cobbold enumerates, among occupations commonly followed at Ningpo, dentist, barley-sugar maker, collector of refuse, hair and paper scraps, wine-carrier, lantern-seller, needle-maker, florist, stone-squarer, barber, water-carrier, scavenger, tailor, go-between (or match-maker), cobbler, keeper of cook-shop, market-man, brass-worker, and crier who announces the results of the literary examinations.]—*Pict. of the Ch., passim.*

[A class of men called N'ga Tsoi (at Canton) prepare beans in a particular way by soaking them in water till they sprout.]—*Gray, China*, ii. 137.

"All persons who grow mulberry trees upon their estates are not rearers of silk-worms. In many instances, farmers cultivate the tree only to sell the leaves. On the occasion of a visit which I paid in 1868 to the silk town of Wong-ling . . . there was but one article for sale in the market-place, namely, mulberry leaves. The farmers of mulberry lands were offering them in large quantities to breeders and rearers of silk-worms. . . . At Luk-low . . . I witnessed a similar scene."—*Ibid.* ii. 225.

[The growth and importance of the porcelain industry is shown by there being over a million persons employed at the Ching-tê Chên factories in K'ang Hsi's reign, and over three hundred kilns in full activity.]—*Monkhouse, Hist. and Descr. of Ch. Porcelain*, p. 42.

"Many trades, such as the superior lacquer industry in Foochow and the manufacture of bronze drums in Canton, have been family secrets; and these secrets are so well guarded that a branch of art may die out with the last scion of the family that created it, as in the case of the celebrated Foochow lacquer, the secret of which was lost during the T'ai-p'ing rebellion."—*Hirth, Anc. Hist.*, p. 117.

"Coffin-making is quite a separate business, by no means a work to be done by ordinary carpenters. Some few people add to this business a so-called *ts'ai péh tièm* [*ts'ai po tien*] (彩帛店), or 'shop for decorative silks,' where they sell all sorts of things required for the equipment of the dead in their coffins, such as lime, paper, pith, etc.; they also supply sackcloths, soul tablets and such-like articles. These shops, which are, in many instances, kept by people who are not coffin-makers, should be carefully distinguished from the undertakers' shops."—*De Groot, Rel. Syst.*, i. i. 322–3.

"Small groups of these men [*chiao fu*, 脚夫 'footmen'], headed, like every group in China by a leader, may regularly be seen loitering about the coffin-shops, awaiting employers." They are hired to convey the coffin from the shop to the house of the deceased.—*Ibid.* i. i. 89.

"The erection of sheds for playing constitutes a separate branch of the carpenter's trade; one large enough to accommodate two thousand persons can be put up in the southern cities in a day, and almost the only part of the materials which is wasted is the rattan which binds the posts and mats together."—*Williams, Midd. King.*, i. 820.

[It appears, from a native account of the re-opening of some old mines in Shan-tung, in the years 1854 and 1855, that mining is a highly specialised occupation, since "it had been supposed that the mines produced coal, and the gentry had made preparations for hiring workmen skilled in the getting out of coal." Hence, when it turned out that the ore was lead, we are given to understand that the profit was smaller than would otherwise have been the case.]—*N. & Q. on C. & J.*, ii. 97.

"Their devotion to ornamental work is mechanized by the use of classic books of conventional forms, and each workman gives his whole attention to one kind of pattern."—*Johnson, Or. Rel.-Ch.*, p. 80.

"One peculiar occupation of the beggars at Foochow is the rearing of snakes. These are sold, I believe, to the doctors, by whom they are boiled down and used for medicinal purposes."—*Gray, China*, ii. 61.

"Every man had his pipe, and tea was in most dwellings. They were industriously engaged, some in ploughing, others in reaping, some carrying out manure, and others bringing home produce; numbers were collected on the thrashing floors, winnowing, sifting and packing wheat, rice, millet, peas, and in drying maize, all with the greatest diligence." [Wei-Hai-Wei and Chefoo in 1837].—*Williams, Midd. King.*, i. 93.

[Printers ground their own ink. See PRODUCTION.]

Localization of Trades.—"One of the common characteristics of this land seems to be the massing of particular industries in certain districts. Thus one district is famous for its carpenters, as Chichou in Chihli. Another sends out all the Punch-and-Judy shows for a vast region. Burners of brick-kilns come largely from Shenchou in Chihli. From such centres, the men who engage in these occupations swarm forth in every direction, yet always returning like bees to the old hives. As in the case of emigration to Kirin and to Kwangtung, the waste of time and of capital in marching back and forth every year, or every few years, is very great, but it is regarded as a necessary evil, like friction in machinery. A friend was telling us the other day of a mutual acquaintance, who is a blacksmith, and whose home, like that of all the blacksmiths in this part of China, is in the district of Changch'iu, some thirty miles east of the capital of the province. This blacksmith has been in the practice of his craft in Western Shantung for half a lifetime or more, and has a fairly good business."—*N.-C. Daily News*, Letter *Life in N. China*, dated Western Shantung, 8th Oct., 1890, reprinted in *Hongkong Daily Press*, 18th Nov., 1890.

". . . the sugar, oil, and rice of the South; the tea, silk, cotton, and crockery of the East; the grain and medicines of the North; the metals and minerals of the West."—*Johnson, Or. Rel.-Ch.*, pp. 75–6.

Yang Chou (*cf.* MONGOL PERIOD) "is the headquarters of the salt manufacture, and . . . also now noted for a great manufacture of sweetmeats."—*Yule, Marco Polo* (3rd ed.), ii. 155, note.

[Cobbold describes the stone-quarries of Da-ying, near Ning-po, where some of the best building stone is obtained. The blocks are squared, and if intended to be ornamental, the rougher part of the carving is done on the spot.]—*Pict. of the Ch.*, pp. 116–9. See also DIST. and AESTH. SENT.

"Many of the bankers in the Empire are from its cities" [Shansi].—*Williams, Midd. King.*, i. 96.

"Almost every large city in China, and certainly every important division of the Empire, has its own characteristic fan; or else there is something peculiar in the make, colour, or ornamentation of the common 'folding' fan as seen in that particular district, by which it may be distinguished from its ubiquitous congener."—*Fraser's Magazine*, N.S. xix. 549.

"It [Peking] has no important manufactures, horn lanterns, wall papers, stone snuff bottles, and pipe mouth-pieces being the principal. Trade in silks, foreign fabrics, and food is limited to supplying the local demand, inasmuch as a heavy octroi duty at the gates restrains all enterprise. No foreign merchants are allowed to carry on business here."—*Williams, Midd. King.*, i. 81–2.

"The Buddhist temples and manufactories of bells, idols, praying machines, and other religious articles found here [Lama-miao], give it its name, and attract the Mongols, whose women array themselves in the jewellery made here."—*Ibid.* i. 87.

"The Chinese regard this [Suchou] as one of their richest and most beautiful cities, and have a saying 'that to be happy on earth,' one must be born in Suchou, live in Canton, and die in Liauchau, for in the first are the handsomest people, in the second the most costly luxuries, and in the third the best coffins.' . . . Its manufactures of silk, linen, cotton, and works in iron, ivory, wood, horn, glass, lackered ware, paper, and other articles are the chief sources of its wealth and prosperity; the kinds of silk goods produced here surpass in variety and richness those woven in any other place."—*Ibid.* i. 104.

"Hwuichau (or in Cantonese, Fychow) is celebrated, among other things, for its excellent ink and lackered ware."—*Ibid.* i. 110.

"The cloth called nankin, generally written nankeen . . . obtained its name from the fact that it was first manufactured at Nankin. . . . It was woven from a cotton for the production of which the lands in the vicinity were very famous. The production was temporarily obliterated by the T'aip'ing rebellion. This cloth is also produced in large quantities in the province of Kiang-soo."—*Gray, China*, ii. 143–4.

"It [Kiangsi] shares, in some degree, the manufactures of the neighbouring provinces, especially in Nankeen cloth, vast quantities of which are woven here, but excels them all in the quality and amount of its porcelain."—*Williams, Midd. King.*, i. 111.

"Within the department of Jauchau, in Fauliang hien, east of Poyang Lake, are the celebrated porcelain manufactories of King-teh chin, named after an Emperor of the Sung dynasty in whose reign, A.D. 1004, they were established. This mart still supplies all the fine porcelain used in the country, but was almost wholly destroyed during the rebellion, the kilns broken up, and the workmen dispersed to join the rebels or die from want."—*Ibid.* i. 113.

"In the progress of the last embassy through the country, we observed that the largest quantities of porcelain were exhibited for sale at Nânchang-foo, just to the southward of the [Poyang] lake." "It was soon discovered that the *Kao-lin*, mentioned by Père Dentrecolles in Du Halde, was the felspar clay, or porcelain earth of Europe. The neighbourhood of the Poyang Lake was observed, by our embassies, to abound in those disintegrating granite rocks which supply the largest quantity of that material."—*Davis, China*, ii. 204–5.

"The manufacture of porcelain at King-tê-chin has employed a million of workmen. . . . In all fine workmanship for literary or æsthetic uses the industries of Nanking, previous to their desolation by the Tai-ping war, were equally productive."—*Johnson, Or. Rel.-Ch.*, p. 73.

"The best varnish or glaze [for porcelain] is obtained in the province of Chit-kong [? Chê Kiang]. The provinces of Yünnan, Kuang-tung, and Kiang-si also produce a glaze which is in great requisition, and not very inferior in quality to that for which Chit-kong is famous. Blocks of this glaze are conveyed in great quantities to the town of Kin-tei-ching [Ching-tê Chên], where it is exposed for sale in a large building erected for the purpose. Before the blocks can be used, they are softened by placing them in kilns. The glaze is then reduced to a powder, and mixed with water, when it is ready for use."—*Gray, China*, ii. 240.

"The art of moulding coarse earthenware vessels for domestic purposes is practised at the town of Shek-wan, in the province of Kwang-tung. The clay which is used for this purpose is of a very inferior quality, and the process of manufacture differs in some respects from that at Kin-tei-ching. . . . The furnaces in which earthenware vessels are baked at Shek-wan are also very different from those . . . at Kin-tei-ching."—*Ibid.* ii. 243.

"In various parts of China the manufacture of flat clay tiles, which resemble flags, is carried on. At Pakhin-hok, near Canton, and at other places in the vicinity, these tiles are made in large quantities. The plastic clay of which they are formed is brought to Canton from the neighbouring counties or districts of Toong-koon and Pun-yu respectively."—*Ibid.* ii. 244.

"All the [native] glassware and pottery used in this part of the Empire [Shantung, etc.] were supplied by Poshan."—*N.-C. Daily News*, Mar. 9th, 1907.

P'ing Yang Fu "is known for its black pottery. The vicinity is known for large paper factories."—*Yule, Marco Polo* (3rd ed.), ii. 17, note.

"Hangchau is better known abroad for manufactures of silk than for any other fabrics, but its position at the termination of the canal may perhaps give its name to many articles which are not actually made there, for Huchau is now a greater depôt for raw and woven silks."—*Williams, Midd. King.*, i. 119.

"When foreigners first resorted to China for trade, Ningpo soon became a centre of silk and other kinds of commodities."—*Ibid.* i. 120.

"The productions of Hupeh are broadstuffs, silk, cotton . . . its manufactures are paper, wax, and cloth."—*Ibid.* i. 143.

"The crape shawls, for the manufacture of which the Chinese are so justly famous, are embroidered at the town of Pak-kow, in the province of Kwang-tung."—*Gray, China*, ii. 230.

"At Canton . . . numbers of men and women—chiefly men—are daily employed in embroidering altar-cloths, banners, and vestments of all kinds. The principal shops at Canton in which this work . . . is executed, are situated in Chong-yune-fong street, near the Tai-ping-moon, or Great Peace Gate of the city."—*Ibid.* ii. 230.

[The following silk towns in Kuangtung are named as "of equal importance to Kow-hong and Kum-chok:—Loong-shun, Loong-kong, Sha-tow, Nam-poon, Lak-low, Wong-sui, Yoong-āk, Tai-laong, See-ne-lam, Hung-tan, Shoou-tung, Kat-ngan-kwei-chow, Yoong-ku, Koo-loong, Kut-yow, Law-shoo-ee, Loong-tam, Ko-chune, Wong-ngan, Foong-kan, Kwang-wa, and Pak-kow.]—*Ibid.* ii. 228. "The silk town of Wong-ling" is mentioned in *ibid.* ii. 225.

"In China proper, more particularly, I believe, in the neighbourhood of Chee-foo, in the province of Shan-tung, and also in Mongolia and Manchuria, there are silk-worms which produce what is termed by Chinese silk merchants 'mountain silk.' These worms are very large, and are found upon oak trees. The silken stuffs made of mountain silk are very coarse."—*Ibid.* ii. 230.

"Canton is famous for its gauzes, as well as for its webs of silks and satins. Of the towns of China, however, that which appeared to me to be most deserving of note for the quality of its gauzes was Tang-yang Hien, on the banks of the Grand Canal."—*Ibid.* ii. 229.

[Natalis Rondot enumerates, among industries special to Canton, lacquer-ware and ivory carving. The varnish used in lacquer-work is produced in Ssŭch'uan, Kiangsi, Honan, and Chekiang. Other Canton industries are sandal-wood carving, manufacture of cotton and silk fabrics, and dyeing (with *Polygonum tinctorium*, or *lan*).]—*Journ. Asiat.*, Sér. IV. xi. 34–62.

"Siangtan [in Hunan] at the confluence of the Lien chi, more than 200 miles above Yohchau, is one of the greatest tea-marts in China. Its population is reckoned to be a million, and it is a centre of trade and banking for the products of this and other regions."—*Williams, Midd. King.*, i. 148.

[Hu Peh was the seat of the production of Oo-pack Congou, Sung-yang and Yang-lou-tung, in the same province, producing black brick-tea; Hu Nan, of Oo-nan Congou, Tung Shan, in the same province, producing green brick-tea; N.W. Kiangsi, of Ning-chow Congou, the finest kinds of which came from Wu-ning, S.W. of Kiukiang; N.E. Kiang Si and the north side of the Bohea hills, of Ho-how Congou; Fu Kien, of Red or Brown Leaf Congou, Flowery Pekoe, Oolong, Foochow Scented Orange Pekoe, Scented Caper, and brick-tea of smaller size than that of Hu Nan and Hu Peh; N.E. Fu Kien, of Fine Souchong Congou; Kuang Tung, of Tay-shan Congou, Canton Scented Orange Pekoe, Scented Caper, Soo-loong, in the Wei-chou Prefecture, and Su-kuan, in the Su-chou Prefecture, producing cake-tea; Yün Nan, in Nang-nee-nen district in Pu-nee Prefecture, of brick- or cake-tea; and Formosa, of Oolong and other tea (*Gray, China*, ii. 208–17). For a list of the principal tea districts in the Empire, and notes on the names applied to the various kinds of black and green tea, see *Journ. N.-C.B.R.A.S.*, N.S. x. 1–15.]

[*Ch'a-yu*, or tea-oil, was prepared in Kuang Tung (*Gray, China*, ii. 132). In the same province were bean and pea farms, where bean curd was made (*ibid.* ii. 136).]

"Pea-nuts are . . . produced in very large quantities, especially in Kwang-tung."—*Ibid.* ii. 137.

"The lands best adapted for the sugar-cane are in the district of Shek-loong, in the vicinity of the Low-fow range of mountains, in the province of Kwang-tung. The sugar which is grown in this district sells at the highest price."—*Ibid.* ii. 140.

"The lands most famous for their yield of indigo are those of Pak-loo, in the province of Kwang-tung; and the principal indigo market in Canton is in the street Tai-luk-poo."—*Ibid.* ii. 140.

"In Kwang-tung the lands which are said to produce the best cotton are those of San-tsoo or San-tchow, in the district of Pun-yu."—*Ibid.* ii. 142.

"The cinnamon gardens are in the provinces of Kwang-si and Yun-nan."—*Ibid.* ii. 145.

Tobacco is "cultivated with greater success in the provinces nearer to the tropics. Large quantities are produced in Kwang-tung. At Kong-moon, in the district of San-woo-ee, the tobacco fields are very extensive. The best Kwang-tung tobacco, however, is produced in the prefecture of Nam-hung."—*Ibid.* ii. 146.

The "kind of tobacco . . . known as 'pigtail' . . . is prepared, not by the Chinese, but by the aborigines who inhabit the mountain fastnesses of Formosa."—*Ibid.* ii. 148.

"The trees which produce 'Chinese camphor' are not found within the districts marked on maps of Formosa as Chinese territory. They occur only within the country of the aborigines, or upon the immediate border."—*Pharmaceutical Journal*, Third Series, iv. 589.

"In many a town there is one or more streets in which most or nearly all the houses are devoted to the making and sale of coffins. Amoy possesses a street of this kind, called the *koan-ts'a hāng* (棺材巷), or 'coffin lane.'"—*De Groot, Rel. Syst.*, i. i. 322–3.

"These women [professional match-makers: *sung neang*] are found only in certain parts of China; none north of the Hang-chow river; none, that I am aware of, without the limits of the province of Chekeang."—*Cobbold, Pict. of Ch.*, p. 178.

[Doctors who specialized in castrating eunuchs for the palace were congregated in Ho Chien Fu, in Chih Li.]

[For the shifting of trade centres at this time, see DIST.]

REGULATION OF LABOUR.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Land.—"Land in the earliest times was held in common . . . . China at that time consisted only of a few valleys; the chief, when elected, parcelled out this territory among district officers, who, like himself, drew their maintenance from it. No one of the people was allowed to hold [*i.e.*, cultivate] any land, except men between the ages of 20 and 60 fit for agriculture and military service."—*Arbeiten d. Kais. Russ. Ges.*, p. 3.

"From the earliest existence of a government in China, land has been considered to be the property of the sovereign. There was no private ownership, but subjects were allowed to claim lots on payment of a tax, which consisted in the surrendering of a certain percentage of the harvest. This percentage has, of course, varied a good deal in the course of history. At first calculated on the mere area held by farmers, it is stated to have been levied according to the nature of the land as early as the Emperor Yau (2300 B.C.)."—*Hirth, Anc. Hist.*, p. 297.

Tradition "assigns to the reign of Shun the division of the land into twelve districts, subject to the 'Twelve Pastors,' under the presidency of an officer called 'The Four Mountains.' . . . At the same time . . . the habitable world within the 'four seas' was theoretically divided between the Imperial domain, the domains of the nobles surrounding this, a larger area of border lands called the 'peace-securing domain,' where Chinese influence was making its way pacifically, while the still larger 'domain of restraint' and the 'wild domain' consisted of the more or less entirely barbarous regions into which criminals were banished."—*Simcox*, ii. 21.

Yü the Great "was chosen emperor. . . . The land assigned to the ruler was declared to be the hereditary property of his family in the direct line."—*Arbeiten d. Kais. Russ. Ges.*, p. 3.

Yü "conferred lands and surnames" (*Shu ching*, III. i. (ii.) IV. 16, and Prol. p. 197, note). "It was necessary that provision should now be made for the government of the multitudes, and the maintenance of the order which had been established. Yü therefore now assigned throughout the province, according to the plan which is subsequently detailed, different portions of territory to those whose birth, or services, or virtue, most entitled them to the distinction. We may suppose . . . that in his conferring lands his first regards were given to the officers who had rendered him the most effectual assistance in his arduous labours."—*Legge, Ch. Class.*, III. i. 143, note.

[Under Yü fields were classified according to three qualities of soil (三壤 *san jang*).]

"The occupation of China is interesting as the earliest instance of appropriation by use, and that upon a national scale. The agriculturists appropriated the arable land. The indigenous population was treated by the Chinese like squatters by a 'free selector.' The black-haired people picked out the eyes of the land. They spread along the course of every fertile river valley, settling, improving, draining swamps, cutting canals, building embankments, but always with a colonizing instinct, occupying first every spot that would repay cultivation without much labour, and so spreading a network over the whole couutry, the meshes of which could be drawn tighter at leisure. The colonization of the Yellow River and the great plain probably took place as gradually and as peaceably as the later colonization of the Blue River, or that of Mongolia at the present day."—*Simcox*, ii. 11.

"The provinces are grouped in three classes, three in each, but in a different order for fiscal and descriptive purposes. The highest revenue is not necessarily drawn from the provinces containing fields of the richest quality; and as the purpose of the latter classification is not explained, we are left to guess that perhaps it referred to the quality of the land available for village allotments, the quantity of which was regulated by its richness, so as to secure about the same average amount of produce to the cultivators in different districts. The theory of the Government was to exact an increasing proportion of its dues in the form of personal services from the cultivators nearest the capital, while those at a distance contributed produce only; and as the same system was followed in ancient Peru and modern Manipur, it may easily have been acted upon in ancient China."—*Ibid.* ii. 13.

"During the period between the beginning of the Chinese monarchy and the third century B.C., which includes the first dynasties, those of Hsia, Shang, and Chou, the emperor was recognized as sole legal proprietor of all land. He divided it into definite areas, on each of which he settled a certain number of families. The latter cultivated this area and lived on the produce, on condition of cultivating a portion on the emperor's account; which was called *kong-tien* (the field of the state) and formed from one-tenth to one-ninth of the total extent of cultivated land; its produce served to support the emperor and the officials charged with the conduct of public affairs, who could not till the ground for themselves."—*Journ. Asiat.*, Sér. III. vi. 258.

"The exclusive possession of the soil by the emperor, who disposes of everything and transports his servants at will from one point to another, is the distinctive characteristic of this long period."—*Ibid.* vi. 259.

"The husbandmen of Li Shan encroached upon each other's landmarks. When Shan went there to cultivate, within one year the natives yielded the landmarks to each other."—*Han Tzŭ, Yüan chien lei han, c.* 356, *Ch'an yeh pu*, p. 3*b*.

"The Emperor Yü (2200 B.C.) is supposed to have introduced the so-called tribute system (*kung-fa*)."—*Hirth*, p. 297.

Under the Hsia dynasty "the method of dividing lands among the husbandmen . . . was called *kong* [*kung*]. Each individual received 50 mao to cultivate, and reserved the produce of five mao for the *kong*, *i.e.*, the tax due to the emperor. Thus the tax was 10 per cent. of the gross product of the land, whatever its quality, and was paid in kind. Up to a distance of 100 *li*, the growing wheat was taken in payment of the *kong*. Beyond that, up to a distance of 200 *li*, payment was made in threshed wheat. Husbandmen at a distance of from 300 to 400 *li* paid in millet, those from 400 to 500 paid in rice. Thus the kind of the tax depended on the greater or less distance from the centre, and consequently on the difficulty of transporting the crops."—*Journ. Asiat.*, Sér. III. vi. 260–1.

"The great territorial division [under the Shang] was the *tsing* [*ching*], containing 630 *mao*. Around this was drawn a ditch or trench (*kia*) [*chia*], and the enclosed ground was divided into nine *kia*, each of which represented 70 *mao*. The middle *kia* was the state field (*kong-tien*) [*kung t'ien*]. The eight others were divided among eight families, each of whom cultivated their own, while all together cultivated the state field by *corvées*. The produce of this field went to the emperor, who exercised no right of levying taxes on the private fields of the eight families. . . . It will be seen that the Shang took as taxes the ninth part of the produce of the land." [This system was called *tsou* (*chu*)].—*Ibid.* vi. 261.

"Ch'öng-t'ang, founder of the Shang dynasty (1766 B.C.), is supposed to have been the originator of a mutual aid system (*tsu-fa*), which the philosopher Chu Hi believes to have been the foundation of the *tsing* system remodeled by Mencius . . . By this system the ground tax would seem at first sight to have been one-ninth of the produce; but since the farmers had to live in houses occupying certain portions of their lots, it may be said that practically the government tax amounted to that prototype of all ancient taxation, the tithe."—*Hirth*, p. 297.

[Mencius mentions a tradition that the 50, 70, and 100 *mu* allotments of this and the following Period were actually of the same dimensions.] See *Legge, Life and Works of Mencius*, p. 201, and *cf.* EXCHANGE.

"He [Duke Liu, 1750 B.C.] divided and subdivided the country [of Pin] into fields; he stored up the produce in the fields and in barns. . . . He measured the marshes and plains; he fixed the revenue on the system of common cultivation of the fields."—*Shih ching*, III. ii. VI. i. 5; but see *Legge, Ch. Class.*, IV. ii. 483, note.

[Wen-Wang decreed that the emperor, the princes, and the officials should all have their private lands, and that titles and appanages should be hereditary. . . . The appanage reserved for the emperor was much larger than the rest, so as to secure his preponderance. In densely populated districts, the *kong* method of Hsia was followed, in less populous ones the *tsou* of Shang.]—*Journ. Asiat.*, Sér. III. vi. 262–3. His decrees affected the following Period, *q.v.*

Ranks.—[The order, as in subsequent periods, was *Agriculturists*, *Artizans*, and *Merchants*. The two last were more ignoble than the first. Yü, having, by direction of Yao, found outlets for the water of the deluge, and so "caused the land to rise above the level of the sea," examined all the lands, and divided them into different classes. Shun appointed Kee to act as Minister of Agriculture, and teach the people how to cultivate the land. Some regulation is here implied, but the system controlling the field labourers and (if any) the two other classes is not described in detail. There were one hundred kinds of artizans, as in later times. See *Kang chien, Shou chüan*, p. 20, etc.

"For 4,000 years the strength of the empire has been in the agricultural peasantry, who ask nothing from the emperor but to be let wisely alone."—*Simcox*, ii. 46.

Forced Labour.—The "rule with regard to the subjection, respect and devotion due to parents, superiors and mandarins, naturally extends to the Son of Heaven, himself the Father and Mother of his people, and the highest mandarin of the Empire. Hence all his subjects are in duty bound to work at his mausoleum with the same zeal they would display at the grave of their own parents. This theory places the fact of the Chinese monarchs of all ages having regularly had their funereal monuments erected by statute labour, in a new light, and proves that the absolute right of the emperors to dispose without any restriction of the labour of their subjects [*cf.* ABS. MON.], and the duty of the latter to submit without demur to being driven in flocks to the Imperial mausolea to do unpaid work there for years are quite in harmony."—*De Groot, Rel. Syst.*, II. i. 460.

"Yaou has nine sons, who are sent with his two daughters, and a host of officers, to serve Shun amid the channelled fields."—*Legge, Ch. Class.*, III. i. Prol., p. 54.

"The amount of forced labour exacted from the people was intended to vary under the same circumstances. In good times three days' labour may be exacted from the cultivators; but if the harvest is middling, this is reduced to two days', and if it is bad, to one. If there is a public calamity, such as an epidemic, all taxation, whether in produce or labour, is excused."—*Simcox*, ii. 38.

"In Egypt . . . the base of the industrial order was formed by a system of forced labour and subsistence wages. In the Middle Kingdom free labour and sufficient food would be the corresponding formula. As in Egypt for many ages food was normally so plentiful, by the pure bounty of nature, that dearth appeared only explicable as the result of bad government; and so, while reserving the right of the people to earn their own food in their own way, the duty of their rulers was conceived to consist, chiefly, in making not only such arrangements as should secure the free labourers in the enjoyment of the fruits of their labour, but also such as should make the labour itself as remunerative as possible."—*Ibid.* ii. 8.

Slavery.—[In the earliest times there were no male nor female slaves. Elders had a right to the service of the younger, and nobles to that of the commoners.]—*Kang chien, Shou chüan.*

[Under the Hsia and Shang penal servitude, or State slavery (see LATER FEUD. PER.), was unknown.]—*Ch. Repos.*, xviii. 348.

Industry.—The emperor "Vitey [Yü Ti-Shun] ordained occupations, and "commanded that no man should use any other but that which his father did use, without his particular licence . . . All of one occupation were put in streets by themselves, the which order is used unto this day throughout all the Kingdom. . . . He ordained . . . that no woman [was] to be idle, but to work, either in her husband's occupation, or in sewing or spinning. This was a law so general amongst them that the Queen herself did observe and keep it."—*Mendoza, Hist. of China*, i. 70–1.

"During the Three Dynasties all the different kinds of skilled labour were handed down to one's descendants. A grandson inherited his grandfather's occupation, a son received his father's instructions (or training). Thus those employed in them had a thorough knowledge of each trade."—*M'a Yung-ch'ing Lan Chên tzŭ, Tzŭ shih ching hua, Ch'an yeh pu, c.* 150, p. 12*b*.

[In the time of Yao and Shun people who lived on the water were ordered to occupy themselves only in fishing.]—*Shih Tzŭ, Yüan chien lei han, c.* 358, *Shou yeh pu*, p. 3*b*.

"Yü wished to restrain his near ministers, the officers of the Boards, Presidents, and those above them, ruling that their families had no right to buy or sell privately, or compete for wealth with the people. Anyone violating this law was to be discharged from office; or, if of the nobility, to be deprived of his title, and never reinstated."—*Yü kung, Yüan chien lei han, c.* 145, p. 32*b*.

[An officer who superintended the farms over a district of considerable extent is mentioned in *Shih ching*, I. xv. I. i. This and the visits of the princes indicate that the various occupations for each month of the year, referred to in the ode, were carried on under regulation, though details respecting the latter are wanting.]

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

LAND.—"Under the wide heaven, all is the king's land."—*Shih ching*, II. vi. I. 2; *Legge*, IV. ii. 360.

"All through the Chou dynasty the principle by which land was held was that the sovereign, whoever he might be, was in all cases the real owner and that the tenant held it under conditions determined by the government. Man was held to be an adult at the age of twenty, and his portion of land was then allotted to him; at the age of sixty his fields reverted to the government; and no sale or other disposal was permitted. This system was not changed under the feudal government by which so many kings, dukes, marquises, counts, and barons were sovereigns and consequently owners of all the soil within their respective dominions—under the more or less doubtful authority of the Son of Heaven."—*Hirth*, p. 298.

"The rulers of all those [feudal] states [of Chou] were then regarded as possessing their territory from one common liege-lord, the Sovereign of the realm of Cheu, who himself held the whole Empire as a liege from Heaven, whose sole lawful Vice-regent he was, and of whom he styled himself the Son. Those feudal states were again split into numerous smaller fiefs."—*De Groot, Rel. Syst.*, II. i. 624.

"The territory of the Son of Heaven amounted to 1,000 *lî* square; that of a duke or marquis to 500 *lî* square; that of an earl to 70 *lî* square; and that of a count or baron to 50 *lî* square. (Lords) who could not number 50 *lî* square were not admitted directly to (the audiences of) the Son of Heaven. Their territories were called 'attached,' being joined to those of one of the other princes."—*Li chi*, III. i. 2; *Legge*, i. 209–10.

"The territory assigned to each of the ducal ministers of the Son of Heaven was equal to that of a duke or marquis; that of each of his high ministers was equal to that of an earl; that of his great officers to the territory of a count or baron; and that of his officers of the chief grade to an attached territory."—*Ibid.* III. i. 3; *Legge*, i. 210.

"The tenures in the Royal domain were not hereditary."—*Legge, Li Ki*, i. 212, note 3.

"Outside the royal domain the feudal states were all hereditary. This is a fact of all early Chinese history. In the domain itself the territories were appanages rather than states; yet they were, in some sense, hereditary too. The descendants of all who had served the country well were not to be left unprovided for. Compare *Mencius*, I. ii. 5. 3."—*Ibid.* i. 214, note 2.

"A space of one *lî* square contained fields amounting to 900 *mâu*; ten *lî* square were equal to 100 spaces of one *lî* square, and contained 90,000 *mâu*," etc.—*Li chi*, III. v. 18; *Legge*, i. 244.

"A space of 100 *lî* square contained ground to the amount of 9,000,000 *mâu*. Hills and mounds, forests and thickets, rivers and marches, ditches and canals, city walls and suburbs, houses, roads and lanes took up one-third of it, leaving 6,000,000 *mâu*."—*Ibid.* III. v. 20; *Legge*, i. 245–6.

"All within the thousand *lî* (of the royal domain) was called the *Tien* (or field tenure). Outside that domain there were the *zhâi* (or service territories) and the *Liû* (or territory for banished persons)."—*Ibid.* III. ii. 3; *Legge*, i. 213. See also *Wên hsien t'ung k'ao hsiang chieh*, c. 1, *T'ien fu k'ao*, p. 1*b*.

"Under the allotment system of the Chou dynasty, as Sui Jên, of the Board of Revenue, says, of fertile fields they allotted little and of poor ones much; and as the Vice-President of the Board says, if their 'mouths' be many they gave them fertile fields, and if few, poor ones; and as it was also said by Mencius in *Wang chi*, one man should have 100 *mâu* of fields so that good farmers may have much to eat and idle ones little."—*Wên hsien t'ung Kao hsiang chieh*, c. i., *T'ien fu k'ao*, p. 2*a*.

"The 大司徒 *Ta sze too*, 'ministers of instruction,' made rules for the equal distribution of land; distinguished the five 五物 *Woo wuh*, 'four points of the compass and centre'; separated the nine qualities of land; framed fixed rules for levying imposts on the empire in order to make the people attend to their proper avocations; caused the land to pay the tribute; received duties on property; and applied the orders of the state equitably over the whole empire, whether a half, one-third, or one-fourth of the produce was taken."—*Chou li Kuan chu* (*Gingell*), pp. 27–8.

"According to the regulations, the fields of the husbandmen were in portions of a hundred acres (*mu*). According to the different qualities of those acres, when they were of the highest quality, a farmer supported nine individuals; where they were of the next, eight; and so on, seven, six, and five. The pay of the common people, who were employed in government offices [appointed and removable by the head of their department], was regulated in harmony with these distinctions among the husbandmen."—*Li chi*, III. i. 4; *Legge*, i. 210.

"The Minister of Works with his (various) instruments measured the ground for the settlements of the people. About the hills and rivers, the oozy ground and the meres, he determined the periods of the four seasons. He measured the distances of one spot from another, and commenced his operations in employing the labour of the people. In all his employment of them, he imposed (only) the tasks of old men (on the able-bodied), and gave (to the old) the food-allowance of the able-bodied."—*Ibid.* III. iii. 12; *Legge*, i. 228.

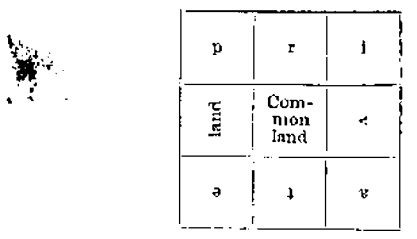
"In settling the people, the ground was measured for the formation of towns, and then measured again in smaller portions for the allotments of the people. When the division of the ground, the cities, and the allotments were thus fixed in adaptation to one another, so that there was no ground unoccupied, and none of the people left to wander about idle, economical arrangements were made about food; and its proper business appointed for each season."—*Ibid.* III. iii. 15; *Legge*, i. 230.

"The creation in the 12th century B.C. of hereditary appanages, held by branches of the ruling house, was an innovation, to which the dynasty of Chow was supposed to have been indebted for much of its success, though it is sufficiently obvious now that the troubles of the Warring States were due to the resulting multiplication of feudal princes. In consequence of a palace plot by a step-mother, an oath was taken in Tsin, at the beginning of the 7th century B.C., that they would not maintain in the State any of the sons of their marquises; and from that time, for nearly a century, according to the Tso Chuen, 'there were no families in it which were branches of the ruling house.' The consequent inconveniences are not described, but we are told that a later duke (605 B.C. *Tso Chuan*, C.C., v. 291) sought to avoid them by giving offices of various degrees to the sons of his ministers, so as to create an artificial set of branch families. The end of this State, however, did not form an inviting precedent, for after figuring as one of the presiding States and a rival of T'sin, Tsoo, and Tse, about 400 B.C., Tsin had been broken up into three marquisates and lapsed into insignificance."—*Simcox*, ii. 102–3.

[We see in the *Shih ching* several indications of the agrarian laws established by the dynasty of Chou. They are explained by Mencius (V. Pt. ii. II.). The division of the land in the tribe of its ancestor Duke Liu (c. 1750 B.C.) is indicated in III. ii. VI. (See previous Period.) The public or State field or fields (公田) is mentioned in II. vi. VIII., and a loyal wish expressed that the rain might first descend on them. In the cultivation of the ground, the allotments of families were separated by a small ditch (遂); ten allotments by a larger one (溝); a hundred, by what we may call a brook (洫); a thousand by a small stream (澮); and ten thousand by a river (川). The space occupied by 10,000 families formed a square of a little more than 33 *li*. This space constituted a *pu* (一部) and was under the charge of a special officer. The mention (IV. i. [ii.] II.) of the 'private fields' seems to imply that there were also the 'public fields,' cultivated by the husbandmen in common on behalf of the government, but Chu Hsi says that in the portion of the royal domain here contemplated the public revenue was derived from a different system. Taking the ancient acre at 100 square paces, each individual would have about 100 Chinese acres—the number assigned in several passages of Mencius to every head of a family. The *Chou li*, Bk. IX., gives the same number on good lands.]—*Legge, Ch. Class.*, II. 250; IV. ii. 483, 584, and note; and Prol. pp. 150–1.

"That there were in these early days restrictions on the transfer of land which prevented it from being wholly monopolised by the wealthy, there is no want of evidence."—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 188.

"This system [sub-infeudation] attained a greater development in B.C. 1122, when the prince of Tschjou [Chou] seized the throne of the Tan [T'ang-Yin] dynasty, and bestowed appanages, not only on his relatives, but on all who had rendered him personal service." "The Emperor was regarded as the owner of all land, and the laws fixed the extent of every holding—the estate immediately attached to the Crown comprised 1,000 square *li*, while no fief [*Lehen*] held by a prince could be more than 100 *li*. Each one of these princes could parcel out his estate to other feudatories, who stood in the same relation to him as he to the Emperor. All State officials, from the Minister to the lowest subordinate, had a certain share of land assigned them, whose revenue formed their emoluments, but these lands belonged to the office and not to the individual, and passed, on his death, to his successor. The fiefs, however, were personal property and hereditary in the families of their holders in the direct male line. As regards the mass of the people, every man was assigned by his lord a piece of ground sufficient to maintain him and enable him to pay his taxes. To this end a general survey of the whole empire (irrespective of the dominions of the feudal princes) was undertaken; each square *li* (of 900 *mu*) being divided into nine equal squares, thus—



The middle square was reserved for the government and cultivated by the united efforts of the eight families, who had each a plot of 100 *mu* for themselves. Only 80 *mu* of the common land, however, were cultivated by them in common; the remaining 20 were divided among them as kitchen gardens. Ditches were constructed between the squares, into which water flowed from the smaller and greater canals which separated every 10, 100, 1,000, and 10,000 of such one-*li* sections. Every man, in his 20th year, received a share of 100 *mu* (or sometimes less) and kept it till his 60th, when he handed it over to a son or relative, who was bound to provide for him for the rest of his life. Lands were divided into three classes, according to quality, and each farmer sometimes received more than 100 *mu*, if the land was bad, or he had a large family of sons (sometimes, in this latter case, a family was transferred from bad to good land). [Families of five individuals received 100 *mou* of land: *Ku liang chuan chu, P'ei yün fu, c. 67 hsia*, p. 101*a*.] If near the capital, too, the plots were smaller. Traders and handicraftsmen had one-fifth the amount of land given to farmers, and sometimes grown-up sons of a farmer, if there was vacant land near their fathers' holding, received one-fifth share. This land could not be sold, mortgaged, or sub-let. These fields were called "common"—gun-tian [公田 *kung t'ien*]. They are also called "well-fields" zsin-tian [*ching t'ien*] (井田), because the peculiar divisions between them suggested the shape of the Chinese character for a well." "Taxation, local government, etc., were all arranged to suit these divisions. There are no complete documents from the earliest times to show how this principle worked, and whether the division was as neat and regular in practice as it was in theory; but the existence of such a principle is proved by the revolution in land tenure which took place later. At the present day we find in some parts of Corea traces of the old common fields of the early days of the Chou dynasty. The system was founded under the first three dynasties, who ruled from 2265 to 254 B.C., and it remained unaltered nearly the whole of that time."—*Arbeiten d. Kais. Russ. Ges.*, pp. 4–7.

"At the beginning of the Chou dynasty . . . a combination of the two older systems was resorted to, householders in cities and towns paying their tithe in kind on the land belonging to them, whereas the mutual aid system remained in force in the rural districts. This arrangement was know as the 'share system' (*ch'ö-fu*) and prevailed during the greater part of the Chou dynasty. Under it a certain percentage of the land held by farmers was allowed for buildings, and of the remainder, as ground under actual cultivation, the tenth portion of the crops, *i.e.*, the tithe, was due to the government."—*Hirth*, pp. 297–8.

"The institution of the *tsing* [or group with a common well] with its nine plots is regarded as the special creation of the men of Chow [*i.e.*, the *chu* system of Shang became more definite after the survey of the kingdom.] The nine squares cover the area of a square *li*, which contained 900 *mow*, or nine squares of 100 *mow* each, of which the central square formed the public field, which was cultivated in common for the benefit of the State. Throughout the first three dynasties it was held that taxation could not lawfully exceed a tithe of the produce, and accordingly the area of the public field was reduced by deducting from it the ground required for the separate houses and gardens of the eight families, so that the public land was really 80 *mow* and the private 820, or rather more, instead of less, than ten times as much."—*Simcox*, ii. 42.

"The imperial editors say that the character *Li* is used in three senses—it means (1) a group of 25 houses, *i.e.*, the hamlet; (2) a length of 1,800 feet, of which the square forms a *tsing*; and (3) a habitation (*Chinese Classics*, ii., p. 7. *Giles' Chinese Dictionary*, p. 707. *Tcheou-li*, i. 393). From this it seems that the term tsing was sometimes used to describe the smallest, and sometimes the smallest but one, of the groups described in other passages of the Chow li (i. 337 ff)."—*Ibid.* ii. 42.

"One point is significant in connection with what we know of communal cultivation elsewhere. The *mow*, as a measure of land, represents a rectangular strip of 240 *pou* in length by one in breadth, *i.e.*, just such a furrow-long as was used to divide the ploughlands of Western Europe. The allowance of land to each village group was supplemented by pasture, and the various rights of common allowed upon the hills and wastes, and this allowance of both pasture and arable land was doubled or trebled if the arable land was of inferior quality. Enclosures were forbidden on the hill pastures, but the allowance was never less than the arable, *i.e.*, at the rate of from 100 to 300 *mow* to each household. Perhaps the simplest view is to suppose that, as long at least as land was plentiful, the hamlet occupied about as much land as it wanted, and divided its settlement into nine squares, taking the actual size of the squares for granted, as in the case of other conventional measures, and calling the enclosure always by the same name as long as it occupied the same place in the district administration. Whatever its acreage and numerical strength, the enclosed hamlet tilled in common, by the system of mutual aid, fields enough to provide food and clothing in simple abundance for old and young."—*Ibid.* ii. 45.

[A Chinese Diogenes mentioned by Chuang-tze, refuses to take office, saying, "I have 50 acres of land beyond the city walls, which are enough to supply me with food. Ten more within the walls supply me with clothes": an exact counterpart to the Egyptian and Babylonian classification of property in "town and country." The philosopher is poor, so the measures are small.]—*Giles, Chuang Tzŭ*, p. 379.

"The work upon the public and the private fields seems to have been done in the same way by joint labour, at least at seed-time and harvest, though the crops of each square were probably garnered separately, as nothing is said about the principle on which they were divided. One of ten sacrificial odes of the Chow dynasty gives a graphic description of the work of the associated farmers (C.C., iv., Pt. ii., p. 381)."—*Simcox*, ii. 48.

"The surveyor of the fields looks on well pleased, and his officers have nothing to do but to see that all are provided with the implements of husbandry, and that the new fields and fallows receive their proper treatment, as well as the old arable land. Besides the regular cultivation of the fields, there are enclosures for the breeding and cultivation of fish for food, and the wild fowl of the marshes are regarded as the source of a regular food supply; so that if the scenery of the Chinese odes could be translated into a series of wall pictures, we should have an almost exact counterpart to the surviving representations of the rural economy of Egypt. Only in one respect is there a marked difference."—*Ibid.* ii. 49.

"As an instrument of government, the bamboo plays quite as large a part in ancient and modern China as the courbash, or stick, in Egypt; but, unlike the Egyptian, the Chinaman does not *work* under the stick. In both countries food is abundant and the means of subsistence as a rule easily obtained; and in both it was regarded as a part of the duty of Government to provide stores of grain for the relief of the people in years of scarcity. But in China, forced labour was the exception, not the rule. The soldier was a reluctant conscript, not a mercenary or a volunteer; but the hardships of a military campaign were felt all the more because the experience was infrequent; and the occasional employment of forced labour for a specific purpose, such as the walling of a town, the repairing of an embankment, or even embellishing an officer's residence, partook more of the nature of taxation than servitude. In China, 4,000 years ago, as now, the common people employed themselves, and, as a natural consequence, formed a standard of comfort fully equal to that reached under the rule of the most liberal and benignant masters. At the same time, a customary standard of economic independence was also set up, in the strength of which the threatened encroachments of feudalism were successfully defied."—*Ibid.* ii. 49. See also *infra*, *Bond Labour*.

"Early records of primitive custom sometimes omit to mention just those points which are of most importance, and so are treated as too notorious to need description. And this is probably the reason why . . . there is nothing in the Chow Li concerning any redistribution of the village lands at intervals, in the manner recognised by most archaic systems of village ownership."—*Ibid.* ii. 99.

"In one section of the Li Ki the salaries of different officials and the rulers of the feudal states, are calculated in terms of an agriculturist's wages. The cultivator's portion of 100 mow is here stated to suffice, according to the quality of the land, for the support of so many individuals, ranging from five to nine. The salary of the lowest officer is equal to that of a husbandman on the most fruitful soil, and represents the food of nine persons: a great officer has wherewithal to feed seventy-two individuals; a minister can feed 288, and the ruler . . . 2,880 (*S. B.*, iii., p. 210). As official salaries were, to a great extent, paid in kind, this arrangement was probably not an imaginary one. Translated into cash, it would mean that if the peasant earned the equivalent of 6*d.* a day, the great officer would receive about £650 a year, a minister about £2,600; while the ruler of the state received about £26,000. The very fact that all salaries were calculated at the rate of so many days' rations would tend to check any inclination to underestimate the amount of that unit."—*Ibid.* ii. 49–50.

"The political economy of China squared with its ethics. The payment of taxes in kind was the rule, but even the exaction of a fixed rent was objected to in the interests of the cultivators. An ancient worthy, quoted by Mencius, declares: 'For regulating the lands there is no better system than that of mutual aid, and none that is not better than that of taxing. By the tax system the regular amount was fixed by taking the average of several years. In good years, when the grain lies in abundance, much might be taken without its being oppressive, and the actual burden would be small. But in bad years the produce not being sufficient to repay the manuring of the fields, this system still requires the taking of the full amount'; the result of which is that the peasants are compelled to borrow, and 'old people and children are found lying in the ditches and water channels' (*Works*, iii. i. §7)."—*Ibid.* ii. 35.

"The Book of Rites contains some striking provisions expressly designed to prevent the State charges from becoming an oppressive burden on the cultivators. The amount of rice consumed per head of the population was estimated at about 1½ lbs. per diem, in an average year. With a bountiful harvest it might rise to 2 lbs., and in a bad year it might fall to 1 lb.; but it was the duty of the officers in charge of the public granaries to watch the harvests and the state of the public stores, and when the lower limit of consumption was reached, to import grain from adjoining provinces, to remove the people to more productive regions, and to warn the sovereign to reduce the expenses of the State. In times of famine the King had no great feasts, and all other optional items of expenditure were curtailed."—*Ibid.* ii. 35.

"The Chinese cultivator had no master with the right or power of forcing him to labour against his will, but the law did something to encourage industry by taxing indolence. The cultivator was legally entitled to do as he pleased with his own lot, but fiscal pressure was exercised to ensure its not being neglected. If the ground of the homestead is left 'bald' that is, not sown with hemp or planted with mulberry trees, the owner has to pay a money tax equal to the tithe on the same extent of arable land; if the arable land is not cultivated, grain equivalent to the taxes of three families (*Biot, Tcheou-li*, i. 279, n. 4) is exacted from the delinquent; and persons of no occupation pay a poll tax equivalent to the sum paid by a householder."—*Ibid.* ii. 50.

"The day's work of the labourers employed in digging canals is determined afresh by each job, after the nature of the soil, and consequent difficulty of the task, has been ascertained (*Tcheou-li*, ii. 570)."—*Ibid.* ii. 63.

"In the later history of China so many deliberate attempts were made to check the growth of large estates, and a landless class, that it is quite possible these stringent provisions may have been directed, not only against idleness among the peasants, but also against the ownership of land by any person not actively engaged in its cultivation. In any case, it tends to show that ownership and occupation went normally together, and that the occupier who did not cultivate his holding was accountable to the State for the omission. As in Egypt, houses in the capital were not taxed, as the imperial editors say, because there was no vacant ground to be sown or planted. The only districts

taxed to the amount of five-twentieths of the produce were the woods and marshes, which do not owe their value to human labour, and were consequently regarded as a legitimate source of revenue for the State, like the natural pasture of Egyptian wastes."—*Ibid.* ii. 50.

"The conclusion of the section on taxes in the Chow Li is understood by M. Biot and the Chinese commentators as assigning further penalties of a sumptuary sort to the neglect of the labours of agriculture; but it is more in accordance with the spirit of Chinese ethics to see in the passage a solemn statement of facts, a record of the eternal necessities, by which certain causes entail with automatic justice appropriate effects, against which it is the part of a wise Government to give its subjects timely warning. 'In general,' it is said, 'those amongst the people who do not rear cattle cannot offer animals in sacrifice; those who do not cultivate their plots of land cannot sacrifice grain; those who do not plant their orchards cannot have a complete coffin with external case; those who do not rear silkworms cannot wear robes of silk, and those who do not spin cannot wear a complete suit of mourning with an under-garment' (*Tcheou-li*, i., p. 282)."—*Ibid.* ii. 50–1.

"The force of these particular deterrents may seem unequal, but the political wisdom of the Chinese legislator shows itself in observing and drawing attention to those natural sanctions which enforce the precepts accepted by the national conscience, rather than by direct legislative interference. Mencius' enumeration of the consequences of good administration is conceived in the same spirit. 'If the seasons of husbandry be not interfered with, the grain will be more than can be eaten. If close nets are not allowed to enter the pools and ponds, the fishes and turtles will be more than can be consumed. If the axes and bills enter the hills and forests (only) at the proper time, the wood will be more than can be used. When the grain and fish and turtles are more than can be eaten, and there is more wood than can be used, this enables the people to nourish their living and bury their dead without any feelings against any one' (*Works*, i. i. iii. §3), which is the first step in the way of royal government."—*Ibid.* ii. 51.

"It would be easy to multiply examples of this keenly rationalistic appreciation of natural sequences. When Duke He of Loo, in the 7th century B.C., wished, in consequence of a long drought, to burn (or expose in the sun) a suspected witch and an emaciated person, the sagacious minister of the moment advised him that this was not the proper course: 'Put your walls, the inner and the outer, in good repair, lessen your food, be sparing in all your expenditure. Be in earnest to be economical, and encourage people to help one another. What have the witch and the emaciated person got to do with the matter?' (*Legge, Ch. Class.*, ii, 6)."—*Ibid.* ii. 51.

"On the other hand, to cut down trees upon a hill as part of a sacrifice for rain is punished as the greatest of crimes, which is Chinese for a blunder (*Legge, Ch. Class.*, v. 663). Notwithstanding the clearances effected by successive heroes, the hills of China were not yet stripped of their natural forests, and these were administered by a special officer. Certain kinds of trees were reserved; but even in the plantations of the State the public were admitted to cut for themselves under prescribed regulations for a limited number of days during the year. In cases of public necessity (as to procure coffins, or make an embankment) trees might be felled at irregular times, but otherwise the common people were restricted to one lopping season for each kind of wood. A passage in Mencius (*Works*, vi. i. viii. §2) shows incidentally how the fatal process of denudation went on, when no longer controlled by a strong and watchful Government."—*Ibid.* ii. 51-2.

In the first month of spring "prohibitions are issued against cutting down trees. Nests should not be thrown down; unformed insects should not be killed, nor creatures in the womb, nor very young creatures, nor birds just taking to the wing, nor fawns, nor should eggs be destroyed." "In this month [second of spring] they keep both the young birds and those more advanced from being disturbed; they nourish both the young animals and those not fully grown . . . (the fishermen) should not let the streams and meres run dry, nor drain off all the water from the dams and ponds (in order to catch all the fish), nor should (the hunters) fire the hills and forests." In the last month of spring "the nets used in hunting animals and birds, hand-nets, archers' disguises, and injurious baits should not . . issue from (any of) the nine gates. In this month orders are given to the foresters throughout the country not to allow the cutting down of the mulberry trees and silk-worm oaks." In the first month of summer "they chase away wild animals to prevent them from doing harm to any of the (growing) grain; but they should not have a great hunting." In the second month of summer "the people are forbidden to cut down the indigo plant to use it in dyeing, or to burn wood for charcoal, or to bleach cloth in the sun. . . . Impregnated mares are collected in herds by themselves, and the fiery stallions are tied up. The rules for the rearing of horses are given out." In the third month of summer "orders are given to the master of the fishermen to attack the alligator, to take the gavial, to present the tortoise, and to take the great turtle. Orders are given to the superintendent of the meres to collect and send in the snakes available for use." In the third month of winter "orders are given to the master of the fishermen to commence the fishers' work."—*Li chi*, iv., Sects. i-iv.

"There should not be any work in earth (now [in the third month of summer]) undertaken; nor any assembling of the princes of the States; nor any military movements, causing general excitement." In the second month of autumn "it is allowable to rear city and suburban walls, to establish cities and towns, to dig underground passages and grain-pits, and to repair granaries, round and square. Orders are given to the proper officers to be urgent with the people. . . . They should (also) stimulate the wheat-sowing. (The husbandmen) should not be allowed to miss the proper time for the operation. Any who do so shall be punished without fail." In the last month of autumn "the orders are renewed and strictly enjoined, charging the various officers (to see) that noble and mean all exert themselves in the work of ingathering, in harmony with the storing of heaven and earth. They must not allow anything to remain out in the fields." In the first month of winter "the city and suburban walls are put in good repair; the gates of towns and villages are looked after; bolts and nuts are put to rights; locks and keys are carefully attended to; the field-boundaries are strengthened; the frontiers are well-secured; important defiles are thoroughly defended; passes and bridges are carefully seen after; and narrow ways and cross-paths are shut up." In the second month of winter "orders are given to the proper officer to the following effect:—'There should nothing be done in works of earth; care should be taken not to expose anything that is covered, nor to throw open apartments and houses, and rouse the masses to action—that all may be kept securely shut up. . . . All women's work [in the palace] must be diminished, and none of an extravagant nature permitted.'" "In this month [third of winter] orders are given to the master of the fishermen to commence the fishers' work." Ice was collected and carried into the ice houses.—*Ibid.* iv. ii. iii. 11; iii. ii. 12–14; iii. iii. 6; iv. i. 15; iv. ii. 7–8; iv. iii. 9–10. *Legge*, i. 279, 289, 292–3, 298–9, 302–3, 307–8.

The "famous hills and great meres were still held to belong to all the people, and all had a right to the game on the hills and the fish of the waters. The princes could not deny to any the right of access to them; though, I suppose, they could levy a tax on what they caught."—*Legge, Li Kî*, i. 211–2, note.

"An important commentary of the Sung dynasty asserts that the woods and waters were free to all till the Chow dynasty, and that their produce was then taxed to prevent too many of the people abandoning agriculture in favour of what might seem easier and more remunerative modes of life. The legislator wished to reduce 'sport' to an orderly branch of industry, and it was always counted as an abuse and an indecorum if the Court amusements threatened to interfere with the humble trade of hunters and fowlers. By the time of Mencius, however, game preserving had already reached such a point that the slayer of a deer within the Royal park was punished in the same way as one who had killed a man. Hence the magnitude of the Royal park was a subject of popular discontent (*Mencius, Works*, i. ii. ii.), though it was only half the size of that ungrudgingly enjoyed by King Wen, who allowed the grass-cutters and fuel-gatherers and the catchers of hares and pheasants to pursue their avocations freely within his enclosure."—*Simcox*, ii. 39–40.

"One of the Sung commentators on the Chow code combined his admiration for the liberality of the ancient monarchs—who divided the produce of the woods, mountains and watercourses with their subjects—with remarks on the necessity of regulating the human greed for profit, which ends by exterminating the sources of wealth, unless the State intervenes for the protection of natural species by imposing a close time."—*Ibid.* ii. 52.

"With regard to other than agricultural produce, the Chow Li explains at length that the inspectors of ponds received in kind the skin, horns, pearls, shells, &c., gathered by the inhabitants, and forming their tax: when the requirements of the treasury are met, the surplus is divided amongst the people, and the same officer apportions the parts of the marshy ground which are not under water the whole year, and from which, consequently, a crop may be gathered during the summer—as is still done by the Chinese on the borders of large shallow lakes, like the Tung-ting or Poyang waters, which contract during the dry season. There is also an officer of the chase, who is in charge of the Imperial covers, and who, after the Emperor has hunted in any district, has power to regulate the admission of the people to kill game for themselves in the reserve. The same permission was given in the case of the marshes and rivers, and it was an unpardonable offence in the 'superintendent of waters,' who collected the revenues from rivers, springs, ponds and meres, to encroach in any way upon the rights of the myriads, so as to awaken a feeling of dissatisfaction among them against the Son of Heaven (*Biot, Tcheou-li*, i., p. 88. *S. B.*, xxvii., p. 220)."—*Ibid.* ii. 39.

"It was lawful to burn the woods and herbage in the vicinity of an imperial cover, or when it was desired to clear the ground for cultivation; but this was only permitted early in the year—no doubt for fear of loss from prairie fires. At a prescribed time of year, in spring and autumn, a special officer performed the rite of 'taking the fire out of doors,' and bringing it in again, which probably announced the time when the cultivators should leave their houses for the fields, and when they should return home for the winter. A penalty was inflicted on the townspeople who 'lose fire'—or let it go out by inadvertence, when the villagers are gone afield—a regulation which takes us back, if not to the very origins of civilization, at least to traditions derived from them (*Tcheou-li*, ii., pp. 195, 381). It is specified that, in summer, after 'putting out the fire,' clothes must be dried in the air, and the precautions to be taken in the army against conflagrations are also laid down. The art of obtaining fire by friction was still practised when Confucius wrote, and different woods were to be used for this purpose in different seasons."—*Ibid.* ii. 48. See also ARTS.

"One of the signs that foretold the ruin of Tse was that, after the duke had tampered with the grain measures, or, in other words, debased the local currency, a powerful family began to bid for popularity by taking the opposite course, lending according to their own (large) measures and accepting payment in the public measure, which was deficient; and while the State was absorbing two-thirds of the people's wealth, leaving them only one-third for food and clothes, this family caused its wood, fish, salt and frogs to be sold at the same rate in the market as at the water or the hills, *i.e.*, at cost price. 'Though such an one wished not to win them to himself, how could he help doing so?' asked the loyal minister of the doomed State (*C. C.*, v., Pt. ii., p. 589)."—*Ibid.* ii. 40.

"The regulations still in force respecting the pasturing of the imperial herds differ little from those set forth in the Chow Li. Under the heading which describes the functions of the 'valuer of horses,' it is said: 'In general when an officer of State receives a horse from the hands of his chiefs, he writes down the age and colour and price of the horse. If the animal dies within ten days, it must be paid for in full. If it dies after ten days, the ear is given as a proof, the payment is made with the body. Beyond that term there is no reclaiming' (*Tcheou-li*, ii. p. 189). From this it appears that the 'boarding-out' of the royal cattle, which reappears in the Irish laws as the 'giving and taking of stock,' was an ancient Chinese institution, not invented or introduced by the present Mantchu dynasty."—*Ibid.* ii. 52.

"As in ancient Egypt, the charge was not converted into a burden or treated as a source of revenue, and the keeper of the herds was not bound to make good losses for which he was not responsible. It was also the duty of the royal herdsmen to provide the six species of animals used for sacrifices—the ox, horse, sheep, pig, dog, and pheasant. All animals for sacrifice were required to be of uniform colour, and without spot or blemish; but the commentators observed that the difficulty of observing this rule had caused it to be relaxed. It is possible that Sumerian scholars may find in the provisions on this subject some trace of kinship with the sacrificial usages of ancient Babylonia."—*Ibid.* ii. 52–3.

"In the 15th year of Duke Seuen (608–590 B.C.) an additional tithe was for the first time levied on the village lands (*Ch'un Ch'iu*, pp. 327–9), either by simply doubling the proportion of agricultural produce formerly claimed by the State, or more probably by tithing the valuable produce of the homestead, with its mulberry and fruit trees, on account of which the personal tax of silk or cloth was already being paid. The tax was never regarded as lawful, and when Duke Gae (494–467 B.C.) complained of his financial difficulties to a disciple of Confucius, he was advised to try the effect of tithing the people. 'With two-tenths,' said the Duke, 'I find them not enough; how could I do with that system of a tenth?' (*Analects*, xii. ix. § 3). To which his mentor replies that if the people have plenty, their prince will not be allowed to want, while it is an accepted principle that anything beyond a tenth is oppressively heavy."—*Ibid.* ii. 38.

"On the other hand, Mencius received with great scorn the suggestion of a would-be reformer, anxious to go beyond the benevolence of the ancients and reduce the taxes to a twentieth (*Works*, vi. ii. x.)."—*Ibid.* p. 38.

[After some centuries, Wên Wang's regulations (see previous Period) fell into disuse, imperial progresses no longer took place, one prince was chosen as representative of the rest and intermediary between them and the emperor, and soon usurped part of the imperial power. The smaller states were absorbed by the more powerful, and the whole system became disorganized. This epoch lasted from the 8th to the middle of the 3rd century B.C. About 600 B.C., the number of small states had been reduced to ten kingdoms; each followed its own arrangements independently of the rest.]—*Journ. Asiat.*, Sér. III. vi. 262–71. *Cf. Arbeiten der Kais. Russ. Gestandtschaft*, p. 5.

"The reign of Heaou (360–336 B.C.), whose son and successor took the title of king, was memorable for other innovations, which ended by introducing private ownership of land and abolishing the Chow system of common fields. Apparently the revenue of T'sin was found to be insufficient as the power and ambition of its rulers grew. The State was large, but less populous than its neighbours, and wide tracts of land therefore remained uncultivated between the village enclosures. Chang-yang, the duke's minister and adviser, whose name deserves to be recorded, since China owes to him her first experience of an agrarian difficulty, was an able and original, if unscrupulous statesman; and he conceived the idea of increasing the fighting population of the State, by abolishing the Chow system of grouping the village households for purposes of cultivation and taxation, while retaining the corresponding arrangement for military levies."—*Simcox*, ii. 97–8.

"The old agrarian regulations, known as 井田法 . . . are said to have been abrogated [by Wei Yang, *circ.*, 350 B.C.], and the 阡陌 regulations, under which individual ownership obtained, were put in their place. The tithing system was introduced, and also many other important reforms."—*Giles, Bio. Dic.*, p. 869. This system was extended, under the following Period, to the whole empire.

"Separate ways were made between the homesteads, and each plot was taxed separately. According to some authorities the taxes were raised so as to amount to one-third of the whole produce, but the change seems to have been more radical than a mere increase of taxation, and it is probable that the innovation really consisted in the substitution of a fixed and uniform contribution for a proportion of the varying annual crop. Such a change has always been found profitable by financiers and burdensome by the agricultural masses, and it is certain that the measures taken were unpopular, and gave rise to disturbances that called for severe repression."—*Simcox*, ii. 98.

"About 350 B.C.—100 years before the fall of the Chou dynasty its [the Ching system's] defects made themselves felt. The produce of the middle square was found to be a very insufficient revenue for the Government. Confucius, when consulted by his prince on the subject, said it was possible to increase the taxation 16-fold. As the feudatory princes became stronger under the Chou dynasty, the old arrangements began to show themselves inadequate. In the long and bloody civil wars, the requirements of the Government increased, while the peasants became more and more careless about the cultivation of the State land." "This was especially the case in the feudatory State of Tsin, which was sparsely populated, while the neighbouring states of Chau, Tshjao and Wei suffered from the opposite cause. In 350 B.C. the minister Shan-Yan [Kung-sun Yang] enacted that the cultivators should own the land absolutely, be free to part with it, and also to migrate elsewhere. In consequence of this, many of the vacant lands in Tsin were occupied by immigrants from other states."—*Arbeiten d. Kais. Russ. Ges.* pp. 8–9.

"As an attraction to settlers from other states, land was ceded for the first time in absolute ownership; vacant land were sold in freehold, and both these classes were freely saleable which the village allotments never had been. With increase of population, of course, inequality and distress began; was impoverished some and enriched others, and after a time we find a Chinese author lamenting:—'The owner of the land is one, but those who cultivate it are ten' (*J. Sacharoff, Uebe das Grundeigenthum in China*, p. 11). Another complaint to the same effect was that T'sin 'neglected the fields and taxe men' (*Journ. As.*, 3me sér., vi. 271), the taxes on person being greatly increased [see also *infra*], while the State ceased to provide all its subjects with lands out of which they could both live and pay the ordinary land-tax. The holders of large estates brought the poorer cultivators into a state of dependence by paying the personal tax for them, and thus assuming towards them the place of the State and the rights of political superior; a transaction which has far more to do with the origin of rent than the competition of cultivators for land of a superior quality, but which in China has always been discouraged instead of favoured by the laws (*cf. Ta Tsing Li Li*, cap. xcv)."—*Simcox*, ii. 98.

"In De Mailla's account of the innovations of Kong-sun-yang . . . he is said to have grouped the families by fives and tens for the maintenance of order by mutual responsibility; idleness was punished, and skilled artisans were exempted from the great corvées. The tutor of the heir-apparent was put to death when the latter joined the party of malcontents. The separation of families was forbidden during the father's lifetime, and scattered families were brought together and settled in townships; so that, according to this version, the tendency of his measures was to restore rather than to abrogate the system of Chow. It was said at this time that while T'sin possessed a fifth of the territory of the Empire, it only possessed a tenth part of the troops, and the prince was accordingly urged by his admirers to encourage the growth of population, and to avoid the dangerous hostility of neighbouring States by extending his possessions only towards the west at the expense of the barbarians."—*Ibid.* ii. 98–9.

"De Mailla's original is so late that his authority cannot over-ride that of any earlier texts, and, in fact, the policy here attributed to Chang-Yang [=Shang Yang=Kung-sun Yang] bears a suspicious resemblance to that of a less notorious worthy. The Tso Chuen records a successful attempt made in the 6th century B.C. in the small State of Ching, to restore the system of common fields, and, though at first the people murmured at having 'to count their fields and villages by fives, and accept a mutual responsibility,' within three years the burden of the popular songs was changed, and they hailed the innovating minister as their own and their children's benefactor (*Legge, Ch. Class.*, V., Pt. ii., p. 557). This appears to have been the last of the thoroughly popular restorations of the Tsing system, though it is difficult to tell how far the unpopularity of Wang Mang [see following Period] was due to his attack on private property, and how far to his other measures. But from the days of the T'sin innovations onwards it seems to have been usual for those politicians who aimed at the aggrandisement of the central authority to disguise their encroachments by a professed desire to restore the ancient forms of communistic agriculture. The distrust which seems to have been generally felt towards such professions rested, so far as we can judge, upon a correct impression that local self-government was a better protection to the proprietary rights of individuals and communities than any extension of the Imperial authority, which was never likely, in practice, to stop short at enforcing the joint enjoyment and use of village lands."—*Ibid.* ii. 99.

"According to Ma-twan-lin, under the first three dynasties, all lands belonged to the State, but not to the Emperor, whose authority over the feudal princes was like their's over the cultivators on their appanages. The T'sin were the first to make one man master of everything; 'but when they did away with the ancient redivisions, and abandoned the ownership of land to the people, so as to form a divisible inheritance, they gave what they had no right to give, and took what they had no right to take.' In other words, the clan or primitive community was conceived as having a title to the land it occupied, superior to that of the sovereign, or any individual tenant of his. But Ma-twan-lin obviously regards the joint ownership, subject to redistribution, of the village lands as the essential feature of the Chow system; and he writes as if this feature had survived, as it easily might, the more conventional nine-square division of the *Tsing*."—*Ibid.* ii. 100.

"With the institution of private property in land, the State ceased, on the one hand, to consider itself responsible for providing each individual with land enough to live by; and, at the same time, it ceased to regulate its demands upon the taxpayer by his known circumstances and ability. From the days of Yu the land was divided into nine classes, which were taxed in proportion to their fertility; but T'sin 'neglected the fields and taxed men,' making the same demands upon all to the ruin of the poorest."—*Ibid.* ii. 100.

"We cannot pretend to trace in detail either the course or the consequences of this economic revolution. It was the first example of an experiment made more than once in the future, an attempt to combine political absolutism with economic individualism; or, in other words, to subvert at once the two mainstays of social life and morals in China. The heroes of these adventures have never won the final victory, which carries with it the right to tell their own story to posterity; but the judgment due to the unsuccessful revolutionaries is implied in that passed upon the system which they failed to subvert; and those who value what survives in modern China from the ritual of Chow will join in the orthodox condemnation of the Emperor, who, in the year 255 B.C., founded the famous, if short-lived, dynasty of T'sin."—*Ibid.* ii. 100.

[The *Shih ching*, in various odes, shows that the wars of one small State with another, which multiplied during the decay of the Chou dynasty, desolated the plains and ruined the small farmers.]

[RANKS remained the same as in the previous Period.]

"In the first book of the Chow Li, which describes the administration of the Imperial court and the branches of government nine classes or occupations of the people are recognised by the legislator. The first class of course is that of the cultivators—the men of the hills, the plains, and the marshes, who produce the nine kinds of grain. Then follow (2) the gardeners. (3) Wood and watermen. (4) The herdsmen of the cultivated marshes, who look to the breeding of the beasts and herds native to them. (5) The artizans of a hundred trades, by whom the eight sorts of raw material are manufactured, *i.e.*, the workers in stone, wood, metal, jade, ivory, pearls, skins, and feathers. (6) Shopkeepers and wandering dealers or pedlars. (7) Lawful wives, by whose labour silk and flax are wrought into cloths. (8) Servants of both sexes, including the inferior wives who are employed in domestic services. (9) Individuals without fixed profession, who change their occupation from time to time, in whom a commentator at the beginning of our era recognised the counterpart of the wage-earning class of his own time (*Tcheou-li*, i. pp. 26, 27)."—*Simcox*, ii. 54. See also *Biot., Mém. présentés, etc.*, 1re Sér. ii. 37–8.

"In the section of the Shoo King called the officers of Chow four classes are mentioned: The scholars or officers, the cultivators, the mechanics, and the merchants or traders; a classification chiefly remarkable for its omission of a noble or military class. This is the classification referred to in the Thsi-yu, when it is said: 'The sons of officers ought always to be officers; the sons of artizans ought always to be artizans; the sons of merchants ought always to be merchants, and the sons of agriculturists ought always to be agriculturists' (*cf. Tcheou-li*, i. p. 198). The Tso Chuen, tells of a prisoner from Tsoo in the sixth century, who when questioned by the Marquis of Tsin about his family, replied, 'We are musicians; and when asked if he could play:—'Music,' said he, 'was the profession of my father; dared I learn any other?' According to tradition, a certain quarter was assigned anciently in Chinese towns and cities for mechanics, and all of one art were required to have their shops together. The son followed the father's profession, and it was supposed that, seeing nothing else around him, he would think of nothing else, and so become the more proficient (*Legge*, ii. p. 206)."—*Simcox*, ii. 54.

"The four classes of people were called the 'stone men' of the nation. The commentary says [they were] the scholar, farmer, artizan and trader. Each kept to his fixed occupation, and they did not change, as now the stone support under the pillar [does not change]."—*Kuan Tzŭ, Yüan chien lei han*, c. 358, *Shou yeh pu*, p. 1*a*.

Agriculturists.—"Agriculture was a matter under the personal attention of the king. . . . He taught the people how to cultivate the land."—*Kang chien.*

"The agricultural population forming the first class hold their estates as tenants of their princes, and have to deliver a percentage of the cereals they grow proportionate to the fertility of the soil. The latter is ascertained by special officers appointed for the purpose, who first instruct the cultivators on the nature of the grains and vegetables best adapted for cultivation, and the times for tilling, sowing, watering, and harvesting. Under their advice a system of irrigation best suited to the configuration of the land is introduced. It is by government officers that the people's work connected with the production of silk is supervised in all its details. The inhabitants are treated like a huge family, at the head of which is the emperor, their patriarch. The government apparatus is, therefore, not confined to those who mete out justice and collect taxes or administer what with us would be called government departments, but the officers of Chou (*Chou-kuan*, which was the original title of the *Chou-li*) comprise inspectors, appointed by the government, for almost any useful work performed by the people."—*Hirth*, p. 110.

Artizans.—"Industry was highly developed in the time of the Chou dynasty. In the *Chou li* it is stated that there were six kinds of officials, each of whom had a particular industry to look after. That was also the case in the *Ch'un Ch'iu* period. Their duties were to look after the industries represented by the hundred kinds of artizans."—*Ibid.*

Merchants.—"The mercantile class first appeared during the reign of Duke Wei. He endeavoured to develop commerce and industry. After his time, trade gradually declined."—*Ibid.*

"In the *Chou li* it says that duties were collected at frontier stations, and tolls at each market place. Thus a trade tariff already existed."—*Ibid.*

"Wên Kung of the Wei State showed solicitude about commercial intercourse and treated workmen kindly."—*Tso chuan, Yüan chien lei han*, c. 357, *Ch'an yeh pu*, p. 19*b*.

Hired Labour.—[The rich had their house-work done by hired servants, men and women. These paid no taxes, but it does not seem that the law made any distinction between them and the tax-paying class as regards punishments.]—*Ch. Repos.*, xviii. 348, 361. See also *Slavery, infra.*

"In the old days, those people who had no permanent occupation generally went about to pick up work. Those were what we now call labourers. In this class was included Chu Pao, a waiter at a restaurant. Yi Yin, the Prime Minister, of King Tang was in that position."—*Kang chien.*

[Skinners, cooks' assistants, feather-wavers, and doorkeepers were the meanest of the servants.]—*Li chi*, xxii. 23.

"Certain 狄 or 狄 [*ti jén*] were employed in performing the more servile offices at the ceremonies of funerals and mourning. I suppose they were natives of some of the wild *Teih* tribes; and we know that some of the 虎 賁, or 'guards,' were taken from those people. I have ventured to translate the character by our old term 'salvage,' which seems to convey a less intense meaning than savage."—*Legge, Ch. Class.*, III. ii. 552, note.

Bond Labour.—"Ancient China was always feudal, and the emperor could command the service of the people of each barony. Agriculture was the basis. The workers of the soil gave a share of their work to the cultivation of common land. In providing for labour in the erection of palaces and imperial temples, the feudal system supplied it, and as that system was based on the justice and benevolence of the sovereign, the people came, says an old classical record, like sons to work for a parent."—*Journ. N.-C.B.R.A.S.*, N.S. xxiv. 265.

"The demand of labour from the able-bodied had likewise rules by which it was governed. [Each able-bodied man was required to give his services to the State for three days in each year.] The *Hsiao Ssŭ t'u* apportioned equally the ground and fields. For superior ground each family sent out three men; for land of a middling description two families sent out five men; and for inferior ground each family sent out two men; equally appointed were they to field and ground, according as it was good or bad, rich or sterile."—*Chou li kuan chu*, p. 64.

"The *Chün jén* (均 人) equally distributed the labour required from vassals. In a year of abundance they were employed on public works for three days; in a year of middling aspect for two days; and in a year of scarcity only for one day. So again there was a distinction made according as the year and seasons promised abundance or scarcity; but besides this the *Hsiao Ssŭ t'u* also levied servants from among the people. One man only was required from each family."—*Ibid.* p. 64.

"The *Sui jén* levied agriculturists, but only according to the number required for inferior ground; thus did the state employ the labour of the people. And was not this treating them most liberally? And besides this the *Hsiang ta fu* discriminated among the attendants, and exonerated from this service the rich, the honourable, the talented, those who follow public business, the old and the deformed, all of whom were exempted from serving."—*Ibid.* pp. 64–5.

[Competitors in the schools were exempt from forced labour in their own villages, and students in the Imperial college were excused from all manual labour.]—*Simcox*, ii. 72.

[The service at the frontier-posts was carried on by forced labour (*Shih ching*, I. vi. IV.; II. i. VII.).]

[Some further extracts relating to forced labour have been given *supra* under LAND.]

Slavery.—[We do not see in the *Shih ching* any notice which points clearly to the existence of slavery properly so called, and this silence agrees with the custom of making few prisoners. As the two terms *nu* (奴), a male slave, and *pei* (婢), a female slave, are not found in the classes of the population mentioned in the *Chou li* (Ch. II. parr. 44–53), domestics being there designated by the name of *ch'ên ch'ieh* (臣 妾), Chinese authors generally affirm that there were no slaves under the Chou dynasty. [The K'ien-lung editors of the *Chou li*, however, in a note on ch. II. par. 52, refer to this other passage in proof that anciently there were slaves, and also to the *Yi ching*, diagram 23, par. 4, proposing a different interpretation of the 妾 in 臣 妾. As the *Chou li*, XIV. 22, conflicts with the general opinion that anciently there were no slaves, Wang T'ao says that it is not a work sufficiently authenticated to be appealed to for evidence on such a point.] But this assertion is contradicted by a passage in the *Shu ching* (V. xxiv. 4), where Pi Ch'in, son of the duke of Chou, declares that the valets and women of the second rank who shall have run away must be returned to their masters, and by a passage of the *Chou li* itself (ch. XIV par. 22), where the officer in charge of the market is ordered to control the sale of men, cattle, horses, arms, utensils, etc.]—*Biot*, quot. *Legge, Ch. Class.*, IV. i. Prol. pp. 166–7.

"China has never had a caste system, a fact which is due to the circumstance that in that country a systematical Fetichism prevailed over Theologism, and became the general creed of the nation. Slavery existed, though only on a small scale except, apparently, in the public or the imperial domains. Its sources were the same as in other ancient communities. It was sometimes a legal penalty, especially for political revolt. The sale of children by their parents was permitted, being perhaps a modification of the earlier practice of exposure. War supplied not many members of the class; with a dense industrial population bordering on nomad races, China lost more captives than she gained. The right of the master to the slave, and the obligation of the latter, were hereditary and perpetual, but the features of the institution were peculiarly mild. Both the manners of the people and the laws protected the life and person of the slave. His family often existed within the family of his owner, almost on terms of equality. Female slaves in domestic service were little below the inferior wives, who, like them, were purchased and were subject to the principal wife; and male slaves often enjoyed much credit, confidence, and influence with their masters. The institution never had much extension relatively to the whole population. Free labour was universal in the country, and supplied each family with most articles without the necessity of domestic production; and filial duty, which held the highest place among the moralities enjoined by public opinion, imposed on children a personal service to their parents which in general dispensed with the assistance of slaves as well as of hired attendants."—*Ingram, Hist. of Slavery*, pp. 269–71. See also *Wallon, Esclavage dans l'Antiquité*, i. 21–59, and *Journ. Asiat.*, Sér. III. iii., and *cf.* following Periods.

"'Slaves were criminals. In ancient times, anyone who was condemned by law lost his civil status, and became a slave to the Government. Male criminals were called *tsui lî*, and were employed in all kinds of menial labour; while female criminals became slaves, and were employed in threshing rice and making mats. High officials, men of seventy years of age and youths who had not yet reached the age of puberty were exempt from becoming slaves. Anyone who killed a slave, but did not report the fact to the authorities, was punished according to the law. When Duke Huan [of the Ch'i State] had been on the throne for two years, some cases occurred in which some scholars employed and treated their own youths as slaves. Slaves were of seven kinds:—(1) *Hsi* (奚), that is, Government slaves who were men of ability and wisdom; (2) *nu* (奴), *tsang* (臧), *li* (隸), *wu* (侮). *Nu* was a term implying contempt. In scolding a slave, the term *tsang* or *wu* was used. The term *tsang* was used in reference to an ordinary person who was married to a female slave; (3) *huo* (獲). This was a contemptuous term for both kinds of slaves, male and female, and was used in reference to an ordinary girl who married a slave; (4) *chén* (娠). This was a general term for grooms, slaves, and the like; (5) *hun jén* (閽 人), a lower class of hall porters; (6) *tsao* (卓), a servant of a servant; (7) *tsu* (卒), a servant to the servant called *li*."—*Kang chien.*

"In ancient times criminals were made slaves as a punishment (官 奴 *Kuan nu*, slaves of the State)."—*Möllendorff, Fam. Law*, p. 8; *Li ki*, xxxvi. 48, *Legge*, ii. 363.

[The only slaves at this time were "public slaves," condemned to servitude (from which high officials, men over seventy, and young children were exempt) for crime, and forced to work under the superintendance of Government officers.]—*Ch. Repos.* xviii, 348, 361. See LAWS.

"There seems to have been a regular system of serfage in ancient China. The services due from them to the State 從 政 are defined as 'labour supplied to the public,' 給 公 家 之 力 役 也. The people appear to have been able to transfer their domicile at pleasure; for those serfs or villains regardant employed on the fees of Imperial Officers 大 夫 采 地 之 民 who removed to the estates of the mediatised feudal princes 徙 於 諸 侯 爲 民 were exempted from public labour for one year; those who removed *vice-versa* were exempted for three months. The *Book of Rites* explains that the Imperial fees were thickly populated, while the population of the feudal states was sparse. It goes on to explain that it is doubtful whether this withdrawal of services did not mean withdrawal of state services [退 仕 or 出 仕]."—*Ch. Rev.*, viii. 321.

"According to the ritual of the Chow dynasty (circa 1100 B.C.), the sons of male slaves (奴) supplied the class of lictors and official menials, whilst their daughters supplied the ranks of domestic servants hulling rice and washing clothes. The Shwoh-wên (A.D. 121) defines the term 'male and female slaves' (奴 婢) as anciently designating 'convicts' (罪 人)."—*Ibid.* x. 284.

[No mention is made of eunuchs previous to about 1100 B.C. Among punishments instituted by Chou Kung was castration (*cf.* BOD. MUT.). From history and tradition it is evident that the castrated criminal was made to serve the members of the royal family. *Kung hsing* is, literally, "palace punishment." "It may be presumed that the system of employing eunuchs in the palace was found to answer; and gave such satisfaction, that . . . other means were resorted to to obtain them. Boys were either bought, sent by their relatives, or obtained from other sources, and castrated to fill the various posts in the palace caused by keeping up establishments, rendered necessary by the increasing style of splendour and luxury in which each succeeding monarch lived; till what had been originally a punishment only, became by custom or necessity an established rule."—*Journ. N.-C.B.R.A.S.*, N.S. xi. 147–8).]

"Anciently they did not employ men who had suffered dismemberment to keep the doors."—*Li chi*, xxii. 23; *Legge, Lî Kî*, S.B., xxviii. 249.

[In all periods except the T'ang (see REST. OF UNITY) the freed slave passes without intermediate stage into the condition of a free citizen.]—*Ch. Repos.*, xviii. 355.

INDUSTRY.—"A certain number of the officers described in the *Chow li* are also [see *supra*, RANKS] characterized as hereditary; especially such as might reasonably be supposed to require hereditary skill, like the snarers of birds and the tamers of wild beasts, or inherited knowledge of minute forms and ceremonies, such as those appropriate to the reception of foreign guests."—*Simcox*, ii. 55.

"With these exceptions, the oldest and the ruling idea with the Chinese is that office should not be hereditary, but that ordinary employment should be so. Mencius quotes as one of the maxims accepted by a confederacy under one of the Chiefs of the Presiding States: 'Let not offices be hereditary, nor let officers be pluralists' (*Works*, vi. ii. vii. §3). The *primâ-facie* right of the eldest son of the king's lawful wife to inherit the throne was asserted less in the interest of the heir than of the

Government, which would be distracted by the intrigues of rival pretenders, and endangered if the king were induced weakly to listen to the favourite of the moment, pleading for her own children. Functions or obligations might be hereditary, but inherited privileges were equally dangerous to the giver and the recipient. There was no feeling about the right of children to inherit, or the duty of parents to bequeath, wealth. A story is told of a retired statesman in the 1st century B.C. who was reproached with spending his acquired wealth so lavishly that none was likely to be left for his sons; and he defended his conduct on the ground that it would be injurious to the latter to inherit the means of living in luxury without industry (*Giles, Gems of Ch. Lit.*, p. 97)."—*Ibid.* ii. 55.

"So far as the common people were concerned, each adult was registered as following some lawful pursuit—as a matter of course that of his father, unless otherwise stated; if he ceased to follow that calling, without being enrolled in any other, the presumption would be that he was an idler, seeking to evade the payment of his lawful tax, and so obnoxious to the police. But changes of occupation in the case of individuals would be discouraged by the mere fact of their having to be reported; while the Government would consider any large displacement of industry as matter for regulation, so as to prevent any disturbance of the existing social order such as would be caused, *e.g.*, by the desertion of agriculturists taking to sport or traders abandoning commerce for domestic industries. The migration of households or individuals was recognized as a normal incident. The persons quitting a 'neighbourhood' received a pass or permit from the elder whose jurisdiction they were leaving; and unless distance forbade, they were introduced by him in person to their new chiefs (*Tcheou-li*, i., pp. 241, 259, 260)."—*Ibid.* ii. 55–6.

"The provisions regarding internal commerce and markets (*Tcheou-li*, i. pp. 309–336) are as full and elaborate as those respecting agriculture. The duties of the poorest of the market are singularly extensive. They include, of course, the regulation of weights and measures, the maintenance of order—by the help of a rod, made of the standard measure—and the punishment of theft, fraud or adulteration, if the proportion of the inferior article exceeded 20 per cent. (*Ib.* p. 315); the levying of the octroi duties on the goods brought in and taken out for sale; and when, in case of plague or famine, the duties were remitted, he had still to keep an account of the goods that passed the barrier. But, besides all this, the officers of the market were required to regulate and equalize the quantity and prices of the goods offered for sale, as the superintendents of agriculture were required to regulate the cultivation of the ground and equalize the burdens of the cultivators; and the legislator evidently regards one task as no more arduous than the other."—*Ibid.* ii. 56.

"Those who had rank-tokens, the long or the round, and gilt libation cups, were not allowed to sell them in the market-places; nor were any allowed to sell robes or chariots, the gift of the king; or vessels of an ancestral temple; or victims for sacrifice; or instruments of war; or vessels which were not according to the prescribed measurements; or chariots of war which were not according to the same; or cloth or silk, fine or coarse, not according to the prescribed quality, or broader or narrower than the proper rule; or of the illegitimate colours, confusing those that were correct; or cloth, embroidered or figured; or vessels made with pearls or jade; or clothes, or food, or drink (in any way extravagant); or grain which was not in season, or fruit which was unripe; or wood which was not fit for the axe; or birds, beasts, fishes or reptiles which were not fit to be killed. At the frontier gates, those in charge of the prohibitions, examined travellers, forbidding such as wore strange clothes, and taking note of such as spoke a strange language."—*Li chi*, III. iv. 17; *Legge*, i. 238.

An enactment was made during the reign of King Ch'êng "that the manufactures of cloth and silk should be two cubits two inches wide, in pieces of forty-four cubits long."—*Legge, Ch. Class.*, III. ii. 544, note.

"The booths of the market were grouped as far as possible, in accordance with the analogy of the rural divisions, every twenty booths having a head-man, who was responsible for the conduct of the sales and the payment of the Government dues. Three markets were held in the day: in the morning shopkeepers and costermongers make their purchases; the great market is in the afternoon, when the townspeople and those from a distance come in and buy for themselves; while, in the evening, the retail dealers sell off the remains of the stock which they purchased wholesale in the morning. A commentator of the Han dynasty observes that these regulations are only based on the convenience and actual practice of the mass of purchasers and traders (*Tcheou-li*, i. 312)."—*Simcox*, ii. 60.

"The title [of the *K'ao kung chi*] suggests that it is a manual intended for the use of inspectors of the Government factories and workshops, and the limited number of trades and processes described also makes it seem probable that only those are dealt with which were carried on under the immediate direction of the State, and as a branch of the public works department."—*Ibid.* ii. 60–1.

"The Li Ki enumerates six kinds of public works—terraces and masonry, metal work, stone work, carpentering and furniture, leather work, or the preparation of skins, and basket work, or the working of twigs (*S.B.*, xxvii. p. 110)—but the 'Examination' [*K'ao kung chi*] goes into minuter details. The manufacture of chariots is the first industry described, and the art is said to be a special favourite with the Chow dynasty, as that of the potter was with Shun, that of house-building with Hia, and that of making cups of metal with Yin. Elaborate numerical proportions are given for the different parts of the vehicle, and each piece is to be separately examined and tested before it is used. The wheels are tested by a compass, the straight parts by a square, the uprights by a plumb line, the horizontals by a water level, and the comparative size of corresponding parts by weighing the pieces and measuring their cubic content with grains of the large millet; the men who understand these processes are called royal workmen."—*Ibid.* ii. 61–2.

"The service of the markets was considered to be in a sense a part of the public service. A dealer who succeeded in effecting a 'corner' in cattle in the State of Loo was treated as a criminal by Confucius, and was said to have secured immunity in his malpractices only by bribing the officers who should have denounced his guilt. Yet he is not accused of any action which would be considered dishonest or even discreditable in the mercantile world of the West. He had gradually bought up all the cattle of the neighbourhood, and all the available pasture land; whoever wanted to sell, he was in a position to buy, and by making advances to smaller dealers, when in difficulties, he had gradually also got them into his power; and all the shepherds and herdsmen of the district were in his employment. Meat was not generally in everyday use; but on certain festive occasions, even poor families were required by custom to provide it for their guests, so that the high price the monopolist was able to charge amounted to a considerable tax on the whole community. Confucius required him, as a condition of pardon, to give up the profitable industry and make restitution to the community he had plundered, of all his wealth beyond what was necessary for a decent maintenance. The cattle dealer consented, and the point of economic morality was settled once for all in Chinese opinion (*Pauthier, La Chine*, i. p. 156; *Mencius*, II. ii. xi. § 7)."—*Ibid.* ii. 40–1.

[For the hours at which markets were held see DISTRIBUTION.]

"But the Government was not content with trying to lower prices when abnormally high, it also aimed at preventing the depreciation of prices in times of exceptional abundance; and with remarkable financial enterprise, it undertook to buy from the traders when goods were plentiful as well as to sell to the public when commodities were scarce. It was the business of the officer in charge to attract dealers by preventing a fall of prices below remunerative rates, and to attract customers by a constant supply of provisions at uniform prices. If any commodity became, for a season, a drug in the market, the profit was reserved to the State, which alone could afford to buy up goods on speculation at an advance upon the current market rate; and the profit secured by its ultimate sale was thus secured by the community instead of being scrambled for by commercial speculation. In the same way if curiosities or valuables of any kind hung long on hand, they were purchased on account of the treasury and reserved until there was a demand for them."—*Simcox*, ii. 56–7.

"Ma-twan-lin says of the duties of the Chow treasurer that his operations are analogous to those of the officers of later dynasties who are charged to regulate the price of commodities by the purchases and sales which they effect in the name of the State. And Yang-chi [d. 1132] describes him as benefiting the merchants by buying their unsold stock without trying to profit by its low price, and benefiting buyers by allowing them the advantage of purchases made in the favourable season: but it is evident this sort of commercial administration could only be practised, on a comparatively small scale, when the services of the ablest and most disinterested statesmen were not pre-engaged with matters of larger imperial concern."—*Ibid.* ii. 57.

"According to Ma-twan-lin, the system of State purchases was not primitive, and the official 'purchase of grain at a fair price,' as it was called, was only introduced in the 7th century B.C. This was followed by 'the sale of grain at a fixed price,' and the establishment of granaries to supply the sale. It was argued that if the State began to sell grain at a moderate price in times of scarcity, private dealers would be driven to lower their prices, by the fear of not disposing of their stocks, and the idea is economically speaking in advance of the mere attempt to fix the price of corn by edict. But, like most well-meant experiments in the way of State trading, this ended by opening the door to fresh abuses. The State was tempted by the near view of the profits of commerce to make its benevolent granaries a source of revenue; and when once the sale of corn had been carried on for the sake of profit, arbitrary measures became necessary to secure a sufficient supply for sale, and the demand on individuals to furnish a given quantity of grain, irrespective of the market price, became in time a serious tax."—*Ibid.* ii. 56.

"The frequent issues of money by towns seems to imply that municipal independence advanced during the feudal period in China exactly as was the case in Europe, while the number and energy of the trading guilds is shown by the same evidence. Their coins give reality to the passages in Mencius, where princes are promised, as a reward of good government, that 'the traders will all seek to buy and sell' in the markets of the virtuous ruler. The habit of self-government and respect for local liberties, which characterize the Chinese, must have established their deepest roots when the government of the States and the Empire was in the worst disorder. But the lines followed by the independent townships, which coined money, were probably substantially the same as those embodied in the ideal legislation of the Chow Li."—*Ibid.* ii. 59–60.

"Yü O-fu was a Pottery Officer of the Chou Dynasty."—*Tso chuan, Yüan chien lei han*, c. 358, *Ch'an yeh pu*, p. 27*b*.

"In the first traditional organization of China there is a Ministry of Public Works; and the last chapters of the Tcheouli-Institutes contain probably the most elaborate record of industrial rules and processes in ancient history,—including at least a hundred trades."—*Johnson, Or. Rel.—Ch.*, p. 69.

The following passage summarizes the most important and familiar of the fiscal usages of this period:—"Anciently, the public fields were cultivated by the united labours of the farmers around them, from the produce of whose private fields nothing was levied. A rent was charged for the stances in the market-places, but wares were not taxed [but see *infra*]. Travellers were examined at the different passes, but no duties were levied from them. Into the forests and plains at the foot of mountains the people went without hindrance at the proper seasons. None of the produce was levied from the fields assigned to the younger sons of a family, nor from the holy fields. Only three days' labour was required (by the State) from the people in the course of a year. Fields and residences in the hamlets (when once assigned) could not be sold. Ground set apart for graves could not be sought (for any other purpose)."—*Li chi*, III. iii. 11; *Legge*, i. 227–8. See also *Simcox*, ii. 38, and *cf. Mencius*, III. i. III. 6–9, *et al*; II. i. V. 2–4; I. i. III. 3, 4; III. i. III. 15–17; with the notes.

"According to Choo-hi, if he is not too late to be trusted for the fact, the ground rent of the market stalls was a genuine rent, levied when the number of traders applying for space was greater than could be accommodated; but it was not considered right to levy both the ground rent and an octroi duty (*Legge, Life and Works of Mencius*, p. 172, n.)."—*Simcox*, ii. 38, note 5.

"The *T'ai tsai* (太宰) directed the nine kinds of occupations, and laid them in charge upon the mass of the people. Attention to the three kinds of husbandry ranked first in order, and the fixed rules for securing continual production could not be set aside or delayed." For this object there were various divisions of the land. "Oh, how minute was the attention paid to the fixed regulations of the fields!" "Then the *Ts'ao jên* (草人) was directed to take charge of the rules for transforming the soil (for producing the necessary changes required in husbandry)." "The *Shao jên* (稍人) had charge of sowing seed in low ground," and other officials urged the people to plough and weed. "All without occupation had a money fine levied from them (a capitation tax on each individual)." The *Nei tsai* (內宰) also had various regulative duties connected with agriculture. "Husbandry was undoubtedly deemed of great importance, and the regulation of trade was also not deemed unimportant. The *T'ai tsai* had the official trust of storing up wealth, and had, moreover, the charge of the grain used for husbandry. The *Ssŭ t'u* (司徒) [ministers of instruction] managed matters connected with the promotion of trade and commerce, and with the promulgation of rules regarding husbandry." "The *Ssŭ shih* (司市) was the elder or superior of the officers placed over the market"; he and his subordinates had multitudinous duties. "But it was found that the rules for regulating the market-holdings were, for the most part, three. Early in the morning there was a market held, at which the merchants and dealers attended; at noon there was a market, at which the public attended; and at eventide there was a market, at which the small retail dealers, men and women, attended." Officials assisted those whose goods did not sell. There were twelve inhibitions against the fictitious sales of ornaments. Weights and measures were minutely regulated. Duties were levied either on stances or goods. The *Ssŭ mén* (司門), officers of the gates, prevented worthless articles from going in or out. "The *Ssŭ kuan* (司關) regulated the entry and exit of merchandise in general." [For fines on unemployed and levies of able-bodied workers see *supra*.] Then, as "the affections of the people were easily alienated," officers were appointed to induce them "to rest satisfied in their allotted spheres." Special regulations were made for times of scarcity.—*Chou li kuan chu*, pp. 55–67.

"The *Shan yü* (山虞) had charge of the Government orders for hills and forests, and set up prohibitions and rules for guarding them. In the eleventh moon hard timber was cut down; in the fifth moon soft wood was felled; and orders were issued to the mass of the people to hew materials in proper seasons." "The *Lin héng* (林衡) had charge of the prohibitions and orders for patrolling the forests and feet of the hills, and he enforced the rules for guarding them. If wood was required to be hewn, the orders were obtained from the *Shan yü*." "The *Ch'uan héng* (川衡) had supervision of the prohibitions and orders for patrolling the marshes and rivers, and arranged their proper guards." "The *Tsé yü* (澤虞) had charge of the stern inhibitions for the State marshes, and in due seasons sent up fish to the *Yü fu* (玉府) for the king, and the remainder was distributed among the mass of the people. Thus, not only was the produce of all the hills and marshes beneficial to the people, but, moreover, the king retained a tender regard for duly nourishing all sentient beings." There were also official hunters, fishers, spearers of turtles, fellers of injurious or useless timber, etc., slayers of fierce savage beasts, removers of poisonous reptiles, killers of fierce birds, destroyers of worms, drivers away of toads and of insects.—*Ibid.* pp. 105–6.

"Misfortune and injury must be removed, and the dwellings of the people have no cause of injury or misfortune; and this was brought about by the righteous regulation of all animate and inanimate things."—*Ibid.* p. 107.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

LAND.—[When, in 221 B.C., all the smaller states were united under the Tsin [Ch'in] dynasty, this system [private ownership] was extended to the whole empire. However, as the population increased, difficulties again arose, and, after the fifty years of trouble and disorder which preceded the establishment of the Han dynasty, famine and misery prevailed, and many proprietors parted with their land to get food. As a consequence of this, the greater part of the land, at least, belonged neither to the Government nor the peasants, but was accumulated in the hands of a few rich men. The Han emperors took various measures to alleviate the condition of the people. They distributed all uncultivated land and all Government property gratis among the needy, encouraged the officials by rewards, remitted taxes and recouped themselves for expenses incurred by the sale of offices and dignities, improved the method of farming, etc. However, the misery of the people continued, and the Crown was becoming impoverished. It was thought that the cause of this lay in the individual ownership of land, but it was found impracticable, in spite of the efforts of a large party, and the often-quoted authority of Mencius, to restore the old system of common fields.]—*Arbeiten d. Kais. Russ. Ges.*, pp. 9–14. See also *Hirth*, p. 298.

"The *permanent* institution of a *fixed* territorial tax for each mao is to be attributed to the prince of Thsin, Hiao-kong (360 B.C.), and his minister, Chang Yang, who had separating roads opened between the fields of the different cultivators, and required from each separate field a fixed tax in kind. . . . This minister seems also to have sold lands to private persons who wished to own them, and these new proprietors had the right of buying and selling lands—a right not previously possessed by the people [see previous Period]. When Thsin chi hoang-ti had made himself sole master of the empire, about 230 B.C., he extended [this system] to all his provinces. . . . Each family had to pay the land-tax of the *tsou*, and the personal tax of the *fu*, or the census. Chinese authors say that this tax on individuals did not prevent the princes from requiring from the people numerous *corvées* . . . ; that the land-tax was assessed without regard to the real produce of the land; that, in short, the Thsin neglected the fields and taxed the men. We might infer from [this] that the personal tax was . . . of considerable amount in proportion to the land-tax."—*Journ. Asiat.*, Série III. vi. 272–3.

"The personal tax still existed conjointly with the land-tax. [The latter was fixed at one-fifteenth of the gross produce, then reduced to one-thirtieth; and, for a time, abolished entirely.] Much land belonging to the poor was encroached on by powerful families, and the despoiled owners became their tenants at a rent of half the produce. . . . Those unable to pay [the personal tax] became tenants of the rich, who undertook to pay for them, and so were virtually dependent on them. This collection of poor families round rich ones, or, in general, the possession by a single individual of more land than he could till by himself, is called by the historians *kien-ping*—'agglomeration.' Lands which the possessor could not till by himself were called *ming-tien* (nominal fields), and these agglomerations were extremely distasteful to the sovereign . . . [as they] were creating a crowd of petty lords almost independent of [him. It was attempted to make land once more inalienable, but this proved impracticable.] From this time forward the

struggle against inequality of estates always went on between the prince and rich men."—*Ibid.* pp. 274–6.

"Besides the case of those who had lost their liberty through poverty, there was also a large and increasing class who had lost their lands from the same cause. The historians use a special term, signifying *agglomeration*, to describe the accumulation by one owner of more land than he could cultivate himself; and it was by these great landowners that the free, but landless, cultivators were reduced to a state of semi-feudal dependence, the landlord taking half their crop in consideration of his engaging to pay their taxes. But as it was contrary to propriety for the Imperial taxes to exceed a tithe, it was clearly incorrect for prædial lords to derive five times as much revenue from the same source. And hence the encroachments of the agglomerators, even when tolerated for a time, never ceased to be regarded as unlawful and inexpedient."—*Simcox*, ii. 114.

"The first, though by no means the last, of his [Ch'in Shih Huang-ti's] unpopular innovations was the extension of the new agrarian system of T'sin to the rest of the empire. It will be remembered that the founders of the Shang and Chow dynasties both came forward, not as destroyers or innovators, but as restorers of the good old usages of the past, which had fallen into neglect in the degenerate hands of the last kings. There was probably no constitutional principle better known to the mass of black-haired politicians than those regulating a change of dynasty. That T'sin should take the empire was one thing, that it should impose its own new laws was another, and there can be no doubt that every student of Chung and Mang [Confucius and Mencius] who had learnt to reverence the divine memory of the Duke of Chow, would be prepared to denounce as sacrilegious any proposal to abolish the common fields, the hamlet enclosures, with their virtuous ditches, and the time-honoured system of moderate tithing. What had provoked discontent, even among the unlettered and scattered population of T'sin, was likely to rouse rebellion elsewhere; and while the scholars could be as usual on the side of the populace, the nobles and princes would not be on the side of the Crown; for every State had the memory of some injury or affront to redress, to say nothing of the humiliation inflicted on all the princes, who found themselves deprived of their virtual independence by the restoration of a central authority." In the light of these facts it is possible to understand the proceedings of the great council held in the year 212 B.C. (as reported by the historian Ssŭ-ma Ch'ien, a century later) which resulted in the imperial command to burn all books, including the popular poetry and sacred liturgies, as well as the laws, the legends, and the history of antiquity, with the exception of those on medicine, divination, and husbandry.—*Ibid.* ii. 101–2.

"We are indebted to Ma-twan-lin for an account of the annual expenses of a small cultivator under the Hans. The State of Wei seems to have been fortunate in the number of paternally disposed princes to whom the government was committed. The minister of one of these makes the following report, near the middle of the 1st century B.C.:—'A householder undertakes the cultivation of 100 *mow*; the gross return of grain per mow is 1½ *chi*, giving a total of 150 *chi*. One householder represents five persons. Each person consumes 1½ *chi* monthly; from the produce of his 100 mow the cultivator pays his taxes with 15 *chi* (*i.e.*, 10 per cent. of the gross produce of his holding), with 90 *chi* he has the food for his family, and there remain 45 *chi*, which, at 30 *tsien* the *chi*, are worth 1,350 *tsien* (according to M. Biot, 22 fr. 80 c. of modern French money); the ceremonies celebrated in every village at spring and autumn cost 300 *tsien*, and the surplus serves to clothe the five members of the family' (*Journ. As.*, 3me Sér., iii. 456, note)."—*Ibid.* ii. 113.

"Other authorities cited by Ma-twan-lin estimate the taxation of a family under the Hans at 200 *tsien* only, and it is possible that the imperial authorities did not exact more, the rather that the commentator clearly considers the Wei cultivator to have been hardly treated. Ma-twan-lin, in a note on this passage, estimates the cost of clothing at 300 *tsien* per head, and taxes the budget with a deficiency of 450 *tsien*, or about 6 shillings; and he exclaims against the impossibility of clothing being so cheap as to allow the cultivator to live with so narrow a margin. The learned encyclopædist, however, probably failed to allow for the lower value of money at the earlier period."—*Ibid.* ii. 113.

"The sentence 民有昆弟訟田 in the annals of the Han Emperor Süan [73–48 B.C.] shews that for 2,000 years at least the landed property of brothers has been separately owned: it also shows that from ancient times division has been thought less respectable than tenancy in common."—*Ch. Rev.*, xiii. 53.

"Shih Tan [師丹] seems to have been a sort of Chinese Gracchus: he brought before the Emperor 成 [32–6 B.C.] the great inequalities between the patricians [諸侯王列侯公主], rich official classes [吏民], and the poor. The consequence was an edict forbidding the lands called 名田 held by 關內侯吏民 to exceed 30 *k'ing* [600 acres], and their slaves, male and female [奴婢], to exceed 30 individuals. The result of this was that the price of slaves fell, and the matter was soon dropped."—*Ibid.* xiii. 54. See also *Journ. N.-C.B.R.A.S.*, N.S. xxi. 188–9, where ordinary individual holdings are stated to have been limited to 50 acres, and three years allowed for the sub-divisions to be effected. "Land thereupon became cheap," but the plan was reversed on the displacement of Shih Tan, etc., and "that endeavour to prevent monopoly in land was frustrated."

[In A.D. 9, Wang Mang seized the throne of the Han dynasty and enacted a new land law based on the systems of the earliest times. It was an attempt to prevent pauperism and promote contentment, but land laws adapted to an early stage of civilization were not conducive to promote the common weal at the comparatively advanced stage which society had then attained. All land was to belong to the emperor; no subject was to have more than a *ching* of land and 8 male slaves (私屬); the sale of land was forbidden, all land beyond each man's legal allowance fell to the crown and was divided among the villages according to their needs (or between the 九族 and the 鄉里 in cases where they were not more than eight males to occupy it). It was an attempt to restore the old system of common cultivation; the *ching* being now called "imperial fields" (王田) and the emperor being again regarded as universal landlord. This law created so much discontent that Wang Mang repealed it three years after its enactment. The circumstances attending the restoration of the Han dynasty were such that four-fifths of the people would have perished, if agriculture had come to a standstill. Similar circumstances prevailed throughout the 3rd and 4th centuries, so that the government could not attempt to introduce any important changes but were content to keep up the existing conditions as best they could.]—*Arbeiten d. Kais. Russ. Ges.*, pp. 15–16. See also *Tzŭ chih T'ung chien kang mu*, c. 8, *Shang ts'ê, Chêng p'ien*, p. 30*a*; *Ch. Rev.*, xiii. 54; *Han shu Shih huo chih, P'ei wên yün fu*, c. 106, p. 46*b*; *Simcox*, ii. 116; *Journ. Asiat., Sér.* III. vi. 274; and *Journ. N.-C.B.R.A.S.*, N.S. xxi. 189.

"The second Han dynasty re-established the system of taxation of the first." "In 78 A.D., Tchang-ty divided lands into three classes, according to their productiveness, and regulated the *tsou* tax, which was to be paid in hemp-cloth and silk stuff." "[Under the last Han], *Houan-ty* [Huan Ti] (A.D. 165) and Ling-ty (A.D. 185), the tax was quintupled or at least tripled."—*Journ. Asiat.*, Sér. III. vi. 274–9.

[The business of husbandry was minutely regulated by the inspectors of the fields.]—*Li chi*, IV. i. i. 15; *Legge*, i. 255. And see AGRICULTURE.

RANKS.—"In ancient times there were only four classes of the people; soldiers were not included. For in those days the tillers of the soil were themselves soldiers; but from the 秦 Ch'in dynasty onwards, the fighting men refused to perform agricultural duties, so that a new class grew up outside the four original classes."—*Sung shih, Wang Yü-ch'êng.*

Agriculturists.—[Under the Ch'in dynasty, the area of land was extensive and the population sparse, so large tracts of land remained uncultivated, and the resources of the country were undeveloped. Steps were therefore taken to encourage immigration from the districts formerly known as the Three Kingdoms of Ch'in, and lands were allotted to them to settle on.]—*Kang chien.*

Artizans.—[No information beyond mention of two of extraordinary skill.]—*Ibid.*

Merchants.—[It was ordained by the Emperor Kao Tsu that a merchant was not entitled to travel in a carriage or wear fine dress. He imposed heavy taxes on the mercantile class in order to oppress them. This harsh treatment was put an end to in the time of Hui Ti (194–187 B.C.), and in the time of Wu Ti (140–86 B.C.) commerce was carried on between China and foreign countries. Commissions were sent abroad to some maritime states to buy pearls and other articles.]—*Ibid.*

[Those who had been enrolled as merchants could not enter into the government service.]—*Ibid.* See also *infra.*

"The disorders which had preceded the rise of the Han Dynasty had impoverished all classes, except the speculative traders, whose nets generally secure the largest haul when cast into the troubled waters of a long war. Prosperity was long in returning. The able-bodied men had been taken off to the army, the old and young were employed in carrying food; the rich drove in bullock-carts for chariots, and even the emperor could not afford a team of horses to match. Corn was scarce, and monopolists drove up prices, holding out for a rise till rice was 3*d.* a pound and famine was in sight."—*Simcox*, ii. 108.

"The traders, who alone had prospered during the war, were held answerable by the impoverished people for their sufferings, and the soldier emperor found it popular as well as convenient to levy additional taxes upon this class in order to keep them down, while they were also forbidden to wear silk, or drive in carriages; and when a few years later, these restrictions were withdrawn, the sons of traders were still disqualified from holding official rank (*Giles, Gems of Ch. Lit.*, p. 57). At the same time money was raised by selling titles of honour and rank to rich persons willing to contribute grain for the public service, while rich criminals were allowed to commute their penalties for a fine. By this means the burdens of the cultivators were relieved so that the peasants no longer had to sell their crops at half value, or to borrow money at usury, or to sell their children or the ancestral homestead to swell the gains of unprofitable idlers." "With the return of peace abundance reigned again" but the growth of wealth revived luxury, extravagance, ambition, and the military spirit.—*Ibid.* ii. 108. See also *Ssŭ-ma Ch'ien*, quot. *Giles, Hist. of Ch. Lit.*, pp. 103–4; *Shih chi, Yüan chien lei han*, c. 357, *Ch'an yeh pu*, p. 17*b*.

"Using capital to seek wealth, *i.e.*, trading; being a workman was not so good as a trader."—*Shih chi, Yüan chien lei han*, c. 357, *Ch'an yeh pu*, p. 17*b*.

Hired Labourers.—[Those who were employed by others were called *yung*, that is, employees. (1) *Shih* (使), servants who did work of a heavy kind; (2) *Chiu pao* (酒保), waiters in wine shops.]—*Kang chien.*

[(1) *Shu yung* (書傭), clerks; (2) *p'u yung* (僕傭), any kind of employee; (3) *chiu pao* (see above); (4) *ch'ung yung* (舂傭), a labourer employed in thrashing rice; (5) *kêng yung* (耕傭), a labourer employed in cultivation of land (the land of the rich was always cultivated by this class of labourers); (6) *ya yi* (衙役), office messengers or runners.]—*Ibid.*

Slaves.—[In the Ch'in period slaves were treated as cattle and horses. In the house of Lü Pu-wei there were over ten thousand slaves. The classes of slaves were:—(1) *Shih shih* (侍史), Government slaves, also called *yi*; (2) *chia t'ung* (家僮), house slaves; (3) *hun ssŭ* (閽寺), a lower class of hall porters; (4) *pei* (婢), female slaves; (5) *li* (隸); (6) *tsao* (same as before); and (7) *tsu* (卒).]—*Ibid.*

"According to the catalogue of the Han dynasty literature, there is a book called 'the Memoirs of Ch'an Shing,' in which it is stated that the Ts'in Government . . . ordered a certain sub-prefect. Chéung Hon, to restore to liberty all 'sons born in slavery' (奴產子) of persons who had been transported (as convicts) to Li-shan."—*Ch. Rev.*, x. 284.

[It was ordained by Kwangwu that every one who hurt a slave, by scorching him or her with a hot iron, should be tried according to the law, and the slave should at once be liberated, and made a free man or free woman; that no mercy should be shown to anyone who killed a slave; that sentence of death should not be passed on anyone whose slave, male or female, had killed a person with an arrow; and that a female slave should be called *ssŭ shu*, and not be treated as an article of sale.]—*Kang chien.* See also *infra.*

[Slaves were well treated at this time (Han dynasty). Many of them were set free simply because they had been industrious in their work and faithful to their masters. Sometimes slaves were even allowed to enter the Government service, and became prefects, or were ennobled. At this time the people were very fond of having slaves. In some families a thousand, in others several hundreds, were employed.]—*Ibid.*

[Classes of slaves were:—(1) *Shih shih*, mentioned before; (2) *ts'iang t'ou* (蔷頭); (3) *chien nu* (監奴); (4) *chia p'u* (家僕), slaves; (5) *chia t'ung*, little slaves, or house slaves; (6) *ch'ien nu* (鉗奴) collar slaves; (7) *kêng nu* (耕奴), slaves employed in the cultivation of land; (8) *ch'ing i* 青衣, a lower class of servant. *Ch'ing i* literally means 'green dress,' and it is thought that at that time the dress worn by this class of people was of that colour.]—*Ibid.*

"About 204 B.C. the founder of the Han dynasty said that parents might sell their children. This concession is of a prior date to the laws regulating slavery. . . . Under the Han dynasties, rebels with their families were condemned to be slaves of the state. Thus King-ti, about 168 B.C., condemned the inhabitants of seven revolted provinces to slavery. Criminals were always punished with slavery. [Some authorities give the number of these slaves as over 100,000, but others make it much higher.] . . . During the reigns of the Eastern Han, which synchronise with the two first centuries of our era, the prisoners made during the civil wars became slaves of the state. Afterwards they were freed, and re-entered the class of the people. . . . The class of slaves of private persons is composed, firstly, of prisoners of war; secondly, of persons who sell themselves, or are sold by others; thirdly, of the children of slaves. Prisoners made in the civil or foreign wars have been, since the Han dynasty, sold for slaves. . . . Han Wu-ti freed his prisoners, but these prisoners had been confiscated to the Government; they should have become slaves of the state. . . . Private slaves [Matwanlin] distinctly says, 'can neither be helped nor freed by the magistrates.' Nevertheless, Han Wu-ti deprived masters of the right of killing their slaves at pleasure, and, still later, Han Ngai-ti limited the number and the age of slaves belonging to the principal dignitaries. . . . No one under 10 and over 60 was allowed to be a slave. In the first century, Kien Wu . . . freed by many edicts even private [as well as Government] slaves. . . . He published these edicts after the troubles which followed the usurpation of Wang-mang, when the lands remained untilled [and cultivators were needed]. Kien Wu forbade the killing [and branding] of slaves, and abolished a law which condemned every slave who had wounded a person with an arrow to be beheaded. . . . But he did not appoint that the slave should be able to buy his freedom by his own labour. [The distinction of ranks became, under the first Han, much more marked than it had been before], and 'the slave was scarcely included within the pale of the law.'"—*Ch. Repos.*, xviii. 349, 350, 354, 361.

"A sort of free serfage, with liberty to migrate from the Imperial to the vassal states, and liability to serve the public by a fixed amount of labour in each case, seems to have been in vogue between 2,000 and 3,000 years back. It was not until the rise of the true Imperial system, 2,000 years ago, that free men drifted into a state of serfdom, and, during the great wars with the Hiung-nu. . . . when the treasuries were depleted, inducements were offered to the people to contribute slaves, instead of money, for frontier defence. . . . About A.D. 1 the Emperor had to limit the number of slaves which any private dignitary might own. A few years later the founder of the second Han dynasty, by special edict, freed many private slaves, and declared that every girl sold as a wife should be free."—*New Century Rev.*, Jan., 1898, p. 10.

"The development of slavery in China dates from the Han dynasty, and the impoverishment of the lower orders through war and famine. The injurious results of this change were more felt by the State than by the enslaved individuals. The slaves, of course, paid no land-tax; and, as noble proprietors and officials were also exempt, it was estimated that about a quarter of the whole population made no contribution to the revenue. On the contrary, the maintenance of the State slaves (condemned criminals, or rebels) was a heavy burden in times of scarcity, and we hear at intervals of their emancipation in numbers, avowedly to relieve the community from the expense of their support."—*Simcox*, ii. 114.

[For an instance of a son selling himself into slavery to procure the means to bury his father, see *Hsiao tzŭ chuan, Yüan chien lei han*, c. 356, *Ch'an yeh pu*, p. 25*a*.

[Stent says that Ch'in-shih-'huang selected a great number of lads who were made eunuchs, in order to look after his palace and gardens.]—*Journ. N.-C.B.R.A.S.*, N.S. xi. 150–1.

[The Empress (of Wên Ti) occasionally made presents of her hand-maids to the princes.]—*Ssŭ-ma Ch'ien, Shih Chi*, Bk. 49.

Statute Labour.—"There are instances of mausolea of grandees having been constructed, during the Han dynasty, by statute labour, the people being relegated to the spot by Imperial decree, just as in the case of a mausoleum of an emperor."—*De Groot, Rel. Syst.*, ii. i. 447.

INDUSTRY.—[In 213 B.C. literary property (which, however, has generally been absolute) was restricted, under severe penalties, to works on medicine, divination, and husbandry. The restriction was withdrawn 11 years later. See *Legge, Ch. Class.*, i. Prol. pp. 6–10. A mild censorship on works of a treasonable or licentious tendency was enforced in later times.]

[In the time of the Emperor Ming (A.D. 58–76) people were forbidden to have two occupations. This was protested against by Liu Yi. See DIV. OF LAB.]—*Hou Han shu, Yüan chien lei han*, c. 358, *Shou yeh pu*, p. 6*a*, and *P'ei wên yün fu*, c. 106, p. 78*a*.

"It is a feature of Chinese social life that specialities in art and workmanship are treated as the monopoly of certain families on which no outsider is allowed to trespass. Such was the case under the Han dynasty with certain patterns of silk brocade."—*Hirth*, p. 117.

"In the time of the Han dynasty, 'iron-masters' (鐵官), were appointed in several districts of the old Leang-chow to superintend the iron works."—*Legge, Ch. Class.*, III. i. 122, note.

"During drought, trade in wine is forbidden."—*T'zŭ chih t'ung chien kang mu*, c. 4, *Shang ts'ê, Chêng p'ien*, p. 28*a*.

"Besides his interference with the currency, he [Wang Mang] imposed vexatious duties on trade. The taxes on salt, iron, and wine had been abolished by an emperor nearly 100 years before; but when a local governor proposed to restore order in his district by reducing or abolishing the unpopular imposts, Wang Mang turned upon him and confiscated his wealth, which proved to be very great. He then directed his attention to the official class generally, and to all those whose riches exceeded the lawful profits of their ostensible callings, confiscating four-fifths of all the treasures thus discovered. He also forestalled Wang-ngan-chi, the great innovating financier of the Sung Dynasty, by a scheme for State banking; and the edition of the Chow Li which was published under his inspiration contained a spurious passage, making it one of the duties of the treasurer to fix the rate of interest on loans in accordance with the requirements of the State."—*Simcox*, ii. 116.

[Minting was at times an office and at times a trade. See *Ibid.* ii. 156.]

[Lien Fan, Governor of Shu, the modern Ssŭch'uan, removed the restrictions upon the use of fire or lights at night, thus stimulating industry.]—*Giles, Bio. Dic.*, p. 482.

Period of Disruption (221 *to* 589).—*Table IV.*

LAND.—"No material change in the condition of the industrial population took place during this period" (*Simcox*, ii. 126). "In the midst of this disastrous period [*Three Kingdoms*: 220–265], we find [that] Wu-ti, prince of Wei, ordered the levying of two taxes: the land-tax (*tsu*) consisting of four-tenths of a bushel of corn per *mao* [*mu*], and the family tax of 2 *py* [*p'i*] or pieces of taffeta, and 2 *kin* [*chin*] or Chinese pounds of silk for each family. The rarity of coin in these stormy times had made it useless to demand payment in money." [Biot calculates that this would come to about one-thirty-seventh of the gross produce, though he thinks this is placing it too high for the yield of the land at that time.] (*Journ. Asiat.*, Série III, vi. 280.) The Chin (265–420) "divided able-bodied workers into classes according to age, giving each a certain allowance of land, with extra quantities for nobles and princes" (*Simcox*, ii. 126). "The first class comprised people between 16 and 60—in this, every man was to have 70 and every woman 30 *mu*. The second class consisted of children between 13 and 16 and old people over 60 and under 65, and these had half the share of the first" (*Arbeiten d. Kais. Russ. Ges.*, p. 16). [The land-tax and the personal tax were merged in one, which was paid either in silk or hemp, in grain, or in money (*Journ. Asiat.*, Série III, vi. 280–2).] The complete development of this system belongs to the Northern Wei and T'ang dynasties. "In 328, Tching-ty [Ch'êng Ti] introduced another system called *tou*, and declared that he would levy one-tenth of the gross produce" (*ibid.* p. 282). "In 377, Hiao-wu-ti abandoned the *tou* system and returned to the *tsou*. [Thus the taxes were assessed by persons, and not by area of land. The people of the central provinces were to pay in silk. During this period, officials were allowed a certain number of serfs or "foreign cultivators" on their estates, who were exempt from land-tax and government corvées.] "The maximum number of such families on an estate was forty." (*Ibid.* pp. 283–4; *cf.* under *Slavery, Ch. Repos.*, xviii. 356–7.)

"We have no precise information as to the division of land or method of taxing it during this period [420–589], but it seems clear that the power of the large land-holders grew and also the number of their tenants" (*Journ. Asiat.*, Série III. vi. 286–91). In 485, the Northern Wei "made a serious attempt to revive the agrarian policy of the ancients" (*Simcox*, ii. 126). "The immediate occasion for this was a demand for equal taxation, which it was thought could only be had by equalizing resources. It was therefore enacted in the year 485, that there should be assigned to every man between the ages of 15 and 40, 40 *mu* for sowing corn, and to every woman of the same age, 20 *mu*, and in addition, 20 *mu* were set apart for each house, for the cultivation of mulberries and other useful trees [which latter portion became inalienable (*Journ. Asiat.*, III. vi. 289)]. Minors, old people, and widows, if occupying a separate dwelling, received half the above shares" (*Arbeiten d. Kais. Russ. Ges.*, p. 17). "Land in excess of this amount was not confiscated, but was allowed to be sold, which the duty fields were not" (*Simcox*, ii. 126). "All arable lands belonged to the State, and in the first month of each year, they were distributed among the population over 15, while the share of those who had reached their 60th year was reduced" (*Arbeiten*, p. 17). [Lands were held as long as the occupiers were able to cultivate them; when they grew old they had to give them up. The size of holdings varied with the number of persons in a family (*Journ. Asiat.*, III. vi. 289–91).] "At the same time it was forbidden to plant trees except on the ground assigned for that purpose, because orchards, as distinct from fields, were personal property, which could not revert to the State" (*Arbeiten*, p. 17).

"By the legislation in force between 477 A.D. and 499 A.D., all cultivators had a certain share of land allotted to them; land held in excess of this allowance only might be sold, and no excess might be bought. [Princes and relations of the emperor each had a piece of land proportioned to his rank, and a fixed proportion (5 to 16 *ching*) was assigned to every office of state (*Arbeiten*, p. 18).] If a householder died, leaving no representative, his relations, *i.e.*, the clan or family community, received the inheritance in preference to strangers [and the poor in preference to the rich (*Arbeiten*, p. 17)]. But failing direct representatives, the State resumed possession of the land, in which the grantee had nominally only a life interest. Migration was again recognized by the State as a means of providing for surplus population, and if the people refused to move when in want, they were compelled to cut down their trees and plough up their orchards to leave more room for grain. [They might go where they chose, even into another province, but were not allowed to remain idle (*Arbeiten*, p. 18).] Northern China was colonized at this time, and it was noted that property was much less unequally divided there than in the south, where positive legislation could not entirely undo the effects of feudalism and the concentration of wealth in a few hands, which had gone on in times of disorder."—*Simcox*, ii. 126–7. See also *Journ. N.-C.B.R.A.S.*, N.S. xxi. 189.

"It is not clear how the enactment providing for home colonies was carried out in fully settled parts, where there were few or no waste lands at the disposal of the Crown; but in 484 A.D. the system of paying officers by salaries instead of land grants was introduced (*Journ. Asiat.*, Mar. 1837, p. 288), and this change would no doubt set free a good deal of State property. At all events, in the next century we read of persons renting the public lands, so that these cannot have been exhausted by the allotments."—*Simcox*, ii. 127.

"The system of land tenure was never independent of that of taxation. From the days of Chow two main sources of revenue had always been recognized—the land-tax, which was liable to fall off when from any cause the cultivators ceased to form the bulk of the population, and the personal tax, paid in respect of what we should still call personal property. The government allotments of land were not apparently intended to represent what was required for the maintenance of a family, but only to furnish wherewithal to meet the demands of the tax collector; hence the tax payable in respect of these allotments seems extraordinarily high for China, reaching a third of the produce, while those who rented a whole farm only paid about a tenth, which was always regarded as the legitimate proportion, whether levied under the name of rent or land-tax. It is obvious that the condition of free cultivators without land could not become intolerable so long as they were able to rent it on the simple condition of paying the ordinary tax: and as long as the State had land to let on these terms, private agglomerators would be unable to get farmers to pay more to themselves; so that large estates could only be profitable on condition of evading the land-tax, or being tilled for the owner by servile labour."—*Ibid.* ii. 127.

"In the history of Nanchao, the division of land was into *Shwang*. Yung-ch'ang was one of the Nanchao cities, and there to this day a *Shwang* means an English acre [五 畝 爲 一 雙]."—*Ch. Rev.*, xx. 393.

"The gradual pacification of the Empire was much assisted by the reluctance of the free cultivators to leave their homes, when not suffering from distress, to fight for one feeble ruler rather than another. At the end of the 5th century a general, summoned to lead his troops to a distant province, demurred, on the ground that the men of the north do not willingly go far from their homes, and can only be depended on to keep together for short raids where booty is to be got (*De Mailla*, v. 188). The mercenary element in the Chinese character was, by preference, pacific, and it was never necessary to prolong a war for fear of leaving the army out of work."—*Simcox*, ii. 127.

"The equalization begun under the Wei continued substantially the same under the Sung, Ch'i, Liang, Chou and Ch'ên dynasties, and reached its full development under the T'ang dynasty (618–907)."—*Arbeiten*, p. 18.

RANKS.—*Agriculturists.*—[Under the Three Kingdoms the system may have been similar to that under the Hans. Wu Ti (265–290), of the Chin, encouraged and aided the agriculturists. Protection for the weak against the strong was provided in the time of Sung Wu Ti (420–3), who enacted, under severe penalties, that no land could be taken from its owner by force. In the period Hsien K'ang (335–343) of Ch'êng Ti's reign, owing to increase of population, steps were taken to encourage emigration, and to reclaim lands for cultivation. Under Wei Ming Yüan Ti (409–424) all the local authorities were ordered to encourage people to cultivate land, resulting in great industry and the ingathering of several harvests yearly. In the time of the Chou dynasty (557–589) six officials were appointed to regulate all matters relating to land. See also below, under *Slavery*.]—*Kang chien.*

Artizans.—[Several instances of unusual skill on the part of artizans are recorded.]—*Ibid.*

Merchants.—[Yang Wan, a millionaire merchant in the time of the Chin dynasty, seems to have had great influence. Officers were not allowed to engage in trade. When official quarters for the accommodation of travellers were abolished by Fan Yün, in the time of the Ch'i dynasty, merchants and traders were compelled to pass the night in the open air.]—*Ibid.*

Hired Labour.—[Same as under ABSOLUTE MONARCHY.]

[*Forced labour* on public lands was vehemently protested against by Hsiao T'ung (501–31).]—*Giles, Hist. of Ch. Lit.*, p. 139.

Slavery.—[Under the Three Kingdoms the condition of slaves does not seem to have differed essentially from that under the Han. Wu Ti, of Wei, treated his slaves well, but compelled them to work hard, and employed them to build the Copper Bird Pavilion. During the Chin dynasty, people of talent and refinement were fond of keeping female slaves. Most of these could write verses and play musical instruments. The classes of slaves were:—(1) *shih shih*; (2) *ch'iang t'ou*; (3) *hu nu* (胡 奴), see previous Period; (4) *mo nu* (摩 奴), drivers of Imperial chariot; (5) *li*; and (6) *pei*, see previous Period. During the six dynasties, three classes are mentioned:—(1) *ch'iang t'ou*; (2) *chia nu*, house slaves (no slave was without a master, and a slave could be pledged to others); and (3) *pei*, female slaves.]—*Kang chien.*

"At the times of great internal troubles, . . . poor cultivators placed themselves and their lands under the protection of powerful individuals. . . . This occurred principally during the wars following the fall of the Han, and under the Tsin dynasty (280–404). Under the Eastern Tsin (375) the protected husbandmen appear as very serfs [擅 戶 *shan hu*]; the law freed them from taxes and personal service, and limited their number proportionally to the rank of their lord who was obliged to inscribe them on his domestic register, and was assessed in proportion. . . . The law of the Tsin dynasty granted to every officer a fixed number of husbandmen appointed for the maintenance of himself and family."—*Ch. Repos.*, xviii. 356–7. *Cf. Journ. Asiat.*, Série III, vi. 284.

"An edict attributed to Tai-wou-ty (425–430) orders [people] without oxen . . . to supply [their] place by a certain number of slaves. . . . A married couple were entitled to eight slaves, the men to till the fields and the women to weave cloth. Unmarried persons could have no more than four. For tillage, ten bullocks were considered equivalent to eight slaves."—*Journ. Asiat.*, Série III, vi. 286–7. See also *infra*.

"The Government endeavoured to promote the plantation of mulberry trees, and the cultivation of waste lands, by giving distinctions to the families which had oxen for the plough. It is curious that those who had no oxen were expected to have slaves, for the law seems intended to limit the number of slaves held by one owner, while it is scarcely likely that cultivators too poor to have any oxen should have too many slaves. Eight slaves, the number allowed to a married householder, were reckoned for purposes of cultivation as equivalent to a yoke of ten oxen (*ibid.* p. 287)."—*Simcox*, ii. 126.

"Under the second Wei dynasty, which occupied the Northern Empire, the labour, even on small properties, was done by slaves. An ordinance, published in 420, declared that every married couple, being lords of the manor, should have male slaves to labour in the grounds, and female slaves to take care of the household concerns—in all eight persons. A bachelor proprietor was to have only half this number. Ten head of labouring oxen were allowed to eight slaves. The second Wei dynasty adopted Tartar habits, if they were not Tartars themselves. All labour was done by slaves, while the master refused to do any work. The law distinguished between lands cultivated by oxen and those cultivated without them. Upon certain lands hired out by the Government, the farmer, a free man, was obliged to make up his deficiency in oxen by a certain number of slaves."—*Ch. Repos.*, xviii. 357.

"It does not appear that the slave was usually ill-treated, except in times of great distress; and particularly so after the invasions of the Wei and later Chou dynasties, in the sixth century of our era."—*Ibid.* p. 361.

"Slaves of the State are found under the *Hau-chau* [Hou Chou], toward the middle of the 6th century. An ordinance, delivered in 566 by one of these princes, declares all slaves of the State over 65 years of age to be free, thus renewing the ordinance of the Chou. . . . This grant of freedom appears not to be the result of a feeling of humanity . . . the end was to get rid of a number of useless hands."—*Ibid.* p. 349.

"One of the minor dynasties, in the 6th century, improved upon this somewhat ambiguous boon [of emancipating State slaves to relieve the community of the expense of their support—see ABSOLUTE MONARCHY] by enfranchising all public slaves of the age of sixty-five years and upwards (*Journ. As.*, March, 1837, p. 255)."—*Simcox*, ii. 114.

"Many examples of the sale of prisoners of war are to be found under Kwang-wu, towards the first years of the 6th century. In consequence of the invasion of the northern kings, a great part of the population of the south of China were made prisoners and slaves."—*Ch. Repos.*, xviii. 354.

INDUSTRY.—"The Later Chao prohibited people from making liquor."—*Tzŭ chih T'ung chien kang mu*, *c.* 19, *Chêng p'ien*, p. 19*b*.

"He ordered that officers of the seventh and higher ranks be granted the right to drink tea, but still had no right to sell or present it to one another."—*Hsü Wén hsien t'ung k'ao, Kuang shih lei fu*, *c.* 11, p. 8*a*.

"The families of the poor and lonely, and those who had no ox, were ordered to help one another with regard to things of which [one or other was] in want, so that they thus received mutual aid."—*Pei shih Su Tso chuan, Tzŭ shih ching hua*, *c.* 52, p. 28*b*.

From the Restoration of the Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

LAND.—"The founder of the Suy [Sui] dynasty, Wen-ty [Wên Ti], enacted that all his subjects, from the highest to the lowest, should receive land to cultivate for the *ko*, or on account of the State. These lands were called *tching-nie-tien*, 'fields of perfect duty,' or also by the old name of 'dew-fields'; the division was made according to the number of able-bodied males—full or medium (first or second class); and, in general, the system of the Pe-tsy was followed. These lands were to be planted with mulberry trees, or common kinds of timber trees. One mao [*mu*] was allotted to every three persons. Under this same Emperor, in 589, after the conquest of the southern Empire, an edict exempted the recently conquered lands beyond the Kiang, which had been devastated by the war, from the *tsou* for ten years." [The *iu* was now called *yong*, and imposed on every person over 15. There were now three distinct charges—*tsou*, *ko*, *yong*.]—*Journ. Asiat.*, Série III, vi. 291–2.

"The encylopædist Ma-twan-lin mentions the period between 627 and 649 A.D. as the last, during which the Government attempted to restore the old agrarian customs. It may be doubted whether the revival can have been actually carried out all over the empire, but the intention was to give every householder one lot of land for perpetual, and another, consisting of orchard, for temporary ownership, the last answering to the duty fields of the Souy. These lots as a rule were to consist of eighty and twenty *mow* respectively, and the repartition took place after the last of the crops were gathered in. The restriction on sales, enforced by the Yuen Wei, were retained, but land might be pledged by an absentee owner, who had no natural representatives to occupy it for him, and a cultivator, desirous of migrating to another district, might sell his allotment and employ the purchase money in obtaining another elsewhere."—*Simcox*, ii. 150.

"In the year A.D. 614 [? 624] a new agricultural system was introduced by the T'ang dynasty, and called the 均 田 租 庸 調 法. Persons between the ages of 16 (中) and 20 (丁) were given 100 *mou* of arable land (田); persons suffering from serious bodily disabilities only got 40 *mou*, and widows (whether wife or concubine) only 30 *mou*, in each case holding as freehold (世 業) 30 per cent., and 80 per cent. as 八 爲 分 口 (*sic*). Every man (丁) paid a fee-farm rent (租), of two hundredweights of grain (粟 二 石), and a percentage on personal property (調), in silk or cotton fabrics, according to the products of the land. A labour tax of 20 days in the year was added (役), with an alternative of paying for vicarious labour (傭), at the rate of three feet of fabric a day. In the event of extra labour being called for in emergencies, either the rent, or both rent and the tax or penalty, was or were remitted, according to the number of extra days; in the case of flood, drought, pest or blight, the rent was remitted if the damage exceeded 40 per cent., and the personal tax was (? also) remitted if the damage exceeded 60 per cent. If over 70 per cent., both taxes and labour (課 役) were remitted. Holders were divided into nine categories: 100 householders (戶) formed a 里, of which 5 went to a 鄉; four families (家) formed a 鄰, of which four again went to a 保, known in cities as 坊, and in the country as 村."—*Ch. Rev.*, xiii. 400; and see following extracts.

[According to the laws enacted in the first years of the T'ang dynasty, each person, without distinction of age or sex, who constituted a separate household, received one piece of land as a *perpetual possession*, and every able-bodied person, in addition another piece for temporary occupation. The latter was intended for orchards—the reverse of the Wei arrangement. Traders and mechanics received half shares—or none, if the locality had not sufficient land. The land given in perpetual possession could be sold, if the occupier should die and his family be too poor to bury him, or if he should remove to another village. The sale had to be effected through the courts of law. A man was allowed to mortgage his land, if he were sent away to a distance on military service, and had no relatives to till it in his absence. The scale of official estates was as follows:—

Princes and hereditary nobility	5 to 100 *zin* (*ch'ing*)	On perpetual possession
Warriors, of classes 1–5	30 to 60 *mu*	
Other warriors and civil officials	20 *mu* to 12 *zin*, but only for occupation during tenure of office.	

Of the *temporarily occupied* lands, every man at the age of 18 received 80 *mu*, which he kept till his 60th year. Children, old men (over 60), invalids, or widows, if occupying a separate household, 40 *mu*. A soldier wounded in fighting for his country, was allowed to keep his share so long as he lived—as were the sons and grandsons of men who had fallen in battle. This land could never be sold, mortgaged, or handed over to others for cultivation.]—*Arbeiten d. Kais. Russ. Ges.*, p. 19. See also *infra*.

"The limits on purchases were evaded by rich men who bought land in the name of agents or farmers, and the practice of sub-letting, which reached a considerable development under the Sung, seems to have originated at this time, as the reserves of State land became exhausted and the low official rent ceased to act as a check upon private owners. The fixity of tenure allowed by the State to its tenants contributed to this result, for land, let to one generation after another, came to be regarded as private property subject to land-tax, which it resembled in all particulars except the original title."—*Simcox*, ii. 150. See also *Journ. Asiat.*, Série III, vi. 292–6.

"The emperor Huen tsong, in the 8th year of the *Kay-yuen* period (720 A.D.) established the system of the *yong* and the *tiao*." [Not *first* established, but simply revived—the various taxes had been the same, under different names, since the beginning of the T'ang dynasty.] By this means the reigning dynasty hoped to strengthen itself against the petty princes; but the great division of estates made the allocation of ground to able-bodied individuals very difficult, and the text says, in fact, that the lands assigned for this purpose were uncultivated ground, whose owners had died; but the carrying out of the system must have been attended with great difficulties. As the population increased, it became more and more difficult to keep count of the various estates, so as to remove those land-holders who were over age, and replace them by others; and it frequently happened that a plot of land leased from the State was transmitted from father to son, and in course of time sold as private property. Soldiers serving on the frontier were exempt from the *tiao* and the *ko* during their six years' term of service; they sometimes died or deserted, yet their names remained on the register as *ting*, while others who, from misfortune or other reasons, had no land, remained liable to the personal taxes, and, being unable to pay them, became *feou-ke* [*fou k'o*], vagrants, and tenants of rich families, who paid their taxes for them. "In vain the principal minister of Huen-tsong, named Wen-yong, opposed all his efforts to powerful men, thus gathering the poor around them and making them their serfs. In 720, he had the homeless families who had escaped the census searched out, and tried to settle them on fallow lands, in order to make them liable to the personal tax; his orders were imperfectly carried out," the larger landlords (or petty princes) being already too powerful. In 736, Wen-yong fixed the age at which people became liable to the *ko* at 20, and exempted from it all the old and infirm, women, and slaves. In the census of 755, out of 52,919,390 persons, only 8,208,321 were returned as subject to the *ko* tax. The enumeration of 760 (which, however, is incomplete) only gives 2,370,299 out of a total of 16,990,386. The *ko* was gradually dropped, and in spite of all efforts of the rulers to equalize the position of these subjects, by means of levying personal taxes, the force of things continually drove them back to territorial burdens. After the troubles which marked the reign of Su-tsong (758–762) an edict of the first year of Tai-tsong (763), in every family containing 3 *ting* persons, exempted one of them from paying the *yong*. The land-tax was fixed at $\frac{2}{10}$ bushel per *mow*. The *ting* age was from 25 to 55. "We recognize in this measure an evident tendency to reduce the personal charges." In 766, the tax was fixed at 15 *tsien* per *mow*, instead of being paid in kind, as before. The collection in money seems not to have been easy, and the receipts were found insufficient to cover expenses. In autumn the payment was made in unbeaten wheat, and this tax was therefore called "the *tsien* of the green unthreshed harvest." There was also the tax on the land itself, which amounted to 20 *tsien* per *mow*. A subsequent edict divides the land into two classes for the collection of this autumn tax:—

1st class lands pay 1 bushel per *mow*.
2nd „ „ $\frac{6}{10}$ „ „
Worst lands pay $\frac{2}{10}$ „ „

A 3rd ordinance of 769 definitely decrees the collection of two taxes, one in summer and one in autumn:—

In the summer—
1st class lands pay $\frac{6}{10}$ bushel per *mow*.
2nd „ „ $\frac{4}{10}$ „ „

In the autumn—
1st class lands pay $\frac{5}{10}$ ($\frac{1}{2}$) bushel per *mow*.
2nd „ „ $\frac{3}{10}$ „ „

Bad land included in the last class.

Or, for the whole year—
1st class lands pay $1\frac{1}{10}$ bushel per *mow*.
2nd „ „ $\frac{7}{10}$ „ „

(The "denier de la terre," levied in 766, is not mentioned.)—*Journ. Asiat.*, Série III. vi. 294–9.

"The demand for money payments in 766 A.D. was in itself burdensome, and when three years later this was commuted into a biennial grain payment, the proportion of the produce taken, in the case of the more fertile lands, was nearer 25 than 10 per cent. . . . The rate of payment is thus twenty times as much as that paid by an ordinary cultivator under the Hans."—*Simcox*, ii. 150–1.

"It had formerly been a maxim of State that the land-tax should be paid by the occupier, who was normally also the owner; but as the effect of the redistribution of lands at the beginning of the dynasty wore off, some of the cultivators fell again into poverty and the land-tax into arrears. Yang-jin, one of the innovating financiers, then hazarded the startling doctrine that it did not matter who paid the taxes provided enough was paid (*Arbeiten d. R. Ges.*, p. 20; *Journ. As.*, 1838, p. 300). He therefore introduced a new plan of taxing artizans and tradesmen, so as to make the personal tax of these classes as remunerative as the land-tax. A great development of trade is said to have followed this measure, so we may suppose that previously the Government had put difficulties in the way of the cultivators leaving the land for other pursuits. The same principle served to justify the indulgence now extended to the rich proprietors who undertook to pay the personal taxes of their dependants, while taking their chance of evading the land-tax altogether. The increase in the amount levied gave the landless poor an additional motive for accepting the protection thus offered, without regard to its probable ulterior results."—*Ibid.* ii. 150.

[In course of time, however, through the increase of population and other circumstances, the old inequality was restored. In 780 a new edict was issued, by which taxation was regulated, not according to landed property, or capacity to work, but simply according to property of every kind, and for this purpose the whole people were divided into nine classes (see *infra*), according to property. They were also free to choose their trade and change their dwelling-place. Since this edict, the right of unlimited property in land has remained unchanged in China for over 1,000 years. Later dynasties could not change the land laws without affecting other parts of the constitution, and have left them unaltered except for temporary modifications to meet occasional abuses. The first result of the new edict was the decay of agriculture and the increase of trade. A law intended to protect the farmer against the oppression of the landowner (date of this law not given) fixed a certain rent according to the quality of the farm, and provided that, as long as the rent was paid, the tenant could not be evicted without legal cause.]—*Arbeiten d. Kais. Russ. Ges.*, pp. 20–22.

About this time the people were divided into three classes of three sections each:—

I.—(*a*) paid 4,000 *tsien* in taxes.
(*b*) „ 3,500 „ „
(*c*) „ 3,000 „ „
II.—(*a*) „ 2,500 „ „
(*b*) „ 2,000 „ „
(*c*) „ 1,500 „ „
III.—(*a*) „ 1,000 „ „
(*b*) „ 700 „ „
(*c*) „ 500 „ „

"The families of officials on duty (*officiers en exercice*) were divided into nine classes corresponding with the above and taxed according to the same scale."—*Journ. Asiat.*, Série III. vi. 294–9.

"The taxes had thus considerably increased since the Han dynasty, when the lowest assessment for a family was 200 *tsien* per annum. But the number of persons registered as taxable had diminished. The T'ang census never exceeds 3 million families, and each of these having a certain number of *feou-ke* depending on and working for them, whose taxes they paid,—the increased amount per family is thus accounted for."—*Ibid.* vi. 299.

The "system of the 'two taxes' became general in 780, under Te-tsong, and through the influence of his minister, Yang-yen. The first tax was to be paid, in summer, by the 6th moon at latest; the 2nd, in autumn, not later than the 11th moon. But this is only an accessory regulation. The important point in the new system of assessment is that the distinction between the classes of half-*ting* and whole *ting* (who, at 16 and at 21—afterwards at 25—received lands to cultivate from the Government) was no longer kept up. The only distinction made for the payment of the tax was between rich and poor. The landless families, called 客 *ke*, or strangers, were attached to the land which they were occupying at the moment, on the estates of the rich whose tenants they were, and the taxation was reduced to a land-tax (*l'impôt devint complètement foncier*). It was no longer necessary to search out the families who escaped the census, to give them land, to prevent the encroachments of the rich, or to alter the registers every year. This new system was favourably received, especially by the petty princes, who were thus relieved from the continued Government inspections; but, at the same time, the Government lost much of its direct authority over the people, and the decadence of the T'ang dynasty dates from this epoch."—*Ibid.* vi. 299–300. See also following extracts.

Yang Jên, who maintained that it did not matter who paid the taxes, "gave, in the early years of Te-tsong (780 A.D.), the formal sanction of the exchequer to the feudalizing tendency of rich landowners, by taxing the estate as a whole, and making the landlord responsible for taxes levied on all the landless families settled under his protection. Free labourers with no fixed settlement or occupation were called 'strangers'; and, as this class increased in numbers, the loss to the revenue, from the impossibility of taxing the migratory poor, became considerable."—*Simcox*, ii. 151.

"The new measure, though taxing land which had previously escaped, was not unpopular with the rich, because it gave for the first time a kind of legal sanction to the system of 'agglomeration'; and, by allowing, so to speak, the lord of the manor to stand between the State and the cultivators, it sanctioned his usurpation of those Imperial functions which had hitherto been sedulously guarded. The State, in fact, waved its right of determining what burdens should be imposed on the peasantry, in order to facilitate the collection of revenue, and the result was much the same as in the case of more deliberate attempts at farming the taxes. The new feudal chiefs used their power to make themselves independent of the Crown, the land-tax became a sort of tribute, to be refused by those who were strong enough to do so with impunity, and the gradual decay of the Imperial authority which led to the fall of the dynasty, was held to begin with this surrender of direct influence."—*Ibid.* ii. 151.

"In somewhat the same way, though more legitimately, the revival of the village system was used as a means of increasing the corvées, which at this time formed a serious and unpopular burden. The payment required in lieu of personal services was three times as much as that paid for the duty fields, and instead of the three days' labour required by the Chow Li, it was regarded as a concession to demand only twenty-two days' labour in the year. Individual labourers apparently had succeeded in evading the demands on them, and the labour tax was therefore assessed upon the village as a whole, so that the local authorities were obliged in self-defence to force all the inhabitants to contribute."—*Ibid.* ii. 151.

"As an encouragement to agriculture, newly reclaimed land was allowed to be held free of tax, and it is significant of the depressed state in which the cultivators found themselves that this permission was followed by complaints that the old taxed land was being abandoned in favour of the free wastes. Several memorials were addressed to Tai-tsong, against the oppression caused by public works, and he was reminded of the full treasuries left by the deposed Souy dynasty, to show how little a ruler is likely to gain by economies made at the expense of his subjects. Throughout the prosperous times of the dynasty it seems to have been a standing source of surprise and disappointment to the more thoughtful politicians that the common people were not as much better off as was to be expected from the aggrandizement of the empire; and the only explanation that presents itself is that the Government was more expensive, as well as stronger, than its predecessors."—*Ibid.* ii. 151–2.

"The *tsou*, *ko*, *yong* and *tiao* taxes were thus replaced by the two taxes (summer and autumn), but the mass of the people were no better off than before, and the collection was not yet legally and regularly carried out. The cash payments diminished the coin in circulation to such an extent (the emperors accumulated vast hoards, and, at the same time, coined less money every year), the prices of provisions were lowered, and the tax-payers, having no money, were forced to pay in kind. This opened the door to corruption, as the officials had to value the produce brought in, and did so at a low rate when receiving it, and at a high one when paying it into the treasury. The evil was still further increased in 806, by Hian-Tsong [Hsien Tsung] establishing three new extra taxes: (1) the *chang-kong* (offering to the emperor) (2) the *song-sse* (present), (3) the *lieou-tcheou* (part kept back for the districts). The two latter appear to have been purely local taxes, intended to pay the expenses of each district; by the advice of Pey-tsun [P'ei Chi], whom the emperor chose for his minister, a general estimate of the amount of these taxes was ordered to be made for the whole empire." "Every governor who did not find in his district a sufficient quantity of provisions to pay his share of the tax was allowed to supply this deficit from the districts depending on the former (*les districts dépendents du premier*). . . ." "To the same period belong the edicts of Hian-tsong, fixing the quantity of copper which each private person was allowed to keep in his dwelling, and instituting bonds on the Treasury (*fey-tsien*) delivered on deposit of metal, or other objects easily sold."—*Journ. Asiat.*, Sér. III. vi. 301–2.

The Emperor Tê Tsung's conversation with a peasant "explains why even the best days of the Tang dynasty fail to rank among the golden ages of popular tradition. Instead of the lawful tribute collected twice a year from the cultivator, this rustic complains that he is burdened with all sorts of mysterious and additional charges. He has to deliver the grain at Court himself, without being paid a better price than when the Government collected it, though he has either to hire animals to bring it, or wear out his own on the journey; and when by any chance a favourable harvest might make amends for his losses, he is obliged to sell his surplus at the lowest price, and buy it back again at the highest, the first time he is in want (*De Mailla*, vi. 350). In other words, the abuse which Ma-twan-lin describes, under the name of 'grain purchase by agreement,' was rife at this time, and the so-called voluntary contract was forced on the helpless cultivators by the ever-growing army of tax-collectors."—*Simcox*, ii. 152.

"In the 14th year of Mo-tsong, about 835, these three additional taxes were still in existence; the people suffered extremely from the unjust valuation of the goods presented in payment of taxes; and coined money had become so scarce that 8 *py* of silk stuff could be bought for the same sum in copper *tsien* which formerly had been the price of $2\frac{1}{2}$ *py*. Mo-tsong . . . following the advice of the President of the Home Office, declared that the taxes should be paid directly in grain and stuffs, without valuation, and that the officials were to forward the goods received direct to headquarters. In consequence of the oppression and fraud practised by these agents, disorder reigned supreme; lands remained uncultivated, and many villages were deserted. The edict of Mo-tsong removed the principal cause of these troubles, and in 841, his successor, Won-tsong, in order to revive agriculture, granted a general exemption from taxes, for five years, to those who should till barren lands and drain marshes. After this five years' delay, they were to pay in kind, according to the edict of 835. "In 852, Suen-tsong suppressed the taxes additional to the *summer* and *autumn* ones"—but the systems of valuation was partly restored. After this, no new regulations of the T'ang as to tax-collection are mentioned. Payments were still made in kind, though the amount had been fixed in money—owing to the scarcity of coin: a scarcity increased by the laws restricting the amount of copper possessed by private citizens, and the avarice of the rulers, who accumulated vast hordes."—*Journ. Asiat.*, Série III, vi. 302–3.

[The statement made by the Arab travellers in the 9th century that there is no land-tax in China probably referred to the commercial towns, of which alone the statement would be true.]

[For the *t'un t'ien*, fields allotted to soldiers, established with successful results in 701, see MILITARY.]

RANKS.—[The first Sui Emperor, Wên-ti, tried to introduce a division of the people into castes, which appears to have been modelled on the Indian system, and decreed that the son must always follow his father's occupation; but these regulations soon fell into disuse.]—*Klaproth. Tabl. hist. de l'Asie*, p. 203.

"The Indian ideas on the division of castes were already widely diffused in China under the T'ang dynasty, which instituted military castes."—*Ch. Repos.*, xviii. 361.

Priests, both Buddhist and Taoist, were objected to as being non-producers. "Anciently the people were divided into four classes, the scholars, husbandmen, artizans, and traders, of whom the first only had to be maintained out of the labours of the rest; but now six classes have to be maintained by three, so who can wonder if crime and beggary prevail."—*Simcox*, ii. 147–8.

Agriculturists.—[Under the Sui, no agriculturist was without occupation. People could now (T'ang) sell their lands if they wished. Common was converted into private land. Although land still existed which was nominally common, yet it was in reality private. See *supra*, *Land.*]—*Kang chien.*

[An instance occurs in the 7th century of an obscure farmer (Hsieh Jên-kuei) becoming a General. See *T'ang shih, Yüan chien lei han*, c. 356, *Ch'an yeh pu*, p. 10*a*.]

Artizans.—[Judging by their clever inventions, artizans seem to have been efficient workers. See *Kang chien.*]

Merchants.—[No satisfactory records occur showing the condition of this class under the Sui. The development of commerce under the T'ang caused an increase in their numbers, and the tribute sent by vassal States is said to have given them opportunities of greatly increasing their wealth.]—*Ibid.*

"Employés in the public service (食 祿 之 家) were not to compete for gain with the commons, and neither traders nor artizans were to have civil or military employ. New-born babes were officially termed 黃; when of four years old, 小; when 16, 中; when 20, 丁; when 60, 老. Accounts were balanced annually, and the census taken triennially."—*Ch. Rev.*, xiii. 400.

Hired Labour.—[The condition of hired labourers did not apparently change much under the Sui. Under the T'ang, three classes are mentioned:—(1) *shu yung* (see ABSOLUTE MONARCHY); (2) *ku p'u*, ordinary servants; and (3) *ya yi* (see ABSOLUTE MONARCHY).]—*Kang chien.*

Corvées.—"These works [canals] were constructed by a general *corvée* or levy *en masse*, each family being required to provide one able-bodied man, and the whole of the army was also employed on this public undertaking."—*Boulger, Short Hist.*, p. 26.

Slavery.—[Two classes of slaves, *chia p'u* and *chia t'ung*, are mentioned under the Sui. Six classes are mentioned under the T'ang (see *infra*).]—*Kang chien.*

"An edict of the 2nd year of T'ang T'ai Tsung [628] illustrates several points in connection with Chinese slavery. Slaves who accused their masters of treason or rebellion were to be executed, and no notice taken of the information. The historians con-

sider this edict of great social weight."—*Ch. Rev.*, xiii. 400. Various punishments re-introduced during the T'ang period had reference to slaves. See *Ch. Repos.*, xviii. 348, and LAWS.

"Rebels as well as their families were sentenced to be slaves of the State. . . . The youngest of about 14 years were divided among the imperial domains by the superintendent of agriculture; others were employed in making terraces. But, as China had been so much impoverished by its wars, that there were at that time a great number of slaves in private families, the first emperors of the T'ang dynasty freed by decrees many of the government slaves, divided between them the central and western provinces, and thus increased the numbers of the cultivators of the soil. . . . Towards the end of the T'ang . . . the prisoners made in the civil wars were often set at liberty by imperial order"—*Ch. Repos.*, xviii. 348.

"After the conquest of the southern provinces of China when the internal troubles were ended, the prisoners who had become private slaves were freed by authority, *but by a note under the hand of their master*, who was the arbiter of their liberty. [Rich houses were visited to see whether they contained any slaves beyond the legal number, or any] sick, infirm, or seventy years old. The last were freed by right; but this was rather advantageous to the masters."—*Ibid.* pp. 354–5.

"Rebels, when made prisoners and slaves of the state, did not obtain their full pardon except through three successive steps, which they were to gain by their labour." [This arrangement was peculiar to the T'ang period. See LATER FEUDAL PERIOD.]—*Ibid.* p. 355.

"This institution [of protected husbandmen (see ABSOLUTE MONARCHY)], which was bondage on a large scale, was afterwards opposed by the T'ang and the emperors of the following dynasties. . . . They dreaded this union of [property and serfs] in the hands of certain families, who thus rendered themselves independent and withstood the agents entrusted with the new verification of goods, and often caused great troubles."—*Ibid.* p. 357.

The T'ang dynasty "is known to have emancipated large numbers of Government *adscriptitii*, who had, during centuries of war, sought protection under great lords, but private families continued to keep them, and the T'ang Government ceased to emancipate privately-owned serfs against their master's will."—*Parker, China*, p. 185.

"In the seventh century . . . the emancipation of the slave by order of the government, against the will of the master, is seldom met with."—*Ch. Repos.*, xviii. 354.

"While the greater portion of the States that were tributary to China were slave-holding communities—that is, holding inferior peoples in servitude—the Chinese appear in history, with unimportant exceptions, practising domestic slavery, which, of necessity, was of a mild character—a sort of poor law." [Aliens were captured in battle, or bought from traders.] "At the beginning of the 8th century, rich men in Canton kept black slaves—men and women who were black as ink, hair frizzled or curly; the men were very strong, being able to carry several hundred catties; they could understand orders given in Chinese, but were unable to learn to speak the language of their masters. In their native wilds they ate food uncooked: those who preferred a change of diet to cooked food did well." "These were probably brought from the east coast of Africa—either by Arab or Persian traders—but negro slavery never became an established institution in China."—*Ch. Rev.*, xix 291.

[The practice of sending in female slaves by vassals as tribute was put an end to by the Emperor Tê Tsung. He also ordained that slaves should not be sold as chattels. In Shu the people generally sold their daughters to others as slaves, and a law was therefore passed by Li Tê-yü whereby a slave girl at the age of 13 years should be manumitted after having been in the service for three years; and, if under that age, only after having been in the service for five years; the manumitted slave to be sent back to her parents. In Yüan Chou, men and women could be hypothecated for loans, and if they were not redeemed within a certain time, and the interest charged thereon became as much as the loan itself, they became slaves. This custom was abolished by Liu Tsung-yüan, when he was magistrate of that place. He ordered that the service rendered by hypothecated persons should be paid for, and when the money so ordered to be paid came to as much as the loan and the interest thereon, they were at once to be liberated. Sometimes the masters burnt the deeds of sale, and liberated their slaves. At this time (T'ang dynasty, 618–907) slaves were of six kinds: (1) *kuan nu* (官奴), same as *hsi* (奚), mentioned before; (2) *chia nu* (家奴), mentioned before; (3) *ch'i nu* (騎奴), no exact definition is given, but probably duties were those of a groom; (4) *chia t'ung* (家僮), a little slave; (5) *ch'ing i* (青衣), mentioned before; (6) *shih pei* (侍婢), maid-in-waiting.]—*Kung chien.* See also following extracts.

At Yüan Chow, Han Yü "abolished an old but evil custom which allowed men and women to pawn themselves and their children to the officials for money, and the latter to confiscate as slaves all who were unredeemed. He even devised a means by which 700 of such slaves were purchased from their owners and restored to their relatives."—*Journ. N.-C.B.R.A.S.*, N.S. vii. 170.

[In 809, slavery was forbidden by Hsien Tsung.]—*Giles, Bio. Dic.*, p. 463.

841–64.—"The convent lands were confiscated . . . and . . . the slaves of the monasteries, to the number of 150,000, were set free, and, like the monks, added to the ranks of the common people, who were liable to the payment of land and labour tax."—*Simcox*, ii. 149. *Cf.* ECCLESIASTICAL.

INDUSTRY.—[The prohibition against the people obtaining salt from salt-ponds and salt-wells was removed in the Sui dynasty.]—*Sui shu Shih huo chih, P'ei wên yün fu, c.* 53, p. 39*a*.

"The whole period was one of increasing commercial activity, rather than one of increasing industrial prosperity. Both industry and commerce were hampered by Government interference, which was at least as often as not of an interested kind, and . . . resulted in the conversion of some of the leading writers of the day to the doctrine of *laissez faire*) in its most extreme form."—*Simcox*, ii. 153

"An apologue, by Liu-tsung-yuan (773–819), the philosophic defender of Buddhism against the diatribes of Han-wen-kung, represents the people as suffering quite as much from the indiscreet zeal of their rulers as from direct oppression." "There is . . . no difficulty in understanding how even a well-meaning Oriental Government at that date might over-govern and over-burden its subjects in the name of progress."—*Ibid.* ii. 152, 153.

"But some of the legislation was honestly meant to check the danger of excessive inequality in the distribution of wealth, to which the Government had always been alive; and even the clumsy restrictions on trade, in the supposed interest of the treasury, had at worst the same tendency. No country in the world has really less to gain than China by foreign commerce, and, blunder for blunder, it is less unintelligent for a Government which distrusts the mercantile class to discourage trade by legislative restraints, than for those which intend to promote trade and manufactures to hamper both by would-be protective regulations, such as were universally believed in by European rulers till within the last century or two."—*Ibid.* ii. 153.

"Merchants, farmers, workmen and traders should each have his special occupation. Those with salaries should have no right to compete for wealth with the people."—*Lu Chih Tsou i, Yüan chien lei han, c.* 145, p. 33*a*. *Cf.* EARLY FEUD. PER.

[The Arab accounts of China in the 9th century (*Ancient Accounts of India and China*, &c., tr. *Renaudot*, p. 24) state that, when any dearth makes the necessaries of life very dear, "then does the king open his storehouses and sell all sorts of provisions much cheaper than they are to be had at market," and hence no scarcity can be of long continuance.]

"The cost of living had risen to something like a halfpenny a day. . . . The estimated consumption of rice is 1½ lb. a day for each person, which is midway between average plenty and dearth, according to the standard of the Chow Li (*Journ. Asiat.*, Aug., 1837, p. 120)."—*Simcox*, ii. 164.

"The general rate of expenditure upon other articles than food, regarded as necessaries, had risen considerably since the . . . Hans."—*Ibid.* ii. 164.

"In the frontier districts no iron foundries were allowed to be built. All the necessary implements were supplied by Government."—*T'ang po kuan chih, Yüan chien lei han, c.* 358, *Ch'an yeh pu*, p. 25*b*.

[There were Government foundries, weaving and dyeing offices, etc., under superintendents, etc.]—*Ibid.* pp. 24*b*, 25*b*, etc.

[Ming Huang (712) closed the silk factories.]—*Giles, Ch. Lit.*, p. 168.

[Under the T'ang, Sung and Ming dynasties breeding stations were sometimes private and sometimes under Government.]—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 101. *Cf.* REARING.

Gilds.—"The origin of Mercantile Guilds is succinctly given in the Constitution and Bye-laws of the Ningpo Guild at Wên-chow, which, in a preamble such as those institutions usually publish for their *raison d'être*, says: 'Wei [Hui]-kuan were first established at the metropolis by mandarins among compatriots or fellow-provincials for mutual aid and protection. Subsequently, merchants formed guilds like those of the mandarinate, and now they exist in every province.'"—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 135.

[The idea first took shape in a curious way. Provincial mandarins, on visiting the capital, found that they were quite unable to cope singly with the exactions of the officials, and the insults which their local pronunciations and provincial attires drew upon them from the people. They determined, therefore, to combine for mutual protection, and to establish guilds as common centres for protection in case of need, and for the more congenial purpose of social intercourse. For like reasons provincial guilds were founded in all parts of the country.]—*Ibid.* pp. 135, etc.

"How long metropolitan compatriot guilds have been in existence I have been unable to discover. Early in the Ming era a Kiangsu guild (*Yen-ling, Wei-kuan*) flourished at Peking, and it is probable they were known as early as the Tang period. Being of the nature of clubs, their origin may have been much more ancient."—*Ibid.* xxi. 135.

"We are not likely ever to know with certainty whether the gild in China was formed at a comparatively recent date to meet new conditions of trade, or was simply the development of an institution already existing." "Yet traces of those principles which characterize the institution in other countries are sufficiently marked in China to denote them as in some legitimate sense survivals of more ancient associations, or as having, perhaps, passed at a remote period from aother country."—*Williams, Ch. and Med. Gilds*, pp. 204, 205.

"The two great classes of gilds in China are the *Wei-kwan* (clubs), resembling mediæval merchant or trade gilds, more distantly our modern chambers of commerce, and *Kung-so* (public halls), representing craft gilds, and, in a less degree, trade unions. While it is too soon yet to affirm anything positively as to their age or origin, we infer that the *Wei-kwan* were developed before the *Kung-so*, and afforded in some degree a model to the artisans in forming unions on their present basis."—*Ibid.* pp. 207–8.

"At Peking the Guilds include compatriot members and merchants—the official class, of course, preponderating. In the provinces the mercantile is the controlling element; mandarins not needing such protection."—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 135.

"Provincial compatriot Guilds have two main objects in view—protection against sectional prejudices to which settlers from distant places are subjected, and for the prevention of litigation among its members; and, latterly, including the functions of Chambers of Commerce."—*Ibid.* xxi. 135.

907–60.

Land.—"About 930, under the Heou-t'ang [Hou T'ang], a chief of Hoai-nan, restored the payment in coin of the *tsou, tiao* and *ko* taxes. In default of money, the officials collected the produce of the land, and re-sold it to the taxpayers at more than its value—this was called a friendly agreement. We see that at this time the land was taxed by the *king* (= 100 *mow*), the first quality at 2,100 *tsien*, second quality at 1,800, third at 1,500. Silk stuffs worth 500 and 600 *tsien* a *py* were fixed by the tax at 1,700 and 2,400—that is to say, at *three times* their value."—*Journ. Asiat.*, Série III. vi. 304.

"In the time of the Heou-tçin [Hou Chin], in 940, in the south-eastern provinces, which the Heou-t'ang had kept, under the name of the Southern T'ang, . . . the autumn tax was declared payable in kind without valuation; but for every 10 bushels of grain, a surplus of 3 was demanded, in return for which the Government gave 3 lbs. of salt, which was a Government monopoly. This kind of forced exchange was frequently repeated in later times."—*Ibid.* p. 305.

"In 954, Tcheou-chi-tsou wished to re-people his kingdom, and granted proportionate remittances of taxes for 15 years to any vagrants who would settle down to till the ground; but his officials made a profit out of these exemptions by selling them to cultivators who had never left their work."—*Ibid.* p. 305.

"Under the Heou-han, in 948, the exactions and fraud only increased. In 951, an Emperor of the Heou-tcheou [Hou Chou] the last 'later' dynasty, Tay-hou [T'ai Tsu] forbade the exportation of leather from his states, and it appears that under the Southern T'ang this exportation was punished with death."—*Ibid.* p. 305.

"The able Emperor 郭 榮 [954–60] had to deal with a Chinese Ireland. It was represented to him that repeated decrees had authorized the cultivation of larger areas by the peasantry at the former rates of taxation; but no sooner were improvements made than the tax gatherers came to view the land and raise the 'rint,' in consequence of which the people felt uneasy, and took no pains to extend cultivation."—*Ch. Rev.*, xv. 249.

[*Ranks* and *Hired Labour* were the same as in previous Period.]

Slavery.—"At the end of the T'ang dynasty and under the five later dynasties, during the civil wars, the emperors repurchased with their own money the cultivators of the soil made prisoners by their armies."—*Ch. Repos.*, xviii. 350. See also p. 355, where it is added that they were sometimes (but not so often) enfranchised by imperial decree.

Sung Period (960 *to* 1280).—*Table VI.*

LAND.—"The economic history of the Sung divides itself into two portions, that before and after Wang-ngan-shi [1021–86], almost as the history of the Hans is cut in two by the reign of the usurper Wang-Mang."—*Simcox*, ii. 180.

[At the beginning of the Sung dynasty, the amount of private property in land had increased to such an extent that the rents paid to private owners far exceeded the amount received by the government from peasants farming their own land. The government therefore began to farm out the crown lands (*i.e.*, the lands of extinct families escheating to the Crown, forfeited lands of criminals, and those taken from Buddhist and Taoist priests) instead of selling them or distributing them to the poor. At first, except for the military colonies there was very little Crown land. See end of Period.]—*Arbeiten d. Kais. Russ. Ges.*, p. 23.

"The founder of the Sung dynasty, by an edict of 961 appointed inspectors to go through the provinces and abolish illegal taxes. Another edict of the same year prescribed the kinds of grain which were to be sown or planted. This was afterwards left to the choice of the cultivators, as the differences of soil could not be provided for by the law. The old weights and measures were restored (they had been altered under the Five Dynasties); the unit of money payments was to be the *tsien* and that of payments in grain the *ching* (= $\frac{1}{10}$ bushel); for silk stuff the *tchy* [*ch'ih*] (exact foot); for spun silk, the ounce; for wood (faggots) and grass, the usual bundle (*botte*); for gold and silver, the exact tenth of an ounce. The taxes (edict of 970) were to be paid in these things, and not in articles of luxury—which, it is probable, had previously been sent in to the treasury by officials, at a higher value than the real one." "In order to distribute the [taxes fairly], it was enacted in 963 that every year the officials of the state, such as superior civil and military officials down to the heads of districts called *tcheou* and *hien*, should in person summon the individuals of each family to the door of the house occupied by the latter and thus directly collect the amount of the summer and autumn taxes. Those who could not, or would not, pay were to have half a month's grace, afterwards extended to a whole month by an edict of 987." This (being also found in an edict of Yang-ti of the Sung dynasty—about 609) seems to have been the usual manner of taking the census."—*Journ. Asiat.*, Série III, vi. 306–7.

"An edict of 975 declares that, in default of a sufficient quantity of silk stuff, payments were to be made in money, and it was declared illegal for 'several families to add together the fractions of their share of the tax, as they formerly did, to complete the legal measure of a *py*—a piece or roll of stuff.'"—*Ibid.* p. 307.

"It remains to find out what the tax on produce at that time amounted to. The *Khan-chu-pi-khao*, Vol. III. p. 41, in the chapter on taxes, says positively that at the accession of the Sung, the tax was reduced to $\frac{1}{20}$ of the crops, and that thus the burdens on the people were light. But from this general estimate we must not conclude that at this time the system of collecting in proportion to the produce was followed. According to the documents furnished by Ma-touan-lin, and the division of the land into five classes which he indicates, it seems much more probable that the tax was fixed at a definite sum of money per *mow*, as we have seen was the case under the Heou-t'ang. But, in consequence of the scarcity of coin, payment in five principal kinds of articles (money, grain, silk stuff—coarse or fine—linen, and metals) was admitted; the price in money of the four last named being fixed by the government. But as the quality of grain, silk, and linen is subject to variation, it became necessary for officials to value them, and this once more opened the door to fraud. It is very strange that, in spite of the considerable quantity of copper cash coined at this period, rural proprietors should have been unable to pay their tax in coin; this seems to me to indicate a very imperfect state of communications in the interior, as we still see in some parts of France, where farms will not let except on condition of half the rent being paid in corn (*qu'à moitié grains*). The superior official charged with the collection of the land-tax even bore the name of 'Prefect of land and water transport.' He was supposed to receive the goods at the chief town of his district, and then—as it suited him and them—made agreements with those taxpayers who would not bring their produce so far as that town; this occasioned frequent difficulties."—*Ibid.* pp. 307–8; and see p. 316, where it is shown that only an insignificant part of these taxes was paid in coin.

"The empire having been desolated, in 987, by a general drought, the following years present edicts for the recall of the dispersed people to whom the State promises a reduction of taxes. Some time previous to these edicts, a certain Pao-tchy presented a petition describing the great decrease in the number of peasant families, the frequent flight of the farmer when the harvest was bad, and the injustice of the tax-collectors, who indiscriminately charged other families with the amount owed by the fugitives. He concludes by saying that the debt ought to be recovered from the relations of the fugitives, rather than their neighbours. A system of mutual responsibility (*solidarité*) among relatives was then put in force, but it gave rise to many complaints, and was soon abandoned."—*Ibid.* p. 309.

"In 995, we find an edict prompted by the desertion of many farms in consequence of bad years. As the tax-collectors had not succeeded in inducing the vagrants to return to a settled

life, the latter were offered the deserted lands to cultivate, under the title of *tching-nie*, with exemption from taxes for three years, at the end of which time they were to pay half the produce. The state seems to have taken possession of the deserted farms, which explains the considerable amount of the tax collected at the end of three years. This tax includes the rent to the proprietor, over and above the usual tax."—*Ibid.* pp. 309–10.

"About this time, it was discovered that, in the district of Kai-fong-fou, which was called the court district, 10,283 families, registered in the previous census, were missing, having fled in consequence of being condemned as defaulters. This flight left many lands untilled, which thus paid no tax to the government till they were bought, or simply seized upon, by the neighbours. To put a stop to this state of things, an inspector-general was sent to the place, with 14 subordinates, to draw up an accurate list of the deserted farms. A fortnight's delay was granted to the fugitive owners to make their declaration, and they were promised release from all their debts to the state. At the expiration of this period the land was probably sold on terms similar to those of the preceding edict. This amnesty brought back a large number of families."—*Ibid.* p. 310.

"It was complained that the total amount of the landlords rents exceeded that of the emperor's taxes. The account of three departments added to the empire in 985 A.D. . . . gives the proportion between the rent or tribute-paying inferiors and their lords, when the latter had emancipated themselves from any external suzerainty. The district was occupied by 125 families, to whom 1,600 other families paid tribute. Ten acres was, at this time, regarded as an average holding for a family, and at this rate the average estate of each landlord, besides what was in his own occupation, would be nearly 1,300 acres, or 10,000 *mow*, a magnitude now almost unheard of, and always considered extravagant."—*Simcox*, ii. 189–90.

"Two classes of families are recognized in the Sung registers—the landowners in their own right and those who farmed the land of others on a kind of métayer system, who were described as 'guests.' With the prevalence of sub-letting, laws and customs grew up for the protection of the tenants, which are still in force, and have in effect robbed the rôle of landlord of all its charms. A fair rent and fixity of tenure were secured to the cultivator, and, as the central Government again became strong enough to assert its claims as overlord, by the appropriation of all waste or ownerless plots, its influence began to be felt again as formerly in preventing rack-renting."—*Ibid.* ii. 190.

The custom of letting land had become so common that, in 997, it was proposed to let deserted fields "to willing tenants at a moderate rent, instead of ceding them out of hand, as had been done in earlier times, or granting them for a term, subject to redemption by the Crown, when the tenant ceased to rank as an able-bodied taxpayer. When the land was granted for three years, rent free, the rent after that time was at first fixed at 50 per cent. of the produce, following, no doubt, the precedent of the métayer system in use among private persons; but the Government seems, on the whole, to have preferred a fixed rent, subject to allowances for bad years. This rent may have included a slight advance upon the ordinary land-tax, to which the freehold properties were subject, and, indeed, otherwise the freeholder who had bought his farm would be at a disadvantage compared with the State tenants who had paid nothing for a lease in perpetuity."—*Ibid.* ii. 190.

"In 997, Y-tchin-song, at that time imperial historiographer, addressed to the emperor a similar petition with regard to deserted farms, requesting that the State might take possession of them and grant them to other persons at a fixed rent." "Ma-touan-lin compares this proposal with the system established in the 5th century by the Emperor Hiao-wen of the Yuen-wey. In both cases the State took possession of unowned lands, and granted them to new tenants. But the Yuen-wey were imitating the system of the Tcheou. They granted out lands to be cultivated only during the tax-paying (*ting*) age. When he had passed this age, the farmer had to hand back his land to the State, to be handed over to a new tenant. According to Y-tchin-song's proposal . . . the *cession was a complete alienation*, subject to the payment of rent. Besides which, the State assumed the obligation of supplying the new tenants with cattle and seed-corn, to be paid for at the end of five years. This repayment occasioned many difficulties, and the government lost part of the capital advanced."—*Journ. Asiat.*, Série III. vi. 310–1.

"Judging from an edict of the year 1000, it would seem that it had already been recognized that the exemptions granted to vagrants in order to induce them to work had given occasion to numerous frauds. Many farmers deserted their land in order to demand new allotments, and enjoy the benefits of the three years' exemption." "Express instructions on this subject were sent to the officials, in the years 1004–1008; a special office of *promoter of agriculture* was created, and the people were allowed to complete at the autumn payment any deficit in their summer tax. The delay allowed for paying this summer tax was extended to the 10th moon, and that for the autumn tax to the 2nd moon of the following year. Each year the inspectors were to make in advance an estimate of the harvest of their districts, and according to the results of this examination, they could raise or lower the total of the taxes. It will be seen that the government revenues were still very uncertain."—*Ibid.* pp. 311–2.

"Since the year 973 an additional tax on the quantity of articles furnished by the taxpayers had been revived; this tax had been established by the Heou-t'ang, about 928 or 930, for the payment of the officials employed in collecting the taxes. At that time it had been at the rate of 7 *tsien* on every 1,000 *tsien* in cash, and 1 *tsien* on every *sho* [*shuo*] (or 10 bundles of hay or wheat). Under the Sung, the product of this tax, called the *tsien teou*, was divided into two parts, one of which reverted to the State, and was placed in the treasury; the other was allotted to the expenses of the officials, as Ma-touan-lin explains in a note. Besides this, there was levied, at the time, 7 *tsien* for every 1,000 *tsien* in cash, 8 or 10 *tsien* for every *py* [*p'i*] of silk, 1 *tsien* for every ounce of silk thread, pound of tea, or *sho* of hay or wheat." "In 1040 all this additional cash was required to be paid into the treasury, and in 1069 there was required, over and above (for the payment of officials), 5 *tsien* for every 1,000 *tsien* in money, or for every *chy* [*shih*] (= 10 bushels) of grain. In 1116, there was collected besides this, 5 *tsien* for every thousand *tsien*, ounce of silk, *chy* of wheat, *py* of silk stuff. Another addition of 5 *tsien* was made in 1134, so that by this time each amount of 1,000 *tsien* received in payment of taxes, was further assessed with a tax of 23 *tsien*, of which 10 were set apart for the inspectors or receivers. Later on, in 1143, the same additional *tsien* rose to 43 per 1,000 on the value of the goods collected."—*Ibid.* pp. 312–3.

"After these various details, Ma-touan-lin reports three surveys of land, somewhat incomplete, executed in the years 975, 996, and 1021. . . . He follows them up with a detailed enumeration of the various articles which entered into the payment of the *tsou* and the *choue* [*shu*]—on the taxes payable in produce and in money. The *tsou* is . . . the land-tax which every family had to pay in corn. The *choue* was to include the rest of the direct taxation, which was payable in money by each family, and this seems to me evident from a long note in which Ma-touan-lin divides these two united taxes (*tsou* and *choue*) into five sections, as follows:—

Sections of Taxation.	*Remarks.*
1. Tax on State lands.	This branch of the revenue was composed of a part of the produce of the imperial domains and of lands colonized or cultivated by soldiers. The cultivators of these various lands paid a rent which constituted the tax on State lands. [*Gutzlaff* (*Sketch* I. 344) says that Chin-tsung ordered a census in 1014, and found the number of families who paid tribute to be 9,955,759.]
2. Tax on the people's lands.	Tax levied on land cultivated by each family of the nation.
3. Tax on enclosures and collections of dwellings.	This was the tax on inhabited houses and on land within the walls of towns.
4. Tax on various articles.	Under this name were included the duties (*droits*) on ox-hides, on salt for eating [?], and for silk-worms [?], which were levied according to the kind of articles produced by each family and also formed part of the direct taxation.
5. Tax on individual *ting* or healthy adults.	The persons between 20 and 60 years of age in each family were counted, and each of them taxed with a certain quantity of rice, in payment of his or her personal contribution."—*Ibid.* pp. 313–4.

"According to this note, it seems to me evident that the *tsou* and the *choue* together represented the total of the *direct* taxes collected in this period. Ma-touan-lin has given the details of the joint *product* of these two taxes in the years 997 and 1021. [See Tables on p. 316.]"—*Ibid.* pp. 313–4.

[In the beginning of the reign Chien Hsing (1022) they began to delimit the fields. Anyone who appropriated the field of another had to forfeit to him one-third of his own field.]—*Sung shih Shih huo chih, P'ei wên yün fu, c.* 106, p. 49*b*.

"The most extensive survey of cultivated land made under the Sung dynasty took place in 1020 or 1021. The result is 5,247,584 *king*, 32 *mow*, and though this figure is much lower than those of the Han and the T'ang, it is much higher than that given by previous surveys of the Sung; which proves that the appeal to the cultivators had not been in vain. In 1023, we find a new edict, by which foreigners are summoned into King-si and Tang-ki, to cultivate waste land. These provinces were situated in the north-west, near the independent prince of Hia and the Tartars, who devastated them by their incursions, as soon as the Chinese emperors were at all slow in paying them the tribute agreed upon."—*Journ. Asiat.*, Série III. vi. 317.

"The rest of the empire, according to history, was at that time fairly well cultivated, but landowners and cultivators were strongly opposed to the enumeration of the estates. The two following surveys—those of 1052 and 1064—show, respectively, only 2,280,000 and 3,400,000 *king* of cultivated ground—an enormous reduction on the figures of 1021. The Imperial counsellers recognized the existence of an enormous deficit, which they estimated at not less than seven-tenths—so that the taxation was distributed in the most unequal manner, and the great majority of estates paid nothing to the Government."—*Ibid.* vi. 317. See also Table on p. 319, and following extracts.

"Up to the year 1021 the record of the area of cultivated land subject to taxation continued to increase proportionately with the population. By 1052 it had fallen off unaccountably—more than 50 per cent.—whilst the number of tax-paying families still multiplied. Officers of the time, according to Ma-twan-lin, reported that as much as 70 per cent. of the cultivated land escaped assessment; but this is probably an exaggeration, as, if taken literally, it would imply that a quarter of the whole area of China was under cultivation, which is scarcely possible, considering the scantiness of population in the wilder districts. It seems more probable that the large landowners continued to defy the tax collectors, and it is possible that while the State tenants were counted as householders in the census, their lands, for which the rents were paid separately, were not counted as liable for land-tax."—*Simcox*, ii. 192.

"It is not conceivable that the average size of holdings should have been reduced by half in the course of thirty years, and the reference to a proposition made in 1062 to tax 20 per cent. of the cultivated lands, seems to imply that then, at all events, no attempt was made to tax, nor, therefore, to register, all the lands under cultivation. Usage oscillated between two plans, both sanctioned by antiquity, of levying a certain percentage of the whole produce and levying the whole produce of a corresponding fraction of the productive land. Either plan was open to objection, and it is likely that financiers from time to time thought is desirable to meet the abuses that had grown up under one system by reverting to the other, till that in its turn became unworkable."—*Ibid.* p. 192.

Shên Tsung's minister, Wang An Shih, undertook the reform of these abuses, and, under Imperial patronage, attacked (1069) the prevailing system of land tenure. He "exempted the poor from all taxation. He allotted lands, and he supplied the cultivators with seeds and implements. He also appointed local boards to superintend the efforts of the agricultural classes, and to give them assistance and advice. But this paternal Government, this system of making the State do what the individual ought to do for himself, did not work as it was expected. Those who counted on the agricultural labourer working with as much intelligence and energy for himself as he had done under the direction of a master were doomed to disappointment. Want of skill, the fitfulness of the small holder, aggravated perhaps by national calamities, drought, flood and pestilence, being felt more severely by labourers than by capitalists, led to a gradual shrinkage in the area of cultivated land, and at last to the suffering of the classes who were to specially benefit from the scheme of Wanganchi."—*Boulger, Short Hist.* p. 40. See also *Oxenham, Atlas*, Pref. p. iii.

"The keynote to Wang's financial policy was the belief that it was possible to do without taxation; or rather that the expenses of the State might be defrayed, in lieu of taxation, by the profits realized on certain commercial operations, which he wished the State to undertake on its own account. He was in favour of substituting fixed money payments for contributions in kind or labour, and did not trouble himself to enquire how far the economical gain to the Treasury, from such a change, might be counterbalanced by the losses of individual taxpayers. The first innovation propounded was to abandon the old practice, by which the provinces sent their contributions or taxes in kind to the capital, where they were sold for the benefit of the State," possibly for much less than the market value, and consequently at a loss to the forwarding locality. "Wang argued . . . that the value of these contributions varied from year to year, and he proposed to substitute a fixed payment, the produce of which was to be spent by the officials in buying the goods required by the State in the cheapest market. It is obvious, however, that the cultivators under this scheme would lose at least as much as the State gained, by the substitution of a fixed payment in money for a variable quantity of agricultural produce. The primitive Chinese custom made the State go shares with the peasant in his losses, as well as his gains" [see LATER FEUDAL PER.]. "To carry out the proposed measure a special transport commission was demanded, with a capital of five millions cash and three million piculs of rice, to pay for the first purchases and the staff expenses. The scheme was negatived as too costly," and the argument that it afforded opportunities for fraud was used against it.—*Simcox*, ii. 181–2.

"Another unpopular measure, called the 'Forced Labour Emancipation Act,' had the same tendency as the last project, and was actually put into effect. The corvée, it is admitted, is not an economical or very efficient instrument for getting work done, and it is not improbable that the State at this time received much less than the traditional value of the labour tax; on the other hand, the increase of population and the development of private industry must have very much reduced the proportion of labour required on the public service. A mere proposal to compound for the labour tax would, therefore, not have been untimely, and possibly not unpopular, if it had not been accompanied by the attempt to restore the amount of the tax to its traditional nominal value before effecting the composition. The sum required being comparatively large, *i.e.*, the value of the day's work which theoretically should be—instead of those which actually had been—given, the payment in money instead of kind was found onerous."—*Ibid.* ii. 182.

"According to Ssema-kwang, the peasants had no money; they obtained grain by ploughing, and cloth by growing cotton and mulberries; and if they had to pay a uniform money tax in bad seasons they would have to root up their mulberry trees for firewood, kill their buffaloes, and sell their land to meet the demands of the tax-gatherer. On the other hand, we are led to infer that the poor would also lose the benefit of the wages paid them by the rich, who hired substitutes to do their share of the work."—*Ibid.* ii. 183.

"Besides compounding for the corvée, a supplementary tax was imposed to form an insurance fund against the losses in bad years, when even the Innovator admitted that it would be impossible to extort the 'Labour Emancipation aid money.'"—*Ibid.* ii. 183.

"The labour tax was not, like the land-tax, habitually evaded by those best able to pay it, and the commutation scheme was made additionally unpopular by being associated with the abolition of the exemptions previously allowed, in favour of families in which there was only one able-bodied man, or those consisting of women and children exclusively. Upon the financial failure of this labour tax a general property tax was imposed on all classes."—*Ibid.* ii. 183.

"The most important and the most vigorously criticised of the new laws was . . . the 'Green Sprout Law' [青苗法]. The proposal was that the State should lend grain out at 4 per cent. to the farmers, either for sowing fresh lands for the benefit of the State, or to carry them over bad seasons. The seed was to be advanced from the public granaries in the spring, and repayment made, of principal and interest, in the autumn. The scheme was founded partly upon the benevolent provisions of the Chow Li, which allowed advances free of interest to the poor, and partly on a temporary expedient recently tried by the Board of War, which, in order to provide food *in situ* for the frontier troops, and to save transport, made advances to the cultivators of the neighbourhood on condition of their growing grain in proportion for the soldiers."—*Ibid.* ii. 183. The law met with violent opposition. For the arguments against it, see *ibid.* ii. 183–5.

"Another unpopular proposal was that of selling certain 'charity lands'; that is to say, State property obtained by confiscations, or other means, and set apart for benevolent uses. . . . It is possible that Wang's attention was called to this subject by the scandalously small proportion of cultivated land which paid the land-tax, and it may have been associated with his next measure, the order for a complete cadastral survey of the whole country." "This was abandoned on his fall, and though resumed for a time, in the reign of Tche-tsong, was, unfortunately, never completed. Its effect is to be seen, however, in the increase of the area registered for taxation in 1084, to more than double what it had been in 1052, when the lowest point was reached, and not much less than the maximum recorded in 1021, just before the palmy days of the regency. Title-deeds, which are mentioned as something new, were granted on occasion of the survey; and the simplicity of the cultivators, and the perverse ingenuity of the minor officials, is illustrated afresh by the complaint that, when the land was marked out into squares of a certain size for the survey, the cultivators were persuaded that odd lots outside the squares were of no value, and so induced to sell them at a nominal price."—*Ibid.* ii. 185–6.

All "the cultivated land of the empire . . . was to be divided according to a new measure, the *fang tien*, or square field—*i.e.*, a square of 1,000 *pu* a side, containing 41 *king*, 66 *mow*, 80 *pu*. The inspectors whose duty it was to assess the tax were to distinguish two qualities of land: the black and the red, and the tax was regulated according to these colours, which indicated a greater or less degree of fertility. But this regulation could only be carried out slowly, amid the protests of all the rich or official families in the State, against whom Wang . . . had to struggle during his whole tenure of office."—*Journ. Asiat.*, Série III. vi. 318.

"It is not surprising that, with all these new regulations, added to the chronic vexations which made the cultivator's life burdensome in the days of Tang, popular discontent grew deep, if not loud; it was described by a contemporary as of that most dangerous sort, 'when the people do not dare to speak, but dare to be angry.' . . . Complaints came in from all quarters, from the local governors, of the people's suffering in repaying the loans and the charges of the tribunals for exacting payment." In 1085 "the obnoxious legislation was repealed."—*Simcox*, ii. 187–8. See also *Journ. N.-C.B.R.A S.*, N.S. xxi. 189–90; *Ch. Rec.*, xxv. 205–13, 259–64.

"During the 15 years of Tchi-tsong's ministry, which lasted till his death in 1100, the administrative organization of China grew sensibly weaker. The Court were much more occupied in discussing the interpretation of the *king* than in governing the country, and the tax-collectors were not very closely watched. Only, in 1086, the official known as the *Imperial Historian* pointed out, in a petition, that one of the officials in charge of the transport (which was the title of the collectors) had collected in his district an exorbitant duty for the transport of the produce delivered in payment of taxes; that he had taxed every family indiscriminately at 18 *tsien*. The affair was examined before the tribunal of punishments, and the families of the people were taxed according to their rank and the distance of transport. Another edict of 1094 relates to unclaimed lands, which were often sold on account of the State, without sufficient inquiry."—*Journ. Asiat.*, Série III. vi. 320–1.

"In 1104, a new emperor, Chy-tsong [? Hui Tsung], gave orders to resume the survey of the land according to the *Fang tien* system; and the operation was to begin again with Kiang-si and Kiang-pe-lou. These *Fang tien* were, as already stated, squares of 1,000 *pu*: certain men employed in the survey made the people believe that detached parcels outside the squares lost their value, and bought them at a low price. This fraud was suppressed; but the operation itself only advanced slowly, for during the 20 years' interval the registers of the measurements made in 1072–1085 had disappeared, and the limits fixed for estates had been destroyed. In 1106, the emperor ordered the survey to be carried out simultaneously in all districts of the empire; but, so soon as 1108, many doubts were raised as to the accuracy of the operations already finished. The work was stopped for some time, and begun again in 1110; and it continued during the ministry of Tsai-king, till 1120, when it was finally interrupted. The survey having proved that a considerable number of estates paid no tax, and the surveyed estates having probably been taxed too heavily, many families had dispersed, and given up cultivation. In 1120 they were induced to resume their work under promise of a complete remission of whatever they might owe. In the provinces where the survey had not been carried out the taxes were to be collected *en masse* from each district, just like a military requisition."—*Ibid.* pp. 321–2.

"Between 1125 and 1130, the Sung were deprived by the Kin of all the north-eastern provinces as far as the Kiang, and they did not recover from this terrible blow. The new expenses required by the long wars against the Kin, or other Tarters, increased their financial embarrassments, and the taxes were collected without any regular order. Sometimes the Government created new taxes in order to supply the deficit of the Treasury; while the officials valued the articles brought in payment too low, so as to increase the sum levied on the tax-payers. Sometimes, in districts where the peasants, overwhelmed with misery, had left their farms and taken to brigandage, the emperor entered into negotiations with these brigands, and promised them entire amnesty and exemption from arrears of taxation, on the sole condition that they would return and cultivate their farms. When the Kin invaded the provinces . . . on the left bank of the Kiang, the result was still a compromise, by which the emperor pledged himself to pay tribute to the Kin; while, at the same time, he was forced to grant a delay of payment to the various provinces ravaged by the invasion, or exhausted by the expenses of the war." *Ibid.* pp. 322–3. *Cf.* EXCHANGE.

"Choo-hi [1130–1200] is said (in a work compiled under the Ming, 1602 A.D.) to have put an end to disorders which prevailed in the district where he resided by restoring the system of public storehouses for grain. . . . The satisfactory result was reported to the emperor, and other provinces commanded to follow the same plan. . . . But it is not clear how Choo-hi's action, which is praised, differs in principle from some of the measures of Wang-ngan-shi, which were regarded as practically mischievous, as well as speculatively unsound. The fact seems to be that experiments in State socialism in China are judged by their results, which is only satisfactory when they are devised and carried out by exceptionally able and absolutely disinterested officials."—*Simcox*, ii. 191.

"According to the *Khun-chou-pi-kao*, in the last days of the Sung dynasty, under Li-tsong (1225–1260), the principal minister of this prince, Kia-sse-tao, had the idea of restoring the institution of the *kong-tien*, or State field. According to the passages quoted in the continuation of Matouanlin, this minister merely tried to fix with accuracy the limits of estates which were still uncertain, and insisted on greater strictness in the collection of the taxes."—*Journ. Asiat.*, Série III. vi. 323–4.

"Apart from the laws of Wang it does not seem that there was any sudden change in the system of land tenure or the condition of the cultivators. It will be remembered that slavery, as introduced by the Hans, made way under the minor dynasties which followed, for a kind of feudal servitude, which largely reduced the number of householders paying taxes direct to the imperial treasury. By the beginning of the Sung dynasty, slavery had fallen into disrepute, the relics of feudalism were passing away, and in their stead we meet with a form of the modern relation of landlord and tenant."—*Simcox*, ii. 189.

"But it is obvious that, as freeholding again became the rule, the distinction between the cultivator paying land-tax for the farm of his ancestors, and the cultivator paying rent for a smaller farm, would become more and more unreal; the process by which the tax became a rent would reverse itself, and the rent would recover its normal character of a land-tax. The land laws of the present dynasty, which, so far as concerns the agricultural land of China, are substantially borrowed from the Ming, show us the outcome of the agrarian policy of the Sung. The drift of legislation, apart from the Innovator's vagaries, was to assimilate the landlord's position to that of the Emperor, and not conversely. Land could only be let at a fair rent, and when once let, the farmer was not allowed to be disturbed without legal cause."—*Ibid.* ii. 190.

"Nevertheless, large estates continued to grow, and in 1263 it was again proposed to limit the amount of land which might lawfully be held by a single owner to 100 *mow*; and everything above this amount was liable to be bought or confiscated by the Crown. It was considered a proof of loyalty and liberality voluntarily to surrender such excess lands, without waiting to have them claimed; and a sufficiently absurd abuse is said to have them claimed; and a sufficiently absurd abuse is said to have grown up in consequence, officers not possessed of any land, but desiring to pay their court in this way, having obtained possession tyrannically of other men's lands, that they might make a merit of surrendering them."—*Ibid.* ii. 191. See also following Extract.

[At first, except for the military colonies, there was very little Crown land. Afterwards, especially towards the end of this dynasty, the amount was greatly increased. About the same time, when the Sung dynasty were struggling against the Mongols, it was resolved to make all freeholders pay rent to the emperor in the same proportion as tenant farmers did to their landlords. A calculation had been made, showing that 100,000 *zin* of land were needed to produce seven million sacks of corn—*i.e.*, enough for the largest army. In 1263, therefore, it was decreed that all officials and all the people (in contradistinction to the nobility) were to give up to the government all the land they possessed over 100 *mu*, receiving in compensation a sum proportioned to the annual rent. An estate paying one sack as a year's rent was valued at 200 thousand cash [?] pieces (200 *Tausendstücke des chinesischen Kupfergeldes.*) In carrying out this law, the officials frequently forced men possessing *less* than 100 *mu*—sometimes by means of torture, to give up their land. Though the insecure position of the Sung Dynasty, and the discontent of the people caused this law to be dropped, it was not without favourable results for the treasury. The Crown in this way acquired a great deal of land, and a special class of peasants was formed.]—*Arbeiten d. Kais. Russ. Ges.*, pp. 23–4.

[A farmer in Fuh-kien related to Simon that the valley of the Ta-Shwui-Khi was first settled by his ancestor Wang, who regulated the course of the river, and tilled the ground, in the reign of Sung Yuen Fung (1078–86), about 800 years previously; and his descendants had remained on the land ever since.]—*Simon, Cité chinoise*, 252 *et. seq.*

[For the military levies, which for a time were a heavy burden on the agricultural population, and the provision of cavalry horses by the people, see MILITARY.]

RANKS.—[Some information relating to *agriculturists* has been given under LAND. Under Chên Tsung they were officially encouraged and it is said were happy and contented. *Artizans* were of various kinds, but none possessing conspicuous skill is mentioned. *Merchants* were an increasing class. Some made their living by selling prints of the handwriting of the noted Ch'in and Han calligraphists.]—*Kang chien.*

Hired Labourers.—[An ordinance of the Sung fixes the maximum time for which free people may engage themselves as hired servants, at five years, and insists that] "the engagement should be made in clear and precise terms. Wages are settled by the year or month."—*Ch. Repos.*, xviii. 355.

[Classes of hired labourers were (1) *shu yung* (書 傭), (2) *ku p'u* (僱僕), (3) *kuan pan shih* (館 伴 使), and (4) *ya yi* (衙 役)—see previous Periods.]—*Kang chien.*

Forced Labour.—"Wang [An-shih]'s plan [of Impressed or Conscripted Labor for the State 募 役] was to do away with the abuses which had grown up around the system of the State's requiring service from its subjects. He proposed to divide the people, including women and the unmarried, into five classes, according to their wealth, and then to issue money to them called 'Tsu-yu' [*chu i*] 助 役, or help for service, on which interest must be paid at the rate of two per cent. per mensem. This interest was to be taken by the State in lieu of labour, which had been formerly required. The plan was to commence in Kai-feng-fu as an experiment and then extend to all parts of the Empire. Sz-ma Kwan[g] objected to the feature of causing women and the unmarried to take money as they had never formerly been liable for work. He also pointed out that work had not been required of the people all the time but only when necessary, and that under the new money-plan the people would be under an incessant burden. The scheme never came into full operation and was finally abandoned in the first year of Cheh-tsung."—*Journ. N.-C.B.R.A.S.*, N.S. xxxv. 74.

"The corvée system underwent modifications under the Emperor Kao Tsung [1117] of the Southern Sung Dynasty. Under this system, 25 families formed a 保, and 16 *pao* a 都. The ancient feudal 井 system was also recommended [recommenced ?] during the struggles of this monarch with the Tartars. 16 夫 were one 井, and every *tsing* had to furnish [賦], two soldiers and one horse: the women had to furnish three feet of pongee and an ounce of cotton or six feet of cloth and two ounces of hemp. Every 夫 was to have 50 畝 of land."—*Ch. Rev.*, x. 222.

Slavery.—"Under the Sung and following dynasties we hear no longer of the slaves of government, but of persons sentenced to transportation. It appears then that the State has definitively renounced the task of maintaining in the country those masses of public slaves which existed under the Han Dynasty."—*Ch. Repos.*, xviii. 348.

"In peaceable times, such as under the first emperors of the Sung dynasty, the Government always aimed at reducing the number of slaves in the houses of the rich; but it no longer interposed in so direct a manner as Han Kien-wu, neither did it give the slaves the right of redeeming themselves . . ."—*Ibid.* p. 354. See also *Parker, China*, p. 185.

[In the district of Chien Ning, male slaves were taught to cultivate land, and female slaves to spin. Both were treated well. In all his dealings with his slaves, male and female, Ch'êng Ming-tao always observed strict honesty. Occasionally, a man or his children would voluntarily sell themselves into slavery.]—*Kang chien.* See also *infra*, INDUSTRY.

[Slaves were of six kinds: (1) *kuan nu* (官 奴), mentioned before; (2) *hsiao hsi nu* (小 奚 奴), same as *shu t'ung* (書 僮); (3) *chia jên* (家 人), another term for general servant; (4) *chia nu* (家 奴); (5) *kêng nu* (耕 奴); and (6) *chih pei* (織 婢), weaving girl.]—*Ibid.*

INDUSTRIAL.—[The great Ssŭ Ch'uan salt industry was first organized in 1132. It differed from all the others, the brine being extracted from deep artesian wells, instead of being prepared from sea-salt.]—*Parker, China*, p. 217.

"Even in Nüchên and Mongol times there was some official control of the Liao-yang salt flats."—*Ibid.* p. 220.

[On the accession of T'ai Tsu the public granaries were re-established.]—*Giles, Bio. Dic.*, p. 70.

State-trading.—"Besides the Grain Loan Law, the chief plan for raising revenue without taxation was the so-called Barter Law; this was professedly intended to revive the market regulations of the Chow dynasty, which contemplated sales and purchases of goods by the State, with the sole object of keeping prices at the same level. . . . The transactions under this head can scarcely be separated from those undertaken in connection with the taxes and the transport commission. The only money with which the State could buy, and the only goods it had to sell, were those received on account of the revenue. But there was more opportunity for purchases on account of the Government when distant provinces paid their quota in money instead of goods delivered direct for use. The Government establishments opened under this law seem to have been something between an Owenite Exchange Hall and a pawnshop. The State became the chief trader, to the disgust of the *literati* and the masses alike; and private trade was ruined by the competition of the Government. Su-che's prophecy, however, was fulfilled as to the absence of any real gain to the Exchequer."—*Simcox*, ii. 186.

"While the traders were complaining that their business was taken from them, State benevolence tried to conciliate them with the offer of loans on the security of town lands or houses at 10 per cent. interest for the half-year. In fact, if the execution of all these schemes had been on a par with their conception, and if the Chinese had been as manageable as the ancient Egyptians, the great financial *coup* attributed to the Hebrew Joseph would have been paralleled in China, and even without the help of the seven lean years of famine, Wang-ngan-shi would have bought up on account of the Emperor the freehold of all China. The whole scheme foundered on the rock which is really the corner-stone of the political economy of the country—the conviction that ownership is based on use, as well as limited by the discharge of civil obligations. The State could only be allowed to make itself universal creditor on condition of extracting no more profit out of the rôle than a private person would do; and as both slavery and serfdom were ceasing to find a place in the national manners, it was at least a thousand years too late to establish State absolutism on an economic, for want of a political, basis."—*Ibid.* ii. 186–7.

"The fiction, by which the Emperor was supposed to have a monopoly of the goods brought by foreign traders, was still kept up in a way; but, in the case of the Southern capital, which was also a great seaport, the rights of the Crown evidently tended more and more to be compounded for harbour and custom duties, amounting to 10 per cent. on most foreign merchandise."—*Ibid.* ii. 221–2.

Gilds.—"There were in this city [Kinsay = Hangchow] twelve guilds of the different crafts, and that each guild had 12,000 houses in the occupation of its workmen. Each of these houses contains at least 12 men, whilst some contain 20 and some 40—not that these are all masters, but inclusive of the journeymen who work under the masters. And yet all these craftsmen had full occupation, for many other cities of the Kingdom are supplied from this city with what they require."—*Yule, Marco Polo*, ii. 146; see also *Simcox*, ii. 220–1, who adds: "These are obviously round numbers corresponding, perhaps, to the classification of the dwellings paying house-tax."

"Marco Polo was given to understand . . . that the twelve great trade guilds of Hang-chu-fu (his Quinsay) had each their own district, and were strictly hereditary, even the rich being compelled to follow their father's calling to the exclusion of any other."—*Simcox*, ii. 54, note. See also *Williams, Ch. and Med. Gilds*, pp. 208–9, who states that the "condition of industrial organization and wealth . . . points to a system of at least some antiquity in that period," and points out that the chief motive of consociation was protection: "social and industrial interests are regulated by the people or classes most intimately concerned, the officials being loth to interfere, except in cases of physical outrage." "Here, then, we detect the vital necessity amongst a people normally suspicious, ignorant and clannish, for mutual protection associations, which, in their practical working, supply a very fair substitute for an equitable and helpful government. Without institutions of such obvious utility, business on a large scale could hardly be prosecuted anywhere in the Chinese Empire." See also extracts given under MANCHU PER.

LIAO (CH'I-TAN).

Land.—"Among the tribes whose power increased at the expense of the Chinese empire, the first were the Liao who since the 10th century A.D., had occupied the northern provinces known as *Leao-tong* and *Pe-tche-ly*. Accustomed hitherto to the freedom of nomad life, the Liao began to settle and to engage in agriculture. An edict of one of their chiefs, dated 1027 . . . enacts . . . that the lands cultivated by military colonies (*t'un-t'ien*) were to belong to the State, and the corn grown on them could not be freely sold. This, says the text, was the regulation of the *kong tien*. As to waste untilled lands, the poor people who undertook to break them up, were to be exempt from taxes for 15 years. Those who tilled the alluvial lands of the Hoang-ho and other rivers, were only to pay the *tsou* tax at the end of 10 years. Finally, we have the regulation as to private lands, which were divided by *mow* and taxed proportionately. Mountains were not taxed. Taxes, as under the Sung, were collected by the officials of each district, and expended in the same district—only the product of the tax on wine was sent to the court."—*Journ. Asiat.*, Séric III. vi. 324–5.

"In the reign T'ung Ho [983–1012], the Liao Emperor Shêng Tsung called on the people to cultivate the waste lands of Luan Chou [in Chih-li] and freed them from the land-tax for 10 years."—*Hsü wên hsien t'ung k'ao, Yüan chien lei han*, c. 356, *Ch'an yeh pu*, p 6*a*.

Industry.—"In the 5th year of the period T'ai P'ing [1024] [private] workmen were forbidden to melt metal."—*Liao shih Shêng Tsung chi, P'ei wên yün fu*, c. 82, p. 164*b*.

KIN.

Land.—"After the Liao came the Althoun-khan, called *Kin* by the Chinese, who, in 1125, repulsed the Sung as far as the Kiang, seized on their capital, Kay-fong-fou, and kept possession for more than a century of nearly all the country north of the Hoei (Hwai-ho). The Chinese author of the continuation of Ma-touan-lin says that, for the measurement of land, the Kin fixed the value of the *pu* at 5 *tchy*, that of the *mow* at 240 *pu*, that of the *king* at 100 *mow*. The people were not forbidden to sell or pawn their lands. The taxes had to be paid according to the different crops, and the planting of mulberry trees was especially recommended. The *Kin* are said in history to have exhausted the country which they occupied. These conquerors, unused to labour, thought only of procuring intoxicating drink, sumptuous garments, and articles of luxury. The people were ill-treated by them and the cultivation of the fields generally neglected."—*Journ. Asiat.*, Série III. vi. 525–6.

"The amalgamation of the two peoples [Kin (Chin) and Chinese] was . . . promoted by the settlement of agri-

cultural colonies, bound to render military service when called upon, in those central provinces which were furthest from the seat of the Northern government."—*Simcox*, ii. 174.

Slavery.—[In 1125 an imperial decree was issued stating that influential families had no right to buy poor people as slaves. (For penalty see LAWS).]—*Hsü t'ung tien ch'i yao*, c. 20, p. 7*a*.

INDUSTRY.—[There were various government departments carrying on industries, such as clothes-dyeing, clothes-cutting, figure-designing, embroidery, implement-making, chiselling stone, moulding in clay, etc. See *Yüan chien lei han*, c. 357, *Ch'an yeh pu*, p. 29*b* ; c. 358, pp. 24*b*, 26*b*, etc.]

Mongol Period (1280 *to* 1368).—*Table VII.*

Land.—"As soon as the Mongols became civilised, they imitated the Chinese regulations. The celebrated Chinese minister of Ogodai, Ye-liu-tchou-tsai, substituted, in the northern provinces, the personal for the land-tax. . . . in imitation of the taxes called *tsou, yong, tiao* by the T'ang. The personal tax was divided into two parts : each family had to pay half a pound of silk for the general expenses of the state, and . . . every five families, one pound of silk . . . for the personal expenses of the district officials. [Land was divided into three classes according to goodness, and each quality assessed at so much per *mao*.]" "This system was afterwards modified : families were taxed by *ting* or able-bodied individuals, old men and children were exempt. Each person, on reaching full age, had to pay ten bushels of grain. Those immediately below it . . . paid five bushels. Newly settled families only paid half. . . . Compensations were admitted. Families with much land and few persons of the *ting* age paid the territorial tax. Those in the reverse position paid the *ting* tax. Artisans and bonzes (both Buddhist and Taouist) were liable to the land-tax." "When the provinces south of the Kiang were conquered, the tax was collected . . . in summer and in autumn, which was an imitation of the T'ang." "Under Kublai Khan, the taxes were considerably increased. . . . In the first class, every person of full age was to pay 30 bushels of grain . . . in the second, ten. The difficulty of carriage necessitated the valuing of produce, as under the Sung . . . The culture of the mulberry was still the object of special attention on the part of the government. In the Hoai-sy, first-class families were required to plant 10 *mao* with mulberry-trees ; second-class ones, 5, and the lowest, 2 only. This was the only point in which the Mongol government interfered with the arrangement of the crops."—*Journ. Asiat.*, Série III. vi. 326–9.

Sacharoff says that the Mongol government tried "to convert the whole country into steppe and pasture-land, and if possible drive out the Chinese. An edict forbidding cultivation was issued in A.D. 1230. Only towards the end of the dynasty was some tillage permitted in the autumn."—*Arbeiten*, p. 21.

"The land nearly all came into the hands of the ruling race who (even down to the private soldiers), acquired enormous estates. . . . Since the nobles could seize the property of the peasants with impunity, the latter preferred in many cases to give up their lands voluntarily and live on them merely as tenants. Commissions were several times appointed to rectify this evil, but they all came to nothing. In 1314 the government attempted to impose by force a law favourable to the peasants : the result was a revolt and the restoration of the former state of things."—*Sacharoff*, pp. 22–3.

[For hunting preserves, and officials in charge of hunting arrangements see *Yule, Marco Polo*, ii. 6 ; i. 356, 361].

Ranks.—[The encroachments made by the rich and powerful brought the poorer *agriculturists* to a state of destitution. Many died of starvation or sold their wives and children. The enactments above-mentioned providing for fixed holdings were made to remedy this state of things. A *chang* or headman was appointed over each parish. *Artizans* seem to have occupied much the same position as before. Ch'êng Tsung (1295–1308) forebade anyone sent on a mission to a foreign country to trade. (See also *Hsü wên hsien t'ung k'ao, Yüan chien lei han*, c. 357, *Ch'an yeh pu*, p. 19*a*.) Ying Tsung (1321–24) imposed taxes on traders by sea, and forbade girls, gold, silver, silk and cotton to be exported. With these exceptions, *merchants* were not subject to any other restrictions.]—*Kang chien.*

According to Odoric of Pordenone "all the people of this country are traders and artificers, and no man ever seeketh alms, however poor he be, as long as he can do anything with his own hands to help himself."—*Simcox*, ii. 232.

[*Hired labourers* were : (1) *shu yung* (書傭) ; (2) *ku shih* (僱使) ; (3) *ku p'u* (僱僕) ; and (4) *ya yi* (衙役)—see previous Periods.]

Forced Labour.—"The official annals of the dynasty describe this [Grand Canal] and other canal works as executed by the forced labour of millions, 'of whom the majority perished' (*Pauthier's Marco Polo*, p. 481, etc.)."—*Simcox*, ii. 225.

"The three months of December, January, and February during which the Emperor resides at his capital city, are assigned for hunting and fowling, to the extent of some 40 days' journey round the city, and it is ordained that the larger game taken be sent to the Court. . . . The animals are gutted, and despatched to the Court on carts. This is done by all the people within 20 or 30 days' journey. Those at a greater distance cannot send the game, but they have to send the skins, after tanning them, and these are employed in the making of equipments for the Emperor's army."—*Yule, Marco Polo* (1st ed.), i. 352.

"Whatever traces could be found, in the old laws, of the Emperor's right to have his horses maintained at the public expense, were sure to be revived and made the most of, to the great disgust of the Chinese, who objected to the charge of the Government horses, even when nominally paid for it."—*Simcox*, ii. 222.

Slavery.—[Slaves were divided, as before, into *hsi* (奚), *chia nu* (家奴), *chia t'ung* (家僮), and *pei* (婢). Cases are mentioned of people selling themselves into slavery to obtain money to bury their deceased parents, or as a means of subsistence after the internecine struggles of the Empire.]—*Kang chien.*

"The Mongol invasion threw a great number of all classes of Chinese into slavery. The Mongol code forbade the selling of children to be trained as actors and actresses ; these, as well as courtesans, were recruited from the children of slaves. The Mongol emperors . . . [liberated private slaves only in a few individual cases—those] of *literati* made prisoners during the invasion. . . . The first ordinance which forbade the military to marry an operative dates from the fifth year of Kublai Khan (1264), and many Indian dogmas were brought into China by the Mongols, or by the priests belonging to their suite. . . . After the invasions of the Kin and Mongol dynasties in the 12th and 13th centuries [came an epoch of inhumanity]. . . . These Tartar conquerors allowed their slaves to remain in the greatest destitution, and often branded their bodies ; but their inhumanity should not be laid to the account of the natives."—*Ch. Repos.*, xviii. 350, 351, 355, 361. *Cf.* some extracts from T'ao Tsung-i, quoted in *Ch. Rev.*, x. 283–4 (see Ming Period), where it says that "modern registers of the personalia of Mongols, when speaking of slaves as a class, employ the term 'prisoners of war.'"

Industry.—"All merchants arriving from India or other countries, and bringing with them gold or silver, or gems and pearls, are prohibited from selling to anyone but the Emperor. He has twelve experts chosen for this business, men of shrewdness and experience in such affairs. These appraise the articles [*cf. Ta Ch'ing Lü Li*, Staunton's trans., Sect. cliii], and the Emperor then pays a liberal price for them in those pieces of paper. The merchants accept his price readily, for, in the first place, they would not get so good an one from anyone else, and, secondly, they are paid without any delay. And with this paper money they can buy what they like anywhere over the empire ; whilst it is also vastly lighter to carry about on their journeys. And it is a truth that the merchants will several times in the year bring wares to the amount of 400,000 bezants, and the Grand Sire pays for all that in paper. . . . So he buys such a quantity of those precious things every year that his treasure is endless, whilst all the time the money he pays away costs nothing at all. Moreover, several times in the year proclamation is made through the city that anyone who may have gold, or silver, or gems, or pearls, by taking them to the Mint, shall get a handsome price for them. . . . Thus the quantity they bring in is marvellous, though those who do not choose to do so may let it alone. Still, in this way, nearly all the valuables in the country come into the Kaan's possession. . . . And if any baron, or anyone else soever, hath need of gold, or silver, or gems, or pearls, in order to make plate or girdles, or the like, he goes to the Mint and buys as much as he lists, paying in this paper money."—*Yule, Marco Polo* (1st ed.), i. 379–80.

"In the period *Yüan Chêng* [1295–97] of the reign of the Emperor Ch'êng Tsung of the Yüan dynasty junk merchants were forbidden to export gold and silver."—*Hsü wên hsien t'ung k'ao, Yüan chien lei han*, c. 357, *Ch'an yeh pu*, p. 22*a*.

Under Timur Khan [Ch'êng Tsung, 1295–1308] "the rigour of the fishing and hunting laws was relaxed."—*Giles, Bio. Dic.*, p. 733.

"The institution of the Hong merchants, who were made responsible for the foreign trade in recent times, existed already in embryo. The Mussulman trader who landed in China was allowed to take up his abode either with a resident merchant of his own faith, or in an hotel. In the first place, the merchant, in the second the innkeeper, was made responsible for his property and sustenance, and was required to act honestly as trustee on his behalf. The foreign merchant was allowed to buy slaves, or marry if he pleased ; but he was not allowed free access to the Chinese parts of the town, as it was held contrary to public policy to allow the growth of any class making a trade of ministering to the profligacy of foreigners. The inland traffic was protected with the same kind of vigilance."—*Simcox*, ii. 236.

"In A.D. 1280, during the reign of the Yuen dynasty, a high officer was appointed by the Chinese Government to superintend the potteries."—*Gray, China*, ii. 235.

"With a view to the fabrication of vases and other vessels from baked clay for the especial use of the Royal family, an Imperial edict was issued in the second year of the reign of the Emperor Hung-wu, A.D. 1366, that a large factory and furnaces should be erected on the Chu-Shan, or Pearl Hill ; and, in order that the works of this Imperial factory might be properly regulated, a very high functionary was appointed with power to exercise a general authority over the whole establishment. This edict was obeyed ; but the building then erected" was burnt by "the rebels in 1854. . . . The workmen employed were chiefly from the two districts of Fou-laong and Pan-tong ; and the mandarins at one time had power to compel persons residing in these districts to work in the Imperial factory. An official, however, of the name of Chu Tsun, regarding such a measure as one of a most arbitrary nature, suggested that labourers should be invited to come from all the adjacent districts. After some delay this suggestion was approved and adopted, and it was open to all labourers in the neighbourhood to come forward and engage themselves as workmen in the Imperial factory at remunerative wages. The workmen were divided into five classes, to which the names of 'Fire,' 'Water,' 'Wood,' 'Metal' and 'Earth' were respectively given. The duties allotted to these five classes were arranged . . . under no less than twenty-two different heads."—*Ibid.* ii. 235–7.

"Besides this Imperial factory, there were, in the same town, . . . no fewer than 3,000 ovens, which were the property of enterprising citizens."—*Ibid.* p. 237.

[There were official wood-carving, weaving dyeing, ornament-making, etc., departments or bureaux. See *Hsü wên hsien t'ung k'ao, Yüan chien lei han*, c. 357, *Ch'an yeh pu*, pp. 29*a*, 30*b* ; c. 358, p. 24*b*, etc.]

"There were in this city [Kinsay = Hangchou] twelve guilds of the different crafts, and . . . each guild had 12,000 houses in the occupation of its workmen"—representing, perhaps, 240,000 journeymen and masters. "And yet all these craftsmen had full occupation, for many other cities of the Kingdom are supplied from this city with what they require."—*Yule, Marco Polo* (3rd ed.), ii. 186.

"It was an ordinance laid down by the King that every man should follow his father's business, and no other, no matter if he possessed 100,000 bezants."—*Ibid.* ii. 186. "Though Rubruquis (p. 292) says much the same thing, there is little trace of such an ordinance in modern China. Père Parrenin observes : 'As to the hereditary perpetuation of trades, it has never existed in China. On the contrary, very few Chinese will learn the trade of their fathers ; and it is only necessity that ever constrains them to do so' (*Lett. Edif.* xxiv. 40). Mr. Moule remarks, however, that P. Parrenin is a little too absolute. Certain trades do run in families, even of the free classes of Chinese, not to mention the disfranchised boatmen, barbers, chair-coolies, etc. But, except in the latter cases, there is no compulsion, though the Sacred Edict goes to encourage the perpetuation of the family calling."—*Ibid.* ii. 196, note 3.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

Land.—"History is very concise as to the enactments of the Ming in general. We find in the continuation of Ma-touan-lin four enumerations of cultivated land, relating to the years 1360, 1502, 1542, 1578 ; they are presented without explanation, and are singularly different from one another. . . . The total revenue from the taxation of 1360 was 29,433,350 *chy* [*shih*] of grain, 45,330 *ting* (1 *ting* = 10 ozs.) in money, and 288, 546 pieces of silk stuff. If we may judge from the silence of history, it does not seem that the Ming government reserved to itself any right of directing the way in which land was to be cultivated, or that it enacted any rules for limiting individual ownership. . . . This seems to indicate that the Government at that time, in practice, respected rights of property consecrated by time ; but we cannot infer from that the right of ownership in land was thenceforth perfectly free in China. . . . In fact, at the present day, various articles of the [Manchu] penal code limit the rights of private property, and this code . . . appears to be merely a reproduction of the Ming code."—*Journ. Asiat.*, Série III, vi. 329–30.

"At the beginning of the Ming dynasty, the Crown lands formed one-seventh of all arable land : in the west, only one-fifteenth belonged to private owners, the founder of the Ming dynasty [having here] confiscated all the property of the rich. . . . Crown lands served to reward favourites, meritorious generals or civil officials, endow pagodas, etc. . . . Appanages in China, date from . . . the re-introduction of free trade in land. . . . The first farm carried on account of the emperor is not older than the Ming dynasty. The beginning was made in 1464 [see *infra*] with the confiscated property of a eunuch, which, instead of being sold, as would have previously been the case, was managed on behalf of the emperor's privy purse, and increased by the addition of 35 more, making in all 37,595 *zin*. These domains increased rapidly, and the officials who had charge of them frequently enlarged them by absorbing the land of the neighbouring peasants."—*Sacharoff*, pp. 24–5.

"The Government was called on to deal . . . with the two evils always bequeathed by a period of civil disorder, the depopulation of agricultural districts and the growth of a landless class ; and, as is usual in China, the two evils were allowed to cure each other. The landless inhabitants of five towns, amounting in all to 4,000 households, were removed to colonise a vacant district ; cattle, seeds, wagons, and necessary provisions were given them, together with three years' immunity from taxation. In other parts soldiers were employed to reclaim waste lands ; and in the north, where the population was sparse, the number of public functionaries was reduced."—*Simcox*, ii. 238.

"The whole of China is divided up into lots ; they call each lot *quintei* [*kêng ti*, ploughed land] ; it will be sowing land of four *alqueires* [an *alqueire*, as a dry measure = 13 litres] of rice. Every husbandman is obliged to pay from this land of his a certain quantity of rice. Now they sow, then they do not ; now to-day they have good seasons, then bad ones. When the seasons are not favourable they become poor, and sell their children in order to pay : if this is not sufficient, they sell the properties themselves. They are obliged, every person that has this acreage of land, to give certain persons for the service of the mandarins, or for each person twenty *cruzados*. They are obliged to supply all furniture of colored tables, chairs, beds, ewers and other trifles for the houses of the mandarins. . . . Those who have not lands are obliged each one to give certain persons ; and, if he have no person, money ; and, if he have no person or money, he in person has to serve and eat at his own cost and fee the person he serves."—*Ferguson, Lett. from Port. Capt.*, p. 126.

"In all this kingdom there is not one that is lord over any subject or vassals (as they of Turkey), neither have they any jurisdiction proper, but that which is his patrimony and movables, or that which the king doth give them in recompense of good service . . . all the which doth end with the person and is returned again to the king, except he will give it to the [deceased's son], in courtesy more than by obligation or duty. . . . [It is explained that this was in order to prevent any subject becoming too rich and powerful. Officials received large salaries to secure them against any temptation to bribery.]"—*Mendoza, Hist.*, i. 79–80.

Among the reforms of Ying Tsung's reign "may be named the formation of state farms on waste or confiscated lands."—*Boulger, Short Hist.*, pp. 91–2.

"A more important matter, and one that was pregnant with grave consequences in the more distant future, related to the land, and what may be termed the rights of feudalism. . . . The members of the reigning house, and all who had contributed to its elevation, naturally expected some reward for their position or their services ; and it became their first ambition to obtain territorial grants from the sovereign, and to found an estate which could be handed down as a patrimony to their descendants. The feudal practice and system had died out in China many centuries before, and it was not to be supposed that a people like the Chinese, strongly imbued with the principles of equality, and only recognising as a superior class the representatives of officialism and letters, would look with much favour on any attempt to revive an order of territorial magnates with whom they had no sympathy. Hientsong himself felt no strong interest in the matter. He knew the people's mind on this subject, and he was aware that the authority of the king is rather diminished than enhanced by the presence of a powerful and warlike nobility, who have always been prone to see in the ruler the highest member of their order rather than the 'divinely elected' guide of the people. On the other hand, he was not sufficiently cold to resist the importunities of his friends. In this matter, therefore, of making territorial grants to the more prominent of his supporters he vacillated between the one side and the other. The representations of one of the censors led him to pass an edict against any territorial concessions, but within a very few weeks of this firm and wise decision he was so far influenced by his relations that he conferred several grants of land on members of his family. The rule once broken was seldom afterwards rigidly enforced, and gradually the scions of the Ming family became territorial magnates, much to the discontent of the people. It was in the eyes of the latter a flagrant interference with the laws of Providence to assign to one man a district which could supply the wants of a hundred families. The socialistic tendency of these theories is evident, but in China their evil has been arrested and corrected by the veneration of the people for the sovereign and by the natural conservatism of the masses."—*Ibid.* p. 92.

In 1464, mention is made of the "beginning of the establishment of imperial 'farms.' It is recorded as something new that the Emperor kept for himself the confiscated lands of political or other offenders. 'After this' (*i.e.*, in the reign of Hien-tsong, 1465–85) 'members of the imperial family and nobles frequently took lands from the people to make estates.' Light is thrown both on this abuse and the change in the financial order . . . by the complaints which began to be made that the revenue of the Emperor and Empress is now regarded as private property to be spent in buildings, and fêtes, instead of in maintaining the army or preventing scarcities. In fact, the court had begun to hanker after a Civil List, while the people still took the primitive view that the sovereign should pay the expenses of his sovereignty out of the pocket which his subjects fill for him. . . . The noticeable point in China is that the discussion . . . could be put off so long."—*Simcox*, ii. 244.

"In 1468 (*De la Marre*, p. 341) one of the Emperor's daughters, a prince, and a priest had asked for grants of land and had obtained them, in one case as much as 4,000 acres. An officer represented that uncultivated land used to be allotted free of taxes to the cultivators—of old an estate of 10,000 acres formed the hereditary domain of 100 families: was it fitting to make such a grant to one man? The Emperor on reflection thought not, and ordered restitution, but later applications on a somewhat more moderate scale were nevertheless allowed to pass. The following year the Empress's maternal uncle asked for a grant of fields which he declared to be neither taxed nor cultivated. A commission of inquiry was sent, and reported that all the land was on the register and under cultivation, but that 7,000 *mow* of confiscated land were ownerless. The uncle thought this was not worth having, and another commission was sent; but, instead of bringing back a discreetly revised statement of facts, their report set forth that 'since the beginning of the dynasty the lands in the department concerned had been ceded in perpetuity to the cultivators, to till and reclaim, free from taxation for the encouragement of agriculture. Is it fitting that families united to the Emperor by the memory of services rendered or matrimonial alliances should dispute with the people for an inch of ground?' The two signitaries of this formidable theory of *noblesse oblige* were thrown into prison, but released on the unanimous demand of the magistracy." "The true state of the case probably was that the coveted land had been granted to the cultivators on the usual terms, viz., a temporary immunity from taxation, and that when the time of grace had expired, careless or corrupt officials omitted to carry the reclaimed lands on to the register for taxing. And if this be so, it is significant that a small error in form of the subject was held no plea for a greater one by the Government."—*Ibid.* ii. 244.

[For details respecting the struggle between the cultivating peasantry and the 'agglomerators' of land in the 15th cent., see the *Yüan Shih* and the partially completed translations by the Abbé de la Marre.]

"Four lists of the amount of cultivated land registered for taxation were published under the Ming Dynasty; the first in 1370 by order of its founder, and the others respectively in 1502, 1542, and 1582. The quantities show a surprising variation; and it will be observed that the minimum is reached in 1502, just at the time when the revision of the salt monopoly, following the attacks upon agglomeration, began to encourage the industry of small cultivators." The amounts are:—

1370 A.D. ..	.. ..	8,496,523 *king.*
1502 A.D. ..	.. ..	4,228,058 „
1542 A.D. ..	.. ..	4,360,582 „
1582 A.D. ..	.. ..	7,013,976 „

"The latter area, according to M. Biot's estimate, would be about equivalent to 120 million acres, or a little over 10 acres to a family, according to a census taken two years before."—*Simcox*, ii. 252, and note.

Ranks.—[For *agriculturists* see under *Land.* No change of any importance seems to have taken place in the condition of the *artizans.* Shih Tsung (1522-67) ordered that dishonest *merchants* should be bambood. See *Kang chien.*]

[A habit had grown up of seeking the protection of rich persons, and of pretending to be workmen or traders, in order to escape excessive taxation.]—*Parker, China*, p. 189.

[*Hired labourers* were: (1) *shu yang* (書傭); (2) *ku p'u* (僱僕); (3) *kêng yung* (耕傭): (4) *ch'ang sui* (長隨), an attendant who always accompanied his employer; and (5) *ch'ai yi* (差役), the same as *ya yi*—see previous Periods.]

Forced labour.—"An organisation for taxing and corvée purposes was perfected in the reign of Hung Wu. founder of the Ming dynasty. . . . One 里 consisted of 100 戶, or land-tax payers, and the 10 who paid most were 里長 on alternate years; the other 100 formed 10 甲. In the city, instead of 里, the term 坊 was used, and in the suburbs the term 床. [A 坊 was a 里 thus booked and registered, and the term 圖 seems to have been alternatively used.] The proletarians attached to each 圖, who were not liable to corvée were called 田奇."—*Ch. Rev.*, x. 221. See also following extract.

"In 1381 a list was drawn up of the contributions and forced labour to be exacted throughout the empire; 110 households were reckoned to make a village; the ten largest taxpayers being counted as chiefs; the other hundred were divided into ten sections, so that theoretically each headman represented ten households. The old people and widows and orphans were not counted; the lists were revised every ten years, and the share of each group in the public works allotted every year."—*Simcox*, ii. 238–9.

In the reign of Hui Ti [1399–1403] "the people of Nanking, the then capital, were required to provide for the Emperor's stud, and the measure was now extended to Peking; families under a certain size had to maintain one horse, and those over the size had to maintain two. The smaller households, which formed groups subject to mutual responsibility or collective punishment, were required to maintain one horse for every seven households. As the horses multiplied the people had to give up more of their pastures to make room for them, and the labour of herding them occupied all or most of the youths of fifteen, to whom their charge was committed. By a further practical abuse the people were also required to maintain free of charge the horses of official underlings."—*Ibid.* ii. 240.

"In 1413 . . . . 'the people were made to maintain horses.'"—*Ibid.* ii. 240. *Cf.* SUNG and MONGOL PERIODS.

"In 1430 he [Hsüan Tsung] proposed to excuse the people from making good the loss of the Imperial horses, and . . . was told [by Yang Shih-ch'i] to excuse arrears for wood and forage, to enforce justice in the purchases made on account of the Emperor, not to oppress the over-numerous workmen in the capital, and to reduce the rent of the State lands. The rents of the public fields around Su-chow were reduced accordingly from twenty to seven million bushels. The transport of the grain required for the army had become even a greater burden than the supply of the grain itself, and it was hailed as a welcome measure of relief when, in 1431, the troops were allowed to undertake the transport themselves. About this time a whole batch of virtuous officers were appointed, and continued to hold their posts for the next ten or twenty years. . . . One of these virtuous governors fell to the share of Su-chow; he opened a granary called the 'Labourers' Aid,' out of which all loans to the poor, and losses by weather and theft, were defrayed; and, during the twenty years of his government, scarcity was unknown, and the taxes were never in arrear."—*Ibid.* ii. 241–2.

Slavery.—[Slaves were of six classes: *hsi, chia p'u, chia nu, ch'ing i chi shih* (青衣給事), the same as the *ch'ing i* previously mentioned; *chia t'ung* and *shih pei*—see previous Periods.]—*Kang chien.*

"Modern registers of the personalia of Mongols, when referring to 'captives whose lives have been spared' (臧獲), designate the males *Nô* [*nu*] (奴) and the females *P'i* [*pei*] (婢), and when speaking of them as a class they employ the term 'prisoners of war' (驅口)." "Now, when the affairs of the present (Ming) dynasty first began to settle down peaceably, the several States kept daily sending in captives (俘). Males and females among these then contracted marriages, the offspring of which have become slaves (奴婢) in perpetuity. There are, however, others, said to have been purchased under red (officially stamped) deeds, that is to say, persons sold by their original owners under a deed on payment of a legal tax. For this reason there is now a prohibition against purchasing 'free men' (良), and treating them as 'prisoners of war' (驅)." "Again, there are others who have been acquired by gift as retainers, that is to say, persons allotted and transferred as part of the outfit of a bride on her wedding." "Males and females among slaves (奴婢) are limited to intermarriage among themselves, and the males are by statute forbidden intermarrying with 'families of free men' (良家). If families of free men, however, desire of their own free will to contract marriages with female slaves (婢), they are permitted to do so; but if a male slave (奴) becomes wealthy, and his owner, coveting the man's property, waits till he commits some slight offence, and then beats and detains him in custody, whilst gathering up his property and sweeping it away, people simply call it 'confiscation' (抄佔). On the other hand, there are some (slaves) who, of their own free will, hand in their property with a view to obtain 'liberation and exemption from the status of slavery' (脫免奴籍), whereupon their owners write out and deliver to them deeds to be held in proof. This is called 'discharging (slaves) as freed men' (放良)."—*Ch. Rev.*, x. 283–4. See also *Tzŭ shih ching hua, c.* 81, p. 3*b*.

"Slaves were treated the same as cattle and horses"—the punishment for killing them being 107 and 100 blows respectively.—*Tzŭ shih ching hua, c.* 81, p. 3*b*.

"Tau-kui-u (Yuan period, name Koling of the Tong Tupo Sung of Liu) made a present to Hung Wu, founder of the Ming, of 300 black slaves, who must have been acceptable at Nanking, for, in the year following, 100 men and the same number of women were 杜 婆 詞 陵 公 哇 given as a portion of tribute." "Slave-hunting has been from prehistoric times an occupation of the ruling tribes of Indo-Chinese, Tonkingese, Annamese, Laotian, Siamese, Cambodians, the victims being hill-men of the tributaries of the Cambodian river. Poli, Sumatra, sent tribute in 1407, which in part consisted of black slaves, whose eyes were round and yellow, who were easily blinded and destroyed by smoke." "It was the neighbours of the Poli Cambodians who had the largest number of black slaves—rich men owning several hundreds, ordinary men 20 to 30. A strong young man was worth 100 pieces of cloth, an old man only fetched 30 pieces. These slaves are abducted from the hills; when one who had escaped is recaptured, his face is branded, or he is made to wear an iron collar, or he is manacled." "The 'diminutive black slaves' from the coasts of Indo-China and Malayan Archipelago, during the Ming era, mentioned in the Kuangtung *Gazetteer* (21), as well as the negrito slaves from Java, were evidently Alfourous, aborigines of Java and other Malayan islands."—*Ch. Rev.*, xix. 292. *Cf.* also *N. & Q. on C. & J.*, iii. 105.

"Such as are poor widows and driven by necessity . . . may, for the supplying of their want, sell their children and bind them to perpetual servitude, the which is permitted in such sort that there are among them rich merchants that deal in no other thing: and all the maiden children that they buy so be brought up with great care and taught to play and sing and other things appertaining unto pleasure. Then after, when they are of years, they carry them to the houses aforesaid ordained for common women. [Each one, before entering, is taken before a judge, who] doth place her in the house himself, and from that day forwards her master hath no more to do with her, but to go every month unto the judge to recover his tribute, which is a certain sum set down by the judge by agreement made between them both, and he appointeth besides this the time when he shall be paid for her, and for that [which] was spent in her bringing up and teaching." "Such as have spent all their youth in these houses cannot go forth as long as they live, as is commanded by a law public. . . . Whatsoever profit doth remain unto these women when they have paid their master they give unto the judge . . . who doth keep it faithfully . . . and giveth a good account thereof every year unto the visitors. And afterwards, when these women wax old, it is repaid unto them again by order of the said judge. [If this is insufficient to maintain them, they were paid a stipend for waiting on the blind women (see *infra*), or supported in an almshouse—'the King's hospital'.]" [Blind women, who were assigned to the same life—*cf.* also *id. ib.* p. 68—are said to be "free and not bond."]—*Mendoza, Hist.*, i. 146–7.

"The men children which [the slave-dealers] buy . . . they put to learn some occupation, and, after that, they are expert therein, they do serve a master in the same trade for a certain time; the which being expired, their masters are not only bound to give them their liberty, but also to provide them of wives . . . [and] houses and necessaries whereby they may get their living. Which, if they do not of their own free will, they are compelled by justice to do, whether they will or no. And [the freedmen] for a token of gratefulness must come unto their masters the first day of the year, and other days appointed, and bring them some present. The children of these be all free, and subject to no bondage for the benefit done unto their father for their bringing up."—*Ibid.* i. 147–8.

[Christovão Vieyra, writing from Canton in 1534, says that the women captured in the Portuguese ships were sold. Elsewhere he says: "The women of the interpreters, as also those of Tomes Pirez that were left in this city in the present year, were sold as the property of traitors."]—*Ferguson, Lett. from Port. Capt.*, pp. 112, 118.

Industry.—According to Gaspar da Cruz, China "is a land where everyone works, and all are free to enjoy and bequeath their own earnings as they please. Prices, it would seem, have not risen much since he wrote, for he speaks of shoes to be bought at from two crowns each to threepence; boots vary from ten crowns to two, and the good friar evidently regards the variation as a popular trait:—'Even the very poor may wear shoes.'"—*Simcox*, ii. 263–4.

"In all this mighty country, they do not suffer vagabonds nor idle people, but all such (over and above that they are grievously punished), they are holden for infamous; neither do they consent nor permit any of them that are naturally born there to go out of their countries into other strange countries; neither have they any wars at this present. The king doth content himself only with his own kingdom (as one that is held the wisest in all the world.)"—*Mendoza, Hist.*, i. 13.

"All these writers [Mendoza, Perera, etc.] understand that by Chinese law natives cannot leave, nor foreigners reside in the country, without a special licence, hard and costly to obtain; but this seemed to be rather by ancient custom than immemorial law, and the attachment of the modern Chinaman to his pigtail shows that a custom can obtain more than the force of law during the reign of one dynasty."—*Simcox*, ii. 265.

"Artificers and mechanical officers do dwell in streets appointed, whereas none do dwell amongst them, but such as be of the same occupation or art. . . . It is ordained by a law and statute that the son shall inherit his father's occupation, and shall not use any other without licence of the justice; if one of them be very rich and will not work, yet he cannot let but have in his shop men that must work of his occupation. Therefore that they do use it, by reason that they are brought up in it from their youth, they are famous and very curious in that which they do work."—*Mendoza, Hist.*, i. 34.

[The regulation of the tea-trade with Tatary was a constant anxiety to the native administrators. See DIST.]—*Simcox*, ii. 238.

[One of several causes of discontent was the introduction in some places of an Imperial salt monopoly.]—*Sacharoff*, pp. 24–5.

In 1524 the Minister Yang T'ing-ho "retired because he could not stop the appointment of eunuch superintendents to silk factories."—*Giles, Bio. Dic.*, p. 916.

[The Superintendent of the Weaving and Dyeing Office is mentioned in *Yüan chien lei han, c.* 358, *Ch'an yeh pu*, p. 25*a*.]

In 1370, "an expedient for supplying the frontiers with grain was introduced. . . . Traders were allowed to receive salt from the central Government mines in return for rice delivered to the border garrisons at rates varying according to the distance which it had to be brought."—*Simcox*, ii. 238.

Gilds.—[A Kiangsu gild flourished at Peking.]—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 135. *Cf.* REST. OF UNITY and MANCHU PER.

Manchu Period (1644 *to* —).—*Table IX.*

LAND.—[When the Manchus conquered China they knew little or nothing about agriculture or the problems of government, and therefore did not attempt to make any changes, but endeavoured, as far as possible, to carry out in every particular the arrangements of former dynasties. The ownership of land has (apart from the losses inevitable during political revolutions) preserved its inviolability; every individual has the right to own land without limit as to the amount, to buy, sell, or mortgage it. The government has undertaken the duty of protecting this possession against illegal appropriation, and has taken especial pains to restore to its original destination the land which has been lying uncultivated since the Ming revolutions. This land was given in perpetual possession to landless persons; —what had belonged to the Ming princes was assigned to their former tenants. All officials of the district, from the governor-general downwards, were rewarded if the farms in their districts were in a flourishing condition, and punished in the contrary case. However, agriculture made but slow progress—partly because the taxes were heavy, even for the well-to-do, and partly because those provided with land had no capital wherewith to cultivate it. The new settlers in Ssŭ-Ch'uan returned to their old homes in Chu-kuan and Shan-si, as soon as the three years, during which their taxes were remitted, had expired. It was found that, through the corruption of officials, government grants were in the end dearer than purchased land. The government has made further remissions of taxes, and remitted *all* taxes for cultivating the steppe for the first time. Anyone who wants to cultivate waste ground may do so at any time without giving notice, but he is expected to report to government within the year [*cf.* foll. extr.]; if not, he is punished for misappropriation of Crown lands; if an official, he loses his rank; a soldier or peasant is liable to corporal punishment. The land is forfeited, and taxes must be paid for the time of occupation; anyone giving information in such cases is rewarded. . . . The cultivator of waste land only acquires an absolute title to it after the expiry of the time during which his taxes have been remitted. In places so remote that no one is willing to settle there—as in Kan Su, etc., or even Turkistan—convicts have been settled. All officials and soldiers quartered there are at liberty to cultivate land, and make it their own. On the other hand, so many have been found willing to emigrate to Manchuria, that it was feared the original inhabitants would be expropriated, and further immigration was prohibited, while Chinese traders living in the province were forbidden to cultivate lands there. In spite of this, secret emigration continued, and in 1844 a decree was published to enforce the existing law. Whole caravans set out for the Ssŭ Ch'uan district, some of which were sent back or sometimes repelled by force of arms. The population of this district has increased so much that from east to west 500 *li*, from south to north 330 *li* are newly cultivated.]—*Arbeiten d. Kais. Russ. Ges.*, pp. 25–27. See also *Journ. N.-C.B.R.A.S.*, N.S. xxi. 191; xxiii. 60–79.

"Everything leads us to believe that the Manchu legislation is the same as that of the Ming, so far as regards lands possessed by Chinese. The only difference is in the case of confiscated lands granted under feudal tenure (*inféodées*) by the Manchus to their soldiers, according to their national custom."—*Journ. Asiat.*, Série III. vi. 331.

Amyot says on this subject, in a note on p. 27 of *l'Art militaire des Chinois* (vol. vii. of *Mémoires des Missionaires*): "After the Manchu Tartars had taken possession of China, the new emperor, without touching the lands of the people, took possession of all those which were untilled, those which belonged to the princes and grandees still attached to the side of the former dynasty, and, in general, those of all persons guilty of rebellion against the conqueror. He made of these lands the appanage of those men of his nation to whom he distributed them all. The eight banners under which all the Manchu families are ranged, then received certain specified parcels of ground of which they, properly speaking, only enjoy the usufruct, for the right of (free) alienation does not belong to them. A private individual (of this class) could indeed sell the piece of ground of which he was the possessor, but only to another private individual of the same banner as himself. Nevertheless the Chinese found means gradually to acquire possession of these lands, either by buying them under assumed names, or by cheating in numberless ways these new-comers who had not yet lost their ancient good faith and their natural sincerity. Every one of the Manchu emperors has made regulations in order to remedy these abuses, but it does not appear that they have met with all the success that was hoped for. The reigning emperor, Kien-long, has published an edict by which he permits the descendants of owners of lands which have become alienated outside the banners, to take back these lands on payment only of the first purchase-money."—*Ibid.* vi. 331–2.

"The laws at present in force, regulating the affairs of agriculture, the transfer of lands, etc., are substantially the same as in the days of Confucius. Although each dynasty has promulgated its own laws, still the models of them were found in the ancient books. By these laws the emperor, after the patriarchal mode, is declared universal landholder, and all lands are held in occupation directly from him. The possessor can be ejected at will, but he is allowed to remain as long as he can cultivate the soil. Thus the same spot of ground descends from father to son, for a long succession of generations. Whenever a man is registered in the lawful possession of a spot of ground, all the improvements and crops are guaranteed to him. Many who possess more land than they wish to cultivate, lease it to others, who give a part of the produce as rent. The greatest part of the land cultivated in China is held in this manner. Mortgages are also known among the Chinese, and on any secretion of the property or fraudulent evasions, the land reverts to government. Lands occupied by soldiers cannot be mortgaged. . . . At the end of the time, the mortgager can recover his land, by paying the original consideration, and the mortgagee cannot refuse to deliver up the premises. All unregistered land can be cultivated by anyone who applies, if he shows that he is able to fully occupy it. There are no game laws nor fishing privileges, and the use of rivers, lakes, and canals are open to all. The land-tax is paid, partly in money and partly in kind, according to the nature of the produce, and the wants of the government. Evasions of the taxes, either by the officers or from false representations on the part of the landholder, are punished by confiscation and blows. The rate of taxation, however, is altered, when the land becomes unfruitful, or it is remitted when freshes or droughts have deprived the husbandman of the fruit of his labors."—*Ch. Repos.*, iii. 121–2.

"Land in China is held in fee simple on condition of registration and payment of the constituted taxes and imposts, the Emperor being considered to be the original granter or lord of the soil."—*Trans. C.B.R.A.S.*, Pt. iv. (1854), p. 31, note.

"Landed property is held in clans or families as much as possible [*cf.* ABSOLUTE MONARCHY], and is not entailed, nor are overgrown estates frequent. The land is all held directly from the Crown, no allodial property being acknowledged; if mesne lords existed in feudal times, they are now unknown. The conditions of common tenure are the payment of an annual tax, the fee for alienation, with a money composition for personal service to the government, a charge generally incorporated into the direct tax as a kind of scutage. The proprietors of land record their names in the district, and take out a *hung ki*, or 'red deed,' which secures them in possession as long as the ground tax is paid. This sum varies according to the fertility, location, and use of the land, from $1·50 per acre for the best, down to twenty or thirty cents for unproductive or hilly fields. As the exactions for alienation or sale of lands are high—amounting to as much as one-third of the sale price sometimes—the people accept white deeds from each other as proofs of ownership and responsibility for taxes. As many as twenty or thirty such deeds of sale occasionally accompany the original *hung ki*, without which they are suspicious, if not valueless. In order to keep the knowledge of the alienations of land in government offices, so that the taxes can be assured, it is customary to furnish a *ki-wei*, or 'deed-end,' containing a note of the terms of sale and amount of tax liable on the property. There is no other proof of ownership required, and the simplicity and efficiency of this mode of transfer offer a striking contrast to the cumbrous rules enforced in western kingdoms. Revised codes of land laws are issued by the provincial authorities when necessary, as was done in 1846 at Canton."—*Williams, Midd. King.*, ii. 1–2; and see *Journ. C.B.R.A.S.*, vol. i. (1848).

"Six parts of the rice region of Wênchow are owned by non-cultivators, and four parts are tilled by owners of the soil. Tenant farmers pay landlords one-half of the rice crop—one acre yielding over 19 piculs, giving to each about $21, the owner paying the land-tax, $1·80—every other expense being paid by the farmer, to whom, however, the intervening crops all belong, which are worth $15; consequently his share of the product of the farm is $39. The proprietor, after deducting expenses, receives something less than five per cent. interest on his investment. Coming now to the field-hand, whom the farmer hires, we arrive at the substratum of labour [*cf. infra, Ranks*]. The average wages of an able-bodied young man is $12 per annum, food, straw shoes, and free shaving. Deducting $4 for his clothing, he saves $8 annually—or may do so. Ten years' savings will enable him to buy one-third of an acre of land (value per acre, $150), and necessary implements, by which he can obtain, by his own labour, a subsistence. In twenty years he can become possessor of two-thirds of an acre and one-third of a buffalo; and, with six years' more saving, he may purchase a wife, with whose assistance he can maintain himself on his own land, in his own hut, and rear children. Thus, in twenty-six years from zero, a Chinese farm labourer may obtain what to him is a competence."—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 187–8.

"The relations between agricultural labourers and between landlord and tenant give rise to no ill-will; all are satisfied by arrangements developed in long bygone ages. Few are so poor as not to be able to become possessors of soil"—so minute is the sub-division of holdings.—*Ibid.* xxi. 188.

"As a rule, in the country, each family tills its own bit of ground, and . . . has held the same for centuries."—*Little* (*Mrs. A.*), *Int. Ch.*, p. 539.

"The land is cultivated throughout the whole extent of our vast empire, and field labours occupy a great part of the population." "All the cultivators are generally well off, whether they own the land or only farm it. The land-tax is excessively small; it does not, on the average, represent 10*d.* per head, and it is customary for the farmer not to pay rent in bad seasons."—*Tcheng-ki-tong, Chinese Painted by Themselves*, pp. 130–1.

"In Petchili . . . landed property is excessively divided, and agricultural operations are carried out upon a small scale; but the intelligence with which they are directed prevents the grave inconveniences of minute subdivision." "The abundance of hands, and the low price of labour allow cultivation by alternate rows."—Quoted in *ibid.* p. 131.

[No one can farm private lands without the consent of the owner—or even with it—unless the owner is not a farmer, or, being one, is incapable of working on the land himself. But a tenant, once in possession, cannot be arbitrarily removed. The same rule holds good for the lands on the Myao frontier, along the Great Wall, in the Tschasar steppes, in Tunset and everywhere where the steppes originally assigned as pasture for the cavalry horses have been deserted, and are lying fallow. The lands, however, which belong to the wandering Mongols, or the foreign tribe of the Myaos cannot be acquired as property, or even rented, by the Chinese, even with the consent of their owners, as these live by cattle-breeding, and would soon be in want of the necessary pasture. There is an exception to this in Eastern Mongolia, where the Chinese have for a long time past occupied a certain area, in return for a fixed rent paid to the tribal chief; but are not allowed to cultivate one acre beyond this, or bring in fresh settlers. In this district, the Mongols themselves have something like fixed dwelling-places.]—*Arbeiten d. Kais. Russ. Ges.*, p. 28.

"The land is cultivated generally by the owners. When sub-let, or worked by others, the owners receive one-half of the produce. Rent of land is usually paid according to the amount of the crop, the landlord paying the taxes, and the tenant stocking the farm. Leases are for 3, 4 or 7 years; the terms vary according to the position and goodness of the soil."—*Dudgeon, Land Question*, p. 5.

[The Boards of Agriculture pay special attention to useless land. They have to watch the state of marshes, and report whether they are drying up and may eventually become fit for tillage. They have likewise to examine the accumulation or disappearance of sand-hills, the changes taking place in alluvial land, etc. The area of productive land has increased every year, and amounted in the year 1831 to 7,566,340 *zin* and 17 *mu* for the whole empire.]—*Arbeiten d. Kais. Russ. Ges.*, p. 28.

"The Government has paid special attention to the case of the smaller landowners, burdened, as they are, with [both] the land and personal tax. An edict of grace [*Gnadenmanifest*] fixed the list of those who, among those liable to the poll-tax, either possessed sufficient land already, or received it through the distribution of Crown lands. The latter became free private property, under a single condition. It might be sold only to persons of the peasant class, or to adults who would undertake the obligation of paying the poll-tax paid by the former owner. In order to keep this obligation undivided and attached to one individual only, these holdings must not be divided, but only transferred as a whole."—*Ibid.* p. 29.

"The translator of the present Penal Code, Sir G. Staunton, has carefully examined the various articles of the Code relating to the disposition of property in China; and, adding to this examination the information gathered by him during his 20 years' residence on the Chinese coast, he concludes . . . that the condition *of the Chinese landowner is, as it were, intermediate between that of the English landowner and the Indian* (*zemindar*), who is, in reality, nothing more than a farmer of the ground."—*Journ. Asiat.*, Série III. vi. 332–3.

"Along with the rigorous text of the Chinese laws, there is always great tolerance in the execution of them; all breaches of law may be expiated by money payments, and this way must be successfully employed by anyone who wishes to assure to himself the free disposal of his landed property."—*Ibid.* vi. 333.

"Crown lands are divided into: (1) appanages, (2) military lands, (3) Crown lands proper. The appanages belong to the ruler, and the members of the ruling family, among whom they were divided under the present dynasty as formerly under the Ming [*cf. Journ. N.-C.B.R.A.S.*, N.S. xxiii. 63]. The estates of the Manchu emperors are, in all, 1,078—in Chih-li, in Manchuria (at Schen-zsin, Zsin-Tschjou, Daschen-Ula, and on the Amur), in the region of Chu-lan, and in Mongolia by the Great Wall at Dje-che and Gui-gua-tchen, and amount to 35,772 *zin* and 75 *mu*. They produce corn, vegetables, fruit, honey, indigo, cotton-paper and flowers. The total of the land held by Princes of the Blood and nobles of various grades is at present 13,555 *zin* 39 *mu*."—*Arbeiten d. Kais. Russ. Ges.*, p. 29.

"In Manchuria, a certain area of land had been assigned to each of the eight Manchu banners. After the invasion of China, and the transfer of the Court to Peking, the lands surrounding the city were granted out to Manchu princes, soldiers and officials. . . . The dispossessed Chinese had lands assigned them at a distance from the capital, free of taxes for one year. Princes received, according to their rank, from 1⅕ to 18 *zin*; soldiers, according to their rank and descent, from 18 to 180 *mu*." The holding was not increased with a subsequent rise in rank, nor diminished with degradation. Manchus or Solons, newly entering the army, originally received grants of land on the same terms.—*Ibid.* p. 30.

[By ordinances of 1764 and 1781 [*sic*], however, 1⅕ *liang* of silver was ordered to be paid to every newly-enlisted soldier or official for every *mu* of land to which he would have been entitled; and, in 1771, this was commuted for a payment of 200 to 600 *liang* when enlisting, or entering on office.]—*Ibid.* p. 31.

"The annual income from real estate is between nine and twelve per cent."—*Williams, Midd. King.*, i. 739.

[Simon estimates as follows the annual expenditure for a family of 7 adults and 4 children under 15:—Taxes, 13·65 ff.; wear and tear of implements, 58 fr.; seed, 146 fr.; wages (2 labourers and one maid-servant, engaged by the year), 255 fr.; manure, ashes and other fertilizers, not produced at home, 226 fr.; food for 14 persons, 1,589 fr.; ditto for animals, 552 fr.; charcoal for tea-firing, 57 fr.; clothes, 500 fr.; incidental expenses 280 fr. (The household furniture is valued at 2,225 fr., and the clothes actually in use, including watches, jewellery, etc., at 2,679·60 fr.) The gross yield of the farm was 7,142 fr. per annum.]—*Cité chinoise*, pp. 330–51, and *cf.* App pp. 374–82.

"A peasant" in one of the poorest districts of China, with a property of 3½ hectares, puts by, every year, from 1,500 to 1,800 francs. . . . Another, with 1 hectare of land, saves from 700 to 800 francs [annually]."—*Ibid.* pp. 7–8.

Mgr. de Saint-Martin, Bishop of Caradra, writing in 1792, says that, at Ngô-mî-hien, in the northern part of Sze-chuen, "the land belongs in great part to the bonzes, who have built on it a large number of pagodas."—*Nouvelles Lettres Edifiantes*, iii. 33.

"The Viceroy of Sz Ch'wan mentions certain military tenures in 懋功 sub-prefecture. Married soldiers [眷丁] get 30 *mu*, on which they pay an annual tax of a little over 2 斗 one 升, or a trifle more than seven gills [合] of rice the *mu*. Unmarried soldiers [單丁] pay the same tax, but only receive 15 *mu* of land. The encampment or lines are called 屯寧營."—*Ch. Rev.*, xiii. 53.

"Amongst the places where there are 中田 may be mentioned 黎平府, in Kwei Chou; but the present governor has just done away with them. A quantity of military land is let out to farmers outside the capital of Sz Ch'uan; for each *mu* they pay an annual rent of 5 石 of grain, and 10 斤 of straw. This goes to the maintenance of the Manchu garrison. The first-named 中田 were originally allotted for defence against the 苗子, and paid 30 per cent. on all harvests to the Government."—*Ch. Rev.*, x. 73. *Cf. N.-C.B.R.A.S.*, N.S. xxiii. 64–5.

"In Chih Li and Shun-t'ien there are a number of fee-farms [莊田] held by princes, dukes, etc. [王公員勒] and managed by stewards [莊頭] or bailiffs [攬頭]. When the Emperor grants remission of taxes on common socage tenures, these dukes are directed to make a proportionate reduction in their rack-rents, and proclamations are issued by the local authorities stating to the people to what remissions they are entitled. The rents on those lands the stewards of which have been degraded [革退] by the Household Department [內務府], are collected for the noble owners by the local authorities. The glebes attached to the Mausolea [東陵衙門永濟庫] the estates supporting the Western River repairs [步軍統領衙門西河歲修], and the various temple glebes [香燈], to all of which rents [租] are appurtenant, are, as to their cultivating tenants, placed on a similar footing."—*Ch. Rev.*, xiii. 54–5.

The last experiment in restoring the ancient forms of communistic agriculture "was made as recently as 1724, when a colony of fifty Mantchus, fifteen Mongols, and fifteen Chinese was established in accordance with the 'Rites of Chow.' It was given up at the beginning of the next reign in 1736, but its failure or abandonment of course proves nothing as to the merits of the system, which demands, above everything, a thoroughly homogeneous population."—*Simcox*, ii. 99.

"Something like the feudal distribution of lands made by William the Conqueror is now [*circ.* 1880] taking place in Manchuria. In order to eke out the salaries of the military officials (who only draw half their nominal pay) allotments [隨缺地畝] of lands appendant to official titles are made. A 協領 is to have 80 晌; a 佐領 is to have 50; a *fangyü* is to have 40; a *hsiao ch'i hsiao* is to have 30; a *bitkeshi* 50; and a *lingts'ui* or a *ch'ienfêng* 20. These officers will be official *tenants in capite*, holding what are practically life fees in return for military service or serjeantry. As some (the *tsolings*, for instance), are hereditary, the fees will be held to them and their heirs. (See *Gazette*, 9 m. 20 d.).—*Ch. Rev.*, xi. 263.

[The rural population of the Tali Fu district are Ming-chia aborigines, most of them not able to speak Chinese. The average size of farms (in the T'ai-ho valley) is 10 *mow*. . . . About eight out of ten farms are owned by the cultivators, the rest held on lease. Hired labour is employed, women being paid about five-sixths of the men's wages. Rent is paid in kind. There are a few proprietors owning 100 or 200 *mow*. These got their land as a reward for service in quelling the late Mahommedan rebellion. . . . Each village has a man appointed to collect the land-tax and hand it over to one of the 16 collectors appointed by the magistrate,—but some pay direct to the District Yamên.]—*Journ. N.-C.B.R.A.S.*, N.S. xxiii. 116–7.

"With the view of superintending farmers and agricultural labourers in their operations, an agricultural board is established in almost every village throughout the empire. This board is presided over by three or four aged agriculturists, upon each of whom the eighth degree of rank is conferred. This board insists upon each farmer cultivating his lands to the fullest extent, and sowing and reaping in due season . . . Nor is the law confined to renters. There is a decree which enjoins all landed proprietors to see that their estates are kept in high cultivation; and the penalty inflicted for a breach of this law is an entire confiscation of the neglected property to the Crown."—*Gray, China*, ii. 107–8.

"A head-man was appointed for each district who regulated the supply of water to each farm."—*Journ. N.-C.B.R.A.S.*, N.S. xxxiii. 309.

[For information as to land, the area of farms, etc., in various Provinces, see *ibid.* xxiii. 79–174; 178–83; for penalties attached to illegal dealings with land, evasion of land-tax, etc., see LAWS; and for landmarks see LANDWORKS.]

RANKS.—"Chinese society is divided into two classes—officials and non-officials."—*Giles, Ch. Sketches*, p. 105 (*cf.* p. 73).

"Chinese society is composed of three classes: the free citizen, the servant or hired workman, and the slave. The penal code protects the two last classes against their masters and freemen in general; but it fixes precisely the limit of separation between them and freemen; and in general all alliances between them are severely punished."—*Ch. Repos.*, xviii. 357.

"The people of China are divided into four classes or categories of citizens, according to the merits and honours that custom and the law of the land attribute to each. These classes are the literary, the agricultural, the manufacturing, and the commercial. Such is the order of the social hierarchy in China."—*Tcheng-ki-tong, Chinese Painted by Themselves*, p. 61.

"The literary class occupy the first place, as representing the thinking class; the agriculturists have the second rank as

befits the class that nourishes; the manufacturers also enjoy great consideration on account of their industry; but the commercial class is the lowest." "In point of fact, the two classes esteemed and honoured are the two first; they constitute the aristocracy of mind and of labour." "All the members of the four classes . . . are admitted to take part in the competitive examinations which determine degrees."—*Ibid.* pp. 61–2.

"Amid all the evidences of toil, the poorest has some leisure at his command. Then, seated on a bench, or squatting tranquilly on the ground, he will smoke or chat with his neighbour, untroubled by the presence of his good-natured employer, who seem to grow fatter and wealthier on the smiles and happy temperament of his workmen. . . . The Chinese operative is completely content if he escape the pangs of hunger, endowed with health sufficient to enable him simply to enjoy the sense of living, and of living, too, in a land so perfect that a human being ought to be happy in the privilege of residing there at all. It is a land, so they seem to suppose, wherein everything is settled and ordered by men who know exactly what they ought to know, and who are paid to keep people from rising, or ambitiously seeking to quit the groove in which Providence has placed them at their birth."—*Thomson, Straits of Malacca, etc.*, pp. 254–5.

Simon says that, on the whole, the Chinese peasantry do not suffer from the pressure of want, and that this is shown by the freedom and cheerfulness of their general demeanour, and their politeness to strangers and to each other. "One feels, on seeing them, that there is evidently less distance and difference between rich and poor, (I should say, less rich)—between town and country people, than among ourselves."—*Simon, Cité chinoise*, p. 8. *Cf.* also pp. 9–14, and Part V. *passim.*

"Next to farmers in popular estimation stand mechanics, and even a deeper state of poverty than that which afflicts agriculturists is the common lot of these men. They live perpetually on the verge of destitution, and this from no fault of their own, and in spite of their untiring devotion to their callings." *Douglas, Society in China*, p. 137. But see previous extracts.

"It is characteristic of Chinese topsy-turvydom that that class of society which has done most to promote the material prosperity of the nation, should, in theory at least, be placed on the lowest rung of the social ladder. The principle 'that those who think must govern those who toil' is justly upheld in China, but why the men who have made her the rich country which she is, and who have carried the fame of her wealth and power into every market in Asia, should be subordinate in the social scale to labourers and mechanics it is difficult to understand [but see previous extracts]. The merchants and traders of China have gained the respect and won the admiration of all who have been brought into contact with them. For honesty and integrity they have earned universal praise."—*Ibid.* pp. 139–40.

[Milne enumerates five classes debarred from the literary examinations, viz., brothel-keepers, actors, lictors, jailers, and domestic slaves, their children and grandchildren. To these are added barbers, watermen, chairmen, and their descendants.]—*Life in China*, p. 218.

"Though they afford much gratification to the people, actors are ranked so low in the social scale that their children are not allowed to present themselves for literary distinctions, which of course prevents them ever attaining to any high position in the State. When boys, they are bought by the conductors of companies and sent to dramatic schools, where they are carefully instructed in all the mysteries of their art. They are very harshly treated at these seminaries, and disobedience is visited with very severe punishment. Should a refractory youth die under the hands of a master, no notice whatever is taken by those whose duty it is to administer justice. . . . The usual period of instruction is one year, at the close of which the youths are expected to take part in any play which may be performed. They are regarded by their purchasers as little more than beasts of burden, and receive for their services only food and clothing. Their period of servitude, however, lasts only six years, after which they may claim their discharge. If sufficiently influential they form companies of their own; otherwise they engage themselves to managers at a tolerably remunerative salary. As a rule, women are not allowed to appear on the stage. Female parts are well sustained by men. . . . There are, however, schools in which females, generally of dissolute habits, are instructed for the stage. The usual hire for a company of players is from 20 to 100 dollars a day. They are frequently rewarded during the performance of a play by presents of food, such as roast pigs, or offerings of money."—*Gray, China*, i. 378–9.

"A class of men called *do be* . . . were degraded from their social position some four centuries back, as a punishment for a revolt against the then reigning power. So tradition rather than any authentic history, has recorded. Against these men the road to official promotion is barred. They are not permitted to enter the lists at the periodical literary contests, nor are they allowed to make choice of any [occupation, save those of chair-bearers, pedlars, barbers, and actors.] They intermarry with one another, and their wives, debarred from social intercourse with the daughters of the country, get their living as matchmakers."—*Cobbold, Pictures*, pp. 178–9. *Cf. Milne, Life of China*, p. 218, where a similar set of people, supposed to be descended from rebels against the Sung dynasty, are called *tse min*, "degraded people." These "seem to be confined to certain localities, though in some parts of the country they bear a large proportion to the bulk of the population"; also *Smith*, pp. 252–3.

"By a long-established custom, barbers and the sons of barbers used to be reckoned among the pariah classes who were disqualified from competing in the competitive examinations. Though complaints of this deprivation had been long and loud, no formal action was taken in the matter till the union took up the question. In their collective capacity, the members appealed to the governor of Chehkiang, who, approving of the spirit of the memorial, presented the matter to the Emperor, and obtained for the barbers the removal of the disability."—*Douglas, Soc. in Ch.*, p. 146.

The *tan chia*, ferry-boat women, "live in their boats. . . . They are said to be of a peculiar race, and never intermarry with the real Chinese, who look down upon them with contempt."—*Davidson, Trade and Travel*, pp. 234–5.

"There are said to be seven surnames among the Zik'a [余 客], namely, 鳴 闕 余 莊 雷 謝 and 庄. One of the literary chancellors of Che Kiang, whose surname was 雷 allowed a Zik'a man of the same surname to compete at the public examinations on the . . . ground that 'if this Mr. Lei be not admitted, then where did I come from?' Since that event, it is said that, if capable, they are admitted. Some people say that they are 回 回 教 or 蒙 古 人 一 般; that they will not eat pork, but will eat beef and mutton . . .; their women sometimes do up their hair in Loochooan style, with a coil or bob in front, and a long pin running through it. It is said that the Emperor once made a certain Princess 狗 頭 公 王, and that her consort proved a traitor, in consequence of which they were banished to the provinces and made to work. . . . After quitting their stock for three generations they are allowed to intermarry with and become Chinese.—*Ch. Rev.*, xii. 202.

"In the towns of the interior, I do not believe, from inquiry and personal observation, that more than from 20 to 25 [paupers] can be reckoned for populations of from 150,000 to 200,000 inhabitants. In the country districts, it may be said that there are more."—*Simon, Cité chinoise*, p. 24.

Hired Labour.—"To constitute the relation of master and servant, the mere fact of service for wages is not enough"—there must have been a deed or an agreement (written or verbal) for a term of years or the person must have been for five years or more in the employ of the particular individual. "Slaves and servants are placed on a different footing *qua* their masters and their masters' relatives to the rest of the world, and offences committed by them are more severely visited than they would be with strangers."—*Alabaster, Notes*, pp. 207–8. See also LAWS.

"The wages of the common people are low. Carpenters and masons obtain from 20 to 30 cents a day, boarding themselves. Hired men and women who do coarse work in the fields, or in houses as servants, generally receive from $4 to $6 per month, and they board themselves. If their employers board them, they get from $1 to $3 per month. Clerks and accountants receive from $10 to $30 per annum, with their board. School teachers often obtain only from $30 to $60, besides small presents from their pupils per annum. Literary men who are poor, and who fail of acquiring government employment, are frequently glad to teach school at almost a nominal price. Food, clothing and rents are cheap, and yet the poor of all classes and occupations are enabled to support themselves only by great industry and frugality."—*Doolittle*, i. 61. See also some extracts given *supra* under LAND.

[Ed. Renard says, with regard to the ivory-carvers at Canton, that the working-day is 15 hours: 7 a.m. to 5 p.m.—then two hours' interval—then 7 p.m. to midnight. The head workmen are allowed several intervals in the course of the day (about three hours' off, in all) for smoking opium. There is about a month's holiday in the year, which the men spend with their wives (who always live in the country). Workmen are usually employed by the year. Wages vary from 110 to 1,100 francs a year; but a good workman usually gets 550 francs a year. The master supplies their food, and they sleep in the workshop.]—*Journ. Asiat.*, IV. xi. 57.

[Wages in the lacquer-ware trade at Canton:—Men who gather the varnish, 26 centimes a day (1 tael a month). Men who prepare articles for varnishing, 75 centimes a day (275 francs a year). Men who put on the varnish, about 1 franc a day. Painters, 1 franc 28 centimes, up to 2 francs 75 centimes per day. They sleep in the workshop, and the employer finds their food, the cost of which is estimated at 45 centimes each a day.]—*Ibid.* IV. xi. 56.

"The wages of the tailor [are] lower than those of almost every other trade [as customers are obliged to protect themselves against loss by his dishonesty in abstracting cloth."]—*Cobbold, Pictures*, p. 149.

"Cooks and waiting servants in families of a lower grade in society [than the gentry] hire themselves for a period of twelve months at least, as also do agricultural labourers. For these . . . statute hirings are held by the appointment of the local authorities in squares or other suitable places. At Canton the statute hirings took place from the first to the fifteenth day of the first month . . . in the quadrangle before the Temple of Longevity. . . . Hiring in the open street is a matter of daily occurrence in Canton and other large cities in Kwang-tung. [Day labourers, journeymen carpenters and bricklayers and others, stand in the streets and the courtyards of the temples from 5 to 9 a.m.—or later, if still unhired. The carpenters and bricklayers] are, as a rule, hired by public contractors."—*Gray, China*, i. 240–1.

"The wages received [by carpenters and bricklayers] are very small, being not more than a quarter of a dollar and three meals *per diem* to each man. The workmen, also, stipulate that at the time of the new, and again at the full moon, and also on the 9th and 23rd days of each lunar month, extra food, or its equivalent in money, shall be given to them."—*Ibid.* i. 241.

"Even when employed, their wages are ridiculously small, compared with the pay of their colleagues in Europe, whose hours of labour are short compared with theirs, and whose relaxations furnish a relief from toil to which Chinamen are complete strangers."—*Douglas, Soc. in Ch.*, p. 138.

"The wages females receive for work done at their homes varies greatly, owing to different degrees of skill and speed—from 50 cash to 100 or 150 a day, they boarding themselves."—*Doolittle, Soc. Life*, i. 61.

"Wages of operatives are governed more or less in China by the supply and the demand for the same."—*N.-C. Herald*, May 7th, 1902, p. 907.

Corvée.—"By law every landowner, and indeed we may say every adult male, is liable to be called upon for certain personal services for the . . . Government. [In Shansi, the people were frequently called on to supply horses, camels and carts for the use of the officials passing to and fro between Peking and the west.] . . . Strictly speaking, there is no limit to corvée demands; [but] gross abuse provokes a remonstrance, and a sort of limit is assigned: [and] such calls tend to settle down into a regular money payment, which by and by gets added on to the land-tax, and in time becomes undistinguishable from it."—*Ch. Rev.*, x. 353–4.

"In the code of laws now in force it is specified that if the Government requires any material for State use, the commissioners and the prefects and district magistrates shall consult and apportion the contribution, and decide whether it shall be levied in kind or purchased in the market, 'having regard to whether it is a time of great plenty or the reverse' (*Ch. Rev.*, viii. 359). With the same object, money is to be coined in a time of scarcity, to enable the people to buy necessaries; and, though this expedient may seem more well meant than scientific, it might be resorted to occasionally without perceptible damage, if the State continued its purchases at the old rate on a large enough scale to prevent a nominal fall of price. An early commentator admires the wisdom of this device on the ground that gold and copper, which are always valuable, are not subject to the uncertainties of the seasons."—*Simcox*, ii. 57.

Slavery.—"The state of slavery is very common in China; parents sell their children; children may sell themselves; and husbands may dispose of their second wives or concubines; but this is all done by private contract and with the supposed consent of the parties. The condition of slaves is, however, very different from that of negroes; from the moment they become one of the family, they are considered, and in most respects treated, as a member of the family; but they are not equal in the sight of the law; for a crime committed by a slave is punishable one degree heavier; and a crime committed against a slave one degree lighter than in the case of free citizens."—*Laou-seng-urh*, pp. 109–10, note 6.

"Slavery ordinarily arises from three causes, sale, punishment, and birth. Parents, for instance, have this right over their children by way of sale merely, or by way of punishment." Sale is permitted as result of poverty, but not from lust of gain (*Hsing an hui lan*, xx. 11 *seq.*). "The Manchu Princes have the power of sending their serfs and farmers into servitude, as parents have the power of sending their children. . . . Dukes would also appear to have the same privilege."—*Alabaster, Notes*, pp. 210–2.

"As regards the duration of the tie; if a slave be sold, he becomes a stranger in his former master's house, but, if he becomes a freeman, either by redeeming his liberty, or by being given it, his relations to his old lord will continue." "A slave's wife follows her husband's *status* if she lives with him in his master's house, but not if she makes her living outside (*Po an hsü pien*, xxii. 5)."—*Ibid.* p. 214.

"Slaves are held of vile estate, and though it is lawful to apply for their registration as citizens if their master draw up deeds setting them free, yet they have only the right to cultivate the land or carry on business, and not till three generations are passed can they present themselves at the examinations, or obtain office (*Hsing an hui lan*, xlviii. 83)."—*Ibid.* p. 210. For the law of master and slave, see LAWS.

With one exception (the hereditary princes) "the employment of eunuchs [who become so either from compulsion, poverty, or choice] is strictly confined to the imperial family." "The emperor ought to have 3,000 eunuchs to perform the various duties of the palace; at the present time there are not above 2,000 employed."—*Journ. N.-C.B.R.A.S.*, N.S. xi. 166. The numbers employed by other members of the imperial family (who are not only entitled but compelled to employ them) are given on pp. 166–7, and the methods of procuring them and places whence obtained, etc., on pp. 167–82. See also *Matignon, Superstition, etc.*, pp. 253–73.

"According to the Penal Code, illicit slaughtering of (another person's) oxen or horses is punished with 100 strokes. Slaying (another person's) 'prisoners of war' (驅) is a crime by one degree removed from the capital crime of causing the death of an ordinary person, and it is punished by 170 blows. Hence it would seem as if slaves (奴 婢) were looked upon as hardly differing from oxen and horses."—*Ch. Rev.*, x. 284. *Cf.* previous Period.

"One great reform he [Hsü Yüan-wên, A.D. 1634–91] effected was to require an officially sealed bill of sale for every serf held by a Manchu, as hitherto many Chinese had been kidnapped and enslaved for life."—*Giles, Bio. Dic.*, p. 313.

[Père Benoit, writing from Peking, Aug. 26, 1770, says that, besides the ordinary slaves in the service of Manchu families, the latter were required by law (especially official families) to have some slaves who "could not leave their master without becoming guilty of a capital crime." He also remarks that it is a common thing to see slaves served by other slaves, who are sometimes richer than their masters.]—*Lettres Édif.*, xxiv. 181.

"Slavery exists in a modified form of corporal mortgage for debt, and thousands remain in this serfdom for life through one reason or another. But the destruction of a feudal baronage involved the extinction of its correlative, a villein class, and the oppression of poor debtors, as was the case in Rome under the consuls. Only free men are eligible to enter the *concours*, but the percentage of slaves is too small to influence the total. To this cause, too, may, perhaps, to a large degree, be ascribed the absence of anything like caste, which has had such bad effects in India."—*Williams, Midd. King.*, i. 564.

[Medhurst (*Foreigner in Far Cathay*, pp. 92–5) says that the practice of selling children is tolerated and has increased of late years, owing to the great amount of distress prevalent, chiefly in consequence of floods; also of "the extensive rebellions which are perpetually occurring"—especially the T'aip'ing rebellion. Boys are bought for adoption as sons or sons-in-law, and sometimes to be trained as play-actors; girls as domestic servants in families, or for purposes of prostitution. "In neither case is the slavery perpetual, and it is only where the girls are consigned to the public markets that their fate is to be deplored." Even then, if attractive or accomplished (for they are often given a classical and musical education), they may be married by rich men. Girls bought as servants constantly marry into the family, or their masters arrange a suitable marriage for them elsewhere.]

"The sale of children by their parents in stress of poverty involves less mischief than we should expect; as the buyer is forbidden to sell the child again, or to use it for vicious purposes. This slavery is not perpetual; nor are girls, bought for domestic service, excluded from ordinary feminine culture, nor from the best marriages."—*Johnson, Or. Rel.—Ch.*, p. 31.

[A Chinese said to the writer:] "Within a short time past, I can enumerate six or eight instances in this vicinity (Whampoa) of carrying off young girls to be sold as slaves, or ransomed by their friends. The way is for the kidnappers to give notice to the parents that if a certain sum—from $15 to $100—be sent within a certain time to a set place, the girl shall be returned; otherwise she is kept, or sold as a slave."—*Ch. Repos.*, iv. 415.

"Now, as for many centuries, slaves of both sexes are openly bought and sold all over the Empire." "At the present day, a young girl of 10 or 12 is worth, at Peking, from 30 to 50 taels, and young women commonly fetch from 250 to 300 taels. Poverty is the prime cause of the full markets, and especially in times of famine, drought, and pestilence, it is common for men who, at other times, would shrink with abhorrence from the deed, to sell their wives and daughters to the highest bidder. Gambling is also responsible for much of the poverty which produces this state of things; and, in all large towns, there are recognised brokers who deal in these human wares."—*Douglas, Soc. in Ch.*, pp. 346–7.

"In the case of modern slaves . . . their ancestors were not originally convicts nor criminals, and yet they are held in bondage for generation after generation, which makes their case rather a painful one. Again, the sons of slaves (奴 婢) are

called 'children to the manor born' (家生孩兒). . . . Sze-ku (*circa* 650 A.D.) says: the term 'sons born in slavery' (奴產子) has the same meaning as the common term 'slaves to the manor born' (家生奴). Hence there is some warrant for the phrase 'children to the manor born' (家生兒)."—*Ch. Rev.*, x. 284.

"The sons, and certainly the grandsons, of slaves seldom serve in the household of their parents' master, but they visit the family to offer assistance on great occasions. Local usage differs."—*Ibid.* viii. 93, note.

"Slaves are generally well-treated, and their position in the family is more like that of the Jewish *ebed*, not like that of the slaves amongst the Greeks and Romans."—*Möllendorff, Fam. Law*, p. 8.

"The Chinese master may punish his slave, but not excessively."—*Ibid.* p. 8. See also *Ch. Rev.*, x. 282–4.

"In the Chinese scale of virtues and vices, to scold slaves severely is rated as *one* fault; to see them ill and . . . require labour as usual, is rated at *ten* faults; to disallow slaves marrying is rated at *one hundred* faults; to refuse assent to slaves being ransomed is rated at *fifty* faults. These faults are registered by the spirits . . . to decide the fate of mortals after death; but they are beyond terrestrial legislation."—*Ch. Repos.*, xviii. 355.

"The dread of native courts is such that slaves are usually punished at home for offences such as assault, &c."—*Ch. Rev.*, viii. 93, note.

The only case where the term slave of the State is found in the Manchu code is when for "founding a new monastery without the authority of Government, the priest is stripped of his sacred character, and sent into perpetual banishment. The guilty priestess becomes a slave of the [State, which probably means] that she is made a slave of the Imperial household."—*Ch. Repos.*, xviii. 349.

[State slavery no longer exists as a punishment, banishment with forced labour being substituted. Public works are done by free men, who are fairly well paid, and cannot be detained beyond the stated time. Relations of executed rebels are sometimes given as household slaves to officials, but if too numerous, they are deported. There are hardly any foreign prisoners in China now, except some Tibetan slaves on the Sze-chuen frontier. Kidnapping and sale of free persons are penal offences; but the selling of children and exchange for money of secondary wives are very common in practice. Children of slaves belong to their masters. It is illegal to detain a runaway slave. Secondary wives rank above slaves (see under DOMESTIC: MARITAL). The Code does not provide for manumission, or recognise the slave's right to work out his freedom. Freed slaves offending against their old masters are punished by law as if still slaves. Marriage between slaves and free persons is illegal, and crime is more severely punished in the former. Even the accidental killing of a master is punished with death. But, in practice, the lot of the domestic slave is not usually a hard one.]—*Ibid.* xviii. 348–61; *cf. Doolittle*, ii. 209–13; *Tcheng-ki-tong*, p. 126; *Gray, China*, i. 240–8, ii. 50; *Nevius, China and the Ch.*, p. 253; *Ch. Rec.*, xxii. 567–72.

"The slave follows the surname of his master, [and has no longer one of his own]."—*Ch. Rec.*, xxii. 569.

"Slavery in China comprises both the *mancipium* and the *servus* of ancient Rome; but, as far as our observations go, in no part of China is there anything resembling the shocking condition of the slave in the golden period of Roman history. Certain criminals are handed over to the frontier soldiery, or to 'Mohammedans capable of exercising control,' as slaves, and, in cases of treason, these persons and their descendants under the age of sixteen are first castrated. We have no information as to the ultimate fate of such slaves, who, in any case, must exist in very limited numbers, especially since the frontier Mohammedan wars. The ordinary household slavery of China is more assimilated to the *mancipium* than to the *servitus* of the Romans. *Mancipium*, or bondage, was the result of the act of a parent: so, in China, the conditions of bondsman, *p'u* 僕, or bondswoman, *pei* 婢, may also be created in the first instance by the act of a parent."—*Ch. Rev.*, viii. 93.

"The Chinese bondsman is almost as free as the Roman bondsman, who was *civis* and *liber* in respect of all persons not his master. The Chinese bondsman is punished one degree more severely than a free man for assaulting, with or without fatal consequences, a free man; on the other hand, a free man is punished one degree less severely for similarly assaulting a slave than he would have been for assaulting a free man. [*Cf. supra.*] Between themselves slaves stand in the same relation as freemen between themselves. In cases affecting property, freemen and slaves are equal. Striking or killing the slaves of relatives is punishable the more lightly according as the slave belongs to a nearer relative. The Code does not provide a penalty for killing one's own bondsmen. On the other hand, a bondsman who wilfully strikes his master is punishable with death, accompanied by a slow and painful execution if the blow is fatal. The Roman bondsman could sue his master for outrage. Like the Roman, the Chinese bondsman appears to be capable of civil wedlock, and may have a concubine as well as a wife. His wife is not at the mercy of his master's lawless affections, and cannot be parted from him. His children may not be sold without his consent, and they receive their freedom when his deed of purchase is returned to him. Formerly the taint of slavery prevented the descendants of slaves from sharing the privileges of the public examinations—the chief channel to public honour—for three generations; but it is said that, by a recent law, the Emperor has declared all the descendants of slaves to be equal in every way to free men. Unlike the Roman bondsman, the Chinese is not subject to his manumittor's rights of patronage, and his *patria potestas* appears to be concurrent with that of his master. A Chinese bondsman, it seems, may sue or be sued either personally, or through his master, for torts; but, in matters concerning his own or third person's property, he alone is capable of suing, or of being sued. It was not until the time of Antoninus Pius that the Roman slave was protected from personal violation by his or her master, whilst the Chinese master, it appears, is even obliged to find wives and husbands for his slaves, or else take the females as concubines—which, again, he cannot do against their consent. Roman law to the end refused to permit any rights to the slave."—*Ibid.* viii. 93–4.

INDUSTRY.—"Like the contemporary secularism of Han-yu the fabulist's belief [see REST. OF UNITY] in free industry survives in modern China, less as a speculative opinion than as an organic habit of mind and manners."—*Simcox*, ii. 153.

"Probably the custom that has the greatest effect upon Chinese life is . . . the principle of co-operation. In a Chinese business, be it large or be it small, pretty well every man in the business has his share."—*Little* (*Mrs. A.*), *Int. Ch.*, pp. 541–2.

"It is strange that there are scarcely any large factories in China. Labour is not concentrated, but divided into small workshops. This may arise from fear of having large numbers congregated together, where there might be difficulty in having a direct supervision of the workmen. Where women and children are employed, such as in picking teas, sorting out the leaves, we find large groups working together. . . . But where men are employed, it is rare that many are collected in one building."—*Scarth, Twelve Years*, pp. 8–9.

"Labour is much divided; there are no great factories, with large bodies of workmen. All handiwork is either carried on out of doors, exposed to sun and wind, or the workshops, like the ordinary shops, are open in front. There are no injurious trades or manufactures polluting the earth, air, and water. The Chinese shoemakers cut their leather and dress their shoes on boards on the counter or on their knees; the tailors stand at their trade, and sew beside long tables. Even painting and gilding by means of mercury do not seem to produce any bad effect among the workmen; this is, perhaps, to be explained by the fact of the work being carried on so much in the open air. Apprenticeship in China is long in all trades; the workmen, as a rule, live with the master." "The hours of labour are long, but are interspersed with frequent periods of rest, such as tea-drinking and smoking. These periods are regulated in extent and number by the season of the year. The wages are very low, amounting, for unskilled labour, with food, to a few pence daily. Skilled labour of all sorts rarely exceeds a shilling per diem. Trade accidents are very rare. No machinery of any kind is employed: all work is done with the hand. The people are so ingenious that the simplest tools are sufficient for the finest and most complex work."—*Dudgeon, Diet, Dress, &c.*, pp. 274–5.

"It is not permissible to prospect for gold without license, but the offence varies with the locality." Special edicts prohibit gold washing in certain districts. "Other mining is on much the same footing."—*Alabaster, Notes*, p. 548.

The silver mines at Fóshán, on the Burmah-Yünnan and Cochin China-Kuang Si borders, are not open to be worked by anyone, "but are intrusted to certain merchants, who pay duty on them, and worked by Chinese."—*Bridgman, Ch. Chrest.*, pp. 260–1.

"In respect to opening mines, it is the usage to report the particulars to the officers, before proceeding to work the beds, paying the taxes according to their produce. In former times, when the country was rich and well supplied with metals, the Government forbade the mines being any longer worked; but, in the year 1848, the Emperor Tau-Kwang decreed that whenever mines of gold, silver, copper, lead or iron were found in any province, any person could work them on reporting their condition to the authorities, paying the taxes either on the metals after smelting, or on the ore as it was sold from the pit."—*N. & Q. on C. & J.*, ii. 97. See also GEN. GOVT.

[Père Jartoux says that the Chinese were not allowed to go outside the Palisade, in Liao-tung, to gather gin-seng. A certain number of Tartars were licensed to collect this root, on condition of giving up a certain quantity to the Emperor; the rest was bought from them by the Government. The troops of gin-seng gatherers are accompanied by officials, and proceed according to a fixed order and method.]—*Lett. Édif.*, xviii. 127–43.

[In times of scarcity distilling is often forbidden or checked, because it causes a waste of good grain.]—*Parker, China*, p. 276.

"When legislation of one sort has missed its aim, or proved vexatious in fresh ways, the legislation is allowed to drop; it is not thought necessary to try a new plan at the risk of new inconveniences. The State learns what to let alone, and the people profit by their widening liberties to do for themselves what the Government had failed to do for them. The result is that industry and commerce are, at the present moment, more entirely left to themselves in China than in any other civilized country, with, in the main, satisfactory results. But it is only just to her earlier rulers to point out that this paradisaical state of *laissez faire* was not reached by popular wisdom, in spite of State bungling, but under cover of legislation, wise and otherwise; yet, in the main, designed to compass the identical results which now commend themselves to public opinion in the Middle Kingdom. In other words, the experience of China proves that the industrial condition of a country may be permanently influenced by its legislation, when that legislation gives voice to powerful and deep-rooted national tendencies."—*Simcox*, ii. 153–4.

"Arrangements to artificially influence the market are contrary to law. For a person to unduly depress or raise prices to suit his own convenience entails a penalty of eighty blows; and undue profit arising therefrom will be treated as theft." There is a "law against 'ruffians establishing conferences and preventing shippers chartering outside vessels'; and the originator of the combination to raise sales would be sent to military servitude on the borders after a month's cangue, while those who combined with them would get one hundred blows and three years' transportation." Corners are forbidden. Strikes do not often occur, but "to agitate against the repair of the bunds or embankments, if there be a pressing necessity therefor, and so agitating keep people from coming forward," is punishable with decapitation. The unauthorized levying of tolls is held to be an interference with trade. Commercial gambling is generally and strictly forbidden (*e.g.*, gambling transactions in grain).—*Alabaster, Notes*, pp. 545–7.

Copyright "exists chiefly in respect of official publications."—*Ibid.* p. 548.

[Literary property continued to be absolute. *cf. Wylie, Notes*, Intro.]

[Mills, forges, etc., were private. *cf. Williams, Midd. King.*, ii. ch. xv.]

Gilds.—"A later development of trade has been the adoption of guilds, whose halls are often among the handsomest buildings to be met with in the busy centres of trade." "The more strictly mercantile guilds serve invaluable purposes in the promotion of trade. Each is presided over by a president, who is helped in the administration by a specially elected committee and a permanent secretary. This last is generally a graduate, and thus, in virtue both of his literary rank and of his connexion with the guild, has ready access to the mandarins of the district. Through his instrumentality disputes are arranged, litigation is often prevented, and the *Lekin* taxes due from the members of the guild for the passage of their goods into the interior of the country are compounded for by lump sums."—*Douglas, Soc. in Ch.*, pp. 142–3, summarizing *Journ. N.-C.B.R.A.S.*, N.S. xxi. 135–8.

The gilds "are so far recognized by the local authorities, that they enjoy semi-official rights which it would be dangerous even for a high mandarin to contravene."—*Williams, Ch. and Med. Gilds*, p. 210.

"In view of the influence and preponderance of gilds in the Empire and colonies, it is somewhat surprising to learn that their membership is usually kept below thirty."—*Ibid.* p. 212. See also *Journ. N.-C.B.R.A.S.*, N.S. xxi. 138.

"Women and girls are not admitted to guild-halls, to the end that decorum may be maintained."—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 139.

"The revenue of the guilds is derived from a payment of one-tenth of one per cent. on all sales effected by members. At first sight this percentage appears insignificant, but so great is the amount of internal trade, that the amount realized not only covers every requirement, but furnishes a surplus for luxurious feasts. In one guild at Ningpo the reserve fund was lately stated to be 700,000 dollars, to which must be added the amount realized by the deposit exacted from every new member of 3,000 dollars. Against the income account must be set down large outgoings in several directions. In the case of a member going to law with the sanction of the guild, he receives half his law expenses, and a not inconsiderable sum is yearly disbursed in payment of the funeral expenses of those members who die away from their homes. Besides these outgoings, money is advanced on cargoes expected, and is lent for the purchase of return ventures. The rules regulating the guilds are numerous, and are strictly enforced. The favourite penalty of any infraction is that the offender shall provide either a theatrical entertainment for the delectation of his brother members, or a feast for their benefit. If any member should be recalcitrant, and refuse to submit to the authority of the committee, he is boycotted with a severity which might well excite the emulation of promoters of the system in the Emerald Isle."—*Douglas, Soc. in Ch.*, pp. 143–4. See also *Giles, Ch. Sketches*, pp. 49–52; *Journ. N.-C.B.R.A.S.*, N.S. xxi. 139–41, 137; *Indian Textile Journ.*, Feb., 1900 (loan gilds).

"Allied to these mercantile associations are the guilds which are strictly analogous to the trades unions among ourselves. [They are generally composed of retail traders and artizans (*Journ. N.-C.B.R.A.S.*, N.S xxi. 170).] Each trade has its guild, which is constituted on precisely the same lines as those above described. So far as it is possible to judge, the action of the Chinese trades unions appears to tend to the promotion of fair play and a ready kind of justice. Unjust weights, or unfairly loaded goods, are unhesitatingly condemned, and substantial fines are inflicted on members found guilty of taking advantage of such iniquities. By the influence of the unions wages are settled, the hours of work are determined, and the number of apprentices to be taken into each trade is definitely fixed. Silk weavers are not allowed to work after 9 o'clock in the evening, nor are any workmen permitted to labour during the holidays proclaimed by the guild."—*Douglas, Soc. in Ch.*, pp. 144–5. See also *Journ. N.-C.B.R.A.S.*, N.S. xxi. 170–86.

The development of the trades unions "does not appear to be as perfect in China as in the West, or as in the case of" the guilds. "Amongst mechanics, the unions generally embrace masters and workmen as against society, journeymen or apprentices, except in a few of the largest centres, seldom uniting exclusively by themselves. . . . There are deep-lying reasons for this phenomenon, among which may be suggested the ignorance and poverty of the menial class, the sharp distinctions in society from the lowest to the highest, the phlegmatic calm of the national temperament, etc., etc. Strikes or combinations against employers are extremely rare, and always peaceably conducted, but in this regard we must remember that large factories and the huge plants they involve are unknown. Industrial life in Asia is practically where it was some two centuries ago in Europe."—*Williams, Ch. and Med. Gilds*, p. 228.

"The unions . . . do not always possess club houses, their meetings being held in temples, tea-houses, or in any convenient public place. . . . As might be expected, they are severe in respect to the employment of female labor, which is almost always prohibited in the arts and trades, though women are everywhere great field-hands and shop-keepers. Needle makers allow exceptions in favour of the wives and daughters of their own craft, who are permitted to acquire the difficult art of drilling needle eyes; but should either ever marry out of the union, employment would be withheld."—*Ibid.* pp. 228–9. *Cf. Journ. N.-C.B.R.A.S.*, N.S. xxi. 178–9.

"Clannishness is a Chinese characteristic, which renders sectionalism . . . everywhere rampant. Many occupations form unions, membership in which is restricted to fellow-townsmen. Fish-hook making at Wênchow is confined to men of that trade who belong to Fukien, and no Wênchowese is allowed to acquire the art. Needle-makers allow only Taichow and Kiangsu men to work in the city of Wênchow, tallow-chandlers and tin-foil beaters are cited as the two most truculent classes, owing to their sectional jealousy. These men will not work with others of their craft who happen to belong to another prefecture; as it is, though labouring in different establishments, they are perpetually involved in feuds and fights."—*Ibid.* p. 229. *Cf. Journ. N.-C.B.R.A.S.*, N.S. xxi. 181. For a typical instance of sporadic combination see *Henry, Ling-Nam*, p. 312.

"On being admitted as an apprentice, a lad has, as a rule, to stand treat to the workmen, and in the more skilled trades he has to serve five years before he is admitted to the rank of a journeyman. Though the conduct of these societies is generally beneficial, they are occasionally apt, like all similarly constituted bodies, to act tyrannically. Barbers, for example, are in many parts of the country forbidden to add the art of shampooing to their ordinary craft, it having been determined by the union that to shampoo was beneath the dignity of the knights of the razor. During the last six days of the year, when the heads of the whole male portion of the empire are shaved, barbers are forbidden to clean the ears of their customers, as it is their wont to do during the rest of the months. Anyone found breaking the rule is liable to be mobbed, and to have his tools and furniture thrown into the street."—*Douglas, Soc. in Ch.*, p. 146. *Cf. Journ. N.-C.B.R.A.S.*, N.S. xxi. 179; 177–8.

"It is too much to expect that the unions should always refrain from bringing to bear the influence which they collectively possess for their direct financial advancement. Strikes are of frequent occurrence [but see *supra*, and *Journ. N.-C.B.R.A.S.*, N.S. xxi. 180], and victory is commonly with the workmen, except when their claims are manifestly unjust. The mandarins recognize that they cannot flog a whole trade, and the poverty of the men secures them against those exactions which would probably be demanded from their employers were

they to appear in court. These facts are fully recognized by the masters who prefer rather to yield to the demands of their men than to fall into the clutches of their rulers."—*Ibid.* pp. 146-7.

"The field-hands, into whose minds the thought of combination never penetrates."—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 186.

[The Marquis de Courcy says that the baggage and chair coolies form a numerous and influential corporation: the sons succeed their fathers at the work.]—*De Courcy, L'Emp. du Mil.*, pp. 216-7. *Cf. Williams, Middl. King.*, i. 748, and DIST.

[Gray describes the gilds of beggars at Canton and elsewhere, which are elaborately organized, and so far recognized by the law as to be placed under the superintendence of a special magistrate. They exact contributions from householders according to a fixed assessment, and in return protect them against unauthorized beggars.]—*China*, ii. 59-61.

[For the law against "monopolising markets" see *Ta Ch'ing lü li* (Penal Code), *Staunton*, pp. 164-5.]

"Civil cases are rare in China, such questions as arise in the way of trade being almost invariably referred to some leading guild, whose arbitration is accepted as final."—*Giles, Ch. Sketches*, p. 79.

"I have been unable to discover that trade unionism in China has been on the whole inimical to the public weal, while its utility is obvious from several aspects."—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 185.

"In quantity and strength the existing guilds are more numerous and far stronger than any other trade unions in the world."—*N.-C. Herald*, May 7th, 1902, p. 907.

[Besides the works quoted above, references to gilds or their regulations occur in *Voc. and Handb. of the Ch. Lang.*, ii. 399; *Ch. Rev.*, xii. 5; *Commercial Reports by H.B.M. Consuls in China*, 1884, Pt. II., *Report on Trade of Ningpo*; Shanghai General Chamber of Commerce: *Minutes of Annual Meetings and Reports*, 1882-3; *Simon, Note sur les petites Sociétés d'Argent en Chine*, in *Journ. DOMESTIC — MARITAL.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

"The Book of History says that the ancient Chinese lived promiscuously [野合], knowing their mothers but not their fathers [知有其母不知有其父]."—*Ch. Rev.*, x. 73. This refers to a time previous to the mythical Emperor Fu Hsi, whose successors are said to have introduced marriage. (*Legge, Ch. Class.*, III. i. Prol. p. 75.) By some Fu Hsi himself is said to have "placed the marriage contract upon a proper basis." (*Giles, Bio. Dic.*, pp. 233-4.) "Sui Huang Shih [the fabulous Jên Huang Shih, or according to some, Sui Jên] was the first to institute marriage. When the Five Emperors ascended the throne they married wives."—*Yüan chien lei han, c.* 176, p. 1*a*.

"Tradition tells us very little of the family life of the Chinese in antiquity. Its foundations can be clearly recognised in the classical writings; in the *Shiking*, or Book of Odes, we even find traces of marriage by capture."—*Möllendorff, Fam. Law*, p. 4. See also *Ch. Rev.*, x. 95.

"The rite of marriage had been substituted for capture."—*Giles, Historic China*, p. 4.

"From all antiquity in China, no son ever did, or hereafter will, marry without the consent of his parents."—*Navarette*, quot. *Westermarck*, p. 227.

"An imperial decree [of A.D. 484] says:—'In the Hsia and Yin dynasties marriage could take place with those of the same clan; in the Chou dynasty marriage with those of the same surname was first forbidden."—*Pei shih Wei Wên Ti chi, P'ei wén yün fu, c.* 13*b*, p. 86*a*.

"Yao was the 曾孫 of Hwang Ti. . . . Shun, however, was the 八世孫 of Hwang Ti, and therefore we must conclude that exogamous [? endogamous] marriages were known at this time, or else that, as the historian remarks, the marriage was incestuous [亡宗瀆姓亂序無別]—*i.e.*, supposing the facts were true."—*Ch. Rev.*, xii. 443. Huang Ti was probably, however, mythical.

"In ancient times when one of the same surname married a lady, the two States of the same surname presented maids-of-honour *ying*[4] (媵)."—*Shih wên, K'ang Hsi Tzŭ tien, Ch'ou chi hsia Nü pu*, p. 54*a*.

"When the ancients married a daughter she was accompanied by the [bride's] brother's daughter, the latter was called *ying*[4] (媵), a maid servant who accompanies a bride to her new home. The *ying* were of two kinds. Besides the *ying* presented by the princes of two other States [of the same surname as the bride's family] there was also the brother's daughter." These were not concubines.—*I li Shih hun li, P'ei wén yün fu, c.* 84, p. 60*a*. See also *Chêng yün, K'ang Hsi Tzŭ tien, Ch'ou chi Hsia, Nü pu*, p. 37*a*.

"In very ancient times there were no silk or cotton clothes; the people wore skins of animals and feathers of birds; and used them for marriage presents. The presents of silk of subsequent ages originated from this."—*I chih lu, Shih wu yüan hui, c.* 13, p. 3*a*.

"In ancient times a married girl was called a woman (婦 *fu*). It was a long-established principle that she should serve her husband as she did Heaven."—*Nü hsiao ching, P'ei wén yün fu, c.* 7*a*, p. 143*b*.

Yao gave Shun "his own two daughters in marriage."—*Legge, Ch. Class.*, III. i. Prol. p. 53. See also *Mêng Tzŭ, Shih wu yüan hui, c.* 13, p. 3*b*.

[The Emperor Shun married without first informing his parents, fearing they might prevent him from doing so (*Mêng tzŭ*, iv. xxvi. 2. *Legge*, ii. 189). He considered that obtaining posterity was the higher duty.]—*Möllendorff*, p. 23.

"The practice of polygamy [concubinage], which was as old as Yaou, was a constant source of disorder. A favourite concubine plays a conspicuous part in the downfall of the dynasties of Shang and Hea, and another signalizes a calamitous epoch in that of Chow. In the various States, this system was ever giving rise to jealousies, factions, usurpations, and abominations which cannot be told."—*Legge, Ch. Class.*, III. i. Prol. p. 199.

[Gray thinks that, in the earliest ages, concubinage was a privilege of the wealthy classes only.]—*China*, i. 184.

"Pêng Tsu altogether married 49 wives."—*Hai lu sui shih, P'ei wén yün fu, c.* 8, p. 25*a*.

"In the time of the Three Dynasties (Hsia, Shang, and Chow) the people exceeded in lewdness. The Yao Terrace and Ching Palace contained several hundred concubines."—*Hou Han shu Hsün Shuang chuan, ibid. c.* 105, p. 57.

Widowhood.—[*Westermarck, Hist. of Human Marr.*, p. 125, quoting *Navarette*, says that in olden times widows occasionally sacrificed themselves on the death of their husbands.]

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Age.—"When it is said that at thirty a man has a wife, the meaning must be that he ought not to reach that age without being married. Early marriages were the rule in ancient China, as they are now. Confucius was married when barely twenty."—*Legge, Lî Kî*, i. 65, note; and see p. 478.

"A youth was considered marriageable at twenty, and a girl at fifteen: thirty and twenty respectively marked the lawful limit for celibacy; single men and women above those ages were liable to be exhorted by the officer of marriages, for it was a part of good government to have no unmarried persons in the country."—*Simcox*, ii. 71.

"The *Mei Shih* (媒氏) was in charge of the marriages of all the people. All fully grown boys and girls had their names entered in the record. If there was a man 30 years old, he instructed him to get a wife; and a woman of 20 he instructed to find a husband."—*Chou li, Yu hsüch hsü chih, c.* 2, p. 4*b*.

Prohibitions.—"There are five women who are not to be taken in marriage:—the daughter of a rebellious house; the daughter of a disorderly house; the daughter of a house which has produced criminals for more than one generation; the daughter of a leprous house; and the daughter who has lost her father and elder brother."—*Legge, Ch. Class.*, I. Prol. p. 105.

"The reason why marriages were originally forbidden between persons of the same surname is explained in the *Tso Chuan* to be because unhealthy offspring would be the result. . . . And, for this reason, in purchasing concubines of unknown antecedents, the surname was ascertained negatively by divination."—*Ch. Rev.*, x. 71; see also *Li chi*, Bk. I., sect. i., Pt. iii. 38; IX. iii. 7; XIV. 8; XXVII. 34; XLI. i.; *P'ei wén yün fu, c.* 8, p. 17*a*; *De Mailla, Hist.*, ii. 11, *seq.*; *Hirth*, pp. 152-3; *Parker, Anc. Ch.*, p. 205.

"Within the 3 years [of mourning] one should not marry a wife."—*Kung Yang chuan, P'ei wén yün fu, c.* 13*b*, p. 84*b*. *Cf.* FUNERAL RITES.

"A curious proof of the tenacity of Chinese usage is afforded by a passage in the *Chow Li* (I. p. 308), *forbidding* a custom which is still in use. The officer of marriages, according to this clause, forbids the removal of the bodies of those who have died unmarried to fresh tombs, where, by a sort of posthumous marriage, they are united to girls who have died before reaching the marriageable age. It is not quite clear whether betrothed pairs whose marriage had not been culpably adjourned might be united after death; but the intention seems to have been to promote marriages by closing a too easy way of wiping out the disgrace attached to celibacy."—*Simcox*, ii. 70.

Consent.—"It is said in the *Book of Poetry*: 'How does one proceed in taking a wife? Announcement must first be made to one's parents. If they are alive, then it is right to marry; if they are dead, then one need not do so, but the marriage must be announced to the ancestral temple.'"—*K'ang Ts'ung Tzŭ, P'ei wén yün fu, c.* 13*b*, p. 84*b*.

Betrothal.—[When two families wished to form a matrimonial alliance, the negotiation was conducted by a go-between of either sex, who went to make the proposal to the two houses (*Shih ching*, I. viii. VI. 3; xv. V. i.).]

"Male and female, without the intervention of the match-maker, do not know each other's name. Unless the marriage presents have been received, there should be no communication nor affection between them. Hence the day and month (of the marriage) should be announced to the ruler, and to the spirits (of ancestors) with purification and fasting; and (the bridegroom) should make a feast, and invite (his friends) in the district and neighbourhood, and his fellow-officers—thus giving its due importance to the separate position (of male and female)."—*Li chi*, i. i. iii. 6. 36-8; *Legge*, i. 78.

"The ceremony of marriage was intended to be a bond of love between two (families of different) surnames, with a view, in its retrospective character, to secure the services in the ancestral temple, and, in its prospective character, to secure the continuance of the family line. Therefore the superior men (the ancient rulers) set a great value upon it. Hence, in regard to the various (introductory) ceremonies—the proposal with the accompanying gift [this gift was always a goose]; the enquiries about the (lady's) name; the intimation of the approving divination [the gentleman's family had divined on the proposal]; the receiving the special offerings (these were various); and the request to fix the day [the lady's family fixed this. The first proposal was made, and perhaps those that followed also, by . . . 'the go-between,' or a friend acting in that capacity]—these all were received by the principal party (on the lady's side) as he rested on his mat, or leaning-stool, in the ancestral temple. (When they arrived), he met the messenger, and greeted him outside the gate, giving place to him as he entered, after which they ascended to the hall. Thus were the instructions received in the ancestral temple [thus a religious sanction entered into the idea of marriage], and in this way was the ceremony respected, and watched over; while its importance was exhibited, and care taken that all its details should be correct."—*Li chi*, XLI. i; *S.B.*, XXVIII. 428-9.

"As they [wild geese] live in the north in spring and in the south in autumn, they acquire the harmonizing power of the male and female principles in nature. As they are always in pairs, so they represent a good match, and were therefore used as presents on joyful occasions [*i.e.*, marriages]. As wild geese could only be got at the proper season, domestic geese were often used instead."—*Chia li ta ch'êng, c.* i, *Kuan chi hsi i*, p. 11*a*. *Cf. infra.*

"Presents are interchanged before (the parties) see each other."—*Li chi*, IX. iii. 9. Presents are also mentioned in *ibid.* IX. iii. 7, and *passim.*

"On betrothing a daughter, as well as taking a wife, the plain silk for the marriage present should not exceed 5 pairs of rolls."—*Chou li, Ti kuan mei shih, P'ei wên yün fu, c.* 34, p. 8*b*.

"The feudal ruler, according to Dr. Legge, could only in all his life have one wife, one lady, that is, to be called by that name. Something answering to the preliminary betrothal of the West seems to have lasted down to the Three kingdoms. The marriage day was fixed when the presents were sent, at the interval of a year for the emperor, six months for the great vassals, and one month for the commonalty, the royal custom being no doubt the earliest. Another trace of archaic law is preserved in the San Kwo Chi, where a pretender says he will do something 'when I have founded my dynasty by the marriage of my eldest son' (*San Kuo Chi* [*San kuo chih*], ii. 87. Trans. T. Pavie)."—*Simcox*, ii. 67, note.

"When an Emperor married his daughter to a prince, he instructed a prince of the same surname to manage it. He did not manage the marriage himself because they were unequal in rank."—*Ch'un ch'iu chu, P'ei wén yün fu, c.* 13*b*, p. 86*a*.

"When a girl was betrothed, she had her hair bound up (lit. assumed the broad bent hairpin) and received her [betrothal] name. If she then died, mourning might be performed as for a married woman. This was the system of the Chou dynasty."—*Kung yang chuan, Shih wu yüan hui, c.* 13, p. 2*b*.

[King Wu and his brother the duke of Chou consecrated by special regulations the sanctity of marriage, at a time before the duke of Chou had formed the code of Chou laws (*Shih ching*, I. ii. VI.). This ode speaks of ceremonies of engagement and of the intervention of the magistrate. Every union which had not been so consecrated was declared illegitimate, and the offenders were punished. I. vi. IX. makes allusion to those regulations, and to the case of a young lady who refuses to take a husband without fulfilling those formalities.]

Conclusion of Marriage.—"The father gave himself the special cup. [The son received it and gave no cup to the father in return. This was its speciality. In the capping ceremonies it was given 'in the guests' place'; in those of marriage, in the son's chamber] to his son, and ordered him to go and meet the bride; it being proper that the male should take the first step (in all the arrangements). The son having received the order, proceeded to meet his bride. Her father, who has been resting on his mat and leaning-stool in the temple, met him outside the gate and received him with a bow, and then the son-in-law entered, carrying a wild goose. After the (customary) bows and yieldings of precedence, they went up to the hall, when the bridegroom bowed twice and put down the wild goose. Then and in this way he received the bride from her parents."—*Li chi*, XLI. 2, *S.B.*, XXVIII. 429. See also *Li chi*, XXIV. 9-10; XXVII. 38.

"After this they went down, and he went out and took the reins of the horses of her carriage, which he drove for three revolutions of the wheels, having handed the strap to assist her in mounting. He then went before, and waited outside his gate. When she arrived, he bowed to her as she entered. They ate together of the same animal, and joined in sipping from the cups made of the same melon; thus showing that they now formed one body, were of equal rank, and pledged to mutual affection."—*Ibid.* XLI. 2, *S.B.*, XXVIII. 429-30. See also *Li chi*, IX. 10.

"In passing out from the great gate (of her father's house), he precedes, and she follows, and with this the right relation between husband and wife commences."—*Ibid.* IX. 10.

"The respect, the caution, the importance, the attention to secure correctness in all the details, and then (the pledge of) mutual affection—these were the great points in the ceremony, and served to establish the distinction to be observed between man and woman, and the righteousness to be maintained between husband and wife."—*Ibid.* XLI. 3, *S.B.*, XXVIII. 430.

From the *Li chi*, ch. 26, l. 25 *et seq.*, "we must deduce the fact that, in those times the completion of a marriage was the progress of the bride from the home of her parents. Indeed, her having to put on mourning dress immediately and to hurry to the house of her parents-in-law in case one of these happened to die whilst she was on the way, shows convincingly that the most sacred duty of a daughter-in-law, viz., to mourn for her husband's parents, was deemed then already to be incumbent on her to its fullest extent. Her duty to return to her own home if her own father or mother died, does not refute this, as there is nothing in the text which justifies the inference that her marriage was not considered fully consummated when on the way to the bridegroom's home. Sü Shi-tseng 徐師曾, an author of the Ming dynasty, writes that 'she would then live at the house of the son-in-law.'"—*De Groot, Rel. Syst.*, II. i. 611, note.

[Confucius condemned the usage of some families in which the bridegroom was required to join the family of his father-in-law.]—*Simcox*, ii. 68.

[When the bride was of a noble family, she was conducted to her husband (*Shih ching*, I. v. III. 2) in a chariot adorned with pheasant's feathers. Musicians and a numerous suite accompanied her (I. ii. I.). The husband awaited his future wife at the door of the house (I. viii. III.). The arrival of the cortege was the signal for the commencement of the rejoicings (I. i. I.).]

"When the Prince of the Ch'in State married his daughter to the son of the Prince of Chin, 70 *ying*[4] (媵), bride's lady's maids, wearing gay garments, accompanied her. The men of Chin loved the concubines and despised the daughter of the prince. It might be said that he [the Prince of Ch'in] knew how to arrange marriages with concubines, but not so with regard to his daughter."—*Han Fei Tzŭ, P'ei wên yün fu, c.* 105, p. 60*a*.

"In the 2nd moon of the 9th year of Ch'êng Kung, Po Chi was married to Sung. In summer the men of Chin came with

the present of a *ying*[4] (媵), bride's lady's maid, and on the 5th moon of the 10th year the men of Ch'i also came with the present of a *ying*."—*Ch'un ch'iu, ibid. c.* 84, p. 60*a*.

"The partner of the son of Heaven is called 'the queen'; of a feudal prince, 'the helpmate'; of a great officer, 'the attendant'; of an (inferior) officer, 'the serving woman'; and of a common man 'the mate.' The son of Heaven has his queen, his helpmates, his women of family, and his ladies of honour. (These) constituted his wife and concubines. A duke and (one of) the feudal princes had their helpmate, and their honourable woman, (which) were their mates and concubines."—*Li chi*, i. ii. ii. i. i. 6. 18–19; *Legge*, i. 109, 112–3.

[Marriages were arranged at the commencement of the year before the ice was melted by the return of the heat (*Shih ching*, I. iii. IX. 3); and the ceremony took place at the flowering of the peach tree (I. i. VI.). The songs of rejoicing compare the bride to the flowers of the peach and apricot trees (I. ii. XIII. 2). See also *P'ei wén yün fu, c.* 13*b*, p. 84*b*.]

"The 2nd moon was the proper season for wiving."—*Hsia hsiao chêng, P'ei wên yün fu, c.* 8, p. 17*a*. *Cf.* HAB. AND CUST.

"Ch'ên Chên Tzŭ, when marrying his daughter, first performed the marriage ceremony and then visited the ancestors' temple."—*Tso chuan, ibid. c.* 36, p. 85*b*.

"Rising early (the morning after marriage), the young wife washed her head and bathed her person, and waited to be presented (to her husband's parents), which was done by the directrix, as soon as it was bright day. She appeared before them, bearing a basket with dates, chestnuts, and slices of dried spiced meat. The directrix set before her a cup of sweet liquor, and she offered in sacrifice some of the dried meat and also of the liquor, thus performing the ceremony which declared her their son's wife." "The father and mother-in-law then entered their apartment, where she set before them a single dressed pig, thus showing the obedient duty of (their son's) wife."—*Ibid.* XLI. 5–6, *S.B.*, XXVIII. 430–1. See also *I li*, IV. 1–20. The *Li chi*, IX. iii. 12, says that after she had presented the sucking-pig to her husband's parents, and they had done eating, she ate what was left,—as a mark of their special regard. "They descended from the hall by the steps on the west, while she did so by those on the east;—so was she established in the wife's (or mistress's) place."

"Next day the parents united in entertaining the young wife, and when the ceremonies of their severally pledging her in a single cup, and her pledging them in return, had been performed, they descended by the steps on the west, and she by those on the east—thus showing that she would take the mother's place in the family."—*Ibid.* XLI. 7, *S.B.*, XXVIII. 431; see also *I li*, IV. 1–20. For the pre-marital instruction given to a young lady, see *Li chi*, XLI. 10, *S.B.*, XXVIII. 432.

Connubium and Concubinage.—"A variety of terms are used by Dr. Legge to describe the position of the one lawful wife, whose eldest son is entitled to perform the mourning rites for his father. This lady is spoken of as the 'established,' the 'confirmed,' the 'commissioned,' the 'acknowledged' or the proper wife. A Chinaman can have only one such wife at a time, whose hand was formerly solicited from her parents with the customary present of pieces of silk. According to the *Li ki*, 'after three months she presents herself in the ancestral temple, and is styled "the new wife who has come." A day is chosen for her to sacrifice at the shrine of her father-in-law: "expressing the idea of her being the established wife"' (*S.B.*, XXVII. 322, 316). There was an ancient custom by which a bride, after a short interval, returned on a visit to her parents; and it seems as if the marriage were not regarded as complete or final till after these months of probation. If the bride dies during this interval, 'she should be taken back and buried among the kindred of her own family, showing that she had not become the established wife.'"—*Simcox*, ii. 67.

[Generally they preferred marrying in their own district. It was the contrary with ladies of noble birth. The existence at that time of the present practice of the wife returning to visit her parents is a subject on which opinions are much divided (*Shih ching*, I. i. II. 3).]—*Legge, Ch. Class.*, IV. i. 7, note; and Prol. p. 165, note 9.

"The patriarchal system, under which sons brought their wives to live under the parental roof, was abolished" by Wei Yang, when in the service of the ruler of the Ch'in State, about 350 B.C.—*Giles, Bio. Dic.*, p. 869.

"In the *Rites* it says: 'An Emperor married nine women at a time, including consort and concubines.'"—*Hou Han shu Lang K'ai chuan, P'ei wên yün fu, c.* 84, p. 60*a*.

"In ancient times the queen of the Son of Heaven divided the harem into 6 'palaces'; (occupied by) 3 *fu jên* (夫人), [titles of ladies whose husbands are of the first or second rank]; 9 *pin* (嬪), Imperial concubines; 27 *shih fu* (世婦), ladies of the seraglio; and 81 *yü ch'i* (御妻), Imperial maids."—*Li chi*, XLI. ii.

"The princes had *fu jên* (夫人), consorts; *shih fu* (世婦), wives with titles bestowed on them; wives (妻 *ch'i*); and concubines (妾 *ch'ieh*)."—*Li chi, P'ei wén yün fu, c.* 105, p. 57*a*.

"According to the *Rites*, feudal princes might marry the daughters of three states as wives."—*Kung Yang chuan Chu hou yu san kung chu, ibid. c.* 36, p. 93*b*.

"The bride of a feudal prince was accompanied [to her husband's home as companions] by a younger sister and a cousin; while two houses of the same surname each sent a similar group, making nine in all."—*Giles, Dic.*, No. 10,951.

"The Marquis of Ch'i had many favourites; his favourite concubines and *ju fu jên* (a sort of concubine) were six in number."—*Tso chuan, Kuang shih lei fu, c.* 19, p. 10*b*.

"Sze-ma Ts'een seems to make Confucius to have been illegitimate, saying that Heih and Miss Yen cohabited in the wilderness (野合). Keang Yung says that the phrase has reference simply to the disparity of their ages."—*Legge, Ch. Class.*, i. Prol. p. 59, note.

Relation of Husband and Wife.—"The position of women generally seems to have been very much what it is at the present day."—*Giles, Hist. of Ch. Lit.*, p. 18. But see following extracts.

"That filial piety or duty is the first of all virtues is a well-known principle of Chinese moralists; and, at the foundation of a well-ordered social State, they place the right regulation of the relation between husband and wife. Pages might be filled with admirable sentiments from them on this subject; but nowhere does a fundamental vice of the family and social constitution of the nation appear more strikingly than in the *She*. In the earliest pieces of it, as well as in the latest, we have abundant evidence of the low status which was theoretically accorded to woman, and of the practice of polygamy. Biot has referred to the evidence furnished by the last two stanzas of II. iv. VI. of the different way in which the birth of sons and that of daughters was received in a family. The family there, indeed, is the Royal family; but the king to whom the ode is believed to refer was one of excellent character; and the theory of China is that the lower classes are always conformed to the example of those above them. The sentiments expressed in that ode are those of every class of the Chinese, ancient and modern. While the young princes would be splendidly dressed, and put to sleep on couches, the ground to sleep on and coarse wrappers suffice for the princesses. The former would have sceptres to play with; the latter only tiles. The former would be—one of them the future king, the others the princes of the land; the latter would go beyond their province if they did wrong or if they did right, all their work being confined to the kitchen and the temple, and to causing no sorrow to their parents, . . . 'a slavish submission is woman's duty, and her highest praise.' She ought not to originate anything, but to be satisfied with doing in all loyal subjection what is prescribed to her to do. In II. i. I., a bride is compared to a dove, but the point of comparison lies in the stupidity of the bird, whose nest consists of a few sticks brought inartistically together. It is no undesirable thing for a wife to be stupid, whereas a wise woman is more likely to be a curse in a family than a blessing. As it is expressed in III. iii. X. 3:

> 'A wise man builds up the wall [of a city],
> But a wise woman overthrows it.
> Admirable may be the wise woman,
> But she is no better than an owl.
> A woman with a long tongue
> Is [like] a stepping-stone to disorder.
> Disorder does not come down from heaven—
> It is produced by the woman.
> Those from whom come no lessons, no instruction,
> Are women and eunuchs.'"—
> *Legge, Ch. Class.*, IV. i. Prol. pp. 138–9.

"The relations between husbands and wives, as exemplified in the Odes, are far from unpleasing, and it is significant of the moral tone of the community that this classical collection of popular poetry does not contain the slightest hint of an approach to indecency, and only a few very simple versions of the world-old village idyll of unfortunate or unauthorized courtships."—*Simcox*, ii. 65.

"Anciently, the rules to be observed between husband and wife required the greatest circumspection. They did not speak directly to each other, but employed internuncios, thus showing how strictly reserved should be intercourse between men and women, and preventing all disrespectful familiarity. When the wife was about to lie in, the husband took up his quarters in a side apartment, and sent to enquire about her twice a day. When the wife wished to visit her parents, she intimated her purpose through the matron. Inside the door of the harem, no liberty could be taken any more than with a reverend guest."—*Legge, Ch. Class.*, IV. i. 7–8, note.

The "lawful wives took part in most solemn ceremonies; the eldest son, however aged, was required to have such a wife to preside over the funeral rites, and the confirmed wives of great officers reproduced among themselves the ceremonies practised by their husbands. The ruler and his wife owed certain observances to the acknowledged wife of a great officer. The language of a ruler, when demanding the hand of a neighbouring prince's daughter, was, 'I beg you, O ruler, to give me your elegant daughter, to share this small State with my poor self, to do service in the ancestral temple, and at the altars to (the spirits of) the land and the grain.' The status of such a wife was equal and honourable; and, as in the course of history, the participation of women in public receptions and ceremonies gradually ceased, we are justified in believing that the position of the lawful wife was most distinguished in the remotest times."—*Simcox*, ii. 67–8.

"With regard to the relation of husband and wife, he [Confucius] was in no respect superior to the preceding sages who had enunciated their views of 'propriety' on the subject. We have a somewhat detailed exposition of his opinions in the 'Family Sayings.' 'Man,' said he, 'is the representative of Heaven, and is supreme over all things. Woman yields obedience to the instructions of man, and helps to carry out his principles. On this account she can determine nothing of herself, and is subject to the rule of the three obediences. When young, she must obey her father and elder brother; when married, she must obey her husband; when her husband is dead, she must obey her son. [See also *Book of Rites*, quot. *Ch. Rev.*, viii. 392; *Li chi*, IX. iii. 10; *Kuang shih lei fu, c.* 17, p. 1*b*.] She may not think of marrying a second time. No instructions or orders must issue from the harem. Woman's business is simply the preparation and supplying of wine and food. Beyond the threshold of her apartments she should not be known for evil or for good. She may not cross the boundaries of the State to accompany a funeral. She may take no step on her own motion, and may come to no conclusion on her own deliberation."—*Legge, Ch. Class.*, i. Prol. pp. 104–5.

"The ideal of conjugal duty and happiness is 'to grow old together,' and the poets are on the side of the old wife when the husband neglects her for a new flame. . . . In small household affairs, the husband as well as the wife was required to conform to the dictates of social propriety (*Legge, Ch. Class.*, iv. 41)."—*Simcox*, ii. 66.

"That there was often a true affection between husband and wife in China, in the times of the She-king, as there is at the present day, is a fact to be acknowledged and rejoiced in. Notwithstanding the low estimation in which woman's intellect and character were held, the mind of the wife often was and is stronger than her husband's, and her virtue greater. Many wives in Chinese history have entered into the ambition of their husbands, and spurred them on in the path of noble enterprise; many more have sympathized with them in their trials and poverty, and helped them to keep their little means together and to make them more." Several of the odes "give pleasant pictures of wifely affection and permanent attachment. I believe also that in those early days there was more freedom of movement allowed to young women than there is now, as there was more possibility of their availing themselves of it so many centuries before the practice of cramping their feet and crippling them had been introduced. But, on the other hand, there are odes where the wife, displaced from her proper place as the mistress of the family, deplores her hard lot. There is no evidence to show that honourable marriages ever took place without the intervention of the go-between, and merely by the preference and choice of the principal parties concerned; and there can be no doubt that polygamy prevailed from the earliest times, just as it prevails now, limited only by the means of the family. So far from there being no intimations of it in the odes of Part I., there are many. In Ode IV. of Book I., the other ladies of King Wăn's harem sing the praises of T'ae-sze, his queen, the paragon and model to all ages of female excellence, because of her freedom from jealousy. The subject of Ode V. is similar. In Ode X., Book II., we see the ladies of some prince's harem repairing to his apartment, happy in their lot, and acquiescing in the difference between it and that of their mistress. Every feudal prince received his bride and eight other ladies at once,—a younger sister of the bride and a cousin, and three ladies from each of two great houses of the same surname. The thing is seen in detail in the narratives of the Tso-chuen. Let the reader refer to . . . Han Ying's Illustrations of the She. The lady Fan Ke there, a favourite heroine of the Chinese, tells the king of Ts'oo how she had sought to minister to his pleasure, and had sent round among the neighbouring States to find ladies whom she might introduce to him, and who from their beauty and docility would satisfy all his desires. Nothing could show more the degrading influence of polygamy than this vaunted freedom from jealousy on the part of the proper wife, and subordinately in her inferiors."—*Legge, Ch. Class.*, IV. i. Prol. pp. 139–40.

"The consequences of this social State were such as might be expected. Many of the odes have reference to the deeds of atrocious licentiousness and horrible bloodshed to which it gave rise. We wonder that, with such an element of depravation and disorder working among the people, the moral condition of the country, bad as it was, was not worse."—*Ibid.* p. 140.

[Several odes of the first Part of the *Shih ching* express the regrets of wives while their husbands are absent on the service of the prince (I. ii. III. and VIII.; &c.).]

"When Ch'i attacked Lu, the latter wished to appoint Wu Ch'i as general, but as he had taken a daughter of Ch'i to wife, Lu hesitated to appoint him. As Ch'i wished to get this appointment, he killed his wife, showing that he had no wish to interfere with Ch'i. So Lu appointed him, and when he went to attack Ch'i he gained a decisive victory."—*Shih chi Wu Ch'i chuan, P'ei wên yün fu, c.* 8, p. 17*a*.

Dissolution of Marriage.—"A wife may be divorced for seven reasons, which may be overruled by three considerations. The grounds for divorce are: disobedience to her husband's parents; not giving birth to a son; dissolute conduct; jealousy (of her husband's attentions—that is, to the other inmates of his harem); [incurable disease]; talkativeness; and thieving. The three considerations which may overrule these grounds are: first, if, while she was taken from a home, she has now no home to return to; second, if she have passed with her husband through the three years' mourning for her parents; third, if the husband have become rich from being poor. All these regulations were adopted by the sages in harmony with the natures of man and woman, and to give importance to the ordinance of marriage."—*Legge, Ch. Class.*, i. Prol. p. 105. See also *Chia yü, Yüan chien lei han, c.* 248, p. 7*a*.

[Divorce existed in China when the Code was promulgated—253 B.C. It is not known when it was legalized.]—*Tchêng-ki-tong, Les Chinois peints par eux-mêmes*, p. 43.

"From the time when Shu Liang first divorced his wife, until Po Yü did, and then Tzŭ Ssŭ also, the K'ung family had divorced their wives for three successive generations."—*Chia yü hou hsü, P'ei wên yün fu, c.* 13*b*, p. 15*a*.

Confucius "divorced his legal wife, and the example was followed by his son and grandson."—*Davis, Chinese*, ii. 45.

"For some cause, which has not been transmitted to us, he [Tzŭ Ssŭ] divorced his wife, following in this, it would appear, the example of Confucius."—*Legge, Ch. Class.*, i. Prol. p. 39.; but see *ibid.* i. Prol. p. 71, where Dr. Legge states that the evidence inclines "against the supposition that Confucius did put his wife away."

"Mêng Tzŭ divorced his wife because he hated her for her unchastity. He may be called self-controlled."—*Hsün T'zŭ, Yüan chien lei han, c.* 248, p. 7*a*.

"Tsêng Tzŭ divorced his wife because she did not boil the pears properly [for his step-mother]."—*Chia yü, Kuang shih lei fu, c.* 17, p. 5*b*.

"Someone asked, 'May a wife be put away?' Ch'êng Tzŭ [explaining the Chou Rites] answered: 'If a wife be not virtuous, what harm is there in divorcing her?' He again asked, 'In ancient times there was one who, on account of a wife hooting at a dog before her mother-in-law, and another because she had not boiled a pear well, divorced their wives. I think these were mere trifles.' He again answered: 'The ancients were honest. A superior man does not divorce a wife for a great fault, but only for a slight one. As the proverb says: "In divorcing a wife one should make her marriageable"'" [so as to preserve appearances, and save the character of the husband, family, &c].—*Jên p'u lei chi, c.* 4, p. 10*b*.

[The legitimate wife could not be repudiated but for a very grave cause; she was then almost dishonoured. Thus, in the *Shih ching*, I. iii. X., a rejected wife bitterly bewails her lot, while her husband is espousing another. On no pretext had a wife the right to separate from her husband. In the China of that time, as in the China of the present day, woman was generally doomed to a state of inferior submission, which deprived her of all elevated feeling; her sole duty was to serve her husband. The practice of having concubines, or wives of a second grade, besides the legitimate wife, was frequent among the chiefs. They esteemed widows who refused to marry again (I. iv. I.). A lady married into another State could not go back to her native State after her parents were dead.]

[Tzŭ Ssŭ refused to mourn for a divorced mother; a rule which still prevails in the K'ung family. See *Giles, Bio. Dic.*, p. 398.]

"A scholar who has divorced three wives should be expelled from the district."—*Kuan Tzŭ, Yüan chien lei han, c.* 248, p. 7*b*.

Widowhood and Re-marriage.—"During the Cheu dynasty the moral law forced widows to remain single for the rest of their lives, as we read in the *Li ki* (c. 38, l. 11): 'To keep her word is also a virtue in woman. Once mated with her husband, she remains so for her whole life, and therefore she may not marry again after her husband's death.'"—*De Groot, Rel. Syst.*, ii. i. 744–5. *Cf. Legge, Liki*, i. 439.

"Tsze-sze's mother married again, after Le's death, into a family of Wei; but this circumstance . . . is not at all creditable in Chinese estimation."—*Legge, Ch. Class.*, i. Prol. p. 39.

"Kung Po, heir-apparent of the Wei, died early, and his wife desired to remain a widow; but her father and mother pressed her to re-marry; yet she took an oath not to do so, and composed an ode breaking off her relationship."—*Shih hsü, Kuang shih*

lei fu, c. 18, p. 9*a*. See similar instances in *Lieh nü chuan, passim.*

"At the close of the reign of Hsüan Wang, a wife who had not committed any of the seven crimes of exclusion, and was innocently divorced, could marry again, and it could not be forbidden by the king."—*Shih Wo-hsing-ch'i-yeh Hsiao hsü su, P'ei wên yün fu, c.* 13*b*, p. 84*b*.

"If a man married a widow with children, the officer of marriages registered them as belonging to his family, the presumption being that the mother would not have been allowed to take them with her to a second husband if they had other guardians or property."—*Simcox*, ii. 70, note.

"Someone asked: 'Should one, by right, marry a widow?' Ch'êng Tzŭ [explaining the custom of the Later Feudal Period] answered: 'Marriage is to match one's person; if one matches oneself with a person of unchastity, it is the same as if one were oneself unchaste.' "—*Jên p'u lei chi, c.* 4, p. 10*b*.

"Someone asked: 'May a poor widow who has no one to depend upon re-marry?' Ch'êng Tzŭ said: 'This was only done by people of later ages, who, fearing that they would be destitute, made that an excuse.' "—*Ibid. c.* 4, p. 10*b*.

"Formerly the son of Tung I conformed to the rites of Chu Hsia [*i.e.*, the Kingdom of Chou]. He had a daughter, who soon became a widow, and privately selected a paramour for her. Though she did not re-marry during the remainder of her life, yet it could scarcely be called chastity or purity."—*Chia yü, Yüan chien lei han, c.* 247, p. 7*b*.

"When Tsêng Tzŭ had lost his wife, he did not re-marry during his whole life."—*Jên p'u lei chi, c.* 4, p. 10*a*.

"Wai Huang was the daughter of a rich family, who was very pretty, but treated her husband as a slave."—*Shih chi, Yüan chien lei han, c.* 246, p. 5*a*.

Dissolution of Marriage.—[Chin Jih-shan divorced his wife (Ho Kuang's daughter) in order to avoid being involved in Ho's rebellion.]—*Han shu, Yüan chien lei han, c.* 248, p. 7*a*.

"The wife of Wang Chi, otherwise known as Tzŭ Yang, stole her neighbour's dates and offered them to her husband. So he sent her away, but as his neighbour threatened to cut down the date tree if Chi did so, the divorced wife was rehabilitated."—*Han shu, ibid. c.* 248, p. 8*a*.

[Chu Mai-ch'ên's wife left her husband because he sold wood for fuel and she was ashamed of his poverty. When he became Governor of Kuei-chi, she begged to be re-instated, but he refused.]—*Han shu, Kuang shih lei fu, c.* 17, p. 5*a*.

Re-marriage.—"A decree was issued saying that *ying*[1] (媵), maid servants, and *ch'ieh* (妾), concubines, who had been divorced might re-marry as had been done in Hsiao Wên's time [of the Ch'in dynasty]." This custom was adopted at pleasure by several sovereigns [*i.e.*, it was not necessarily followed by any sovereign's successor].—*Han shu P'ing Ti chi, P'ei wên yün fu, c.* 105, p. 58*b*.

"Chang Fu, a rich man of Hu Yu, had a granddaughter who had married five times; her husbands were all dead; so no one dared to marry her but [Chên] P'ing."—*Han shu Ch'en P'ing chuan, ibid. c.* 66*b*, p. 171*a*.

[For instances of widows killing or maiming themselves in order to avoid re-marriage, see *Hou Han Lieh nü chuan, P'ei wên yün fu, c.* 8, p. 19*a*; *c.* 81, p. 60*a*; &c.]

Prostitution.—"In ancient times there were no prostitutes [following the army]; but the Emperor Wu of the Han dynasty introduced camp prostitutes for the soldiers who had no wives."—*Han Wu wai shih, K'ang Hsi Tzŭ tien, Ch'ou chi hsia, Nü pu*, p. 28*a*.

"Illicit intercourse with a wife's maid was called *p'êng* (姘)."—*Han lü, ibid.* p. 44*b*.

Connubium, &c.—'A prince might have two *ju jen* (孺人), ladies to rank with the chief-fifth grade; and ten *ying* (媵), maids, to rank with the secondary-sixth grade. An officer of the second grade may have eight *ying*, ranking with the chief-seventh grade. A duke and third-grade officer may have six *ying*, ranking with the secondary-seventh grade. A fourth-grade officer may have four *ying*, ranking with the chief-eighth grade. A fifth-grade officer may have three *ying*, ranking with the secondary-eighth grade."—*T'ang shu, P'ei wên yün fu, c.* 84, p. 60*b*.

"When Hsiu Shih was appointed Magistrate of the Four Marts, his family had no singing-girls nor concubines."—*T'ang shu Tuan Hsiu-shih chuan, ibid.* p. 60*b*.

"In the first year of the reign of Chêng Kuan [A.D. 627] a decree was issued that if a man of over 20, or a woman of over 15, had no wife or husband, the local magistrate or prefect should marry them with due ceremony. If the said man or woman be poor, rich neighbours or relatives were to present him with money."—*T'ang shu T'ai Tsung chi, ibid. c.* 60, p. 2*b*.

Relation between Husband and Wife.—[For instances of fidelity on the part of wives, see *Lich nü chuan, passim.* Cases are quoted in *P'ei wên yün fu, c.* 8, p. 21*a*; *Kuang shih lei fu, c.* 18, p. 9*b*; etc.]

"The custom of wife-pawning existed at 袁州 in Kiang Si, 1,000 years ago, but was prohibited by the prefect Han Yü."—*Ch. Rev.*, xiv. 360.

Bigamy.—"Wang had had two wives, one of whom had been bestowed by the Emperor."—*Po t'ieh, P'ei wên yün fu, c.* 8, p. 15*a*.

Re-marriage.—"A decree was issued [by Kao Tsu, of the Sui dynasty] that the wife of an officer of the ninth and higher ranks, or a concubine of an officer of the fifth and higher ranks, whose husband dies, should not marry again."—*Sui shu Kao Tsu chi, P'ei wên yün fu, c.* 81, p. 60*a*.

"When Yang Chih-chien was in a state of poverty, his wife claimed a written release from the marriage, and wished to divorce him. So Chih-chien presented her with an ode, and then parted from her. His wife took it to the Department Magistrate, Yen Lu-kung, requesting him to grant her leave to seek another partner; but he sentenced her to receive twenty strokes of the bamboo, and then allowed her to re-marry."—*Yün chi yu i, Kuang shih lei fu, c.* 17, p. 5*a*.

Widowhood.—[Instances of widows refusing to re-marry are quoted in *P'ei wên yün fu, c.* 8, p. 21*a*; *c.* 13*b*, p. 84*a*; *Kuang shih lei fu, c.* 18, pp. 10*a*, 12*b*; etc.; and of a widower refusing, in *Jên p'u lei chi, c.* 4, p. 10*a*.]

Prostitution.—"The many idlers supported by the prostitutes of San Chü were called *miao k'o* (廟客), 'temple guests.' "—*Pei li chih, P'ei wên yün fu, c.* 22*b*, p. 39*a*.

"In the reign of T'ien Pao, Ying Chü, son of old (*i.e.*, venerable: a title of respect) Jung Yang, Department Magistrate of Ch'ang Chou, was familiar with a prostitute of Ch'ang An, named Li Wa-Wa, who afterwards had bestowed upon her the title of *Lady of Chien Kuo*; but her former name was *I Chih Hua.*"—*I wên chi, ibid.* p. 39*a*.

[For instances of "limbo" marriages, see FUNERAL RITES.]

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

[The main principles governing marital institutions remained the same as in the previous Period.]

Impediments.—[People of the same surname did not intermarry.]—*Po hu t'ung, P'ei wên yün fu, c.* 66*b*, p. 171*b*.

[In the Yu Fêng District of Hsü Chou was the village named Chu Ch'ên, in which there were only two surnames (Chu and Ch'ên), the bearers of which intermarried from generation to generation.]—*Yu hsüeh hsü chih, c.* 2, p. 6*b*.

Connubium, Concubinage, etc.—"The Han Emperor married his grandmother's first cousin's daughter. That is the daughter of his grandfather's father-in-law's younger mother's [*sic.?* brother's] son."—*Ch. Rev.*, xii. 439.

"The Emperor should marry 12 women, following the 12 months of Heaven. He should marry a wife [or wives] once only, in order to guard against lewdness; since to marry more than once would look like giving up virtue for beauty. This is the moral reason why he should marry a wife once only, and not a second time."—*Po hu t'ung, P'ei wên yün fu, c.* 66*b*, p. 169*b*.

"Nine women were married at a time; one is called the consort or wife, and the rest are concubines."—*Han shu Wu hsing chih* (Commentary), *P'ei wên yün fu, c.* 105*b*, p. 56*b*.

"By the laws of the Han dynasty the princes were not allowed to have more than 40 petty ladies (concubines)."—*Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu, c.* 12, p. 11*b*.

"A great minister (卿 *ch'ing*) may have a wife (妻 *ch'i*) and two concubines (妾 *ch'ieh*)."—*Ts'ai Yung tu tuan, P'ei wên yün fu, c.* 105, p. 57*a*.

"A scholar (士 *shih*) may have one wife and one concubine."—*Ts'ai Yung tu tuan, ibid. c.* 105, p. 57*b*.

"When a wife was absent a concubine could not presume to take the former's place at night."—*Li chi, Yüan chien lei han, c.* 247, p. 21*a*.

"Ssŭ-ma Wên Kung, in middle age, had no children; his wife sought a concubine for him, but he took no heed of her."—*Jên p'u lei chi, c.* 4, p. 10*a*.

"The people of Lo Yüeh (Kuangtung) had no marriage rites and promiscuity prevailed. When Jên Yen became Prefect of Chiu Chên he strictly forbade the practice of adultery, and ordered that men from 25 to 50 years of age, and women from 15 to 40, should marry each other according to their respective ages."—*Hou Han shu, Yüan chien lei han, c.* 126, p. 4*a*.

"In the former Han dynasty the presents at a marriage of a queen were 200 catties of gold and 12 horses, but no sheep were used. In the *Written Account of the Marriage Contract* Chêng says:—'Sheep indicated happiness.' From this it is known that using sheep for marriage presents began at the close of the Han dynasty. But in the Six Rites [of Marriage] of the king no sheep were used."—*Chin shu li chih, Tzŭ shih ching hua, c.* 32, p. 15*a*.

"The people of Chiu Chên were poor, and had nothing wherewith to procure marriage presents. It was ordered that the District Magistrates, and those under them should save their salaries to help the people. In this way more than 2,000 people were at that time married according to the rites."—*Ibid.* p. 4*b*.

"Formerly [at the beginning of the Han period] in the State of I, King of Huai Nan, when people married their daughters, they always chose travellers. So that to the present day, the women are still more numerous than the men."—*Han Shu Ti li chih, P'ei wên yün fu, c.* 36, p. 86*b*.

[The number of forgers condemned by Wang Mang to slavery was large enough to oblige him to relax the law on the subject of marriage.]—*Biot, Le Teheou-li*, i. 307.

"From the time of the E. Han, Wei, and Chin onwards, when anyone was in a hurry to betroth his daughter or to take a wife, either on account of times of distress or because the occasion was auspicious, the bride covered her head with fine light gauze, which had to be put off by her husband. After she had paid her respects to her parents-in-law, the marriage ceremony was performed. The Six Rites of Marriage were abandoned, and the custom of exchanging and pledging the nuptial cup was renewed. The usage of covering the head had long since been practised, and did not originate with the Ch'i and Sui. The ancients used it when they were in haste to marry a wife, but now it had become a common rite. The name of the bridal veil came from this practice."—*T'ang tien, Shih wu yüan hui, c.* 13, p. 3*b*.

Relation of Husband and Wife.—"The wife of Pao Hsüan of Po Hai, a daughter of the Huan family, who was otherwise called Shao Chün, had a rich dowry, but her husband was displeased with her. So she sent back all the maids and apparel and wore a short cotton lower garment in order to help Hsüan to drive the deer cart. On reaching home, after paying her respects to her mother-in-law, she immediately went out to draw water with an earthen vessel. She carefully cultivated the duties of a daughter-in-law."—*Hou Han Lieh nü chuan, P'ei wên yün fu, c.* 8, p. 19*a*.

Period of Disruption (221 *to* 589).—*Table IV.*

Impediments.—[The royal family, scholars and the common people could not intermarry.]—*Pei Wei, Shih wu yüan hui, c.* 13, p. 5*a*; *Wei shu Kao Tsu chi, Yün fu shih i, c.* 13, p. 14*b*. *Cf.* LAWS OF INTERCOURSE.

"In the 9th moon of the 17th year of the reign T'ai Ho [A.D. 494] a decree was issued that menial families should not intermarry with the families of scholars."—*Wei shu Kao tsu chi, Yün fu shih i, c.* 13, p. 14*b*.

[In A.D. 484 a punishment was instituted for marrying anyone with the same surname; this being made a legal offence.]—*Wei Kao Tsu Hsiao Wên Ti chi, Shih wu yüan hui, c.* 13, p. 5*b*.

Betrothal.—"The people of the present time used to select a son-in-law at the time of posting up the list of graduates, which was called *luan hsü* (鸞壻). Though some were unwilling to do so, yet, pressed by the influence of noble and wealthy families, they were unable to refuse."—*Fan Ch'êng min Tun Chai wên lan, Tzŭ shih ching hua, c.* 32, p. 16*b*.

"His son, Pao Hsing, was left an orphan when young, and served his mother with the utmost filial piety. The wife of Lu Hsia, President of a Board, was the daughter of Ts'ui Hao. When the mother of Pao and Hsia's wife were pregnant, Hao said: 'What is about to be born to you will belong to me. You may betroth one to the other in pregnancy.' "—*Pei Shih Wang Hui-lung chuan, ibid.* p. 15*b*.

"A marriage should take place in the 8th moon. The man ['s family] should first ask the woman ['s], thus regarding the woman with more esteem than the man. People of the same surname should not intermarry."—*Lin Yi-kuo chuan, Nan shih, P'ei wên yün fu, c.* 66*b*, p. 170*a*.

"As a woman was more esteemed than a man [in marriage negotiations, *i.e.*, the man's family had to go to her—she, as it were, was held for the purpose of the higher position], so she made the first betrothal present."—*Lin I-kuo chuan, Chin shu, P'ei wên yün fu, c.* 36, p. 87*b*.

[Marriages between the royal families of the various States became the practice.]—*Wei shu, Shih wu yüan hui, c.* 13, p. 3*b*.

Re-marriage.—"Ho Shang-chih, of the Sung, enjoyed himself frugally; his carriage and apparel were plain. When his wife died he did not marry again, and also had no concubine."—*Nan shih, Yüan chien lei han, c.* 247, p. 12*b*.

Widowhood.—"Mrs. Huang, having lost her husband, did not re-marry. Her family pressed her to do so, but as she threatened to commit suicide they stopped."—*Nan shih Chiang Tsun ch'i Huang shih chuan, P'ei wên yün fu, c.* 81, p. 61*a*.

"Wang, wife of Wei Ching-yü, of the Liang, when 16 years old, lost her husband, and cut off her ears, swearing that she would not marry again."—*Nan shih, Kuang shih lei fu, c.* 18, p. 9*b*; also in *P'ei wên yün fu, c.* 8, p. 20*b*. The wife of Lü Tsuan committed suicide under similar circumstances, see *Chin shu Lieh nü chuan, ibid.* p. 20*a*.

"[Hsia-hou Tun] having invaded Sun Chuan [King of Wu], on his return, had bestowed upon him singing girls and prostitutes of Ch'in."—*Wei chih Hsia-hou Tun chuan, P'ei wên yün fu, c.* 22*b*, p. 38*b*. *Cf.* LAWS OF INTERCOURSE.

Sung Period (960 *to* 1280).—*Table VI.*

Impediments.—"In the family of a military or civil officer, if his cemetery was completely built, and his parents buried, he was then granted permission to marry; but no music or decoration was allowed."—*Sung shih li chih, P'ei wên yün fu, c.* 66*b*, p. 170*a*.

"An Imperial decree was issued ordering that camp-followers should not intermarry with the common people and scholars."—*P'ei wên yün fu, c.* 67, p. 16*b*.

"Liu T'ing-shih, after agreeing definitely to a betrothal for five years, obtained a literary degree; but when his promised wife became blind, her family strongly apologised that now she was unworthy to be a match for the nobleman. To which Liu answered: 'She became blind after betrothal; by right I should not divorce her. Again, if I do not marry her, whom could she marry?' Accordingly, he selected a lucky day to perform the marriage ceremony. The husband and wife respected each other like friends."—*Jên p'u lei chi, c.* 4, p. 9*b*.

Chastity.—[Men were generally given to adultery, and the women even more so. A husband esteemed his wife if she had had many paramours before marriage, but after marriage she was guarded from further illegal intercourse.]—*Pei shih Chi Hu chuan. P'ei wên yün fu, c.* 95, p. 130*b*. *Cf.* MORAL SENT.

Divorce.—"Though Yen Kuan-fu had been married to [his wife] née Shên, for ten years, she had no children. For this she was divorced. On parting, she composed a poem," which reconciled her husband.—*T'ang Sung i shih, Yüan chien lei han, c.* 248, p. 8*b*.

Re-marriage of Widowers.—"When Han Wei-kung was in the Government service, his family had more than twenty singing girls. When one day his wife, Lady Ts'ui, died, he sent all of them away with rich gifts. Most of his fellow officers persuaded him to keep them, to give him pleasure in his old age; but Kung said: 'I could not enjoy it long, and it only gives them trouble [to attend on me]. To be alone is more pleasant to me.' "—*Jên p'u lei chi, c.* 4, p. 10*a*.

Widowhood.—"A woman of Chü, whose husband was murdered by a man of Chü, remained a widow; but nurtured the desire to revenge her husband."—*Yüan chien lei han, c.* 247, p. 8*b*.

Couvade.—Macgowan says that "covoidism (as he calls it) is noted [in the Sung geography] as occurring in China among the Liaos only, and those only who reside in Taiping, Kuangsi. Mothers, on parturition, rise on the third day, and resume household vocations; while husbands take their places in bed, to be cared for and coddled, taking care meanwhile of the baby—except in the matter of nursing."—*Ch. Rev.*, xix. 289.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

Betrothal.—[In the *P'i-p'a chi*, a drama of the 9th century, the go-between presents herself with an axe as the emblem of her mission, and cites upon the subject the passage in the *Shih ching*, I. xv. VI. i., showing that "without a go-between it cannot be done."]

"The natives of Shantung . . . in marriage demanded large presents. They called it 'marriage-by-sale' (賣婚 *mai hun*)."—*Shih t'ung, P'ei wên yün fu, c.* 13*b*, p. 84*a*.

"Chang Chia-chên wished to select Kuo Yüan-chên as his son-in-law, and said to him: 'I have five daughters, whom I will order each to hold a silk thread in their hands behind a curtain, and you may draw for one. Whichever you draw will be your wife. At last Yüan Chên drew a red silk thread held by the third daughter. What was called *t'ung hsin chin* (通心錦), 'connected heart silk,' was taken from this."—*K'ai t'ien i shih, Shih wu yüan hui, c.* 13, p. 4*a*.

907–960.

"At that time the rites of marriage had declined [from the classical standard]; on the wedding day people used to have bands to play musical instruments. So [Ts'ui] Yu requested that this be forbidden. From this it would seem that the playing of bands at weddings had not been long practised."—*Hou Chou shu Ts'ui Yu chuan, Hai Shan Hsien Kuan ts'ung shu, Ku chung sui pi*, p. 64*b*. *Cf.* HABITS AND CUSTOMS.

KIN.

"In the fifth moon [of 1071] an Imperial decree was issued stating that, after Ning Chiang Chou was taken possession of,

anyone who married, as his wife, a woman of the same surname, should be bambooed after separation."—*Hsü T'ung tien chi yao, c.* 20, *Hsing*, p. 7*a*.

[A custom of celebrating mock marriages preliminary to the formal wedding, which had grown up in the reign Huang T'ung (1141–9), was suppressed by Imperial decree.]—*Ibid.* p. 7*b*. See also LAWS.

Mongol Period (1280 *to* 1368).—*Table VII.*

Polygamy.—[Marco Polo says that the Mongol Emperor, Kublai Kaan, had four recognized Empresses; the eldest of his sons by these four was recognized as his successor. His secondary wives were chosen from among 100 girls annually sent as tribute by the Tartar tribe of "Ungrat" [=Kungurat, near the Great Wall]. These hundred were selected by Imperial commissioners, sent down for the purpose, "according to the scale of beauty enjoined upon them" (a kind of competitive examination, so many marks being allowed for each good quality—24 the total, 20 or 21 sufficient for a pass). Yule says that a like system of selection (without the mode of valuation) was continued by the Ming.]—*Yule, Marco Polo* (2nd ed.), ii. 348, 350, 351.

Marco Polo, speaking of Sinju (=Kansuh), says: "The men are very sensual, and marry many wives, which is not forbidden by their religion. No matter how base a woman's descent may be, if she have beauty, she may find a husband among the greatest men in the land, the man paying the girl's father and mother a great sum of money, according to the bargain that may be made."—*Ibid.* i. 267. See also 3rd ed. i. 220, and *cf.* pp. 252–3, 256*n*.

Couvade.—[Marco Polo says that, in the province of Zardandan (which Yule identifies with a part of Western Yünnan, the capital of which, called "Vochan" by Polo, is Yung-chang Fu; also called Wuntshen): "When one of their wives has been delivered of a child, the infant is washed and swathed, and then the woman gets up and goes about her household affairs, whilst the husband takes to bed with the child by his side, and so keeps his bed for forty days; and all the kith and kin come to visit him, and keep up a great festivity. They do this because, say they, the woman has had a hard bout of it, and 'tis but fair the man should have his share of suffering" (*Yule, Marco Polo*, ii. 52). Yule says, in a note on this: "The nearest people to the Zardandan, of whom I find this custom elsewhere recorded, is one called *Langszi*, a small tribe of aborigines in the department of Weining, in Kweichau, but close to the border of Yunnan. 'Their manners and customs are very extraordinary. For example, when the wife has given birth to a child, the husband remains in the house, and holds it in his arms for a whole month, not once going out of doors. The wife, in the meantime, does all the work, indoors and out, and provides and serves up both the food and drink for the husband, she only giving suck to the child.'"]—See *Yule, Marco Polo* (3rd ed.), ii. 85, 91*n*–95*n*, 596*n*.

Relation between Husband and Wife.—[At court festivals, the Empress (Kublai Kaan's chief wife) and the wives of the Imperial princes, and of all the inferior nobles in their degree, sat at table with their husbands.]—*Yule, Marco Polo* (2nd ed.), i. 368, 369, 370. *Cf.* LAWS OF INTERCOURSE.

Widowhood.—"Wu Yung's wife was a Miss Su. When Yung was suffering from a mortal illness, she cut off a piece of her leg, and made congee for her husband, who soon recovered. She bore a son named Tê Chêng, and when he was four years old, she became a widow. Though her brother-in-law wished to force her to marry again, yet she would not listen to him."—*Lieh nü chuan, Yüan shih, P'ei wên yün fu, c.* 8, p. 22*a*. *Cf.* BODILY MUTILATIONS.

"Wên, the wife of Yü Hsin, whilst still young, lost her husband. Her parents wished her to re-marry, but she took an oath by cutting off her hair, thus putting an end to the matter."—*Ibid.* p. 22*a*.

[*Posthumous marriages* took place: see *Yule, Marco Polo* (3rd ed.), i. 267, 268*n*.]

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

Age, Dowry, Connubium, Adultery.—[The Chinese take care to marry their children very young, in the interests of morality; and sometimes even betroth them unborn, "making their writings and bands for the performance of the same in public order. The husband gives the wife a dowry, which she hands on to her parents, for the pains they took in bringing her up." A man may take as many wives as he can maintain, but one only is accounted lawful; and the husband lives with her, establishing the rest in other houses, or sometimes (if he is a merchant) in other towns which he has to visit from time to time. In case of adultery, the husband is allowed to kill both, if caught in the act; if this is not done at once, and the case comes before court, they are bambooed, but not put to death, and the wife may afterwards be sold as a slave, in order to recover her dowry.]—*Mendoza*, i. 613.

[The Emperor, after his marriage, chooses thirty concubines from families of the highest rank, who remain in the palace during his lifetime; and after his death are married to "thirty gentlemen of the principallest in the kingdom," named by the deceased in his will, by which also dowries are bequeathed them.]—*Ibid.* i. 65.

"In old time, when that the King of China would marry one of his children or kinsfolks, he did make in his palace a great and solemn banquet, to the which he did invite all the principallest lords and gentlemen of his court, commanding them to bring with them their sons and daughters. . . . The banquet being done, the young princes do go whereas are these young ladies, every one placed in order according to their age, and there he doth choose his wife according to his own will or desire. But, at this time, this custom is left off, for that the princes and gentlemen do marry with their kinsfolks, so that it be not in the first or second degree; yet many times they do not keep the second."—*Ibid.* i. 65–6.

[Mendoza (i. 63–4) describes a strange marriage custom said to prevail "in the provinces that be near unto Tartaria." Twelve officials register all men and women of an age, and willing, to marry, note their position and means, and divide them into three classes—the men according to property, the women according to their looks. Each man is given a wife from the class corresponding to his own; those of the first paying a sum fixed by Government, the second paying nothing, and the third being portioned out of the money received from the first. This does not apply to "lords or gentlemen," who are allowed "to marry whereas they like best."]

Polygamy.—"It would appear [from the novel 玉嬌梨] that, under certain circumstances, two women at once could (during the Ming dynasty) have the status of wife, or 妻."—*Ch. Rev.*, xiii. 59.

[The polygamic system of the Mongol Emperors was continued by the Mings.]—*Yule, Marco Polo*, ii. 351.

Degrees Excluded.—"A man may . . . not [marry] with his sister or brother's daughter; and, if any do marry in these two degrees, they are punished very rigorously."—*Mendoza*, i. 62.

Manchu Period (1644 *to* —).—*Table IX.*

The Family.—"As in the ancient Jewish state, the family is the unit of the Chinese; on its model the State is governed, and from the social conditions of the families the family law received its foundations. In this sense the State is called the family of the nation (國家 *kuo chia*) and prefects and magistrates are popularly styled 父母官 (*fu mu kuan*), parent officials." "Everything revolves round the family as the centre."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 134.

"The Chinese family (家 *chia*) embraces, like the Attic οἶκος, and the Jewish *mishpachah*, all members of the same household, which stand under one head or *pater familias* (家長 *chia chang*, 家主 *chia chu*, 家君 *chia chün*), without distinction, whether they have entered the family through marriage or adoption, and including servants and slaves. It is obligatory that all members of the family bear the same family name (姓 *hsing*), as in India, Greece, and Rome (*McLennan, Studies*, p. 217). Even with adoption a kind of *quasi* relationship is formed."—*Ibid.* p. 135.

"Within the family the Chinese distinguish four grades of relationship, which follow according to the proximity of descent, without distinguishing thereby between consanguinity and affinity. Genealogical tables are given in the 大清律例 (*Ta Ch'ing Lü Li*), vol. I., fol. 1–6."—*Ibid.* p. 135. *Cf. Journ. C.B.R.A.S.*, 1853; *Legge, Liki*, i. 202–9; *Ch. Rev.*, x. 199–200.

"The ideas of the Chinese as to nearness of kin, whether by blood or by marriage, differ vastly from our own. They divide relationships into two classes, 內親 *nuy-tsin*, and 外因 *wae-yin*, terms analogous to our 'consanguinity' and 'affinity,' but conveying, nevertheless, other associations than those which we attach to these words. The former, *nuy-tsin*, comprehends all kindred derived from common stock with the individual, but only by descent through the male line; the latter, *wae yin*, includes what the Chinese designate 母黨 *moo-tang*, 妻黨 *tse-tang*, and 女黨 *neu-tang*, three terms best translated perhaps by 'mother's kin,' 'wife's kin,' and 'daughter's kin,' and understood by them to mean a mother's relatives, relatives of females received into one's kindred by marriage, and members of families into which one's kinswomen marry. . . . The principle upon which the distinction is drawn, appears to be, that a woman alienates herself from her own kin on marriage, and becomes a part of the stock upon which she is grafted."—*Trans. C.B.R.A.S.*, pt. iv., pp. 3–4.

"The house is the one house of parents, sons, sons' wives and their children, and also of the daughters till marriage. Marriage in the case of the son is a *perfecting or completing of this* house (*ch'êng chia*); to a daughter it is a *going out of the door* (*ch'u mên*), a leaving of her parents' house to enter that of her parents-in-law. . . . The patriarchal system still rules in China. The father is the head of the house, and life and death are to a large extent in his hands. Parents are highly respected, nay reverenced while alive and worshipped after death. . . . There are fewer disputes and quarrels between mothers-in-law and daughters-in-law than might be expected. . . . There is, of course, some friction, but the son is bound to take his mother's side. The theory is that another wife can be got, but not another mother. Hence suicide by opium, gold-leaf, strangling, starvation, drowning in wells are by no means uncommon. Marriage is invariable, and . . . it may be said all the Chinese are married. There are practically no old maids or old bachelors in China. . . . The future daughter-in-law is often, especially among the poorer people, brought to the house as a girl, and lives there, assisting her future mother-in-law till her marriage. . . . The sons, with their wives and families, all remain under the parental roof. All income goes into the common good, and all expenses are defrayed out of the general purse."—*Dudgeon, Diet*, &c., pp. 282–3.

"Marriage is, from the threefold point of view of society, politics, and religion, a duty so strict and sacred that the number of bachelors over 24 years of age is really not worth mentioning."—*Simon, Cité ch.*, p. 24.

"The family is the institution upon which is based the whole social and political edifice of China. Chinese society may be defined as an aggregate of families. From the most remote period, the influence of the family has predominated in every order of idea; and we say, quoting Confucius, that to govern a country, we must first have learned to govern a family. . . . The Chinese family may be likened to a co-operative society. All its members are under the obligation to live in community and to render mutual assistance. History mentions an ancient minister named Tchang, who united under his roof the members of his family proceeding from nine generations. This example is cited as a model we should all endeavour to imitate. . . . All resources are united in a single fund and all contributions are made without distinction of more or less. . . . Every member of the family has to conduct himself in such a manner as to maintain harmony. . . if order is not maintained in the family the law authorises the equal division of the common property . . . among all the males. . . . The women do not participate." "If a member of the family falls ill, he immediately receives all the aid he requires; if another is unable by his labour to obtain the necessaries of life, the family forthwith intervenes. . . . The chief authority is vested in the oldest member, and in all the important conjunctions of life reference is made to his decision. . . . All documents are signed by him in the name of the family. . . ." Estates are described as belonging to such or such a family; and the family name is written on the posts marking the limits of the property. "Every family has its particular statutes regulating its customs; they are a sort of written law. All the properties the family possesses are inscribed upon the statutes, together with the purposes to which they are devoted. Thus, the produce of such an estate is destined to pension the aged, and of another to furnish the prizes given to young people after their examinations. The resources to provide education for the children, those which furnish donations to girls who marry; in a word, all the expenses which correspond to foreseen requirements are inscribed upon the budget." "One of the articles regulates the punishment to be inflicted upon any member who by criminal conduct or dissipation may gravely compromise the family honour." "Our system of education is exactly adapted . . . to inspire above all things family affection. . . . There are five general principles which by education form and maintain the family tie. These are: fidelity to the Sovereign, respect towards parents, concord between the married, harmony between brothers, and constancy in friendship." "The family in which we are born is founded upon forty centuries of harmony, and every succeeding generation increases its authority. . . . The Sovereign is . . . the keystone of the social edifice; he is the head of all the families, the patriarch to whom the devotion of all is due. To serve the Sovereign is to serve the great master of the universal family, and to honour own's own family. This explains why the most powerful motive of ambition is a desire to belong to the administration of the State."—*Tcheng-ki-tong, Chinese Painted by Themselves*, pp. 7–11.

"The local importance of a large family in the country is weakened by its male members removing to town, or emigrating; consequently, the patriarch of three or four generations endeavours to retain his sons and grandsons around him, their houses joining his, and they and their families forming a social, united company. Such cases as those mentioned in the *Sacred Commands* are of course rare, where nine generations of the family of Chang Kung-i inhabited one house, or of Chin, at whose table 700 mouths were daily fed, but it is the tendency of society. This remark does not indicate that great landed proprietors exist, whose hereditary estates are secured by entail to the great injury of the State . . . for the farms are generally small and cultivated by the owner or on the metayer system. Families are supported on a more economical plan, the claims of kindred are better enforced, the land is cultivated with more care, and the local importance of the family perpetuated. This is, however, a very different system from that advocated by Fourier in France, or Greeley in America, for these little communities are placed under one natural head, whose authority is acknowledged and upheld, and his indignation feared."—*Williams, Midd. King.*, i. 277–8.

"Slaves (奴才 *nu ts'ai*) are also counted as belonging to the family; under the name of 家身子 *chia shên tzŭ* are designated those which have been bought; 家生子 *chia shêng tzŭ* or 家產子 *chia ch'an tzŭ* are those born in the family, children of slaves, *vernae*, οἰκέται, and the Jewish *yelîd bayith* (*Jerem.*, 2, 14)."—*Möllendorff, Fam. Law.*, p. 8.

"In the oldest time of Chinese history the number of families may have been the same as the number of clans; . . . the idea that there exists a kind of relationship between families bearing the same name, has lived to the present time."—[See below—*Impediments.*]—*Ibid.* p. 5.

"The Manchu family names are not publicly known. The Manchus, whose Emperors have reigned over China since 1644, have not used their family names (姓, *hsing*, Manchu *hala*) since the reign of the Emperor Kanghi (1662–1723), but only their personal names (名, *ming*, Manchu *gebu*). The surnames are, however, known within the clans, and the law concerning them is, with some modifications . . . the same for the Manchus as for the Chinese."—*Ibid.* p. 8. See also *Ch. Rev.*, viii. 72.

Marriage.—[The three essential conditions to a valid marriage are:—(1) Consent of parents, or senior male representatives of families; (2) acceptance of the "marriage presents" by the bride's family; (3) bringing home the bride. The contract (1) is the most important step, and, when it is once fairly entered into, either party can compel the other to carry out the agreement. (But the acceptance of the presents—the "price"—seems to be really the most essential part of the negotiations.) It is also important as determining the status of the bride, whether she is to be 妻 or 妾. (For the status of the 妾 *cf.* REG. OF LAB.) "The *ts'ieh* . . . can no more be got rid of [than the wife]. It is within the domestic forum, and chiefly in the ancestral hall, that the distinction between them comes out in all its prominence."]—*Ch. Rev.*, v. 204–5.

"Almost all Chinese, robust or infirm, well-formed or deformed, are called upon by their parents to marry as soon as they have attained the age of puberty. Were a grown-up son or daughter to die unmarried, the parents would regard it as most deplorable. Chinese parents, who are apprehensive that, owing to a weak constitution, the last hours of their son or daughter are not far off often make immediate arrangements for the marriage. . . . A delicate youth with whom I was acquainted, was a member of the family, or class, 'Eng'—probably at that time one of the most influential and powerful in the city of Canton. His parents having been informed by the family physician that their son's sickness would soon terminate fatally, determined that, without loss of time, he should fulfil an engagement of marriage into which he had entered. . . . The ceremony was no sooner ended, than the bridegroom was re-conducted to his sick chamber, where he breathed his last."—*Gray, China*, i. 186.

"Marriage is . . . regarded by the Chinese as necessary and indispensable, and the best proof of this is furnished by the fact that, excluding priests and nuns, who are not allowed to marry, it is scarcely possible to find an old bachelor, and an old maid is a rarity." "Chinese law further recognises the importance of marriage by giving a long list of marriage laws (see *Ch. Rev.*, viii, ix, x. 77–9). We must add, however, that marriage is not absolutely compulsory, nor is celibacy punished, as was the case under the Jewish law and the Attic code of Solon."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 140–1.

[Celibacy is considered a vice.]—*Tchêng-ki-tong, Les Chinois peints par eux-mêmes*, p. 30. See also *Westermarck*, pp. 139–40.

"The intense anxiety of the Chinese to secure an *haeres necessarius* after death is owing to the fear that there may be no one to wash them with (if possible) river water, *mai-shui mu-yü* [買水沐浴], 'buy water and bathe over,' or to accompany them to the grave, *chih-chang* [執杖], 'hold the staff.'"—*Ch. Rev.*, viii. 86.

"From a juristical point of view the Chinese marriage would seem to be neither a bondage nor a transfer, but rather a manumission, a double manumission enforced by no positive law; and, until concluded, involving no rights of the two manumitted ones as against the manumittors, but involving moral duties to carry out the agreement to manumit as between the two manumittors."—*Ibid.* vi. 64.

"*Usus* is undoubtedly the commonest form amongst many of the lower classes, and receives the sanction of the law when the *usus* can be proved by litigants. *Coëmptio*, accompanied by *manus*, is the almost invariable form of marriage with 'concubines,' and, in many cases also, of marriage with a wife. The strictly ritualistic marriage is only performed in its complete integrity amongst the wealthier classes, though fragments of it are frequently introduced into the lower marriage ceremonies."—*Ibid.* viii. 76.

"He who agrees to go and live with his father-in-law, sometimes agrees also, at the time of marriage, to take the ancestral name of his father-in-law, and regard himself as his son. Only a poor family will allow a talented and literary son to ignore his own family name in this way. On the day of marriage he is carried in a black sedan, decked off with some pieces of scarlet silk on the outside, to the residence of his father-in-law, where he and his bride perform the worship of 'heaven to earth,' of the ancestral tablets of the family, in accordance with the established customs relating to wedding occasions. While, perhaps, there is not any disgrace in obtaining a wife in this way, and becoming the heir to a rich family at the loss of one's ancestral name, the opportunity is not coveted as much as the opportunity of obtaining a wife and a valuable present in money from a rich man with the privilege of retaining one's own ancestral name. Some wealthy men are glad to bestow one of their daughters, and a valuable dowry besides, on graduates, for the honour of having a literary son-in-law who has a prospect of becoming a mandarin."—*Doolittle, Social Life*, i. 100.

"It is customary for the Chinese to marry their children according to seniority."—*Gray, China*, i. 190.

"It not unfrequently occurs that a rich family, having only one daughter and no boys, desires to obtain a son-in-law who shall be willing to marry the girl and live in the family as son. Sometimes a notice is posted up, stating the desire of a certain man to find a son-in-law and heir who will come and live with him, perhaps stating the age and qualifications of an acceptable person. Parents having a suitable son, and willing to consider the marriage, are expected to apply through a go-between. Sometimes a rich man makes application to the parents of a young man whose reputation he is pleased with, or who has taken a good degree. Successful graduates, if not engaged, often allow a notification of the fact, and their address, to appear along with their names in the class list."—*Doolittle, Social Life*, i. 99.

"When a girl is born in a poor family, which . . . feels unable, or is unwilling, to rear [her], she is often given away or sold when but a few weeks or months, or one or two years old, to be the future wife of a son in the family of a friend or relative," who have one not yet betrothed. A match-maker is employed, and a formal engagement entered into. The boy's family usually offer a small present—a pair of ducks or geese, a pair of fowls and vermicelli—the male animals are kept by the recipient, the females returned. The girl is called a 'little bride,' and is taken home and brought up in the family together with her future husband. When of marriageable age, and the family can afford the little additional expense, she is married . . . on a fortunate day, selected by a fortune-teller. Friends are invited and a feast is made. No bridal cakes are distributed among her relatives, and no red bridal chair is used, because she is living in the family of her husband."—*Ibid.* i. 98.

"Mr. McLennan says: 'In China such marriages [*i.e.*, marriages for a term, usually short (*consortium*)] are said to be still customary. In a recent report of the proceedings of the Societé de la Sainte Enfance in China, in the *Espérance* of Nancy, it is said that in many parts Chinamen may repudiate their wives, and marry again, every year.' "—*Ch. Rev.*, viii. 73.

"A custom, called the 'double marriage,' is observed in Chinese families, the members of which for three generations are still living, and the senior male members of which have obtained rank." It is celebrated when the grand-parents have reached the age of sixty—the grandmother returns to her native place, and her husband goes a second time through all the formalities of seeking her hand in marriage, and the other wedding ceremonies are all repeated."—*Gray, China*, i. 216.

"Marriages are sometimes solemnized between the spirits of boys who die in infancy or childhood, and those of girls whose dates of birth and death correspond with their's. The ceremonies are gone through with paper effigies, which are finally burnt. The funeral tablet of the girl is also sent to the house of the bridegroom's parents (as one of the deceased's three souls is supposed to remain with it), and placed on their ancestral altar."—*Ibid.* i. 217–8. See also FUNERAL RITES.

"Marriages take place at all times of the year. The principal season, however, is from the 15th day of the 8th moon to the 4th month of the year following. During the 9th month, which is regarded as very unpropitious, no marriages take place, except . . . in cases of extreme urgency [as, *e.g.*, when one of the parents is not likely to live (p. 188)]. At the commencement of the marriage season, books containing songs in honour of wedlock are exposed for sale at the various bookstalls. With regard to the hour of the day at which marriages are solemnized, there is no restriction. In some of the districts round Canton they are always celebrated at night, not so much on account of the heat of the day, as because, although the bridal processions may not be as grand as they ought to be, they pass unremarked—the darkness concealing all defects. At such marriages, lanterns and torches are absolutely necessary. Lanterns, however, are always a feature in the procession, either by day or by night."—*Ibid.* i. 187.

"Actual capture is sometimes resorted to."—*Parker, Ch. Cust.*, p. 13.

"It may surprise Shanghai residents to hear that close to them a marriage exchange and mart is in full swing, where wives can be bought, sold or exchanged."—*N.-C. Herald*, Dec. 5th, 1900.

Impediments.—Absolute.—"The attainment of puberty required by the Roman and Canon law, or of a certain age, as prescribed by modern legislation, as a pre-requisite for concluding marriage, is not known to Chinese law. It is, however, an established custom that men marry when over twenty years of age, and that girls are rarely given in marriage before their fifteenth year. But as there are many exceptions in the laws for the benefit of persons under fifteen years of age, we may consider the latter as the age required for marrying. Very early marriages are not as common in China as is generally believed: the common practice is to provide early in life a suitable wife for the son and a husband for the daughter, and to marry them when their character is formed. In China, puberty commences at the same age as in Europe. The old idea that puberty arrives earlier in hot than in temperate climates is exploded by modern investigations."—*Möllendorff, Fam. Law*, pp. 12–13. Some writers (*e.g.*, *Gray, China*, i. 187) put the minimum age for the woman at fourteen.

"Suitability of age is generally recommended, as also that a young girl should not be married to an old man. But an early marriage in China is understood in the sense of an early settlement in life."—*Möllendorff*, p. 13.

"Non-attainment of puberty, disease or other defects (as insanity, deafness and dumbness, &c.) are considered impediments, if no notice of them has been given in the marriage contract."—*Ibid.* p. 13.

[There was a violent scene on the occasion of a marriage in the western suburb of Canton on Dec. 3, 1871, as the bride was discovered to be a leper. "She was at once divorced and returned to her mother, who positively refused, however, to refund to the bridegroom the dowry which had been paid by him. . . . A part of the sum was eventually returned."]—*Gray, China*, i. 188–9.

"The Chinese law does not seem to deprive the lunatic of any of his family rights, which are regulated by the family council. A lunatic may marry if a woman can be found for him, and a betrothed woman may not withdraw on account of the lunacy of her spouse."—*Ch. Rev.*, viii. 78. Gray (*China*, i. 189) says: "In cases of lunacy, matrimonial engagements are broken off"—though not invariably, exceptions being apparently based on superstitious grounds (p. 190).

"The defect of eunuchs naturally debars them from marrying. The right of having eunuchs (太監 *t'ai-chien*, 老宮 *lao-kung*) is an Imperial prerogative, and is also granted to the highest members of the Imperial family. . . . As eunuchs have to serve and to live in the palace (內宮 *nei kung*), it is for this reason alone impossible for them to marry (see *Shi king*, i. 11, 1 and ii. 5, 6 [*Legge*, iii. pp. 157, 239])." "There are, however, eunuchs at Peking who had children before their mutilation, and who may obtain permission to visit their families from time to time. Cases may occur where a eunuch, who by intrigues in the palace has risen to a position of honour, takes a wife *pro forma* and adopts a son for the succession."—*Möllendorff, Fam. Law*, pp. 13–14; *Journ. N.-C.B.R.A.S.*, N.S. xi. 143.

Relative.—Relationship.—"Marriage between relations of all grades of agnatic relationship is prohibited; 'cognates cannot marry anyone of the generation above or below, but may marry anyone of the same generation, not being agnate' (*Ch. Rev.*, x. 82). For the relationship by adoption the prohibition does not remain in force after the first adoption has been dissolved by a new one."—*Möllendorff, Fam. Law*, p. 14. [If by relationship here is meant agnatic relationship, this is true; and, as adopted agnates cannot be removed by their father from their adopted place, the question of marriage between relations does not, as far as they are concerned, have any more significance than has marriage between brother and sister, or persons of the same surname generally. As regards adopted male strangers, their rights are usually defined by contract.]—*Ch. Rev.*, viii. 81.

"There exists in China no relationship between the husband and his wife's sister, as is the case according to the Canonical. and after it the English law. In fact, since the Emperor Shun, married the two daughters of Yao [see EARLY FEUDAL PER.] (*Méng tzŭ*, v. i. 4) [*Legge*, ii. 220. From the *Liki*, i. 132, it would appear that Shun had three wives], such marriages have been of frequent occurrence in China, probably because a wife, finding that a concubine will be taken, prefers to share the affection of her husband with her sister, rather than with a stranger." "Altogether, there is no relationship between the relatives of the husband and those of the wife (called 姻親 *yin-ch'in*)."—*Möllendorff, Fam. Law*, pp. 14–15. [Relationship, as used here, necessarily excludes the idea of identical surnames; the husbands of two wives are relations by marriage, and so are the agnates of one of those husbands in respect of the agnates of the other.]—*Ch. Rev.*, viii. 82.

"Relationship is always implied by the fact of bearing the same family name:—同姓不爲婚姻 *t'ung hsing pu wei hun yin* (those of the same family name do not intermarry) [Endogamic marriage is excluded]. Considering that for a population of 400 millions only about 438 family names exist [408 simple and 30 double ones (*Journ. N.-C.B.R.A.S.*, N.S. xxi. 256)], this impediment appears severe in the highest degree. In the course of ages [the prohibition occurs in books as early as the *Tso chuan* (左傳) and the *Lun yü* (論語)] it happened that whole communities were composed of people with the same surname, so that men desirous of marriage had to look elsewhere for wives, and often to undertake for this purpose expensive voyages. Where a surname has two distinct origins, persons of the same surname may intermarry, provided that their line of ancestry can be traced from the separate stock, 同姓不同宗 *t'ung hsing pu t'ung tsung* (of the same surname, but of different ancestry [see *ibid.* p. 256]), *e.g.*, persons of the name of 車 *ch'ê*. On the other hand, families of the same ancestry have branched off under a different name, and do not intermarry, as 徐 and 佘, both pronounced *hsü*, who were one family until the reign of Yung-chêng [1723–36] (*Ibid.* pp. 265, 283). It is the same with 沈 *ch'ên* and 葉 *yeh*, and with 楊 *yang* and 易 *yi*. An expedient to mitigate this law has also been found. During the reign of Yung-lo [1403–25] those families who took part in the grain transport were called military families (軍家 *chün chia*), the others being called families of the people (民家 *min chia*). Since that time the distinction between 軍 *chün* and 民 *min* has been maintained, and marriages between a *chün* and a *min* family bearing the same surname are permitted—almost the only exception to the above-mentioned prohibition."—*Möllendorff, Fam. Law*, pp. 15–16.

[The punishment for marrying within the clan was sixty blows, and the marriage was declared null and void.]—*Gray, China*, i. 186. See also *Doolittle, Social Life*, i. 99; and *Davis, Chinese*, i. 282. [Parker says that, amongst the Manchus, cousins descended through male ancestors, and having the same surname, might intermarry after the fifth generation.]

"It will thus be seen that, in China, as throughout America and Australia, the clan is exogamous—that is, marriage within the clan is forbidden."—*Möllendorff, Fam. Law*, p. 16. See also *Ch. Rev.*, viii. 72; and *Starcke, Prim. Fam.*, p. 44.

Affinity.—"Marriage is not allowed with sisters of the wives or ascendants or descendants, with the father's or the mother's sister-in-law, or with the sister of the son-in-law." "Further, marriage is forbidden with the step-daughter and with female relations within the fourth degree of relationship, with a widow of a relative of the fourth degree, or with the sister of the widowed daughter-in-law. Marriages with widows of relatives of a nearer degree are considered incestuous."—*Möllendorff, Fam. Law*, p. 16. See also *Westermarck*, pp. 305, 330; *Doolittle*, i. 99. In *Ch. Rev.* (viii. 82) it is said that affinity is an impediment on the ground of disparity of degree "propter inelegentiam," or, perhaps, because one stands in *loco parentis* to the other.

"Decapitation is the punishment of marriage with the father's or grandfather's former wives, or with sisters of the father." "Whoever marries his brother's widow is strangled."—*Möllendorff, Fam. Law*, pp. 16–17. [But marriage with a deceased wife's sister is exceedingly common, and has always been regarded as particularly honourable.]—*Trans. C.B.R.A.S.*, iv. p. 24, *et seq.* note.

"The like punishment [death] is inflicted upon whoever seizes the wife or daughter of a freeman and carries them away to marry them."—*Williams, Midd. King.*, i. 793.

Other Reasons.—"To marry during the legal time of mourning is prohibited." "Marriage with concubines is, however, not punished in this case, unless either the bride or the bridegroom is in mourning for a parent, or the bride for her late husband, even if the marriage had never been consummated. It is considered to be a time of mourning for children or grand-children if father or mother or grandparent is confined in prison for a capital offence. In accordance with the principle of Chinese marriage—*i.e.*, that the *pater familias* makes the marriage contract—marriage is in this case permitted if the head of the family in prison gives his assent. The usual ceremonies and festivities are, however, to be omitted."—*Möllendorff, Fam. Law*, pp. 17–18.

"The prohibition to marry during the legal time of mourning is in many parts, if not most parts, of China practically a dead letter, except in the case of mourning for parents. Officials, however, adhere to the rules more strictly than persons not holding any office."—*Ch. Rev.*, viii. 82. See also *Doolittle, Social Life*, i. 101.

"Marriage is forbidden with a woman who has committed a crime and has fled for fear of punishment. In this prohibition is included marriage between an adulteress and her seducer."—*Möllendorff, Fam. Law*, p. 18.

"Whoever forces the wife or daughter of a free man to marry either with himself or with a son, grandson, younger brother, or nephew, *i.e.*, with a *filius familias*, is to be strangled."—*Ibid.* p. 18.

"According to Roman law marriage could not be concluded between persons who stood to each other in the relation of guardianship, as *tutor* and *pupilla*. In China these are near relations, as only relatives or adoptive parents are able to exercise the right of guardianship and to acquire through it the *patria potestas*. A runaway female slave is not allowed to marry, as she can be lawfully given into marriage by no one except her master."—*Ibid.* p. 18.

"Compared with Roman law, the relation exists only to a limited extent in China. The tutor is almost always *legitimus*, *i.e.*, whose rights would be sustained by the law if the family could show no just cause to depose him; and, though he does the duties of Roman tutor, he has no distinct appellation. The tutor is an agnate appointed by will by the pupil's parent, or in default, by his mother, uncle, &c., according to the act in which the pupil is interested. Acts are done in the name of the pupil as principal, with the tutor joined as secondary party. Beyond the fact that the wife, brothers and eldest son of the deceased paterfamilias are all *de facto tutores legitimi*, Chinese customary law knows nothing of the Roman tutela."—*Ch. Rev.*, viii. 83.

"It is a rule that, in order to secure greater impartiality, officials cannot hold office in their native province. For the same reason they are not allowed to marry a woman under their jurisdiction, or out of a family that has an interest in the performance of their official duty. An official who is related to one of the parties is not even allowed to sit as judge."—*Möllendorff, Fam. Law*, pp. 19–20. Gray (*China*, i. 186–7) says this law was framed to prevent nepotism, and to check the exercise of an undue influence of one family over other families in the same district.

"On account of inequality of rank, marriages between officials and actresses, or singing girls, are not allowed. Such marriages are also forbidden to the sons or grandsons of nobles with hereditary rank (*disparagium, mésalliance*), the punishment in such cases being degradation to a lower class of nobility, and eventually loss of it."—*Möllendorff, Fam. Law*, p. 20.

"A widow of a man of rank may not remarry."—*Ibid.* p. 20. See *infra, Widowhood.*

"Play-actors, policemen, boatmen or slaves are not allowed to marry women of any other class than that to which they respectively belong."—*Gray, China*, i. 187.

"Marriage is impossible between male slaves and free women."—*Möllendorff*, p. 21.

"The law says (see *Ch. Rev.*, x. 88) that it is forbidden to intermarry with some of the savages; but this is not carried out in practice. In Formosa the Chinese constantly intermarry with the savages; that is to say, arriving singly, they readily take savage girls as wives, chiefly from the settled tribes (熟番 *shu-fan*), who have adopted Chinese surnames."—*Ibid.* p. 22. See also *Ch. Rev.*, x. 94, *et. seq.*

"Buddhist priests (和尙 *ho-shang*) and nuns (尼姑 *ni-ku*), and those Taoist priests (道人 *tao-jen*) and nuns (道姑 *tao-ku*) who do not shave their heads, but bind the hair in a net or head-band (網巾 *wang-chin*) [the old Chinese fashion, still in use in Corea], are not allowed to marry. Only Taoist priests (道士 *tao-shih*, or 門祝 *mên-chu*) who shave their head and plait their hair like other Chinese—in fact, lay brothers—may marry."—*Möllendorff*, pp. 20–21. See also *Trans. C.B.R.A.S.*, iv. 18.

[Priests might marry after returning to the laity.]—*Ch. Rev.*, viii. 84.

"A priest who obtains a woman under the pretence that she shall marry another, and who then marries her himself, is severely punished."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 151.

"In China difference of religion has no influence upon marriage."—*Ibid.* p. 151.

"Posthumous children may be betrothed, *chih-fu wei-hun* (指腹爲婚), but this practice is said to be viewed with disfavour by the present dynasty."—*Ch. Rev.*, viii. 78.

[For levirate and re-marriage of widows, see *infra.*]

Effects.—"Any impediment to marriage renders the marriage already concluded null and void; the *impedimenta* are always *dirimentia*. Ignorance of them exempts the parties from punishment, but the marriage is dissolved. In accordance with the sense of the marriage contract, the parties who signed it are punished if the marriage laws are transgressed; the go-between only if he was aware of the illegality; but husband and wife are not punished unless they are *sui juris*. If the

father, grandfather or uncle signed the contract, they alone are punished; if it was another relation, he is punished as principal and husband and wife as accomplices. The purchase-money is in each case forfeited, except when the parties were ignorant of the existence of the impediment."—*Möllendorff*, p. 21.

"A dispensation in cases of impediments to marriage is not admissible."—*Ibid.* p. 21.

Betrothal.—The Contract.—"The mutual promise of marriage formed with the Romans an act of social and moral importance as a preparation for marriage. In China, the parties concerned are not the principal ones. The conclusion, however, of a *justum matrimonium* has to be preceded by a contract, in which the amount of presents (*arrhæ sponsalitiæ*), and the latest day for concluding the marriage are fixed. When made, the contract, if in writing (禮 書 *li-shu*), is signed by those persons in whose *patria potestas* bridegroom and bride stand; the latter never sign it, unless both have no older relations. This last condition, and the fact of the son holding office, being the only cases in which a *filius* or a *filia familias* becomes *sui juris*. This is the chief distinction between the Chinese and the Roman marriage."—*Möllendorff*, p. 22. See also, for consent, *Navarette*, quot. *Westermarck*, p. 227, and *Trans. C.B.R.A.S.*, iv. 11.

"The age at which young people are affianced is from 7 to 14 years. In some parts of the Empire, however, more especially in the districts occupied by the Hakkas, children are affianced in infancy. This custom is condemned by many Chinese, on the ground that the children, on coming to mature years, may show that they have been tainted with leprosy or lunacy, or some disease which would render it necessary to cancel the engagement."—*Gray, China*, i. 189.

"When the children are espoused older, the boy sometimes accompanies the go-between [see *infra*] and the party carrying the presents to the house of his future mother-in-law, and receives from her some trifling articles, as melon-seeds, fruits, &c., which he distributes to those around. Among the presents sent to the girl are fruits, money, vermicelli, and a ham, of which she gives a morsel to each one of the party, and sends its foot back. These articles are neatly arranged, and the party bringing them is received with a salute of fire-crackers."—*Williams, Midd. King.*, i. 785–6. See also *Doolittle, Social Life*, i. 65.

"In by far the most cases . . . young people are wedded by their so-called *chu-hwun* (主 婚), 'those who are masters of their marriage,' relations who, as the word indicates, in ordinary circumstances, have an unlimited right to assign them to such a bride or bridegroom as they deem to be a suitable match, and whose dispositions in this respect must be implicitly obeyed. Those masters are, in the first place, the parents, and these failing, the paternal grand-parents, and, subsequently, the paternal uncles, beginning from the eldest, and so on."—*De Groot, Rel. Syst.*, ii. i. 615.

"The persons legally competent to act as guardians [or 'wedding-directors'] are:—First, parents or grand-parents; failing these, second, father's brother or sister, or mother's parents; and, in default of these, third, some senior kinsman. [This rule does not apply to officers of government above the seventh rank, who are at liberty to dispense with the interference of their elder relations, and act as their own *chu-hun-jên*.] The guardians are (by law) *alone* responsible, and punishable to the extent of the highest degree of penalty, short of death, for contracting a marriage in any way unlawful; while the parties themselves are held guiltless, the authority of their guardians being considered law with them as juniors. Other relatives, besides those above specified, may act as guardians in the negotiation of a marriage; but if concerned in contracting an unlawful union, the parties themselves are then held principally responsible, and they only suffer as accessories, excepting where the union is proved to have originated with themselves, in which case they suffer as principals under the same limitation as above described, and the persons marrying as accessories."—*Trans. C.B.R.A.S.*, Pt. iv., p. 11.

Great stress is "laid by modern legislators upon submission to the elders of the clan. Even in matters of their own marriage every one, both man and woman, must submit implicitly to the will of him or her for whom they have to mourn in the first degree, or to the superiors and seniors of the second degree [see FUNERAL RITES], and are therefore not punishable, even though the marriage be in the most flagrant opposition to sacred custom and written Imperial law. Only against kinsmen more removed may the parties oppose their will, should attempts be made to unite them in a marriage forbidden by the law. They *must* then oppose until subjected by main force, in order to escape being treated as accomplices, unless the bridegroom can plead infancy (being under twenty), and the bride that she lived in the circle of her clans-people, and was therefore under their absolute power."—*De Groot, Rel. Syst.*, ii. i. 616.

"Thus the *animus matrimonii*, the intention of husband and wife to form a connection for life, can, with the above-mentioned exceptions, have no place in China. . . . Among the Chinese the heads of the families alone choose, and the inclination of the principal parties is never consulted" (*Möllendorff*, p. 23). "This is true, except that it may be inferred in the man from his having admitted a mistress into his household, and begotten children by her; and also as the absence of *animus matrimonii* will keep an obstinate woman single, its presence, express or implied, is always necessary to constitute a marriage."—*Ch. Rev.*, viii. 85.

"If the son is absent from home, or if by mere chance a love match does happen, the assent of the parents has to be obtained."—*Möllendorff*, p. 23; *cf.* EARLY FEUDAL PERIOD.

"This system of Chinese parents selecting wives for their children, and making these binding engagements in their name, has a tendency not only to render breaches of promise impossible, but to prevent elopements. Of course, it does not put such enterprises out of the question. Occasionally, though rarely . . . elopements . . . take place in China; the offending parties are, as a rule, unmarried young folks, whose parents occupy, or have occupied, neighbouring dwelling-houses. I remember a young woman, named Chan Achan, betrothed to a young man she had never seen, eloping with the son of the next-door neighbour. The fugitive lovers were eventually apprehended, and put into the prison of the Poon-yu magistrate, at Canton, for breach of promise and disobedience to parents. The misconduct of the gentleman was aggravated by the crime of abduction."—*Gray*, i. 191.

"The 'anomalous personage,' or 'indispensable assistant,' called the *libripens*, who figured so prominently in the Roman mancipation, may possibly be historically connected with the 'go-between' of the Chinese; who, whether under the name of *mei* (媒), in marriages, or *chung-jên* (中 人), in other contracts, figures equally prominently in Chinese transfers, and, at least, in marriages, is equally indispensable."—*Ch. Rev.*, viii. 76–7.

"The preliminary negotiations are carried on by go-betweens (媒 人 *mei-jen*, 媒 媾 *mei-kou*, 中 人 *chung-jen* and 媒 婆 *mei-p'o*), who, mostly women, form an important part in the whole transaction."—*Möllendorff*, pp. 23–4; see also *d'Hérisson, Etudes*, p. 57. *Cf.* LATER FEUDAL PERIOD.

"Parents, when engaging the services of a go-between to assist them in selecting a wife for their son, are supposed to impress upon the mind of the agent their anxiety that the maiden chosen should be more remarkable for her virtue than her beauty. . . . The young lady's parents are supposed to prefer . . . a young man more renowned for his wisdom than his wealth. . . . The go-between is also supposed to select as husbands and wives those who are in all respects likely to suit one another. It is her duty also to ascertain that the families of the contracting parties are respectable, the members being free from leprosy, lunacy and crime, and not being either play-actors, slaves or boat-people."—*Gray, China*, i. 190–1.

"The office of match-maker is considered honourable, and both men and women are employed to conduct nuptial negotiations. Great confidence is reposed in their judgment and veracity and as their employment depends somewhat upon their tact and character, they have every inducement to act with strict propriety in their intercourse with families. The father of the girl employs their services in collecting the sum agreed upon in the contract, which, in ordinary circumstances, varies from twenty-five to forty dollars, increasing to a hundred and over, according to the condition of the bridegroom; until that is paid the marriage does not take place. The presents sent at betrothment are sometimes costly, consisting of silks, rice, cloths, fruits, &c.; the bride brings no dower, but both parents frequently go to expenses they can ill afford when celebrating the nuptials of their children, as the pride of family stimulates each party to make undue display."—*Williams, Midd. King.*, i. 786–7.

"Before the signature of the contract by the heads of the families, both parties convince themselves of the truth of the statements regarding the persons of the bride and the bridegroom, that they are sound in body and mind, and that they are not older than stated. The festivities of the betrothal then commence. As lies in the nature of the case, the age of the betrothed parties—except it be too great—is of no consequence. It often happens that a betrothal is entered upon by friendly families at a time when bride and bridegroom are not over three or four years of age. The betrothal of unborn children is forbidden."—*Möllendorff*, p. 24.

"Occasionally, in the case of families very intimate and friendly, an engagement between unborn children is entered into . . turning only on the circumstance that the children are of different sexes. . . . Generally, before the birth of the children, something valuable, as a head-dress or rings for the wrists, are exchanged by the families, as proof of the betrothal. After their birth, should the children prove to be a boy and a girl, a go-between is employed, and the betrothal papers are made out and exchanged in the usual way."—*Doolittle, Social Life*, i. 98–9.

"Before the contract is signed, presents are sent to the family of the bride (納 彩 *na-ts'ai*, in common parlance, 落 定 *lo-ting*, giving of earnest). Then cards, with the names, birthdays, &c., inscribed thereon, are exchanged (通 庚 *t'ung-kêng*, spoken of as 問 名 *wên-ming*, asking of names). When the parties are satisfied with all this, agreement is expressed by sending proof (納 徵 *na-chêng*, commonly called 文 定 *wên-ting*, settling the language), when the contract (禮 書 *li-shu*) is exchanged."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 152–3. See also next extract.

"If the parents or guardians of the girl, after instituting inquiries about the family making it, are willing to entertain the proposal, they consult a fortune-teller, who decides, after considering the eight characters . . . whether the betrothal would be fitting and auspicious. If a favourable decision is made, the go-between is furnished with a card indicating the hour, day, month and year" of the girl's birth. . . . The boy's parents then consult a fortune-teller. If answer favourable, and families agree as to details, formal consent is given. If, during the three days while the matter is under consideration, anything unlucky happens, such as breaking a bowl, or losing anything, the negotiations are broken off at once. "The card during this time is usually placed under the censor standing in front of the ancestral tablets belonging to the family . . . incense and candles being lighted before these tablets." In case the go-between receives no definite instructions, he tries to find out a suitable family, then makes inquiry of each whether the other is acceptable, and, if so, supplies the girl's family with the boy's age-card. "Families the most intimately acquainted, and the most friendly, always employ a go-between in the betrothment of their sons and daughters. On the other hand, families which previously were utter strangers are very, frequently made acquainted by reputation, not necessarily in person, through the overtures of a go-between. . . ." "The betrothal is not binding on the parties until a kind of pasteboard card has been interchanged. This card resembles somewhat a book-cover, consisting of two pieces of pasteboard. One of these is made much like the cover of a box, as far as its edges are concerned. The outside of it is covered with red paper, on which is pasted a gilt-paper figure of a dragon, for the boy, or a phœnix for the girl. This cover-like piece shuts down on the other part, and the two are connected by a piece of paper pasted on one edge of both . . . their inner surfaces being neatly covered with red paper. The bridegroom's family provides two of these cards, one with a dragon and one with a phœnix. Inside the former are written the father's ancestral and 'given' name, the boy's given name and date of birth, the name of the go-between and a few other particulars. They also provide two long threads of red silk, each with a needle threaded at each end. These needles are stuck in a particular way into the inner surface of each card. The two cards, with needles attached (one being left blank) are sent to the girl's family, who keep the 'dragon' card and return the phœnix, after filling it up with corresponding particulars, and sticking in the needles in the proper way. The writing is done in each case before the ancestral tablets. These cards are kept as evidences of betrothal, which is now consummated and legal." "After this neither party may break the engagement without the gravest of reasons."—*Doolittle, Social Life*, i. 66–8. See also *Ch. Rec.*, xxiii. 376–7; *Trans. C.B.R.A.S.*, Pt. iv. (1854), pp. 11–13.

Effects of Betrothal.—For a lady "not to marry after becoming affianced, unless for urgent private reasons, till she is upwards of 23, is regarded as very wrong,"—*Gray, China*, i. 187.

"The contract of betrothal gives both parties a right to sue for the conclusion of marriage. The party who refuses to keep the contract is punished with fifty blows, and the court enforces the marriage. Where the contract is not made in writing, the acceptance of presents is taken as proof of the agreement."—*Möllendorff*, pp. 24–5.

"The agreement may even be maintained if the family of the bride enters into a second betrothal; and only in case the family of the first bridegroom waives its claim may the bride marry the second bridegroom. The presents are in this case to be returned."—*Ibid.* p. 25.

"A forcible abduction of the bride before the time fixed for the marriage is punishable, as is also any delay on the part of the bride's family beyond that time."—*Ibid.* p. 25.

[If, among the poor, the marriage is delayed longer than the bridegroom's family likes, and poverty be alleged as the obstacle, an additional sum of money is often given. But if this is ineffectual, and the bridegroom's family have come to the conclusion that there is really no good excuse, they kidnap the bride. It is essential that the betrothed husband should go in person to do it; he takes a party of relatives or trusty friends to help. No one dare interfere in such a case except the bride's relatives, and they seldom make any determined resistance. If any hint of his intentions reaches them beforehand, they, as a rule agree to allow the marriage in the usual way at once. "When, the girl is kidnapped, and carried to her betrothed husband's house, the usual ceremonies are observed there on her arrival, as nearly as the circumstances of the case admit." Should another girl be carried off by mistake, the leader of the party is liable to prosecution.]—*Doolittle, Social Life*, i. 104–5.

"A singular situation arises if a *filius familias* is betrothed during his absence from the family, his grandfather, father, uncle or older cousin—*i.e.*, a person in whose *potestas* he stands—having, in the meantime, chosen a bride for him, and having signed the contract. If the son has married, the betrothal made by the head of the family is dissolved; otherwise the contract made by his family takes precedence over the one made by himself."—*Möllendorff*, p. 25.

"With regard to the 'ghostly' nature of strict Chinese marriages, and the rule that persons related even by affinity cannot serve in the same province, a case has recently occurred in which a Kwang Si prefect has been obliged to abandon his post because his daughter was betrothed eleven years ago to the Governor's eldest son, although she died three months after the earnest money was paid [下 定]."—*Ch. Rev.*, x. 221.

Dissolution of Betrothal.—"If, after signing the contract, it appears that false statements have been made by the family of the bride, then the contract is void, the presents are returned and the *pater familias* of the bride receives eighty blows. The punishment for a like fraud on the part of the bridegroom's family is more severe, and the bride keeps the presents. Should the fraud be discovered after the marriage, an action for divorce can be entered."—*Ibid.* pp. 25–6.

[When a marriage contract is broken up by the consent of both parties, a writing is sometimes given by the affianced husband to the other family, called *a retirement from the marriage*, and the original documents relating to betrothal are exchanged. The marriage contract is comparatively seldom cancelled. Generally, it is done, if done at all, on the girl giving what are considered good reasons for the step. Poverty, or illness, or ugliness are never regarded as good reasons: but a reputation for lewd habits on her part seems to justify the giving up of the match . . . although . . . immorality on his part is not taken into account. . . . If one party becomes leprous before marriage, or is greatly physically deformed, or a notorious thief, the other party may demand a release from the engagement. Generally, the party which insists, even for good reasons, on such a release, has to pay a comparatively large bonus in order to get it from the other party.]—*Doolittle, Social Life*, i. 105–6.

"If the betrothal be dissolved before marriage, either through the death of bride or bridegroom, or through withdrawal of both parties (*repudium voluntarium*), or through a delay on the part of the bridegroom's family for over five years, or through an impediment to marriage just arisen or only just discovered, then the presents have to be returned. If the marriage be not concluded, through the *repudium* of one party, the innocent party of the dissolution of the betrothal gets back or keeps the presents."—*Möllendorff*, p. 26.

"The fact of bride or bridegroom having been punished for theft or fornication gives a right to the other party to cancel the contract."—*Ibid.* p. 26.

"In Fuhkien, parents often send pledges to each other when their children are mere infants, and registers containing their names and particulars of nativity are exchanged in testimony of the contract. After this has been done, it is impossible to retract the engagement, unless one of the parties becomes a leper or is disabled."—*Williams, Midd. King.*, i. 785.

"From the time of engagement until marriage a young lady is required to maintain the strictest seclusion. Whenever friends call upon her parents she is expected to retire to the inner apartments, and in all her actions and words guard her conduct with careful solicitude. She must use a close sedan whenever she visits her relations, and in her intercourse with her brothers and the domestics in the household maintain great reserve."—*Ibid.* i. 786.

"The *Shên Pao* of the 7th of November, 1890, contains a proclamation against capturing girls (already engaged) for marriages; the place specially referred to is Pao-Shan city, in Kiang-su, but the custom also extends into Fukien. It is never done with girls not previously engaged, and the idea is to save the expense of the ceremony: this is an interesting link between the old and universal stealing of wives and the modern civil rites. In Fukien the bridegroom must positively carry the girl on his own back in the first instance, even if he puts her in a chair afterwards. Of course, the man is liable to be defeated in the affray, in which case he loses his wife, or has to sue for her in court."—*Ch. Rev.*, xix. 326–7.

Conclusion of Marriage.—"When the parties desire to conclude the marriage, presents of silks (納 幣 *na-pi*, spoken of as 大 禮 *ta-li*, the great ceremony) are sent to the father of the bride, and a further document (禮 書 *li-shu*, like the first one, also called 婚 書 *hun-shu*, the horoscopes of the betrothed couple) passes. This is the marriage contract stipulating the sum for the bride, which sometimes amounts to thousands of taels. The marriage is therefore preceded by a purchase, which is no mere sham transaction like the Roman

coëmtio, but corresponds to the purchase of the ancient German laws, and to that of the Jewish law. By accepting the purchase money, the father of the bride sells and manumits his daughter to the bridegroom's family, to which she henceforth belongs. Then a date is fixed (請 期 *ch'ing ch'i*, commonly called 送 日 *sung-jih*, sending the day), and on that day the presents, together with her furniture, boxes of clothing, eatables, &c., are paraded through the streets to the bridegroom's house, and the bride herself is brought in a closed red chair, with music, to her new home, where she is personally welcomed (親 迎 *ch'in-ying*). The bride and bridegroom then kneel together before the ancestral shrine (拜 堂 *pai-t'ang*, 拜 天 地 *pai-t'ien-ti*, to worship heaven and earth) of the latter's family. They next drink together the nuptial cup 巹 *chin*)—usually two cups tied together by a red string [according to the *Liki* (*Legge*, ii. 249), two halves of a melon]—and the marriage ceremony terminates (成 禮 *ch'êng-li*). The wife leaves her family for ever (出 家 *ch'u chia*; the same expression is used for a man who becomes a priest, or a maiden who joins a nunnery), and belongs to the family of the husband, *i.e.*, she considers the parents of her husband as her own, and mourns for them legally a longer time (three years) than for her parents (one year)."—*Möllendorff*, pp. 26–8. See also *Ch. Rev.*, viii. 75.

"The Chinese custom requires a man to cleave to his father and mother, and to compel his wife to do the same."—*Möllendorff*, p. 28, note.

"The pledging by the couple of each other in wine, and their united act of obeisance to their several parents, if alive, or to their *manes*, if deceased, appear to constitute the really binding process in all cases. No official registration or religious rite is considered necessary, the contract being strictly a civil one."—*Medhurst, For. in Far Cathay*, p. 108. See also *infra*.

"In China, then, the Church has nothing to do with marriage; neither are the usual ceremonies and festivities absolutely necessary for the conclusion of a *justum matrimonium*, as long as the *consensus matrimonialis* exists between those persons who sign the marriage contract. In fact, when the bride has been brought up in the family of her future husband—as sometimes happens [see *infra, Adoption*]—the red chair and the parading of presents through the streets become useless (*Smith, Ch. Char.*, p. 116). But, like the Jews, the Chinese invite guests, relations and friends [thus giving due importance and sufficient publicity to the ceremony (*Liki*, i. 78)], who keep up the festivities for three days. During these three days the bride is accompanied by bridesmaids (大 妗 *ta-chin*), who constantly attend on her. A peculiar custom is the so-called brawl-room (鬧 房 *nao-fang*). During the first three nights the newly married couple are constantly disturbed by practical jokes executed by relations (in some provinces even by complete strangers), everybody trying to obtain clothes or other objects of necessity or value from the bridal chamber, which the bridegroom has to redeem on the following day with wine, cake, &c."—*Möllendorff*, pp. 28–9.

"Marriage, therefore, . . . is concluded in China by the will of the parties concerned being expressed in a public manner."—*Ibid.* p. 29. The importance of the presents, originally representing a bargain for and purchase of the wife, is indicated in *Ch. Rev.*, x. 78, note; and *Gray*, i. 193. See also *Westermarck*, pp. 404–5, who explains that the feeling of shame at the idea of selling a daughter now prevents the presents being called a "price." And see *Trans. C.B.R.A.S.*, iv. 11, *et seq.* The parents of the bride now hand over the presents to her for her own use, or they are employed in buying for her a wedding outfit, and often add as much more themselves (*Douglas, Soc. in Ch.*, p. 194; *Moule, Old China and New*, p. 623). In the lower classes, however, the old form still prevails in all its grossness (*Doolittle, Social Life*, i. 107).

"Receiving the bride. This part of the ceremony is called *tsin ying*, and may be termed the consummation. It consists in the public procession of the bridegroom to the home of his bride, for the purpose of bringing her to his home, and is the concluding portion of the marriage ceremonies" (for details, see pp. 12–14).—*Trans. C.B.R.A.S.*, Pt. iv. (1854), p. 12.

"No member of her own family may accompany the bride to her new home." "The mother-in-law may not see her for some time after her arrival, till she is brought into the reception room to formally acknowledge allegiance to her husband's house."—*Ch. Rec.*, xxiii. 377.

"In the ordinary course of events the Chinese wife brings no dowry (嫁 粧 *chia-chuang*, 粧 奩 *chuang-lien*) to her husband. Still, she may inherit, or she may be *sui juris* and possess money, land or houses. In this case, she can have her rights protected in the marriage contract."—*Möllendorff*, p. 29. See also, *Davis, Chinese*, i. 284.

[Sometimes the second and third wives are slaves, bought from their masters for the purpose. It is usual for the master, in such a case, to give the girl a dowry, on the day before the wedding, consisting of "one summer and one winter dress, a pair of richly-embroidered shoes, a bed coverlet and bed curtain, a dressing-case, an umbrella and a trunk."]—*Gray, China*, i. 214.

"Whilst the acquisition of a wife is called marriage (娶 妻 *ch'ü-ch'i*, 成 親 *ch'êng-ch'in*, 成 婚 *ch'êng-hun*), the ceremonies of which have a sacramental character, the expressions for the acquisition of a concubine (立 *li* or 買 *mai* or 置 *chih* 妾 *ch'ieh*) point to the inferiority of the action. The union is concluded without music and without the red chair. The punishment for transgressions against the marriage laws in the case of a concubine are less severe than in the case of a wife."—*Möllendorff*, pp. 29–30.

"There are six ceremonies which constitute a regular marriage, though their details vary much in different parts of the Empire: (1) The father and elder brother of the young man send a go-between to the father and brother of the girl, to inquire her name and the moment of her birth, that the horoscope of the two may be examined, in order to ascertain whether the proposed alliance will be a happy one; (2) if the eight characters [see *Divination*] seem to augur aright, the boy's friends send the *mei-jin* back to make an offer of marriage; (3) if that be accepted, the second party is again requested to return an assent in writing; (4) presents are then sent to the girl's parents, according to the means of the parties; (5) the go-between requests them to choose a lucky day for the wedding; (6) the preliminaries are concluded by the bridegroom going or sending a party of friends with music to bring his bride to his own house."—*Williams, Midd. King.*, i. 785. See also *T'oung Pao*, v. 371.

"Marriage is called 婚 姻 *hun-yin*; to marry a husband is 嫁 夫 *chia-fu* for wife and concubine alike (男 婚 女 嫁 *nan hun nü chia*, the man marries, the wife takes a husband). [Compare the Italian *casare*]."—*Möllendorff*, p. 30.

[G. J., in *China Review*, v. 204–5, says that there is no such thing as a marriage certificate in China (but Gray, *China*, i. 203, 209, says that the letter brought by the bridegroom's friend when he comes to fetch the bride, inviting her to come to her new home, is regarded in such a light, carefully preserved by the bride, and returned in case of divorce; also the letter sent by the bridegroom's parents on the third day after marriage).]

[Some few days after the wedding, the newly-married woman, still called bride, receives visitors in her nuptial room. This is the only occasion on which a Chinese woman is allowed to be visited by other men than her relatives.]—*T'oung Pao*, v. 371; *Gray, China*, i. 210.

[In many districts of the province of Canton the bridal pair do not live together until three years have elapsed after the marriage has taken place.]—*Gray*, i. 208.

Connubium and Concubinage.—"The Chinese distinguish between two kinds of marriage, which, not incorrectly, may be termed *connubium* and *concubinatus*. In the first case they are obliged to be content with one wife (妻 *ch'i*), who, like the Jewish and Roman, unlike the Greek, wife, shares the rank and honour of the husband. This wife is almost invariably chosen by the *pater familias* from a family of equal position and circumstances; but the latter is not a *conditio sine qua non*, and the requirement of equality of rank which led in Europe during the Middle Ages to the absurdity of marriages on the left hand (*matrimonium ad morganaticam*) has been almost unknown in China. The wife is generally a woman with small feet." "Concubinage is, however, at the same time permitted, and marriage with several concubines (妾 *ch'ieh*) is allowed. The number of these, besides the one wife, is not limited by law; but only one wife is permitted."—*Möllendorff*, p. 11.

"There is no point on which greater misconception has prevailed than respecting the existence of universal polygamy in China. It is not strictly true that their laws sanction *polygamy*, though they permit *concubinage*. A Chinese can have but one *Tsy* [*ch'i*], or wife, properly so-called, who is distinguished by a title, espoused with ceremonies and chosen from a rank of life totally different from his *Tsiě* [*ch'ieh*], or handmaids, of whom he may have as many or as few as he pleases; and, though the offspring of the latter possess many of the rights of legitimacy (ranking, however, after the children of the wife), this circumstance makes little difference as to the truth of the position." "If a person has *sons* by his wife (for daughters never enter into the account), it is considered derogatory to take a handmaid at all."—*Davis, Chinese*, i. 279–80.

"Polygamy [concubinage] exists in China, but . . . it is not the polygamy of the rest of Asia, the voluptuous polygamy of the Persian and the Turk; it is a means of increasing the number of one's descendants."—*Hervey-Saint-Denys, La Chine devant l'Europe*, p. 41.

"The marriage relation has, at all times, been regarded by the Chinese as a personal one. But although this involves the doctrine that monogamy is prescribed by morality, polygamy [concubinage]—in some parts of the Empire, at all events—is much practised. In some of the northern provinces, and more particularly in that of Shantung, however, the great majority of the inhabitants are monogamists in the strictest sense of the term. . . . In the earliest ages, childlessness was held to justify the taking of a second or third wife in addition to the first; but apparently as an exception only, and as the privilege of the wealthy classes. At the present day, a second or third wife is regarded rather as a female servant than as a wife, until she has borne children. Another cause may be found in the fact that parents choose wives for their sons . . . in many cases the wives thus selected prove most unsuitable; and, as a young man is at liberty to select a second or third wife for himself, he often avails himself of an early opportunity for doing so. The law which compels gentlemen and tradesmen to give their female slaves in marriage, also operates in favour of polygamy. Anyone failing to do so is liable to be summoned before the tribunal of the towns or village where he resides, and to receive a severe flogging for his neglect. [When this law is evaded, slaves are either bribed or compelled by their masters to appear before a magistrate, and declare that they remain unmarried in consequence of their repugnance to marriage.] Another fact tends to promote polygamy. . . . A husband is not expected to cohabit with his wife after she has conceived, nor after the child is born, during the whole period that it is being nourished at the mother's breast. Any violation of the rule is supposed not only to cause the child to become sickly, but to provoke the displeasure of the ancestors, and bring misfortune upon all the members of the family. Wealthy Chinese are generally very careful in the practise of such abstinence. I remember a young gentleman who resided in the southern suburb of Canton, being severely chastised by his parents for a violation of it."—*Gray, China*, i. 184–5.

"Polygamy . . . has a tendency to promote licentiousness, and leads to infidelity on the part of husbands . . . and in not a few cases drives jealous wives to suicide. I have often known it to result in a husband expelling from his house, or selling, one of his wives, upon the false accusation of a rival. Naturally, therefore, many Chinese ladies are opposed to matrimony. In one street alone—the Shap-pat-kan street in the Honam suburb of Canton—I knew four families in which there were ladies who positively refused to marry, on the ground that, should their husbands become polygamists, there would remain for them a life of unhappiness. To avoid marriage, some become Buddhist or Taouist nuns, and others prefer death itself. During the reign of Taou-kwang, fifteen virgins whom their parents had affianced, met together upon hearing the fact . . . and . . . flung themselves into a stream. . . . The tomb in which the corpses were interred is near Fo-chune, and is called the Tomb of the Virgins. At a village near Whampoa, called Siu-tong-ki, in July, 1873, eight young girls drowned themselves in order to avoid marriage."—*Ibid.* i. 185–6.

[The want of robustness in the children of Chinese of the wealthier, compared with those of the poorer, classes, is attributed to the practice of concubinage.]—*Ibid.* i. 239; and see CHARACTERS.

"If the first wife is barren, a concubine is purchased, but almost always with the consent of the wife. Filial piety demands that the family be continued, so that there be worship at the ancestral graves [*Méng tzŭ*, iv. xxvi. 1 (*Legge*, ii. 189):—不 孝 有 三 無 後 爲 大 *pu hsiao yu san wu hou wei ta* (having no descendants is the greatest of the three undutiful acts)]. The concubines stand under the authority of the wife; their children regard her as their mother, for whose death they go into mourning for three years. It is self-evident that this is only an external form, and that a child will always love its own mother. The statement of T. Unger, in his book on marriage (*Die Ehe in ihrer welthistorischen Entwickelung*, quoted by *C. N. Starke, The Primitive Family in its Origin and Development*, p. 158), that the children of a concubine treat their mother with contempt, is based on some misunderstanding."—*Möllendorff*, pp. 36–7.

"Amongst the lower classes in China polygamy [concubinage] is not the rule. In the better classes the first wife is frequently but slightly younger than her husband, and fades, in consequence of nursing her children too long—sometimes five or even six years—earlier than her European sister. She remains at home to look after the children and the property, whilst her husband—official or merchant—is often absent for years. It is then that a concubine is taken, though rarely as long as the first wife is young."—*Ibid.* p. 37. See also *Gray*, i. 184.

"Polygamy [? concubinage] has been called the 'fruitful source of so much anguish and death by suicide.' This is a sweeping statement. Most cases of polygamy occur in well-to-do families, whose means permit to them the maintenance of separate establishments for each wife, and the family life is not always disturbed [although a proverb says: 婢 美 妾 嬌 非 閨 房 之 福 *pi mei ch'ieh chiao fei kuei fang chih fu* (beautiful maids and lovely concubines are not a blessing of the ladies' apartments); or 娶 妻 娶 德 娶 妾 娶 色 *ch'ü ch'i ch'ü tê ch'ü ch'ieh ch'ü sê* (we marry a wife for her virtue, a concubine for her beauty)]."—*Möllendorff*, p. 37.

[Concubinage is tolerated in the interests of the family, but does not affect the indissolubility of marriage. It is impossible to contract a second *legitimate* marriage while the first wife is living and undivorced. Such a marriage would be severely punished.]—*T'chêng-ki-tong, Les Chinois peints par eux-mêmes*, p. 65.

"A system of concubinage exists, and those among the wealthy who desire such can procure them without any . . . ceremonies; the exchange of a written contract, and the pecuniary consideration, being considered sufficient in law. Concubines are generally chosen from among the lower classes, and frequently the favourite handmaid of the wife is selected for this purpose. The relative positions of wife and concubine are strictly laid down by law. By the wife her partner is called *foo*, or husband, as she is on equal terms with him and bound by all ties of duty and affection; but the concubine calls him 'master,' or 'head of the family'—one who has power to do as he pleases with her. She cannot share, as the wife does, in any signs of rank or position to which her master may be entitled. She must wear mourning for her master's wife or children, but she may not wear mourning for his kinsfolk (as a wife would), but only for her own sons or grandsons. Also her children are inferior to those of the wife in the scale of family descent; while the law makes a distinction of adjudging a less penalty in cases where a concubine is concerned than that awarded where the wife is the person injured."—*Trans. C.B.R.A.S.*, Pt. iv. (1854), p. 15.

"The second and third wives are generally women of large feet and low origin; the first wives being almost invariably excepting, of course, in the case of Tartar ladies, women of small feet."—*Gray, China*, i. 212; see also pp. 213–4.

[The question legitimacy or illegitimacy, and so *connubium* and *concubinatus*, on the one hand, and *consortium* on the other, depend on whether the woman has been received into the house of the man. The recognition of legitimacy rests with the father, not with the law. *Connubium* and *concubinatus* differ in that the former has the "red chair" as a necessary part of the ceremony; not so the latter. Concubines usually occupy separate apartments to the wife, but they may share the wife's couch. "The husband has not the right, without sufficient reason, of degrading his wife to the rank of a concubine."]—*Ch. Rev.*, viii. 80. "Nor of raising a concubine to the rank of a wife whilst the wife is alive."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 142. See also *Westermarck*, pp. 445, 448.

"The better classes do not give their daughters to a man already married; Manchu girls are not allowed to become concubines."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 141.

"Whilst the marriage with the wife (妻 *ch'i*) is concluded by the parents of the two parties, the man is allowed to choose the concubines himself. These may be of low rank, even slaves, and have, without regard to priority of marriage, equal rank among themselves, but are subjected to the authority of the wife."—*Ibid.* xxvii. 142.

"Without these [the go-betweens and witnesses], and the marriage presents, and certain feasts, no marriage is accounted legal; but the second wife may be taken without any ceremony."—*Laou-seng-urh*, p. 115, note 16.

"The position of the *tsi*, or wife taken by the prescribed formalities, and that of the *tsieh*, or women purchased as concubines, are accurately defined, and the degradation of the former or elevation of the latter so as to interchange their places, or the taking of a second *tsi*, are all illegal and void. The relation between the two is more like that which existed between Sarah and Hagar, in Abraham's household, or Zilpah and Bilhah and their mistresses in Jacob's, than that indicated by our terms first and second wife, of which idea the Chinese words contain no trace."—*Williams, Midd. King.*, i. 792.

"The wife is considered the mother of all the children born in the family, and is honoured by the latter as their mother."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 142.

"The supplementary Chinese wife thus enjoys a higher legal position than the morganatic wives of Germany."—*Parker, Ch. Cust.*, p. 12.

[A man of the upper classes does not speak to his wife within the first month after the birth of a child, and no visitor will enter the house where she lives, she being considered unclean.]—*Katscher, Bilder*, p. 48.

"The reason for the greater number of marriages with concubines is barrenness of the wife."—*Ibid.* xxvii. 142. See also *Gray*, i. 184; *Navarette*, p. 72.

[It sometimes happens that the barren wife herself advises her husband to take a fresh partner.]—*Katscher*, p. 97.

[Westermarck (p. 485) mentions the attraction which female youth and beauty exercise upon man as another cause of polygamy in China—a fresh wife being taken when the first one grows old.]

[Coltman (*Chinese*, p. 99) describes cases in which wives successfully defied their husbands to bring concubines into their houses.]

"The act of marrying (or buying) a concubine, pending engagement to a legitimate wife [停妻娶妾], is a punishable offence."—*Ch. Rev.*, xiii. 53.

"The number of females attached to the harem is not accurately known; all of them are under the nominal direction of the Empress. Every third year His Majesty reviews the daughters of the Manchu officers over twelve years of age, and chooses such as he pleases for concubines; there are only seven legal concubines, but an unlimited number of illegal. The latter are restored to liberty when they reach the age of twenty-five, unless they have borne children to His Majesty. It is generally considered an advantage to a family to have a daughter in the harem, especially by the Manchus, who endeavour to rise by this back-stairs influence. To the poor women themselves it is a monotonous, weary life of intriguing unrest. As soon as one enters the palace she bids final adieu to all her male relatives, and rarely sees her female friends; the eunuchs who take care of her are her chief channels of communication with the outer world. It may be added, however, that the comforts and influence of her condition are vastly superior to those of Hindu females."—*Williams, Midd. King.*, i. 408.

On the accession of Tao Kuang, "the harem was reduced to modest dimensions. Taou Kwang declared himself to be a monogamist, and proclaimed his one wife Empress."—*Boulger, Short Hist.*, p. 197.

"Manchu princes of the first eight ranks [see *Mayers, Ch. Gov.*, pp. 2–3] are, it is stated, allowed a fixed number of wives and concubines of different classes. The first in rank of these is called the 正福晋; the second the 側福晋; the third class, of which there seem to be more than one member, are the 如夫人; and the fourth class the 格格. With these exceptions—of persons holding hereditary rank—there seems to be comparatively little concubinage at Peking. Manchu officers employed in the provinces, however, frequently leave their wives at Peking, or at the permanent garrison station of their birth, and take a concubine or concubines with them to their post."—*Ch. Rev.*, viii. 185.

Imperial princesses "are supposed to be given in marriage before they reach the age of eighteen. Tao Kuang . . . disliked his fifth daughter . . . and [being] annoyed [with her] swore he would marry her to a beggar, and actually carried out his threat, for he married her to a common soldier, a bannerman, earning only 4 taels a month. The man, however, was well-connected, and was a fine-looking fellow. When he became the husband of the princess a palace was given to him, with an allowance suitable to his rank. The princess lived with him for ten years, and died childless."—*Journ. N.-C.B.R.A.S.*, N.S. xi. 167.

Bigamy (雙室 *shuang shih*).—"If the husband, in the lifetime of his first wife (妻 *ch'i*), marries another (妻 *ch'i*, not a concubine 妾 *ch'ieh*), the marriage is null and void; the wife returns to her family, and her father keeps the purchase money, unless he knew of the existence of the first wife. In this case the money is forfeited."—*Ibid.* xxvii. 165.

"It is doubtful whether, in the customary law, there are any *bonâ fide* exceptions to this rule [that a second wife is forbidden as long as the first one is living]. At Foochow there exists a custom called *t'ung-shih* (同室), 'double wife,' and we have had a specific case pointed out to us where a Foochow man thus married a second wife whilst the first—hopelessly diseased—was living. We suspect, however, that this custom savours of the Canton *p'ing-ch'i* (平妻), 'even wives,' which is popularly supposed and asserted from personal motives by some Chinese to be an exception to the rule."—*Ch. Rev.*, viii. 78.

"A man who does double *sacra* is excepted (一子雙祧 *i tzŭ shuang t'iao*); his marriage with a second wife (妻 *ch'i*) is not considered bigamous."—*Ibid.* xxvii. 165. See also viii. 78–81.

"There are rare cases in which a man may have two ceremonial wives; for instance, if he marries both on the same day, or if his father and uncle arrange that the children of one wife shall represent the father, and those of the other the uncle."—*Parker, Ch. Cust.*, p. 12.

[M. Éd. Renard says that at Canton, working men have only one wife, shop-keepers and merchants two—one with small and one with natural feet. Workmen's wives live in the country, and their husbands spend about a month in the year with them.] —*Journ. Asiat.*, Sér. iv., xi. 57.

Polyandry.—Polyandry "is, in China proper, found exclusively in the prefectural city of T'ing-chou (汀州府), in the province of Fukien, whose inhabitants speak the Hakka dialect. This polyandry of Fukien, carried by emigrants to Formosa, is of local origin, being caused by the extreme poverty of the above-mentioned district; in which, again, only the very poorest practise it. Here the brothers, who are the husbands of one wife, live with her alternately for some period."—*Möllendorff*, p. 38.

Levirate.—"In China . . . the levirate is prohibited, but some assert that the Mohammedans in Peking practise it, and that it also occurs in the district of Huai-an, in the province of Kiangsu. A writer in the *China Review* [x. 71] asserts its practice for the provinces of Kiangsi, Hupeh and Szechuan see *infra*]. I have not been able to find the slightest trace of it, and it can never be of the same importance with the Chinese as with other people (*e.g.*, to keep the family property), as posthumous adoption, the Chinese substitute for it, fully meets the object."—*Ibid.* p. 17.

"In view of the severe penalty for it, it is scarcely possible that the levirate can be practised in any part of China."—*Ch. Rev.*, x. 83.

"Upon the death of the husband, the care of the wife devolves on the brother, or some other near relative of the deceased" (*Prejevalsky, From Kulja to Lob Nor*). This "is important, inasmuch as the *levirate* is suspected to exist at this day among certain classes or tribes of Chinese."—*Ibid.* viii. 256.

"It appears that this custom [levirate marriage], though undignified (on account of its irregularity according to the *Rites*) with any Chinese name, does undoubtedly exist in Kiang Si, Hu Peh and Sz Ch'uan. It is only found amongst the poor and lowly, and the chief reason for it is stated to be the desire to save the expense of purchasing another wife, coupled with a willingness on the part of the widow to remain a useful member in her adopted family. It is only practised by persons of character sufficiently respectable to render them safe against the suspicion of having murdered the husband and brother, and with the consent of relatives, neighbours and parties concerned; yet it is never looked upon as respectable, and stands on the same level as marriages between persons of the same surname, but descended from widely different stocks."—*Ibid.* x. 71.

Couvade.—[The *couvade* exists amongst the 苗. The husband lies in for forty days, whilst his wife works.]—*Ch. Rev.*, xii. 444. [For *Miao* marriages generally, see *ibid.* viii. 184; and for Hakka marriage customs, *ibid.* viii. 318–20. For superstitions governing the husband's action during his wife's pregnancy, see SUPERSTITIONS.]

Cousin's Right.—"Amongst the Manchus, agnatic cousins—that is, cousins descended through male ancestors, and bearing the same surname—may intermarry after the fifth generation." But "authorities are very conflicting upon this point. It is doubtful whether high families approve of such unions. Perhaps the latest *novellæ* have removed the former prohibitions. A Manchu prefect informs us that the daughter of a man may perhaps marry the son of that man's sister, and that the man's grandson through a son may always marry the sister's granddaughter through a son, but never may the man's son marry the sister's daughter." "Even amongst the Chinese, the children of first cousins always could, and first cousins themselves may now intermarry, provided that they do not bear the same surname, and are not both descended through males of the same family." "This extra condition is necessary, for first cousins through males might bear different surnames on account of one having been given in adoption. Such marriages are said to be between the *ku-piao-tsz-mei* (姑表姊妹), and the *ku-piao-hiung-ti* (姑表兄弟), who are *hüe-piao* (血表), or 'blood relatives,' and, it is stated, have only been sanctioned since the Manchu conquest. *Piao* means 'outside,' and *ku* 'a paternal aunt'; *tsz* and *mei* mean elder and younger sister respectively."—*Ch. Rev.*, viii. 72, and notes.

Relation of Husband and Wife.—"Through the marriage the wife becomes, as was the case according to the law before Justinian, not only *uxor*, but comes also into the *manus mariti*. She ceases to be *sui juris*, if she ever was it, and leaves the *patria potestas*, if she stood under it."—*Möllendorff*, p. 30.

[We cannot, with Möllendorff, accept the terms *filia* and *fil. familias* as applicable to Chinese law in the same sense as in Roman law. The husband can dispose of the wife only if she prove unfaithful; and even here he only acts vicariously for the laws, and it seems to be opposed to Chinese tradition to say that a Chinese wife is regarded in the light of a daughter.]—*Ch. Rev.*, viii. 82.

"The early Chinese precepts required a woman to be submissive first to her father, then to her husband, lastly to her son; but it is one of the benefits of Confucianism that it has destroyed the last form of bondage."—*Sutherland, Orig. and Growth of Mor. Inst.*, i. 262.

"It is in consequence of the way in which the wife comes into the power of her husband that she acquires very few rights with the marriage. Though she shares the rank and honours of her husband, she has no right to demand conjugal fidelity from him; whilst she, by sinning against it, commits a heinous crime." —*Möllendorff*, p. 30.

"It is a cause for divorce if the wife beats her husband [a case probably as rare in China as with us, and, when it happens, more likely to be quietly endured than brought into court]; but the husband has the right to inflict corporal punishment on her. He is, however, punishable if by doing this he inflicts a wound; but he escapes with a fine if he and his wife are willing to be divorced."—*Ibid.* p. 30.

"The wife owes the husband implicit obedience, and is not allowed to leave the house without his permission. If she disobeys, her husband may sell her to another as a concubine."—*Ibid.* p. 31. See also *Gray, China*, i. 227.

"The wife belongs to her husband's family, even after his death; if she leaves it, either to return to her own or to marry again, she has to leave behind her husband's estate, including what she brought with her. But her husband may have been the oldest member of his stock; in that case, after his death, his power is transferred to his wife, and one not infrequently hears of an old lady managing the family estate with only one son assisting her, the others living in other provinces, and receiving their orders from her. After her death, the family property is divided (分家產 *fên chia ch'an*) amongst the sons, who then become *sui juris*, and register themselves as new families or households (戶 *hu*)" (*Möllendorff*, p. 31). [If the wife quitted the husband's family, either by re-marrying or repudiating the connection, the husband's agnates secured the persons of the children before the second marriage; and if, by Imperial permission, she wore the insignia of office of her late husband, she forfeited this (*Ch. Rev.*, viii. 87).]

"The wife cannot possess property of her own as long as her husband lives; everything she possessed before entering into the *manus* passes into the hands of her husband, so that even property inherited by her remains with the husband after the marriage has been dissolved, unless it had been otherwise stipulated in the marriage contract. Although, therefore, the questions of *dos, paraphernæ, pacta dotalitia*, and *donatio inter virum et uxorem* do not really exist in Chinese law any more than they existed in the ancient Roman law, still a divorced wife, or a widow, will always take her jewellery and silks away with her. And it is in such that any *donatio* of the husband is invested" (*Möllendorff*, p. 31). "But a Chinese wife cannot inherit property, because she has quitted the only family whose property she could have inherited. Widows with property who re-marry generally secure an agreement withholding it from the second husband; but it is difficult for her to take away her property, as she cannot contract a respectable marriage without the consent of the agnates, and the law takes away her rights of dower on her second marriage. The late husband's agnates frequently persuade her to marry again so as to get the property" (*Ch. Rev.*, viii. 87).

"The husband is not liable for debts contracted by his wife before marriage, unless she was *sui juris*, and had no family when he married her."—*Möllendorff*, p. 32.

"If the husband changes his residence, the wife is obliged to follow him, if he wishes it. Poor people change their *domicilium* only to emigrate to another province; people of the better classes generally leave their first wife at home, to educate the children and to look after the family property, and take a concubine at the new place. The emigration of females to foreign parts is prohibited."—*Ibid.* p. 32.

"With all his power the husband is not allowed to hire out his wife to prostitution, although it does occur that a man whose wife has not borne a son, and does not allow him to purchase a concubine, hires for a time the wife of another to get a son by her. This is unlawful, and not considered decent. But it is lawful for a man to enter into a contract with a widow, and hire her for a certain number of years, until he gets a son by her. In this case, the woman need not leave her former husband's family."—*Ibid.* p. 32.

"In 1861, a man at Canton beat his wife to death on the mere suspicion that she had been unfaithful to him. He was arrested and examined at the police-court, but discharged."—*Gray, China*, ii. 223–4.

[In case of adultery (the only one in which the husband can kill his wife), the law authorizes the husband to kill both the guilty wife and her lover; but if he kills *one only*, he may be prosecuted for murder. Also he must receive no assistance—anyone lending a hand being liable to the charge of murder. (This seems, however, to be frequently evaded in practice.) If he succeeds in executing vengeance on these, he is taken before the magistrate to give his explanation, and receives a nominal punishment of 20 blows and the present of a roll of red cloth and 20,000 cash (see *Ch. Rec.*, July, 1860). "The sword is the weapon which Chinese husbands generally use on such occasions. Among the boat-population of Canton, the guilty couple are sometimes, I believe, bound together and flung into the river." But sometimes he merely calls his servants, and locks the pair into the room until the man has paid a heavy fine.]—*Gray, China*, ii. 224–6; *Ch. Rev.*, v. 405.

[In modern times the practice and the law are at variance, husbands being condemned by public opinion for killing a faithless wife.]—*Sutherland, Orig. and Growth of Moral Inst.*, i. 261–2.

"The power accorded to the husband over his wife and family is often used with great tyranny. The young wife finds in her new home little of the sympathy and love her sisters in Christian lands receive. Her mother-in-law is not unfrequently the source of her greatest trials, and demands from her both the submission of a child and the labour of a slave—which is not seldom returned by disobedience and bitter revilings. If the husband interferes, she has less likelihood of escaping his exactions; though, in the lower walks of life, his cruelty is restrained by fear of losing her and her services; and, in the upper, diverted by indifference as to what she does in the pursuit of other objects. If the wife behave well till she herself becomes a mother and a mother-in-law, then the tables are turned—from being a menial she becomes almost a goddess."—*Williams, Midd. King.*, i. 794–5.

"Men, on leaving home for a long period, sometimes sell their wives, or lend them during their absence; this, however, is only among the poorer classes."—*Scarth, Twelve Years*, p. 148.

Dissolution of Marriage.—"Marriage is naturally disolved by the death of either husband or wife. Another cause for the dissolution is divorce (分家 *fên chia*, 分妻 *fên ch'i*, 分鴛 *fên yüan*, which expressions are also used for a one-sided divorce, when the husband sends his wife away, the Greek ἀποπεμψῖς). This may be either enforced by law, or be a voluntary act."—*Möllendorff*, p. 32.

"A divorce *must* take place if there exists an impediment to marriage, or if the wife commits adultery. The husband has, in the latter case, the right to kill both adulterers, if he surprises them in *flagrante delicto*. [*Cf. supra.*] If he does not kill the wife, she is punished and sold as a concubine, the purchase-money for her being forfeited. If the adulterer kills the husband, the wife is strangled."—*Ibid.* p. 33.

"The husband who kills both, and thus maintains the purity of the family, is invariably rewarded by the local official and praised by the people. A correspondent from Ts'ing-kiang-p'u describes such a case in the *North-China Daily News*, of 19th Nov., 1894, and, evidently dissatisfied with the morality of the transaction, adds: 'the most deplorable feature of the case is the fact of the officials letting the murderer go scot free, and public opinion justifying him fully in winking at such brutality."—*Ibid.* p. 33, note.

"A husband is liable to punishment if he retain a wife convicted of adultery."—*Williams, Midd. King.*, i. 794.

"A divorce *may* take place: (1) If both husband and wife are willing to dissolve marriage (owing, *e.g.*, to incompatibility of temper); (2) if the wife leaves the house against the will of the husband [on account of the suspicion of adultery]; should she marry whilst absent, she is strangled; (3) if the wife beats her husband; (4) if the marriage contract contained false statements; (5) if the wife has one of the following seven faults—barrenness, sensuality, want of filial piety towards the husband's parents, loquacity, thievishness, jealousy and distrust, or an incurable disease." "The husband, however, is obliged to keep her, in spite of one or several of the above-mentioned faults, if she has kept the full term of mourning for three years after the death of his parents; or if his family, having been poor at the time of the marriage, have since become wealthy; and lastly, if the wife has no other relations to whom she may return after the divorce."—*Möllendorff*, pp. 33–4. See also *Doolittle, Social Life*, i. 106; *Ch. Rec.*, xxiii. 377; *Gray, China*, ii. 219–27; *Medhurst, For. in Far Cathay*, p. 108; *Simon, China*, p. 249, note; and *Mendoza, Hist.*, &c., p. 50.

"Desertion on the part of the wife constitutes a much more serious offence against the laws of marriage than either undutifulness or an ungovernable temper. A woman who deserts her husband may not only be divorced, but may be brought before one of the tribunals of the city in which she lives" (*Gray, China*, ii. 221), and receive 100 blows. If she, in addition to deserting her husband, marries another man, she may be strangled. Gray, however, says he has sometimes seen placards offering rewards for capture of runaway wives—not because the husbands wish to have them punished, but from affection. If a husband deserts his wife in time of distress, and remains away three years, she may marry again, if she can prove the desertion; and none of his relatives come forward with an offer to support her. If they do, when she lodges her declaration, the magistrate refuses permission for the second marriage. If she marries without lodging a declaration, the penalty is 100 blows (*ibid.* p. 222).

"The absence of a husband for 20 or 30 years on business of an official or commercial nature does not disannul his marriage," and should the wife, in such a case, marry another, she would be strangled on his return.—*Ibid.* ii. 223.

"If the husband and wife be dissatified with each other, they are quite at liberty to sign a deed of separation."—*Ibid.* p. 223.

[In several rural districts of Kwang-tung, a woman who strikes either of her parents-in-law is not only divorced, but flogged through the village by her husband, or one of his relatives; and she is sometimes also exposed "as a gazing-stock" in the market-place.]—*Ibid.* p. 223.

"When the divorced wife leaves the house, the husband may give her a bill of divorce (休書 *hsiu shu*, 分書 *fên*

shu), a specimen of which is printed in G. Schlegel's *Woordenboek* [vol. I. p. 1053]."—*Möllendorff*, p. 34. A translation of a bill is also given in *Gray, China*, ii. 221.

"In Canton, a man may repudiate a wife on the grounds explained in the note [*Ch. Rev.*, viii. 78, note 48, *i.e.*, for absence of virginity], but it should be done immediately, as condonation estops his right to sue for a divorce on account of his wife's adultery."—*Ch. Rev.*, viii. 78.

"Leprosy is the only defect which will justify a repudiation by the bride. Archdeacon Gray (*China*, p. 188) mentions a case where he was a spectator of a repudiation by a Hakka husband of a leprous wife. A leper may not sleep in the house of his relatives, and either a husband or wife, on petitioning the authorities, may obtain a divorce from a leprous spouse, and marry again."—*Ibid.* p. 77.

"According to Roman law, the action for divorce was a private one, open to wife and husband alike. The Chinese wife may only bring an action if she thinks her husband is willing to give her her liberty, or if her husband has beaten her cruelly, or if she was deceived by false statements in the marriage contract, or if her husband was or has become a leper."—*Möllendorff*, p. 34. See also *Gray*, i. 219.

"A third way of dissolving a marriage is the official declaration of death, if the husband has absconded and has not been heard of for three years. The wife abandoned can then demand such a declaration, especially if the family of her husband will not, or cannot, pay for her maintenance."—*Möllendorff*, pp. 34–5.

"The effects of the dissolution of marriage are the following:—The marriage is considered as having never been concluded; the wife returns to her family if the latter will receive her, the children remaining with the father, and the purchase-money being given back to the husband, except when the latter was the cause of the divorce. If the family will not receive her back, she becomes *sui juris*. All relationship through the wife ceases with the divorce."—*Ibid.* p. 34.

"A first wife, when divorced, is, as a rule, permitted to return to the home of her parents. . . . Should she . . . have neither father, mother, nor near relative, she is usually sold by the husband to a go-between. In this case she may, if no worse fate befall her, become the wife of another man. A second or third wife, when divorced, is sold to a go-between; and, if at all good-looking, to the proprietress of a public brothel, who . . . is always prepared to give a high price. . . . Sometimes it occurs that a second or third wife, when divorced, is cruelly turned into the open streets by . . her husband. In such a case, she is driven to . . . a life of beggary, or . . . prostitution. I have not unfrequently seen women who had been divorced . . . begging in the streets of Canton."—*Gray, China*, ii. 220–1. See also *Katscher*, p. 91.

"In China, a pregnant wife is rarely or never divorced, but after she has left the house of her husband for good the child she bears cannot be claimed by him."—*Möllendorff*, p. 35.

"The *Shên Pao* says the custom [of wife-pawning; *cf.* REST. OF UNITY] still exists, and that, a month or two ago, a woman was pawned for $30 during the winter, redeemed, and then sold to a second man for $100, one-half payable after the hundredth day. The second man only got one night's company for his $50, for the woman hanged herself during the small hours of the morning."—*Ch. Rev.*, xiv. 360.

[For divorce, see also *P. Hoang, Le Mariage Chinois, Var. Sin.*, No. 14, pp. 110–36; *Gray, China*, i. 219–28; *Simcox*, ii. 353; etc.]

Widowhood.—"Popular opinion is against a widow (寡婦 *kua-fu*) marrying again. . . . If, after the death of her husband, she remains under the power of her husband's father or brother, whose power over her is, however, of the slightest, she will not be prevented by them from tying a new matrimonial knot. There are even cases in which a widow, instead of remaining in the family of her former husband, successfully repudiates any connexion with it, and disregards its wishes. The proverb expresses the popular mind in this respect: if heaven wants to rain, or your mother to marry again, nothing can prevent them (天要下娘要嫁無法可制 *t'ien yao hsia niang yao chia wu fa k'o chih*). It is, however, not considered decent for a widow to marry again, and one who refuses all offers in this respect (or who does not want to add another fiddle-string 設心續弦 *mei hsin hsü hsien*) may receive for her faithfulness an Imperial reward in the form of a gateway (牌坊 or 樓 *p'ai-fang* or *p'ai-lou*) [if she became a widow before 30 years of age, and remained unmarried for 30 years after her husband's death (*Giles, China and the Ch.*, p. 201)], which is erected in the place where she lives. After the bestowal of such reward she is not allowed to change her mind. Should the head of the family try to force her into a new marriage, she is not obliged to obey. If she commits suicide—the common expedient of the unprotected female in China—the head of the family is punished. If, however, the marriage be concluded, she shall live with her new husband, the marriage presents, or rather the purchase-money paid for her, being forfeited."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 148–9. See also pp. 150, 168, 172, 189; and *Davis, Chinese*, ii. 283.

"It is the rule in China for sons, when married, to remain settled in their paternal home, or, at any rate, to occupy a dwelling in the neighbourhood, which is then considered to form a dependence of the original family seat. There also their widowed wives are required by custom to stay; indeed, a widow being the property of her husband's manes, and, moreover, of his parents, she has no right to remove elsewhere, except with the full approval of the latter. Besides, the ancestors of her husband, having been accepted by her as her own on her marriage, she must devote herself to their worship, and to that of her husband, for ever, with all the devotion and ardour she is possessed of; indeed, she must conform her conduct in this respect to that of King Wu and his brother, the Prince of Chou, the holy founders of the Chou dynasty, who were held up by Confucius as paragons for all time, because 'they carried their *hiao* to the highest pitch by serving their dead as they had served them when alive, and the departed as they would have served them had they still continued among them' (*Chung Yung*, xix). On the other hand, the parents of the widow cannot reclaim her, their power over her having been formally transferred by themselves to her parents-in-law at her marriage, in exchange for betrothal money and marriage presents."—*De Groot, Rel. Syst.*, ii. 757.

At the father's death the mother "takes charge of the house, unless she prefers to hand over its direction to a grown-up son, if there is one. She takes a double share of the property with the children, if there is a division; but this is merely a life-interest, which she loses if she re-marries. If without children, she retains a life-interest in the entire property, but does not succeed to the ownership of it unless her husband has expressed his wish to that effect."—*Simon, China*, pp. 44–5.

"It is scarcely necessary to say that many families are much gratified by having among them a widow who steadfastly refuses to marry again. Her resolution to live a life of chastity and of filial devotion to her parents-in-law reflects great honour upon all her relations, and surrounds them with an aureola of so-called 'door fame or house reputation' (門風), of which every Chinaman is extremely sensible. She is treated with much more affability than the other women in the house, and in this wise encouraged to persist in her purpose; indeed, the family know perfectly well that, should she change her mind, and not live up to her original vow, they would be greatly dishonoured and exposed to public ridicule. Should she have borne the deceased no son, her parents-in-law, without loss of time, adopt one for her, that he may provide for her until death, assisting her also in the discharge of her sacrificial duties. On her demise, it becomes incumbent upon this son to worship her soul in conjunction with that of her husband, just as if they had been the real authors of his being, *i.e.*, as the Chinese express it, he 'inherits the important charge' . . . in the capacity of continuator of their line of posterity. As such he must properly worship the whole line of his adoptive parents' ancestry, and bequeath this religious duty on his death to his own continuator, and so on, through an endless series of generations. A widow who survives her parents-in-law generally finds her maintenance secured by the legal portion of the patrimony which appertained to her deceased husband; and this so-called 'widows' capital' (守寡本), on her death, devolves upon her sons, or her adopted continuator."—*De Groot*, ii. 757–8.

"The widow of a man of rank is not allowed to marry again."—*Möllendorff*, p. 39; and see *Ta Ch'ing Lü Li*, c. 10, i. 12.

"Enforced widowhood prevails only among the well-to-do, and is unattended with suffering which Indian widows are called on to endure."—*Ch. Rev.*, xvii. 108.

"Among the lower classes, chaste widows by no means experience the same amount of encouragement in the circle of their kinsfolk as among the rich. People who have to work hard for their daily bread cannot afford the luxury of a 'house reputation' at the expense of the sustenance of a drone in their hive. Apart from this, they have no graduated or influential clansmen to do justice to the case by trumpeting it abroad, and so redeeming it from . . . oblivion . . . ; nor can they expect that such a work will be taken in hand by others, in a country where clan-fellowship so strongly prevails as to cause everyone to look upon people not belonging to his clan, if not as enemies, at least as strangers who do not concern him. To have a chaste widow living among them would also be particularly undesirable for the poor, because of the anxiety they would constantly suffer lest she should prove unsteadfast to her purpose, grow weary of her poverty and resolve to free herself from it by re-marrying, which would bring down the derision of the whole ward upon her kinsfolk. No wonder then that poor parents-in-law generally try to avoid these difficulties by prevailing upon the widow to take a second husband. Her second marriage has, moreover, the advantage of enriching them with long strings of copper coins or weighty pieces of silver, which betrothal money either the new bridegroom or his family must pay them in recognition of their relaxing the parental power."—*De Groot*, ii. 758.

"In spite of the little sympathy shown them by their own kinsfolk, there are, as the Chinese generally aver, in almost every town among the poorer classes a goodly number of widows who never re-marry, but live alone in miserable huts, earning their own scanty livelihood by embroidery and other kinds of needlework. No doubt the number would be greatly reduced did not corporations, organized on purpose to assist such noble devotees of conjugal fidelity, allow them to apply at fixed times for a small gift in money or food."—*Ibid.* ii. 758–9.

"Only when Imperial marks of distinction have been awarded them is any support granted by the authorities to chaste" widows.—*Ibid.* ii. 759; *Ta Ch'ing Hui Tien, Wu Hsüeh Lu*, c. 2, i. 13.

[A girl whose betrothed dies may count as his widow.]—*Gray, China*, i. 197; *Williams, Midd. King.*, i. 793.

"However great the reputation of chaste widows in Chinese society may be, their fame is not on a par with that of the affianced bride who, on the death of her betrothed, renounces matrimony for ever." But instances of this class of self-denial were rare, the parents on both sides discouraging the girl for fear of the derision to which they would be subject in case she subsequently changed her mind.—*De Groot, Rel. Syst.*, ii. 763.

Medhurst says he once received a card from a lady "intimating her intention to commit suicide at a specified date. She was very young and attractive, and belonged to a wealthy family. [Her betrothed] had died just before the date fixed upon for their nuptials, and she gave out that she deemed it her duty to render her widowhood irrevocable by dying with [him]. . . . No attempt was made by her relations, or by the local authorities, to frustrate the . . . design, the general opinion . . . being that she was about to perform a meritorious act. . . . The mandarins assured me that interference on their part might lead to a popular demonstration. . . . On the day named . . . a stage was erected in the open fields, with a tented frame over it, from which was suspended a slip of scarlet crape; one end of this she adjusted round her neck. She then embraced a little boy, probably a little brother, presented by a person standing by, and, having let fall a veil over her face, she mounted a chair and resolutely jumped off it, her little clasped hands saluting the assemblage as her fast-failing frame turned round with the tightening cord. As far as I could ascertain, the woman was not drugged . . . but the immolation was entirely a voluntary act on her part. . . . Sacrifices of this kind are not uncommon in certain districts, but they are not always performed in public, or with so much éclat."—*For. in Far Cathay*, pp. 105–6.

Second Marriage (嫁 *kou*).—"After the death of the first wife, re-marriage by the husband is permitted without any delay. The requirements of the household may often render it absolutely necessary. The widow, however, [to] whose re-marriage custom is generally opposed, has to mourn three years for her husband, in which time she is not allowed to marry."—*Möllendorff*, pp. 38–9.

"A widow cannot conclude a respectable marriage without consent; if she does, she cannot be a recipient of Imperial favour, nor have a place after death in the ancestral hall. But neither husband's father or brother can enforce chastity. The *arrha sponsalia* of a second marriage go sometimes to the woman herself, sometimes to her late husband's agnates. In many parts of China wives secrete their separate property, and *fidei commissa* (trusts) in China are common, especially among women, so as to escape the consequences of breaking tyrannical laws, as in the Roman system."—*Ch. Rev.*, viii. 84. See also *Ch. Rec.*, v. 210–11, 213; *Watters, Stories*, pp. 86–114.

"If the husband has left his wife, she may claim a divorce, or rather permission to marry again; but she has to wait for three years, as if the husband were dead."—*Möllendorff*, p. 39.

"Among the better classes, a widow who re-marries seldom takes her sons along with her to her second home (*cf. Möllendorff*, p. 59). People are generally too averse from weakening their family in its struggle for existence by permitting any of its male members to secede from it; besides, grandparents would put their veto on the matter, being so partial to have around them as large a male issue as possible, with a view to the perpetuation of the ancestral worship, of which they themselves hope to reap the advantages after death. Neither can their power over their fatherless grandchildren be neutralized by the widow's maternal rights. Though she is just as much the owner of her children as her husband was, a child having to observe the same measure of *hiao*, and to wear the same mourning for both [*De Groot*, ii. 550], her rights fall far behind those of her husband's manes, which abide in his ancestral home upon the domestic altar; and, consequently, are also secondary to those of his parents, in accordance with the great social principle that a child can possess nothing so long as its parents or grandparents are alive. Therefore a widow who does not desire to live apart from her sons has generally no choice but to remain in the house of her parents-in-law. Cases are, however, frequent in which permission is granted to widows re-marrying to take their sons to their new home—a condition usually being made that the latter shall come back at stated times to worship the manes of their father and their ancestors, and shall settle for good in their own family on attaining the age of manhood."—*De Groot*, ii. 759–60.

"[The rights of marriage] are secured to [a woman] by betrothal alone, should the death of the bridegroom take place before the date of the marriage, and she wish to remain faithful to his memory. It often occurs that the future parents-in-law themselves re-marry the *fiancée*, or widow of their son, as if she were their daughter, to a man without fortune, and adopt the children of this marriage."—*Simon, China*, p. 47 See also *Gray, China*, i. 197.

"In the south-eastern districts of the province of Fuhkien scarcely anyone is inclined to accept a widow for a young man for whom he is seeking a wife. Such a woman, it is believed, must bring bad luck to her second husband and his clan, because of the revengeful manes of her first husband, which, offended at the infringement upon his ownership, will hover over them all. Consequently, a second husband is almost always either a widower, or a man of middle age, no longer under the control of others in respect of his choice of a wife; and, moreover, a man of small means, who cannot pay the large sum of betrothal money which is generally demanded for a virgin."—*De Groot*, ii. 761.

The go-betweens "do not now arrange everything, as at ordinary marriages. . . . The parties themselves now settle most of the preliminaries."—*Ibid.* ii. 761.

"When the day assigned by the fortune-teller as suitable for the consummation of the marriage has arrived, the widow is carried in an ordinary sedan chair to her new home. She is not escorted by a festive bridal procession, nor by music, nor by the show and merriment which accompanies the bridal procession of a virgin. The whole ceremony resembles the clandestine weddings . . . which are sometimes celebrated during the time of mourning. No presents are sent by relations and friends, nor are congratulatory visits paid."—*Ibid.* ii. 762.

"Marriages of widows with widowers are of frequent occurrence when both are blessed with offspring. They are generally concluded with the object of making the step-children intermarry afterwards; and thus the difficulty of being unable to buy wives for the sons for want of betrothal money is overcome. The payment of such purchase-money for brides is, indeed, a great impediment to marriages among the poor classes, and dooms many men of small means to long or perpetual bachelorhood."—*Ibid.* ii. 762–3.

"A peculiar custom exists in some parts of China, *e.g.*, at Ningpo a marriage between a widow and a widower, usually both of advanced age, is concluded with the understanding that the widow belongs spiritually to her former husband, *i.e.*, when she dies her body is claimed by his family, and is buried with him."—*Möllendorff*, p. 39.

"To marry a widow is called 娶後婿 *ch'ü hou hun*; to take a second husband 改嫁 *kai chia*, or 反頭嫁 *fan t'ou chia*."—*Ibid.* p. 39.

"The widow is occasionally sold for a concubine by her father-in-law, and the grief and contumely of her degradation is enhanced by separation from her children, whom she can no longer retain. Such cases are, however, not common, for the impulses of maternal affection are too strong to be thus trifled with."—*Williams, Midd. King.*, i. 793–4.

[The law relating to marriage is fully stated and illustrated in *Hoang, Le Mariage Chinois au Point de Vue Légal* (*Var. Sin.*, No. 14). See also LAWS. For *post-mortem* marriages, see FUNERAL RITES; for effect of ancestor worship on position of wife and children, see REL. IDEAS; for breach of promise, see also LAWS; for prostitution and sodomy, see also MORAL SENT.; for the ceremonies connected with betrothal and marriage, see LAWS OF INT. and HAB. AND CUST.; and for the superstitions relating to marriage, see SUPERSTITIONS.]

DOMESTIC — FILIAL.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Succession.—"Whether or not . . . the early Chinese traced the family line through the mother, as might appear from the important part played by the element 'woman' in the characteristic *hsing*, I am quite unprepared to say; it is, at any rate, worthy of note that the 'eight most ancient surnames' are all written with this particular symbol."—*Giles, Historic China*, p. 359.

"A curious circumstance which may be connected with a forgotten sense of the importance of female kinship is the existence of three distinct terms to describe affinity through women. There are two words, answering approximately to the Latin agnate and cognate; the former (*nei khin*) comprehends all kindred derived by descent in the male line from the same stock as the individual. The latter has three sub-divisions, translated (by Sir W. H. Medhurst) as 'mother's kin,' 'wife's kin' and 'daughter's kin,' including all varieties of relations by marriage (*S. B.*, xxvii. 203). In historic times these relationships were regarded as unimportant, and calling only for the slighter degrees of complimentary mourning; but if this had always been so, it is difficult to see why such pains should have been taken to name them, or why marriage with relatives on the mother's side should have been as strictly prohibited as is still the case."—*Simcox*, ii. 68.

"The oldest recorded instance of adoption in China is that of Shun being received into the family of the Emperor Yao [2200 B.C.]."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 182.

Relation between Parents and Children.—"The Chinese records in general contain numerous passages which point unmistakably to the prevalence, throughout the realm and in all ages, of a conception that it is among the most sacred duties of children to bestow great care upon the coffins of their parents."—*De Groot, Rel. Syst.*, i. i. 304. *Cf.* FUNERAL RITES.

"Shun (2317-2208 B.C.), in serving his father, submitted to the small cane when his father beat him, but would run away if he used the large cane. It was not unfilial, but merely to lessen his anger."—*Hou Han shu Ts'ui Shih chuan, P'ei wên yün fu, c.* 52, p. 67*a*. See also *Yüan erh shih ssŭ hsiao*, p. 3.

"Shun, when 50 years old, played as an infant [to please his parents]. This might be called the utmost filial conduct."—*Liu Hsiang-hsin hsü, Tzŭ shih ching hua, c.* 15, p. 9*a*.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Inheritance and Succession.—[Succession to position and property was in the line of the eldest son. See *Li chi*, ii. i. i. i.]

"It appears that at this date the Turkish principle of giving the succession to the eldest male of the clan was not quite extinct, or had already begun to work its way in. The son of a deceased noble, being for some reason unfit for the succession, the eldest agnate [長 親] was made heir."—*Ch. Rev.*, x. 70.

"To the question: 'If the elder brother has no children, should be adopt the elder son or younger son of his younger brother as his heir?' the reply is: 'The principle is to adopt an elder son to an elder brother; if a younger son be adopted to an elder brother, the principle is lost. But if there is one who was a special favourite of his elder brother during his lifetime, that will answer.'"—*Chia li ta ch'êng, c.* 6, *Ssŭ li pien k'ao*, p. 15*b*.

"Chuang Kung, being sick, asked for an heir of his younger brother, Shu-Ya, who replied: 'One succeeding to and connecting another is a common affair in Lu. There is Ch'ing-fu, who is worthy to be adopted; why are you anxious about it?'"—*Shih chi Lu Chou Kung shih chia, P'ei wên yün fu, c.* 63, p. 64*b*.

"According to the rites, if the consort had no children, the right *ying* (媵), maid of honour, presented by states having the same surname, should be adopted as wife; if the right *ying* had no children, then the left *ying*; if the left *ying* had no children, then the consort's niece; if the consort's niece had no children, then the niece of the right *ying*; if the niece of the right *ying* had no children, then the niece of the left *ying*."—*Kung-Yang chuan chu, P'ei wên yün fu, c.* 84, p. 60*b*.

"The magistrate of Tzŭ Ch'ang of Ch'u wished to adopt Tzŭ Hsi as his heir, but the latter got angry and said: 'A country having assistance from outside, or from another state, cannot be set at naught; a king having an heir cannot be wronged. It would be unlucky to adopt an heir wrongly, and I would get a bad name. Though you bribe me with your whole country, yet I will firmly refuse.'"—*Tso chuan, P'ei wên yün fu, c.* 63, p. 64*a*.

Guardianship.—[King Wu, on his deathbed, gave a special charge to the Duke of Shao to be a guardian of the young king and of the dynasty.]—*Legge, Ch. Class.*, III. ii. 484, note.

Relation between Parents and Children.—[The power of parents over their children was absolute. They could chastise, sell or kill them. A son owed menial services to his parents: in winter, to warm the bed for them, and to cool it in summer; in the evening to adjust everything for their repose, &c. (*Li chi, S. B.*, XXVII. i. 67); as well as complete deference and obedience; could not approach an intimate friend of his father without being told to do so; nor retire without being told, nor address him without being questioned; when going abroad he had to inform his parents where he was going, and on returning to present himself before them (*ibid.* p. 68); had to use respectful terms in conversation (p. 68); could not occupy the honourable positions belonging to the father, either in the house or at meals, *e.g.*, not sitting on the same mat (pp. 68–9); nor at sacrifices to the dead (p. 69); had to act when they are absent as if they were present (p. 69); and could not attempt anything in deed or word which might disgrace them (p. 69); nor, while his parents were alive, promise to die with a friend (who may be committing suicide to avenge a wrong), nor have wealth which he called his own (p. 69); nor, while they were alive, could he wear the mourning colour in his dress (p. 69); nor, after their death, could the eldest son, taking his father's place, wear a cap or dress with a variegated border (p. 69); during the period of mourning for his father, a son was not to over-weaken himself by fasting, &c., so as to be unable to perform his mourning duties (pp. 87–8; and *cf.* FUNERAL RITES); if poor, he had to bury his parents to the best of his means (p. 182); during his parent's sickness he nursed him, supervising the preparation of his food, and reflecting his condition in his looks of joy or sorrow (pp. 343–4); on rising in the morning, after carefully completing his toilet, he attended on his parents whilst dressing and eating (p. 450); and in every action throughout their daily life showing implicit obedience and reverence during life and after death, even under the most trying conditions (pp. 335–7, 452–9; XXVIII. 24, 41, 211–18, 222, 226–9, 233–4, 236–8, 268–9, 289–91, 310–11). The doctrine had various ramifications: see *Hsiao ching, passim.* See also *Chia li ta ch'êng, c.* 1, *Hsüeh li yao wu*; *P'ei wên yün fu, c.* 78, 82, 52, 26 *shang*; *Li chi chieh yao, c.* 1; *Jên p'u lei chi, c.* 4, p. 4*a*; *Shih lei t'ung pien, c.* 54, pp. 8*b*, 9*a*, &c.; and *cf.* LAWS OF INT. and MORAL SENT.]

[An unfilial ruler was reduced in rank.]—*Li chi*, Bk. III. ii. 15.

"The tenderness required of children towards their parents is to be mentioned as a school of sympathy. The Book of Rites teaches that the young should visit the chambers of their parents in the early morning, and perform every possible service with gentle looks and affectionate enquiries, never failing in any attitude or gesture of respect; that at meals and evening they should observe similar rules, anticipating every want with self-forgetful devotion. Even if hated, they must not be angry; and, when admonished, never contend. Mencius declares that one's love for his parents should take precedence of his love for his country. There are numerous significant ceremonies and customs in honour of mothers, and for their benefit, such as those which celebrate the arrival of girls at the age of sixteen by a festival of special thanksgiving; and those performed to save the parent from supposed evils resulting from death soon after child-birth. In the rule that makes one's virtue redound to the honour of his parent, the Chinese have recognized the laws of hereditary transmission, and given motive-force to sexual purity. Their social ideal consists in disciplines of devotion to certain personal relations, whose claims are inherent. These relations are so defined as to keep self in the background, and the thought of subordination and respectful regard constantly prominent."—*Johnson, Or. Rel.—Ch.*, pp. 46–7.

[The chief examples of filial devotion to parents are Tsêng Shên (b. 506 B.C.), whose piety was so great that when his mother bit her finger he felt a sympathetic twinge of pain (*Yüan êrh shih ssŭ hsiao*, p. 5); Mín Sun (6th and 5th cent. B.C.), an example of self-denial (*ibid.* p. 6); Chung Yu (543–480 B.C.), who carried ice on his back for his parents (*ibid.* p. 7); Lao Lai Tzŭ (possibly a legendary character, see *infra* (*ibid.* p. 8); Yen Tzŭ, who obtained doe's milk for his parents by mingling, disguised, with a herd of deer (*ibid.* p. 9); and T'ien Tzŭ (Mêng Ch'ang-chün, d. 279 B.C.), who, when Prime Minister of Ch'i, offered his wealth to his mother (*Han shih wai chuan, Kuang shih lei fu, c.* 16, p. 5*a*); see also Chou Wên Wang (*Kuang êrh shih ssŭ hsiao*, p. 3*b*).]

"Lao-lai-tzŭ served his parents very filially. When 70 years old he played at 'boy' by wearing a five-coloured spotted garment, and playing before his parents [to amuse them]."—*Lieh nü chuan, Shih lei t'ung pien, c.* 54, p. 8*b*.

"Shih Tso was an obedient minister; he destroyed his relatives according to right principles. His son, Hou, having helped Chou-hsü to commit regicide, he killed him with his own hand."—*Tso chuan, Yüan chien lei han, c.* 242, p. 33*b*.

"Shih Ch'io said: 'Your servant has heard that one who loves his son should teach him righteous conduct, and allow him no vicious behaviour, such as pride, extravagance, licentiousness and laziness, from which vicious behaviour springs."—*Tso chuan, Kuang shih lei fu, c.* 16, p. 1*b*. *Cf.* MORAL SENT.

One of the disciples of Confucius observed: "I have also heard that the superior man maintains a distant reserve towards his son." "I can easily believe that this distant reserve was the rule which Confucius followed generally in his treatment of his son. A stern dignity is the quality which a father has to maintain upon his system. It is not to be without the element of kindness, but that must never go beyond the line of propriety. There is too little room left for the play and development of natural affection."—*Legge, Ch. Class.*, i. Prol. p. 71.

[Their duty to their mothers was the reason assigned by the Royal Guards for asking (788 B.C.) not to be sent away from the capital to aid the regular army on the northern frontier.]—*Shih Ching*, Pt. II. Bk. IV. i.

[Only sons were exempted from military service in order that aged parents might not be left unassisted.] "The services of religion come, in China, under the principle of propriety, and are only a cold formalism; but even here, other things come with Mencius before them. We are told: 'The richest fruit of love is this—the service of one's parents; the richest fruit of righteousness is this—the obeying one's elder brothers; the richest fruit of wisdom is this—the knowing these two things, and not departing from them; the richest fruit of propriety is this—the ordering and adorning these two things' (Bk. IV. Pt. I. xxvii)."—*Legge, Ch. Class.*, ii. Prol. p. 75.

"The preserving salt of the kingdom was, I believe, the filial piety, with the strong family affections, of the Chinese race, and their respect for the aged—virtues certainly of eminent worth. All these are illustrated in many odes of the *She*; and yet there is a danger of misjudging from them the actual condition of the country," *i.e.*, they did not conduce to the peace of the country so much as we might expect.—*Ibid.* IV. i. Prol. p. 140.

"Huan Kung of Ch'i said: 'I have tasted all delicate things, but have never tasted human flesh.' Yi Ya [the cook] accordingly killed and cooked his son, and offered him [to Huan]."—*Yu hsüeh hsü chih, c.* 1, p. 23.

"Yüeh Yang eat soup made of his son's flesh."—*Kang chien, Yüan chien lei han, c.* 241, p. 32*b*.

[*Matignon* (*Superstition*, &c., p. 224) says that Ma Tsou, in 400 B.C., protested against a barbarous custom of certain tribes in Shansi, who killed and ate the first-born child of any marriage, whether male or female, on the principle that it was likely to be weakly—as the first fruit from a young tree is often unsatisfactory.]

"It shows the force of ideas in China that the young married people, to whose interests the older generations are sometimes sacrificed in other communities of the same type, are here subordinated to the old and young. It was considered proper that children should be petted and indulged, as they still are in modern China. At eight they began to learn manners, and the art of yielding to others; and, after that, advancing years only bring fresh duties, till the son becomes himself a husband and father. Elder children, however, are only subject to a constitutional rule. We have heard much about the duties of a sovereign, but they are all summed up in the phrase, he should be the father and mother of his people. The father and mother, therefore, in private life, have to consider the interests and inclinations of their children, as the ruler should those of the multitudes. Before his parents a son should not speak of himself as old; and, though he might speak of the duty owing to parents, he might not speak of the gentle kindness due from them (*S.B.*, xxviii. 291); but the latter duty was not the less recognised, and it would evidently be a proper topic of conversation in a company of parents. If children do not like the food or clothes provided for them, they are required to taste or put them on without demur; but the parents are expected to divine from the *nuances* of still respectful deportment that they are not altogether pleased, and the children await their further commands with a reasonable expectation that their tastes will be considered."—*Simcox*, ii. 73–4.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Succession.—"Son to son and grandson to grandson, the succession should be transmitted in one unbroken line."—*Ts'ai Yung Hu T'ai-fu tz'ŭ ch'ien ming, P'ei wên yün fu, c.* 63, p. 64*b*. See also *Shih chi Hsiao Wên Ti chi, ibid. c.* 63, p. 64*b*; *Yu hsüeh hsü chih, c.* 1, p. 24*a*; *Hou Han shu, Yüan shao chuan, P'ei wên yün fu, c.* 63, p. 65*a*; *ibid. Yüan chien lei han, c.* 244, p. 12*b*.

In the reign of Shun Ti (A.D. 126–45) "eunuchs were first allowed to adopt a son as heir, who could succeed to their hereditary nobility."—*Hou Han Shun Ti chi, P'ei wên yün fu, c.* 34*b*, p. 11*b*. See also *Ch. Rev.*, xiii. 123.

"[Liu] Yü . . . memorialized the Throne, saying: 'At the present day the *chung* officers [eunuchs] who have feudal lands adopt sons to succeed to their rank. Some adopt a son of a distant relative, or buy one in the market. It is indeed opposed to the principle of the hereditary law of the country, as well as of the family."—*Liu Yü chuan, P'ei wên yün fu, c.* 4*a*, p. 6*b*.

Relation between Parents and Children.—"Whereas people, in throwing up big grave hills, were pursuing the double purpose of glorifying the memory of the dead and of protecting their bodies and manes from destruction, it is also quite evident that in this same Empire of the Midst, where devotion to parents has ever been the first duty of a child, it has always been considered a mark of a high sense of duty to raise with one's own hands a grave mound as big and high as possible over the remains of a father or mother. Instances of children who have fulfilled their duty in this wise abound in the historical books from the Han dynasty downwards."—*De Groot, Rel. Syst.*, ii. i. 457.

"The native literature . . . shows it has always been ranked among the duties of virtuous children and wives to plant and nurse with their own hands trees upon the graves of their parents and husbands, just as they were morally obliged by the laws of filial devotion and subjection themselves to throw up mounds over the mortal remains of the honoured dead. Whosoever fulfilled the latter duty never neglected to fulfil the former."—*Ibid.* ii. i. 461.

[Many famous instances of extreme devotion of children to their parents, dead or alive, occur during this period: see *Tung Kuan Han chi, Shih lei t'ung pien, c.* 54, p. 9*b* (Huang Hsiang, whose *tzŭ* was Wên Ch'iang, practised self-abnegation in order to feed and warm his parents); *Kuang Chou hsien hsien chuan, ibid. c.* 54, p. 10*a* (Lo Wei, when eight years old, worked in the fields to serve his mother); *I shih chuan, ibid. c.* 54, p. 10*a* (Ting Lan made an image of his deceased mother, and served her as if alive); *I t'ung chih, ibid. c.* 54, p. 10*a* (Kuei Hsiang fetched water for his mother from the central part of a river, a rock springing up to testify to his filiality); *Han shu, ibid. c.* 54, p. 10*b* (similar case of Chiang Shih, where a spring, producing carp, gushed forth); *Hou Han shu, ibid. c.* 54, p. 10*b* (Fang Chu built with his own hands a tomb for his dead mother; Fang T'iao, whose *tzŭ* was Ch'ang Yü, made himself ill through grieving for his step-mother); *ibid.* and *P'ei wên yün fu, c.* 82, p. 202*a* (Sun Ch'i tended pigs to maintain his poor mother); *P'ei wên yün fu, c.* 78, p. 27*b* (Ts'ai Yung served his sick mother so constantly that he did not even change his clothes); *ibid. c.* 82, p. 202*a* (Wang Hsiang, whose *tzŭ* was Hsiu Chêng, nourished his step-mother, though she wished to kill him); *ibid. c.* 52, p. 3*b* (Yang Hou, when nine years old, feigned sickness in order to restore harmony between his mother and Po, the son of a former wife); *Yu hsüeh hsü chih, c.* 1, p. 23*b* (Han Po-yü wept when punished by his aged mother, because the blows failed to hurt him, indicating increasing weakness); *Hsiao tzŭ chuan, Kuang shih lei fu, c.* 16, p. 6*b* (Ts'ai-Shun's filiality caused even thunder to cease); *Hou Han P'êng Hsiu chuan, Shih lei t'ung pien, c.* 54, p. 18*b* (P'êng Hsiu, when fifteen years of age, saved his father's life); *Han shu, Yüan chien lei han, c.* 243, p. 11*a* (Tu Yen-nien revered the places where his father slept, &c.); *Han shih wai chuan, P'ei wên yün fu, c.* 78, p. 26*b* (Shih Shê committed suicide rather than condemn his father, who had committed murder); *Han shu, Shih lei t'ung pien, c.* 54, p. 10*a* (Chin Jih-shan wept whenever he saw his deceased mother's likeness); *T'ung chien, Yüan chien lei han, c.* 242, p. 33*b* (Fêng Mêng became a hermit because Wang Mang killed his son); *I Yüan, Shih lei t'ung pien, c.* 54, p. 10*b* (Yen Wu, carrying earth for his father's grave, was assisted by a flock of crows); *Yüan êrh shih ssŭ hsiao*, p. 16 (Yang Hsiang killed a tiger which was attacking his father); *ibid.* p. 4 (Han Wên Ti waited on his sick mother for three years so assiduously that he did not even change his clothes); *ibid.* p. 10 (Tung Yung sold himself into slavery in order to pay his father's funeral expenses); *ibid.* p. 15 (Kuo Chü, but for supernatural intervention, would have buried his child in order that his mother might have sufficient food); and *Kuang êrh shih ssŭ hsiao* for other conspicuous instances of filial devotion: pp. 4*b* (Chao Hsün), 5*b* (Mao Jung), 6*b* (Tu Hsiao-shan), 7*b* (Ts'ao Ts'êng), 10*b* (Mao *I*), 13*b* (Shih Chien), 24*b* (Wang Hsiu), &c.]

Period of Disruption (221 *to* 589).—*Table IV.*

Adoption.—"One of the earliest mentions of adopted sons [繼] is in the case of Sz-ma Yu [攸] [? I 奕], brother of the first Tsin Emperor [*Mayers, C.R.M.*, No. 661]."—*Ch. Rev.*, xiii. 119.

[Cases of adoption which lapsed on the birth of an heir, are given in *Shu chih, Yüan chien lei han*, c. 244, p. 12*b*; *Chin shu, ibid.* c. 244, p. 13*a*, &c.; and of adoption of nephews, in *Chin shu, ibid.* c. 244, pp. 11*a*, 13*a*; *Nan shih, ibid.* c. 244, p. 13*a*, &c.]

Succession.—"In the year A.D. 282 there was a dispute as to the succession to the well-known statesman 賈充; it was objected that his sister's grandson [外孫] was an improper heir [禮無異姓爲後之文]. It was argued that in ancient times, when the ruler of a state having the surname 姒 took as successor a sister's grandson, born in a state having the surname 嬴, a great scandal and disaster was the result."—*Ch. Rev.*, xiii. 119.

Relation between Parents and Children.—[The celebrated instances of filial piety belonging to this period are:—Wang Hsiu (Shu-chih), whose grief stopped a festival on the anniversary of his mother's death (*San kuo chih, Shih lei t'ung pien*, c. 54, p. 10*b*); Li Ê, who threw herself into the furnace where her father was unsuccessfully trying to melt gold, and so saved him from execution (*Hsiao yüan, ibid.* c. 54, p. 13*a*); Mêng Tsung, whose filiality caused bamboos to sprout in the winter (*Po miao, ibid.* c. 54, p. 10*b*); Wang Hsiang (Hsiu-Chêng), who melted the ice with his naked body to obtain fresh fish for his mother, and wept when the wind destroyed the kind of plums she preferred (*Chin shu, ibid.* c. 54, p. 11*a*); Yü Ch'ien-lou, who gave up his official appointment in order to tend his sick father (*Giles, Bio. Dic.*, 2513); Chao Chih, who wept whilst studying because his father had to perform arduous labour (*Chin shu, Chao Chih chuan, P'ei wên yün fu*, c. 82, p. 202*b*); Wang P'ou, who sat on his mother's grave to comfort her during thunderstorms (*Giles*, 2215); Wu Mêng, who allowed the mosquitoes to sting him, lest they might go and worry his parents (*Yüan êrh shih ssŭ hsiao*, p. 22); Hsü Tzŭ (*ibid.* p. 23); Wu Yin-chih (*Chin shu, Shih lei t'ung pien*, c. 54, p. 11*a*); Hsing Shao-yung (*Pei shih, ibid.* c. 54, p. 11*b*; Wang Tsêng-ju (*Nan shih, ibid.* c. 54, p. 11*b*); Yü yü (*Nan shih, ibid.* c. 54, p. 12*a*); Ho Ch'i (*Chin shu, Ho Ch'i chuan, P'ei wên yün fu*, c. 82, p. 202*a*); T'êng T'an-kung (*Nan shih, Kuang shih lei fu*, c. 16, p. 6*a*); Hsiao Chao (Kao Yen) (*Pei Ch'i shu Hsiao Chao T'i chi, Tzŭ shih ching hua*, c. 15, p. 9*a*); Fan Hsüan (Hsüan Tzŭ) (*Shih shuo hsin yü, Shih lei t'ung pien*, c. 54, p. 11*a*); and Hsiao Jui-nung (*Pai shih, ibid.* c. 54, p. 11*b*).]

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

Succession.—"[Lu] Mai, though twice married, had no children. Someone persuaded him to keep a concubine, or *ying*, but he answered: 'The son of my brothers may be regarded as a son to succeed as a descendant."—*Tang shu Lu Mai chuan, P'ei wên yün fu*, c. 84, p. 60*b*. Similar instance in *T'ang shu, Yüan chien lei han*, c. 244, p. 13*a*; adoption of nephew's son, in *Po Chü-i mu chih, ibid.* c. 244, p. 13*a*; or daughter's son, in *T'ang shu, ibid.* c. 244, p. 13*a*. For inheritance see *Simcox*, ii. 344–55, and *cf.* MANCHU PERIOD.

"Before the time of Chung Yeh, of the T'ang dynasty, the eldest son had not succeeded [during the T'ang dynasty]; but in Tai Tsung's time the eldest son began to succeed to the throne."—*Hai Shan Hsien Kuan ts'ung shu, Ku chung sui pi*, p. 63*a*.

"[Lu] Mao and his fellow-countryman, Hsü Yüan-yüan, were not acquainted with one another. The former, when on the point of death, wrote a will in which he asked the latter to be his son's guardian; and he built a tomb to the former, and taught and nourished his son."—*Lu Mao chuan, Shih lei t'ung pien*, c. 54, p. 19*a*.

Relation between Parents and Children.—"When Tang Jên-hung, of the T'ang dynasty, became commander of the Imperial armies, as there was a custom among the *I* (a tribe in the west) and Liao (a tribe in the south-west) of selling their parents or sons, he instituted a law forbidding these evil practices; thus conferring great benefit upon the people."—*Ts'ê fu yüan kuei, Yüan chien lei han*, c. 125, p. 30*a*. K'ung K'uei, when magistrate of Kuang Chou, forbade people selling their daughters (*ibid.* p. 28*b*). Similar instance on p. 27*b*.

[The period was not rich in conspicuous instances of filial piety. The *Yüan êrh shih ssŭ hsiao* (p. 24) mentions Ts'ui Shan-nan, who nourished her husband's grandfather in his old age; the *Kuang êrh shih ssŭ hsiao* (p. 11*b*), Ti Jên-chieh (629–700), who thought of his parents as he gazed at the clouds; and the *T'ang shu, P'ei wên yün fu*, c. 78, p. 37*b*, Ts'ui Mien (9th cent.), noted for his filial piety.]

Sung Period (960 *to* 1280).—*Table VI.*

Inheritance and Succession.—The provisions of Yang Chi's will (1132) show "how little change the course of centuries had effected in the paternally democratic organization of Chinese society."—*Simcox*, ii. 205.

[The bequeathing of estates subject to many charges, for the benefit of poor relations, good servants and young dependants, may explain the still subsisting scarcity of large fortunes and the generally equal distribution of wealth in China.]—*Ibid.* ii. 205.

[For an example of an elaborate will of the period, see *Mém. conc. les Chinois*, iv. 196; x. 119*ff*.]

Relation between Parents and Children.—[The killing of a son who had committed murder by slaying his parents and brothers was not punishable with death. (*T'ung chien lei tsuan*, c. 6, *Chêng shih pu*, p. 8*a*). *Cf.* LAWS. The *lex talionis* is illustrated in *Sung shih Li Lin chuan, P'ei wên yün fu*, c. 26*a*, p. 166*b*. (son pardoned by Emperor for slaying his father's murderer); *Sung shih Chên P'o-êrh chuan, ibid.* c. 26*a*, p. 168*a* (similar case); see also *Sung shih Yao Ssŭ chuan, ibid.* c. 26*a*, p. 166*b*. Deceit towards parents is deprecated by Ssŭ-ma Wên-Kung (1009–86) in *Jên p'u lei chi*, c. 4, p. 2*a*. Pao Chêng gave up his official post to attend on his aged parents (*Sung shih Pao Chêng chuan, P'ei wên yün fu*, c. 82, p. 202*a*). Yin Tan and Yang I are celebrated instances of filial piety (*Hsiao tzŭ chuan, Kuang shih lei fu*, c. 16, p. 6*a*; *Jên p'u lei chi*, c. 4, p. 3*a*); see also *Sung shih Chieh Tsung Mêng hou chuan, Tzŭ shih ching hua*, c. 15, p. 9*a*. The case of Chu Shou-ch'ang (1031–1102), who resigned his office in order to find his mother, whom he had not seen for 50 years, is described in *Yüan êrh shih ssŭ hsiao*, p. 25.]

"No happiness is so great as to have an heir, and the extreme of unfilialness is to be without descendants. Now the *sha mên* (沙門), Buddhist priests, parted with their wives and sons, and did not marry all their lives. Why did they oppose the principle of happiness and filialness?"—*Hung ming chi, P'ei wên yün fu*, c. 78, p. 27*b*.

"They [the Cathayans] show great respect to their parents and should there be any son who offends his parents, or fails to minister to their necessities, there is a public office which has no other charge but that of punishing unnatural children who are proved to have acted with ingratitude towards their parents."—*Yule, Marco Polo* (2nd ed.), i. 405.

Mongol Period (1280 *to* 1368).—*Table VII.*

Relation between Parents and Children.—[The rules for sons complying with their parents' instructions were strict. See *Jên p'u lei chi*, c. 4, p. 2*a*; see also p. 3*a*, &c., and *cf.* LAWS OF INT.].

"[Jên Tsung] in serving [his mother] the Empress Dowager never bore a disagreeable look all his life [so as not to dispirit her.]"—*Yüan shih Jên Tsung chi, Tzŭ shih ching hua*, c. 15, p. 9*a*. Other well-known cases of filial piety are Lai Lu-sun, who saved his mother's life by offering his own (*Kuang êrh shih ssŭ hsiao*, p. 22*b*), and Chang Yang-hao, who studied at night in order to be able to help his parents (*ibid.* p. 14*b*).

[Marco Polo (*Yule*, ii. 109) says that in the provinces of Manzi, (*i.e.*, China south of the Huang Ho), the poor who had no means of bringing them up were wont to expose their new-born babes.]

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

Inheritance.—"When the father doth die, the eldest son, by his first wife, doth inherit the most part of all his goods, and the rest is reparted in equal parts amongst the other children both of his first wife and of all the other wives. For lack of a son by the first wife, the first-born of the other wives doth inherit the most part."—*Mendoza, Hist.*, i. 62–3.

Relation between Parents and Children.—[Three remarkable instances of filial devotion are recorded: Ch'ên Hsien-chang, who preferred to cultivate the fields near his home rather than be an official and go away from his mother (*Kuang êrh shih ssŭ hsiao*, p. 17*b*); Huang Chi, who knelt on the floor until his father's wrath was appeased (*ibid.* p. 18*b*.); and Yang Tung-li, whose piety caused his mother, who had re-married, to return to her first husband's home (*ibid.* p. 26*b*).]

Manchu Period (1644 *to* —).—*Table IX.*

Inheritance and Succession.—"The desire of securing a male representative of the family has from time immemorial been a prominent characteristic of the Chinese mind. This has its origin chiefly in the importance attached to the annual performance, by a lawful descendant, of the sepulchral rites consisting of sacrificing at and sweeping the graves of ancestors at certain seasons of the year."—*Trans. C.B.R.A.S.*, Pt. iv. (1854), p. 28.

"The dying out of a family was to be prevented, as by the desolation of the house the dead lost their religious honours, the gods of the family their sacrifices, the hearth its flame, and the forefathers their name among the living."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 182.

"The eldest son of the wife or failing him, a younger son, is always considered the lawful future representative of the family [if the eldest son have a son before his death that son claims succession before the younger brother], and upon him devolves all posthumous sacrificial duties to parents and ancestors, but should the wife pass her 50th year without having male issue, the eldest son of a concubine must be nominated to the place of honour. If a man have no sons the representation of the family descends to a brother's son, failing him, to the son of a first cousin, to the son of a cousin once removed, and so on; the principle being that the inheritor *must* be a male relative descended from common stock with the head of the family and a member of the generation next to that to which the deceased belongs. If all these be wanting, some more distant kinsman, providing he be a member of the next junior generation or a person bearing the same surname, may be selected as the family representative. Any departure from this order of procedure renders the offender liable to a penalty of eighty blows. The nomination of an adopted son of a different surname is punished by a penalty of 60 blows and deprivation of the adopted child; and any relative of the child concerned in the matter is liable to the same punishment."—*Trans. C.B.R.A.S.*, Pt. iv. (1854), pp. 28–9.

[There is no absolutely fixed law of inheritance or testamentary disposition of property, but certain general principles are recognized, which the court will not allow to be disregarded without sufficient cause. (1) At the death of a father, his property is vested in all his sons equally, whether by his principal or secondary wife; and, although the principal wife, if surviving, has a certain right of administration and claim on the estate for provision for her funeral, the property does not vest in her, and may, on cause shown, be distributed among the heirs; and also, on the decease of one of the joint heirs, his interest vests in his heir, or heirs; and it appears that the secondary wife has no claim on the estate. (2) Male heirs, whether by blood or adoption, are preferred to female. Even a written will in favour of the latter would be set aside. (3) The guardianship of infants is primarily the duty of the next-of-kin; the wife will continue in the position of the husband after his decease; if she desires to be relieved of the trust, the appointment of a guardian will be made by blood relations, and cannot be attacked without cause shown. A connection by marriage has no *prima facie* right to intervene, except in case the guardian is shown to be neglecting his wards, or injuring their property. (4) Sons by first or second wives share equally the property of their father, and a will in contravention thereof will be set aside. The junior should, for form, yield the senior a larger share, but the senior should not accept it. (5) Dower is recognized; but actual taking of possession, or else documentary evidence is required to prove it. The daughter's share in paternal property is determined by her marriage; if her father die subsequently, without male heirs, the property is divided equally between her and the other daughters, subject, possibly, to the law of "hotchpot," *i.e.*, she must bring what she has already into the common fund before she can take her share of the whole. And (*quære*) where there are male heirs existing, unmarried daughters are entitled to dower in proportion of one-half son's share—but this varies in different provinces, although the son is always bound to provide and obtain marriages for his sisters. (6) Entailed estates.—It is criminal to alienate property devised coupled with the condition of maintaining ancestral worship, property in that case being considered entailed; but it does not appear that an innocent purchaser will be disturbed. Where the devisor directs that land be "zealously cultivated," his intention is presumed to be that the proceeds go to common cultivators in the family, who have most need, and not to students. (7) Inheritance—religious trusts. The foundation of a temple gives the right of patronage to founder and his heirs; that right cannot be evaded by subsequent benefactors, although the latter can recall their benefactions if consequent privileges of patronage are denied them. (8) Religious trusts; alienation of trust property. Purchasers of property for valuable consideration, and without notice of any defect in the title, are protected in possession, provided those interested had opportunity to oppose the transfer if they thought fit. But a defective title would not hold good if the rightful owners represented the matter within a reasonable time. Also a bequest to monastery or temple is a bequest to the priests of that institution, specially and to their successors, not to the church in general. (9) Trusts. Property devised with a condition of maintaining ancestral worship cannot be alienated. (10) Religious trusts. As long as the objects of the trust are being carried out, the trust will be maintained against the original grantors. (11) Inheritance—land tenure. In absence of children, property descends to brother of deceased; but although heir, he cannot prevent his brother from alienating the property when alive, unless the condition of maintaining ancestral worship is attached. (12) Purchase for valuable consideration. The title of a purchaser for valuable consideration will not be disturbed save on the clearest evidence, and doubtful documents will be ordered to be destroyed if the court think them insufficient proof of the claim based on them, lest they should lead to future litigation. (13) Testamentary disposition upheld on cause shown. The natural guardian of an orphan child are its relations; but if it is shown that they are unworthy, a testamentary disposition giving the guardianship to a stranger will be upheld; otherwise a trustee so appointed could not resist their assuming guardianship and taking possession of the property. Purchasers for value of alienated property will not be disturbed, although the land has been improperly alienated.]—*Ch. Rev.*, v. 191–5. An exception to inheritance by sons occurred in the case of "ancestral property," where brothers waived their rights in favour of their elder brother, on whose death it reverted to them. These waivings of right being common, it often happened that ancestral property went to the brothers before the sons. The true course of descent, however, was to the sons. Mothers and grandmothers must all be dead before the property which vested in the sons or grandsons was freed from their life-management. The male lineal heirs of a man's son, however remote, excluded that man's daughter, because she was not, or at any time might not be, of the family name. See *Trans. C.B.R.A.S.*, 1853–4, p. 31, and *Williams, Midd. King.*, ii. 2–3. If married, the daughter could never inherit, even in the absence of male heirs. But the men of the family were compelled by custom to support and endow their sisters, aunts or nieces. Even the senior concubine was compelled by moral law to protect and maintain her junior rivals. The statement that an adopted son (*i tzŭ*) had no claim whatever to inherit (see *Ch. Rev.*, v. 406) would seem to be an error; an adopted son inherited, though the proportion of the property which fell to him varied in different parts of the Empire. The step-son (*chi tzŭ*) being the son of a second wife by a former husband, has no claim to inherit his step-father's property. The property of a woman vesting immediately in her husband, in the absence of agreement, the sons of such a man by his former wife would inherit from their father the property thus brought by their step-mother, to the exclusion of their step-brother; but, in such cases, it is generally agreed that the property of such a second wife or concubine shall revert, on her second husband's death, to her own son, or to her own family—that is, to the family of her first husband. It hardly ever happens that a man dies without either *agnati* or *cognati*. In such a case, however, whoever will take his name and keep up the family honours may enter on the property. In spite of the above rules, the father can, if he chooses, dispose of his property as absolutely as of the lives of his children. But this is seldom done. Written wills are rarer than oral injunctions. In the case of the senior concubine managing the estate for the general good, the earnings of this or any other concubine do not swell the general estate, but are inherited by her or their sons. See *Ch. Rev.*, v. 405–7.

"The eldest grandson (born of a wife) of the eldest deceased son (born of a wife) is the heir of his grandfather—that is, he takes the leading part of the family *sacra*. He and his brothers take the share of their father in equal parts (except that the eldest sometimes receives a fraction in excess of the others), which share is the proportionate share of the father (except that the father, as eldest son, would similarly receive a fraction more than his brothers). Even when the father is alive, the grandfather, besides setting apart a little extra for him, frequently also sets apart a little extra for the future eldest grandson, above described [長孫.]"—*Ch. Rev.*, viii. 256–7.

"The property in land or money received by a soldier passes, after his death, to his widow, sons and grandsons, daughters—as long as they remain unmarried, and brothers and nephews if they have no property of their own. If a private soldier dies without children or near relatives, all his possessions beyond 30 *mu* go to the regiment; on the death in similar circumstances of an official, all above 300 *mu* is confiscated by the crown. What remains goes either to distant relatives, or, if there are none, to some regimental comrade, who is obliged in return to perform the necessary sacrifices."—*Arbeiten d. Kais. Russ. Ges.*, p. 31.

"Very little information has been hitherto collected as to the local usages in different parts of the country with regard to the right of succession to property in China; but no doubt these are much influenced by the regulations and injunctions laid down in the penal code. On the death of an individual, those members of his family who are senior to the inheritors possess the right to act as executors of the estate, and upon them devolves the duty of seeing it properly administered and equitably

apportioned among the juniors who claim the succession, or an interest in the property. Any claimant who presumes, without their cognizance and authority, to appropriate any part of the property renders himself liable to a penalty of twenty blows, where the amount appropriated is valued at 10 taels, and of ten blows more for every additional 10 taels of value abstracted. Any injustice or unfairness on the part of the executors subjects them to the same punishment; and upon the death of the father, his whole estate, lands, goods or money is divisible among all the sons in coparcenary, without reference to seniority or birth, the youngest son of a concubine or slave being entitled to as large a share as the first-born son of the wife. Failing direct male issue, the property devolves to the individual dominated as successor to the representation of the family, and if no such exist, it escheats to the Crown, unless there be a daughter, in which case only she is permitted to inherit. Bastards are allowed to inherit, but only to the amount of half the share allotted to a legitimate son: if there be no other son, the natural son is entitled to divide the property with the chosen representative of the family; and if none can be nominated, he falls into possession of the whole."—*Trans. C.B.R.A.S.*, Pt. iv (1854), pp. 30–1.

"A woman left a widow without a son, and not marrying again, may receive her husband's property in trust until the nomination of a proper representative of her husband's name: him she must forthwith proceed to select in consultation with the elders of her husband's kin."—*Ibid.* p. 31, note.

"No family estate may be divided by the children during the lifetime of either parents or grandparents, every individual being considered a minor and a member of their family so long as any of these relatives live, and therefore unable to appropriate the family property or remove from the household to set up an independent establishment. The penalty attached to breach of this law provided the parents or grandparents themselves prosecute is 100 blows."—*Ibid.* p. 31.

"Children may not, however, appropriate any portion of the inheritance nor enrol themselves as independent householders during the period of mourning for their parents or grandparents on pain of receiving 80 blows: always provided as in the other case that some near kinsman or relative within the second degree prosecutes. All quarrels about succession are rigorously prohibited, and if carried to such length as to occasion loss of life they render all members engaged therein liable to be completely excluded, in favour of some other heir to be selected by elders of the kin."—*Ibid.* p. 31.

"There is a saying which (if rightly translated) may yet throw light upon Asiatic ideas of succession, namely, that 'the legitimate blood takes precedence regardless of merit, but of natural sons the best looking or ablest is always preferred, [立適以長不賢立子以貴不以長]."—*Ch. Rev.*, xii. 515.

Filial respect is shown by retrospective promotions—ennobling of ancestors. "We distinguish two kinds of nobility:—one is hereditary, and descends to the eldest son, as in England; the other attaches to the rank of a State office; . . . [the latter] is a sort of life peerage; it is not transmitted to children, but to ancestors."—*Tcheng-ki-tong, Chinese Painted by Themselves*, p. 12.

"In the case of hereditary title or other dignities emanating from officers of 1st and 2nd rank to their sons a totally different principle of succession prevails, apparently to the retention of the honour among lineal descendants only. Failing the eldest son the title has to pass to his first-born son and so on to all his male heirs. Failing them it passes to the second son; and if he be deceased it reverts to the second son of the eldest son and his descendants before it can pass to his own heirs. Should there be no male issue at all by the wife, the title is then heritable by the sons of concubines, and their heirs, in the same order; and failing any male issue at all, the younger brother of the deceased or one specially appointed by the Emperor inherits. Any departure from this rule makes the party liable to 100 blows and three years' banishment."—*Trans. C.B.R.A.S.*, Pt. iv. (1854), p. 29, note.

[For succession to the throne see GENERAL GOVERNMENT.]

Adoption.—"A man may adopt a person as son or daughter or, if he formerly had sons, as grandchild, but not as brother, wife, or concubine. In China nearly all adoptions take place in childless families, and among these the greater part are adoptions of sons. Five per cent. of all families in China possess adopted children."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 182. See also *Tcheng-ki-tong, Chinese Painted by Themselves*, p. 38; and *Simon, China*, p. 45.

"Adoption, like marriage and the acquisition of slaves, rests in China upon purchase, concerning which a contract is made, with the difference that the word 'wife,' 'son,' 'daughter,' or 'slave' is specifically mentioned in it. The most frequent case is the adoption of a nephew by a childless uncle. This nephew is generally a younger son, who then leaves his father's family and his son becomes the grandson of the adopted uncle. If there is only one nephew whose duty it is to continue the line of his father, he has to marry another wife (妻 *ch'i*), whose male issue is considered that of the uncle. The nephew has thus to perform double *sacra* and is called 'one son with two ancestral halls' (一子雙祧 *i tzŭ shuang t'iao*). He mourns the three years' term for his adoptive father and only one year for his parents. If he leaves only one son, the latter has, like his father, to marry two wives; the issue of the one is that of his grandfather, that of the other continues the uncle's family. When two sons are obtained the ancestral hall is completed (成祧 *ch'êng t'iao*). This then constitutes the only case where a Chinese may have two wives (妻 *ch'i*) at the same time."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 182–3.

"Where there is no son or nephew, but only a daughter, a son-in-law may be taken into the family, who leaves his own family without being actually adopted. This is called (招壻 *chao hsü*, inviting a son-in-law."—*Ibid.* p. 183.

"It being prohibited in China for officials to hold office in their native province, adoption becomes the means of avoiding this restriction. The official in question is adopted into a family of another province, acquires a right of domicile (籍 *chi*) in the province of his adopted parents, and may now hold an office in the province originally his native one. In the same way confiscation of property is prevented by adoption, if such confiscation of property is imminent on account of the crimes of near relatives."—*Ibid.* p. 183.

"The general reason for adoption is to continue the stock 接宗子 *chieh tsung tzŭ*. Adoption of agnates is called 承繼 *ch'êng chi* (taking over the succession), 過嗣 *kuo ssŭ* (going over to be heir), or 過祀 *kuo ssŭ* (going over to the *sacra*). There is a distinction between this and the adoption of a stranger:—義子 *i tzŭ* (or 女 *nü*) and 契子 *ch'i tzŭ* (or 女 *nü*) godchildren or *filii lustrici*, or 養子 *yang tzŭ* (rearing a child). As long as the former is possible, few will resort to the latter fiction. The adoption of cognates is called 歸宗 *kuei tsung* (returning to the stock)."—*Ibid.* xxvii. 183.

"The order of choice, in default of a son, was, first a nephew, next a grandson of an uncle or great grandson of a grand uncle, *i.e.*, a pure agnati; then a sister's child or aunt's grandchild, *i.e.*, cognates; then a stranger of the same surname; finally, a perfect stranger."—*Ch. Rev.*, viii. 90.

"As the main idea of Chinese adoption, it may be stated that only children out of families who bear the same family name may be adopted; as otherwise, according to the Chinese, the difference between families would soon cease to exist." "No special requirements are prescribed for the adopter, and the law fixes no age under which one may not adopt, . . . although it is usual for the adopter to be older than the person to be adopted. Foundlings under three years old may be adopted without further ceremony." "An adopter may emancipate the adopted, and adopt him a second time." "The wife, acquiring after the death of her husband his *patria potestas*, has therefore the right of adopting. . . . She has, however, to ask the consent of the nearest male relatives of her late husband, for adoption as well as for *datio in adoptionem*. She has further the right of preventing the legitimate or adopted sons of her husband from giving themselves into arrogation against her wish." "The adoption of one's younger brother or one's uncle, even if the latter is younger than the nephew is not allowed; for the same reason the uncle may not adopt a nephew who is older or of the same age as himself."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 183–4. Adoption, however, should not, as Möllendorff does, be compared with Roman adoption (see *Ch. Rev.*, viii. 88). There is no reason to suppose that under Roman law the adoption of junior agnates was more common than the adoption of strangers. The Chinese adoption of agnates, again, was not a matter of choice but of compulsion; the brother might *demand* a nephew, and when dead a nephew was given him unasked. Further, unlike the Roman, he could not be emancipated or given out again in adoption. There was no distinction in China between a natural-born and an adopted son. The Chinese resembled the Roman adoption in (1) the objects for which an adopted son was taken; (2) inseparable connection between the performance of *sacra* and entry by the heir; (3) its frequency. But as regards the adoption of strangers in China, which was rare, it differed from Roman adoption because (1) in China it gave the adopted son no claim on the inheritance if natural sons were born, or if the agnates of the adoptive father objected, and (2) the adopted son could not in China be resold or given again in adoption, whereas he could under the Roman system.

Special Requirements of Adoption and Arrogation.—"Whoever wants to give himself into arrogation must ask for the consent of the nearest male relatives of his former *pater familias*. If he has elder brothers alive, their consent must be asked. In the lifetime of his father the son may give himself, even without the consent of his father or his relatives, into arrogation, if the father is insane and poor, so that the son by the arrogation acquires the means of supporting him. If the father is away, the son is allowed to be arrogated, but the father may, on his return, claim back his son." [*Quære*, whether the term arrogation should be applied to Chinese adoption, because no person *sub patria potestate* can take so important a step without the consent of the family in council. If an adult stranger gave himself in arrogation to a family with a different surname he would forfeit the right to share the lararium of his natural family. So with an agnate who was *sui juris* (*Ch. Rev.*, viii. 91).] According to its nature the *datio in adoptionem* is, properly speaking, a sale (*venditio*), to which only the consent of the *pater familias* is required; the person to be adopted is not asked except he be a son holding office. In practice, however, it never happens that an adult married son is sold into adoption against his own free will. The wife of the adopted follows her husband, but the children remain in the family of the *pater familias*." "A man having sons of his own may not adopt a stranger as their elder brother, but he may adopt grandchildren, as sons of his legitimate or adopted sons. After his death the latter have the right to dissolve such adoptions." "Brothers may, after the death of their parents, give their elder or younger sisters into adoption, but not without the consent of the latter." "Even after death a *filius posthumus* may be adopted for a man by his relatives or friends, in case he died without any male descendants; preference is given, in such cases, to a nephew of the deceased. By special grace the Emperor may do this for princes of the blood or high dignitaries, but in all cases with the consent of the male relatives of the deceased. By this means the levirate . . . becomes unnecessary."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 185–6. See also *Parker, John Chinaman*, p. 364.

"At the present day, the question whether a son-in-law has been adopted, so as to acquire the rights of a son and successor, turns exactly upon the point whether he has been domiciled with his wife's parents."—*Simcox*, ii. 68.

"When a son, who has married, dies without male issue, and his relict resolves to remain in her widowed state; or if he die after betrothal, and his affianced binds herself to perpetual celibacy; or, further, if he die married, after having established himself in life, and his widow marry again; or if he die a bachelor upon the field of battle:—it becomes in either case obligatory upon the father to select and nominate a lawful heir to represent his name should there be no kinsman of the generation succeeding that to which the son belonged eligible for this purpose, and the father possesses no other son, he is bound to appoint a lawful representative to *himself*; and, when such representative shall have a son, to nominate the child to represent his deceased son. This rule does not extend to persons dying as minors or bachelors, except where a man loses an only son while a minor, and is unable to procure from amongst all his kindred a substitute related to himself in the proper degree: in such case, he may nominate a representative for his son, and if such nominee be an only son, he may, provided all the kinsmen consent and give an official undertaking to that effect, be permitted to act as representative to both branches, and perform all sacrificial and ancestral rites accordingly."—*Trans. C.B.R.A.S.*, Pt. iv. (1854), p. 30.

"If a man adopted into a strange 'surname' is badly wanted by his original family, he may 'go back to the ilk'—always assuming that his adoptive family can spare him."—*Parker, John Chinaman*, p. 364.

"Foundlings, if under three years old, may be brought up in a family, and receive its name; but they cannot succeed to the representation failing direct issue. They cannot be compelled to leave the family of their adoption; nor, if their real parents afterwards claim them, can they be detained in it; but they may not desert their adopting parents to join another family on the plea of seeking their proper home, and with a view to share in that family's property."—*Trans. C.B.R.A.S.*, Pt. iv. (1854) p. 29.

"*Effects of Arrogation and of Adoption.*—The effects are in either case the same. . . . The adopted becomes agnate of all agnates of the arrogator, or of the adopter. Altogether, the adopted son (or daughter) has a better position than the natural one, as he cannot be sold without the consent of his natural parents, unless a second adoption be of real benefit to the child. He has all the rights of a son (or daughter). In the case of inheritance, natural as well as adopted sons take precedence of all daughters. Should the adopter have sons born after the adoption, so that the original cause for the adoption no longer exists, he may cancel the adoption, if the parents are willing to take back the child. The child, however, must be kept if no member of his family lives to whom he can return; only officials may thus be left without family." "The adopted child, being regarded as the real child of his adopted parents, these must give their consent if the child wants to commence a three years' mourning after the death of his natural parents. An official is not allowed to mourn two terms of three years, but only one term for his adopted father, as mourning means, in this case, withdrawal for the time from official life."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 186–7.

"Any child who, in consequence of the failure of direct issue has been adopted and brought up as heir to the representation of his kinsman's name, is compelled to remain under the roof of his adoption on pain of receiving 100 blows; unless his adopting parents shall, subsequently to his nomination, have issue, and his natural parents have no other children; in which event they are at liberty to reclaim him. When a childless man has nominated his lawful representative from among his kinsfolk, he may, should the individual selected not please him, appoint the next in order, on making proper application to the local authorities for permission so to do; and so long as such child is a member of the next junior generation to his own, the other members of his family may not object or complain, on the plea of his not being the next in order of succession. He possesses the same liberty of selection, where any cause of enmity may previously have existed between him and the lawful representative of his name, and any interference or protestation on the part of the relatives subject them to severe punishment."—*Trans. C.B.R.A.S.*, Pt. iv. (1854) pp. 29–30. For adoption generally see *Ch. Rev.*, xiv. 199–205; xviii. 137–46.

Wills.—"A will, in the European sense of the term, . . . is quite unknown in China. Theoretically, all property belongs, not to an individual, but to the family of which he happens to be a member; and, after his death, it goes by law either to his male children in equal shares, or, failing them, to collaterals in a certain definite and well-known order. The head of the family is but a life-renter of the family property, whether inherited or acquired by himself; and though no restraint seems to be put upon the way he may use it during his life, he has no power to alter in any material degree the mode of devolution after his death. The reverence and respect, however, in which parents are held in China gives them a voice in arranging the details of the succession, as *e.g.*, the particular part of a patrimony that shall go to a particular son, the support of unmarried daughters, &c.; and it is not uncommon to have [? leave] *I-chuh* (遺囑)—last instructions on these points. This is all that is meant by a will in China. It may be either verbal or written. It is rarely, if ever secret, and consequently no doubt could be thrown on its genuineness. It thus becomes a matter of small importance whether it is witnessed or not, and it does not appear that there is any fixed rule or custom on the subject. Supposing a will to be made that seriously affected the ordinary rights of the inheritors, it would only be good so far as a feeling of respect for the dead might prompt them to acquiesce—a feeling that would no doubt, in many cases, have great weight; but if it were brought before a native tribunal to be enforced, the question that would be asked, it is surmised, would be, not whether it was sufficiently witnessed, but whether it conformed to law or not. In the latter case, no assistance would be given towards carrying it into execution."—*Ch. Rev.*, iv. 399–400.

[C. T. G., in *Ch. Rev.*, v. 69, corroborates these statements, and says they hold good for all the parts of the Empire he (C. T. G.) has been in, and, he believes, for the *whole*. He only adds that "the feeling of respect for the dead has greater weight in the disposition of personalty than of realty," and that the testator "practically cannot even appoint executors or trustees for his infant heirs." See also iv. 268, 331; xv. 150; viii. 193; v. 191, 248, 404–7; vi. 55.]

"(1) The number of signatures [*i.e.*, of subscribing witnesses] may vary with the character of the person who signs the will. If the signer is a brother of the deceased, or a brother *of his wife*, then the signature of one person is regarded as sufficient when there is only *one person* of this relationship near at hand. If the senior *one* of the brothers sign, then *one* is sufficient. But in a great majority of cases there are more than one. (2) If there are no brothers or brothers-in-law, then of cousins or neighbours there must be *more than one*, and the more *the better*." "If there are no signatures, the absence of which is reasonably accounted for, the oral or written testimony of brothers, cousins or neighbours who were acquainted with the testator to the genuineness of the *handwriting* of the will as being the testator's, may be accepted as proving the will to be genuine."—*Ch. Rev.*, iv. 332. See also *Perak Govt. Gazette*, Oct. 1892.

Guardianship.—"If at the time of the parents' death the children are still very young (under seven years), and no head of the family exists who has *ipso jure* a right to the *patria potestas*, the father's power devolves upon one of the male relatives of the same name (同姓親戚 *t'ung hsing ch'in ch'i*), if no *testamentaria tutela* has been ordered. If no such relation exist, then one among the male relatives of a different surname (外姓親戚 *wai hsing ch'in ch'i*) is chosen. To be without any such relationship is, in China, an impossibility. If, after the father's death, no relation is willing to take the responsibility of the *patria potestas* upon himself, such guardian has to be appointed (託孤 *t'o ku*, to confide an orphan to anyone, 受託孤者 *shou t'o ku chê*, a guardian)." "The guardian has the full *patria potestas*, and, like the father, retains it with the above-mentioned exceptions as long as he lives. The property

of the child, of which the guardian has the full usufruct, continues to be the child's."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 188–9.

[If a son of a widow's first husband returns, with the consent of the second husband, to his father's family (孤子歸宗 *ku tzŭ kuei tsung*, an orphan returning to his ancestors), a guardian has to be appointed.]—*Ibid.* xxvii. 189.

Relation between Parents and Children.—[There was no term corresponding to *patria potestas*, though a Chinese father had powers almost the same as a Roman. He had (1) the same rights over property; in practice, however, he lost these when he had made a division of the family property among his sons during his lifetime; and an arbitrary revocation of a will by a father was viewed with disfavour. (2) He had the same rights over the person—limited, as in Rome, by the code. (3) Unlike the Roman son, the Chinese might contract in his own name, and a creditor might call on a magistrate to keep him in custody until the father or the family paid up; while the creditor was sueable by the son only, not by the father. But either the father or the son might sue or be sued for torts committed on, or by the son; the son's property was always liable for the father's debts. Often the property of all agnates was impounded to pay debts due from a member of the family. This was especially so in case of debts due to the Government. A Chinese grandfather had no power over a grandson's wife, and the father could not send his son to perpetual imprisonment against the will of the daughter-in-law.]—*Ch. Rev.*, viii. 91.

[A Chinese son or daughter cannot be forced to marry at all. Youths and maidens who do not wish to marry join the priesthood. A Chinese son should obtain his father's consent before divorcing his wife; but a grandfather cannot give a grandson or granddaughter in marriage against the wishes of the son or daughter-in-law, or other sons, as the case may be; and *a fortiori* an elder brother is not in *loco parentis* to a younger brother.]—*Ibid.* viii. 83.

"The *patria potestas* over children, whether legitimate or adopted, is unlimited. The father, or after his death the mother, can do with them as he likes; he may not only chastise, but even sell, expose or kill them (see *Gray, China*, i. 233–4). The latter occurs often enough, especially with girls, if the family is too poor to bring them up. Infanticide is not prohibited, but whenever it spreads too far (especially in the province of Fukien), the officials issue proclamations against it. Moreover, it is generally considered blamable, and the voice of the people is raised against persons who carry the abuse of the father's power thus far" (*cf. Piton, L'Infanticide en Chine*). "The power of the father over his son does not cease as long as the father lives, unless the son enters the Government service, when the father, desiring to exercise his rights over him, has first to obtain the consent of the Emperor. Over the daughter the power of the father exists until she comes into the *manus* of a husband. . . . If her marriage is dissolved, she may return into the power of her father; as widow, however, she remains in the family of her former husband."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii, 171–2. For infanticide generally, see *infra*.

[Though there is legally no limit to the age at which a man can kill his son (unless the latter is in the Government service), public opinion would be very strongly against his doing so if the son were grown up. "Still more so if he wished to sell him; in practice, it would be an impossibility."]—*Ch. Rev.*, v. 405.

"Husbands have a certain power of life and death over their wives, and fathers over their children. The children, however, seem to behave very well, and it is rare to see them punished. I once saw a very old man give his great lout of a son, a full-grown man, a good sound thrashing. The fellow offered no resistance, nor did he attempt to run away, but stood quietly, blubbering like a child, while his father laid on the stick."—*Scarth, Twelve Years*, p. 149. See also *Williams, Midd. King.*, i. 797.

"The more children, especially male children, a Chinese has, the more he is reverenced, a large family of sons being regarded as a mark of the divine favour. . . . The desire is one which has its root in religious belief. It is a natural outcome of the doctrine that the spirits of the departed are rendered happy by homage received at the hands of their male posterity."—*Gray, China*, i. 183.

"The failure of male posterity to continue the succession of the family, and worship at the tombs of parents, is considered by all classes as one of the most afflictive misfortunes of life."—*Williams, Midd. King.*, i. 277.

"*Patria potestas* may be acquired (*a*) through marriage, (*b*) through procreation, (*c*) through adoption, or (*d*) through purchase, the last method differing in nowise from (*a*) and (*c*). If the person who acquires *patria potestas* is one of these four ways, stand himself under *patria potestas*, then he acquires it for his *pater familias*." "(*a*) *By Marriage.*—The wife belongs after marriage to the family of her husband, and stands in his *manus* or in the *patria potestas* of that person under whose *patria potestas* the husband stands. (*b*) *By Procreation.*—Children come under the *patria potestas* of their father, whether born by a wife or by a concubine. (*c*) *By Adoption.*—[See *supra.*]—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 181–2.

"As long as the parents are alive, it is the duty of the children to show them reverence and obedience (孝順 *hsiao-shun*) and, if necessary, to nurse and support them. The son shall, if father, mother, or grandparents are over eighty years old, or feeble and ill, remain at home, unless another son over sixteen years old lives with them. Officials especially are bound by this command, but should anyone use this as a pretence in order to quit his post, he is severely punished." "As long as parents, grandparents, or husband are in prison on account of a capital crime, the children, grandchildren, and wife are not allowed to participate in festivities and amusements of any kind. Disobedience towards parents or neglect to supply proper support is, on the motion of the parents concerned, severely punished by the officials." "Descendants are not allowed to enter an action against ascendants; they are not obliged to denounce crimes committed by them or to appear as witnesses against them, except in cases of high treason, rebellion, &c. This exemption extends to all members of the same household, even to servants and slaves."—*Ibid.* xxvii. 173–4.

"There are many instances of devoted sons saving from their earnings for a long time, in order to purchase a coffin or coffin-boards of excellent quality for their father or mother."—*De Groot, Rel. Syst.*, i. i. 325.

"It is a lasting stigma to a son to neglect the comfort and support of his widowed mother."—*Williams, Midd. King.*, i. 794. See also *Lay, Chinese As They Are*, pp. 62–70.

"The Emperor himself performs the ceremonies of the *Kotow* before his own mother, who receives them seated on a throne."—*Davis, Chinese*, i. 278.

"In intercourse with their relatives, children are taught to attend to the minutest points of good breeding; and are instructed in everything relating to their personal appearance, making their toilet, saluting their parents, eating, visiting, and other acts of life. Many of these directions are trivial even to puerility, but they are none too minute in the ideas of the Chinese, and still form the basis of good manners, as much as they did a score of centuries ago."—*Williams, Midd. King.*, i. 523.

"Children, according to Chinese ideas, ought to censure their parents' shortcomings, but not in too severe language."—*Giles, Dic.*, No. 786.

"The Chinese do not treat children well. Japan has been justly described as the paradise of children. China is the reverse. Fathers and mothers, especially rich ones, of course pet and fondle pretty children of both sexes, and they like to see them well dressed. Also fathers of old or official families are careful to have their sons well trained, according to native ideas of propriety. But the masses of fathers ignore their daughters altogether, or regard them as *impedimenta* of the female department, to be kept safely out of the way. . . . Sons are viewed chiefly as links connecting the person with one's ancestors and futurity. . . . No such sight exists in China as a father sitting down to dinner to eat, smoke, and chat with his sons, and even to exchange 'views.' The only approach to such easy familiarity is when a busy shopman and his sons, usually with other relatives or *employes*, sit round one table for convenience or economy's sake, and snatch a hasty meal by shovelling rice down together from one big dish; but even then the sons must mind their *p*'s and *q*'s: to sit down before a father is 'seated unco' right,' or, as each in turn picks a bit with his chopsticks from the meat or condiment plate, to 'bag' the best piece of meat out of the tureen in a playful way, would be an outrage on the paternal dignity. *A fortiori* a wife, still less a daughter, can never join the festive board on even terms, as with us. . . . Mothers are essentially 'spankers'; even if kind at times, their tempers are so ill-balanced that they are apt to scold and slap on the slightest provocation. The cries of the child only feed their spite, and urge them on to downright cruelty. . . . Fathers do not beat much; their castigations are reserved for their wives. When a boy gets beyond the 'spanking' age, his mother has to treat him as a superior being, and the father would not tolerate any further beatings of the son except under his own authority. Girls are steadily beaten and bullied by their mothers from weaning time until they are women, when they become a prey to something worse—mothers-in-law. It is by no means rare, however, for a father or mother, or both, to show excessive affection for one or all of their children. There are kind good hearts in China, as elsewhere. . . . The very words used in politeness for 'your father' and 'your mother' show us what the Chinese think:—'Your noble severe' and 'your noble tender one.' In China children certainly romp about with great freedom; but so do the pigs; they are none the less capriciously treated and cuffed about: they fear rather than respect or love their parents."—*Parker, China*, pp. 274–6. See also *Parker, Ch. Cust.*, pp. 20–2; *Simon, China*, pp. 249–50; and *Headland, Ch. Boy and Girl*, pp. 35–6.

"The Chinese regard the infliction of punishment on children, when it is called for, as an important duty on the part of parents." "Among the lower orders, chastisement is sometimes inflicted upon adults" (see illustrations pp. 235–8). The offence of a son striking his parent is punishable with decapitation and is occasionally visited with a punishment of almost incredible severity.—*Gray, China*, i. 235–8. See also *Doolittle, Social Life*, i. 138–40.

"Parricide is regarded as one of the most heinous offences of which a man can be found guilty, and is punished by a lingering death. Indeed . . . there is a law which expressly declares that not only shall the offender be subjected to a lingering death, but that the schoolmaster who instructed him in his youth shall be decapitated; and that the bones of his grandfathers shall be exhumed and scattered to the winds. It is also customary to close the ancestral hall of the clan to which the parricide belongs, that the spirits of his ancestors may be deprived of the homage of their posterity. The crime . . . however, . . . is of very rare occurrence in China."—*Gray, China*, i. 238–9.

[Giles (*Chinese Sketches*, p. 157 *seq.*) says that the prevailing belief in Europe, viz., that the Chinese regret the birth of a daughter, is a mistake. There is a certain excess in values of male children over female, because the former are needed to preserve the family from extinction; but "a very fair share both of care and affection is lavished upon the daughters, either of rich or poor. They are not usually taught to read, as boys are, because they cannot enter any conditions of public life; and education for mere education's sake would be considered as waste of time and money by all except very wealthy parents." Besides, money has to be spent on a daughter's trousseau and dowry; and, moreover, she is completely lost to her own family when she marries.] For ceremonial customs on and after birth, see HABITS AND CUSTOMS.

[For a full description of the harsh treatment of daughters-in-law, their position and rights, see *Ch. Rev.*, v. 207–14.]

"*Termination of Patria Potestas.*—With the death of the father his power passes to the mother, and after her death to the eldest son, who then has also power over his younger brothers and elder and younger sisters." "The father's power does not cease throughout his lifetime, except with his own free will or where the son holds office. Unless with the special permission of the Emperor, the father cannot in this latter case exercise power over his son. . . . The son becomes *quasi sui juris* if the father is insane and at the same time poor." "Excepting where the father gives himself into arrogation, so that his children come under the power of his arrogator, the father's power may cease with his will:—(1) By sale into adoption, by which the son acquires agnate rights in the family of his adopted father. (2) By sale of a daughter into marriage, she becoming an agnate in her husband's family and entering his *manus*. (3) By permission to the children to enter a religious order. They then lose their family name and leave the family connection altogether (出家 *ch'u chia*). (4) By exposing the children in tender age. The finder may lawfully adopt them if under three years of age. If older, they are not allowed to be exposed, and only the ways mentioned under No. 1 and No. 3 are left to the father to rid himself of his child." "In contradiction to the Roman law the father may relinquish his power even against the wish of his children." "An emancipation in the Roman sense, by which the emancipated person becomes *sui juris*, does not exist in China. After the death of the father the daughter becomes *sui juris*, if a widow and having sons, the son only in case he has a family."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 187–8. See also *De Groot, Rel. Syst.*, ii. i. 616.

"When parents die, the eldest son stands *in loco parentis* to his younger brothers, and much respect is paid to him by them. He rebukes them when they are wayward, and encourages them in well-doing. In a case in which a younger brother had struck his elder brother's wife, it was decided [by the village elders] that the elder brother should be permitted to flog the younger. This was done before them, and to make the punishment more degrading, the instrument used was a broomstick. The Chinese say that a person who has been flogged with a broomstick will be for ever unlucky."—*Gray, China*, i. 239.

"After the death of the parents the descendants take their place and see that their memory is kept unsullied. [The son is responsible for the father's debts to the amount of his inheritance.] It is their chief duty to strictly keep the term fixed for mourning and to rigorously perform the sacrificial ceremonies at the ancestral shrines and at the graves (see *Lun yü*, II. 5). The coffin has to be buried, if at all feasible, in the native soil, and only then are the funeral ceremonies completed (成殮 *ch'êng lien*).—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 174–5, and note No. 118.

Infanticide.—"The prevalence of infanticide, and the indifference with which the crime is regarded may seem to militate against this view of Chinese social character, and throw discredit on the degree of respect and reverence paid to parents; for how, some will ask, can a man thus worship and venerate parents who once imbrued their hands in his sister's blood? . . . It is exceedingly difficult, however, to ascertain the extent of infanticide in China, and all the reasons which prompt to the horrid act. Investigations have been made about Canton, and evidence obtained to show that it is comparatively rare, and strongly discountenanced by public opinion; though, by no means unknown, nor punished by law when done. Similar investigations at Amoy have disclosed a fearful extent of murders of this nature; yet, while the latter are believed, the assertions of the former are regarded as evasions of the truth from the fear of being reproached for it, or a sense of shame. The whole nation has been branded as systematic murderers of their children, from the practice of the inhabitants of a portion of two provinces, who are generally regarded by their countrymen as among the most violent and poorest fraction of the whole. Sir John Barrow heard that the carts went about the streets of Peking daily to pick up dead and dying infants thrown out by their unnatural parents; but he does not mention ever having seen a single corpse in all his walks or rides about the capital. It has now been ascertained that this cart contains so many dead bodies of both sexes, that the inference by Dr. Dudgeon that not one in a hundred was killed seems to be sustained. The bodies of children are not as often seen in the lanes and creeks of Canton as those of adults, and the former are as likely to have died natural deaths as the latter."—*Williams, Midd. King.*, ii. 239–40.

"While one of the worst features of the crime is the little degree of detestation everywhere expressed at it, yet the actual proportion is an important inquiry, and this, taking the whole nation, has been much exaggerated, chiefly from applying such facts and estimates as the preceding to the whole country. . . . Until investigations have been made elsewhere, it is not fair to charge all the Chinese with the atrocities of a small portion, nor to disbelieve the affirmations of the inhabitants of Canton, Ningpo, Shanghai, and elsewhere, that they do not usually put their daughters to death, until we have overwhelming testimony that they deny and conceal what they are ashamed to confess."—*Ibid.* ii. 242.

[Barrow (*Travels*, pp. 167–76) says that there is no law to prevent infanticide, though it is erroneous to assert, as was done by some of the missionaries, that there was a law permitting it. "It is, however, tacitly considered as a part of the duty of the police of Peking to employ certain persons to go their rounds at an early hour in the morning, with carts, in order to pick up such bodies of infants as may have been thrown into the streets in the course of the night. No inquiries are made, but the bodies are carried to a common pit without the city walls, into which the living as well as the dead are said to be thrown promiscuously" (p. 168) [but *cf. supra.*]. The Roman Catholic missionaries attended at this pit to rescue, or at least baptize those who were still living—the Mohammedans also were said to do the former. The number of children thus got rid of was very variously stated: some said 10,000 for the whole Empire, others 30,000. Comparing the statements of different missionaries, Barrow gets an average of 24 daily, or about 9,000 a year for Peking—which is supposed to be equal to the number for all the rest of the Empire taken together. He admits that these figures may have to be reduced by half, owing to the practice of throwing out bodies of still-born infants, or those who die under a month old, to be taken away by the police carts. At Canton, the boat-people are said to throw infants into the river, sometimes with a gourd tied to their necks to keep them afloat till picked up. The practice is due to poverty, and is common "even in the remotest corners of the provinces." For foundling hospitals, see ACCESSORY INSTITUTIONS.

[Lay (*Chinese As They Are*, pp. 46–8) says he heard very little of the practice when in China, and saw few evidences of it: its existence is proved by the magistrates' edicts condemning it. "Some of my friends have, on one or two occasions, seen an infant lying in the canals about the city of Canton, but such sights are rare."]

"I have the conviction that infanticide exists. Natives have explained to me that, often in poor families who have not the means of supporting children, the new-born infant is taken away and left to perish, while the mother is assured that it has died from disease." "A few years ago, the Viceroy of Canton published a decree branding with infamy those guilty of infanticide. The Catholic missionaries receive many of the victims of poverty. When I was in that part of the country, the Spanish missionaries of Fuh-kien province were bringing up, by means of nurses paid by them, several hundreds, and if they did not save more, it was for want of funds. This originated the *Œuvre de la Sainte Enfance.*" "Europeans have found, near some of the large towns, dry wells full of children's bodies; but it is not proved that they were thrown there while alive."—*De Mas, La Chine et les Puissances Chrétiennes*, i. 37.

"Infanticide of female children exists in several provinces, but to a much less extent than is generally supposed; and

poverty, expense of bringing up, and the final departure from the family seem to have loosened the maternal ties, and driven many of the poorest classes to sacrifice certain of their female children where this sex may happen to predominate."—*Dudgeon, Diet*, &c., p. 283.

[Though the code affords no direct justification for punishing disobedient sons with death, or for infanticide, it is an uncontrovertible fact that, in cases which constantly occur, both crimes are practically ignored by the authorities. "Countless acts of infanticide go unpunished every year. . . . In the *Peking Gazette* [for 1882] a wretched case is reported, in which a husband drowned an infant born to his wife, of which he had reason to believe he was not the father. On another and subsequent issue the case came before the mandarins, but the infanticide was not so much as mentioned in the finding." Daughters are not valued as sons are, and, "in many parts of the country, their lives, when infants, are sacrificed to the wants and needs of the household"—though the extent of the practice has probably been exaggerated, and it is only prevalent in very poor districts. "In such neighbourhoods, however, it is looked upon as an ordinary occurrence, and notices may occasionally be seen at the sides of pools to the effect that 'girls may not be drowned here.'" It is not looked upon as a crime, is most frequent in Fuhkien (where, in some districts, as many as a quarter of the girl-children born are destroyed), and "cannot be said to exist at all at Peking." Proclamations are occasionally issued denouncing the practice, but they have no practical effect, and "it is difficult to pronounce accurately on its extent," as it often goes on without being discovered. Poverty is probably in most cases the only motive for this crime in places where it prevails.]—*Douglas, Soc. in Ch.*, pp. 79–80, 351–6.

"The author of more than one well-known book on Chinese subjects has committed himself to the opinion that the evil of infanticide is non-existent in China. His acquaintance with the works of other writers might have taught him that the only general statement with regard to things Chinese which one can make without fear of contradiction is that every general statement is more or less misleading. Whatever may be the state of things in that part of the Yang-tze valley with which he is acquainted, there is no room for doubt that, in other parts of China, infants are still done to death in a cruel fashion." "In Chêkiang and Fukien towers can be seen on or near the city walls into which babies are thrown. In some parts of Kuangtung a 'baby basket' is hung in a sheltered position, and in or around it babies, living or dead, may often be seen. These baskets are visited by messengers from the Buddhist nunneries, and among the nuns are not a few whose lives have been preserved in this way. Foundling hospitals, opened by natives or foreigners, are supplied with inmates from the same source, or taken from the breast of that *arida nutrix*, a Chinese roadside. As a matter of course, the majority of the unfortunates are girls; but on occasion a boy may be found. In the latter case, the reason is not far to seek. If a child is afflicted with fits, and the parents fail to cure it, they believe that the 'monkey spirit' has possessed the child, and put it away, lest the evil should return upon themselves. It needs a strong reason like this to induce parents to part from the hopes bound up in a boy." "But exposure is the lesser evil, as it gives the child a chance of life. Infanticide, pre- and post- natal, is still far from uncommon. A countrywoman, applying last week for the post of amah, offered it as a recommendation that she had borne twelve children, seven of them daughters. Of these seven, she admitted that only two were allowed to live. A group of Kuangtung women, selected at random, was interrogated on this point. They raised fingers one, four, three, two in answer. One of them had to requisition the fingers of both hands to express the number of daughters whose lives she had taken." "Among the causes of infanticide, poverty is chief. The 'feed' of a daughter, and the cost of her clothes, are large items in a poor man's expenditure. And then, in China, our proverb is reversed, being made to say, 'a daughter is a daughter till she's made a wife: your son's a son all the days of his life!' While she is with the family, she is too young to do much for her keep. Thus, however much you spend in feeding her (餵)—the word used for feeding a cow—she is, and always will be, a 'runaway bogie' (走鬼子). Your money goes into the pocket of her future husband, and in nothing advantages you. 'But what about the price (價 price of goods) you will get for her?' 'Oh, that will barely cover the cost of her outfit.' The result of such a calculation is generally the exposure, or death, of the unconscious little intruder." "Among minor causes are the delay in raising a family caused by the rearing of a female infant and the dislike for large families. A case is on record of a mother who killed her infant girls wishing to spare them the manifold unhappinesses that had fallen to her own lot through marriage." "In the majority of cases it is the mother-in-law who destroys the little life. Angered beyond endurance at the undutiful conduct of the woman who brings to her son a daughter instead of the longed-and-prayed-for boy, it does not cost the fierce old lady a qualm to put her grand-daughter out of the way. Less frequently it is the mother herself who is responsible. She is not so ready to compass the death of even a girl when the little thing is laid before her. And yet doctors tell of the cries of rage with which some women will greet the announcement of the birth to them of a daughter. Few, however, go the length of one who revenged herself on the third unhappy little intruder by hacking off its limbs. Least of all is the father likely to be the agent; yet we know a man who himself killed five girls under his wife's eyes and despite her protests. In many places are to be found women who will take over the child, and guarantee that it will not trouble you again." "The methods of getting rid of these undesirables are various. Most merciful is the sale or gift of the baby to anyone who will undertake to rear it, or the handing of it to a nunnery or orphanage. Placing it in a receptacle provided for the purpose, such as the 'baby basket,' comes next. Exposure by the wayside indicates the minimum of mercifulness. Beyond that lies murder, pure and simple, in a descending scale of cruelty. Asked how she put an end to her babies, one woman covered her mouth and nostrils with her hand. Any receptacle with fluid matter in it offers itself as a means of getting rid of the difficulty. A knife, hoe, or club can be had anywhere, and is used on occasion. The little spark is so easily extinguished, and the appeal of helplessness falls on such stony hearts! To persons living by the seaside it is a simple matter to throw the baby into the water, or lay it within reach of the incoming tide. For prenatal murder, the simples of the spae-wife are always to be had. These not infrequently bring two lives to an end, instead of only the one aimed at." "If these tragic details, drawn entirely from native sources, need proof, it is not far to seek. There lives in a sea-board village not far from where we write a young woman, whose maiden name was 'Come from the Sea' (海來). When she was born, the mother called in the father to kill her. He was at first unwilling, but eventually took the baby down to the shore and laid her below high-water mark. That day the tide did not come in as far as usual, and the baby lay and cried. Angered by the sound of the little voice, the mother sent out an older child with a handful of soot, which he was to put into his sister's mouth. The wind was strong, and the boy frightened, so the soot was blown away, and still the baby cried. Then, at last, the father's love overcame his dislike to a 'scene,' and, carrying the little one back to the mother, he compelled her to rear it. That baby is now the mother of a family, but her experience fails to procure mercy for her own daughters." "One often sees a placard posted on the walls of rest-houses urging people to abstain from two evils—the slaughter of cows and the killing of infant girls. These are no doubt set out in the order of importance." "There is in circulation a pamphlet entitled 'Save the children.' Printed first in the fifth year of the present reign, it has been produced many times, and circulated as an act of merit. It opens with 32 pages of illustrations, alternating with exhortation and warning. Of the 15 pictures given, six describe the punishments here and hereafter which will follow infanticide; three indicate the fate of those who exhort to, or help in, the deed; one deals with pre-natal murder; and one describes the fate of a man who ridiculed attempts made to stay the evil. On the other side four pictures illustrate the rewards enjoyed by those who save babies from destruction." "The second part of the book is a copy of a proclamation issued by the Viceroy and the Governor-General of Canton, forbidding infanticide, and encouraging the opening of foundling hospitals. Within the proclamation is embodied the substance of five enactments dealing with infanticide, which were added to the Statute Book in the 27th year of Ch'ien Lung:—(1) Infanticide is equivalent to the deliberate murder of children. The punishment to parents will be 60 blows, and banishment for a year. (2) Slave girls destroying infants will be treated as if they had deliberately murdered the head of the house. They incur the death penalty. (3) A grandmother killing her infant grandchild will be treated as a murderess, and strangled. (4) Neighbours who do not interfere to prevent the crime, or, learning of it, fail to inform the authorities, will be punished in the same fashion as if the victim were an adult. (5) The Tipao who deliberately conceals the crime will be punished." "In these enactments two things are worthy of note. The comparative leniency of the first enactment admits a right on the part of the parent to dispose of the lives of his children, which is at the root of the evil. The existence of these laws in the statute book indicates that the evil of infanticide was, at the time of their promulgation, both serious and widespread." "The third division of the book is made up of an essay and poems exhorting the people to discontinue the practice. Appeals to the laws of heaven and earth, to reason, and to humanity are numerous, and a Buddhistic colouring is given to several of the poems by reference to the punishment of Hades, and also by the warning that indulgence in the practice may consign the offender to the doom of being born a woman in the next re-birth." "The book closes with directions to those who would open foundling homes, or set on foot a fund for the nourishment of children abandoned by their parents. Along with the directions go some very practical warnings against the indiscriminate distribution of money, lest people who would in the ordinary course bring up their children, might be induced to abandon, or threaten to abandon them for the sake of the nursing-money they hoped to gain." "While the practice is far from being extinct in the eastern part of the Canton province, it is far less common than it once was. Several factors contribute to bring about this result." "Private and official influence have been directed against it for a long time—so long, that among the proverbs of the people is embodied one which says: 'Fierce as are the tiger and the wolf, they do not injure their own young.' The issue of this interference, in laws on the one hand and benevolent institutions on the other, has helped to educate sentiment against the evil." "A much speedier and more direct result has followed the introduction of Christian teaching into China. It may safely be assumed that infanticide is unknown in the families of those who have connected themselves with the Christian Church—Roman Catholic or Protestant—throughout the Empire. And, in addition, the practice and teaching of the converts has produced a body of opinion outside the bounds of the churches which is independent of, but supplementary to, that mentioned above." "A third factor is the advance in the price of girls during recent years. Whereas, formerly, a baby girl could be purchased for two hundred cash and a piece of cloth, an infant daughter-in-law is now worth a dollar, sometimes more. A marriageable girl some years ago brought less than thirty dollars; but now, in many places, she will bring at least one hundred. The cause of this advance may be the increasing prosperity of these southern provinces; it is due, in part at least, to the scarcity of the female element, due to the slaughter of former years. The result, however, is that the chances of life for a girl born now have advanced enormously." "The improvement is no doubt lasting. Influences are abroad which seal all the good attained, and make it permanent. But as long as the Chinese regard infants as not possessed of souls, and therefore no more valuable in their infancy than the beasts that perish, just so long will the practice of infanticide call for efforts directed towards its suppression." "While these notes refer to the eastern part of the Canton province in particular, and more generally to the provinces bordering on and south of the Yangtze, it would be interesting to know how far they hold good of other parts of China."—*N.-C. Herald*, Aug. 21st, 1903.

"Infanticide . . . is due in some degree to the inability of parents to pay the expenses requisite on the marriage of their daughters. But its extent has been greatly exaggerated. 'The whole nation,' says Williams, 'has been branded as systematic murderers of their children from the practice of the inhabitants of a portion of two provinces, who are regarded as among the most violent and the poorest in the whole eighteen.' There is eminent medical and other authority for saying that the proportion of infanticides is not greater in China than in England or America. Chinese are quite as fond of their children as other people; and though boys are more desired than girls yet both are equally cherished. It is a popular proverb, 'Even the tiger does not devour his own young.' Bodies of children are frequently found floating in rivers or lying in roads; but the fact is explained by the popular belief that formal burial is not necessary for the very young. Public opinion is rapidly putting an end to it, even in Amoy, where remonstrances against it from the literary class have been posted in public places for a long period. Government edicts and exhortations have not been wanting, however incompetent, to abolish a practice more dependent on social conditions than on laws or desires."—*Johnson, Or. Rel.-Ch.*, p. 32.

"The reasons assigned for committing the unnatural deed are various. Poverty is the leading cause; the alternative being, as the parents think, a life of infamy or slavery, since if they cannot rear their offspring themselves they must sell them. The fact of the great numbers of men who emigrate to the Archipelago from the coast districts has no doubt also had its effect in inducing parents to destroy daughters for whom they had little expectation of finding husbands if they did rear them. Many who are able to support their daughters prefer to destroy them rather than incur the expenses of their marriage, but the investigation showed that the crime was rather less among the educated than the ignorant, and that they had done something to dissuade their poor neighbours from putting their girls to death."—*Williams, Midd. King.*, ii. 241.

[Poverty also accounts for the prevalence of infanticide and consequent scarcity of women among the Hakkas.]—*Woman's Work in China*, ii. 64.

[Tcheng-ki-tong (*Chinese Painted by Themselves*, pp. 124–6) denies the prevalence of infanticide in China. "In the first place the laws punish infanticide the same as murder of near relatives; and in addition to this, the State subsidizes public foundling establishments. There are, besides, benevolent institutions, founded by private persons, in which abandoned children find asylum. Not only have these establishments a special object defined in the regulations, but these same regulations award recompense to midwives who bring in a foundling or denounce a case of infanticide. The text of our laws is extremely severe, and when such a crime has been committed, not only the perpetrators are punished, but even the head of the family of the neighbours, the former as responsible, the latter as accomplices. . . . It is rare to hear of infanticide in towns, where the means of existence are more abundant than in the country." But even there, the custom of bringing up girls in the family, as future wives for their sons, acts as a check. Tcheng-ki-tong says it is done in every family. Infanticide is also avoided by selling girls as slaves to rich families.]

[Maron (*Vierteljahrsschrift*, etc., 1863) suggests that infanticide is not a result of over-population and insufficient means of subsistence, but intended to keep the balance between the sexes even, and prevent polygamy, the latter having a tendency to weaken the race.]

"The crime of smothering female infants . . . is so prevalent, because entirely unchecked, in China."—*Medhurst, China*, p. 138.

"Female infanticide, we have reason to believe, is very common. It is thought by some of the best Chinese scholars to be greatly increased, if not altogether produced by their philosophical notions [viz., the doctrine of the Yin and the Yang]. Excess or defect in either power deranges the system of nature and introduces disorder in the affairs of mankind." "This [viz., 4,000, the number given by Barrow for Peking] is a small proportion compared with other places. In some provinces not one in three is suffered to live; and in others, as the writer has been informed by the Chinese from those places, the difference between the male and the female population is as 1 to 10. We believe the last statement only applies to the poorest parts of the empire. The most prevalent mode . . . is by suffocation; which is done by means of a piece of paper, dipped in vinegar, laid over the face of the child, so as to prevent it from breathing either by means of its mouth or nostrils.' (*Indo-Chinese Gleaner*, iii. 193). Infanticide is almost exclusively limited to the female sex."—*Abeel, Journal*, pp. 108–10.

[Dr. Ernest Martin, in *Notes and Queries on China and Japan*, iii. 156–65, 172–3, says that Sir John Barrow exaggerated the prevalence of infanticide, but that in our days, while comparatively rare (though not entirely absent) at Peking, it is very common in some of the southern provinces. He quotes from the Penal Code, section 319 ("a parent who punishes a child so as to cause its death is punished with 100 blows—if death is immediate, 60 blows and a year's exile") to show that Barrow was wrong in saying that infanticide is "tolerated by custom, and encouraged by Government," but says that, judging from the general tenor of the code (and not merely Staunton's edition, but the *Ta Ch'ing Lü Li* as recently revised) the penalty for infanticide is excessively lenient, when one considers the frequency with which the death penalty occurs. The edict of Kien Lung [see *infra*], referred to by W.F.M., does not seem to have produced much effect, in any case it was transitory, as in December, 1868, the Viceroy of Kwangtung was obliged to issue a proclamation calling attention to this decree, in consequence of the numbers of infanticides committed in his province. The writer doubts whether Peking was as free from the crime as stated—which certainly was frequently observed there by the Jesuits in the 18th century. His main conclusions of importance are—that it is most frequently the result of destitution (perhaps aided by a belief in the transmigration of souls,—in virtue of which a better fate may be expected for the child)—and that public feeling is not very strongly against it.]

[Simon (*China*, pp. 22–28) says that during 10 years in China he has never personally known of a case of infanticide. . . . It is also contradicted by material facts, viz., the increase in population (360,000,000 in 1812—537,000,000 in 1885), also the relative absence of such poverty as drives people to desperation (even the number of beggars in Peking is far below the 400,000 assisted poor of Paris, not reckoning professional beggars in the latter place) and of illegitimate births owing to early marriage, &c.; and even when children have to be abandoned in case of famine, there are orphanages to receive them . . . where, moreover, they are better and more intelligently cared for than in the Catholic orphanages. The abandonment is often only temporary, no obstacle being placed in the way of parents taking their children back when they can afford to keep them. . . . Dead children are often exposed in order that their burial may be undertaken by the orphanages, and this has given rise to many of the stories about infanticide.]

[Medhurst (*For. in Far Cathay*, pp. 89–91) says that it is not thought necessary to give formal burial to children under a certain age, and the sight of corpses or coffins thrown out into the fields has probably given rise to many stories of infanticide. However "there are towns and districts where infanticide is practised, in some to an infamous extent, in others to a less degree; there are others, again, where it is not known at all as a habit. . . . If there is any distinction to be made, it is in favour of the northern and midland as against the southern and coast provinces." The numbers of children, and the value

set on them by the Chinese is a sufficient disproof of the stories current. "Boys are very naturally more highly prized than girls, but I have never observed the one more lovingly cherished than the other, where there are a number of both in one family."]

[Matignon (*Superstition, &c.*, pp. 227–31) says that in Tsung-ming *male* children are killed, if deformed or weakly, but this is exceptional. He agrees with other writers that it is commoner in the south than the north. Some years ago, at Ping-Yang, 40 per cent. of the girls were destroyed; this practice has ceased since the steamers came there, enabling parents to send them to Shanghai for sale. The crime ascribed by the Chinese to foreigners—of murdering children in order to use parts of their bodies in medicine, is stated to be of not infrequent occurrence among the Chinese, and is mentioned as a capital crime in the statutes. If the mother is very ill at the time of her confinement, and does not soon recover, the infant—especially if a girl—is sometimes held responsible and killed. A sick child is frequently left out of doors to die or recover, under the idea that it may be a changeling—if it survives its genuineness is established, and it is taken back (*Halcombe, The Real Chinaman*). Sometimes, after several girls are born in succession, each one being drowned in its turn, and the next child is still a girl, the parents burn it alive or cut it to pieces, as a warning to the soul not to re-incarnate itself again in the undesired form. In spite of express legal prohibitions, abortion is common and openly advertised.]

"The Governor of Kiang Si confirms our statement that female infanticide is commonest in Kiang Si [視他省爲甚]."—*Ch. Rev.*, xiii. 228.

[J.D. (*ibid.* p. 109) says it is practically unknown in Peking, forbidden by law and severely punished if discovered—for Fuhkien he refers to Abeel in *Chinese Repository* [Oct., 1843, pp. 540–8: average proportion destroyed 39 per cent.], and "the true state of the case at Canton will be found in the *Middle Kingdom*. For Peking he quotes a letter received by him from Dr. Lockhart, as follows:— . . . Whatever may be the state of the case in Fuhkien and Hupeh (and even there I think there is some exaggeration on the subject), I feel confident it does not prevail in Shanghai or Peking. I for many years investigated it at Shanghai and saw no evidence of its prevalence as a custom among the people; that it is done occasionally is highly probable, as it is done in England, but the practice does not prevail. In Peking I saw no evidence of it. I rode through and through the city at early morning over and over again for nearly three years, but I saw nothing that proved the fact of infanticide in the streets or narrow lanes and by-places of the place. The baby-towers (so-called) are in all cities—and those in Peking are merely for the bodies of infants who have died naturally; all who die are not buried, but some are wrapped in a mat and put into these towers. They have nothing to do with infanticide, nor are they any proof of it at all."] See also *Peking Hospital Report* for 1863 and 1865, and *Pumpelly, Across America and Asia*, p. 261.

"In Fuhkien province, especially in the departments of Tsiuen-chau and Changchau, infanticide prevails to a greater extent than in any other part of the Empire yet examined. Mr. Abeel extended his enquiries to forty different towns and villages lying in the first, and found that the percentage was between seventy and eighty down to ten, giving an average of about forty per cent. of all girls born in those places as being murdered. In Changchau, out of seventeen towns, the proportion lies between one-fourth and three-tenths in some places, occasionally rising to one-third, and in others sinking to one-fifth, making an average of one-fourth put to death. In other departments of the province the practice is confessed, but the proportion thought by intelligent natives to be less, since there is less poverty and fewer people than formerly. The examination was conducted in as fair a manner as possible, and persons of all classes were questioned as to the number of children they had killed themselves, or knew had been killed by their relatives or neighbours. One of eight brothers told him that only three girls were left among all their children, sixteen having been killed."—*Williams, Midd. King.*, ii. 240.

"Female infanticide prevails here [in the department of Hinghwa, situated on the coast between Tsiuenhwa and Fuhchau] to a greater degree than elsewhere."—*Ibid.* i. 136.

Infanticide is "exceedingly common in the neighbourhood of Amoy, and all the parts of the prefectures of Chang Chew and Chinchew which I have visited. It is quite usual to find parents admit without the slightest pressure or the slightest shame that they have killed several of their female children. I have not fallen on any plan of finding the *proportion* of female children who are thus killed, but one fact will be sufficient proof of its terrible prevalence. In our open-air preaching in the streets and villages . . . when explaining the 6th [commandment], I state that it forbids (among other things) the murder of female children, the statement is frequently met by derision and laughter. Some persons will argue strenuously that it is quite proper, and others will even come forward of their own accord and say "I have killed several and there is nothing wrong in it."—*N. and Q. on C. and J.*, iii. 45.

"Ten women confessed [to Miss Fielde, *Family Life in China*] that they had destroyed seventy children.]

["The facts with which I became acquainted at Amoy produced in my mind a conviction that this social evil exists in the province of Fokeen to an extent which would be incredible, unless the fullest evidence were at hand to establish its truth. In the other parts of China which I visited, no well-authenticated cases were brought under my knowledge sufficient to prove that this crime prevailed to any considerable extent." Near Shanghai and Ningpo, if occurring at all, it was kept secret, and was comparatively rare. At the village of Hong-choo (six miles from Amoy ?) the people "asserted, without hesitation, that female infanticide was generally practised among them," and did not appear to regard it as a crime. They said that poor people generally killed two out of every four girls at birth, but that those who could afford to keep them let them live. This was confirmed at the next village (Baw-a-aou —inhabited by people of the surname of Lin)—where the people said that it was usual to kill half, but some destroyed four or even five out of six. It was done in four ways—"drowning in a vessel of water, pinching the throat, stifling by means of a wet cloth over the mouth, and choking," by putting a few grains of rice in the mouth. "If sons were alternately interspersed with daughters in a family, the people esteemed it good luck, and were not accustomed to murder female children." Case of a man (p. 448) who had had no son and eight daughters in succession and had killed five of them—another three out of six. Inquiries at two other villages yielded similar results, while it was also asserted to be very general in the city of Amoy —some asserting that half the female children of the poorer classes were destroyed. The small proportion of women in the country villages was very noticeable.]—*Smith, Narrative*, pp. 443–53.

[Doolittle (Foo-chow) says no doubt it is more common in some localities and provinces than others, but "there are most indubitable reasons for believing that it is extensively practised at this place and in the neighbouring districts; and also that it is tolerated by the Government, and . . . treated with indifference . . . by the mass." These reasons are:— (1) There is a native foundling asylum at Foo-chow, supported by contributions from wealthy Chinese, the gentry and resident officers of Government; (2) A Roman Catholic orphanage in the suburbs, intended for girls deserted by their parents, and, at one time containing 400 children; (3) orphanage of the Methodist Episcopal Mission, established about 1859; (4) books and tracts against the drowning of female infants are largely distributed at the time of the literary examinations: this shows that the practice exists, also that it is disapproved of. Nothing is said about the destruction of *boys*, proving that it is always girls who are drowned; (5) the Chinese admit the practice. Doolittle gives several instances (p. 205). "In the farming districts in the neighbouring country [near Foo-chow] the family which has several girls born to it destroys all after one or two, unless some of their acquaintance desire them to bring up as future wives of their boys. In this city the custom of killing girls at birth is probably not so universal as in the country." Intelligent Chinese think that about half the city families destroy one or more of their female children. Officers of Government never do it, as they have no difficulty in supporting and establishing them in life. If given away, as the future wife of some friend's son, the child is brought up in the friend's family. . . . Children are sometimes exposed alive by the roadside; if killed, they are either drowned in a tub of water, thrown into a running stream, or buried alive, which last method is sometimes believed to ensure the next child being a boy. . . . It is usually done by the father: "generally the mother prefers the child should be given away to being destroyed. Sometimes, however, the parents agree to destroy rather than give away their infant daughter, in order to keep it from a life of poverty and shame." Poverty, among the working classes, is usually given as the reason; as to bring up and marry a girl ensures an expense without return. But infanticide is frequently practised by rich families, who often do not care to keep more than one or two girls. . . . It is a mistake to suppose that the children destroyed or exposed by the roadside are principally illegitimate. If so, they would not be all girls. There are comparatively few illegitimate births in China. There are some places in the country where female children are seldom kept alive. A village 12 or 15 miles from Foo-chow is noted for the preponderance of boys, owing to the girls being killed off at birth. Though not directly sanctioned by the Government, no measures are ever taken to find out and punish the guilty parties. Proclamations are sometimes issued forbidding it, but with no effect.]—*Doolittle, Social Life*, ii. 203–9.

In Canton, "the female children of Chinese parents are in some instances put to death. Many reasons are assigned. . . . Poor people plead their poverty as an excuse. They contend that it is better to put their infant daughters to death than be obliged . . . to sell them as slaves, or for . . . prostitution. Infanticide is not invariably confined to the poor. . . . But though it is more or less practised by the nation, some Chinese regard the crime as one of a most diabolical nature." An example is given of a woman at Canton drowning her child in 1872, when, the neighbours giving information to the elders of the district, she was arrested and brought before them, and finally liberated on the entreaties of her husband. In 1848, the chief justices of Kwang-tung issued an edict condemning the practice very strongly.—*Gray, China*, i. 232–3.

[Foundling hospitals are some check on infanticide. "In the mountainous districts of Loong-moon, Kah-hing Chow and Chan-ning, in the province of Kwang-tung," poor women usually sell their baby girls to neighbours who wish to bring them up as daughters-in-law. When there is no demand for such, they are killed—and not always by the poor only. In the autumn of 1863, there was a great scarcity of women in the Loong-moon district, in consequence of this practice. Gray met three persons who had come thence to Canton to buy women, to re-sell as wives on their return home. In December, 1864, he was told of the son of one of the principal landed proprietors in the same district who had had three out of four daughters killed.]—*Ibid.* ii. 51.

"In the adjoining departments of Chauchau and Kiaying in Kwangtung, the people admit the practice, and, as their circumstances are similar, it is probable that it is not much less than around Amoy. Dr. Dudgeon, of Peking, has had very favourable opportunities for prosecuting enquiries in that region, and has shown that the stories formerly credited are wrong; and that most of the children thus disposed of are born of nuns. Inquiries instituted at Hankow by Dr. F. P. Smith, of the hospital, showed a wide prevalence of the crime among the poor and rural population, for which he ascribes several reasons; the proportion of the sexes is ten men to seven women."—*Williams, Midd. King.*, ii. 241–2.

[Though not mentioned in the statute book (perhaps because of the theory of rights of parents and filial subordination; perhaps because it is only in the southern provinces that it was really prevalent), there have been "frequent official proclamations in this province (Kwang-tung) 'exhorting' the people to abstain from the crime." There is also a decree of Kien-Lung, issued in 1773 (quoted by the Viceroy and Governor of Kwang-tung in a proclamation of Sept. 1866) as follows: "The statute establishing penalties for the murder of children and grandchildren presumes a case where children or grandchildren who have in nowise violated the injunctions of their parents are deliberately murdered by their parents or grandparents, and hence flagellation and banishment are provided as the penalty for this unnatural crime. But, in the case of female infants, newly born and still destitute of intelligence or perception, it is impossible that disobedience can be alleged; and the crime of those who, following the course of an evil custom, voluntarily expose such infants to death by drowning, differs in no wise, in its malignity and absence of natural affection, from wife murder. In future, on such cases arising, and being clearly established by the tribunals, sentence must manifestly be pronounced in accordance with the statute against the wilful murder of children and grandchildren. There is no necessity for promulgating a special ordinance. Respect this!" "As no other enactment is quoted in the proclamation referred to above, this is probably the only one on record; but it shows clearly that infanticide is considered a crime deserving of severe punishment. How completely the practice is confined to the murder of female infants is plainly indicated by the Chinese characters by which it is described, viz., 溺女 *hi nü*, or 'girl-drowning.'"]—*N. and Q. on C. and J.*, i. 4.

POLITICAL.

Early Feudal Period (*C.* 2357 *to* 1122 B.C.).—*Table I.*

"About two thousand years before our Christian era, the Chinese tribe first appeared in the country, where it has since increased so greatly. It then occupied a small extent of territory, on the east and north of the Ho, the more southern portion of the present province of Shan-se. As its course continued to be directed to the east and south (though after it crossed the Ho it proceeded to extend itself westwards as well), we may conclude that it had come into China from the north-west. . . . I suppose that the family, or collection of families—the tribe—which has since grown into the most numerous of the nations, began to move eastwards, from the regions between the Black and Caspian Seas. . . . Going on, between the Altaic range of mountains on the north and the Tauric range, with its continuations, on the south, but keeping to the sunny and more attractive south as much as it could, the tribe found itself . . . between 40° and 45°, N.L., moving parallel with the Yellow River in the most northern portion of its course. It determined to follow the stream, turned south with it, and moved along its eastern bank, making settlements where the country promised most advantages, till it was stopped by the river ceasing its southward flow, and turning again towards the east. Thus the present Shan-se was the cradle of the Chinese empire. The tribe dwelt there for a brief space, consolidating its strength under the rule of chieftains, who held their position by their personal qualities more than by any privileges of hereditary descent; and then gradually forced its way, east, west, and south, conflicting with the physical difficulties of the country, and prevailing over the opposition of ruder and less numerous neighbours."—*Legge, Ch. Class.*, III. i. Prol. pp. 189–90.

"The Chinese, like the ancient Egyptians and most other nations of any considerable antiquity, are fond of tracing back their history and government to very early times. The information to be gathered from reliable sources respecting their earliest condition is scanty." "From a careful examination of all the available evidence in the case, Dr. Legge has come to the conclusion (*Shoo-King, Prol.*, p. 90) that the Chinese nation had no existence before 2,000 B.C., and a large part of what relates to the period from 2,000 to 1,600 B.C. recorded in the oldest and most authentic history which the Chinese possess is no more worthy of credence than the 'Arabian Nights' (*Origin of the Chinese*, p. 4)."—*Ch. Rec.*, ix. 379–80.

"They were not simply a nomadic horde of shepherds that depended upon their flocks and herds for subsistence. It is true that as late as Shun his governors of districts are called 'Pastors.' . . . In the later histories of China, however, there are comparatively few allusions to their ancestors having been a pastoral people."—*Macgowan, Hist.*, p. i.

"The arrival of the Chinese tribe had been anticipated by others. These may have left the original seat of our infant race in the west earlier than it; or they may have left it at the same time. If they did so, the wave of emigration had broken in its progress. Some portions had separated from the main body, and found their way into the present province of Shen-se, and others, pursuing the same direction with it, but moving with more celerity, had then been pushed forward, by its advance, towards the sea, and subsequently along the sea-board, trying to make good a position for themselves among the mountains and along the streams of the country. We are not to suppose that the land was peopled by these tribes. They were not then living under any settled government, nor were they afterwards able to form a union of their forces, which could cope with the growing power of the larger people. They were scattered here and there over the region north of the Ho, gradually extending southward towards the Këang. Hostilities were constantly breaking out between them and the Chinese, over whom they might gain . . . temporary advantages. They increased in their degree, as well as those, and were far from being entirely subdued at the end of the Chow dynasty. Remnants of them still exist in a state of semi-independence in the south-western parts of the empire. Amid the struggles for the supreme power, which arose when one dynasty gave place to another, and the constant contentions which prevailed among the States into which the empire was divided, the princes readily formed alliances with the chiefs of these wilder tribes. They were of great assistance to King Woo in his conflict with the last sovereign of the dynasty of Shang. In the speech which he delivered to his forces before the decisive battle in the wild of Muh, he addressed the 'men of Yung, Shuh, Këang, Maou, Wei, Loo, P'ang, and Poh' (*Shu ching*, Pt. V. Bk. III. §§ 2–4), in addition to his own captains, and the rulers of friendly States. We are told that the wild tribes of the south and north, as well as the people of the great and flowery region, followed and were

consenting with him (Pt. V. Bk. IV. p. 6)."—*Legge, Ch. Class.*, III. i. Prol., p. 190.

"This province [Shansi] is the original seat of the Chinese people."—*Williams, Midd. King.*, i. 94.

"All the solid part of Chinese tradition and history seems to show that the original inhabitants of the Central Kingdom . . . were first heard of as moving from the north and west down the valley of the Hwang Ho (Yellow River). . . . The old capitals of the kings were all in the valleys of the Yellow River or in those of its tributaries, such as the River Wei in Shen Si. Hence, all the legends of even the mythical emperors are centred between Si-an Fu and Peking, near which place (Tientsin) the Yellow River once entered the sea. In fact, the trade area now belonging to the single port of Tientsin nearly covers the whole of semi-historical China. Even so far north as Kalgan there are ancient remains of what appear to be signal towers or tombs, dating as far back as B.C. 200."—*Parker, China*, pp. 3–5.

"Having first made good a settlement along the Yellow River, in the south-western parts of the present Shan-se, and perhaps also on the other side of the stream, the early immigrants sent forth their branches, scions of different families, east, west, north, and south, as so many suckers, among the ruder populations sparsely scattered about, which gradually gathered round them, till they lost their original peculiarities, and were prepared to be collected into larger communities, or into States."—*Legge, Ch. Class.*, V. i. Prol. p. 134.

"A capable and settled political race is first heard of in possession of lands along the Yellow River; it is occupied in fighting for its existence with the horse-riding nomads to the north, who raid the stores of wealth accumulated upon cultivated lands by industrious workmen, and who disappear, when pursued, into their trackless deserts. It is continually being reinforced by other bodies of its own kind coming from the north-west."—*Parker, China*, pp. 5–6.

"Critical study of the documents of the Shoo forbids us . . . to think of Yaou and Shun as other than petty chieftains, whose dominions hardly extended across the Ho; and though Yu was the founder of a dynasty that lasted for more than four centuries it is doubtful whether the last of his successors ruled over so much as the nine provinces of Yaou."—*Legge, Ch. Class.*, III. i. Prol. pp. 78–9.

"The Empire of Yao, Shun, and Yü is explicitly stated never to have extended east and west farther than the [China] sea and the borders of the Shen Si desert; the tribes north and south who desired intercourse got it, but no compulsion was used."—*Ch. Rev.*, xiii. 50.

"That Yaou, Shun, and Yu were all obliged to take active measures against them [the Meaouites, under the prince of Meaou, who refused obedience to the king] only shows the restlessness of the people, and the difficulty which those sage emperors had in establishing their sway over the country."—*Legge, Ch. Class.*, III. i. 64, note.

"When the dignity of chief advanced to that of sovereign, and the Chinese tribe grew into a nation, the form which it assumed was that of a feudal empire. It was probably not until the Chow dynasty [see following Period], that its constitution was fully developed and consolidated; as it is only then that we find in the last part of the Shoo, in the Ch'un Ts'ew, the Rites of Chow, and other Works of the period, materials to give a description of it. . . . The feudal system grew in a great measure out of the necessities of the infant empire. As the ruder tribes were pushed backwards from its growing limits, they would the more fiercely endeavour to resist further encroachment. The measure was sometimes taken of removing them to other distant sites, according to the policy on which the kings of Assyria and Babylon dealt with Israel and Judah. So Shun is reported to have carried away the San-mëaou. But the Chinese empire was too young and insufficiently established itself to pursue this plan generally; and each State therefore was formed with a military constitution of its own, to defend the marches against the irruptions of the barbarians."—*Ibid.* III. i. Prol. p. 197.

"It was to their greater civilization, and the various elements of strength flowing from it, that the Chinese owed their superiority over other early settlers in the country. They were able, in virtue of this, to subdue the land and replenish it, while the ruder tribes were gradually pushed into corners, and finally were nearly all absorbed and lost in the prevailing race."—*Ibid.* III. i. Prol. p. 191.

"We get from what is said of the Meaou . . . (*Shu ching*, Pt. V. Bk. XXVII. 5–11) a higher idea of them and their prince than is commonly entertained. From King Muh's language I judge that Shun had in him a powerful rival, and that the struggle which lasted through the reigns of Yaou, Shun, and Yu was of a dynastic nature. The chief of San-meaou was more than the head of a barbarous horde. He was a dangerous rival for the throne."—*Ibid.* III. ii. 593, note.

"The progress of the ancient Chinese from Shensi and the Yellow River eastwards to Shantung, westwards to Szechuen, and southwards to the Yangtze, can be traced. . . . Under Yu, the founder of the Hsia dynasty . . . the population of China amounted to between one or two millions, the so-called 'chow,' or provinces, being probably stations of colonists dotted about by the direction of Yu among the Miao aborigines. China was then, except in Honan and along the Yellow River, overrun by luxuriant vegetation. Birds and beasts swarmed; grain could not be grown; the only roads were the paths marked by wild beasts; and man had to struggle hard for existence. Elephants, rhinoceros, tigers, lions, and tapirs abounded. Yu, as chief of the most civilized race, may have had an indirect control, but he was probably as much Emperor (*Te*) of China as the 'Emperor' of Uganda is of Central Africa in modern times. The awe inspired by his name sufficed to preserve his scattered colonists from the attacks of local savages. It is doubtful if either Kwangtung, Kwangsi, Fuhkeen or Yunnan were then at all subject even to his influence. The scattered colonists became each in their various settlements probably the nucleus, first of a collection of tribes, and then of a State, acknowledging a nominal suzerain in the *Te*, or Emperor, in the north."—*Oxenham, Atlas*, Pref. p. i.

"The empire, as it appears in 'The Tribute of Yu,' consisted of nine provinces. On the north and west its boundaries were much the same as those of China Proper at the present day. On the east it extended to the sea, and even, according to many, across it, so as to embrace the territory of Corea. Its limits on the south are not very well defined. It certainly did not reach beyond the range of mountains which run along the north of Kwang-tung province, stretching into Kwang-se on the west and Fuh-këen on the east. Even though we do not reckon those three provinces in Yaou's dominion, there still remains an immense empire, about three times as large as France, which we are to suppose was ruled over by him, the chief of K'e, and the different regions of which sent their apportioned contributions of grain, and other articles of tribute to his capital year by year." "The accounts which we have of the empire subsequent to Yu forbid us to allow that it had attained in his day so great a development. The third sovereign of the Hea dynasty, T'ae-k'ang, grandson of Yu, having crossed the Ho on a hunting expedition, found his return obstructed by the chief of K'eung, and was never able to regain his throne. . . . Nearly a hundred years elapsed after the expulsion of T'ae-k'ang before the House of Hea regained sure possession of the throne. This was done, B.C. 2078, by Shaou-k'ang. . . . It is believed that Yu died at Hwuy-k'e in the present Chĕ-këang, but it was not till the last year of Shaou-k'ang that any chief was appointed in that part of the country in the name of the reigning house."—*Legge, Ch. Class.*, III. i. Prol. pp. 60–1.

"According to the views which I have sought to establish, the labours of Yu are not history, but myth. He did not perform the prodigious achievements on the mountains and rivers which are ascribed to him. That he was the laborious founder of the Chinese empire, and did much within the small space of territory which was then comprehended in its limits, there is no occasion to deny, but the gradual extension of the empire and development of its resources and order, which were the growth and accomplishment of many centuries, have been attributed to him by the Chinese, and their romance has been accepted by missionaries and others."—*Ibid.* III. i. Prol. p. 76.

"As the Chinese believe that their hills and rivers got their names from Yu, this is to us a strong evidence that the country was first peopled, or began to be occupied, in his time."—*Ibid.* III. ii. 596, note.

"The Emperor Yü, true to the practice of his predecessors, nominated the President of the Council, as his successor, but his son Tiki [Ch'i] seized the throne, and became the founder of the first Chinese dynasty which was called the Hia [Hsia] from the name of the province first ruled by his father. This event is supposed to have taken place in the year 2197 B.C. and the Hia dynasty, of which there were seventeen emperors, ruled down to the year 1776 B.C."—*Boulger, Short Hist.*, p. 3.

"Shaou-k'ang's recovery of the throne [2079 B.C.] . . . was followed by the reverent acknowledgment of the chiefs of the empire, and the submission of the wild tribes. . . . The Emperor's son was styled Woo-yu (無 餘). He was the first feudal chief established in the regions of Woo and Yuĕ, so slowly did the conquering Chinese firmly establish their rule over the country."—*Legge, Ch. Class.*, III. i. 170, note.

"Many of the critics argue that after the dynasty of Hea began to decline, the wild tribes all round the empire encroached upon it, till the 'nine provinces' of Shang hardly embraced half the territory which those of Yu had done. There is no definite testimony, however, to this effect."—*Ibid.* III. ii. 521, note. *Cf. Wên hsien t'ung k'ao hsiang chieh, c.* 3, *Hu k'ou k'ao*, p. *ia.*

"When we come to the dynasty of Shang [1766 B.C.] . . . we find it difficult to admit that even then there was a China at all equal to that which Yu is said to have ruled over. The Shoo tells us of its founder T'ang the Successful, and in him and Këĕ, the last sovereign of the line of Yu, we seem merely to have the chief of Shang warring with the chief of Hea. It next gives us some notices of the minority of T'ae-këă, T'ang's successor, and then there is a blank in the history for three hundred years. When the field is occupied again, we meet with Pwan-kăng, the 17th sovereign, in great trouble, engaged in transferring his capital from the north of the Ho to the present district of Yen-sze in Ho-nan, on the south of it. To reconcile the murmuring people to the trouble of the removal, he reminds them that he was only acting after the example of former kings, and that the capital of the dynasty had already been in five different places. The nation, evidently, had still its seat in the neighbourhood of the Ho, and notwithstanding all that Yu is supposed to have done in regulating the waters of that river, its principal settlement had to be frequently changed in consequence of inundations. The accounts are not those of a great people, but of a tribe which had little difficulty in migrating from one spot to another."—*Ibid.* III. i. Prol. pp. 61–2.

"The map of the Shang, or Yin, dynasty . . . shows still nine provinces or 'chow'; but the modern provinces of Szechuen, Kweichow, Yunnan, the Two Kwang, and Fuhkeen are no longer included within the boundaries of the empire."—*Oxenham, Atlas*, Pref. p. i.

Wu Ting (c. 1324 B.C.) "attacked the demon land, and subdued it in three years." . . . "This 'demon-region' seems to have been the country of the wild tribes in the north, who never ceased to press upon the more civilized Chinese, till they made themselves masters of the empire, about 2,500 years after Woo-ting's time. A note in the 綱 鑑 易 知 says that in the Hea dynasty they were called 獯 鬻; in the Yin, 鬼 方; in the Chow, 玁 狁; under Ts'in and Han, 匈 奴; under the T'ang, 突 厥; and under the Sung, 契 丹,"—*Legge, Ch. Class.*, III. i. 267, note.

[Beyond the 9 *chou* (which covered the same territory as the 5 *fu*) which constituted the China Proper of Yü's time there was still an outlying territory over which the ancient kings claimed authority. See GEN. GOVT.]—*Ibid.* III. i. 148, note.

"The political history of China has been much simplified by" the features of its physical geography. "The only natural barriers which are formidable enough to serve as the frontier of an important state are the Yellow River, the Yang-tse-kiang, and the mountain ranges on the east and north of Sz'chuen, which isolate that large and fertile province. But the empire was never divided for long together into four great States, of Northern, Southern, Central and Eastern China. The great dynasties ruled over the whole territory annexed by settlers of the dominant race. After the fall of one of these dynasties, the political disorganization of which this fall was the result manifested itself in the formation of a number of minor kingdoms or feudal principalities; then the process of integration commenced afresh, and the smallest States were absorbed, until there remained only three or four rivals powerful enough to aim at restoring the unity of the empire."—*Simcox*, ii. 10.

"The official histories of China never recognise more than one Imperial dynasty at a time, though the Imperial dynasty did not always govern the whole empire, sometimes hardly a quarter of it; but the slightness of the barriers between one part of the empire and another was seen when any of the rival States began to grow in power. Any moderately strong Government found it easy to overstep either or all of these natural landmarks; and as soon as one was overstepped, there was seldom any halt till the next was reached. For a time the Hwai might serve as a division between north and south; but that was only a stage in the process by which the master of the Yellow River usually drove his rivals back behind the Kiang, as Kubla drove the Sung emperors before abolishing their dynasty."—*Ibid.* ii. 10–11.

"The obstacles in the way of a United China never took the form of a local patriotism entrenched behind natural frontiers. The difficulties to be overcome were moral rather than material, and the immense territory normally united under the Emperor of China depended for its political unity on the vigour and capacity of the administration. There was nothing in the physical structure of the country to suggest or perpetuate the political subdivisions which followed upon imperial inefficiency; and if the people were seldom willing to fight with much enthusiasm for a sovereign who was losing the empire, they were always ready to submit with a good will to one who was gaining it."—*Ibid.* ii. 11.

[The supersession of the Shangs by the Chows is traceable to the growth (about 1140 B.C.) of the influence of Wên Wang combined with the national hatred of Chou Hsin's wickedness. Wên, Earl of the feudatory State of Chou, having been imprisoned for presuming to criticize the King's rule, his son Wu Wang invaded the Imperial domain with a large army, and brought the Shang dynasty to a close in 1122 B.C.]—*Thornton*, pp. 92–9.

"The historical analogy between the Chinese and Roman Empires is nearly complete throughout the whole gamut of history."—*Parker, China*, p. 117.

Population.—[The population in the time of Yü is given as "between one and two millions" (see *supra*). The 13,553,923 given in *Wên hsien t'ung k'ao hsiang chieh, c.* 3, *Hu k'ou k'ao*, p. 1*a*, seems to embrace all the territories over which the kings claimed sovereignty, allusion being made to the decline in the number of states to 3,000 and later to 1,773. By T'ang's time (1766 B.C.) there was "a loss of 7 out of 10," the population being then estimated at 3,221,212 (see *ibid.*).]

[The total population of the country is stated in the Scale of Progress. Some additional information is given below. See also MILITARY and GEN. GOVT., *Taxation.*]

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

"The Chows rose to power over the vices of preceding rulers, aided by the genius of a certain duke or chieftain of the Chow State, though he personally never reached the Imperial throne. It was his more famous son, who, in B.C. 1122, routed the forces of the last tyrant of the semi-legendary period, and made himself master of China. The China of those days consisted of a number of petty principalities, clustering round one central State, and thus constituting a federation. The Central State managed the common affairs, while each one had its own local laws and administration. It was, in some senses, a feudal age, since the various 'dukes' were regarded as vassals, owing allegiance to the sovereign at the head of the Imperial State, and bound to assist him with money and men in case of need. And in order to keep together this mass, constantly in danger of disintegration from strifes within, the sovereigns of the house of Chow were for ever summoning these vassal dukes to the capital and making them renew, with ceremonies of sacrifice and potations of blood, their vows of loyalty to themselves and treaties of alliance with each other. The senior duke always occupied a position somewhat closer to the sovereign than the others. It was his special business to protect the Imperial territory from invasion by any malcontent vassal; and he was often deputed to punish acts of insubordination and contumacy, relying for help on the sworn faith of all the States as a body against any individual recalcitrant State. Such was the political condition of things . . . for nearly nine centuries."—*Giles, Historic China*, pp. 4–6.

"Thus did King Woo once don his arms, and the empire was greatly settled. He overthrew the existing government of Shang, and made it resume its old course. . . . He dispersed the treasures of Luh-t'ae, and distributed the grain of Keu-k'eaou, thus conferring great gifts throughout the empire, and all the people joyfully submitted" (*Shu ching*, Pt. V. Bk. III. 9). "These two measures were directed to the benefit of the masses of the people, impoverished by the exactions of the tyrant."—*Legge, Ch. Class.*, III. ii. 315–6, and note.

[That the minds of the people of Yin would not submit to Chow and that it was only with great difficulty that Chow brought Yin to a quiet submission, is shown by numerous books of the *Shu ching*. See *ibid.* III. ii. 493, note.]

"The organization of the Empire by Wu Wang after the overthrow of the Shang dynasty was as follows. The descendants of Shên Nung, Hwang ti, Yao, Shun and Ta Yü were enfeoffed [封] in Ho Nan, Shan Tung, Peking, Ho Nan, and Ho Nan respectively. Wu Wang's generalissimo was enfeoffed in Shan Tung. Chou Kung was appointed to 齊, and Shao King to 魯 in Shan Tung and Chih Li. All the other vassals were settled either in Shan Tung, Shan Si, Ho Nan or Chih Li. The Imperial appanage was part of Shen Si. There were 15 兄 弟 之 國 and 40 同 姓 者. The sacrificial regalia of Shang were divided."—*Ch. Rev.*, xi. 402–3.

"It was again from the west of the Yellow river that the chiefs of the Chow family and their followers pushed their way to the east, and took possession of the tracks on both sides of that river, which had been occupied, nearly to the sea, by the dynasties of Hëa and Shang."—*Legge, Ch. Class.*, IV. i. Prol. p. 127.

"The dominions of Chow were not under-estimated, but the dimensions of the empire in the days of Yu have been greatly exaggerated."—*Ibid.* III. i. Prol. p. 62.

"One of his [Wu Wang's] successors, known as the Magnificent King (Mu Wang, 1001–946 B.C.), extended the authority of his family over some of the States of Turkestan."—*Boulger, Short Hist.*, p. 3.

"During the Chow dynasty . . . the tribes, under their colonist nobility of Yu, had so improved in organization and administration as to have coalesced into considerable States. A suzerainty, yearly becoming more and more nominal, was granted to the *Wang* (Princes) of the House of Chow, but the chiefs of the various States, amounting, in 600 B.C., to some 13

. . . and originally scions of the family of King Wu, the founder of the Chow dynasty, paid little attention to their suzerain's commands. A series of wars, intrigues, diplomacy, conspiracies, and plots, much resembling what has been occurring in the Empires of Europe during the last 200 years, ensued. The States were reduced to seven . . . in 475 B.C., and though periods of peace occasionally intervened, a state of unrest, of disturbance, and of frequent wars, ensued. There can be little doubt that the competition in arms, in diplomacy, in military discipline, in material civilization, and in education, caused the Chinese of that period to reach a very high level of ability, of skill, and of material progress."—*Oxenham, Atlas*, Pref. p. i.

"A division of the empire into nine, or more properly ten Fuh, was made under the Chow dynasty. It is twice given in the *Chow Le*, first in Bk. XXIX., where the domains are called Ke (畿), and again in Bk. XXXIII., where all but the king's Ke are called Fuh."—*Legge, Ch. Class.*, III. i. 148, note.

[The nine *chou*, or regions, of this period were:—Yu (幽), Yen (兗), Ch'ing (青), Chi (冀), Yung (雍), Yu (豫), Ch'ing (荊), Yang (揚), and Ping (幷). Hsü (see previous Period) is said to have been absorbed in Ch'ing, and Liang in Yung. Chi was divided into Chi, Ping, and Yu. See following extract.]

"T'ang, the founder of the [Shang] dynasty, is represented as receiving from God the 'nine regions,' and appointed to be a model to the 'nine circles' of the land. These nine regions and nine circles were probably the nine *Chow* of the Shoo; and though no similar language is found in the She respecting the first kings of Chow, their dominion, according to the official book of the dynasty, was divided into nine provinces, seven of which bear the same names as those in the Shoo. We have no Seu-chow, which extended along the sea on the east from Ts'ing-chow to the Keang river, and Chinese scholars tell us, contrary to the evidence of the She and of the Tso-chuen, that it was absorbed in the Ts'ing province of Chow. In the same way they say that Yu's Këang-chow on the west, extending to his Yung-chow, was absorbed in Chow's Yung. The number of nine provinces was kept up by dividing Yu's K'e-chow in the north into three; K'e to the east, Ping in the west, and Yëw in the north and centre. The disappearance of Seu and Lëang sufficiently shows that the kings of Chow had no real sway over the country embraced in them; and though the names of Yang and King, extending south from the Këang, were retained, it was merely a retention of the names, as indeed the dominion of China south of the Këang in earlier times had never been anything but nominal. The last ode of the She, which is also the last of the Sacrificial odes of the Shang dynasty, makes no mention of the subjugation of the tribes of King, or King-ts'oo, by king Woo-ting (B.C. 1323–1263); but . . . its genuineness is open to suspicion. The 9th ode of Book III. Part III. relates in a manner full of military ardour, an expedition conducted by king Seuen in person to reduce the States of the south to order; but it was all confined to the region of Seu, and in that to operations against the barbarous hordes north of the Hwae. The 8th ode of the same Book gives an account of an expedition, sent by the same king Seuen under an earl of Shaou, to start from the point where the Këang and Han unite, to act against the tribes south of the Hwae, between it and the Këang, and to open up the country and establish States in it after the model of the king's own State. All this was done 'as far as the southern Sea,' which did not extend beyond the mouth of the Këang. Ode 5th, still of the same Book, describes the appointment of an uncle of king Seuen to be marquis of Shin, and the measures taken to establish him there, with his chief town in what is now the department of Nan-yang, Ho-nan, as a bulwark against the encroachments of the wild tribes of the south. Now Seuen was a sovereign of extraordinary vigour and merit, and is celebrated as having restored the kingdom to its widest limits under Woo and Ch'ing; and after his death the process of decay went on more rapidly and disastrously even than it had done during several reigns that preceded his. During the period of the Ch'un Ts'ëw, the princes of Ts'oo, Woo, and Yueh, to whom belonged Yu's provinces of Yang, King, and Lëang, all claimed the title of king, and aimed at the sovereignty of the States of the north, to wrest the sceptre from the kings of Chow. The China of Chow did not extend beyond the limits which I have assigned it . . . hardly reaching half-way from the Yellow river to what is now called the Yang-tsze Këang. The country held by the kings themselves, often styled the royal State, lay along the Wei and the Ho for about five degrees of longitude, but it was not of so great extent from north to south. It was, moreover, being continually encroached upon by the growing States of Ts'oo on the south, T'sin on the west, and Tsin on the north, till it was finally extinguished by Ts'in."—*Legge, Ch. Class.*, IV. i. Prol. pp. 128–9. See also III. i. Prol. p. 62.

"The China proper of Chow was confined at first within narrow limits. Even at the beginning of the Ch'un Ts'ëw period it consisted of merely a few States of no great size, lying on either side of the Yellow river, from the point where its channel makes a sudden bend to the east onwards to its mouth."

North of the Royal Domain was Tsin, but, though a fief dating from the commencement of the kingdom, its growth had been so slow, that it is not till the second year of duke He, B.C. 657, that it appears in Confucius' text, on the eve of its subjugation of the small States of Yu and Kwoh. This was the first step which Tsin took in the career of enlargement by which it ere long attained to so great a size." "South of the Domain was Ts'oo; and, though it had been founded in the time of king Ch'ing, it does not appear in the text . . . till the tenth year of duke Chwang, B.C. 683. It is then called King, and we do not meet with it under the name of Ts'oo till the first year of duke He, B.C. 658." "West from the Domain was Ts'in, the first lord of which was given a local habitation and name only in B.C. 908; and it did not become an independent fief of the kingdom till the year 769. Its first appearance in our text is in the fifteenth year of duke He, B.C. 644." "A long way east from Ts'oo, and bordering on the sea, was the State of Woo, which, though claiming an earlier origin than the kingdom of Chow itself, is not mentioned in the classic till the seventh year of duke Ch'ing, B.C. 583."—*Ibid.* V. i. Prol. p. 117.

"In the Book of Poetry . . . we have odes of only about a dozen States; and all the States or territorial divisions, mentioned in the Ch'un Ts'ëw, and Tso-chuen including the outlying regions of Ts'oo, Woo, and Yueh, with appanages in the royal domain, attached territories in the larger States, and the barbarous tribes on the east, west, north, and south, are only 198. In the 'Annalistic Tables of the successive dynasties,' published in 1803, the occurrences in the kingdom of Chow, from its commencement in B.C. 1121 down to 403, are arranged under thirteen States, and from 402 down to its extinction in B.C. 225, under seven States."—*Ibid.* IV. i. Prol. p. 130.

"The principal States which come before us in the She are Ts'in, lying west from the royal domain, a considerable part of which was granted to it in B.C. 759; Tsin having the Ho on the west, and lying to the north of the royal domain; then to the east, Wei, on the north of the Ho, and Ch'ing on the south of it, with Heu and Ch'in extending south from Ch'ing. East from Ch'ing, and south of the Ho, was Sung, a dukedom held by descendants of the royal family of the Shang dynasty. North from Sung was the marquisate of Ts'aou; and north from it again was Loo, held by the descendants of Tan, the famous duke of Chow, to whose political wisdom, as much as to the warlike enterprise of his brother king Woo, was due the establishment of the dynasty. Conterminous with the northern border of Loo, and extending to the waters of what is now called the gulf of Pih-chih-le, was the powerful State of Ts'e. Yen . . . lay north and east from Ts'e. The . . . marquis of Han . . . appears to have played a more noticeable part in the time of king Seuen, than any of his family who went before or came after him did. His principality was on the west of the Ho, covering the present department of T'ung-chow, Shen-se, and perhaps some adjacent territory."—*Ibid.* IV. i. Prol. p. 130.

"The princes of these States, distinguished among themselves by the titles of Kung, How, Pih, Tsze, and Nan, which may most conveniently be expressed by duke, marquis, earl, count, or viscount, and baron, were mostly Kes (姬), offshoots from the royal stem of Chow. So it was with those of Loo Ts'aou, Wei, Ch'ing, Tsin, Yen, and Han. Sung . . . was held by descendants of the kings of Shang, who were therefore Tszes (子). The first marquis of Ts'e, was Shang-foo, a chief counsellor and military leader under kings Wăn and Woo. He was a Këang (姜), and would trace his lineage up to the chief minister of Yaou, as did also the barons of Heu. The marquises of Ch'in were Kweis (嬀), claiming to be descended from the ancient Shun. The earls of Ts'in were Yings (嬴), and boasted for their ancestor Pih-yih, who appears in the Shoo, II. i. 22, as forester to Shun. The sacrifices to Yu, and his descendants, the sovereigns of the Hea dynasty, were maintained by the lords of Ke, who were consequently Szes (姒), but that State is not mentioned in the She." "All these princes held their lands by royal grant at the commencement of the dynasty, or subsequently."—*Ibid.* IV. i. Prol. pp. 130–1.

"Anciently, when the country was first peopled, it was not possible for the principles of propriety and righteousness to penetrate everywhere with a transforming power. All who were unaffected by those principles were classed as E or Jung, and all who recognised them and came under their influence were said to be Hwa and Hea (輒謂爲華夏). We are not to suppose that it was necessary to be living outside the nine provinces, in what are called 'the four seas,' in order to be Jung and E."—*Ibid.* III. ii. 622, note.

"The first symptoms of decay in the dynasty date . . . from his [king Mu's] time" (1000 B.C.).—*Ibid.* III. ii. 578, note.

"During this period [908–894 B.C.] the chiefs of the House destined to supersede that of Chow begin to make their appearance on the stage of affairs. They trace their lineage up to the baron Yih (益; often called 翳), the Forester of Shun."—*Ibid.* III. ii. 614, note.

"The China of the eighth century B.C. consisted of a number of Feudal States, ruled by nobles owning allegiance to a Central State, at the head of which was a king. The outward tokens of subjection were homage and tribute; but after all, the allegiance must have been more nominal than real, each State being practically an independent kingdom. This condition of things was the cause of much mutual jealousy, and often of bloody warfare, several of the States hating one another quite as cordially as Athens and Sparta at their best."—*Giles, Hist. of Ch. Lit.*, pp. 4–5.

"How many the feudal States, great and small, were at the most, I will not venture to say even approximately. The theory of the constitution left them very considerable liberty in the administration of their internal affairs, and in their relations with one another. They were to be content with their allotments of territory and not infringe on those of their neighbours, maintaining a good mutual understanding by means of court visits (朝) and visits of friendship or compliment (聘), and by interchanging communications on all important events occurring within their borders. Any breaking of the peace or unjust attack of one State by another was to be represented to the royal court, and the king would then call into the field the unwieldy forces at his disposal, and deal justice on the offender."—*Legge, Ch. Class.*, V. i. Prol. p. 113.

"But this beautiful theory of government presupposed a wonderful freedom from jealousy and ambition on the part of the feudal lords, and an overwhelming superiority of force on the part of the king; and, neither of these things existing, the constitution of the kingdom was torn into shreds. Instead of the harmony which the principles of benevolence and righteousness, carried out with courtesy and in accordance with the rules of propriety, should have produced, we find the States biting and devouring one another, while the large and strong oppressed and absorbed the weak. . . . The fact was that Might had come to take the place of Right; and while statesmen were ever ready to talk of the fundamental principles of justice, benevolence, and loyalty, the process of spoliation went on. The number of States was continually becoming less, the smaller melting away into the larger."—*Ibid.* V. i. Prol. pp. 113–14.

"The process of degeneracy and disintegration, however, was very marked from the beginning of the 9th century. It is an acknowledged fact that about B.C. 880 the chief of the powerful southern State of Ts'oo usurped for a time the title of king, and wished to declare himself independent of the kings of Chow."—*Ibid.* V. i. Prol. p. 113.

"The disorder of the period . . . was only the sequel of the disorder that preceded it. Not long before it commenced, king P'ing had transferred the capital to the east in 769 [770, not 781, as stated by Giles], in consequence of the death of his father king Yëw at the hands of some of the wild tribes of the Jung. This movement was an open acknowledgement of the weakness of the sovereign power, which had been brought very low towards the end of the first half of the 9th century, B.C., and had only partially revived during the long reign of king Seuen. I doubt, indeed, whether it had been very strong in what is regarded as its golden age, after the duke of Chow had consolidated the dynasty, and introduced his code of ceremonial and political regulations. The theory was then good, but the practice was very indifferent."—*Ibid.* V. i. Prol. p. 113.

"The most pressing business was to get rid of the Tatars, his [P'ing Wang's] allies, against whom he had to fight a very bloody battle. The hordes who lived in Turkestan and little Bukharia (the present government of Ele) lusted as much as the Sarmathians and Goths after the fertile plains of their neighbours. . . . To free himself from these unbidden guests, the emperor gave the greater part of the imperial demesne of Chaou to the prince of Tsin, under pretence of bestowing upon him a reward for his great services, but in reality that he might fight his battles against these ferocious savages. . . . In the twenty-second year of Ping-wang" many other vassals followed the example of Wan-kung and "openly declared their independence. There were at that time twenty-one independent kingdoms. . . . Ping-wang tried to establish his authority by alliances of blood, but these cemented friendships lasted only so long as it suited the convenience of the parties."—*Gutzlaff, Sketch of Ch. Hist.*, i. 184–5.

[No new State arose during the Ch'un Ch'iu period, though several came into greater prominence than had formerly belonged to them; and the enlargement of territory which took place arose chiefly from the greater development which the position of Chin, Ch'u, and Ch'in enabled them to give themselves.]—*Legge, Ch. Class.*, V. i. Prol. p. 112. Ch'in occupied nearly one-fifth of the country, its inhabitants forming one-tenth of the whole population.

"When the Ch'un Ts'ëw period opens upon us, we find existing an all but anarchial condition of things. There was virtually no king in China in those days, and the lord of each feudal State did what was right in his own eyes. In 706, the earl of Ch'ing, the most recently established of all the States, if perhaps we should except Ts'in, engaged in hostilities with the king himself, who was wounded in the battle between them."—*Ibid.* V. i. Prol. p. 113.

"To ameliorate the evils arising from this state of disorder and anarchy, and to keep it moreover in check, there arose during the Ch'un Ts'ëw the singular device of presiding chiefs—the system of one State taking the lead and direction of all the others, and exercising really royal functions throughout the kingdom, while yet there was a profession of loyal attachment to the House of Chow. The seeds of this contrivance were sown, perhaps, at the very commencement of the dynasty, when the dukes of Chow and Shaou were appointed viceroys over the eastern and western portions of the kingdom respectively, and other princes were made, on their first investiture, 'chiefs of regions' (方伯), embracing their own States and others adjacent to them. These arrangements were disused as the kings of Chou felt secure in their supremacy over all the States, and the nominees in the first instance had been sincerely loyal and devoted to the establishment of the dynasty; but now in the Ch'un Ts'ëw period the kings were not sufficiently sure of any of their vassals to delegate them to such an office. When one raised himself to the position, they were obliged unwillingly to confirm him in it."—*Ibid.* V. i. Prol. pp. 114–15.

"Five of these presiding chiefs are named during" this period: "Hwan of Ts'e (683–642); Wăn of Tsin (634–627); Sëang of Sung (649–636); Muh of Ts'in (658–620); and Chwang of Ts'oo (612–590). The first two, however, are the best, and I think the only representatives of the system. Hwan was endowed with an extraordinary amount of magnanimity, and Wăn had been disciplined by a long experience of misfortune, and was subtle and scheming. Both of them were fully acknowledged as directors and controllers of the States generally by the court of Chow; and it seems to me not unlikely that if Wan had been a younger man when he came to the marquisate of Tsin, and his rule had been protracted to as great a length as that of Hwan, he would have gone on to supersede the dynasty of Chow altogether, and we should have had a dynasty of Tsin nearly nine hundred years earlier than it occurs in Chinese chronology. As it was, his successors, till nearly the end of the Ch'un Ts'ëw period, claimed for their State the leading place in the kingdom; and it was generally conceded to them. Though the system . . . be connected with the names of the five princes . . . mentioned it yet continued to subsist after them. They were simply the first to vindicate, or to endeavour to vindicate, a commanding influence for the States to which they belonged throughout the kingdom." Of the remaining three, Chwang of Ts'oo was the only one who exercised any considerable influence over some of the States.—*Ibid.* V. i. Prol. p. 115.

"I am inclined to believe that the system of presiding chiefs, or rather of leading States, did in a degree mitigate the evils of the prevailing disorder. Ts'e and Tsin certainly kept in check the encroachments of Ts'oo, which, barbarous as it was, would otherwise have speedily advanced to the overthrow of the House of Chow. Yet the system increased the misery that abounded, and if it retarded, perhaps, the downfall of the descendants of king Woo, it served to show that that was unavoidable in the end. It was most anomalous—an *imperium in imperio*—and weakened the bond of loyal attachment to the throne. Of what use were the kings of Chow, if they could not do their proper work of government, but must be continually devolving it on one or other of their vassals? . . . The sentimental loyalty of Confucius had lost its attractions by the time of Mencius, who was ever on the outlook for 'a minister of Heaven,' who should make an end of Chow and of the contentions among the waring States together."—*Ibid.* V. i. Prol. p. 116.

"But the system also increased the expenditure of the smaller States. There still remained their dues to the kings of Chow, even though they paid them so irregularly that we have instances of messengers being sent from court to Loo, and doubtless they were sent to other States as well, to beg for money and other supplies. But they had also to meet the requisitions of the ruling State, and sometimes of more than one at the same time. There are many allusions in the narratives of Tso to the arbitrariness and severity of those requisitions. On X. xiii. 5, 6, for instance, we find Tsze-ch'an of Ch'ing disputing on this point with the ministers of Tsin. 'Formerly,' said he, 'the sons of Heaven regulated the amount of contribution according to the rank of the State. Ch'ing ranks as the territory of an earl or a baron, and yet its contribution is now on the scale of a duke or a marquis. There is no regular rule for what we have to pay; and when our small State fails in rendering what is required, it is held to be an offender. When our contributions and offerings have no limit set to them, we have only to wait for our ruin.' It is evident, as we study the history of this system of a leading State, that there was no help to come from it to the House of Chow, and no permanent alleviation of the evils under which the nation was suffering."—*Ibid.* V. i. Prol. pp. 116–17.

"A similar condition of things prevailed in each particular State. There were hereditary ministerial families, who were continually encroaching on the authority of their rulers, and the heads of those families again were frequently hard pressed by their inferior officers. Such was the state of China in Confucius' time."—*Ibid.* i. Prol. p. 64.

"Confucius . . . advocated a policy of union throughout the States. His exhortations were in vain. . . . In his day the authority of the Chow Emperor had been reduced to the lowest point. Each prince was unto himself the supreme authority. Yet one cardinal point of the policy of Confucius was submission to the Emperor, as implicit obedience to the head of the State throughout the country as was paid to the father of every Chinese household. Although he failed to find a prince after his own heart, his example and precepts were not thrown away, for in a later generation his reforms were executed, and down to the present day the best points in Chinese government are based on his recommendations."—*Boulger, Short Hist.*, p. 4.

"Confucius, notwithstanding his pedantic enthusiasm for 'ceremonies,' was not wanting in practical ability, and tradition represents him as restoring the golden age of Yao and Shun in any town or government that was entrusted to his care. But he could not adapt his doctrine to the changed political conditions of the time, and his employers practically found themselves without compensation for the sacrifices entailed by his scruples. The Prince of Tse, pleased with some of his remarks, wished to give him certain estates, and was dissuaded by his prime minister, upon grounds not in themselves unreasonable. These scholars, it was objected, are impracticable, arrogant, lavish in expenditure upon useless ceremonies, full of frivolous 'rules of propriety,' to which statesmen have no time to attend. 'It would take generations to exhaust all that this Mr. Chung knows about the ceremonies of going up and going down' (*C.C.* i. Prol. p. 69). Moreover, as the customs he wished to restore had fallen into disuse, to enforce them would be an innovation tending to unsettle the people's minds and cause discontent."—*Simcox*, ii. 83.

"It speaks volumes for the faithfulness of the Chinese records that we can really gather from them an intelligible summary of the curious intellectual movement which gives its significance to this question about the employment of sages, and the subsequent burning of the Books. On the one hand the champions of antiquity represented the principles of law and order; but the laws and the order belonged to a bygone state of things, and their restoration would imply the destruction of the present. But the state of things present in China from the 5th to the 3rd century B.C. was not wanting in vitality any more than those days of feudalism from which the kingdoms of Europe date their origin. If the power of Chow had wasted, that of the various 'presiding States' had increased, and in those States where the titular prince was as feeble in proportion as the emperor, the minor nobles were as ready to take the rôle of local *maire de palais* as the various kings to usurp imperial prerogatives. It was the age of soldiers and sophists, and the event justified the forecasts of those statesmen who felt that the impending re-organization of the empire must be effected by force of arms, and that the orthodox school of *literati* were more likely to hinder than help during the process. Neither they nor the philosophers foresaw that the ultimate victory would rest with the latter, and that the princes who reunited the empire would end by re-conquering 2,000 years of more than imperial power for the pedantic Mr. Chung."—*Ibid.* ii. 83.

"The forms in which the ambition of the encroaching States displayed itself are characteristically Chinese. One symptom was to express curiosity about the nine vases of Yu, the possession of which was associated with that of the imperial sceptre; another was to offer a sacrifice to heaven and earth, or to the progenitors of the royal house, as to the sacrificer's own ancestors. In the Tso Chuen, on the other hand, the loyalty of virtuous ministers frequently shows itself by their refusal to accept excessive honours offered on their arrival in other States."—*Ibid.* ii. 81.

"As in Scotland, the tradition of the royal supremacy retained just so much vitality that the rebels were always anxious to obtain its nominal support. One of the odes refers to the request of a usurper to be lawfully invested with the fief which he intends to retain whether or no; and in the case . . . when the Imperial sacrifice to heaven and earth is presumptuously offered by a prince of T'sin, his excuse is that a part of the ancient patrimony of the imperial house has just been conceded to him, including the spot where the rite used to be performed. After this, the Prince of Loo applied for permission to offer a similar sacrifice, and, by way of compromise, an imperial officer was sent from the court of Chow to do it for him, whom he detained, in order to be able to repeat the ceremony at discretion. In 720 B.C., and again in 618, an envoy was sent from Chow to Loo asking for contributions to the king's burial, which is equivalent to a demand for tribute."—*Ibid.* ii. 81; see also pp. 81–3, *Parker, Anc. Ch. Simpl.*, p. 314, and *cf.* MORAL SENT.

"The teachings of Confucius in the Chow dynasty could not arrest the progress of degeneracy and dissolution in a single State. His inculcation of the relations of society and the duties belonging to them had no power. His eulogies of the ancient sages were only the lighting up in the political firmament of so many suns which communicated no heat. Things waxed worse and worse."—*Legge, Ch. Class.*, III. i. Prol. p. 199.

"At the close of the Ch'un Ts'ëw period the kingdom was in a worse and more helpless condition than at its commencement; and it seems strange to us that it did not enter into the mind of Confucius to forecast that the feudal system which had so long prevailed in China 'was waxen old and ready to vanish away.' But what State was to come out victorious from its conflicts with all the others, and take the lead in settling a new order of things? Only the event could reveal this, but it could be known that the struggle for supremacy would lie between two or three powers; and the study of their growth supplies one of the most important lessons which the work of the sage and the Commentary of Tso are calculated to teach us."—*Ibid.* V. i. Prol. p. 117.

"The list of the great Chinese reformers is completed by the name of Mencius, who, coming two centuries later, carried on with better opportunities the reforming work of Confucius. . . . The general character of the age may be inferred from its being designated by the native chroniclers 'The warlike period.'" It was marked by weakness and vice.—*Boulger, Short Hist.*, p. 4.

"The pictures which Mencius draws of the misery of his times are frightful. What he auspiced from the doctrines and labours of his master never came to pass. The ancient feudal empire was extinguished, amid universal anarchy, in seas of blood."—*Legge, Ch. Class.*, III. i. Prol. p. 199.

"The state of China had waxed worse and worse during the interval that elapsed between Confucius and Mencius. The elements of disorganization which were rife in the times of the earlier sage had gone on to produce their natural results. One feeble sovereign had followed another on the imperial throne, and the dynasty of Chow was ready to vanish away. Men were persuaded of its approaching extinction. The feeling of loyalty to it was no longer a cherished sentiment; and the anxiety and expectation was about what new rule would take its place." "Many of the smaller fiefs or principalities had been reduced to a hopeless dependence on, or been absorbed by the larger ones. Of Loo (魯), Ch'ing (鄭), Wei (衞), Woo (吳), Ch'in (陳), and Sung (宋), conspicuous in the Analects, we read but little in Mencius. Tsin (晉) had been dismembered, and its fragments formed the nuclei of three new and vigorous kingdoms,—Wei (魏), Chaou (趙), and Han (韓). Ts'e still maintained its ground, but was barely able to make head against the State of Ts'in (秦) in the west, and Ts'oo (楚) in the south. The struggle for supremacy was between these two."—*Ibid.* ii. Prol. p. 22.

"These four States [Chin, Ch'u, Ch'in, and Wu] had from their situation grand opportunities for increasing their territory and their population; and the consequence was that before the end of the Ch'un Ts'ëw period each of them occupied an extent of country many times larger than the Royal Domain, while Ts'oo was nearly as large as all the Middle States, as those of Chow proper were called together. The way in which it and Tsin proceeded was by extinguishing and absorbing the smaller States adjacent to them, and by a constant process of subjugating the barbarous tribes, which lay on the south and west of Ts'oo, and on the north and east of Tsin. Ts'in lay farther off from the settled parts of the country, and its princes had not so much to do in absorbing smaller States, but they early established their sway over all the Jung, or the wild hordes of the west. The leadership, which . . . is improperly ascribed to duke Muh of Ts'in as being over the feudal States belonged to him in his relation to the Jung. The sea forbade any extension of the border of Woo on the east, but it found much land to be occupied on the north and south, and its armies, going up the Këang or Yang-tsze, met those of Ts'oo, and fought with them for the possession of the country between that river and the Hwae."—*Ibid.* V. i. Prol. p. 118.

"The States of Chow proper had little room for any similar expansion. They were closely massed together. From the first immigration of the ancestors of the Chinese tribe, their course had been eastwards and mainly along the course of the Yellow River, and most of the older occupants of the country had been pushed before them to the borders of the sea. Ts'e extended right to the sea, and so did Ke which the other absorbed. Then came the small States of K'e and Keu, the latter of which had a sea border, while they do not seem to have ever thought of pushing their way into what is now called the promontory of Shan-tung. The people of both K'e and Keu were often taunted by the other States with belonging themselves to the E barbarians. South from Keu there was a tract extending inland a considerable way, occupied by E tribes and the half-civilized people of Seu, and reaching down to the hordes of the Hwae, which Loo pleased itself with the idea of reducing (*Shih ching*, Pt. IV. Bk. II. Ode III.), but which it was never able to reduce. Altogether there was, as I have said, hardly any room for the growth of these Middle States, Ts'e was the strongest of them, and longest maintained its independence, ultimately absorbing Sung, which had itself previously absorbed Ts'aou. Of the others Heu, Ts'ae, Ch'in, the two Choo, Loo, and in the end Ch'ing fell to Ts'oo, and Wei became dependent on one of the marquisates or kingdoms into which Tsin was divided." "Woo for a time made rapid progress . . . but . . . was extinguished by Yueh a very few years after the close of the Ch'un Ts'ëw period, and Yueh itself had ere long to succumb to Ts'oo."—*Ibid.* V. i. Prol. pp. 118–19.

"Thus, as the time went on, it became increasingly clear that the final struggle for the supreme power would be between Ts'in and Ts'oo. If Tsin had remained entire, it would probably have been more than a match for them both, but the elements of disorganization had long been at work in it, and it was divided, about the year B.C. 400, into three marquisates. The lords of these soon claimed, all of them, the title of king, and the way in which they maintained for a century and a half the struggle with Ts'in and Ts'oo shows how great the power of T'sin unbroken would have been. Ts'e and Yen also assumed the royal style, and made a gallant defence against the powers of the west and the south; but they would not have held out so long as they did but for the distance which intervened between them and the centres of both their adversaries. Ts'in at last bore down all opposition, and though of all the great States that developed during the Ch'un Ts'ëw period it was the latest to make its appearance, it remained master of the field. From the kings of Chow it cannot be said to have met with any resistance. Their history for three hundred years before the extinction of the dynasty is almost a blank. They continued to hold a nominal occupancy of the throne so long only because there were so many other princes contending for it."—*Ibid.* V. i. Prol. p. 119.

[For an account of the covenant made between the States on the initiation of Hsiang Shu for the abolition of war, see *Legge, Ch. Class.*, V. i. Prol. pp. 120–2. "It was a delusion and proved a failure; but there must have been a deep and widespread feeling of the miseries which it was intended to remove, to secure for it its temporary acceptance."—*Ibid.* p. 122.]

[For an account of the various tribes which surrounded the Feudal States, and their gradual extinction or absorption by them, see *ibid.* V. i. Prol. pp. 122–35.]

"We know that the chiefs of some of the independent tribes bore Chinese titles of nobility. Legge thinks that they had assumed them on their own account. If this had been the case the Chinese chroniclers would scarcely have mentioned them without some contemptuous epithet. It is much more probable that some border tribes stood at that time in the same relation to the Chinese as do at the present day those of Western Szu-chuan, who, it is true, are reckoned, politically speaking, as belonging to that province, but in part have preserved their independence for thousands of years, in part recognize the supremacy of the Chinese, and pay tribute to them, while receiving presents from them. The latter class wear with pride the mandarin's button, bestowed by the Emperor, while a Chinese title, assumed without authority, would never be recognized. The present state of things in Western Szu-chuan, Kwei-chou, Yun-nan, and Kwang-si, where a supremacy of 2,000 years has narrowed, but not subjugated the territory of the independent tribes gives us a clear notion of the country ruled by the Chou Emperors. As these territories, over which the imperial government is unable to exercise any jurisdiction, and some of which are seldom or never entered by a Chinese, are yet assigned, not only to the provinces, but even to the district of the departments and counties, so the nine provinces of that day included a large number of tribes who defied the Chinese authorities, and their administration was in like manner entrusted to the feudal princes. The same thing had, as we must assume, been the case, in a still greater degree, in the time of Yu, 1,000 or 1,100 years before the Chou-li was drawn up. Considerable districts, still independent, at that early time, may in the interval have been occupied by the rising tide of the more civilized race, and the inhabitants subdued, or driven further back into the mountains. At the beginning of the Chou dynasty, the barbarians still took up a threatening position at nearly every place where the mountains abutted on the plain, and lived even in the immediate neighbourhood of the Wei valley, the Lo-ho, and the valleys of Shansi. On the Yang-tsze, too, the Chinese occupied the flat land only. But that very power of the princes which was so injurious to the imperial authority, was during the long rule of the Chou, favourable to the gradual absorption of the independent tribes. The conquest of the Hwai and Lai alone effected an important expansion of the supremacy of the Chinese people, though in the first place it was only by means of individual rulers, who claimed to be independent."—*Richthofen, China*, i. 386.

"In China it is not to be doubted that the unconquered tribes to the south were, as they still are, of tone-using, monosyllabic race, akin to the Chinese. . . . China's expansion was southwards amongst her own kind, her truly foreign foes lay northward across the deserts"—*Parker, China: Past and Present*, pp. 5–6.

In "330 B.C. the feudatory king of Ch'u (Hu Nan) had conquered Yün Nan; but owing to wars with revolutionary Ts'in the conquering general could not get back, and he had therefore founded a kingdom there."—*Parker, China*, p. 34.

[In 240 B.C., five states (Yen, Chao, Han, Wei, and Ch'i) formed an alliance under Ch'u to resist Ch'in, but were defeated. Ch'u then removed its capital further south into Kiang-nan.]—*Faber*, p. 34.

"The rise and establishment of feudalism and provincialism was, however, hostile, and unsuited to the Imperial instincts characteristic of China. Civilization might advance, and cities might prosper, but the cultivator of the soil, who furnished recruits to the armies, and who suffered from each invasion, held the system in abhorrence. Imperial power could alone preserve the poor from the petty tyrannies of nobles and princes; and as small States coalesced into larger ones, so the larger kingdoms in their turn were submitted to the same corroding influence. The Imperial or universal nature of the Chinese hieroglyphical language, bound down by no limits of verbal sounds to any district; the magnificent and all-embracing moral system of Confucius; the habit of selecting men of ability, not of birth, to high offices of the State; and, finally, chiefly the existence of a literary class, bound in all the differing States by common rules and common standards, aided powerfully in the work of disintegration. After nearly 200 years of war, the champion of Imperialism, the State of Ts'in, the Russia of ancient China, like its modern anti-type the largest, the most barbarous and the most unscrupulous of the contending States, won the victory against the divided forces of nationalism and provincialism. In 221 B.C. the State of Tsu was overrun, and in 209 B.C. the last Prince of the house of Chow was reduced to the rank of a common man. The first *Huang Te*, or sovereign ruler of China, Ch'in Shih, divided China into 36 *chun* (principalities) or provinces . . . and, by a bloody and remorseless tyranny, maintained himself on the throne till 209 B.C., when he died. His persecution of the *literati*, who, by a conciliatory treatment, would have been his best allies, and his burning of priceless literary treasures, have left an indelible blot on his fame, and his memory is, this day, held accursed by all Chinese."—*Oxenham, Atlas*, Pref. p. ii.

"The first stage in the formation of the Chinese nation terminated with the ascendency of the State of Ts'in and the establishment of its short-lived dynasty."—*Legge, Ch. Class.*, V. i. Prol. p. 134.

THE FOLLOWING TABLE SHOWS THE CHIEF STATES EXISTING CONTEMPORANEOUSLY, WITH DATES OF ORIGIN AND EXTINCTION OF EACH STATE, AND FINAL ABSORPTION BY CH'IN.

Lieh Kuo, Disconnected States. — *Chan Kuo*, Warring States (484–221).

Population.—[In *Wên hsien t'ung K'ao Hu K'ou, c.* 3, p. 1, the total population is stated as 13,704,923.]

"An account of the nine provinces and their produce in the Chow Li mentions the proportion of men to women in each province (Bk. XXXIII. §§ 8–49), which varies extraordinarily, from five to one to one to three. The average of the nine is possible enough, as it is at the rate of twenty-five men to twenty-four women; but it is difficult to believe that the statistics give an accurate account of such variations as might be noted, for instance, in the United States between Massachusetts and Nevada, though there is no other conceivable explanation of the discrepancy if historical."—*Simcox*, ii. 71.

"The *Ssŭ Min* had charge of recording the population statistics. As soon as children had teeth they were put on the register, being distinguished according as they lived in the country, capital, or wilderness. The sexes were recorded separately, and births and deaths entered for comparison in the register every year. A general comparison was held once in 3 years. The number of all the people was announced to the *Ssŭ K'oŋ*, who on the sacrificial day *ssŭ min* of the 1st month of winter, offered the record to the king who received it reverently and preserved it in the royal treasury."—*Wên hsien t'ung K'ao hsiang chieh, c.* 3, *Hu K'ou K'ao*, p. 1*a*.

"Children were registered at three months old, the time when they received from the father their first or childish name. A record was made of the child's birth on such a day, month, and year, and the secretaries of the hamlets made two copies of it, one of which was kept in the village office, and the other passed to the officer of the district. It is thus evident that in well ordered departments the materials for a census of some kind must have existed from very early times. Indeed, the very reasons given against the proposal, when a prince in the 9th century B.C. was anxious to number the people of a certain district, betray some experience of the results of statistical inquiries. The wise minister of the period observed (*De Mailla, Hist. générale*, etc., ii. 42) that it was the business of the local officials to know the number of families and of persons in their departments; the officers in charge of public works must know how much labour they can command, and the military officers know how many soldiers can be raised, and that is all the knowledge required for practical purposes. But, though the district in question was one of the most populous in the country, the total number of the inhabitants was sure to fall short of the emperor's expectations, while the report of his disappointment would be sure to reach the neighbouring princes, and encourage them to presume on his supposed weakness."—*Simcox*, ii. 71.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

"The next great historical advance seems to be south-west into modern Sz Ch'wan ('Four Streams') [110 B.C.], and then through the two great lake regions down south by way of the navigable Kan River of Kiang Si, and the Yüan and Siang rivers of Hu Nan into the region of Canton, which . . . belongs to an entirely different catchment area. But the valley of the Yang-tsze, as a whole, and the provinces south of it and at its mouth, do not appear to have become properly assimilated, either politically or industrially, before the commencement of our Western era. Moreover, the portions of all the seaboard provinces lying very near to the coasts seem to have been out of hand up to a very recent date—say 500 years ago; so that we must picture in our minds the Chinese race spreading like a fan from the southern bend of the Yellow River towards Upper Yang-tsze and the coasts, its political force becoming weaker and weaker as it approaches those coasts and the Tibetan highlands. Hence we find that, whereas throughout the whole of interior China one tongue is now spoken—subject to more or less serious variations in dialect, never of an incongruous or impossible kind—in the coast provinces south of the Yellow River, and in those alone, are spoken dialects so exceptional as to rise almost to the distinction of separate languages; but only so in the sense that Swedish, Danish, German, and Dutch are languages foreign to one another; that is, though words differ in sound, they are easily traceable to one indefinable or elastic original."—*Parker, China*, p. 6; see also pp. 9, 12.

"The invading Chinese have in their expansion invariably followed the lines of least resistance."—*Ibid.* p. 12.

"Their [the Ch'ins] supremacy was not acquiesced in by the other great feudatories without a struggle, and more than one campaign was fought before all rivals were removed from their path, and their authority passed unchallenged as occupants of the Imperial office."—*Boulger, Short Hist.*, p. 5.

"On the ruins of the old feudal system, the landmarks of which his three or four predecessors had succeeded in sweeping away, the 'First Emperor' laid the foundations of a coherent empire which was to date from himself as its founder."—*Giles, Historic China*, p. 32.

"He effected the revolution and succeeding dynasties adopted his system, and gradually moulded it into the forms and proportions which are now existing."—*Legge, Ch. Class.*, i. Prol. p. 108.

"One of the principal ministers, Chow Ts'ing-shin, came forward and said, 'Formerly, the State of Ts'in was only 1,000 le in extent, but your Majesty, by your spirit-like efficacy and intelligent wisdom, has tranquillized and settled the whole empire, and driven away all barbarous tribes, so that, wherever the sun and moon shine, all appear before you as guests acknowledging subjection. You have formed the States of the various princes into provinces and districts, where the people enjoy a happy tranquillity, suffering no more from the calamities of war and contention.' "—*Ibid.* p. 7.

"He sent an army of 300,000 men to fight against the Huns. He despatched a fleet to search for some mysterious islands off the coast of China; and this expedition has since been connected seriously with the colonisation of Japan."—*Giles, Historic China*, pp. 32–3. "One of his best generals, Moungtien [Mêng T'ien], crossed what is now the Gobi Desert, and made Hami the frontier fortress of the Empire."—*Boulger, Short Hist.*, p. 5.

"The new empire extended 'from the plains of Yen and Chao (the modern Ho Nan and Chih Li) to the banks of the Yang-tsze and the hills of Yüeh (the modern Chêh Kiang), and from the Lake of Tung-ting to the Eastern Sea' (*W. F. Mayers*). 'The nomads, then called Hiung-nu, were for the first time driven beyond the northern bend of the Yellow River, and nearly the whole of what we call Southern China was officially annexed, if in a loose sort of way. . . . The quality of these southerly annexations and the degree of human kinship existing between the Chinese and the peoples of the south may be compared with the northerly annexations of the Romans, and the degree of Aryan kinship existing between them and the Gauls and Germans. Similarly, though in the reverse direction, the hereditary enemy Carthage may be compared with the ancient Hiung-nu foe. But despite the division of nearly the whole area of the Eighteen Provinces of to-day into thirty-six governments, this first truly imperial dynasty, called that of Ts'in from the principality of its origin (Shen Si), seems only to have ruled immediately and directly over the Chinese plain. Like the earliest settled states of America, the oldest of these thirty-six divisions were conceived on a very small scale, whilst the newly conquered 'territories'—like early and half-Spanish Texas as compared with ancestral Massachusetts—each covered an area almost as great as that of all Old China.' "—*Parker, China*, pp. 18–19.

Remembering the fate of the Chin State [*cf.* ante] "it is not surprising that politicians, of what we may call the new Imperialist School, suspected the provincial scholars of invoking the authority of the ancients, to weaken the imperial power, by restoring the disorganization and turbulence of the period of feudalism."—*Simcox*, ii. 103.

"As the possession of a common writing and a common literature has always been one of the strongest influences at work in maintaining the unity of the Chinese Empire, it is curious that this [Ch'in Shih's] attack upon letters and the *literati* should have been made in the interests of centralization. But the same minister who is made answerable for the burning of the books addressed another memorial to the emperor, when it was proposed to banish all natives of other States, in which he urged the importance of employing all the talents of the empire. So that it is probable that after all his ambition was, rather to substitute a hierarchy of practical statesmen for the arrogant and unworldly students of antiquity, than to do away with the peculiarly Chinese notion of absolute government, subject to the advice of intelligent ministers."—*Ibid.* ii. 104. More than 460 scholars were put to death.

"Suh Chou in North An Hwei . . . from 200 B.C. to A.D. 1900 has always been a *point de repaire* for rebels of the 'Boxer' type."—*Parker, John Chinaman*, p. 238.

"The brief existence of the Ts'in dynasty seemed but to afford a breathing time to the warring States, and then China became once more horrid with the din of arms. Most of the States which had contended over the throne of Chow again took the field, and others with them, until, after sixteen years more of strife and misery, the contest was decided in favour of the House of Han [206 B.C.], which joined to force of arms respect for the traditions of the country, and a profession at least of reverence for the virtues of justice and benevolence." —*Legge, Ch. Class.*, V. i. Prol. p. 120. See also following extract.

[At the time of the overthrow of the brief Ch'in dynasty, an attempt was made to reconstitute the ancient feudalism. Some hardy adventurers and some more or less direct descendants from the former lords arrogated to themselves the title of king. But when the Hans had strengthened their power, they adopted on their own account the policy of the Ch'in and set about suppressing one after another the kings who had given them umbrage. If they maintained the royal dignity, they reserved it with a jealous care for the members of their own family; with some transient exceptions it was necessary to belong

to the Liao family in order to obtain the title of Vassal-King (諸侯王 *Chu Hou Wang*). The vassal-kings had kingdoms (國 *kuo*), of which they were, in the beginning, the almost absolute rulers; they maintained in them a court analogous to that of the Son of Heaven; and they had the right to nominate the officials in their estates. However, in spite of the blood-relation which attached them to the emperor, this semi-independence might render them formidable; so the emperor Ching (156–140 B.C.) and his successors attempted more and more to restrict the prerogatives of the kings; they deprived them of the privilege of conferring public offices; they withdrew the too ambitious titles of the officers of their courts; they divided their fiefs amongst all their sons, fearing that the right of primogeniture would preserve the integrity of the more powerful kingdoms. This course of action did not fail to give rise to numerous disaffections and even revolts, but in the long run the skill and patience of the Han emperors attained its object; the vassal-kings grew feebler and feebler and the unity of the empire was assured.]—*Chavannes*, ii. 530.

"The 36 *chow* of the first Emperor were increased to 103 fiefs, and the new dynasty was further strengthened by the adherence of the *literati*, who were again received into favour. The map [of the empire at this time] . . . shows how slightly, during the 200 previous years of strife, Chinese influence had penetrated southwards. Towards the close of the Han dynasty, in A.D. 23, the Eastern Han arose. Feudalism received a check . . . and 13 *chows*, or provinces, with civil governors, had some slight superintendence over the 105 fiefs."—*Oxenham, Atlas*, Pref. p. ii.

"The Hiung-nu soon reappeared upon the frontiers. It was now that the first definite tidings of Japan (then only known as an agglomeration of the Wo or Wa tribes) began to arrive over the sea." (See *infra.*) During the period 202–179 B.C., "there occurred the first really authentic and properly recorded relations with the Hiung-nu, who were then quite able to assert their perfect equality with China, and even presumed to talk of marriage alliances."—*Parker, China*, pp. 19, 20.

"There is excellent ground for believing that the Scythians, Huns and Hiung-nu were practically re-shuffles of one and the same people—the Turks of later date."—*Ibid.* p. 20.

"In the Han times the 'six states north of the [T'ien Shan] mountains' were nomad, and the 'thirty-six town states' were settled in their habits."—*Ibid.* p. 57.

"The ill-assimilated conquests of the short-lived Ts'in dynasty left to the Han house, in addition to Tartar troubles, a legacy of further wars with Corea (then called Chaosien) and the southern coasts of China. It is possible that one of the motives for marching on Corea was the desire to turn the left flank of the Hiung-nu. Although in modern times the 'Yüeh' of Canton is written at least (but not spoken) in a different way from the 'Yüeh' of Chêh Kiang, there was no such difference then, and there is reason to believe that one race, more akin to the Annamese than the Chinese, then occupied the whole of the coast regions south of the Yang-tsze, including the whole valleys of the Canton (Si Kiang) and Tonquin (Red and Black) rivers. It also seems that most, if not all, of the settled countries bordering on China were then ruled by Chinese adventurers; or at all events by native princes acquainted more or less with the Chinese system of records, and having a Chinese blend in their blood derived from immigrants."—*Ibid. p.* 20.

"The Hans are the only Chinese emperors who seem to have aimed at extending their authority by the ordinary arts of war and conquest. The 123rd book of Ssema-tsien's history, which treats of the trading expeditions and commercial wars of the first Hans, during the years between 140 and 97 B.C., has been translated (*Nouveau Journal Asiatique*, 1828, ii. 418), and gives a very graphic, circumstantial and, to all appearance, accurate account of the Chinese campaigns with the kingdoms east of the central desert, and the motives which led to them. The chief of these kingdoms, Ta-ouan and Ou-sun, were identified by Klaproth approximately with the modern districts of Ili and Ferghana. They were reported to be populous, civilized, resembling the Han in their government, and to contain rare and valuable commodities. It was therefore represented to the emperor that they *might be induced by presents to bring the homage of their commerce.* (*Ibid.* p. 427.) Caravans were accordingly sent," but "finally war was declared."—*Simcox*, ii. 108-9.

"The period of conquest extended from 138 to 110 B.C., and at the time when Wu Ti began his military career (128–108), the King of Ch'ang-sha (now still the capital of Hu Nan) was the only one really subject to the Emperor of China. The Canton state was called 'South Yüeh,' and the Foochow state 'Min Yüeh'; even the north part of the latter, with capital at the modern Wênchow, was called the 'Eastern Seaboard of Yüeh.' The princes of both the latter were descendants of one common King of Yüeh, in feudal times a powerful sovereign. Subsequently to 110 B.C. their populations were moved to the River Hwai region."—*Parker, China*, p. 21; see also *infra.*

"The drain upon the resources of the country [in extending the influence of the Empire in the West] was so great that the spreading reputation of the Sons of Han proved to be too dearly bought. To provide for the army the currency was debased, and even victories proved expensive, because every band of tribute-bearers was entertained at the Imperial cost, and dismissed with presents far exceeding the value of their own offerings. This magnificence, which was politic in a power aiming only at an honorary protectorate over the whole continent, was found by the weaker princes of the line to be so heavy a burden, that it was once seriously proposed to decline to receive an envoy from the Huns on the ground of expense. And when the records of the Han Dynasty were closed, the chief moral which they seemed to posterity to point was a warning against military ambition and the sacrifice of the internal administration to a brilliant foreign policy."—*Simcox*, ii. 110.

"It was the boast of the T'ang Dynasty that it accomplished by peaceful policy more than was attempted unsuccessfully by the warlike Hans. The ideal of the native statesman was a government too formidable to be attacked and too prudent to be aggressive; and the Hans, notwithstanding their brilliant campaigns in Central Asia, were exposed to incursions on the east and south of so formidable a character that in one case the people of a border principality were removed *en masse* to a more sheltered settlement north of the Kiang."—*Ibid.* ii. 110.

"The conquest of Corea led to the further discovery by land of the Japanese, who then occupied (whether as immigrants or as aborigines is not yet settled) the tip of the Corean peninsula, as well as the southern half of the Japanese islands."—*Parker, China*, p. 21.

"The necessity of 'turning the flank' of the Hiung-nu, over whom the Chinese gained a decisive success in B.C. 119, led to alliances with other nomad races in modern Ili and the New Territory, and finally to the annexation of Khotan, the Pamirs, Kokand, and, in short, the whole modern Chinese Empire. Although the Hiung-nu were not yet completely subdued, yet their lines of communication were pierced. Parthia, Mesopotamia, and even Syria were distinctly 'located,' if not officially visited, and there are numerous indications pointing to an acquaintance with the Greek dynasties of Bactria and Afghanistan. Now first Buddhism was heard of, and India; the attempt to reach India by way of Yün Nan carried with it the discovery and partial annexation of the various Shan, Miao, and Tibetan tribes. Hindoo missionaries began to find their way to China through Turkestan, and the Burmese (then called Tan) are first mentioned. King An-tun, of Great Ts'in, is said to have sent an expedition or mission by way of Tan in A.D. 166, and there seems good reason to suppose this word must be 'Antoninus.' Whoever the traders were who undoubtedly used to come from the West by sea, it is stated that they were called Ts'in (possibly = Syr) on account of their comely appearance like the Chinese Ts'in people. The annexation of Nan-yüeh involved that of Hainan, Kwang Si, the Lien-chou peninsula, and at least half of Cochin-China. It is even thought that Christians and Jews found their way to China *viâ* Tartary during the After Han dynasty, which reigned for two centuries after Christ at modern Ho-nan Fu, as the Early Han did for two centuries before Christ at Ch'ang-an (Si-an Fu)."—*Ibid.* pp. 21–2.

"During the whole period, the empire, if not enjoying uninterrupted tranquillity either at home or abroad, was nevertheless making vast strides towards a more settled state of prosperity and civilization. There were, however, constant wars with the Tartar tribes to the north, against which the Great Wall proved to be a wholly ineffectual barrier. Also, with the various Turkic tribes on the west; especially with the Huns. . . . The wild tribes of modern Yunnan were reduced to subjection, their territory may be considered as added to the empire from this date."—*Giles, Historic China*, pp. 34–5.

[Kao Tsu's reputation for just administration induced the King of Nanhai—a state composed of the southern provinces of China with its capital at or near the modern Canton—to tender his allegiance. But the Huns began a course of active aggression that entailed serious consequences for both China and Europe. All the districts taken from the Tartars by Mêng T'ien were recovered by Meha. The consolidation of the Hans was effected under Wên Ti (179–156 B.C.).]—*Boulger, Short Hist.*, pp. 10–13.

"One of his [Wu Ti's] earliest conquests was to add the difficult and inaccessible province of Fuhkien to the Empire. He also endeavoured to propitiate the Huns." . . . The "idea of engaging in a mortal struggle with the Tartars gained ground, and became in time the fixed policy of China. . . . The authority of Voreti [Wu Ti] continued to expand. He annexed Szchuen, a province exceeding in size and population most European States, and he received from the ruler of Manchuria a formal tender of submission. In the last years of his reign the irrepressible Hun question again came up for discussion, and the episode of the flight of the Yuchi from Kansuh affords a break in the monotony of the struggle, and is the first instance of that western movement which brought the tribes of the Gobi desert into Europe. The Yuchi are believed to have been allied with the Jats of India, and there is little or no doubt that the Sacæ, or Scythians, were their descendants. They occupied a strip of territory in Kansuh from Shachow to Lanchefoo, and after suffering much at the hands of the Huns under Meha, they resolved to seek a fresh home in the unknown regions of Western Asia," and Wu Ti failed to induce them to return.—*Ibid.* p. 13.

Failing in his attempts to subdue the Tartars, Wu Ti "employed his troops in conquering Yunnan and Leaoutung, instead of in waging another war with the Huns." "He added several provinces to his Empire" and increased "the stability of the Han dynasty."—*Ibid.* pp. 13–15.

[The following particulars of the dates of Wu Ti's conquests are given by *Parker* (*China*, p. 22, note):—

B.C. 127–5.—Ordos, both corners of the northern bend of the Yellow River.

B.C. 115–111.—Modern Kan Suh (Suh-chou, Liang-chou, Kan-chou), up to Tun-hwang (Purun-ki River).

B.C. 111.—Modern Canton, Tonquin, Hainan, Kwang Si, and part of Kwei Chou.

B.C. 110–9.—Western Yün Nan and Sz Ch'wan. Eastern ditto.

B.C. 108.—Corea (northern half only).]

The Tartars were induced to sue for peace. "It is said that all the tribes and countries of Central Asia, as far west as the Caspian sent him [Hsüan Ti] tribute."—*Boulger, Short Hist.*, p. 16.

"At home, the eunuchs gave an immense deal of trouble by their restless spirit of intrigue; besides which, for nearly twenty years the Imperial power was in the hands of a famous usurper, named Wang Mang, who had secured it by the usual means of treachery and poison, to lose it on the battle-field and himself to perish shortly afterwards in a revolt of his own soldiery. This dynasty also witnessed the spectacle—most unusual in the East—of a woman wielding the Imperial sceptre; and hers was not a reign calculated to inspire the people of China with much faith either in the virtue or the administrative ability of the sex. In Chinese history, however, her place is that of the only female sovereign who ever legitimately occupied the throne."—*Giles, Historic China*, p. 35.

"Wang Mang the usurper was certainly a capable administrator, but in seizing the throne he had attempted a task to which he was unequal. . . . The Huns resumed their incursions. . . ." His short-lived dynasty is denied a place in Chinese history.—*Boulger, Short Hist.*, p. 16.

"At the close of the former and beginning of the After Han Dynasties about the commencement of the Christian era, there existed a rebellious and apparently secret society, whose members, before going to battle . . . painted their eyebrows with vermilion, and were . . . called the *Chih Mei*, or Carnation Eyebrows rebels. Their leader, Fan Ts'ung, after having taken a prominent part in overthrowing the usurper Wang Mang [tried to seize the sovereignty, but was ultimately defeated by Fêng I, Liu Siu's general.] At this period, there were other similar societies, such as the Tung Ma, or Copper Horses, the T'ieh Ching, or Iron Shins, and others, all of which took part in the anarchy that prevailed. About A.D. 170, a student of Taoism named Chang Kioh, by pretending to supernatural powers . . . gained a large number of followers in the north-east of China, who [revolted in 184, and] in a month subdued the whole north of China. These were the famous Yellow Turban rebels who played such an important part in bringing about the downfall of the After Han dynasty, and ushering in the turbulent times of the Three Kingdoms."—*Ch. Rev.*, xxi. 159. See also *D'Hervey-Saint-Denys, Poésies*, Introd. pp. xxviii–ix.

"The eldest of the surviving Han princes, Liu Hiuen [Liu Hsüan], was placed on the throne, and the capital was removed from Singan to Loyang, or Honan. Nothing could have been more popular among the Chinese people than the restoration of the Hans. . . . Chingtse, the Queen of Kaochi, which may be identified with the modern Annam, defied the Chinese, and defeated the first army sent to bring her to reason, . . ." but she was subsequently overthrown. The general who vanquished her "more than held his own on the northern and north-west frontiers. When Kwang Vouti died, in A.D. 57, after a brilliant reign of thirty-three years, he had firmly established the Han dynasty."—*Boulger, Short Hist.*, pp. 16, 17.

"The satrap system was in full vogue; princes were given provinces 'to eat,' and not to govern as centralised officials. North of the Great Wall were the Hiung-nu (now broken up and partly driven west) and the Tungusic hunter-nomads (aiming at the decrepit empire of their former masters the Hiung-nu). Then came the pastoral Tibetan tribes of the Kokonor region and the Upper Yang-tsze, gradually merging into the Shan peoples of Yün Nan, the unorganised Miao of Kwang Si, and the slowly retreating Yüeh tribes, originally extending from modern Ningpo to Canton. These last seem to have very soon lost their separate identity, and to have permanently retired into Annam proper or to have been merged into the Chinese."—*Parker, China*, pp. 22–3.

"The country enjoyed a large measure of peace through the policy of Mingti and his father. A general named Panchow [Pan Ch'ao], who was perhaps the greatest military commander China ever produced, began his long and remarkable career in this reign, and, without the semblance of an effort, kept the Huns in order, and maintained the Imperial authority over them."—*Boulger, Short Hist.*, pp. 17–18.

"Victories were obtained over the Northern Huns, and so much of Bokhara conquered that fifty different princes submitted, and sent hostages to China. All Asia, from the sea of Japan to the Caspian, was tributary to the Middle Kingdom."—*Simcox*, ii. 117. See also *Boulger*, pp. 18–19.

"After this brilliant and memorable war, Panchow returned to China, where he died at the age of eighty. With him disappeared the good fortune of the Han dynasty, and misfortunes fell rapidly on the family that had governed China so long and so well."—*Boulger, Short Hist.*, p. 18.

[In A.D. 166, "associations of friends" began to give trouble to the government.]—*Giles, Bio. Dic.*, p. 967.

"After Hwanti's death [A.D. 167] the decline of the Hans was rapid. . . . The last Emperors possessed only the name of Emperor. The practical authority was disputed among several generals, of whom Tsow Tsow [Ts'ao Ts'ao] was the most distinguished and successful; and he and his son Tsowpi [Ts'ao pi] founded a dynasty. . . . In A.D. 220 Hienti, the last Han ruler, retired into private life as Prince of Chanyang, thus bringing to an end the famous Han dynasty, which had governed China for 450 years."—*Boulger, Short Hist.*, p. 19.

"Over-taxation, civil war, and a pestilence which raged between 170 and 175, combined to desolate the provinces, and during the reign of the last Emperor (190–220 A.D.) the virtual dismemberment of the empire had gone so far that the generals, who founded the three kingdoms, did so at the expense of other rebels, rather than at that of any legitimate ruler."—*Simcox*, ii. 121.

"Among the families that have reigned in China none have obtained as high a place in popular esteem as the Hans. They rendered excellent work in consolidating the Empire and in carrying out what may be called the Imperial mission to China. Yunnan and Leaoutung [Liaotung] were made provinces for the first time. Cochin China became a vassal state. The writ of the Emperor ran as far as the Pamir."—*Boulger*, p. 19.

[The *population* under the Ch'in is estimated at "over 10,000,000" (*Wên hsien t'ung k'ao, Hu k'ou pu, c.* 3, p. 2); and under the Han (in A.D. 2) at 59,594,978, the number of families being 12,233,062 (*ibid.* p. 3; *Tzŭ shih ching hua, c.* 53, p. 29*a*).]

Period of Disruption (221 *to* 589).—*Table IV.*

"From A.D. 220 to about 265 China was split up into three empires: a branch of the old Liu family of Han in Sz Ch'wan (Shuh), the Sun family south of the Yangtsze (Wu), and the usurping Ts'ao family in the north (Wei). This state of affairs is very similar to the partition of the Roman Empire into the East and West monarchies at Constantinople and Ravenna, or Rome. The continuity of imperial history is now broken, for the southern dynasty has nothing to do with the long struggles between Tunguses, Hiung-nu, and Tibetans for predominance in the north; whilst the northern dynasty lost all touch with the Syrians, Hindoos, Javans, and other mercantile people coming in trading vesesls to Canton and other marts on the coast. In A.D. 222 the Emperor of Wu divided the old realm of Kiao-chï (South Yüeh) into two manageable halves. The name of Kwang-chou was given to what is now the double Canton province, and Tonquin was called Kiao-chou. Corea slipped away, and Chinese influence disappeared from the Far West. In a word, the whole *Weltpolitik* of the great Han dynasty crumbled to pieces."—*Parker, China*, p. 23.

"Though the three kingdoms had separate rulers, their language and methods of administration were similar, and the State of Wu in the South, and of Shu in the West extended the influence of the Chinese race, and assisted its emigration."—*Oxenham, Atlas*, Pref. p. ii.

"Looking back over the 2,000 years during which the history of China has been recorded at length, we see that in each period of prosperity, the standard of civilization and well-being stands a degree higher than that of the last corresponding period. The proportion of the population untouched by the horrors of civil disorder was greater during the period of the three kingdoms, which followed the fall of the Eastern Hans, than in the days of the Warring States before the reunion of the empire under Chi-hoang-ti."—*Simcox*, ii. 123.

"It was essentially an age of heroes, of martial prowess, of bold attack, and skilled defence, of Odyssean cunning and Hectorean courage. On the other hand, the empire was deluged in blood; cities were sacked, homes desolated, and vast tracts

converted into desert solitudes. An invasion of the Tibetans, followed by a rebellion, popularly known as the revolt of the 'Yellow Turbans,' and coupled with palace intrigues, were the primary causes of all the trouble, which began with a temporary usurpation of the throne, the eunuchs being as usual in the thick of the mischief."—*Giles, Historic China*, p. 43.

[The central and northern provinces contained the greatest population and resources.]—*Boulger, Short Hist.*, p. 21.

"The balance of success gradually declared itself in favour of Wei. . . . The Chow dynasty of the Later Hans was the first to succumb to the Princes of Wei, and the combined resources of the two states were then directed against the southern principality of Ou. The supreme authority in Wei had before this passed from the family of Tsowpi to his best general Ssemachow [Ssŭ Ma-chao], who had the satisfaction of beginning his reign with the overthrow of the Chow dynasty." "He might have completed his work at a stroke," but "the conquest of Ou was put off for twenty years. Ssemachow died in A.D. 265, and his son Ssemachu [Ssŭ Ma-Chu] founded the new dynasty of the Later Tsins [Chin] under the name of Vouti [Wu Ti], or the warrior prince."—*Ibid.* pp. 21–2.

"The Wei dynasty caused large numbers of people to emigrate from 淮北 and the Wu dynasty did the same from 淮南. These migrations are of historical importance."—*Ch. Rev.*, xiii. 125.

"The troubles and disturbance incidental to neighbouring and hostile States re-awakened the longing for harmony and unity of rule, and these aspirations were satisfied by the advent to power of the Chin dynasty."—*Oxenham, Atlas*, Pref. p. ii.

"From A.D. 265 the Sz-ma family (distantly related to the famous historian) were for a time nominally sole rulers of China, under the style of the Tsin [Chin] dynasty. . . . The imperial house was distinctly literary and peaceful, rather than warlike and ambitious; in fact, it developed those qualities which we now consider peculiarly Chinese. It was the great age of calligraphy, *belles lettres*, fans, chess-playing, wine-bibbing, and poetry-making; of strategy rather than hard fighting, and of political timidity. From this time dates the rule that no one should set foot in China, at least to remain, without bringing tribute. Moreover, a succession of Tartar dynasties of very short duration kept the whole of the extreme north in a perpetual ferment. One curious and permanent result of all this was that the Chinese centre of gravity was entirely changed."—*Parker, China*, p. 25. See also LANGUAGE.

Wu Ti [265–90], in the latter part of his reign, "allowed the army to be so much reduced that the Turkic tribes in the north-east encroached upon the empire. Already during the troublous times of the Three Kingdoms they had penetrated within the Great Wall, and now it was necessary to buy their nominal allegiance with titles and dignities. No less than eight princedoms of important provinces were created, which proved under the following reign to be sources of infinite trouble."—*Giles, Bio. Dic.*, p. 675.

"Hwaiti [307–13] is considered the first Chinese Emperor to have fallen into the hands of a foreign conqueror. Two years after his capture, Hwaiti was compelled to wait on his conqueror at a public banquet, and when it was over he was led out to execution. This foul murder illustrates the character of the new race and men who aspired to rule over China. The Tartar successes did not end here, for a few years later they made a fresh raid into China, capturing Hwaiti's brother and successor, Mingti, who was executed, twelve months after his capture, at Pingyang, the capital of the Tartar Hans." "After these reverses the enfeebled Tsin rulers removed their capital to Nankin, but this step alone would not have sufficed to prolong their existence had not the Liu princes themselves suffered from the evils of disunion and been compelled to remove their capital from Pingyang to Singnan. Here they changed their name from Han to Chow, but the work of disintegration once begun proceeded rapidly, and in the course of a few years the Liu power crumbled completely away. Released from their most pressing danger by the fall of this family, the Tsin dynasty took a new lease of life, but it was unable to derive any permanent advantage from this fact. The last Emperors of this family were weak and incompetent princes, whose names need not be given outside a chronological table. . . . Dissatisfied with his position, Liuyu murdered one Emperor and placed another on the throne, and in two years he compelled his puppet, the last of the later Tsins, to make a formal abdication in his favour. For a considerable portion of their rule they governed the whole of China, and it is absolutely true to say that they were the least worthy family ever entrusted with so great a charge. Of the fifteen Emperors who ruled for 155 years there is not more than the founder whose name calls for preservation on its own merits."—*Boulger, Short Hist.*, pp. 22–3.

The "division of the Empire shows how loosely it was held together, and how it had never become really consolidated. In times of trouble the centrifugal force was always stronger than the centripetal, and the central government was unable to hold all the parts together by bonds strong enough to resist disruption."—*Pott, Sketch of Ch. Hist.*, p. 52.

"Again the turbulent feudal elements caused riot and rebellion, and the movement was aided by successive Tartar invasions. These barbarians established the Wei dynasty . . . in the North of China, the S. Sung and the S. Tsi dynasties . . . governing the South of China."—*Oxenham, Atlas*, Pref. p. ii.

"From 309 to 439 there was a bewildering succession of Hiung-nu, Bastard Hiung-nu, Tungusic, Tibetan, Tibeto-Tungusic, Migrated Tungusic, and rebel Chinese 'dynasties,' ruling in various parts of the north, from Corea to Kokonor; in addition to, and in competition with, first the Tsin Empire, and later the Northern Empire of the Tobas and the contemporaneous Chinese Empires at Nanking"—*Parker, China*, p. 24.

[In the reign of T'ien Chien (502–20) the Fu Nan country sent tribute.]—*Nan shih, Shih wu yüan hui, c.* 3, p. 6*a*.

"One of the last emperors of the period . . . succeeded in adding largely to the empire by annexation towards the west. . . . Embassies reached his court from various nations—among others from Japan and Cochin China—and helped to add to the lustre of his reign."—*Giles, Historic China*, pp. 52–3, 51.

"We learn from the Chinese annals, that in the year 530, a Persian embassy came to China, and brought a tooth of Buddha as a present."—*Koeppen, Die Religion des Buddha*, i. 520.

"The rival Tartar dynasties in the north were finally dispossessed by a Tungusic family called Toba, which ruled for 200 years with great vigour over North China, whilst the pure Chinese governed the southern half. This was the period known as the 'North and South Dynasties,' and ever since that time it has been as much the rule as the exception for Tartars of some kind to divide the empire on equal terms with native dynasties. Here, again, we find a close parallel in Roman history. The Stilichos, Ricimers, Alarics, and Theodorics all made way for the permanent northern Frankish empire of Charlemagne. But neither the northern nor the southern half of China was continuously ruled [for succession and duration of dynasties see p. 27]. . . . Capitals were often temporarily shifted. . . . The intermarriages between Han and the Hiung-nu produced dangerous results, for one barbarian based his claim to found a Chinese dynasty on the pretext that he was the only true direct descendant of the first Han Emperor. . . . The Tibetans never had more than one short innings; never again did they assume imperial airs, although they made many conquests in later times. But the Hiung-nu (Turks) and Tunguses (Kitans, Nuchêns, Manchus) will often re-appear; as to the Mongols, they seem to have been Turkified Tunguses."—*Parker, China*, pp. 26–7.

"During this period (386–582)"—wherein the Toba Tunguses of North China "for 200 years had managed things pretty much in their own way"—another nomadic power called the Juju, or Jeujen (Gibbon's, Geougen), had become formidable in the desert region, and had also succeeded in subduing most of the Hiung-nu remnants in Southern Siberia and elsewhere. One of their subject Hiung-nu hordes was that of 'Türk,' so called from an alleged native word meaning 'helmet,' having reference to the helmet-shaped mountain overshadowing one of their chief valleys (lat. 40° N., long. 102° E., or thereabouts). These Turks were mostly smiths by profession, and were employed by their Jeujen masters to forge weapons and armour; but as the power of the Tobas declined, the Turks found an opportunity to measure their strength with the Jeujen. Not only did they destroy this nomad power and take its place, but they began to domineer over the last two Tungusic dynasties of North China, and to demand marriage alliances."—*Ibid.* p. 28.

"Of course the people suffered severely from the outbreaks of rebellion and civil war which heralded and succeeded every change of dynasty, but outside the actual seat of war, life went on as usual, and there was seldom a time when, taking the empire all through, disorder was not the exception and peaceful industry the rule; so that, even during the most inglorious periods, the habits of settled application, which had always characterized the peasantry, were able to go on gradually and silently gathering the strength of a second nature, till they appear as the essential and dominant feature of the whole social body."—*Simcox*, ii. 123.

Population.—[The *Wên hsien t'ung k'ao* (*Hu k'ou pu*, *c.* 3, pp. 3, 5) gives the population under the Three Kingdoms as 4,432,881, under the Chin, as 16,163,863 (about 2,459,000 registered families: *Wên hsien t'ung k'ao hsiang chieh*, *c.* 3, *Hu k'ou k'ao*, p. 2*a*), under the Wei, as 3,375,368, and under the N. Ch'i, as 9,009,640, attributing the smaller figures to the results of the wars.]

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

"The emigration from the North of many Chinese to the more Southern territories, must have assisted in the development of the Southern Provinces; but it was not till after 160 years of frequent warfare, and of changes of dynasties, that the harried and harassed Empire found rest under the able but short-lived rule of the dynasty of Sui."—*Oxenham, Atlas*, Pref. p. ii.

"At last Yang Kien, [楊堅], an energetic general of distinguished descent in the service of the Chou dynasty, succeeded in unifying China once more under one sceptre. He was murdered by his son, who . . . carried his arms or his prestige to the uttermost ends of the empire. It is recorded of this monarch that he wished to communicate with Fulin, or 'the Franks.' Some argue from this that their name could not have been known so early, and that 'Fulin' must mean some other people. But . . . this allusion is made restrospectively by historians of the T'ang dynasty after it was known who the Franks were. Exactly the same thing occurs in the Ming History, which explained all about the Franks of 1520, under the events of that date, but after Ricci, in 1600, had for the first time made it clear that the Franks, Fulin, and Ta Tsin were all one."—*Parker, China*, pp. 27–8.

"In 589 he [Yang Chien] annexed the Ch'ên territory, taking care to employ its existing officials."—*Giles, Bio. Dic.*, p. 898.

"The Sui dynasty (581–618) succeeded in repelling the pretensions of the Turks, and also overran Corea as a punishment for her diplomatic coquetting with their Khan. At that time the modern Mukden was the Corean capital, and the old name of Chaosien had been abandoned in favour of Kaoli (locally pronounced exactly like our word 'Corea'). Relations with Annam were reopened; that country was divided into thirteen provinces in Chinese style, and tribute was exacted for the first time. The attempted conquest of Corea brought a mission in A.D. 608 from Japan, which now for the first time took the name of Ji-păn, or 'Sun's-rise,' and claimed an imperial status. In the same way the closer relations with Annam had the result that Chinese envoys were despatched to Red Earth State. By this appears to be meant the modern Siam, but the Tai or Shan race had not yet been given that name, which is simply the Burmese word Sham, written by the Portuguese Sciam, and corrupted by us into a dissyllable. For the first time Loochoo was heard of, and by that name (Liu-k'iu); the Chinese even sent a quasi-piratical expedition in order to exact tribute. Strange to say, nothing whatever is yet known even of the bare existence of Formosa, though later tradition mentions it as a dependency of Loochoo, at first under the apparently Sanskrit name of P'i-she-ja (some such sound as Vichâna or Vaisadja). The western Turks were an impenetrable barrier between China, Persia, and India; and the Tibetans had not yet become an aggressive power. Such was China under the Sui dynasty, which collapsed before the T'ang house as quickly as, 800 years earlier, the house of Ts'in had fallen before Han; and for the same reasons: it was too revolutionary, and it was unable to digest all that it had swallowed."—*Parker, China*, pp. 28–9.

"In 607 the emperor threatened to drop all correspondence with Japan, because it was addressed from the 'Great son of heaven in the East' to the 'Great son of heaven in the West,' and this was 'contrary to the Rites.' This was equivalent to a declaration of hostility, because, as Amyot observes, 'tributary' in Chinese history means virtually ally, and Japan consequently protested against being erased from the list of tributaries."—*Simcox*, ii. 130.

"The great T'ang dynasty (618–907) ranks with the Han as one of the two 'world-powers' of Chinese history. To this day the only Cantonese word for 'Chinaman' is 'man of T'ang,' which fact tends to show that the south had been isolated ever since the Han lost their prestige there, and that none of the short-lived Nanking dynasties had left any permanent impression on the popular mind."—*Parker, China*, pp. 29–30; see also *Giles, Historic China*, pp. 53–4.

"Under that beneficent Imperial sway the peasant tilled his land, and the trader sold his goods in peace. The fiercer and more martial spirits found an outlet for their energies in extending the western boundaries of the Empire, and the triumphs of war and the tranquil pleasures of peace were sung and hymned by some of the greatest poets which China has produced. . . . But peace has its troubles as well as war, and the exactions and cruelties of officials and eunuchs came latterly to be found as burdensome as the dues and levies of feudalism."—*Oxenham, Atlas*, Pref. pp. ii–iii.

"During the Tang Dynasty the intercourse between China and other considerable powers was not only closer but conducted on more nearly equal terms than at any other time."—*Simcox*, ii. 138.

Li Shih-min, son of Kao Tsu, "was entrusted with . . . the task of subjecting all the provinces. . . . On his return to Singan he was able to assure his father that the Empire was pacified in a sense that had not been true for many centuries."—*Boulger, Short Hist.*, pp. 26–7.

"The peace . . . was soon broken. The tribes again drew their forces to a head for the purpose of invading China, but before their plans were complete Taitsong anticipated them by marching into their territory at the head of a large army. Taken by surprise, the Tartars offered but a feeble resistance. Several of their khans surrendered, and at a general assembly Taitsong proclaimed his intention to govern them as Khan of their khans, or by the title of Tien [T'ien] Khan, which means Celestial Ruler. This was the first occasion on which a Chinese ruler formally took over the task of governing the nomad tribes and of treating their chiefs as his lieutenants. Down to the present day the Chinese Emperor continues to govern the Mongol and other nomadic tribes under this very title, which the Russians have rendered as Bogdo Khan. The success of this policy was complete, for not only did it give tranquillity to the Chinese borders, but it greatly extended Chinese authority. Kashgaria was then, for the first time, formed into a province under the name of Lonugsi, and Lichitsi [Li Chi Tzŭ], one of the Emperor's best generals, was appointed Warden of the Western Marshes."—*Ibid.* pp. 27–9.

"The noble task to which he at once set himself was to prove that the Chinese were one people, that the interests of all the provinces, as of all classes of the community, were the same, and that the pressing need of the hour was to revive the spirit of national unity and patriotism. Before he became ruler in his own name he had accomplished something towards this end by the successful campaigns he had conducted to ensure the recognition of his father's authority. But Taitsong saw that much more remained to be done, and the best way to do it seemed to him to be the prosecution of what might be called a national war against those enemies beyond the northern frontier who were always troublesome, and who had occasionally founded governments within the limits of China like the Topa family of Wei." Having thoroughly reorganized and increased his army, T'ai Tsung "resolved to grapple boldly with the ever-recurring danger from the Tartars. Under different names, but ever with the same object, the tribes of the vast region from Corea to Koko Nor had been a trouble to the Chinese agriculturist and government from time immemorial. . . . The Huns had disappeared, but in their place had sprung up the great power of the Toukinei or Turks, who were probably the ancestors of the Ottomans. With these turbulent neighbours, and with others of different race but of the same disposition on the southern frontier, Taitsong was engaged in a bitter and arduous struggle during the whole of his life; and there can be little or no doubt that he owed his success to the care he bestowed on his army."—*Ibid.* pp. 27–9.

"Li Shï-min, the real founder of the T'ang dynasty, son of the nominal founder, Li Yüan . . . personally subdued the Turks and Tunguses in such a way that for half a century the Tartars were under direct Chinese rule from Corea up to the frontiers of Persia, the fugitive sovereign of which latter country actually came to China for protection. For the first time in Chinese history the Emperor effectively conquered the three kingdoms of the Corean peninsula, which was also for a few generations governed directly as a set of provinces. During the reigns of his successors . . . the Turkish power, after a period of revival, was finally broken, and passed into the hands of a kindred race known as the Ouigours. Within the past decade numerous Turkish and Ouigour monuments have been discovered, chiefly by Russians. Not only has it been possible to reconstruct the old Turkish language by the light of these inscriptions, sometimes bilingual or trilingual, but the main points in Turko-Chinese history are sufficiently confirmed by them. The Turks clearly were, and are definitely stated to have been, the old southerly Hiung-nu; and the petty Ouigour sub-division of the Baikal group of Hiung-nu, which of course had no cause for appropriating the equally petty tribal name of 'Türk,' did, when it became the ruling tribe over kindred tribes, exactly what the Turks, Mongols, Manchus, Russians, English, French, and other dynastic families have done all over the world—it applied to the whole dominion the generalising name of a tribal part of it."—*Parker, China*, pp. 30–1.

"The Mahometans, in their struggles with the Turks of the Bokhara region, were soon brought into contact with China, and relations with the Caliphs became fairly regular and intimate. The Tibetan *gialbos* of Lhassa also first became a power contemporaneously with the T'ang dynasty: bilingual inscriptions of this date, in Chinese and a modified form of Sanskrit, are still to be seen at the Tibetan capital. A third great power, which seems to have been practically Siamese, contested supremacy with the Tibetans in the Yün Nan-Sz Ch'wan region, and we find both Ouigours and Abbasside Arabs taking part with the Chinese in these struggles round and about the Upper Yang-tsze. Both the Tibetans and the 'Chao confederation' (*chao* is still Siamese for 'prince' and 'principality') came within an ace of securing the imperial throne under the weaker T'ang emperors; and as it was, the Tibetans for some decades held possession of Chinese Turkestan. During this dynasty an able Corean general in Chinese employ carried the Chinese arms into the regions of Kashmir and Balti, and Nepaul is heard of for the first time; the various princes of India also opened up diplomatic relations with China. The relations with the South Seas seem to have had leisure to develop themselves

peacefully during these severe struggles all along the line of the land frontiers. The Hindoo trading colonies of Sumatra, Java, Borneo, and Sulu were gradually displaced by those of the Arabs, whose merchants also acquired a firm footing in Canton, Zaitun (Ts'üan-chou), Canfu (Kanp'u near Hangchow), and other places on the Chinese coast. Europeans now begin to be vaguely heard of as Fulin, Folang, or 'Franks,' a name which is almost certain to have been introduced by the Arabs overland by way of Persia. They are identified by the Chinese of the eighth century with the old Ta-ts'in; and, as all the world knows, the celebrated Nestorian stone of the seventh century discovered by European missionaries at the T'ang capital of Si-an Fu 300 years ago, describes in Syriac and Chinese the Christian religion of Ta-ts'in. At this time the Chinese do not seem to have quite understood that the sea and land routes to Arabia both led to the same place; nor is there yet any trace of 'Franks' coming by sea."—*Parker, China*, pp. 31-2; *cf. Boulger, Short Hist.*, pp. 29-30.

"The first stage of Turkish rule lasted from about 560 to 630, when the Chinese, after incessant warring, succeeded in taking the Supreme Khan captive. For fifty years after that event, Chinese political influence was dominant all the way from Corea to the frontiers of Persia; but still there is not in the whole of Chinese history one trace of a single definite name, to show that they had any knowledge of what we call Siberia."—*Parker, China*, p. 121.

[The kingdom of Ha-mi paid tribute in 631-47].—*Mém. conc. les Chin.*, xi. 284.

In Corea "a stubborn people and an inaccessible country imposed a bar to his [T'ai Tsung's] . . . ambition. [*Cf. supra* for previous attempts to bring Corea under the influence of the Chinese ruler.] A certain measure of success had occasionally attended these attempts, but on the whole Corea had preserved its independence. When Taitsong in the plenitude of his power called upon the King of Corea to pay tribute, and to return to his subordinate position he received a defiant reply," and some unsuccessful military operations took place. "After this rebuff Taitsong did not renew his attempt to annex Corea."—*Boulger, Short Hist.*, pp. 29-30.

About 655-60 "the capital of Tokhara was made by the Chinese Emperor, Yüe-chī Fu, or 'the city of the Yüe-chī' nomads, who had been driven thither 800 years earlier. The King of Tokhara, as friend of the Nestorians and head of the anti-Arab party, about this time sent a map to China, with a request that the Arab conquests between Khotan and Persia might be taken under Chinese protection."—*Parker, China*, p. 62.

"The early history of Tibet (700-900) is bound up with that of the early Siamese empire of Nan-chao. For a time the Gialbos threatened the existence of China, and, as it was, asserted their equality, obtained princesses, and made treaties of reciprocity; they also forcibly occupied Kan Suh and Chinese Turkestan for a number of years, right up to Lake Balkash."—*Ibid.* p. 128.

The Empress Wu "vanquished the Tibetans and a new Tartar race known as the Khitans, who appeared on the northern borders of Shensi." Ming Ti was defeated by the Khitans and Tibetans. "A soldier of fortune, named Ganlochan, revolted. . . . He subdued all the northern provinces, established his capital at Loyang, and compelled Mingti to seek safety in Szchuen, when he abdicated in favour of his son. The misfortunes of Mingti . . . foretold the disruption of the Empire at no remote date."—*Boulger, Short Hist.*, p. 32.

"China has never had the faintest political influence in India, though all five kings of the Hindoo states sent missions to China 1,000 years ago."—*Parker, China*, p. 128. *Cf.* MANCHU PER.

[After the aggressions of the Tu-fan in 763], "the emperor called the Turkish tribe of the Hwei-he to his assistance. It is true that the Tu-fan were expelled by this means, but the Hwei-he steppe-dwellers found the fertile valleys of China to their liking, and it became necessary to assign them abodes in Kansu. This was the first Turkish settlement in China. In later times the Chinese were several times compelled to do the same thing again. The Hwei-he may have already, in part, been adherents of the Mohammedan religion. It is certain that this was the case with later Turkish immigrants, and it seems that the bulk of their kinsmen in North China attached themselves to Islam. On account of their different religious usages, the Turkish tribes of North China never amalgamated with the Chinese, but perpetuated themselves as a foreign element, and expanded till, nearly 1,100 years after their first hospitable reception, they broke out in 1862 in that terrible revolution which spread from Hwa-chou (east of Hsi-ngan-fu) in a short time through Kansu to Central Asia, destroyed the Chinese power there, and ultimately occasioned the rise of Yakub Beg's kingdom."—*Richthofen, China*, i. 533.

"The middle of the 8th century marks the turning-point of the Chinese power in the west. The army of the Caliphs had been repulsed, but not so the religion which they had brought with them from the west, and its fanaticizing influence. The relation of the Turanian princes to China became less close. [The evil was aggravated by unrest in China itself—the revolt of the Nan-chau in Yünnan, and the rebellion of Ngan-lu-shan. . . . Repeated attacks of the Tu-fan] destroyed the Chinese power in the west. The year 756 A.D. seems to mark approximately the revolt of all the countries west of the Tsung-ling, and the year 790 the annihilation of the Chinese power in the Tarym Basin. It was not again restored."—*Ibid.* i. 532-4.

[The seditious societies of the period 806-821 were attacked by Lu T'ung, in his poem *An Eclipse of the Moon.*]—*Giles, Bio. Dic.*, p. 551.

[The "kings of Mabed" (Cochin-China) exchanged presents every year with the Emperor of China.]—*Reinaud, Relation des Voyages*, i. 31-2.

"In the eighteenth reign [841-7] of the dynasty, disorders prevailed everywhere; a popular minister was poisoned by the eunuchs; rebellion was rife, and popular subscriptions had to to be invited to provide funds for the imperial troops. Loyang was captured without resistance by a rebel leader, and, though it is said that the inhabitants were not molested, a few years later the once rich and populous city and suburbs are described as ruined and deserted."—*Simcox*, ii. 136.

"The evils of the day became specially revealed during the reign of Ytsong [I Tsung: 860-74], who was scarcely seated on the throne before his troops suffered several defeats at the hands of a rebel prince in Yunnan, who completely wrested that province from the Empire [but see following extract]. . . . The condition of the country at this time is painted in deplorable colours. The Emperor did not possess a palace, and all the great towns of Central China were in ruins."—*Boulger, Short Hist.*, pp. 33-4.

"The rich plain of Ch'êng-tu was colonised centuries before anything of a definite nature was known of Yün Nan, which remained practically a sealed book up to the time of Kublai Khan [1280] . . .; and even now the Chinese have very little acquaintance with what we call the Upper Yang-tsze above P'ing-shan, which is the limit of navigation for all but very small boats."—*Parker, China*, p. 11.

"The possession of all this Yün Nan region was being contested by a powerful Shan empire on the one side, and the Tibetans on the other. At present it has no commercial, and very little political significance, and is one of the least known parts of the world."—*Ibid.* p. 12.

"The great natural barrier between the Chinese and the Tartars has always been, and to a great extent still is, the range known as Yin Shan, or 'Sombre Mountains,' which may be roughly stated to form a backing to the Great Wall all the way from the Northern Ordos bend of the Yellow River to Corea. Then there are the Nan Shan, or 'South Mountains,' of Kan Suh, which divide off the Turko-Tartar from the Tibetan groups; it has always been the policy of China to keep these two apart."—*Ibid.* p. 13.

"Just as the destruction of the Hiung-nu power by the house of Han paved the way for Tungusic dynasties in North China, so the destruction of the Turkish power by the house of T'ang paved the way for the Kitans, Nüchêns, Mongols, and Manchus. Moreover, just as a few Hiung-nu dynasties enjoyed short leases of power before the Tobas obtained a firm seat, so a few Turkish dynasties reigned in the north before the Kitans (the name origin of Marco Polo's Cathayans) secured a real hold. The T'ang power finally collapsed in 907, and of the five dynasties that rapidly succeeded one another, until the house of Sung once more reunited the greater part of China in 960, three were of Turkish extraction. It was during this period of anarchy that Annam finally slipped away."—*Ibid.* p. 32.

"The prosperity of the Tang Dynasty was wider spread and more deeply rooted than that of the Hans, and the reaction under the Five Rosterior dynasties did not reproduce all the anarchy of the Three Kingdoms."—*Simcox*, ii. 123.

Population.—"During his [Wên Ti's] reign [589-605] the population is said to have doubled, reaching a total of nearly nine millions."—*Giles, Bio. Dic.*, p. 898.

In 609 "the population is specifically stated to have numbered 8,700,000 households, in 1,255 *hien* districts. In 652, after the fearful wars of succession and the disastrous expeditions against Turks, Coreans, etc., the number of households had gone down to 3,800,000. In 654 a biennial census was ordained. The conquest of South-west Corea in 660 brought 760,000 households with it. Probably the third or South-eastern peninsular state contained as many. By the conquest of North Corea in 668 China gained 170 *hien* districts containing 697,000 households; and these figures, compared with those for 609, give us a fair relative idea of each country's population. Then followed a period of recuperation ['a census of 726 gives over seven million families or forty-one million persons in the Empire, besides those employed in the army and civil service' (*Biot, Mém. sur la population, etc., Journ. As.*, 1836, p. 457)], and the following official figures enable us to fix approximately the average number of 'mouths' in a household (the figures for 740 being added from *Hirth, Ch. and the Rom. Or.*, p. 52, note, and *Ch. Rev.*, xiii. 400):—

Year.	Households.	Mouths.
733	7,861,236	45,431,263
[740	8,412,871	48,142,609]
755	9,619,254	52,880,488"

—*Parker, China*, p. 183. See also *Wên hsien t'ung k'ao, Hu k'ou pu*, c. 3, p. 6; *Wên hsien t'ung k'ao hsiang chieh*, c. 3, *Hu k'ou k'ao*, p. 3*a*, where (though the figures differ slightly) it is explicitly stated that this was the most populous period of the T'ang dynasty.

"The price of rice at the two capitals was barely 300 cash a 斗 斛, and a piece of 絹 had the same value. Travellers could move unarmed for 10,000 *li*. But in estimating the importance of this census [740], the following statement must be carefully weighed. 'At this time 311 州 were under the direct influence of [Chinese] civilization (教 聲 所 被); and 800 州 were only mediatised (羈 縻).'"—*Ch. Rev.*, xiii. 400. See also *Hirth, Ch. and the Rom. Or.*, p. 52, note. The average number of members to a household at this time was between 5 and 6. The *Shih kuo chih* of the T'ang dynasty says that in the period T'ien Pao [742-56], judging from the number of families, 2 families supplied 1 soldier, but after the period Ch'ang Ch'ing [821-25] 3 families supplied one soldier. See *Wên hsien t'ung k'ao hsiang chieh*, c. 3, *Hu k'ou k'ao*, p. 3*a*; *Tzŭ shih ching hua*, c. 53, p. 29*a*.

"The census of 764 A.D. shows an almost incredible falling off in the population during the decade, less than three million householders being registered. The figures may be taken as an authentic record of the empire's weakness, though the actual loss of life in battle and famine cannot have been so great as they imply. Some districts were depopulated, and it is stated that during one siege, in Honan, human flesh was eaten. Singan-fu also suffered from famine owing to the blocking of the canals, by which grain was imported from the south. But the census returns would also be affected by the necessary omission of all districts in the hands of the rebels, as well as those temporarily deserted by the cultivators, to say nothing of all that would profit by the disturbances to make fraudulent returns."—*Simcox*, ii. 134.

"In the year 780 A.D. the census returns showed an increase of about a million families since the disasters which were at their height in 764 (*Journ. As.*, 1836, p. 457)."—*Ibid.* ii. 135.

"In 807, after bloody wars with the Shans and Tibetans, 1,453 *hien* only contained 2,440,254 households, and even of this number but 1,440,000 in eight provinces (*tao*) had been counted; the rest for fifteen other provinces had been merely estimated. . . . In the years 820 and 821 the number of 'households and tents' is twice given as below 2,400,000, and the number of mouths as below 16,000,000; but in one of the two cases it is stated 'this excludes (modern) Sz Ch'wan, Kwei Chou, the Two Kwang, and Annam (then Chinese)'; and in the other, 'this excludes military provinces.' Finally (apparently after reconquests), we are told a few years later that 'out of 3,350,000 households we are employing 990,000 soldiers; out of a total revenue of 35,000,000 (? taels), one third goes to the Emperor, and two thirds are local.'"—*Parker, China*, pp. 183-4. See also *Wên hsien t'ung k'ao, Hu k'ou pu*, c. 3, p. 5; *Wên hsien t'ung k'ao hsiang chieh*, c. 3, *Hu k'ou k'ao*, p. 2*a*.

"Between 839 and 845, the census returns showed a falling off in the population of over 40,000 families, which caused some surprise, as there had been no war, famine, or pestilence to account for the loss."—*Simcox*, ii. 136.

[The populousness of the fertile plains covered with villages, formed the subject of remark by the Arab travellers in the 9th cent. See *Ancient Accounts of India and China*, etc., trans. *Renaudot*, p. 62; *cf. Mencius, Life and Works*, p. 161.]

907-960.

"The last years of the T'ang were a time of utter anarchy . . . which continued during the first half of the 10th century, under the Five Dynasties."—*Journ. As.*, Séric III. vi. 304.

"A period of wasting and incessant civil war, discord, invasions, and commotions lasted from 907 to 960 A.D."—*Oxenham, Atlas*, Pref. p. iii.

A "more calamitous step [than the sub-division of provinical governorships] was taken when the founder of the third minor dynasty, the Heou Tsin (936 A.D.), summoned the Khitan Tatars to his assistance, offering them, in return, a share in the northern provinces of China. He promised a yearly tribute of 300,000 pieces of silk, and ceded at once sixteen frontier towns, thus throwing all China open to the Khitan armies. Some of the ceded towns rebelled, thinking it unworthy of their civilization 'to submit to barbarians'; but parts of Shansi and Pecheli remained in the Tatar's hands, in addition to the wide region on the north already held by them. The Khitan Dynasty at this stage took the name of Leao, by which it is afterwards known, from the province Leao-tong, now in its possession; its capital was subsequently placed at Peking."—*Simcox*, ii. 165-6.

"The Yü T'ien (于 闐) country sent tribute in the 2nd year of T'ien Fu (937) of Chin."—*Wu Tai shih, Ko chih ching yüan*, c. 23, *Yin shih lei*, p. 4*b*.

"During the Five Dynasty or Anarchy Period (907-960), there were a few missions to China, but practically Tibet was an unknown quantity."—*Parker, China*, p. 128.

"Apart from Tatar encroachments, none of the five dynasties had been acknowledged in the whole, or even the greater part, of China. The Imperial Dynasty held indeed the Middle State, as in the degenerate days of Chow, but it was surrounded by a fluctuating number of minor States, sometimes as many as twelve, some of which were always intriguing with the Tatars, while others were at war among themselves."—*Simcox*, ii. 167. See also *Wu Tai ti hsi, Hsü kuang chih p'ing lueh*, c. 2, p. 5*a*, etc.

"The Heou Chow [Hou Chou] (951-9) are regarded with less disfavour by the historians than any of their predecessors, and Chi-tsong [Shih Tsung] (954 A.D.), last but one of the fifteen 'posterior' Emperors, may be held to have begun the work of restoration continued by the founder of the Sung Dynasty."—*Ibid.* ii. 166.

Population.—"During the Turkish interregnums, or the Five Dynasty Period (907-60), . . . when China was really split up into a dozen petty states, there are naturally no records of population worth noticing."—*Parker, China*, p. 184.

Sung Period (960 *to* 1280).—*Table VI.*

"The first Emperor [of the Sung] contended with and defeated the Khi-tan Tartars or Liaos."—*Oxenham, Atlas*, Pref. p. iii; see also *Simcox*, ii. 167.

"The new Emperor's first thought was how to put a stop to the incessant revolutions of the last half-century. At the time of his accession, besides the Khitan empire, seven separate principalities divided with him the inheritance of Tang. These were held by descendants or successful rivals of the governors, who secured hereditary offices for themselves in the degeneracy of the empire; and Tai-tsou's first object was to guard against the growth of similar dangers in the future, even before reclaiming the severed fiefs."—*Simcox*, ii. 167.

[He proclaimed a general amnesty, "even in provinces where he had not a shred of authority. The step was a politic one, for it informed the Chinese people that they again had an Emperor." Tranquillity caused by military successes, due to his improvement of the army, enabled him to institute great reforms in the civil administration.]—*Boulger, Short Hist.*, pp. 35-6.

"His first centralizing measure was well adapted to put the people on his side. He reserved to himself the power of passing capital sentences, and so gave a right of appeal to the emperor from the judgment of all provincial officers; and in the same year he withdrew from them the command of provincial troops, and required them to pay all tribute in full to the Imperial treasury, through which disbursements for local purposes were in future to be made. Without control of money or troops, the highest officers became powerless for evil, and their ambition was driven to content itself with the prizes that a powerful prince could bestow, in return for loyal and diligent service."—*Simcox*, ii. 167.

"It took eighteen years to subdue all the minor States so as to re-unite the empire; the central ones between the Yellow River and the Yang-tse-kiang fell first with little resistance; then the second Chow, under whom Sz'chuen had been independent for forty years; then the important district held by the southern Han, with Canton for its capital; and, finally, the remainder of the south, while a voluntary cession by the prince of Wu-yuei added a territory nearly equal to that of the reduced empire taken over by Tai-tsou in 960 A.D.; the northern Hans also surrendered voluntarily, and their officers were retained in the service of the emperor, whose domains thus became conterminous on the north with the empire of the Leao. On the accession of Tai-tsou, under a million families paid tribute to the empire; but on the accession of his son, Tai-tsong (976 A.D.), the number had increased to nearly four millions, not so much by growth of population or vigilance of the revenue officers, as by the addition of whole provinces to the Imperial territory. [T'ai Tsung's reign marked 'an improvement in the condition of the country and the people' (*Boulger, Short Hist.*, p. 38).] By 982 A.D. it was said that the empire was re-united, as in the days of Han or Tang, with the exception of the ill-fated cessions made to the Leao. And this was undoubtedly true as regards China proper, though the influence and authority exercised by the greatest Tang emperors, beyond the natural boundaries of the country, was never equalled by the Sung Dynasty, even in its palmiest days."—*Ibid.* ii. 168.

"The restoration of peace was celebrated by public rejoicings, and the empire settled down to the enjoyment of internal tranquillity, only broken by occasional disturbances on the frontier, the significance of which it was always dangerously easy to ignore."—*Ibid.* ii. 168.

"The Sung dynasty (960–1260), like the Tsin, was never able to get quite rid of unpleasant northern intruders; and, also like the Tsin, it was peaceful, literary, and strategical in its inclinations rather than warlike, bold, and ambitious. The Sung era is undoubtedly the Augustan era of China in all these senses. The Kitans formed a powerful empire (with a capital for the first time at modern Peking) which lasted for 200 years (915–1115). They were replaced by their eastern subjects the Nüchêns, the southern branch of whom had already (700–900) formed an influential and civilised buffer state on the north frontier of Corea. The Nüchêns governed their empire with success for over a century (1115–1232), until they in turn were overthrown by the Mongols. Roughly speaking, both Kitans and Nüchêns ruled only over Old China, *i.e.*, the four provinces of Chih Li, Shan Si, Shan Tung, and part of Ho Nan; but also over what we now call Mongolia and Manchuria:—in other words, over the trade area now fed from Tientsin. Turkestan and Tibet lay entirely outside their spheres, and a semi-Tibetan, semi-Toba State called Hia (Marco Polo's 'Tangut') formed in the region of Ordos and the Yellow River Loop a barrier (895–1237) between them and the west. During all this time the Sung dynasty, with capitals at various towns in modern Ho Nan province, and finally at Nanking and Hangchow [see also GEN. GOVT., *Exec.*], had a complete monopoly of southern affairs and the ocean trade; whilst Corea, Hia, and the Uigours kept up a trimming policy, first with one, then with the other, often with both of the Chinese powers. It is curious to observe that the true Chinese were not now to be found in Old China, but in all those parts which, as emigrants, their ancestors from Old China had populated."—*Parker, China*, p. 33.

"The first portion of the Sung dynasty may be considered as on the whole one of the most prosperous and peaceable periods of the history of China. The nation had already in a great measure settled down to that state of material civilization and mental culture in which it may be said to have been discovered by Europeans a few centuries later."—*Giles, Historic China*, p. 79.

"The House of Sung was not, however, without the usual troubles for any length of time. Periodicity of revolt is a special feature of Chinese history; and the Sungs were hardly exempt from this in a greater degree than other dynasties."—*Ibid.* pp. 79–80.

[T'ai Tsu (960–76) acquired possession of the rich provinces of Honan and Ssuch'uan and 40,000,000 of Chinese subjects. He captured Canton and Kiangnan, the dual province of Anhui and Kiangsu.]—*Boulger, Short Hist.*, p. 36.

"During his [T'ai Tsung's] reign of twenty-three years [976–98] the Sung dynasty may be fairly considered to have grown consolidated. . . . The subjugation of Han completed the pacification of the Empire. . . . Taitsong was fortunate enough to retain his conquests over the southern Han States. . . ." His reign marked "an improvement in the condition of the country and the people."—*Ibid.* pp. 37–8.

"During the tranquillity that had now prevailed for more than a generation a new power had arisen on the Chinese frontier in the principality of Tangut or Hia. This state occupied the modern province of Kansuh, with some of the adjacent districts of Kokonor and the Gobi desert." The result of its encroachments was that "many years elapsed before the Sung rulers can be held to have recovered from the loss of their best armies. The Khitans of Leaoutung took advantage of these misfortunes to encroach," the Chinese Emperor being eventually obliged to repurchase the lost cities by large annual payments. "Not content with this payment Chao Yuen [the Prince of Tangut] subsequently exacted the right to build fortresses along the Chinese frontier."—*Ibid.* pp. 38–9.

"This [1067–85] is the period memorable for the legislation of Wang-ngan-shi, the 'Innovator,' and to the maleficent influence of this great political heresiarch the orthodox historians trace all the future woes of China." "But apart from the *odium theologicum* which has gathered round the Innovator's memory, his policy, however erroneous, can scarcely be held responsible for the gradual gathering and breaking of two more waves of Tatar conquest, each of which swept, as it were, further than the last over the peaceful shore, because of the breaches on the coast-line made by those that went before it."—*Simcox*, ii. 170.

[In the reign of Hwei-Tsung, 1102–1119, a band of rebels of whom Sung Chiang and Lu Chün-i were the chiefs, bound themselves together by an oath similar to that now taken by the Triad Society. Particulars of this ceremony are given in the historical romance entitled *Shui hu chuan.*]—*Ch. Rev.*, xxi. 159–60.

"The Sung emperors only fought on the defensive, and invited attack by their too obvious desire for peace at almost any price. They had their reward in one way, for the internal prosperity and material wealth of China reached a point under their rule as yet undreamt of. The populous provinces and magnificent cities, described with so much enthusiasm by Marco Polo, were preserved but not created, by the wisdom of the great Khan; the Mongols only entered into the inheritance of the Sung, and, as the centre of the empire was forced further and further south, peace and wealth went with it, so that Chinese civilization continued to secure fresh conquests, as the Chinese empire lost hold of its earliest settlements."—*Simcox*, ii. 170.

"At last, as is usual in Chinese history, the weakness, the extravagance, the shortsightedness, and even the very ambition of a monarch, brought about a Tartar invasion. North China was once more ravaged, and the empire was eventually divided between the Kin . . . dynasty in the North and the Sung in the South, the Yangtze being the dividing line."—*Oxenham, Atlas*, Pref. p. iii.

Akouta, the Niuche conqueror's resolve "to found a dynasty of his own . . . in the year 1115 A.D. . . . was the historical introduction of the Kin [Chin] dynasty, which so long rivalled the Sung, and which . . . was remarkable as being the first appearance of the ancestors of the present reigning Manchus."—*Boulger, Short Hist.*, pp. 40–1.

"The reign of Oukimai, the second Kin Emperor (1124–1136 A.D.), marks the beginning of settled and civilized life among the conquerors. . . . Like the later Mantchus, the Kin required their Chinese subjects, under penalty of death, to shave their heads and wear Tatar dress; and the amalgamation of the two peoples was further promoted by the settlement of agricultural colonies, bound to render military service when called upon, in those central provinces which were furthest from the seat of the Northern Government."—*Simcox*, ii. 174.

"In the 12th century and the first half of the 13th, peace and plenty indeed reigned in Southern China, but the Emperor's share in securing these boons was negative; he did not plunder his people of the fruits of their own industry, and he did not attack the neighbours he would have been unable to resist. The power of peace and war thus rested first with the Kin and then with the Mongols, and so the allegiance of the Chinese was half transferred beforehand to their new rulers."—*Ibid.* ii. 199.

"The Mongols gradually became a vast and ever-increasing confederacy of the most warlike and aggressive races of the Chinese northern frontier."—*Boulger, Short Hist.*, p. 47.

"The possession of Honan formed the principal bone of contention between the Kins and Sungs, but after considerable negotiation and some fighting, Kaotsong agreed to leave it in the hands of the Kins, and also to pay them a large annual subsidy in silk and money. He also agreed to hold the remainder of his states as a gift at the hands of his northern neighbour, and thus, notwithstanding the very considerable successes gained by several of the Sung generals, Kaotsong had to undergo the mortification of signing a humiliating peace and retaining his authority only on sufferance." A war began in 1161 and ended in the subjugation of the Kins. But "the long competition and bitter contest between the Kins and the Sungs had not resulted in the decisive success of either side, and after a few more sovereigns of both dynasties had reigned, the Mongol peril . . . eventually buried both Kin and Sung in a common ruin."—*Ibid.* pp. 44–6. See also pp. 59–68, and *Oxenham, Atlas*, Pref. p. iii.

[When T'ai Tsung allied himself with Sung and destroyed Kin, he held two-thirds of the Chinese territory.]—*Hsü kuang chih p'ing lüeh, Yüan tai ti hsi, c.* 2, p. 5*b.*]

"The mere political chronicle of reigns and wars and treaties is far from explaining why the 320 years of Sung rule are counted among the glorious and prosperous periods of Chinese history. Even before the Tartar conquests had begun, China was less active and influential in the rest of Asia than she had been under the Hans and the Tang. And the glories of the Augustan age of Chinese literature do not seem to be tarnished in the eyes of those who, after all, are better judges than ourselves, even by the political and military incapacity which allowed the literary empire to become a prey to barbarian conquest."—*Simcox*, ii. 179.

"Throughout the Sung dynasty . . . the diplomatic relations [with Tibet] were only fitful."—*Parker, China*, p. 128.

"The French until very recently did not make much history in China. Lewis IX. sent the Franciscan friar Ruysbroek (Rubruquis) to Mangu Khan in 1254, but the name of France does not appear in the numerous Mongol allusions to Christians."—*Ibid.* p. 99. *Cf.* GEN. GOVT., *Exec.*

Population.—There is "sufficient reason for doubting whether the population ever declined as much as the decline in the number of tax-paying householders implies" [*cf.* previous Period].—*Simcox*, ii. 168.

[40,000,000 of Chinese subjects were added by the acquisition of Honan and Ssü Ch'uan.]—*Boulger, Short Hist.*, p. 36. *Cf. supra.*

"The Emperor [Chên Tsung] promoted education and agriculture; and in 1014 the population was returned at 22,976,965."—*Giles, Bio. Dic.*, pp. 60–1. See also *Wên hsien t'ung k'ao, Hu k'ou pu, c.* 3, p. 9.

"In the 5th year [1021] of Tien Hsi the permanently settled families numbered 6,039,231, not including those of sojourners." *Sung shih Ti li chih, Tzü shih ching hua, c.* 52, p. 28*b.* Boulger (*Short Hist.*, p. 38) says that, in 1022, "the people were contented and the population rose to over 100,000,000." This may refer to 1102.

[The following figures, given in *Parker, China*, p. 184, show the population at different periods:—

Year.	Households.	Mouths.
1014	9,055,729	21,976,965
[1083	17,211,713	24,969,000]
1088	18,289,385	32,163,017
1097	19,435,570	33,401,606.]

"The two last years, however, subdivide the householders into two classes, and use the word 'adult man' (*ting*) instead of the word 'mouth.' A close, special study is necessary to discover exactly what this means. I am inclined to think 'mouth' here means 'man or woman, but not child,' and *ting* means 'male capable of doing *corvée*, or bearing arms.' The figures for 1088 and 1097 are thus subdivided:—

Qualification.	Householders.	Adults.
Superior	12,134,733	28,533,934
Guest	6,154,652	3,629,083
Lord	13,068,741	30,344,274
Guest	6,366,829	3,067,332

The probable meaning of this is that most Chinese freeman units furnished at least a father and one (or two) sons out of each household; but that villeins, or 'copyholders' with precarious tenancy, only furnished occasional men for the wars—never more than one for each two villein households—and were practically serfs. . . . It was the policy of the Sung dynasty . . . to reduce the number of slaves in the households of the rich. It must also be borne in mind that the Kitans ruled over parts of modern Chih Li and Shan Si, and that the Sung dynasty positively declined to have any political truck with either Yüu Nan or Annam."—*Parker, China*, p. 185.

"In the 6th year [1083] of the period Yüan Fêng the families of sojourners as well as natives consisted of 17,211,000 odd, and the mouths of 24,969,000 odd."—*Wên hsien t'ung k'ao hsiang chieh, c.* 3, *Hu k'ou k'ao*, p. 3*b.*

"The population continued to increase, not fast but steadily, and the census of 1084 gives 17,211,713 families paying tribute, which compared with 9,955,729 in 1014 (*Journ. Asiat.*, 1836, p. 461), and the first census of the reunited empire, shows the population, or at least the taxpaying part of it, to have doubled in about each half-century."—*Simcox*, ii. 171. But *cf.* last two preceding extracts.

"The first census in the reign of Hoei-tsung, two years after his accession (1102), gives the population of the empire at the highest figure yet reached; more than 20 millions of families are recorded as paying taxes, and the estimate of the 100 millions for the total population must be under rather than over the mark, as the estimate of five persons to a family is certainly not excessive, while scholars, soldiers, civil officers, slaves, and priests are omitted from the record; and these classes with their families would add some millions to the general total."—*Ibid.* ii. 171.

"In the periods *Tsung Ning* [1102–07] and *Ta Kuan* [1107–11] the families numbered 20,910,000, and the mouths 43,810,000. From the histories and biographies it appears that the population was greatest [at this time], but as there was no means of investigating all the facts, this cannot be regarded as proved."—*Wên hsien t'ung Kao hsiang chieh, c.* 3, *Hu Kou Kao*, p. 3*b.*

"The population of the Southern empire again showed a tendency to increase, and in the latter half of the 12th century the number of families paying tribute in the divided empire was scarcely, if at all, inferior, to the number registered in all China a century before."—*Simcox*, ii. 175.

"Their [Kitans] official figures [for the whole of 'Old China'] for three years are:—

Year.	Households.	Mouths.
1183	615,624	6,158,636
1190	6,939,000	45,447,900
1195	7,223,400	48,490,000

The figures for 1183 only include the military organisation under the Tartar *mingans* or chiliarchs, and may perhaps also serve to show what the Kitan 'banner' population had been: one quarter of the mouths were slaves. It is stated that the equivalent of 26,000,000 English acres was cultivated, *i.e.* between four and five acres for each 'mouth.' . . . If we deduct the *mingan* population from the figures of 1190–5, we get about 6,500,000 householders, consisting of 40,000,000 mouths, taken by the Tartars from the native Chinese Sung Empire. We have seen what the Sung population was a century earlier. If it had not increased, there would still have been 13,000,000 householders left in the southern empire, and probably (in view of incessant warring) this figure really does approximately represent the number for South China."—*Parker, China*, p. 186.

In 1233, after the slaughter of the siege of K'ai Fêng Fu by the Mongols "1,400,000 families were said to be left to profit by the clemency of the conqueror."—*Simcox*, ii. 176.

"The Sung history says that in 1264 that dynasty still possessed 5,696,989 households of 13,206,532 mouths, and that in 1276 the Emperor formally 'handed them over' to General Bayen. In 1278 the conquest of Chang-chou (Jaitun) and the surrounding parts brought in about another million households."—*Parker, China*, pp. 187–8.

Mongol Period (1280 to 1368).—Table VII.

"At the beginning of the thirteenth century there arose the mighty Genghiz Khan, whose vast empire had its origin in a petty squabble between himself and an envoy sent by his Nüchên suzerain to enforce from him more respect. The Mongols soon made short work of not only both the Chinas, but also of their tributary states, such as Hia and the Uigours; they moreover swept over Turkestan, Persia, and the steppes beyond; annexed Russia; ravaged Hungary; and even threatened the existence of Western Europe. In the south, Kublai for the first time effectively conquered Yün Nan, and even Burma, Annam, and several of the Shan states between them. . . . Corea was made a subservient dependency, and Mongol influence was extended all over the southern seas, at least as far as Ceylon. But Kublai came to signal grief in his attempt to subdue Java; still more so in his persistent and presumptuous expeditions against Japan, not one inch of whose soil has ever been sullied by foreign conquest. Kublai Khan perhaps came nearer being Emperor of the World than any monarch, Eastern or Western, has ever been before or after him; and, though the Chinese affect to despise the 'frowsy Tartars' (*sao ta-tsz*), their historians frankly admit that 'Hupilie' (as they call him) ruled over a vaster empire than any other Chinese sovereign had ever done before."—*Parker, China*, p. 34.

"When Kublai permanently established himself at Pekin he drew up consistent lines of policy on all the great questions with which it was likely he would have to deal, and he always endeavoured to act upon these set principles. . . . He was thus able to deal wisely and also vigorously with a society with which he was only imperfectly acquainted."—*Boulger, Short. Hist.*, pp. 70–1.

"Except in the remote south-west, where cowries and salt were used for money (as the latter is still in the same regions), and where gold was to be bought from unsuspicious natives for only five times the price of silver, the traveller's [Marco Polo] descriptions show us everywhere Chinese civilization flourishing in substantially the same manner and degree throughout the empire."—*Simcox*, ii. 218.

"The irruption of the Mongols under Genghiz Khan, and the comparatively short dynasty which was later on actually established under Kublai Khan, may for several reasons be regarded as a period of transition from the epoch of the Sungs to the epoch of the Mings. For the first eighty years after the nominal accession of Genghiz Khan, the empire was more or less in a state of siege and martial law from one end to the other; and then, in less than one hundred years afterwards, the Mongol dynasty had passed away. The story of Ser Marco Polo and his wonderful travels, familiar to most readers, gives us a valuable insight into this period of brilliant courts, thronged marts, fine cities, and great national wealth; to which may be added the corroborative account given by Ibu Batuta, the Arab traveller, who visited China towards the end of the first half of the fourteenth century."—*Giles, Historic China*, pp. 85–6.

"It is also to this period that we must refer an extensive migration of natives from the northern to the southern portions of China, the descendants of the migrating families being recognisable in the modern Hakkas, a strange people who live among, yet in some senses apart from, the ordinary Chinese of the south, possessing a dialect and many social characteristics of their own."—*Ibid.* p. 87.

"Hardly so successful [as the Grand Canal] was the same Emperor's [Kublai Khan's] huge naval expedition against Japan, which, in point of number of ships and men, the insular character of the enemy's country, the chastisement intended, and the total loss of the fleet in a storm, aided by the stubborn resistance of the Japanese themselves—suggests a very obvious comparison with the object and fate of the Spanish Armada."—*Ibid.* pp. 87–8. See also *Boulger, Short Hist.*, pp. 72–3.

"As a . . . measure of conciliation [to the Chinese], new honours were conferred on Confucius, and the tablets of the great orthodox authors of the Sung Dynasty were finally ordered to be hung up in his temple."—*Simcox*, ii. 229–30.

"Throughout the next half-century [1320–68] few years pass without some complaint of dynastic rivalries, Mongol malversations, and Chinese seditions, interspersed with abortive attempts at reform and repression."—*Ibid.*, ii. 230.

The "Mongol conquests were . . . brought down to the very border of Assam." "Several of the principal provinces [of China] were in a state of veiled rebellion, showing that the first opportunity would be taken to shake off the Mongol yoke."—*Boulger, Short Hist.*, pp. 73–5.

"In 1337 the first distinct rebellion on the part of the Chinese took place in the neighbourhood of Canton, and an order for the disarmament of the Chinese population aggravated the situation because it could not be effectually carried out. Bayan, after his defence of the palace, became the most powerful personage in the State, and to his arrogance was largely due the aggravation of the Mongol difficulties and the embittering of Chinese opinion. . . . While these dissensions were in progress at Pekin the Chinese were growing more daring and confident in their efforts to liberate themselves from the foreign yoke." "The deliverer of the Chinese from the Mongols was an individual named Choo Yuen Chang [Chu Yüan Chang]" who, in 1345, joined one of the bands of Chinese who had thrown off the authority of the Mongols. "In 1356 he captured the city of Nankin, which thereupon became the base of his operations as it was subsequently the capital of his dynasty. He then issued a proclamation declaring that his sole object was to expel the foreigners and to restore the national form of government. . . . While the Mongols were assailed in every province of the Empire by insurgents, Choo headed what was the only organised movement for their expulsion and his alliance with the pirate, Fangkue Chin [Fang Kuo-chên] added the command of the sea to the control he had himself acquired over some of the wealthiest and most populous provinces of Central China. The disunion among the Mongols contributed to their overthrow as much as the valour of the Chinese. . . . "In 1366, Choo, having carefully made all the necessary preparations for war on a large scale, despatched from Nankin two large armies to conquer the provinces north of the Yangtsekiang, which were all that remained in possession of the Mongols. A third army was entrusted with the task of subjecting the provinces dependent on Canton, and this task was accomplished with rapidity and without a check."—*Ibid.* pp. 78–80.

[Staunton says that the White Lotus Society was founded about 1300 A.D., and revived in or about 1344 A.D. by Han Shan-tung, the founder's grandson, who gave it a religious character by proclaiming the advent of Maitreya Buddha, and started a movement for the overthrow of the Yüan dynasty, which was ultimately headed by Chi Yüan-chang, or Hung Wu.]—*Ch. Rev.*, xxi. 160.

"After the death of Kublai, Lamaism, luxury, and inattention to administrative duties, bred dislike, hatred, and contempt in the minds of the Chinese people against their Mongol oppressors. A Buddhist priest headed a local rebellion, and . . . succeeded in driving the Mongols beyond the great wall."—*Oxenham, Atlas*, Pref. p. iii.

"The Russians were the first Europeans to hold relations on a national scale with China, though it is highly improbable that at first the Chinese had the faintest idea of connecting them either with the ancient Ta-ts'in people, or with any other hazily conceived 'tribes' of the West Ocean, or Europe. They were rather grouped, in the Chinese mind, with the Kirghis and Kipchaks as a Western Asiatic race of hyperboreans. The story of the Mongol conquests of 1240 and onwards has often been told, but it is not so generally known that Russian imperial guards are frequently mentioned at the Mongol Court of Peking at intervals up to a century later than that date, and this at a time when the Mongol dynasty at Peking was tottering to its fall, and had no more political hold of any kind upon Russia."—*Parker, China*, p. 96.

"Between 1289 and 1305 there was some correspondence between the Mongol khans of Persia and Philip the Fair, and in 1342 a native of 'Fulang' State is recorded in Mongol history to have brought a present to Peking of a very fine black horse with white 'stockings.'"—*Ibid.* p. 99.

"During Mongol and Ming times Tibet was under military supervision, but enjoyed internal independence."—*Ibid.* p. 128.

"The Mongols, Mings, and Manchus have each in turn sent expeditions to Burma, but China's political influence has never continued long."—*Ibid.* p. 128.

[There is no hint in any of the writings of the foreign travellers of the period "at any systematic policy of isolation, or the exclusion of all foreigners from China, such as we meet with in the 16th and 17th centuries."]—*Simcox*, ii. 236.

Population.—The first Mongol census in 1235 "showed 873,781 households, with a total of 4,754,975 mouths. Over 200,000 households were added to the next census in 1252. From 1261 to 1274 there is steady progression, year by year, from 1,418,490 to 1,967,896 households; but of course these totals only include 'Old China,' two-thirds of whose population had either emigrated or been destroyed. In 1275 the number of households is given at 4,764,077, but it is not clear what conquered parts this total includes. The later conquests of 1275–6 are carefully recorded, together with the number of households and mouths obtained by official inquiries in each province. These conquests practically amount to the same thing as the additions to 'Old China' made by the conquering Han dynasty 1,400 years earlier, and include Hu Peh, Hu Nan, Kiang Si, Cheh Kiang, and Kiang Su, with a grand total of 7,288,331 households of 14,653,820 mouths, *i.e.* if we add up each specified minor total. But if we lump specified with unspecified totals, as the historian does, we obtain, as he gives us, 9,370,472 households of 19,721,015 mouths, settled in 773 conquered *hien* districts. This agrees roughly with a casual statement made in another chapter: 'In that year (1276) we obtained ten million households from the obliterated Sung house.'"—*Parker, China*, pp. 186–7.

"An idea of the fearful slaughter which took place in those times may be gained from the statement in 1282 that Sz Ch'wan was found to contain only about 120,000 households. This is accentuated in 1285, when we are told that 'Sz Ch'wan and the Kwang Tung coast districts are but sparsely populated." [In 1290, 'the returns showed only 13,196,206 tax-paying families, or a total population of 58,834,711 persons, exclusive, it is stated, of the large number of rebels and others, who had taken refuge upon the lakes or in the mountains' (*Simcox*, ii. 228).] In 1293 the number of households is put down at 10,402,760, without any further explanation: possibly the disastrous wars against Japan, Annam, and Java may have stopped further increase. In 1294 the conquests and annexations on the Burmo-Tibetan frontier added 900,000 households to this figure. In Kublai's time 5,000,000 cwt. of rice used to be annually sent to Peking. On the whole it seems that during the 1,500 years' interval between the 'First Empire' and that of Kublai, in spite of ups and downs, the population had remained stationary: it began and ended with about 50,000,000 souls."—*Parker, China*, p. 188.

Ming Period (Restoration of Chinese Supremacy) (1368 *to* 1644).—*Table VIII.*

Chu Yüan-chang "speedily established friendly relations with Corea, united the whole of the eighteen [*sic*] Provinces once more under a native Chinese dynasty, sent a Frank messenger back to Europe to notify the change, and summoned all the petty powers of the southern seas to their 'duty.' Never was there such marine activity in China as during the first reigns of the Ming dynasty. . . . Chinese junks, under the command of a very distinguished eunuch, amply supplied with funds, ammunition, and fighting men, went as far as the Arabian and African coasts; the Red Sea was first vaguely heard of, and tribute was for some time regularly sent from Arabia, Ma'abar or Malabar, Ceylon, Sumatra, the Malay States, Siam, Java, Sulu, Loochoo, and Borneo, besides innumerable other petty island rulers."—*Parker, China*, p. 35.

"For nearly three hundred years the Mings swayed the destinies of China. Their rule was not one of uninterrupted peace either within or without the empire; but it was on the whole a wise and popular rule, and the period which it covers is otherwise notable for immense literary activity, and for considerable refinement in manners and material civilisation. . . ."—*Giles, Historic China*, pp. 99–100.

"In 1367 and 1375 Fulin men are heard of at the Court of the new Ming dynasty."—*Parker, China*, p. 99.

[Balfour says that in 1373, the reigning Prince of Liu Ch'iu sent complimentary tribute to Hung Wu, and 27 years later, asked the Emperor to invest him with the kingly power—a custom which continued down to about 1870. Yet at the same time the position was anomalous, for the suzerainty of Japan was never disputed. China never demanded the allegiance of Liu Ch'iu, but did not refuse it when offered. The kingdom had been founded by a Japanese prince about the 7th century, but was not interfered with for some centuries. Towards the end of the 16th century, the Prince of Satsuma seized Sio-nei, King of Liu Ch'iu, and carried him off to Japan, where he kept him . . . four years. At the end of this period, he restored him to his throne, but the independence of Liu Ch'iu was at an end." The natives of Liu Ch'iu were sincerely attached to the Chinese empire and "entertained a very honest admiration for the literature and civilization of the Chinese. They looked upon the principles of Chinese government as a model of rectitude and enlightenment, and taught the ethics of Confucius in all their schools." They are of Japanese descent, with probably a mixture of Malay blood.]—*Waifs and Strays from the Far East*, pp. 56–8.

"The expulsion of the Mongols beyond the Great Wall and the death of Chunti [Shun Ti], the last of the Yuen [Yüan] emperors, by no means ended the struggle between the Chinese and their late northern conquerors." From 1368 to 1385 there was constant war with the Mongols. The provinces of Shansi, Shensi, and Kansuh were captured. "The pacification of the northern borders was followed by the despatch of troops into the southern provinces." Ssŭ Ch'uan was captured. The Mongols retreated, but continued to harass the borders, but tranquillity was gradually restored. "The death of Kuku Timour was followed by the abandonment of all ideas of reviving Mongol authority in China."—*Boulger, Short Hist.*, pp. 81–6.

"Hongwou [Hung Wu] had the satisfaction of restoring amicable relations with the King of Corea, a state in which the Chinese have always taken naturally enough a great interest from its proximity, as well as from an apprehension that the Japanese might make use of it as a vantage ground for the invasion of the Continent. The King of Corea sent a formal embassy to Nankin, and when he died his son asked for and received investiture in his authority with the royal yellow robes at the hands of the Ming ruler. . . . The last military episode of the reign of Hongwou was the conquest of Yunnan, which had been left over after the recovery of Szchuen, in consequence of the fresh outbreak of the Mongols in the north. . . . The conquest of Yunnan completed the pacification of the Empire, and the authority of Hongwou was unchallenged from the borders of Burmah, to the Great Wall and the Corean frontier."—*Ibid.* p. 86.

"There is no doubt that he [Yung Lo] greatly consolidated the power of the Mings, which he extended on the one side to the Amour and on the other to the Songcoi."—*Ibid.* p. 90.

Tongking was annexed and converted into a province of the Empire in 1407. In the reign of Hsüan Tsung (1426–36) "the Chinese were obliged by grave local disturbances to withdraw their garrison from Tonquin, and the Emperor wisely decided to make no excessive sacrifice to maintain his authority over that region. Tonquin ceased in 1428 to be a Chinese province, and again sank into the doubtful category of a tribute-bearing nation."—*Boulger, Short Hist.*, p. 90. Its administration was entrusted to local officials, the Chinese emperor retaining the right of overlordship and of exacting a yearly tribute.—See also *Macgowan, Hist.*, p. 480.

[Bengal and Annam sent tribute during the reigns of Yung Lo (1403–25) and Hsüan Tê (1426–36) respectively. See also GEN. GOVT.]

"The confusion between trade and tribute, wilfully kept up by the Chinese officials, was a fertile source of trouble. Regarding the Tatars as tributaries, it was becoming for the Emperor to be liberal in his presents, to maintain all the followers of the embassies, and not to be too exacting as to the quality of the gifts brought by the barbarians. On the other hand, these liberalities attracted vast caravans of camp followers, whose only object was to share in the Emperor's gifts and the free rations enjoyed by his guests. The people of one district alone, which used to send embassies of thirty persons, sent so many thousands, that their entertainment cost the market town as much as 300,000 taels. The number of tribute-bearers was then limited to 300, but over 3,000 came." "The Tatars complained that damaged wares were supplied and that members of their embassies failed to return in safety," and this led to a campaign and ultimately to the temporary appointment of a new Emperor.—*Simcox* ii. 242–3.

[An unsuccessful insurrection of the black aborigines of the island of Hainan took place during Hsiao Tsung's reign (1488–1506).]—*Boulger, Short Hist.*, p. 93.

"In 1513 the quarrels with the Tatars for the protectorate of Hami were renewed, and, while the Emperor with his troops amused himself by hunting expeditions north of the Great Wall, Tatar bands ravaged Shensi, carrying off booty and prisoners."—*Simcox* ii. 246.

"The early years of Shih Tsung's reign [1522–67] were marked by some successes over the Tartars, and he received tribute from chiefs who had never paid it before." Yenta, a Tartar chief, "carried his ravages to the southern extremity of Shansi, and returned laden with the spoils of forty districts, and bearing with him 200,000 prisoners to a northern captivity. . . . The Chinese annalists state that never was the frontier more disturbed, and even the establishment of horse fairs for the benefit of the Mongols failed to keep them quiet. In Cochin China the emperor gained some gratifying if not very important successes, and asserted his right as suzerain over several disobedient princes. But a more serious and less satisfactory question had to be settled on the side of Japan." "The Japanese had never forgiven the formidable and unprovoked invasion of their country by Kublai Khan. . . . The refusal of a Chinese merchant to give a Japanese the goods for which he had paid lit the embers of a war which went on for half a century, and which materially weakened the Ming power. During the last years of Chitsong's long reign of forty-five years this trouble showed signs of getting worse, although the Japanese confined their efforts to irregular and unexpected attacks on places on the coast and did not attempt to wage a regular war."—*Boulger, Short Hist.*, pp. 90–6.

"Macao was founded shortly after" the death of St. Francis in 1552. (*Parker, China*, p. 82). It was "first occupied by the Portuguese trading with China in 1557. It appears that Macao was actually ceded to the Portuguese in 1566, on condition of payment of an annual tribute to the Chinese Government, which was to be represented in Macao by a resident mandarin. The said payment ceased in 1849, after the war between Portugal and China, and the barbarous assassination by the Chinese of Ferreira de Amaral, Governor of Macao. Meanwhile, the colony was (until 1844) under the jurisdiction of Goa, and was in every way the property of Portugal."—*Giles, Glossary*, p. 140.

"In 1517 a 'Fulangki' fleet had appeared at St. John's Island, which was then the entrepôt of trade between Canton and Malacca. Why the Portuguese—for they it was, under Peres de Andrade's command — were introduced into China by this name we can only guess; probably, because as with the old Fulin, the already established Arabs had to explain to the Chinese who they were. They sent apparently to Canton or Chao-k'ing a *Ka-pi-tan Mo* (Capitaõ do Mar) with tribute in 1518, and then first was their name of 'Frank' officially recorded: the word 'Portugal' was afterwards used, but it never seems to have quite 'caught on,' though the '*Po-tu-ki* man' of Macao is now familiar to us all. Naturally the appearance of these strangers at Canton, to which place Andrade shortly afterwards forced his way, created great commotion in official circles, especially as other Portuguese ships had meanwhile visited Ts'üan-chow, and had exhibited considerable violence and asperity in their dealings with the various trading people along the coasts. However, a Portuguese mission, it is not quite clear under whom, got to Peking in 1520, and an attempt was then made by the Chinese Government to force the Envoy to restore Malacca to its rightful king, who was nominally a tributary of China. At least one of the members of the mission was executed at Peking, and the Envoy himself is supposed to have perished in prison at Canton, back to which place he was ignominiously escorted. This fiasco naturally led to hostilities. . . . The Chinese seem to have subsequently availed themselves of the assistance of the Portuguese . . . to punish their own pirates." In 1534–7 the Portuguese by bribery obtained permission to occupy Macao, and have since retained it, though their right was not put on a legal footing until 1887. They had also for a time other settlements at Ningpo and Ts'üan-chow, the former of which was destroyed in 1549.—*Parker, China*, pp. 82–4; see also DISTRIBUTION.—*Trade.*

"In the main it appears the Chinese were unable or unwilling to prevent the fortification of Macao: moreover the Dutch and the Japanese were beginning to give serious trouble, and it was therefore thought prudent to conciliate the Portuguese. In 1667 a mission was sent from Goa to complain about obstructions to trade, and in 1710–27 the King of Portugal took prominent part in the Emperor's academic dispute with the Popes; but since the last mission to Pekin in 1753 the Portuguese have until our own days had very little intercourse with official China."—*Ibid.* p. 84.

"The country of Malacca has the *fom* [fêng] and seal of China, and of submission to it."—*Ferguson, Letters from Portuguese Captives in Canton*, p. 114.

"The six years [1567–73] during which he [Mu Tsung] reigned were rendered remarkable by the conclusion of a stable peace with the Tartar Yenta, who accepted the title of a prince of the Empire. . . . With the death of Moutsong the period ends when it was possible to state that the majesty of the Mings remained undimmed, and that this truly national dynasty wielded with power and full authority the imperial mandate." "The reign of Wanleh [Wan Li (Shên Tsung)] covers the long and important epoch from 1573 to 1620, during which period occurred some very remarkable events in the history of the country, including the first movements of the Manchus with a view to the conquest of the Empire."—*Boulger, Short Hist.*, p. 97.

"In 1583 Nurhachu appears in history, and before the end of the reign the Manchus had risen to power and were invading Korea and threatening Liao-yang, meeting with but a feeble resistance from the ill-paid soldiery and corrupt officers of the Mings. The Japanese invaded Korea in 1592; and when on the death of 平秀吉 P'ing Hsiu-chi they at last evacuated Fusan, China had lost incalculable sums and thousands of men. Aboriginal risings, Mongol incursions, Yellow River floods, droughts and famines, are recorded again and again; and the avaricious monarch left a ruined country to his feeble successors"—*Giles, Bio. Dic.*, p. 178; see also GEN. GOVT.

.[A seven years' war (1591–8) on China by Japan, for which Corea was made the instrument, whilst it did not effect the conquest of China, left Corea in "its primitive state of exclusion and semi-darkness."]—*Boulger, Short Hist.*, pp. 98–100.

"In 1572, the first year of Chin-tsong's [Shên Tsung] reign, the Tatar[s] sent a tribute of 250 chosen horses; but the danger of concessions to such neighbours became manifest in 1574, when his son asked for a horse-fair to the west of the Hoang-ho." But the Emperor "granted license for two fairs. In 1577 fresh demands were made for a market for tea as well as horses; but after the death of Yenta, in 1583, the leading rôle passes to another branch of the great Tatar race."—*Simcox* ii. 248.

"The Portuguese, by paying a yearly rent of 500 taels, secured the practical monopoly of the trade of the Canton River. . . . Next after the Portuguese came the Spaniards, who, instead of establishing themselves on the mainland, made their head-quarters in the group of the Philippine Islands, which they still hold. Chinese traders also visited that archipelago, and Chinese settlers formed the bulk of its prosperous colonists." The Spaniards considered them a danger to their supremacy, and many massacres took place. "The promotion of European interests in China owed little or nothing to the forbearance and moderation of either the Spaniards or Portuguese. They tyrannised over the Chinese subject to their sway, and they employed all their resources in driving away other Europeans from what they chose to consider their special commercial preserves."—*Boulger, Short Hist.*, p. 100.

"At this time seven or eight of the kingdoms of Western Asia were allowed to send ambassadors to China, to the number of seventy-two every six years, who in return for their presents received money and more valuable gifts. A Mahomedan merchant told Akbar that he had been admitted in the character of an ambassador from the king of Cashgar. Trade was the real object of the embassies, and it was probably owing to his want of skill in maintaining the character of a merchant that Goes was delayed at the frontier, after he had learnt from a return caravan that he would find his brethren at Peking. The latter part of the journey between Turfan and Hami and the Chinese frontier was at this time considered the most dangerous, owing to the Tatar raids."—*Simcox*, ii. 269.

"Shortly after their exploit with the King of Loochoo [1609] . . . the Japanese endeavoured to form a colony in Formosa, and had to contest possession with the Dutch."—*Parker, China*, p. 87.

"Luzon (Manila) is first mentioned in 1410 as sending tribute to China; but nothing more is heard of the place until 1576, when the sea-borne Franks (Fulangki) begin to attract serious attention. At first this term was applied indifferently to the Portuguese, Spaniards, and French; but the Dutch (Ho-lan), and afterwards the English, were specially known as 'Red-hairs.' Chinese influence had almost disappeared from the south seas before Europeans put in an appearance; but after the settlement of Malacca by the Portuguese, the whole political field was practically abandoned; the Chinese traders there willingly submitted to the government of natives and Europeans without attempting to secure the protection of either the Ming or the Manchu power—in fact, the latter was always disposed to view trading emigrants in the light of pirates or traitors. In one case, however, the Manchus put their foot firmly down: they secured possession of Formosa, whence the Dutch were ignominiously driven."—*Ibid.* p. 36.

"It was in the year 1618 that Noorhachu invaded Leaoutung, and so surprised were the Chinese at his audacity that they offered little or no resistance. . . . All the Nuiche clans . . . became united under his banner, and adopted the name of Manchu." "With the death of Wanleh [1620] the decadence of Ming power became clearly marked, and the only question that remained was whether it could be arrested before it resulted in absolute ruin."—*Boulger, Short Hist.*, pp. 101–7.

"In 1621 the Manchu war reopened with an attack on Moukden or Fanyang," resulting in the vanquishing of the Chinese. . . . It was only natural that, while this heavy cloud from the Manchus was collecting on the northern frontier, other enemies of the Imperial House should have gathered strength and confidence to attack the Chinese officers, who might be generally embarrassed and weakened by the strain imposed on the resources of the government. In Szchuen the peril assumed a very definite and formidable character. . . . General disorder prevailed among the people of what was the most fertile and prosperous province of the Empire." However, a woman named Chinliang, "the hereditary chieftainess of a small district, placed herself at the head of the loyalists in the state, and . . . succeeded in recovering the principal cities and in driving" the rebel chief "out of the province. . . . The success she met with in pacifying Szchuen after a two years' struggle was not attained in other directions without a greater effort, and at a still heavier cost." Risings also occurred in Kueichou, Yünnan, and Shantung, which "distracted the attention of the central government from Manchuria, and weakened its preparations against Noorhachu," who soon crossed the frontier and drove the Chinese behind the Great Wall."—*Ibid.* pp. 108–11.

In consequence of the ejection of the Dutch from Formosa in 1624, "the Chinese Government encouraged their people to emigrate" to that island.—*Parker, China*, p. 87.

"The first English arrivals came shortly after the Dutch. According to one account cited by Chinese writers, Queen Elizabeth of England sent a letter and presents to China in 1596, but the ships of the Mission were wrecked in a storm. In 1637 five English ships are stated to have come from Sumatra to Canton, and to have commenced hostilities there, owing to the Portuguese having intrigued so as indirectly to force the local authorities to obstruct the newcomers' trade; but, it is added, they surrendered the fort they had taken, on being allowed to dispose of their cargoes. However, in both cases, the strangers were, if they really did come, mistaken for Dutchmen, whose own origin again was only imperfectly understood at that period."—*Ibid.* p. 90.

"Not one single word touching Russia appears in Chinese history during the whole interval between the disappearance of the Mongols (1368) and the rise of the Manchus (1644); but, according to Russian accounts, an unsuccessful attempt to induce the Chinese Emperor to open relations was made in 1567. . . . Two Cossacks were sent, *viâ* Kalgan, on a mission to Peking by the Governor of Tobolsk in 1619, but with like unsatisfactory results."—*Ibid.* pp. 96–7.

"Although it is said to be in 'Manchuria,' the province of Shêng King had really no civilised Manchu population to speak of before A.D. 1600; the inhabitants are a mixed Chinese-Tungusic race, who have been as often governed by Corea and by Tunguses of various kinds as by Chinese."—*Ibid.* p. 152.

"Towards the end of the sixteenth century the armies of the great Japanese Napoleon Hideyoshi overran Corea, his ultimate aim being to conquer China. The Ming dynasty, though already decrepit, rendered signal aid to Corea in driving the Japanese out. During the two preceding centuries the Japanese pirates had actively harassed the Chinese coasts, and in 1609 they temporarily carried off China's tributary, the King of Loochoo. Manchuria is scarcely even mentioned during the 280 years this house of Ming occupied the throne. There were frequent wars with the Mongols, and it was in the course of this isolated period that the obscure power of the Eleuths had time to grow. One Chinese emperor was taken captive at a place (still so called) just outside the Great Wall styled T'umu, and was detained by the chief Essen for some years."—*Ibid.* p. 35.

"In the reign of Tienki, 1621–1628, insurrections were rife, and amidst the intriguing for power that was ruining the country, Sü Hung-ü, one of the insurgent leaders, employed the White Lotus Society to advance his ambitious political aims. This man . . . was already proclaimed emperor, under the style of Hsing Sheng, when he was defeated and slain in battle. This appears to have damped the ardour of the Society, for it remained inactive during the few succeeding years of rebellion by Li Tzu-sheng and other chiefs, that tore the empire to pieces, and paved the way to the throne for the Manchus."—*Ch. Rev.*, xxi. 161.

The descendants of Noorhachu "dated their dynasty from the year 1616, although the conquest of China had not then so much as commenced. "Noorhachu was succeeded [1627] by his fourth son, the fourth Beira or Prince, known as Taitsong [T'ai Tsung (Wên)], who continued both his work and policy." "Taitsong was as determined to humiliate the Mings as his father had been. He commenced his offensive measures by an attack on Corea, which he speedily reduced to such a pass that it accepted his authority and transferred its allegiance from the Mings to the Manchus. This was an important success, as it secured his eastern flank and deprived the Chinese of a useful ally in the Forbidden Kingdom."—*Boulger, Short Hist.*, pp. 111–12.

"Taitsong, in the year 1635, assumed, for the first time amongst any of the Manchu rulers, the style of Emperor of China." "Corea became a Manchu possession."—*Ibid.* pp. 114–15.

"The possession of a well-trained army, the production of two great leaders of admitted superiority, and forty years of almost continuously successful war, had not availed to bring the authority of the Manchus in any permanent form south of the Great Wall. The barrier of Tsin Che Hwangti [Ch'in Shih Huang Ti] still kept out the most formidable adversary who had ever borne down upon it, and the independence of China seemed far removed from serious jeopardy. At this juncture events occurred that altered the whole situation, and the internal divisions of the Chinese proved more serious, and entailed a more rapid collapse than all the efforts of the Manchus. . . . The public dissatisfaction continued to spread, and the demand was increasing every day for the Mings to reform, or to be got rid of. The time was auspicious for a genuine patriot, and also for unscrupulous adventurers. China failed to find the former, but the production of the latter was abundant, and one of these completed the ruin of his country, and paved the way for the triumph of the Manchus." In 1629, the rebel Li Tzŭ-ch'êng "appears on the scene as member of a band of robbers," and as the result of a successful rebellion assumed the title of Emperor with the intention of establishing a dynasty to be called Tai Shun. Wu San-kuei, a Chinese general, however, entered into an alliance with the Manchus, and drove Li Tzŭ-ch'êng from Peking. Being appointed by the Manchu Regent to pursue the rebels, Wu San-kuei drove them from Shansi into Honan, and from Honan into Shensi, but found on his return that the Manchus were determined to retain the territory they had conquered. He tendered his allegiance on condition that no Chinese woman should be taken into the imperial seraglio, that the highest literary degree should never be given to a Tartar, and that the men should adopt the Tartar costume."—*Ibid.* p. 115–21; *Giles, Historic China*, pp. 103–5.

[The Hung League, or Heaven-Earth-League (天地會, *Tien-ti Hui*), originally non-political, began to assume a political character towards the end of the Ming dynasty (1640). Its main object was, and perhaps still is, the restoration of the Ming sovereignty. For an exhaustive account of the Society, its history, government, and masonic signs and ceremonies, see SCHLEGEL.]

"The Ming dynasty waged a long war with Burma and the Shan states under the latter's protection; on the whole successfully. It also maintained a preponderating influence in Annam, Siam, Ciampa, and Cambodgia. Tribute was occasionally sent from Arabia, Samarcand, the Pamir States, and various parts of Turkestan; but in the main Chinese influence in Tibet and all places west of it and of the Yellow River was fitful and feeble. In spite of the vigour of the founder of the Ming dynasty and of his warlike son, who finally transferred the capital from Nanking to his own appanage Peking, on the whole no impression of affection or respect has been left upon the Chinese mind by this ruling house, the Emperors of which soon dropped into the hands of eunuchs and favourites; and it perhaps ended as pitifully and contemptibly as any Chinese dynasty ever did."—*Parker, China*, pp. 36, 38.

Population.—"In 1391 the Ming dynasty . . . counted its population at 10,684,435 households, of 56,774,561 adults. In 1393 there were 16,052,860 households, of 60,545,812 mouths. [*Cf. Yu chuen tsze che tung këen Ming ke kang muh*, a continuation of the *Kang-këen E Che* (*Ch. Repos.*, i. 357).] The increase of mouths over adults is not hard to account for; but, unless we assume a new or the recrudescence of an old habit of living apart from the paternal roof, it is difficult to explain the sudden upward movement of households. This year the equivalent of 140,000,000 acres were cultivated, and it is distinctly stated that 'most of the land in the empire is now under tillage.' In 1491 the population went down to 9,113,446 households of 53,281,158 mouths; and in 1578 it figured at 10,621,436 households of 60,692,856 mouths. The explanation is given that (apparently in order to escape excessive taxation) 'a habit had grown up of seeking the protection of rich persons, of living in boats, and of pretending to be workmen or traders.'"—*Parker, China*, pp. 188–9.

Manchu Period (1644 *to* —).—*Table IX.*

"The way the Manchu dynasty came into being was this. During the Mongol times (1260–1360) the warlike spirit of the Tungusic hunting tribes had been kept up to the mark by employment on a large scale in the expeditions against Quelpaert and Japan. . . . The Ming dynasty left the whole region of what we now call Manchuria very much to itself [see MING PERIOD]; as it bore the Mongol name Uriangkha, it seems likely that when the Mongols were driven out of China they, and more especially the Uriangkha tribe, retained political influence in Nayen's old appanage, which had in Kublai's time been practically modern Manchuria. The name of the celebrated Mongol general, Uriangkhadai, simply means 'man of Uriangkha.' The only occasions on which the people in these parts seem to have had friendly intercourse with the Ming power was when they took advantage of frontier fairs to bring down horses, furs, and skins for sale or barter to the Chinese. During this obscure period of imperial inaction, the tribes now grouped together as the Manchu race must have had ample opportunity to develop; but the Manchus themselves are not able to tell us much of their own origin and doings previous to the time when their chief Nurhachi conceived and carried out the bold idea of welding all the Tunguses into one nation. Some of the southern chiefs, tinged with Mongol blood, objected to this fusion, and either took refuge in or intrigued with China. This led to frontier wars and recriminations, and finally to the conquest of the Chinese borderlands by Nurhachi's son, Abkhai. Meanwhile a great rebellion broke out in degenerate China, and the Ming general, Wu San-kwei, who had been sent against the Manchus, was recalled to quell it. Peking fell into rebel hands, and Manchu assistance was foolishly sought by Wu San-kwei. The Chinese Emperor having meanwhile committed suicide, and there being no proper heirs, the Manchus saw their opportunity, and promptly took it. Abkhai's son and successor became the first Manchu Emperor of China in 1644. Previous to this Corea and Eastern Mongolia had been reduced to submission, and special measures were now taken to draft the capable Mongol troops into the Manchu military organisation. The Coreans were allowed to govern themselves on the tacit condition of furnishing troops when called for. China was soon conquered, and then came the turn of the overweening Wu San-kwei and other revolted Chinese satraps, the Western Mongols, the Kalkhas and Eleuths, Kokonor, and Tibet. By the time of the Emperor K'ien-lung (1736–1795) the Chinese Empire had reached its climax. The necessity of completely subduing the Eleuths and Dzungarian Kalmucks led to the conquest of Ili and Kashgaria. The wars with Tibet similarly led up to the conquest or pacification of Nepaul. There were also long wars with Annam and Burma, in which the Manchus often came off second best, but which resulted in a more or less genuine recognition of Chinese suzerainty; an authoritative tone was assumed even over Siam when that country became involved in the peninsular question. Of course these southern nations knew next to nothing of Manchu-Chinese distinctions. The Manchus have always left Japan severely alone, but in Loochoo they found a faithful vassal (equally complaisant to Japan) until about twenty-five years ago [1874], when Japan, in consequence of Formosa disputes, unceremoniously gave the Chinese notice to quit. The Sultans of Sulu have also been respectfully disposed towards the Manchus. With these exceptions, the reigning dynasty, which has no real aptitude for the ocean, has, following the example of its kinsmen, the Kitans and Nüchêns, cut itself off entirely from political relations with the Southern Seas. As a land power, however, it has been even more solidly established than the Mongols were; for although the immediate successors of Genghiz commanded the personal attendance before their desert throne of Russian, Armenian, and Persian princes, the most powerful Mongol Emperor, Kublai, really ruled in an effective sense over the Eighteen Provinces alone, and was at perpetual loggerheads with his vassal relatives of Mongolia and Manchuria; moreover, the Mongols were not the intellectual or literary equals of the Manchus, and never had either the same prudence or the same financial grasp of the country's resources. As to the relations of Europe with the Manchu Empire, that subject requires a special chapter. It only needs to be remembered at this point that Chinese struggles with the nomads and Tartars begin with the dawn of history, and are carried down to our own day."—*Parker, China*, pp. 38–40.

"By 1644 the glories of the great Ming dynasty had departed. Misgovernment, referred by Chinese writers to the ascendency of eunuchs, had resulted in rebellion, and the rebel chief with a large army was pressing upon the capital. On the 9th April Peking fell. . . . The Manchus took possession definitely of the throne, which they had openly claimed since 1635, and imposed the 'pigtail' upon the Chinese people."—*Giles, Hist. of Ch. Lit.*, pp. 337–8.

"The subjugation of the empire by the Manchus was followed by a military occupation of the country, which has survived the original necessity, and is part of the system of government at the present day. Garrisons of Tartar troops were stationed at various important centres of population, each under the command of a Tartar officer of the highest military grade, whose duty it was to co-operate with, and at the same time act as a check upon, the high authorities in the civil administration of the empire. . . . The conquering Tartars have been themselves conquered by the people over whom they set themselves to rule. They have adopted the language, written and colloquial, of China; and they are fully as proud as the purest-blooded Chinese of the vast literature and glorious traditions of those past dynasties of which they have made themselves the joint heirs. Manchu, the language of the conquerors, is still kept alive at the Court of Peking."—*Giles, Historic China*, pp. 112–14.

"Under this dynasty the empire has been divided into eighteen provinces, forming China proper, to which must be added the huge areas of Manchuria, Mongolia, Chinese Turkestan, and even of Tibet, which last the Chinese claim as a dependency, sending a political agent to reside at the Tibetan capital."—*Ibid.* p. 121; see also *Oxenham, Atlas*, Pref., p. iii.; and *Mayers, Ch. Govt.*, p. 32, for a table giving the names, groupings, and archaic designations. *Cf.* GEN. GOVT.

"In 1652 there began a long struggle between the Manchus and the Russians for the possession of Yaksa, or Albazin, on the Amur. Baikoff was sent on a mission in 1653."—*Parker, China*, p. 97.

"According to the arrangement which the Chinese say was made by a Dutch mission to Peking in 1656, Holland had to send tribute to the Manchu court once every eight years."—*Ibid.* p. 88.

"In 1665 a Dutch mission under Van Hoorn visited Peking, and the local government of Fuh Kien seems to have sought Dutch assistance about this time in connection with Formosa affairs. It was not until 1683 that the Manchus succeeded in obtaining from the Koxinga family, with Dutch assistance, a renunciation of their hereditary rights in Formosa; and since this date (until its loss in 1895) the island has been incorporated in the empire as part of Fuh Kien."—*Ibid.* p. 88.

"By the Treaty of Nerchinsk of August, 1689, the Russians agreed to abandon Albazin, and a number of them were removed as prisoners to Peking, where they were incorporated in the 'banner' system."—*Ibid.* p. 97.

"The history of Russian relations with the Manchus is a long one. It embraces the questions of the Turgut Mongols' or Kalmucks' migration to the Volga, the Manchu envoy Tulishên's missions to them in 1715–30, and their subsequent return in a disgusted frame of mind to China in 1770; Russia's missions to China in 1719–27; the Kalmuck wars, and the surrender by Russia of fugitives; frontier disputes in 1848–9; the occupation by Russia of the Lower Amur in 1855; Pontiatin's mission; and the Treaty of Aigun in 1858."—*Ibid.* p. 97.

"The name of France never appears for certain in Chinese history until the year 1718, when, in enumerating the Holan (Dutch) and other strange Western nations, the Manchu Emperor observes the 'unusual ferocity' of the Holansi, who are 'of the same race as the Macanese.' True, Lewis XIV. had sent a letter to the Chinese Emperor in 1688, recommending to him some French Jesuits; but no mention whatever is made of this event in Manchu history. There was, apparently, a certain amount of French trade at Canton, as is evident from the fact that the United States received French assistance there in 1785 [in which year United States traders first arrived at that place, *cf.* DIST.]; but French interests in China up to the date of the Second War were almost exclusively religious [*cf.* ECCL.]."—*Ibid.* pp. 99–100.

[For the origin (*circ.* 1723–35) of the *T'ien-ti Hui*, or 'Heaven and Earth League,' a secret society having a political character, see *N. and Q. on C. and J.*, iii. 55–8, and *Schlegel, Thian Ti Hwui.*]

"After ten years of internal reorganisation, his [Ch'ien Lung's] reign [1736–96] became a succession of wars. The aborigines of Ssŭch'uan and Kueichou were crushed wholly or for a time; Burmah and Nepaul were forced to pay tribute; the Chinese supremacy was established in Tibet; Kuldja and Kashgaria were added to the empire; and rebellions in Kansuh and Formosa were suppressed. At the same time it was found advisable to cease from interfering with the Government of Annam. In 1770 the Turguts, who had emigrated from Semgaria into Russia between 1650 and 1673, returned in one vast body from the borders of the Caspian Sea, and settled in Ili among the Altai Mountains."—*Giles, Bio. Dic.*, p. 143; see also *Giles, Historic China*, pp. 116–17.

"With western nations relations were friendly, a Portuguese embassy in 1750 being succeeded by Lord Macartney's mission and a Dutch mission in 1793, and by a Spanish envoy in 1795. With Russia, in spite of frontier disputes, caravan trade through Kiachta was maintained. In 1763 two Chinese visited Europe."—*Giles, Bio. Dic.*, p. 143.

"A mission under Titsingh and Van Braam visited the Chinese capital in 1793, and since then Holland appears to have gone quietly about her own business in the Southern Archipelago, without troubling herself with Manchu official relations."—*Parker, China*, p. 88.

"The reign of Tao Kuang [1821–51], the sixth Manchu Emperor, will be ever memorable for the so-called Opium War, the result of which was that, at the point of the bayonet, we extracted a treaty of commerce and a recognition of national equality from a nation which had up to that date looked upon us simply as unsubdued savages. The trade in opium was legalised; the island of Hong-Kong was ceded to England; five ports were thrown open to commerce; and on the abolition of the old forms of restricted intercourse, foreigners began to flock in considerable numbers to what had previously been a 'hermit land.'"—*Giles, Historic China*, pp. 118–19.

"It is distinctly admitted that it was the stoppage of trade, and not the destruction of opium, which caused the war; also that the Emperor, when the war was over, voluntarily conceded the right of all but officials to smoke the drug."—*Parker, China*, p. 92.

"Serious disorders also broke out in the islands of Formosa and Hainan," but the rebellions were effectively suppressed. "Minor troubles culminated in the Miaotze rebellion, the most formidable internal war which the Chinese Government had to deal with between that of Wou San Kwei and the Taepings" (see *infra*). Minor troubles with the Miao Tzŭ in 1832 "did not seriously affect the stability of the government or the authority of the Emperor," though they seriously affected the national exchequer. "The real significance of these local disturbances and of the embarrassment they caused the Emperor lay in the fact that they encouraged a seditious movement on the part of more formidable disturbers of the peace, and that they distracted some of the government's attention from the foreign problem, which was now entering upon its most important phase."—*Boulger, Short Hist.*, pp. 200–2.

"By the treaties of Wang-hia of July, 1844, and Whampoa of October in the same year, the United States secured the privileges obtained by England for her subjects after the first Chinese war."—*Parker, China*, pp. 104–5.

The Chinese inhabitants of Macao "have been governed since 1849 by the Portuguese authorities somewhat differently from their own people, but the mixed government has succeeded very well. . . . The Portuguese have refused to pay the former annual ground-rent of 600 taels to the Chinese Government, since the assassination of their governor in 1849, and now control all the inhabitants living within the barrier wall, most of whom have been born therein."—*Williams, Midd. King.*, i. 170–1.

"From that time [1689] to 1855, when Muravieff 'Amurski' obtained the Czar's permission to annex the Amur, the Russians remained on very quiet and inoffensive terms with China, trading only at Kiachta and Tarbagatai [*cf.* DIST.]. In 1858 the Aigun Treaty, necessitated by these new acquisitions, loosely defined the Ussuri boundaries."—*Parker, China*, p. 127.

"As the rod of empire was about to pass from Tao Kwang to Hsien Fêng [1851–62], there arose the formidable rebellion of the T'ai-p'ings [an anti-dynastic uprising, which had its origin in the Triad Society], which was by and by to shake the Manchu power to its foundation; and Hsien Fêng had actually been seated upon the throne only some four or five years when the seizure of a dozen sailors on board a Chinese lorcha, flying the British flag, led to a second war with foreign powers, to new treaties, and to the promised opening of new ports, with a considerable extension of trade. Then ensued a short period of friction, involving repudiation by the Chinese of responsibilities they had undertaken, refusal to allow our Minister to proceed to the capital, renewal of hostilities, and the ultimate capture of Peking by the allied French and English forces, and the flight and death of Hsien Fêng."—*Giles, Historic China*, p. 119.

"After much bloodshed and devastation of the country, the T'ai-p'ing rebellion" was "crushed, chiefly through the valuable military services rendered to the Chinese Government by Colonel Gordon. A great Mahommedan rising, which dated back as far as 1856, and which had for its object the separation of the province of Yünnan into an independent State, was some years afterwards brought to an end amid scenes of bloodshed and wholesale carnage."—*Ibid.* pp. 119–120.

"The colonization of Mongolia is done under the authority of the Mongolian princes, with the sanction of the Imperial Government; but in the Ya-loo Valley, and about the base of the Long White Mountains generally, an illegal colonization by Chinese squatters has been simultaneously going on, in defiance of the Manchoo authorities, who dare not proceed into the newly-settled region. The colonists are all outlaws by the fact of their being there, but no inconsiderable portion of them are men who have committed crimes (in Manchuria) and made their escape. They have established a government of some kind, one feature of which is a rough penal legislation that knows few punishments but death. At its head is a chief, entitled Laou ta lo . . . [a term equivalent to] Signor or Seigneur [as used in the mediæval republics of Europe]. The chief in the Ya-loo Valley rules over a small but independent State of growing importance."—*Naut. Mag.* (Oct., 1864), pp. 511–12.

"The increase of . . . foreign commercial interests at [New-chwang] depends on the colonization of the *tsaou-te* or grass-lands of Eastern Mongolia . . . which is, humanly speaking, certain to go on, and is capable of almost unlimited extension."—*Ibid.* p. 511.

[During the first half of the 19th century, Chinese colonization spread rapidly from the province of Shingking into Eastern Mongolia; and by 1864 the settlers had penetrated to a distance of over 200 miles beyond the Palisade.]—*Ibid.* p. 508.

"In 1860 Count Ignatieff, by the Treaty of Peking, took advantage of the situation created by the Anglo-French attack upon China to secure the annexation to Russia of the whole Ussuri region."—*Parker, China*, pp. 97, 127.

"Germany was not even known to China by name previous to the Second War: even in Ricci's time some of the Jesuits were known to hail from 'Germania'; but where that place was no one either knew or cared. After the British and French had got their treaties finally settled in 1860, 'various smaller states,' amongst which [was] Prussia, applied for similar privileges. The Prussian treaty was signed at Tientsin in September, 1861, but for five years after that no Prussian envoy was allowed to reside at Peking."—*Ibid.* pp. 102–3.

[The Portuguese unsuccessfully endeavoured to obtain a treaty in 1862.]—*Ibid.* p. 106.

"In 1862 there was concluded a convention [with Russia] regulating the land trade *via* Kalgan, but this was subsequently superseded by another dated 15th April, 1869."—*Ibid.* p. 97.

"On their way back from China [after the Second War] the commanders of the French fleet, in conjunction with the Spaniards, who also had unredressed grievances against Annam, conquered part of Cochin China, and by the treaty of 1862 Saigon and the surrounding province was made over to the French. This led to further conquests and cessions in 1867, partly as a sequel to the explorations of Garnier and others in the Shan States and Yün Nan."—*Ibid.* pp. 100–1.

"The Dutch held aloof, and [even after the Dutch treaty of 1863] probably they would never have sent a minister to Peking at all, had they not desired to obtain a liberal supply of coolies for Sumatra."—*Ibid.* p. 89.

"The Chinese in Java and other Dutch colonies have not quite so much freedom as in Hong-Kong or Singapore, but they are treated with sagacity as well as firmness."—*Ibid.* p. 89.

[The Danes concluded a treaty with China in 1863, the Spaniards in 1864, and the Belgians in 1865.]—*Ibid.* pp. 109, 106.

"The Italians, not having come to trade, are stated by Chinese authors to be the most cultured and respectable of the barbarians, who would never have 'rebelled' but for England and France. . . . The first Italian treaty was concluded in 1866, but the Italians did not put in an official appearance until 1877, when a man-of-war visited the coasts of Corea."—*Ibid.* p. 110.

"The real ground for hostilities furnished by the Chinese to the Americans was the firing into two of their vessels by the forts of the Bogne on the 17th November, 1856. By the Treaty of Washington of 1868 the United States disclaimed all desire to interfere in Chinese affairs, and arranged for the admission of immigrants into the United States."—*Ibid.* p. 105.

"The Austrians did not draw up a treaty until 1869, and they have usually since then left their interests in British hands."—*Ibid.* pp. 110–11.

In 1871, the Japanese "succeeded in concluding their first treaty with China."—*Ibid.* p. 107.

"On the 29th of June, 1873, Tungche received in audience the ministers of the principal Powers at Pekin, and thus gave completeness to the many rights and concessions obtained from his father and grandfather by the treaties of Tientsin and Nankin." This has since formed a precedent for other audiences.—*Boulger, Short Hist.*, p. 330.

"The Formosa dispute of 1874 soon awoke them [the Chinese] to the fact that the despised islanders were not to be trifled with. That same year Japan, by a stroke of the pen, placed China's old tributary Loochoo under the control of the Tōkyō Home Office, and all China's expostulations were ignored, as well as the piteous entreaties of Loochoo itself."—*Parker, China*, p. 107.

"The Swiss have no treaty, and their interests are commonly entrusted to French hands."—*Ibid.* p. 111.

"Peru drew up a treaty with China in 1875." Since the war with Chili "she may be regarded for the present as non-existent in Peking councils."—*Ibid.* p. 111.

On being raised to the Vice-royalty of Shensi and Kansuh, Tso Tsung T'ang "threw himself into the task of reconquering them with remarkable energy, and within two years of his arrival he was able to report that he had cleared the province of Shensi of all insurgents. He then devoted his attention to the pacification of Kansuh," and after having defeated the Mahomedans he devoted his main efforts to the reorganisation of the province. "In 1874 the campaign against Kashgaria had been fully decided upon." "The fall of Souchow had distinguished the closing weeks of the year 1873, and in 1874 Kinshun had begun, under the direction of Tso Tsung T'ang . . . his march across the desert to the west." Barkul and Hami were occupied. Gumti and Urumtsi surrendered in 1876. With the capture of Manas "those Mahomedans who might be said to be Chinese in ways and appearance ceased to possess any political importance. It would not be going much too far to say that they no longer existed. The movement of rebellion, which began at Hochow in 1862, was thus repressed in 1876, after having involved during those fourteen years the north-western provinces of China, and much of the interior of Asia, in a struggle which, for its bitter and sanguinary character has rarely been surpassed."—*Boulger, Short Hist.*, pp. 331, 339–42.

After this struggle was over, the Chinese armies proceeded against Yakoob Beg, and Kashgar was taken in December, 1877. "The Chinese thus brought to a triumphant conclusion the campaigns undertaken for the reassertion of their authority over the Mahomedan populations which had revolted. . . . Having vanquished their enemy in the field, the Celestials devoted all their attention to the reorganisation of what was called the New Dominion, the capital of which after much deliberation was fixed at Urumtsi."—*Ibid.* p. 344.

"The immediate results [of the Chefoo Convention of 1876] were the opening to trade of more ports (Wênchow, Pakhoi) on the coast, and more places on the Yang-tsze (Ichang, Wuhu), together with certain stipulations concerning the opium trade, and the establishment of permanent Chinese Legations in Europe, America, and Japan."—*Parker, China*, pp. 93–4.

"China, as Corea's suzerain, was somewhat puzzled what to do, when Japan, in 1876, signed a Treaty with the 'independent sovereign state of Chosen'" (*v. infra*).—*Ibid.* p. 108.

"The Spaniards concluded a" further treaty "in 1878, as a result of a Chinese mission sent to enquire into the question of the ill-treatment of Chinese in Cuba." "When a permanent Chinese minister was sent to the United States in 1879, Spain and Cuba were included in his mission."—*Ibid.* p. 109.

"Having conquered Eastern Turkestan, the Chinese next took steps for the recovery of Ili. Without the metropolitan province the undertaking of Tso Tsung Tang would lack completeness, while indeed many political and military dangers would attend the situation in Central Asia. But this was evidently a matter to be effected in the first place by negotiation, and not by violence and force of arms. Russia had always been a friendly and indeed a sympathetic neighbour. In this very matter of Ili, she had originally acted with the most considerate attention for China's rights, when it seemed that they had permanently lost all definite meaning, for she had declared that she would surrender it on China sending a sufficient force to take possession, and now this had been done." An ambassador (Chung How) was sent to St. Petersburg in 1879 and a treaty was signed at Livadia, by which Russia surrendered the Kuldja Valley, but retained that of the Tekes, which left in her hands the command of the passes through the Tian Shan range into Kashgar. The Chinese refused to ratify this treaty, and the Marquis Tsêng subsequently succeeded in obtaining the almost unqualified territorial concession, for which the Chinese had stood firm. "On the 12th February, 1881, these views were embodied in a treaty, signed at St. Petersburg, and the ratification within six months showed how differently its provisions were regarded from those of its predecessor. With the Marquis Tsêng's act of successful diplomacy the final result of the long war in Central Asia was achieved. The Chinese added Ili to Kashgar and the rest of the New Dominion, which at the end of 1880 was made into a High Commissionership."—*Boulger, Short Hist.*, pp. 344–6; see also *Giles, Historic China*, pp. 120–1.

"When China was in the throes of the Mussulman revolt, Russia temporarily occupied the province of Ili; but, after Yakub Beg's power had been broken in 1876, energetic steps were taken by China to recover from Russia this important region [Ili], and these steps proved successful in 1880–1. . . . During all this long period of time the Russians had been carefully kept by the Chinese as far away as possible from Manchuria, the whole of which region it has always, since the Albazin affair, been Manchu policy to maintain as nearly as might be practicable in the condition of an unoccupied desert. It was only in 1888, after British consular and military officers had visited and reported on that fertile region, that China awoke to the fallacy of this timid policy. Since then the three Manchurian provinces have been civilly organised, cultivated, and populated as quickly as possible, and have thus been prepared to resist Russian aggression by the development of their own economic strength."—*Parker, China*, pp. 97–8.

"After the subjection of Kashgaria the Manchus for a few years extended their influence over Kokand, Bokhara, Shignan, and Badakshan; but their armies never penetrated even temporarily far beyond the Pamirs."—*Ibid.* p. 77.

"When, in 1883, the Powers began to conclude treaties with Corea, it was found that Japan had ancient vested rights of an unmistakably historical nature at Fusan, and it was soon evident to all concerned that she was bent on developing them in other parts of Corea."—*Ibid.* pp. 107–8.

In 1881 it was "harmoniously arranged at Pekin that Corea was to issue from her hermit's cell, and open her ports to trading countries under the guidance and encouragement of China." Jealousy on the part of Japan on this account nearly led to a rupture between that country and China on the signing of the treaties with the Powers at the Court of Seoul.—*Boulger, Short Hist.*, p. 347.

"Corea was originally dependent on China. But after the war Kuang Hsü permitted her to have her own Emperor. According to the ancient rule of China, we could hold no diplomatic relations with her."—*N. C. Herald*, Aug. 14, 1899, p. 341.

"Towards the end of the year 1882, the French Government came to the decision to establish a 'definite protectorate' over Tonquin. . . . The weakness of the kingdom of Annam was a strong enough temptation in itself to assert the protectorate over it which France had, more or less, claimed for forty years." Hanoi, the nominal capital of Tonquin, was captured before the end of 1882. The Chinese "took no immediate steps to arrest the development of French policy in Tonquin by proclaiming it a Chinese dependency, and also their intention to defend it. . . . After the capture of Hanoi, the French were constantly engaged with the Black Flags [half pirates and half patriots], from whom they captured the important town of Sontay." The French sustained several reverses. "Before this happened the French had taken extreme measures against the King of Annam, of which state Tonquin is the northern province. . . . Hué was attacked and occupied a month after the death of Tuduc [the King], and a treaty was extracted from the new king which made him the dependent of France." Further fighting ensued in Tonquin, and on May 11th, 1884, a treaty of peace was signed by which the French were to be allowed to occupy Langson and other places in Tonquin. The forces sent to occupy these places were opposed, and eventually an apology and a small indemnity were exacted from the Chinese. Hostilities were then resumed, not only against the Black Flags but also against the Chinese, Foochow and the Formosan ports

were bombarded, and a treaty signed on the 9th June, 1885, by which, however, the French gained no further concessions than those granted under the earlier convention.—*Boulger, Short Hist.*, pp. 347–50.

"The French had been steadily tightening their hold upon Annam and Tonquin. . . . Finally hostilities broke out [1882–4]; the Chinese fleet was destroyed at Pagoda Anchorage" and the protectorate of Tonquin secured to France. "Haiphong now became an important centre of trade, and economical development quickly followed all over Tonquin. A delimitation of land frontiers was arranged, and one of the political results has been that several new treaty 'ports' have opened to the French the inland trade of Kwang Si and Yün Nan. [See DIST.]."—*Parker, China*, p. 101.

"The Chefoo Convention, closing the Yunnan incident, contained a promise from the Chinese Government to allow an English mission to pass through Tibet." In 1884 passports were granted, but the mission assumed such large dimensions that alarm was created in Tibet, and on the annexation of Burmah by Great Britain in 1886, it was stipulated, in the negotiations which followed for the adjustment of China's claims in that country, that "if the Tibetan mission were withdrawn, the Chinese would be content with the formal admission of their claim to receive the tribute mission from Burmah in accordance with established usage." This was agreed to, but "the exact frontier between Burmah and China has still [1893] to be delimited."—*Boulger, Short Hist.*, pp. 354–5.

"The hostile feeling engendered in the western territories and states by the overflow of undesirable Chinese led to a compromise in the shape of the Commercial Treaty of 1880, and finally to the Immigration Prohibition Treaty of 1894. The United States have always been somewhat prone to pose as the good and disinterested friend of China, who does not sell opium or exercise any undue political influence."—*Parker, China*, pp. 104–5.

"It was not until 1887 that they [the Portuguese] were officially recognised as possessors of Macao," Portugal undertaking never to alienate it without China's consent.—*Ibid.* p. 106.

"Another open clause in the Chefoo Convention took the ultimate form of the Chungking agreement of 1890, by which foreign commerce obtained direct admission into the heart of Sz Ch'wan. The Sikkim Convention of the same year recognised in principle the right of British India to trade with Tibet, provided for by a separate article in the Chefoo Convention."—*Ibid.* pp. 93–4.

"Until 1893 Danish interests were usually looked after by the British authorities: in that year they were placed in Russian hands. Danish interests lie chiefly in the direction of Telegraph Conventions. . . . Without the countenance and support of Russia Denmark would not count for much in the Far East."—*Ibid.* p. 109.

"Brazil (about 1880), Mexico, and the Congo State (1898) have treaties with China." "There is a Swedo-Norwegian treaty with China."—*Ibid.* pp. 110–11. For a categorical list of treaties from 1689–1898, see *ibid.* pp. 113–15.

[In 1876, Japan had treated Corea as an "independent sovereign state (*v. supra*)"; England and the United States of America doing the same in 1882–3. The Americans having admitted China to a share of the privileges obtained, the latter concluded a treaty with her own vassal, and then began to intrigue with the view of substituting her influence for that of Japan. This led to revolutions, murders, hostilities, etc., lasting during a period of ten years and culminating in the Japanese war of 1894–5, in which China was crippled and lost Corea and Formosa. The victor was deprived of further fruits of victory by the intervention of Germany, France, and Russia. The Commercial Treaty of 1896 opened Soochow and Hangchow as ports of trade. See *ibid.* pp. 103, 108, etc.]

"The culminating point in Germany's diplomatic influence was reached when, in piping times of peace [1897], Kiao-chou and two surrounding territories were taken by force in ostensible satisfaction for some injuries done to missionaries, but manifestly also because China had not showed sufficiently tangible gratitude for favours received. This act, unprecedented in the annals of diplomacy and international comity, undoubtedly set the evil ball a-rolling which led to the occupation of Port Arthur and Ta-lien Wan by Russia, Wei-hai Wei by England, and Kwang-chou Wan by France; but in all three cases these Powers at least went through the form of asking before taking."—*Ibid.* pp. 102–4.

[The Japanese war and the demands by Foreign Powers for concessions of territory, roused China to extraordinary military activity, which culminated in the "Boxer" outbreak of 1900, the Legations of the Foreign Powers in Peking being besieged, until relieved by the allied European, American, and Japanese forces.]—*Ibid.* p. 108.

"The province [of Hu Nan] has never, I think, been conquered; has never furnished a dynasty, or set up in rebellion, or been the head of a separate empire: it is as virgin as the temperament of its inhabitants."—*Parker, John Chinaman*, p. 236.

"In some parts of Kwei Chou province they [Miao Tzŭ] form the bulk of the population, and even have officials of their own; just as we used to allow, and perhaps still do allow, a sort of limited home rule to Maori or Canadian chiefs."—*Ibid.* p. 266. For conquest, see *Boulger, Short Hist.*, pp. 170–1.

"At Canton there is an analogous 'gipsy' population called 'Tanka,' which is also often spoken of in old historical works, and which seems to be allied with the Miao-tsz; but in Canton they are confined by law to boats."—*Parker, John Chinaman*, p. 266.

"Since the Manchus came to power their Resident, except on one or two occasions when China had to assert herself, has occupied a position in Tibet as modest and retiring, but as influential, as that of our Resident in Nepaul."—*Parker, China*, p. 128. For the establishment of control over Tibet by K'ang Hsi and his successors, see *Boulger, Short Hist.*, pp. 171–3.

"Nepaul is tributary to China, and sends trading missions; but she prudently avoids raising questions, and meanwhile supplies us with some of our best mercenary troops."—*Parker, China*, p. 128.

"Manipur, or Kasé, as the Chinese call it, was only known to the Manchus for a short time during the wars with Alompra's successors: there is no mention of such a place in the records of any previous dynasty."—*Ibid.* p. 128.

"Siam has never been invaded either by land or sea, but from the date of her moving down definitely to Ayuthia—say A.D. 1200—from the Shan States (Old Thai), south of Yün Nan, until 1853, she always recognised China as a nominal suzerain, for reasons of trade policy."—*Ibid.* pp. 128–9.

"The Shan States—those not belonging to Burma—and also Annam, have nearly always been either ruled indirectly by the Chinese or have been nominally tributary to them. The same thing may be said of Corea. Japan has never been in any way conquered by any Chinese or Tartars, or forced to do anything; she has occasionally sent polite missions, but it is only the Chinese who call them 'tributary' ones."—*Ibid.* p. 129.

"Now [1900] Russia, biding her time, has slipped quietly in and taken all Manchuria."—*Ibid.* p. 128.

"In a general way . . . it may be truthfully stated that the wealthy, populous, eastern half of China proper contains none but pure Chinese, or aborigines so closely assimilated as to be indistinguishable from Chinese." "On the other hand, the western half of the Eighteen Provinces is largely foreign. The miserably poor province of Kwang Si contains many obscure tribes, usually grouped under the main heads of Shan (Siamese) or Miao (no ethnological clue as yet). Not only so, but there are still many aboriginal officials, responsible, however, not to the Central Government direct, but to local Chinese prefects or magistrates. In the adjoining province of Kwei Chou there are also a good many Miao tribes, . . . they are in appearance not unlike the Kachyns of the Burmo-Chinese frontier, who are known to be of Tibeto-Burman origin. In Yün Nan there are a great many tribes of the Shan race, not only within the border but also in those recently delimitated districts which now belong politically to Burma (Great Britain) or Tonquin (France). Among the mountains of north-east Yün Nan and South Sz Ch'wan, the powerful confederation of so-called Lolo tribes still maintains its independence. . . . The Lolos possess a written system of their own. . . . From time to time very serious collisions take place between the Lolos and the Chinese armies, the result always being a patched-up peace, leaving the uncivilized men very much to their own devices as before. The Kachyn tribes (*cf. Fortnightly Review*, 1897) seem to form a link between the homes of the Shans and Tibetans. They extend along the Upper Irrawaddy and the western frontiers of Yün Nan. The Kamti tribes of the Upper Irrawaddy (the Mali-kha branch) are, however, pure Shans, and their language possesses a strong affinity with Laotian and modern Siamese. On the western frontiers of Sz Ch'wan we have numerous and sometimes very formidable independent Tibetan tribes, such as do not fall within the hierarchical administration of Tibet proper. . . . The cave-dwellers of Eastern Sz Ch'wan have mostly disappeared, but their abandoned dwellings in the mountain sides may still be seen anywhere to the west of Chungking; some of these tribes still exist to the extreme south-east, near the Kwei Chou frontier. In the island of Hainan there are at least two groups of 'savages,' or non-Chinese, one of which I personally ascertained to be of Shan kinship. Despite the utter confusion which reigns both in the Chinese and the European mind touching the south-west barbarians, taken as a whole, I am disposed to think that in all probability most of them will be found to range themselves either under the Shan or the Tibetan head."—*Ibid.* pp. 7–9.

[Gutzlaff, writing in 1833 (*Sketch of Ch. Hist.*, i. 6–16), says the countries "which more or less acknowledge the Chinese sway" are: (1) The province of Ele [Ili], comprising Soungaria and Eastern Turkestan, the cantons of Barkoul (Chin-se-foo) and Oroumtchi (Teih-hwa-chow) had been cut off from it and added to Kansuh. The Soungars, a Kalmuk tribe (= the Sefan or Hoshoits) were, when Gutzlaff wrote, living in the neighbourhood of the Kokonor; while the so-called Soungars, who occupied their former territory, were the Tourgouth and Tourbeth, who migrated thither in 1770 from the steppes near Astrakhan. It was used as a place of exile by the Chinese Government, and Chinese colonists had recently begun to settle there. Eastern Turkestan (Little Bukharia) was conquered by Keen-lung in 1738. (2) Mongolia, divided into 4 parts: I. Inner. II. Outer. III. The country about Kokonor. IV. The dependencies of Oulia-soutae, situated to the north of the Western Kalkas. The Mongols "who assisted the Mantchoos in the subjugation of China were dispersed throughout the whole of the conquered empire, and their posterity constitutes an army divided under eight standards." (3) Tibet, called Tangout or Setsang by the Chinese, divided into Tseën-tsang and How-tsang. The former (capital Lassa) "includes 39 [so-called] *feudal townships* or too-sze," towards the north near Kokonor. How-tsang (capital Khashi-koumbou) was governed by two Chinese officers (Ta-chin), who occasionally consulted the Dalai lama and the Bant-chin-erdeni. Kien-lung "abolished the dignity of Gialbo, or king," towards the end of his reign. Gutzlaff refrains from describing Bhootan and Nepaul, "as it is not yet decided whether or not these provinces are to be annexed to China, or to the still vaster empire of Great Britain."]

"Its peace [Peking] is always an object of considerable solicitude with the imperial government, not only as it may involve the personal safety of the Emperor, but still more from the disquieting effect it may have upon the administration of the empire. The possession of this capital by an invading force is more nearly an equivalent to the control of the country than might be the case in most European kingdoms, but not so much as it might be in Siam, Burmah, or Japan. The good influences which may be exerted upon the nation from the metropolis are likewise correspondingly great, while the purification of this source of contamination, and the liberalizing of this centre of power, now well begun in various ways, will confer a vast benefit upon the Chinese people."—*Williams, Midd. King.*, i. 84.

"If the political boundaries have in our times, as often before, been pushed into the desert or upon the plateau, that does not seriously affect the one salient feature of the vast Chinese Empire, which is that, out of an irregular triangle covering an area of 5,000,000 square miles and supporting a total population of 400,000,000 souls, one corner, embracing barely one-third of the total surface, consists of regulation provinces, ruled under one uniform system, and containing nine-tenths of the population; whilst the rest of the triangle consists of poorly watered desert or plateau, thinly peopled by races forming majorities over the Chinese settlers. It is only when, as in the case of Manchuria and the New Territory of Turkestan, the Chinese element becomes in some way predominant or equal, that political measures are taken to assimilate an 'outer' portion."—*Parker, China*, p. 2.

"The Eighteen Provinces thus form a rough circular mass occupying nearly one-third of the empire's surface. But, if we bisect this mass from north to south, we shall find that the western half has a general tendency to be mountainous, whilst the eastern half has a corresponding tendency to be flat. . . . Out of a total population of between 300,000,000 and 400,000,000, the eastern half contains three-quarters, whilst the mountainous half only contains one-quarter. . . . Taken as a whole, the western half is not self-supporting, and contributes nothing to the Central Government at Peking, whilst the eastern half supports itself, feeds the Central Government, and also assists the impecunious west. The wealthy province of Sz Ch'wan rather interferes with the truthful harmony of this sweeping arrangement; but none the less the broad facts are as stated; for it is only the eastern half of Sz Ch'wan that pays a surplus."—*Parker, China*, pp. 2–3.

Population.—"The Manchu Government, which has issued incomplete revenue returns from the first year of its existence (1644), was not ready at all until 1651 with its population and land-tax statistics. At the end of that year there were 10,633,326 households. We may assume that the conquest of the Eighteen Provinces was practically complete in 1657, up to which date the number of householders had increased by one or two million each year, until they reached over 18,500,000. Various wars and disasters kept the figures steady up to 1708, when for the first time an excess over 21,000,000 was recorded. . . . From the year 1713 the returns of 'adults and mouths' were accompanied by a subsidiary return of 'free ones.' By 1734, the last year for which returns are published under this system, the 'free ones' had increased to 937,530, whilst the other two categories remained pretty much as they were in 1712."—*Ibid.* pp. 189–90.

"The last-recorded number of (modern) Manchu households was in 1734, when there were 26,500,000 for all China, cultivating about 150,000,000 acres."—*Ibid.* p. 186.

During the reign of Ch'ien Lung (1736–96) the population of the Empire doubled in fifty years. According to the official censuses it "had risen from sixty millions in 1735 to three hundred millions in 1792. Of course the larger part of this increase was due to the expansion of the Empire and the consolidation of the Manchu authority."—*Boulger, Short Hist.*, p. 179.

"The words 'mouths and adults' so vaguely used together now, as they were used separately under previous dynasties, must have meant in combination 'tax-paying households'; for, on his accession in 1735, the Emperor K'ien-lung set about devising a more intelligent system. . . . Consequently from 1741 to 1851 we have year by year a steadily mounting return of souls, beginning with 143,411,559, and ending with the maximum of 432,164,047. . . . It will be seen that the population of China cannot at any time have much exceeded 100,000,000 souls until the beginning of the eighteenth century. By the year 1762 it had overtopped 200,000,000; and so on, doubling itself every [? during the next] century; so that we are probably right in concluding that it only reached 50,000,000 in 1644 when the Manchus took over the power; that is, it much more than doubled itself during the century 1650–1750, despite all wars and tribulations."—*Parker, China*, p. 190.

"During the first years of the great Taiping rebellion (1856–60), the registered population declined by two-fifths; but, though many millions must have perished, it is not at all likely that the numbers of 1851 were more than literally decimated. . . . It is notorious that Cheh Kiang, Ho Nan, Kiang Su, and Kiang Si suffered most by the Taiping revolution. . . . Shan Si suffered from a terrible famine in 1877–8. Kan Suh and part of Shen Si were ruined by the Mahometan rebellion of 1860–75. Sz Ch'wan calls for special remark: we have seen that in Kublai Khan's time it had already been once depopulated, whereas all visitors to the celebrated Ch'êng-tu plain certify to its being at the present moment one of the richest and most populous spots in China, and this plain alone (the only large plain in the province) must cover an area of 3,000 square miles. . . . During the rebellions which ushered in the Manchus 250 years ago, the depopulation was again so complete as to be nearly absolute, . . . about 4,000,000 souls, instead of the 80,000,000 now supposed to be there."—*Ibid.* pp. 190–3.

[For a table giving the population of each of the Eighteen Provinces in 1842 and 1894 see *ibid.* p. 192. The total population for those years is given as 419,600,000 and 421,800,000 respectively.]

"The assessment of the War Tax has given the Chinese Government an opportunity of obtaining with approximate accuracy a general census of the Empire. . . . The figures go to show that the present population of China is comparatively very little in excess of that recorded by various European statisticians half a century ago," when authentic information concerning the population was inaccessible. "By some writers this was given as 350,000,000, by others as 400,000,000 and 450,000,000. We now learn, on the very best authority, that the Chinese population of to-day numbers about 426,000,000 of souls, including 8,500,000 in Manchuria, 2,580,000 in Mongolia, 6,430,020 in Tibet, and 1,200,000 in Chinese Turkestan." "Shantung, with a population of 38,247,900, is the most densely-inhabited province of China. Kiangsu, in which Shanghai is situated, has a population of 1,398,235. In density of population Shansi, with 50 inhabitants to the square kilomètre, may be compared with Hungary; and Fukien and Hupeh with England, Chi-li with France, and Yunnan with Bulgaria. On an average, China proper—*i.e.*, the 18 provinces—is not much more thickly populated than the German Empire. The four great Chinese "out-lands," consisting chiefly of steppe and wilderness, are very sparsely populated."—*Standard*, Sept. 6th, 1902. In Vol. iii of the *Encycl. Brit.* the estimate given is 390,400,000.

[Simon (*Cité Chinoise*, p. 5) says that there is no population question in China, because the productiveness of the soil can be increased, if its area cannot, and this increase keeps pace with that of the people.]

"The evil consequences resulting from an overgrown population are experienced in one or another part of the provinces almost every year; and drought, inundations, locusts, mildew, or other natural causes, often give rise to insurrections and disturbances. There can be no doubt, however, that, without adding a single acre to the area of arable land, these evils would be materially alleviated, if the intercommunication of traders and their goods, between distant parts of the country, were more frequent, speedy, and safe; but this is not likely to be the case until both rulers and ruled make greater advances in just government, science, obedience, and regard for each other's right."—*Williams, Midd. King.*, i. 280.

GENERAL GOVERNMENT.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

RANKS.—I. *Sovereign* (后 *Hou*) or *King* (王 *Wang*).—"The sincere, intelligent, and perspicacious among men becomes the great sovereign, and the great sovereign is the parent of the people."—*Shu ching*, Pt. V. Bk. I. Pt. i, 3.

Yao was "the lord or first of all Sages, the senior or superior of all kings."—*Morrison, Dic.*, i. i. 393.

[The word 帝 *Ti*, god, applied to Yao and Shun was probably a Later Feudal apotheosis of these kings. See *S.B.*, III. Pref. pp. xxiii–ix.]

T'ien Tzŭ, "Son of Heaven," is "the style by which the holder of the supreme authority is designated in China, whatever his other titles may be. The term has been applied to the legendary rulers; the great Yü calls himself 'Son of Heaven' in one of his speeches preserved in the *Shu-king*. The Shang emperors used the same title, and if Wu-wang is so described, he is virtually Emperor of China, who rules over his people—the people *par excellence*—whose lord has received the approval of Heaven, who rules the world in the name of Heaven, and who is the representative of the *t'ién-hia*, 'what is under heaven,' 'the world,' 'the Chinese people.' *T'ién-tzï* may in this sense be appropriately translated by 'Son of God,' a designation for which it is easy to find parallels in the history of both Oriental and Occidental nations."—*Hirth, Hist.*, pp. 95–6.

"The Emperor is generally responsible for natural phenomena. It is he who has to address Heaven and pray for rain after a long drought; and to his prayer is due the credit of relief, when it comes."—*Ibid.* p. 36.

"The father was priest for his family, the prince of each state for his people, and the 'Son of Heaven' for the empire. The Emperor's duties in his capacity as high priest of the nation were not a matter of personal belief, but formed the most inportant part of his position."—*Ibid.* 79; See also *Legge, Ch. Class.*, III. i. Prol. pp. 194–7.

The people mourned for the king "as for a parent for three years."—*Shu Ching*, Part II. Bk. I. c. v. 13.

[That the king was commander-in-chief and took the field in person is to be inferred from *Legge Ch. Class.*, III. i. p. 153, note. Under Yao and Shun, however, on the theory that their good government rendered war unnecessary, there was no need for the king to assume military functions. According to a legend in the *Historical Records*, Yao sent Shun to defeat or drive off the four "wicked ones" (*ssŭ hsiung*). See *Ibid.* p. 32, note.]

"In their earliest form the Chinese maxims probably still date from the youth of the Old World, when the Middle Empire of Egypt was in its glory and Assyria still a dependence ruled by patesis." "At this time the qualities regarded by the black-haired people as proper to a virtuous ruler were 'reverence,' intelligence, unfeigned courtesy, the appreciation of merit in his subjects, and the power of conciliating the upper classes of the nation, while enforcing peace and order among the lower. If calamities befel the State, the ruler thought the fault must lie in himself, and sought for a virtuous colleague to help him in rectifying what was wrong."—*Simcox, Prim. Civ.*, ii. 30.

"When claiming obedience, the king speaks of himself as 'the one man,' but on other occasions he indulges in the self-depreciatory tone which is still *de rigueur* among well bred Chinamen; he is the servant of heaven, and the 'little child,' and the duty of 'reverence' is no less incumbent on him than on his ministers. . . . In China it seems . . . that Heaven and the People are the two spheres which overarch the rulers of men, dispensing praise and censure and looked up to by them with reverence and awe."—*Ibid.* ii. 31–2.

"Kĕĕ, 'the holder of Hea,' was a criminal condemned by Heaven which had given charge to cut him off. But how had Heaven done this? and how was the charge given to T'ang? The answer to both questions is the same:—'By the voice of the people.'" "Though the charge of Heaven was ascertained from the voice of the people, it is plain from this speech [of T'ang] that it cost him some trouble to get the co-operation even of his own subjects."—*Legge, Ch. Class.*, III. i. 174, 176, notes.

"The doctrine *vox populi, vox dei* was frankly proclaimed from the throne. Thang announces after his victory over the house of Hia that 'Great Heaven has conferred on the inferior people a moral sense, compliance with which should show their nature to be invariably right. To make them tranquilly pursue the course which it would indicate is the task for the sovereign' *S. B.*, iii. p. 90)."—*Simcox*, ii. 31.

"Political liberty for the masses did not exist, and they had no right to criticise the imperial measures, but all the more ruthless was the judgment passed on the results of such administration. Was food abundant? The government was good, and the people orderly and contented. Was there famine in the land? The Emperor and his officers had neglected the duties of their station; they and not the people were to blame for the crimes which followed invariably on the heels of misery."—*Ibid.* ii. 8.

"It is treated almost as a constitutional principle that when the king of China misbehaves, it is the duty of the most virtuous and powerful of the provincial princes to depose and succeed him." "This . . . . . is not the only point on which the political philosophy of ancient China was advanced and revolutionary."—*Ibid.* p. 18.

[The minister I Yin confined the sovereign T'ai Chia temporarily in a palace at T'ung near the remains of the former king, until he gave proof of reformation. "When Kung-sun Ch'ow asked him (Mencius) whether worthies, being ministers, might indeed banish their vicious sovereigns in this way, he answered, 'If they have the same purpose as E Yin, they may; if they have not the same purpose, it would be usurpation' (VII., Pt. I. xxxi.)." (*Legge, Ch. Class.*, III. i. 203–4, notes).]

[E Yin also, on withdrawing from public life, addressed some cautions to the Emperor on the subject of virtue (*Legge, ibid.* pp. 213–9).]

"The Emperor regulated the territories, appointing nobles to every quarter to reside in them, giving them surnames of distinction, and defining the constituents of each."—*Shu Ching*, Pref., 3, *Legge, Ch. Class.*, III. i. 2.

"Over this [the central State] he [the sovereign] ruled like one of the other princes in their several dominions; and he received, likewise, a certain amount of revenue from all the rest of the country, while the nobles were bound to do him military service, whenever called upon. He maintained also a court of great ministers, who superintended the government of the whole empire. The princes were little kings within their own States, and had the power of life and death over the people. They practised the system of sub-infeudation; but their assignments of land were required to have the Imperial sanction."—*Legge, Ch. Class.*, III. i. Prol. p. 198.

[The sovereign made tours of inspection throughout his domain. After giving audience to the nobles, his first business was to see that they had the calendar correct; the second, to see that the weights, measures, &c., of the different States were uniform; and the third, "to regulate the five ceremonies," *i.e.*, those appropriate to worship, calamity and mourning, guests of State, war, marriages and other occasions of joy. These tours of inspection were made once in five years, during which there were "four appearances of the nobles at court," those from the East, South, &c., probably coming separately, each in their own year. "They set forth a report of their government in words. This was clearly tested by their works."]—*Shu Ching*, Pt. II, Bk. I. Ch. III. 8–9, *Legge, Ch. Class.*, III. i. 35–7, and notes.

"There were the proper seasons both for tours of inspection and hunting expeditions. Wăn made them both at those seasons, and did not protract them beyond the regulated length of time."—*Legge, Ch. Class.*, III. ii. 469, note.

Succession.—"From the earliest periods of [Chinese] history, it has been distinctly taught, both by example and by precept, that no man whatever had a *hereditary divine* right to the throne, not the eldest son, nor even any son, of its last occupant. In spite of the power and influence . . . of his family . . . this principle has always been able to assert itself."—*Meadows, Chinese and their Rebellions*, p. 17.

[The "Five (legendary) Rulers" are said to have treated the kingdom as belonging to the nation, while the "Three Kings" treated it as belonging to their own family, so that the former handed it on to the best to be found amongst the people, but the latter bequeathed it to their descendants. Consequently, before the time of Yao there could be no such title as Heir Apparent.]—*Yüan chien lei han, Ch'u Kung pu, T'ai tzŭ*, p. 1*a*.

"The throne was not hereditary; the Emperor named his successor, after the grandees had proposed or assented to the appointment. . . . The supreme dignity . . . though elective, seems to have been confined to persons of high birth" [though in some cases of lowly occupation]. "The merit of the individual was, at least, the ostensible foundation of the choice. In some cases, the future emperor underwent a previous probation. On the other hand, an unworthy monarch could be deposed."—*Thornton, Hist.*, pp. 42–3.

"We find him [Shun] next appointed to be 'General Regulator,' the functions of which office he discharged so successfully, that, after three years, Yaou insisted on his consenting to accept the succession to the throne. They then reigned together for about a quarter of a century, till the death of Yaou, who enjoyed the superior dignity, while Shun took all the toils of government." "Yaou was not childless. He had at least one son, mentioned as Choo of Tan; but the father did not feel justified in transmitting the empire to him, in consequence of the unworthiness of his character, so much did concern for the public weal transcend Yaou's regard for the distinction of his own family."—*Legge, Ch. Class.*, III. i. Prol. p. 53.

"Yao, the ruler, selected the worthiest from the people for his successor."—*Kang chien, c.* 2, p. 5. See also *Kuang chih p'ing lüeh hsü chi, c.* 2, p. 1*a*. Yao selected Shun, and Shun raised Yü to the position of joint-regent, the latter succeeding on Shun's death to the exclusion of Shun's sons.—*Kang chien, c.* 2, p. 12; *Kuang chih p'ing lüeh hsü chi, c.* 2, p. 1*b*.

"Some time after the death of Yaou, when Yu is superintendent of works, Shun compliments him on the success with which he had regulated the water and the land, and appoints him to be 'General Regulator' under him, as he himself had formerly been under Yaou. . . . His appointment to be 'General Regulator' may be considered as preliminary to his being called to occupy the throne. The Shoo does not tell us that Shun had a son; but Mencius assumes that such was the case, and that the son was weak or worthless like Choo of Tan, so that the example of Yaou had again to be copied. Three and thirty years after the death of that sovereign, Shun tells Yu that the laborious duties of the government wearied him, being now between ninety and a hundred years old, and summons him to take the leadership of the people. Yu declined the dignity again and again, till Shun waxed peremptory. They then reigned together for about fifteen years, when Shun died, and Yu was left in sole possession of the empire."—*Legge, Ch. Class.*, III. i. Prol. p. 55.

Shun died 2208 B.C. Yü "carried on the government during the years of mourning for his death, and then withdrew, to allow his son, Shang-k'euu (商 均) an opportunity of ascending the throne. The people, however, would not have him to be their king;—they preferred Yu (*Mencius*, Bk. V. Pt. I. vi). . ." Kao Yao was "associated with him in the administration" for a year.—*Ibid.* III. i. 152, note.

"Now Yao, Shun, and Yü duly succeeded in order to the throne, which was transmitted from one virtuous man to another; Ch'i however, succeeded to his father's throne. . . . He was appointed by Heaven and accepted by the people. Therefore it was impossible for Ch'i to decline to rule over the empire."—*San tai ti hsi, Kuang chih p'ing lüeh hsü chi, c.* 2, p. 1*b*. See also *Legge, Ch. Class.*, III. i. 178, note.

"Succession first became hereditary [in 2197 B.C.], but at that time there was still no such title as Heir Apparent."—*Kang chien, c.* 2, p. 1*b*. See also *Kuang chih p'ing lüeh hsü chi, c.* 2, p. 1*b*. By the time of the Yin dynasty [1766 B.C.] it was considered that a son was always taken for heir: see *Shih chia Hsiao Wĕn Ti chi, P'ei wén yün fu, c.* 63, p. 65*a*.

"Yu the Great was the founder of the dynasty of Hea. The throne descended in his line, for a period of about four centuries and a half. This fact sufficiently distinguishes him from Yaou and Shun, and indicates the point of time when the tribe or tribes of the Chinese people passed from the rule of petty chiefs, and began to assume the form of a nation subject to a sovereign sway."—*Legge, Ch. Class.*, III. i. Prol. pp. 55–6.

"When Chingtang, founder of the Shang dynasty, B.C. 1766, and Wu Wang, of the Chau, B.C. 1122, took up arms against the Emperors, the excuse given was that they had not fulfilled the decrees of heaven, and had thereby forfeited their claim to the throne."—*Williams, Midd. King.*, i. 381.

[Four brothers occupied the throne in succession from 1408 to 1324 B.C.]—*Legge, Ch. Class.*, III. i. 248, note.

[It was in the time of Wên Wang (1231–1135 B.C.) of the Chou that the title of Heir Apparent came into existence; but in the Ch'un Ch'iu period (770–484 B.C.) the title of Crown Prince was used in several States. No rules had as yet been established for the use of these titles.]—*Tzŭ shih ching hua, c.* 13, p. 1.

II. *The People* (民 *Min*).—[The general broad division of the nation was into the Sovereign, King, or (later) Emperor, and the *Min*, his people. To them the sovereign stood in the relation of parent (*v. supra*). Of the sovereign's *Min*, the first division was the *Shih*. This class consisted of (1) *Ch'ên*, Officials, and (2) *Shên Shih*, Unofficial Scholars, Gentry, etc. (*v. infra*). The main popular division of all the people being into Officials and Unofficials (the official class being regarded as the assistants of the ruler), the term *Min* is frequently used for all the unofficial classes (the Minister of Works, in *Shu ching*, V. xx. 12, "settles the four classes of the people," and a *ch'ên, e.g.*, often referring to the people under his jurisdiction as his *min*), and has thus a relative meaning; but the term *Shih*, Officer, Scholar-officer, or (later) Scholar, does not seem to be confined to unofficial scholars (*i.e.*, those who have not yet become, or have ceased to be, officials), a class which was not at this time distinct, or at least conspicuous. In its earliest meaning *Shih* indicated a civilian official, and was later on also used for "soldier." In the *Shu ching* it occurs, according to Legge, only with the meaning of "officer," and he adds (*Ch. Class.*, i. 123, note) that the two ideas of officer and scholar "blend together in China." He frequently translates the word by "scholar-officer" (*ibid.* i. 203, note) and "scholar" (*passim*), with the meaning of government official. The teachings of the scholars as a class were based upon benevolence and faithfulness, and also upon the cardinal relations between sovereign and minister; between father and son; between husband and wife; between elder brother and younger; and between friend and friend. These principles were highly valued by Yao and Shun.]

A. *Officers* (士 *Shih*).—[The nobles did not form an exclusive class. They were of five grades: duke (公 *kung*), marquis (侯 *hou*), earl (伯 *po*), viscount (子 *tzŭ*), and baron (男 *nan*) (*Shu ching*, iii. 10), and had five gem-tokens, or symbols of rank (v. xxiii). They took rank in various degrees with the feudal princes (*Legge, Ch. Class.*, III. i. 145, note). They did not rank, as a class, between the king and the rest of the nation. Their nobility did not separate them from or place them above other officials. With few exceptions, *e.g.*, the king's relatives, they had to be officials before they could become nobles, but their nobility was accessory to, and did not supersede, their official rank. A son of a noble might not actually hold office, but he drew his subsistence from official sources. See also *Mencius*, V. ii. ii. 3. Promotion was obtained by good archery (*hou*); see *Morrison, Dic.*, i. 107.]

"Hereditary rank appears to have occupied a more prominent position in the most ancient periods of Chinese history than during its modern development. The divison of the nobility into the five grades existing at the present day . . . is supposed to have been first made by the emperors Yau and Shun."—*Hirth*, p. 98.

"The nobles of ancient times in China were inferior kings or princes, with a certain territory over which they ruled [see REG. OF LAB.]."—*Morrison, Dic.*, i. i. 829. The point as to the extent of territory assigned to the various ranks appears to be undecided: see *Legge, Ch. Class.*, III. ii. 316. As far as can be ascertained, there would seem to have been 5 degrees of nobility under Yao, Shun, and Yü, but under the Yin, the first two and last two were bracketed together, making three classes arranged according to the extent of territory assigned to them (see *Yüan chien lei han, c.* 118, and *infra*).

"It appears that an earl or count was really a better official title than 公. It also appears probable that the earls were in some cases merely leaders of nomad flocks [牧 師]."—*Ch. Rev.*, xii. 203.

"The Teĕn tse, Son of Heaven, or Chinese Emperor, had a domain of one thousand *le* in extent; the Kung and How nobles had a territory of one hundred *le* in extent; the Pih nobles had seventy *le*; the Tsze and the Nan had 50 *le*, *i.e.*, a district of about twelve English square miles."—*Ibid.* p. 828.

This is different "from the account which we find in the Chow Le, Bk. ix. (地 官, 大 司 徒). There the orders of nobility are five, as in Mencius, but the divisions of territory are also five. To the Kung, it is said, there were assigned 500 *te* square; to the How, 400; to the Pih, 300; to the Tsze, 200; and to the Nan, 100. I don't see how the two accounts are to be reconciled."—*Legge, Ch. Class.*, III. ii. 316.

[Forming the bulk of the *ch'ên* class was the hierarchy of government officials consisting in the time of Yao (2357–2255 B.C.) of 60, of whom the chief were the high administrative officers. Over the affairs of the provinces were 12 *Mu*, Pastors, chiefs of the *Chu Hou*, Feudal Princes, whose states were models in miniature of the central kingdom. See *Administration*. Civil and military duties were not differentiated, and the soldier (see *infra*, *Agriculturists*) was held in much higher esteem than in later times.]

2255-2205 B.C. The classes of nobles remained the same as before. "He [Shun] called in all the five tokens of gem; and when the month was over, he gave daily audience to the chief of the four Mountains, and all the Pastors, finally returning the tokens to the several nobles" (*Shu ching*, Pt. II. Bk. I. Ch. III. 7).

'The fiefs of the empire were divided into five classes, the chiefs of which were known respectively by the titles of Kung, How, Pih, Tsze, and Nan (see *Mencius*, Bk. V. Pt. II. ii.); so it was in the Chow dynasty [Later Feudal Period], and there was an arrangement, the same or similar, in the earliest times. Each ruler, on obtaining his appointment from the emperor, received a token, differing in size and form according to the rank. This he kept, and brought with him whenever he appeared at court. The separate tokens were so constructed that they fitted into a sort of frame kept in the imperial treasury, by which their genuineness was tested."—*Legge, Ch. Class.*, III. i. 34–5, note.

[The executive officers were somewhat more numerous, but exercised much the same powers as under Yao. The *Hsi* and *Ho* no longer existed, whilst four chief ministers had been added. See *Administration.*]

2205–1766 B.C. [Under Yü and the Hsia Dynasty "the officials (*ch'ên*) had further increased in number" and consisted of ranks of :—nobles (*chüeh*), three dukes (*san kung*), chiefs of the vassal states (*chu hou*), ministers of various departments (*ch'ing*) great officers (*ta fu*), and officers of the chief grade (*yüan shih*). See *infra.*]

1766–1122 B.C. "The Yin-tseŏ, 殷 曾, nobles of the Yin period, were of three degrees; by which it was intended to imitate the three glorious lights of nature, the sun, the moon, and the stars."—*Morrison, Dic.*, i. i. 828. The three degrees, or classes, were the duke and the marquis, the earl, and the viscount and the baron. The estate enfeoffed to a duke or a marquis was 100 *li* each; that to an earl, 70 *li*; and that to a viscount or baron, 50 *li*. See *Li ch'ao kang chien hui tsuan*, *c.* 3, p. 1. Some Chinese works give the 3 degrees of the Shang dynasty (1766–1401 B.C.) as *Kung*, *Hou*, and *Po* only. The official hierarchy, including the Great Officers, etc., attached to the King and the Heir Apparent, as well as the order of official precedence, are given under *Administration.*

"It is reckoned among the crimes of the Emperor Scheu-te [Shou Ti = Chou Hsin] who was overthrown in 1123 B.C., that he made dignities hereditary (*Shu-king*, p. 150); nay, there is an absolute feeling of dislike towards prominent families; 'virtue seldom rules amongst rich men and those of ancient race; pride inspires them with hatred and contempt for the virtuous, and they like to ill-treat them,' says an old and famous maxim (*Shu-king*, p. 282)."—*Wuttke, Geschichte des Heidenthums*, ii. 152.

B. *Agriculturists* (農 *Nung*).—[Little is to be gathered from the classical literature respecting the status of agriculturists beyond the relatively high position they occupied in the social scale. They supplied the fighting strength of the kingdom, returning to their labour in the fields when their duties as soldiers were completed. In the time of Shun, a Minister of Agriculture was appointed who "sowed" for the people "the various kinds of grain" (*Shu ching*, II. i. 5, 18).]

[C. *Artizans* (工 *Kung*) are said to have numbered 100 kinds as in the Later Feudal Period.]

[D. *Merchants* (商 *Shang*) formed a separate class of lower status than other classes.]

[*Menials* did not form a distinct class.]

ADMINISTRATION OF THE COUNTRY.—*Seat of Central Government.*—[Ping-yang-fu (in Shansi) is said to have been the residence of the primitive Emperor Yao.]—*Yule, Marco Polo*, ii. 8 (note). (1st ed.).

"Cachanfu is the Ho-chung fu [the ancient capital of Emperor Shun] of those days, now called P'u-chau fu, close to the great elbow of the Hwang Ho (*Klaproth*)."—*Ibid.* ii. 25, note. (3rd ed.).

[The Hsia capital was at Yang-Hsia (陽 夏), near modern T'ai Kang Hsien, in Honan.]—*Oxenham, Hist. Atlas*, map 1.

[The Shang capital was Po (亳) near modern Kuei-tê-fu in Honan Province.]—*Ibid.* map 2.

"From Sëĕ to T'ang the Successful, there were eight changes of the capital. T'ang at first dwelt in Pŏ, choosing the residence of the first sovereign of his House."—*Shu ching*, Pref. 9; *Legge, Ch. Class.*, III. i. 3–4.

[For the removal of the capital from the north of the Ho to Yin on the south of it (involving the change of dynastic title from Shang to Yin) and the circumstances attending it, see *Shu ching*, Pt. IV. Bk. 7. The importance and difficulty of this undertaking are to be found in the fact that all the people had to be removed as well and against their will.]

[The *division* of the Empire by Yü into principalities is mentioned in the *Shih ching*, IV. iii. IV. 6.]

"Yu marked out the nine provinces; followed the course of the hills, and deepened the rivers; defined the imposts on the land, and the articles of tribute."—*Shu ching*, Pref. 5; *Legge, Ch. Class.*, III. i. 3.

"Inside the tenure of Restriction (要 服) were the nine provinces (九 州), containing altogether a space of 49,000,000 square *le*. Deducting from these the imperial domain, there remain 48,000,000; or 6,000,000 square *le* to each province. Now, when Yu assembled the princes of the empire at Hwuy-k'e (會 稽), they amounted to 10,000. Such was the number of the States of the nine provinces. Over every province was a Pastor (牧), and the worthiest of the princes were selected to be tutors or counsellors (師) to him. For every hundred States there was one 師, and 12 師 would suppose 1200 States. Each province contained of States 100 *le* square, 200; 70 *le* square, 400; 50 *le* square, 800 :—altogether 1400. Deduct 200 of these, as an allowance for waste lands, and there remain 1,200 States. Multiply these by 8; we have 9,600 and allowing 400 for States within the imperial domain, we have the 10,000 States forming the empire."—*Ch'ing*, quot. *Legge, Ch. Class.*, III. i. 85, note. See also pp. 143–50.

"It would appear that an arrangement of the 'domains,' akin to that which obtained under the Chow dynasty, had come, during the dynasty of Yin, to supersede the older one introduced by Yu."—*Legge, Ch. Class.*, III. ii. 407, note.

Administration.—"It appears from the ancient writings, that, at this very remote epoch, . . . the Chinese had a regular government, directed by a supreme ruler, who was aided by ministers and an organised series of tribunals."—*Thornton, Hist.*, i. 40.

[The king was ruler of the nation. Associates on the throne (such as Shun with Yao during the last 30 years of his reign) were rather ministers than partners. The authority of the sovereign extended to religious as well as secular affairs. He directed the entire administration of the state, distributed offices and employments, and in fact, whatsoever was done was held to be done by him. It would appear, however, that his power was not a pure despotism, for the acts of the king were subject to the control of the chief ministers, whose concurrence seems to have been requisite even in appointments to offices. The ministers were consulted when the monarch nominated an individual to a high post; they recommended or presented a fit person, whom he might reject, but even this prerogative appears to have been controllable by the united voice of the ministers (*Shu ching*, Pt. I.; Pts. I.-IV. *passim*; *Thornton, Hist.*, i. 41-2). Though probably not so perfect as subsequent writers would make out, the evidence shows that Yao's administration produced good results. He made a study of astronomy so as to regulate the calendar for the people (to facilitate agricultural operations).]

It was the "duty of the ministers freely and openly to correct the sovereign's faults," and ministers were not only to be strictly faithful to their sovereign, but were to use stringent measures to correct others, and provide a supply of good men for the use of the state.—*Legge, Ch. Class.*, III. i. 81–2, notes.

"It is a characteristic feature of the history of these early emperors, especially Yau and Shun, who are held up to all the world as models of what good rulers should be, that in all . . . important selections they were guided by the advice of their ministers."—*Hirth, Anc. Hist.*, p. 33.

"It is observed that in those times of wise antiquity, forceful control was not the way of sovereigns and ministers, but a cautious accordance with nature and circumstances."—*Legge, Ch. Class.*, III. i. 23, note.

"The idea of what has been denominated ceremonial government meets us . . . in the openiug pages of the *Shuking*. . . . The Emperor Shun . . . is represented as bringing his refractory subjects to submission by the celebration of a religious pageant in the temple of his ancestors. Later writers say that the monarchs of that period knew how to employ moral forces in place of physical; or, as they express it, they secured the peace of the Empire by merely displaying their embroidered robes; which means that they maintained in their palaces an imposing ceremonial, and caused their example to be followed, as far as possible, by officers and people."—*Martin, Chinese*, p. 258.

"As in Egypt the position of the scribe was open to the ambition of every class, so in China the lower offices of State were open to all, and promotion by merit was, in theory at least, an essential part of the constitution."—*Simcox*, ii. 55.

[According to some accounts (generally discredited), the first Ministers (afterwards known as the *Ssŭ Hsiung* (四 凶) "Four Villains") employed by Yao and Shun proving incompetent, were dismissed, and sixteen *Hsiang* (相), Secretaries of State, appointed. Eight of them were the sons of Kao Yang Shih. . . . They were known as the "Eight Righteous Men" or *Pa K'ai* (八 凱), and were employed in the office of Prime Minister. The other eight were the sons of Kao Hsin Shih. . . . They were known as the "Eight Good Men" or *Pa Yuan* (八 元), and discharged the duties of Ministers of Instruction. "The Eight Righteous Men were charged to deal with all affairs in connection with the administration of the land, and the government, and the Eight Good Men, with the diffusion of knowledge of the five duties of every man in the realm."]—*Tzŭ shih ching hua*, *c.* 15, p. 10*a*.

[The administrative officers in the time of Yao (2357–2255 B.C.) were the *Ssŭ Yüeh* (四 岳), Chief of the Four Mountains Adviser to the King and Controller of the Princes of the various feudal States, either directly or through the *Mu* (see below); *Po K'uei* (百 揆), General Regulator, employed to regulate all affairs of government (*Wén hsien t'ung k'ao*, *c.* 11, *Chih kuan*, p. 1*b*; *Kung Kung* (共 工), Minister of Works; *Yü* (虞), Forester; *Chih Tsung* (秩 宗), Minister of Religion; *Tien Yüeh* (典 樂), Director of Music; *Na Yen* (納 言), Minister of Communications; and some brothers named *Hsi* (羲) and *Ho* (和)—either 3 or 2 of each—forming a Board of Astronomy, to regulate the calendar and thus facilitate agriculture. *Hsi* and *Ho* appear to be family names, the several brothers being appointed to make astronomical observations in distant parts of the empire. Dr. Kurz, however, argues (*Journ. Asiat.*, v. 401), partly from inductive reasoning and partly from an analysis of the characters, that *Hsi* and *Ho*, or rather *Hsi-Ho*, was the name of the tribunal of celestial affairs —a college of priests, some of whom had to offer victims or grain, and others to address prayers to the deities. Over the affairs of the different provinces were *Mu* (牧), Pastors or lord-lieutenants, whose official chief at the capital was the *Ssŭ Yüeh*. They were the chiefs of the nobles (*Chu Hou* 諸 侯) in the different provinces, and were 12 in number. They existed before the time of Shun's duodecimal division of the kingdom (see *Shu ching*, II. i. 7, and below). How many feudal nobles each *Mu* superintended is not stated. Opinions differ as to whether the *Ssŭ Yüeh* was one or four, and whether, if four, they coincided with the [four ?] *Hsi* and *Ho* (*Chavannes*, i. 50); the king having offered the throne to the *Ssŭ Yüeh* (*Shu ching*, I. iii. 12) being regarded as proof both that this office was held by one individual and also that he was an officer of the highest rank. It is uncertain whether the *Ssŭ Yüeh* or the *Po K'uei* was the more important office. Ma Tuan-lin gives precedence to the *Po K'uei* (see *Wén hsien t'ung k'ao*, *c.* ii., *Chih kuan*, p. 1*b*). In the earliest times there seems not to have been any settled precedence amongst the central administrative officers. Ma Tuan-lin (*ibid. Chih kuan*) also states that under Yao and Shun, the distinction between civil and military offices, internal and external, did not exist, the same individual fulfilling functions subsequently separated.]

"The minister of Works . . . had to look after all the workers, or guilds of workers, in earth, stone, metal, leather, &c."—*Legge, Ch. Class.*, III. i. 45, note.

"There are the titles of the high officers about the courts of the two Emperors [Yao and Shun], which we do not meet at a later age. The principal personage, for instance, was styled 'The Four Mountains'; next to him was 'The General Regulator'; and the minister of Religion was 'The Arranger of the Ancestral Temple.' The peculiarity of these designations indicates that the compiler had received them from tradition or from written records (which is more likely), and that they were not invented by himself."—*Legge, Ch. Class.*, III. i. Prol. p. 49.

[It is improbable that the *T'ien Kuan*, *Ti Kuan*, and *Ssŭ Shih* (*i.e.*, *Ch'un*, *Hsia*, *Ch'iu*, and *Tung*) *Kuan*, Officers of Heaven, Earth, and the Four Seasons (Spring, Summer, Autumn and Winter), given by Ma Tuan-lin (*Wén hsien t'ung k'ao*, *c.* ii., *Chih kuan*, p. 1*b*) as comprising the *Liu Ch'ing*, 'Six Great Ministers,' existed at this time. They are not mentioned until the Later Feudal Period, and their duties seem to be included in those of the Ministers already mentioned. (See *Chou li*, *Ch'ing i*, where it says that the Officers of the Four Seasons managed the affairs of the "Four Mountains").]

[Provincial officials under Yao :—*Chou Mu* (州 牧), District Pastors, 12 in number, who were feudal lords (marquesses) of the States outside the Central Kingdom. Their duties were the same as those of the *chien ch'a yü shih* (監 察 御 史), censor (in Manchu Per.) of the Ch'in State, and also as those of the *tz'ŭ shih* (刺 史 = Chih-li Chou of modern times) of the Han dyn.]—*Wén hsien t'ung k'ao*, *c.* 11, *Chih kuan*, p. 1*b*; *Yüan chien lei han*, *Shê kuan pu*, *Tz'ŭ shih*, p. 184*b*. "牧, 'pastor,' 'shepherd,' was a name given in the times of Yaou and Shun to the chief or superintendent of all the princes and nobles in a province."—*Legge, Ch. Class.*, III. i. 42, note.

[*Hou Po* (侯 伯), the feudal princes. The elder or chief of the District was called *po*. Each chief appointed a worthy *hou* as his officer. These *hou po* were probably the same as the *chu hou* (諸 侯), feudal princes.]—*Wén hsien t'ung k'ao*, *c.* 11, *Chih kuan*, p. 1*b*; *Yüan chien lei han*, *Shê kuan pu*, *Tz'ŭ shih*, p. 184*b*.

"The subdivisions of the official hierarchy are substantially similar to those still in force, and it would be the very wantonness of scepticism to reject the positive evidence given as to their antiquity merely on the ground that it would be easier for such institutions to endure for a period of two thousand years than for three. Indeed, as an elaborate bureaucracy existed in Egypt and Mesopotamia, it is actually easier to suppose the Chinese administration to have been organized in the same manner from the first, than that such similarity of method should have been achieved independently at distant times."—*Simcox*, ii. 23.

[The total number of government officers under Yao was 60 (see *supra*). The *Shang shu* says: When officers were [first] appointed there were 100 of them. Chêng Yüan [of the Han dynasty] says: Yü [Shun]'s officers were 60 in number; but I have not heard how many Tang [Yao] had, Yao and Shun having the same system, his were probably also 60 in all; or with the minor officers, 100 in all.]—*Wén hsien t'ung k'ao*, *c.* ii., *Chih kuan i*, p. 4*a*.

[In the *Tu shih t'ung tien* it is written: The number of the officials of Tang, Yü, Hsia, and Shang are given differently by different writers; so the text and commentaries have been left as they were for future researches to clear up the discrepancies.]—*Ibid.*

[Shun (2255–2205 B.C.) followed in Yao's footsteps. He is said to have enacted the "Five Criminal Laws" and "Five Punishments," and instituted the "Five Rites" and "Five Garments" for the better regulation of his subjects. Also, in order that he might avail himself of public opinion, he had a tablet placed outside his official residence whereon anyone could criticize his administration. He put questions to the people in the Ming Tang, a kind of national Council Chamber, asking for the names of bad characters. He established the Upper and Lower Academies for the accommodation of the Elders of the Gentry whose examples were good enough to be followed by others. He also built educational institutions for the custody of all archives, as well as the Upper and Lower Colleges (said to be the same as the Upper and Lower Academies) (*Yüan chien lei han*, *Chu kung pu*, *T'ai Tzŭ*, p. 1*a*; *Kang chien hui tsuan*, *c.* 1, 2-7*b*; ii. 1*a*).]

Under Shun "the General Regulator [*Po K'uei*] was the head of all the ministers. . . . The nourishment of the people is the beginning of royal government, and therefore the minister of agriculture [*Hou Chi* 后 稷] was next appointed. [His duty was to advise the people as to the time for sowing the different kinds of grain (*Li ch'ao kang chien hui tsuan*, *c.* 2, p. 10).] When people are well off, instruction may be given them; hence there followed the appointment of" the minister of instruction [*Ssŭ T'u* 司 徒], who was charged with the education of the people in the five principal rules of society. "Punishment is intended to help instruction; hence followed the appointment of" the minister of crime [*Shih* 士]. "Workers make implements and utensils for the benefit of the people :—this is the conclusion of government;" hence the minister of works [*Kung Kung*] was appointed [his duty being "to improve the utility of the instruments used by the hundred kinds of artizans in their professions" (*Kang chien*, *c.* 2, p. 10)], "and so far as men are concerned, the organization of the government was pretty well complete. Shun then proceeded to care for the grass and trees, for birds and beasts," appointing a forester [*Yü*]. "This done, the time came for the cultivation and development of ceremonial observances and music. These two things are the grand consummation of government, by which service is done to Heaven, to earth, and to spirits, and all things are brought to harmony and order; hence there were the appointments of" a minister of Religion [*Chih Tsung*] and a minister of Music [*Tien Yo*], in that order, because "music must be a sequel to the ceremonial observances. With music the work of government might be supposed to be ended, but notwithstanding the abundance of able ministers, let slanderous dividers once go abroad, and the men of worth and ability would be made restless, and what had been done would come to nought. On this account the appointment of" the minister of Communication [*Na Yen*] "was made last of all. The design of this was the same with that of Shun's concluding charge to the pastors of the twelve provinces, that they should *make it hard for the artful*; and with Confucius' concluding lesson on the administration of a country—*to keep far from specious talkers*" (*Ana.* XV. xx. 6).—*Wang Yen*, quot. *Legge, Ch. Class.*, III. i. 49, note.

[In Shun's time, therefore, the principal executive officers were the same as those in Yao's time, except that the Hsi and Ho had disappeared, the *Ssŭ Yüeh* seems to have occupied a less prominent position, while the *Hou Chi* (后 稷), Prince Millet, Minister (afterwards God) of Agriculture, *Ssŭ T'u* (司 徒), Minister of Instruction (in Agriculture), and *Shih* (士), Minister of Crime, had been added. An official named *Ssŭ K'ung* (司 空), Regulator of Land and Water, whose duties were to assign unoccupied lands, is also mentioned. He is classed in various works (*e.g.*, *Kang chien*, *c.* 2, p. 10) next to the *Po K'uei*.]

[The *Li ch'ao kang chien hui tsuan*, *c.* 2, places the *Ssŭ K'ung* first and the *Hou Chi* between the *Tien Yo* and *Na Yen*.]

"The minister of Crime exercised among the people the restraint of punishments, in exact adaptation to each offence, to teach them to reverence virtue. . . . In examining criminal cases, the officers executed the law not only against the powerful, but also against the wealthy."—*Shu ching*, Pt. V. Bk. XXVII. 9, 11; *Legge, Ch. Class.*, III. ii. 596-7.

[In the *Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan êrh*, p. 7*a*; *Yüan chien lei han*, *Shê kuan pu êrh*, p. 5*a*; etc., reference is made to *Ssŭ Fu* (四 輔), Four Supporters or Assistants. The *Shang shu ta chuan* says: "In ancient times the Emperor had four *Lin* (鄰), Neighbours"—Ministers attendant on his person, a Helper (*Fu* 輔) on the left, a Corrector (*Pi* 弼) on the right, a Solver of Doubts (*I* 疑) before, and a Stimulator of Purpose (*Ch'êng* 永) behind. *Legge* (*Ch. Class.*, I. ii. 82, note) says: "There is no evidence that there were such officers." The *San Kung* (三 公) also referred to by Ma Tuan-lin cannot be traced further back than the Shang dynasty (see below).]

"Every three years there was an examination of merits, and after three examinations the undeserving [officials] were degraded, and the deserving promoted. By this arrangement the duties of all the departments were fully discharged."—*Shu ching*, Pt. II. Bk. I. Ch. VI. 27; *Legge, Ch. Class.*, III. i. 50.

"Through the reforms introduced by Ch'ung and Le, a general reformation among all the higher classes was produced. Princes and inferior officers co-operated with those ministers, and the way was opened for the poorest and most helpless of the people to make their complaints and distresses known to the Emperor."—*Legge, Ch. Class.*, III. ii. 594.

[The provincial officials under Shun were the same as in Yao's time (v. *supra* and *T'ung tien, Kuang shih lei fu*, *c.* 8, *Chih kuan pu*, p. 7*a*).]

"In the provinces twelve Tutors (師 *Shih*)"—*Shu ching*, II. iv. i. 8. "It is a vexed question whether in each province there was only one 師, or whether there were eleven. The old interpreters, not without differences among themselves, yet all maintain the larger number. . . . 'Over every province was a Pastor (牧 *Mu*), and the worthiest of the princes were selected to be tutors or counsellors (師) to him. For every hundred States there was one 師' (View of Wu Ch'êng). On the other hand, many scholars maintain that the 12 師 are the same as the 12 牧." Legge prefers the latter view.—*Legge, Ch. Class.*, III. i. 85, note.

[Shun's officials numbered 60, or, including smaller officials, 100.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 4*a*.

[Yü (2205–2197 B.C.) is said to have manufactured, out of the tribute presented to him by the chiefs of his nine provinces, nine vases or tripods bearing delineations of the objects of nature, that the people might distinguish between good and evil spirits and be no longer assailed by terrors in the forests and by the waters, learning thus what regions were habitable and what not. In the *Shih chi* and *History of the Han Dynasty*, however, the delineations are said to have been maps of the provinces themselves, with records of the population and the division of properties and fiefs. Other accounts state that the inscriptions represented the provinces as demarcated after the country had been rescued from the deluge. After examining and classifying the lands, Yü settled the system of tenure on which the lands could be held, and fixed the amount of tax which each kind should pay. The inscriptions on the tripods are also said to have had the object of enabling future generations to follow his system. (*Kang chien hui tsuan*, *c.* 2, pp. 15*a*–*b*).] But *cf.* ÆSTHETIC PRODUCTS.

[In the "Great Plan" (*Shu ching*, Pt. V. Bk. IV. 7) the "eight objects of government are stated to be:—food, commodities, sacrifices, the minister of works, the minister of instruction, the minister of crime, the entertainment of guests, and the army" (see *Legge, Ch. Class.*, III. ii. 327, and note).]

"Among the ancients who exemplified this anxiety [about the appointment of the chief officers] there was the founder of the Hea dynasty. When his House was at its strength, he sought for able men to honour God. His advisers, when they knew of men thoroughly proved and trustworthy in the practice of the nine virtues, would then presume to inform and instruct their sovereign, saying, 'With our heads to our hands and then to the ground, O sovereign, we would say, Let such an one occupy one of your high offices: Let such an one be one of your pastors: Let such an one be one of your law-officers. By such appointments you will discharge your royal duty. If you judge by the face only, and therefrom deem men well schooled in virtue and appoint them, then those three appointments will all be occupied by unrighteous people.' The way of Kĕĕ, however, was not to observe this precedent. Those whom he employed were cruel men; and he had no successors."—*Shu ching*, Pt. V. Bk. XIX. 2–3; *Legge, Ch. Class.*, III. ii. 511–2.

"Every year in the first month of spring, the herald with his wooden-tongued bell goes along the roads, proclaiming, 'Ye officers able to direct, be prepared with your admonitions. Ye workmen engaged in mechanical affairs remonstrate on the subject of your business! If any of you disrespectfully neglect this requirement, the country has regular punishments for you.'" "The wooden-tongued bell was used for civil, peaceful objects; in war a metal-tongued bell was used."—*Shu ching*, Pt. III. Bk. IV. Ch. II. 3; *Legge, Ch. Class.*, III. i. 164-5, and note.

[According to the *Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 2*a*, under Hsia Hou's (*i.e.*, Yü's) system of government six *Ch'ing* (卿), Great Ministers, were also appointed, and the various ranks of officials were the same as those of Yü (Shun). In the *Shu ching*, in the speech at Kan the *Liu Ch'ing* (六 卿), Six Leaders of Hosts, are referred to, these high nobles here acting in a military capacity as leaders of the "six armies" (六 軍 and 六 師) which composed the fighting force of the king.]

[The same work takes the passage in the *Li chi* (III. ii. 4)—"The Son of Heaven had three dukes (三 公 *san kung*), nine high ministers (九 卿 *chiu ch'ing*), twenty-seven Great officers (大 夫 *ta fu*), and eighty-one officers of the chief grade (元 士 *yüan shih*)"—to refer to Hsia Hou's time. It refers, however, to the "early kings," and there is nothing to show that this system had already been instituted. The *Kang chien* and *Tzŭ shih ching hua*, dealing with this period, give the following as the administrative ranks under the Hsia, viz.:—(a) nobles (爵), (b) dukes (公), (c) *Chu Hou* (諸 侯), the Chiefs of the vassal states; (d) *Ch'ing* (卿), ministers of various departments; (e) *Ta Fu* (大 夫), ministers of smaller rank than *Ch'ing*; (f) *Shih* (士), officials next in rank to *Ta Fu*. Ennoblement was, however, accessory to official rank.]

[Of the existence of official Recorders, Annalists, &c., previous to the Chow dynasty, there is not much evidence. But some appointments of the kind may be inferred from the prince of Yin during the reign of Chung K'ang (2159–2146 B.C.) quoting from the Statutes of Government, and from the grandsons of the great Yü, founder (2205–2197 B.C.) of the Hsia dynasty, making mention of his Lessons. See *S.B.* III. 5.]

"When we ascend from the Chou dynasty to those of Shang and Hea which preceded it, we do not have the same amount of evidence for the existence under them for the class of officers styled Recorders. Chinese critics, indeed, say that it did then exist, and even earlier; my own opinion is, that the institution was in active operation during the dynasties just named:—but the proofs are not adequate."—*Legge, Ch. Class.*, III. i. Prol. p. 11.

[Over the provinces, under the Hsia, there were 9 *Chou Mu* (州 牧), v. *supra*.]

"In the dynasties of Hea and Shang, the number of officers was doubled," the increase being necessitated by the growth of population.—*Shu ching*, Pt. V. Bk. XX. 3; *Legge, Ch. Class.*, III. ii. 526, note.

[The Hsia officials were 120 in number. The Shang *shu* says: 'In the Hsia and Shang dynasties, the officials were double the number [of those in Yao and Shun's times], being thus 200. [But] Chêng Yüan [of the Han dyn.] says: 'There were but 120.']—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 4*a*.

"After him [Kĕĕ] there was T'ang the Successful [1766–1753 B.C.], who, rising to the throne, greatly administered the bright ordinances of God. He employed to fill the three high positions those who were equal to those positions; and those who were called possessors of the three grades of ability could display that ability. He then studied them severely and greatly imitated them, making the utmost use of them in their three positions and with their three grades of ability. The people in the cities of Shang were hereby all brought to harmony, and those in the different quarters of the Empire were brought greatly under the influence of the virtue thus displayed. Oh! when the throne of T'ang came to Show, his character was all violence. He preferred men of severity, princes of States who deemed cruelty a virtue, to share with him in the government of the empire; and at the same time, the host of his associates, men who counted idleness a virtue, shared the offices of his court. God then sovereignly punished him, and caused us to possess the great empire, enjoy the favouring decree which Shang had afore received, and govern all the people in their myriad realms."—*Shu ching*, Pt. V. Bk. XIX. 4–5; *Legge, Ch. Class.*, III. ii. 512-4.

"We are told in distinct terms that the dynasty of Shang . . . 'employed the worship of the gods as an instrument of government.'"—*Martin, Chinese*, p. 258.

[The administrative system under the Shang (Yin) dynasty (1766–1122 B.C.) was as follows:—There were *Tso Hsiang* (左 相) and *Yu Hsiang* (右 相), Left and Right Prime Ministers (*Kuang shih lei fu*, *c.* 5, *Chih kuan pu*, p. 1*b*; the Prime Minister under the Shang dynasty was called 阿 衡 *O Héng*); *San Kung* (三 公), the Three *Kung*, Secretaries of State, ranking as princes, and "employing only able subordinates." They assisted the king in governing the country on the basis of the ancient principles (but see *infra*), forming a sort of Privy Council, as in the Later Feudal Period. The *T'ai Shih* (太 師) and *T'ai Pao* (太 保) (in some works *Fu Shih* 父 師, Grand Tutor, and *Shao Shih* 少 師, Junior Tutor) were of this class (see following extract); *T'ai Tzŭ T'ai Shih* (太 子 太 師), *T'ai Tzŭ T'ai Pao* (太 子 太 保), *T'ai Tzŭ T'ai Fu* (太 子 太 傅), and *T'ai Tzŭ Shao Fu* (太 子 少 傅), Grand Tutor, Protector, Assistant and Junior Assistant of the Heir Apparent—Great Officers (大 夫 *ta fu*) of the highest rank, who resided in apartments to the right, left, front, and rear of the Heir Apparent, and were men of upright conduct whose duty was to explain the rules of ceremony and right conduct for the guidance of the Heir Apparent (*Yüan chien lei han*, *Shê kuan pu*, *T'ai Tzŭ T'ai Fu Tsung Tsai*, p. 134*b*); the *Liu T'ai* (六 太), 'Six *Tai*,' *viz.*, *T'ai Tsai* (太 宰), Chief Secretary of State (all the other state officials being under him), *T'ai Tsung* (太 宗), Minister of Ceremonies, *T'ai Shih* (太 史), Historian, *T'ai Chu* (太 祝), High Priest or Minister of Religion (Controller of Public Sacrifices), *T'ai Shih* (太 士), Minister of Justice, and *T'ai Pu* (太 卜), Diviner, these six having charge of the execution of the *Liu Tien* (六 典), six codes of governmental regulations; the *Wu Kuan* (五 官), Five Officers, or Administrators of Five Boards, *viz.*, *Ssŭ T'u* (司 徒), Minister of Instruction, *Ssŭ Ma* (司 馬), Minister of War, who was responsible for the good behaviour and loyalty of the head of each vassal state to the Supreme Lord, *i.e.*, the King of Shang, *Ssŭ K'ung* (司 空), Minister of Works, whose duties related to conservancy of waterways and reclamation and cultivation of land, *Ssŭ Shih* (司 士), Controller of Official Appointments, and *Ssŭ K'ou* (司 寇), Minister of Crime; *Liu Fu* (六 府), Six Treasurers, or Keepers of Stores (for revenue purposes), *viz.*, *Ssŭ T'u* (司 土), Controller of Earth, *Ssŭ Mu* (司 木), Controller of Woods, *Ssŭ Shui* (司 水), Controller of Streams, *Ssŭ Ts'ao* (司 草), Controller of Herbs, *Ssŭ Ch'i* (司 器), Controller of Utensils, *Ssŭ Huo* (司 貨), Controller of Commodities; and the *Liu Kung* (六 工), Six Overseers of Works or Industries, *viz.*, *T'u Kung* (土 工), of Earth Workers, *Chin Kung* (金 工), of Metal Workers, *Shih Kung* (石 工), of Stone Workers, *Mu Kung* (木 工), of Wood Workers, *Shou Kung* (獸 工), of Skin Workers, and *Ts'ao Kung* (草 工), of Tree Planters (or makers of articles out of reeds, &c.) (for details of duties see *Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 2*a*).]

"We do not know that there were, in the Shang dynasty, the three *Kung* and three *Koo*, as subsequently in the Chow, but the 'grand Tutor' [*Fu Shih* 父 師] and 'junior Tutor' [*Shao Shih* 少 師] were of the class of those dignitaries."—*Legge, Ch. Class.*, III. i. p. 274, note. The *Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan êrh*, pp. 7*a*–8*b*, says that in the time of Chou Hsin [1154–1122 B.C.] of the Yin, Chi-tzŭ (Chou's uncle) created the post of *T'ai Shih* (太 師), Grand Tutor, and in the time of T'ai Chia, I Yin created the post of *T'ai Pao* (太 保), Grand Protector, and quotes the *Shih chi* to the effect that "Shun, Yü, and Shang all had [*T'ai*] *Shih* and [*T'ai*] *Pao*."

"We cannot tell how many were the officers of divination in the earlier dynasties, nor what were their several duties."—*Legge, Ch. Class.*, III. ii. 336, note. And see LATER FEUDAL PER.

[Provincial officials of the Shang dynasty:—The land to a distance of one thousand *li* from the capital was called *Wang Chi*, or Royal Demesne. For the administration of each territory beyond that distance a *Fang Po* (方 伯), governor, was appointed. Five districts made a *Shu* (屬), or dependency, and for each dependency there was a *Chang* (長), or Chief. Ten districts made a *Lien* (連), and for each *Lien* there was a *Shuai* (帥), or Leader. Thirty districts made a *Tsu* (卒), and for each *Tsu* there was a *Chêng* (正), or Principal. 210 districts made a province (*Chou* 州), and for each province there was a *Po*, or Earl. The *Chêng* (see above) were 56 in number, the *Shuai*, 168, and the *Chang*, 336. Thus there were the *Fang Po* (方 伯), Governor of the Region, or Ruler of the District; *Chou Po* (州 伯), Governor of a *Chou* of 210 States (8 *Chou* had 8 *Po*); *Tsu Chêng* (卒 正), Chief of a *Tsu* of 30 States (56 in all); *Lien Shuai* (連 帥), Commander of a *Lien* of 10 States (168 in all); and *Shu Chang* (屬 長), Elder of a *Chang* of 5 States (336 in all). The 8 *Po* each administered his own territory. The kingdom was divided into right and left parts, each under an *Êrh Po* (二 伯), Secondary Earl.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 2*a*.

[For precedence the above would be arranged in classes as follows: 1st rank—*Kung*, *Tso Hsiang*, *T'ai Tzŭ T'ai Shih*, *T'ai Tsai*, *Ssŭ T'u*, (*Fang Po*), *Ssŭ T'u*, *T'u Kung*; 2nd rank—*Hou*, *Yu Hsiang*, *T'ai Tzŭ T'ai Pao*, *T'ai Tsung*, *Ssŭ Ma*, (*Chou Po*), *Ssŭ Mu*, *Chin Kung*; 3rd rank—*Po*, *T'ai Tzŭ T'ai Fu*, *T'ai Shih*, *Ssŭ K'ung*, (*Tsu Chêng*), *Ssŭ Shui*, *Shih Kung*; 4th rank—*T'ai Tzŭ Shao Fu*, *T'ai Chu*, *Ssŭ Shih*, (*Lien Shuai*), *Ssŭ Ts'ao*, *Mu Kung*; 5th rank—*T'ai Shih*, *Ssŭ K'ou*, (*Shu Chang*), *Ssŭ Ch'i*, *Shou Kung*; 6th rank—*T'ai Pu*, *Ssŭ Huo*, *Ts'ao Kung*.]

[The existence of official Records (see following Period) is indicated in *Shu ching*, IV. v. sect. 1 (I Yin remonstrates with sovereign in writing); IV. viii. sect. 1 (Wu Ting, 1324–1265 B.C., communicates dream to ministers in writing); and V. x. ii. "The 'Recorder of the Interior' (內 史 *Nei Shih*) belonged, it is maintained, only to the imperial court." There was a minister holding this office at the court of Shang.—*Legge, Ch. Class.*, III. ii. v. 410, note, and *cf. supra*, *re* the Prince of Yin.]

"Under the Chow dynasty there was a 'Recorder of Merits, who entered the names of meritorious ministers among the imperial kindred when alive, and regulated the arrangement of their spirit tablets at the sacrifice in the ancestral temple, when they were dead." This custom was taken by the Chow dynasty from the Yin dynasty.—*Ibid.* III. ii. 439, note.

"Independently of the Institution of Recorders, if we may admit the testimony of the Shoo itself, both emperors and ministers were in the habit of committing their ordinances and memorials to writing during the rule of the House of Shang. Woo-ting, B.C. 1321, is described as making a writing to communicate the dream which he had to his ministers (Pt. IV. Bk. VIII., Pt. i. 2); and, more than 400 years earlier, we have E Yin addressing his remonstrances to the young emperor T'ae K'ëă in a written form (Bk. V. Pt. i. 2)." *Ibid.* III. i. Prol. p. 12.

[I Yin, minister to the first king of the Shang dynasty, banished the Crown Prince for three years for misconduct.]—*Kang chien hui tsuan*, *c.* 2, pp. 10*a*–11*b*.

[T'ai Mao (1637–1562 B.C.) introduced many improvements in the administrative system, and drew up rules defining the rights and privileges to be enjoyed by the Elders of the realm.]—*Ibid. c.* 2, pp. 10*a*–11*b*.

[P'an Kêng's (1401–1373 B.C.) ministers and officers had degenerated as compared with those of former times.]—*Legge, Ch. Class.*, III. i. 225, note.

[Yüeh, a builder in the country of Fu Yen, was appointed Prime Minister to King Wu Ting (1324–1265 B.C.), in consequence of a dream which the latter had during a period of mourning.]—*Shu ching*, Pt. IV. Bk. VIII. Pt. i.

For "repelling the incursions of certain wild tribes in the north" the Emperor Ti Yi [1191–1154 B.C.] gave to duke Ke "the title, first of 'Master of the Pastors' (命 爲 牧 師), and subsequently invested him with the dignity of 'Chief of all the princes' (侯 伯)."—*Legge, Ch. Class*, III. i. 269, note.

"Ch'in Leih says that it was a common practice of antiquity for the princes of States to reside at the imperial court, and there sustain office, while the officers of the court were also sent forth, as princes of States. See the 集 說."—*Ibid.* III. ii. 514–5, note.

"Good government and bad depend upon the various officers. Offices may not be given to men because they are favourites, but only to men of ability. Dignities may not be conferred on men of evil practices, but only on men of worth."—*Shu ching*, Pt. IV. Bk. VIII. Pt. ii. 5; *Legge, Ch. Class.*, III. i. 256.

"Chow [Chou Hsin, 1154–1122 B.C.] did not look out for able and good men to fill the offices of the State, and thus brought about its destruction."—*Ibid.* III. ii. 285, note.

"The viscount of Wei spoke to the following effect:—'Grand Tutor and Junior Tutor, the House of Yin, we may conclude, can no longer exercise rule over the four quarters of the Empire. The great deeds of our founder were displayed in

former ages, but by our being lost and maddened with wine, we have destroyed the effects of his virtue in these after times. The people of Yin, small and great, are given to highway robberies, villainies and treachery. The nobles and officers imitate one another in violating the laws; and for criminals there is no certainty that they will be apprehended. The lesser people consequently rise up, and make violent outrages on one another." "When I look down and survey the people of Yin, the methods of government to them are hateful exactions, which call forth outrages and hatred;—and this without ceasing. Such crime equally belongs to all in authority, and multitudes are starving with none to whom to appeal."—*Shu ching*, Pt. IV. Bk. XI. 1–2, 7; *Legge, Ch. Class.*, III. i. 274–5, 277.

[The Yin officials numbered 240. The *Ming T'ang* (chap. of the *Li chi*) says: the officials were 200. Chêng Yüan (of the Han) says 240.]—*Wên hsien t'ang k'ao, c.* 11, *Chih kuan i*, p. 4*a–b*.

[The administrative unit throughout this Period was the *kuo*, or fief. See *Wên hsien t'ung k'ao, Yü t'u pu, c.* 23, p. 2.]

[As regards the imperfect differentiation of civil and military duties see also MILITARY.]

[Some administrative appointments which, though dating from the later years of this Period, formed the root of government institutions of the Later Feudal Period, are given under the latter as more properly belonging to it.]

The king was the source of *legislation*, though in the time of Yao there was, it is alleged, no need for repressive measures, Yao's virtuous example rendering them unnecessary (see *infra*), but the inconsistency of the comment on the *Shu ching*, which states that there were no punishments in the reign of Yao, whereas it is admitted, in the same page, that the associate and successor of that monarch, and the emulator of his virtues, established cruel punishments (see LAWS), has been pointed out in the *Mém. sur les Chinois* (i. 180). The commentators are there imagined to have been mistaken, but in vol. iii. p. 20, and vol. iv, p. 56, the fact is re-asserted that although such laws had really been established, the innocence and virtues of the people were such, that many centuries elapsed before it became necessary to enforce them. *Ma Tuan-lin* says: "I have observed with pain that punishments . . . —which appear rather the result of the tyranny of a Ch'ih Yu—should nevertheless have been employed in the reigns of Yao and Shun." "The truth," says *Staunton* (*Ta Tsing Leu Lee*, Pref. p. xxii), "it is most probable, lies between the two extremes; and while we may agree with the Missionaries, that the practice of such cruelties in the ordinary administration of justice is improbable, and inconsistent with the high character which is given of the wisdom of the sovereign and the mildness of the people at that era, we shall scarcely be so extravagant as to suppose that punishments, and even severe ones, could have been at any time altogether unnecessary." Traces of and references to laws occur (*Shu ching*, III. iv. 2, etc.; and see LAWS), and there is nothing to show that the Chinese nature, though it may have improved under Yao's good rule, had changed so much as is indicated by the great contrast implied by the absence of any necessity for coercive measures during the seventy years of his reign and their presence both before and after. The decreeing of punishments was at any rate necessary during the joint reign of Yao and Shun (*Shu ching*, II. i. iii. 11). Moreover, Shun's reign is described as beneficent (*Shu ching*, II. ii. ii. 12), and the people, on the hypothesis, having already reached a very high state under Yao, should have been still further improved under Shun. "It is maintained by some Chinese scholars that Yaou and Shun did not use these severe punishments. . . . Ma Yung says: '. . . none made themselves obnoxious to them. There were the representations, but not the criminals.' Fuh-shang speaks of persons liable to these punishments being dressed up so as to attract attention, which made a greater impression than the infliction of the penalties would have done. These objections were made at a very early date, and answered by Seun K'ing, in the 3rd cent. before Christ" (*Legge, Ch. Class.*, III. i. 38, note).]

[For the five laws enacted by Shun, "the first law maker," see LAWS.]

[*Justice* seems to have been administered by the Sovereign both as Judge and Judge of Appeal. Under Shun there was a Minister of Crime (*Shu ching*, II. i. 20, etc.): "'one who presides over the examination of civil and criminal causes' (*Wu Ch'ing*); Ma says he was 'the chief of such judges.' . . . The office was that of the 大司寇 of the Chow dynasty" (see following Period) (*Legge, Ch. Class.*, III. i. 45, note).]

[According to the *Yüan chien lei han, Shê kuan pu, Chih kuan*, p. 1*a*, "in the time of Yao and Shun there were laws but no means for their enforcement (punishments). When Kao Yao was appointed Minister of Crime he expounded the law and instituted the Five Punishments.]

"The Minister of Crime exercised among them the restraint of punishment in exact adaptation to each offence, and taught them to reverence Virtue. . . . The clear adjudication of punishments effected the regulation of the people and helped them to observe the regular duties of life. The officers who presided over criminal cases executed the law (fearlessly) against the powerful, and (faithfully) against the wealthy. They were reverent and cautious. They had no occasion to make choice of words to vindicate their conduct. The virtue of Heaven was attained to by them; from them was the determination of so great a matter as the lives (of men)."—*S. B.*, III. 258–9.

"The King said, 'Oh! you who direct the government and preside over criminal cases through all the land, are you not constituted the shepherds of Heaven? To whom ought you now to look as your pattern? Is it not Po-i, spreading among the people his lessons to avert punishments? And from whom ought you now to take warning? Is it not from the people of Miâo, who would not examine into the circumstances of criminal cases, and did not make choice of good officers that should see to the right apportioning of the five punishments, but chose the violent and bribe-snatchers, who determined and administered them, so as to oppress the innocent, until God would no longer hold them guiltless, and sent down calamity on Miâo, when the people had no plea to allege in mitigation of their punishment, and their name was cut off from the world?'"—*Ibid.* III, 259–60.

"Kaou-yaou said, 'Your virtue, O Emperor, is faultless. You condescend to your ministers with a liberal ease; you preside over the multitude with a generous forbearance. Punishments do not extend to the criminal's heirs; while rewards reach to after generations. You pardon inadvertent faults, however great; and punish purposed crimes, however small. In cases of doubtful crimes, you deal with them lightly; in cases of doubtful merit, you prefer the high estimation. Rather than put to death an innocent person, you will run the risk of irregularity and error. This life-loving virtue has penetrated the minds of the people, and this is why they do not render themselves liable to be punished by your officers."—*Shu ching*, Pt. II. Bk. II. Ch. II. 12; *Legge, Ch. Class.*, III. i. 59.

"The system founded under the Emperor Shun was followed in the Hsia dynasty. The five punishments were still administered by the Minister of Crime."—*Yüan chien lei han, Shê kuan pu, Chih kuan*, p. 1*a*.

[Under the Yin, the Minister of Crime was called *Ch'iu Kuan* (秋官), Minister of Autumn.]—*Ibid.* p. 1*a*.

[The princes, in their several States, had the power of rewards and punishments, and the right to revenue.]—*Legge, Ch. Class.*, III. ii. 334, note.

[*Revenue.*—In ancient days, land was held and cultivated under the feudal system, according to which a tithe of the production of the land held in common by nine families (households) was paid to the Government as tax, and so with the income made by artisans, merchants, fishermen, and foresters. Taxes were collected to provide for all the expenses in connection with various sacrifices which were offered to the Ancestral Temples, Heaven and Earth, and all the other gods; and also for the maintenance of the Royal dignity, and for the salaries of various state officials. The tithe from the land was collected for military purposes, such as the purchase of chariots, horses, weapons, and skins; for filling the national Treasury; and for rewards and pensions. In the administration of the national revenue, the sovereign had only two things to think of, the land and the forests. From ancient times down to the present, taxes have been collected from each portion of land according to its acreage.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 50*b*.

"A great order was effected [as a result of Yü's labours] in the six magazines of material wealth; the different parts of the country were subjected to an exact comparison, so that the contribution of revenue could be carefully adjusted according to their resources. The fields were all classified with reference to the three characters of the soil; and the revenues for the Middle region were established."—*Shu ching*, Pt. III. Bk. I. Pt. ii., Ch. III. 15; *Legge, Ch. Class.*, III. i. 141.

"Its [Yen-chou's] revenues just reached what could be deemed the correct amount; but [owing to the devastation caused by the great flood] they were not required from it as from the other provinces, till after it had been cultivated for thirteen years. Its articles of tribute were varnish and silk; the baskets from it were filled with woven ornamental fabrics."—*Shu ching*, Pt. III. Bk. I. Ch. III. 18–19; *Legge, Ch. Class.*, III. i. 99.

From Ts'ing-chow the "contribution of revenue was the highest of the second" class. "Its articles of tribute were salt, fine grass-cloth, and the productions of the sea of various kinds; with silk, lead, pine-trees, and strange stones, from the valleys of the Tae."—*Ibid.* p. 102.

From Ts'eu-chow the "contribution of revenue was the average of the second" class. "Its articles of tribute were earth of five different colours; with the variegated feathers of pheasants from the valleys of the Yu; the solitary dryandra from the south of Mount Yih; and the sounding stones that seemed to float near the banks of the Sze. The wild tribes about the Hwae brought oyster-pearls and fish; and their baskets full of deep azure silks, and other silken fabrics, chequered and pure white."—*Ibid.* p. 107.

From Yang-chow the "contribution of revenue was the highest of the lowest class, with a proportion of the class above." "Its articles of tribute were gold, silver, and copper; yaou and keun stones; bamboos small and large; elephants' teeth, hides, feathers, hair, and timber. The wild people of the islands brought garments of grass. The baskets were filled with woven ornamented silks. The bundles contained small oranges and pummeloes:—rendered when specially required."—*Ibid.* pp. 111–2.

From King-chow the "contribution of revenue was the lowest of the highest class." "Its articles of tribute were feathers, hair, ivory, and hides; gold, silver, and copper; the ch'un tree, wood for bows, cedars and cypresses; grindstones, whetstones, arrow-head stones, and cinnabar. There were also the k'wăn and loo bamboos, and the wood of the hoo tree, of which the three regions were able to contribute the best specimens. The three-ribbed rush was put in cases, which again were wrapped up. The baskets were filled with deep azure and purple silken fabrics, and with strings of pearls that were not quite round. From the country of the nine Kĕang the great tortoise was presented."—*Ibid.* pp. 115–6. Hirth states (*Journ. N.-C.B.R.A.S.*, N.S. xxii. 54) that this province was also called upon by Yü to supply the Court with salt.

From Yu-chow the "contribution was the average of the highest class, with a proportion of the very highest." "Its articles of tribute were varnish, hemp, a finer hempen cloth, and coarser hempen cloth. The baskets were filled with fine silken fabrics, and fine floss-silk. Stones for polishing sounding-stones were rendered, when required."—*Legge*, pp. 117, 119.

From Leang-chow the "contribution of revenue was the average of the lowest class, with proportions of the rates immediately above and below." "Its articles of tribute were musical gem-stones, iron, silver, steel, stones for arrow-heads, and sounding-stones; with the skins of bears, great bears, foxes, and jackals, and articles woven with their hair."—*Ibid.* p. 121.

From Yung-chow the "contribution of revenue was the lowest of the second" class. "Its articles of tribute were the k'ew and lin gem-stones, and the lang-kan precious stones." "Hair-cloth and skins were brought from Kwăn-lun, Seih-che, and K'eu-sow:—the wild tribes of the West all coming to submit to Yu's arrangements."—*Ibid.* pp. 125, 127.

"From the first hundred *le* [of the imperial domain] they brought, as revenue, the whole plant of the grain; from the second, they brought the ears; from the third, they brought only the straw, but had to perform other services, from the fourth, they gave the grain in the husk; and from the fifth, the grain cleaned."—*Shu ching*, Pt. III. Bk. I. Pt. ii., Ch. IV. 18; *Legge, Ch. Class.*, III. i. 143–4.

"We have no mention of the payment of revenue in the other domains. It was, no doubt, on some arrangement analogous to that made for this *fuh*. The princes occupying the several territories received it, and then paid a tithe of their incomes to the Emperor not in kind but in value, in other articles produced in their principalities;—such at least is the account given by Hoo Wei."—*Legge*, p. 144, note.

"In ancient times the only tax was a land tax of 10 per cent. [古者什一而稅亡他賦役.]"—*Ch. Rev.*, xiii. 59.

"San Shan Shih said: 'In the Three Dynasties the methods of collecting [taxes] from the people differed, but were [all] within one-tenth. And all being within one-tenth, the difference consisted in the divisions into nine classes. As the areas of the nine Chou differed, some being large and some small; and the population also differed, in some being great and in some small, so the total amounts of taxation were also unequal. They were not fixed according to the superiority or inferiority of the fields, but by comparing the [old] totals, whether much or little, the division into nine classes was made. The taxes of Ch'i Chou were much greater than those of the other eight, and were therefore called *shang shang* (best), but the taxes of Yen Chou were less than those of the other eight, and so were called *hsia hsia* (worst). The remaining seven were the same. It was not the case that in collecting from the people they made the differences of light and heavy [quality of the fields] in order to have these nine classes.'"—*Wên hsien t'ung kao hsiang chieh, c.* i., *T'ien fu K'ao*, p. 1*a*.

"The wild people of the islands brought dresses of skins."—*Shu ching*, Pt. III. Bk. I. Ch. III. 10.

[Ta Yü . . . fixed the amount of tribute to be paid by each portion of land according to the degree of its fertility. He allotted all the lands to the people, and initiated the tithe system. Thus prosperity and happiness prevailed throughout all parts of his kingdom. No details are given concerning the various revenue officers.]—*Ibid.* p. 50*b*.

[In the time of Yin, the system of dividing lands among the people for revenue purposes was as follows:—What was produced from the land within the distance of 100 *li* (the Crown lands), was appropriated for all expenses in connection with the maintenance of staff officials. The lands within a distance of 1,000 *li* were called *tien*, and the revenue accruing therefrom was set aside for military expenses, while the land beyond was called *yü*, it being treated as a dependency, and a governor appointed to administer it. Common lands were registered only, and not taxed. Out of every 70 acres of cultivated lands, only seven acres were taxed. Because the tax was so light, it could be paid by the people without difficulty, but when Chou Hsin became King, he treated his people with cruelty, and taxed them very heavily in order to fill his national exchequer in the *Lu Tai*, and accumulate large stores in Ch'ü Ch'iao.]—*Ibid.* p. 50*b*.

"The Hsia sovereigns took *kung* (貢) 'tribute' from every 50 of the people; the men of Yin, *chu* (助) 'aid,' from every 70 of the people; and the men of Chow, *ch'é* (徹) enacted the 100 *mou* allotment and the share system—these were really taking one-tenth from the people." [10 families cultivated 1,000 *mou* in common, dividing the produce and paying a tenth to the Government.]—*Wên hsien t'ung k'ao hsiang chieh, c.* 1, *T'ien fu K'ao*, p. 1*b*. *Cf.* REG. OF LAB.

"During the time of the Shang Dynasty . . . the inhabitants of these southern regions ['*Yang*,' including among others the present province of Kuang Tung] first began to pay tribute to the emperors of China."—*Ch. Repos.*, ii., 147.

Later Feudal Period (1122–221 B.C.).—*Table II.*

RANKS.—*King* (王 *Wang*).—"The title *ti*, 'emperor,' had grown unpopular after the many examples of weakness and lack of virtue displayed by so many of the previous emperors. . . . In his modesty he [Wu] continued to style himself simply *wang*, or 'king' [besides holding the dignity of 'Son of Heaven'], and his successors followed his example."—*Hirth*, pp. 96–7.

"China was in those days divided, somewhat like Germany, into a number of small States, all of which recognized the Son of Heaven as their principal ruler, who from the outset must have had considerable power over the several feudatory governments; for it is he who establishes states, defines their limits, and indicates the location of their capitals; through him, also, their rulers hold their appointments. Their government is to be modeled like the Emperor's, and is to be controlled and inspected from time to time by him, he having the power to revoke and to dispose or reprimand the refractory." He was "the patriarch of the nation" and "regarded as the ruler of the world." He had "the right of pardon in criminal cases.' Great officers could not be put to death nor promotions made without his sanction. He had "Travellers" to inform him of all that was going on within his dominions, and "himself travelled through his dominions to see for himself where his authority was called upon to interfere." Staffs of officers also reported to him on topographical, historical, social, and economical questions. Mildness was regarded as weakening his position, while terrorism created a spirit of independence among vassals. He "had to perform the ceremony of working in person in the 'Fields of a Thousand Acres' set aside for the purpose".—*Hirth*, pp. 108–9, 111, 112, 123, 124, 125, 154, 158, 207–8, 210; *Ch. Rev.*, i. 370 seqq. For description of king's palace, see *Chou li, Gingell*, pp. 3–5, *Shu ching*, V. xxii. *S.B.*, III. 236, note, and LAWS OF INT. for the strict ceremonial which regulated his life.

"On the principle of *Mencius*, VII. Pt. II. ii., the emperor did not fight (戰), but only 'punished'; nor did he take the field till after the means which the constitution of the government provided had proved ineffectual. Such came to be the rule when the feudal system had become fully developed."—*Legge, Ch. Class.*, III. i. p. 153, note.

"What was designed to be the central State of the empire was the appanage of the sovereign himself, and was of the same dimensions as one of the largest of the feudatory States. (Here is the true account of the origin of the names Chung Kwoh, 中國, 'Middle State,' and Chung Pang, 中邦, 'Middle Region'). Over this he ruled like one of the other princes in their several dominions; and he received, likewise, a certain amount of revenue from all the rest of the country, while the nobles were bound to do him military service, whenever called upon. He maintained also a court of great ministers, who superintended the government of the whole empire. The princes were little kings within their own States, and had the power of life and death over the people. They practised the system of sub-infeudation; but their assignments of lands were required to have the imperial sanction."—*Ibid.* III. i. Prol. p. 198.

"*In the construction of the ancient palaces of the Chinese Emperors, there were three objects kept in view.* They were for religious purposes, for feudal audiences and consultations, and they included private apartments for the Emperor. The feudal compacts needed to be confirmed by religion. The Emperor was chief sacrificer, and there was never in China any notion of

local sanctity in buildings. All the reverence attached to a palace is on account of the Emperor, the brother of the Sun and Moon, and his ancestors."—*Journ. N.-C. B.R.A.S.*, N.S. xxiv. 256.

"The emperor's personal life was regulated by strict ceremonial in its most minute details, in which respect the most powerful man among millions was less free than any of his subjects. His mode of dress, the work he had to do during every hour of the day, the postures he had to assume in performing certain ceremonies, and the words he had to pronounce on every possible occasion were regulated by that cruel tyrant, state ceremonial. Even his daily meals, the nature and quantity of food to be served to him at each season of the year and on special occasions were subject to fixed rules. He was supposed to starve himself when famine prevailed in the country or in times of public calamity. His meals were not presented to him by state dignitaries or by eunuchs, who might flatter his senses in order to curry favour, but by a court attendant who had to taste them in his presence. The same rigid ceremonial was brought to bear on the feudatory princes."—*Hirth*, p. 115.

"The imperial palace consisted of a vast enclosure surrounded by high mud or brick walls, in which were the following: the dwelling houses of the emperor, the empress, the concubines, and their servants; the offices of the ministers, reception halls, and temples; shops for weaving silk and hemp for the use of the court; treasuries for the preservation of the imperial archives, historical documents, jewelry, and other precious belongings of the state or the emperor; depositories for stores and all that was necessary for the maintenance of life. In other words, it was a walled city within the capital city reserved for the emperor, his household, and his government; and the monarch seldom left it except in his official capacity."—*Ibid.* pp. 114-5.

[The king, by changing the name of a city to an auspicious or inauspicious one, could benefit or injure it.]—*Oxenham, Atlas*, Pref. p. iv. *Cf.* SUPERSTITIONS.

[The right of *succession* was hereditary, and the title of *Shih Tzŭ* (世 子) (the eldest son of a *Wang* 王, prince) was first used at this time. Nevertheless uncertainty exists as to the distinction between the title of *T'ai Tzŭ* (太 子) (Heir Apparent) and that of *Shih Tzŭ*.]—*Kang chien.*

[Succession to the throne was to the eldest son. See *Shih chi tz'ŭ K'o chuan, P'ei wén yün fu*, c. 63, p. 64*b*; *Tso chuan, ibid.* p. 64*b*; p. 64*a*; *Yüan chien lei han*, c. 244, p. 11*a*; p. 10*b*; etc.]

"During the half century [1001-946 B.C.] that he [Mu] occupied the throne, the House of Chow went on to decline. According to Sze-ma Ts'een, the king would engage in hostilities with the wild tribes round about, contrary to the counsels of his advisers, losing consequently the former reverence with which they had regarded the sovereigns of Chow, and the good-will also of many of the princes."—*Legge, Ch. Class.*, III. ii. 558, note.

King I (夷 王) (894–878 B.C.) "proved a weak sovereign, and was in bondage to the princes to whom he owed the empire. It is objected to him that, when he gave audience to them, he descended from the dais to meet them, as if he were their equal merely. The chief of the State of Tsoo extended the possessions of his House during this reign, and assumed the right of investing his sons with his conquests without reference to the court. He arrogated to himself, moreover, the title of king. The imperial authority was evidently but little cared for."—*Ibid.* III. ii. 614, note.

[The king's nominal power was upheld solely by the spirit of loyalty among the feudal States. The period of the Five Leaders (685–591 B.C.) marks, according to Mencius, "the first stage of that decay of imperial power which had ruled supreme for a thousand years and more." At times the king had to flee from his capital (*e.g.*, Hsiang Wang in 637 B.C.) Under Ch'ing Wang (618–612 B.C.) "the imperial prestige had become so low that even the king's treasury was found insufficient to pay the deceased Emperor's burial expenses, and a loan had to be raised from the prosperous state of Lu." Ting Wang (606–585 B.C.) was slighted by a vassal of Ch'u. In 370 B.C. Lieh Wang's summons to the imperial court was disobeyed by all except one of the vassal princes. Hsien Wang (368–220 B.C.) "was nothing better than a silent looker-on without the slightest power to interfere in the endless struggles between his nominal vassals. By the time of Mencius (372–289 B.C.) the feeling of nominal loyalty "as regards the legitimacy of the Emperor's position, which Confucius had tried to foster as best he could, had . . . given way to utter disregard of imperial rights. . . . The Emperor was now a mere shadow, and things took their own course before his eyes." Mencius "denounced the decadence of his age as being the result of the neglect of loyalty." In 288 B.C. an attempt was made by the two states of Ch'in and Ch'i to adopt the title. By 255 B.C. the king (Nan Wang) had lost the western part of his territory, the eastern part, bequeathed to Tung Chou Chün, being annexed by Ch'in in 249 B.C.]—*Hirth*, pp. 217–8, 219, 220, 220–1, 275, 284–5, 294, 318, 325.

A. *Officers, or Scholar-officers* (士 *Shih*).—[There was a "Board of Scholars" or "College of Great Scholars," consisting of seventy members holding official rank. But "even so far back (as the time of Confucius) such a class of men (scholars, or men claiming to possess literary acquirements) there was in China" (*S.B.*, xxvii. Intro. pp. 51–2). The scholar (*shih*) was regarded as both the "root of the Prime Minister" (though perhaps not so directly so as after the institution of public examinations for official posts) and the "first of the four unofficial classes" (*shih wei ssŭ min chih shou*).]

[In the *Ch'un ch'iu* it is stated that a man could not be called a scholar (*Ju Shêng*), unless he had thoroughly mastered one classic. The term *Hung Ju*, that is learned scholar, was only for those who had read a large number of books. The term *Ju shih* was for those who had done good to the people by their teachings. In the time of the Warring States, those who were called scholars were really demagogues, and demagogism was the profession which occupied most attention at that time. Still, true scholars were numerous in the kingdoms of Ch'i and Lu (see *Tzŭ shih ching hua*). According to the *Chou li*, the duty of a scholar (when he came into power) was to gain the good will of the people by proper government. During the time when the States were making war and bringing ruin upon each other, the principles which every scholar followed were generally discarded. Chung Ni (Confucius) took this matter up and preached the practice of principles. He revised the Six Classics, and his labour was continued by Tzŭ Ssŭ, Mencius, and their followers. They looked upon Confucius as their great teacher. After the death of Mencius, all the doctrines laid down by them were of like kind.]

"The literati in China do in reality occupy the place of priests and ministers in Christian kingdoms. Sovereign and people have to seek the law at their lips."—*Legge, Ch. Class.*, ii. Prol. p. 55.

(i) *Officials* (臣 *Ch'én*).—King Wu, "after he had overthrown the last sovereign of the line of T'ang, arranged the orders of nobility into five, from duke downwards [see previous Period], and assigned the territories to them on a scale proportioned to their different ranks."—*Legge, Ch. Class.*, III. i. Prol. p. 197. See also *Hirth, Hist.* p. 98. They had enfeoffed lands but no territorial jurisdiction over the people on their estates.—*Shih hsiang t'ung chien*, c. 4, p. 3.

"He [King Wu] arranged the orders of nobility into five, assigning the territories to them on a threefold scale. He gave offices only to the worthy, and employments only to the able. He attached great importance to the people's being taught the duties of the five relations of society, and to take care for food, for funeral ceremonies, and for sacrifices. He showed the reality of his truthfulness, and proved clearly his righteousness. He honoured virtue, and rewarded merit" (*Shu ching*, Pt. V. Bk. III. 10). "This agrees, with the account of the arrangement of dignities and emoluments determined by the House of Chow, given by Mencius, Bk. V., Pt. II., ii. The orders of nobility were the Kung, How, Pih, Tsze, and Nan, to the two first of which were assigned a hundred *le* square of territory, each, while the Pih had 70, and the Tsze and Nan only 50 *le* square each." The Chou Li, Bk. IX. (地 官, 大 司 徒), however, gives five divisions of territory, and the discrepancy has not yet been explained.—*Legge, Ch. Class.*, III. ii. 316, note.

"Hereditary rank is contrary to the Chinese social theory; and even the prince, usually with the advice of his ministers, can nominate his successor from among his sons. There have been periods when the hereditary principle received great expansion; but these periods—and notably that of the later Tcheou, in whose feudalism it took root—are regarded as the product of a perverted state of society. It is traced by Chinese writers to the reduction of the people to a condition of dependence on great officials, who were paid, not from the total revenue, but in rights of attachment on the soil and its products, to be levied directly on the labourer. The protest against the principle of entail appears to have been constant and strong, even while the process of enfeoffment was going on. Confucius and Mencius, who belong to that epoch, insist that, in imperial succession, virtue must take precedence of hereditary right (Mencius v, 1. 6). The introduction of eunuchs into court offices is believed to have been in part a plan to get rid of the latter principle (*Eiot*, from *Ma-tuan-lin*). Where it still remains, as in certain privileged classes, it confers no real power."—*Johnson, Or. Rel.—Ch.*, p. 299.

"Five generations had now elapsed since the dukedom was held in the direct line of his [K'ung-fu Chia's] ancestry, and it was according to the rule in such cases that the branch should cease its connection with the ducal stem, and merge among the people under a new surname."—*Legge, Ch. Class.*, i. Prol. p. 57.

[The practice of selling titles of nobility was originated in 242 B.C.]—*Ch. Rev.*, xiii. 374.

"According to the regulations of emolument and rank framed by the kings, there were the duke; the marquis; the earl; the count; and the baron:—in all, five gradations (of rank). There were (also), in the feudal states, Great officers of the highest grade,—the ministers; and Great officers of the lowest grade; officers of the highest, the middle, and the lowest grades:—in all, five gradations (of office)."—*Li chi*, iii. i. 1; *Legge*, i. 209.

"In selecting the officials of his government he [Wu Wang] made a careful choice among those of his predecessor, dismissing all the incapable ones."—*Hirth*, p. 98.

"As a further step toward the consolidation of his [Wu Wang's] power he surrounded himself with a phalanx of faithful supporters to the throne by reorganising that class of nobility called *chu-hóu*, 'Princes of the Empire,' selected from the representatives of families deriving their pedigree from the old sacred Emperors and other personages of similar merit. It appears that, whether wrongly or not, descendants of Shön-nung, Huang-ti, Yau, and Shun were supposed to exist, and that Wu Wang rewarded the merits of their respective ancestors by appointing such descendants fief-holders in different parts of the empire. . . . The sentiment of gratitude thus implanted in the hearts of his grandees remained constant during their lifetimes. But later generations are apt to be forgetful of benefits accorded to predecessors."—*Ibid.* pp. 99–100.

[Favourites or aiders of the king were also sometimes created princes, &c., *e.g.*, Fei Tzŭ, chief equerry to Hsiao Wang (909–895 B.C.), and Hsiang, Duke of Ch'in (770 B.C.). See *D'Herbelot, Bibl. Or.*, iv. 8.]

"The prince of a State, when serving at court as a minister of the crown, was held to be of lower rank by one degree."—*Legge, Ch. Class.*, IV. i. 185, note.

[The rigid religious ceremonial which regulated the daily life of king, officials, and feudatory lords was a chief factor in the cementing and stability of the Chou organism. See *Hirth*, p. 109, and LAWS OF INTERCOURSE.]

[Next to the king and his court, the hierarchy of government officials, of whom the chief held patents of nobility, administered the affairs of the kingdom. The monarch was assisted by three statesmen of the first rank, the Grand Tutor, Grand Assistant, and Grand Guardian, to whom the Junior Tutor, Junior Assistant, and Junior Guardian were now added. The Prime Minister, who could hold one of these highest posts jointly with his own, was the king's chief administrator, and was appointed by him together with the principal executive officers — the Ministers of Education, Religion, War, Crime, and Works. This body of metropolitan officials and their subordinates were supposed to set an example to the pastors of the provinces, each feudal state being modelled on the system of the central government. See *Hirth, Anc. Hist.*, pp. 109–10; *Wên hsien t'ung k'ao, Chih kuan; Yüan chien lei han, Shê kuan pu;* and *Legge, Ch. Class.*, III. ii.]

[*Circ.* 500 B.C. The relations between princes and ministers were less favourable to the latter than formerly. Ministers no longer went into mourning for princes whose service and state they had left. See *Legge, Ch. Class.*, i. Prol. p. 42.]

(ii) *Gentry* (紳 士 *Shên Shih*).—[Did not apparently figure as a distinct class of any importance (*v. supra*).]

"Far below the emperor and the princes of the empire was the mass of the people, placed in rank and file according to their occupations. The nation consisted of rulers and their assistants, government officers, and the rest of the world, who were the working classes."—*Hirth*, p. 109.

Wu Wang "tried to improve the moral standard of his people, and paid special attention to the welfare of the labouring classes as well as to industry and trade. At the beginning of his reign he had to contend with some refractory elements among his own people; but he soon overcame these, and established peace all over his empire."—*Ibid.* p. 98.

The working classes "were divided into nine sections ranking in the following order: first, landholders, the producers of grain; second, gardeners, who grow plants and fruit trees; third, woodmen, occupied with the products of the forests and mountains; fourth, livestock holders, raising cattle and fowl; fifth, artisans, who convert raw materials into articles of daily use; sixth, merchants, both resident and travelling; seventh, the wives, who change silk and hemp into clothes; eighth, servants, both male and female; ninth, the miscellaneous class, who have no fixed profession, but change their occupation as occasion may demand."—*Ibid.* p. 110. This is an elaboration, with addition of the people who could not claim to be members of any recognized class, of the four classes into which Chinese society has always been divided. See preceding Period.

B. *Agriculturists* (農 *Nung*).—"The agricultural population . . . hold their estates as tenants of their princes, and have to deliver a percentage of the cereals they grow proportionate to the fertility of the soil. The latter is ascertained by special officers appointed for the purpose, who also instruct the cultivators in the nature of the grains and vegetables best adapted for cultivation, and the times for tilling, sowing, watering, and harvesting. Under their advice a system of irrigation best suited to the configuration of the land is introduced. It is by government officers that the people's work connected with the production of silk is supervised in all its details. The inhabitants are treated like a huge family, at the head of which is the emperor, their patriarch. The government apparatus is, therefore, not confined to those who mete out justice and collect taxes or administer what with us would be called government departments, but the officers of Chóu (*Chóu-kuan*, which was the original title of the *Chóu-li*) comprise inspectors, appointed by the government, for almost any useful work performed by the people."—*Ibid.* p. 110.

C. *Artizans* (工 *Kung*).—[See REG. OF LAB.]

D. *Merchants* (商 *Shang*).—[See REG. OF LAB.]

[Below the four recognized ranks of unofficials were the *Chih Shih* (執 事), retinue, servants, etc., and below these the *Nu Li* (奴 隸), bond-slaves, of seven classes (see REG. OF LAB.:)—all of course without administrative power.]—*Wén hsien t'ung k'ao*, c. 11.

Eunuchs.—"Under the Chou rule these were merely servants and in no way connected with administrative or political duties. They were employed in the court in personal attendance on the imperial concubines.—*Hirth*, p. 114.

INSTITUTIONS.—1. *Executive.—Seat of Central Government.*—[The capital was (1122 B.C.) Hao-Ching, now Ch'ang-An, and later (781 B.C.) Lo-Yang.]—*Oxenham, Atlas*, map 3.

770 B.C. King P'ing's "first measure was to transfer the capital eastwards to Lo-yang, fulfilling at length, but under disastrous circumstances, the wishes of the duke of Chow; and from this time, B.C. 769, dates the history of 'the Eastern Chow.'"—*Legge, Ch. Class.*, III. ii. 615, note.

"The same monarch, abandoning Si-ngan (then called Hao-King, the capital of his empire) to transport his seat to Lohyang, Siangkwan was able to make himself master of the large province of Shensi, which had composed the proper kingdom of the emperor."—*D'Herbelot, Bibl. Or.*, 4° ed., 1779, iv. 8.

"At this time (reign of Ching Wang, 519–475 B.C.) the court of Chow was in the city of Lŏ (洛), in the present department of Ho-Nan of the province of the same name."—*Legge, Ch. Class.*, i. Prol. p. 64.

The ancient history of Peking "as the capital of the *Yen Kwoh* (the 'Land of Swallows') during the feudal times, and its later position as the metropolis of the empire for many centuries, give it historical importance."—*Williams, Midd. King*, i. 62.

Divisions.—"All within the four seas, taking the length with the breadth, made up a space of 3000 *lî* square, and contained eighty trillions of *mâu*."—*Li chi*, iii. v. 19; *Legge*, i. 245.

"Of the nine provinces embracing all within the four seas, a province was 1000 *lî* square, and there were established in it 30 states of 100 *lî* (square) each; 60 of 70 *lî*; 120 of 50 *lî*; in all, 210 states. The famous hills and great meres were not included in the investitures. [The hills and meres were still held to belong to all the people.] The rest of the ground formed attached territories and unoccupied lands of the eight provinces (apart from that which formed the royal domain), each contained (the above) 210 states. [But the provinces were not all of the same size.] Within the domain of the son of Heaven there were 9 states of 100 *lî* square; 21 of 70 *lî*; and 63 of 50 *lî*; in all, 93 states. The famous hills and great meres were not assigned. The rest of the ground served to endow the officers, and to form unoccupied lands." "In all, in the nine provinces, there were 1773 states, not counting in (the lands of) the officers of the chief grade of the son of Heaven, nor the attached territories in the feudal states." The tenures in the royal domain were not hereditary.—*Li chi*, iii. i. 8–10; *Legge*, i. 211–2.

"A space of 1000 *lî* square contained 100 spaces of 100 *lî* square each. In this were constituted thirty states of 100 *lî* square, leaving what would have been enough for other seventy of the same size. There were also constituted sixty states of 70 *lî* square, twenty-nine of 100 *lî* square, and 40 spaces of 10 *lî* square; leaving enough for forty states of 100 *lî* square, and sixty spaces of 10 *lî* square. There were also constituted a hundred and twenty states, of 50 *lî* square, and thirty of 100 *lî* square, leaving enough for ten of the same size, and sixty spaces of 10 *lî* square." "The famous hills and great meres were not included in the fiefs; and what remained was assigned for attached territories and unoccupied lands. Those unappropriated lands were taken to reward any of the princes of acknowledged merit, and what was cut off from some others (because of their demerit) became unappropriated land."—*Li chi*, iii. v. 22; *Legge*, i. 246.

"The territory of the son of Heaven, amounting to 1000 *lî* square, contained 100 spaces of 100 *lî* square each. There were constituted nine appanages of 100 *lî* square, leaving ninety-one spaces of the same size. There were also constituted twenty-one appanages of 70 *lî* square, ten of 100 *lî*, and twenty-nine spaces of 10 *lî* square; leaving enough for eighty of 100 *lî* square, and seventy-one of 10 *lî*. There were further constituted sixty-three

appanages of 50 *lî* square, fifteen of 100 *lî*, and seventy-five spaces of 10 *lî*, while there still remained enough for sixty-four appanages of 100 *lî* square, and ninety-six spaces of 10 *lî* each."—*Li chi*, iii. v. 23; *Legge*, i. 246–7.

"Ch'in Sze-k'ae gives the following statements:—'The imperial city formed a square of nine *le*. Outside the city was called the 郊. Fifty *le* off was called the 'near 郊, or frontier,' and a hundred *le* off was called the 'remote frontier.'"—*Legge, Ch. Class.*, III. ii. 538, note.

"A country of 1000 chariots is one of the largest fiefs of the empire, which could bring such an armament into the field."—*Ibid.* i. 4, note 5.

[The unit during the first part of the Period was the *hsien*, and during the *Ch'un Ch'iu* Period, the *chün*. See *Yüan chien lei han, Chih kuan pu, c.* 115, p. 32.]

[The first principalities, or feudatory divisions, established by King Wu, were in general of small extent.]—*Journ. Asiat.*, 1843.

"The first feudal baron of the Cheng State was Yeu, brother of Cheu siuen wang. He received, B.C. 806, a part of the Cheu patrimony included in the modern Honan."—*Journ. R.A.S.*, xviii. 13.

Administrative hierarchy.—"Subsequently there were King Wăn and King Woo, who knew well the minds of those whom they put in the three positions, and clearly saw the minds of those who had the three grades of ability. Thus they could employ them reverently to serve God, and appointed them as presidents and chiefs of the people. To establish their government, they had the men of office, the officers of law, and the pastors, and these appointments were their three concerns. They had also their guards; their officers of the robes; their equerries; their heads of petty officers; their personal attendants; their various overseers; and their treasurers. They had their governors of larger assigned cities and of the smaller; their men of arts; the overseers whose offices were beyond the court; their grand historiographers; and their chiefs of direction:—all, good men of constant virtue."—*Shu ching*. Pt. V. Bk. XIX. 6–9; *Legge, Ch. Class.*, III. ii. 514–5.

"King Wăn was able to have in himself the minds of those in the three high positions, and so it was that he established those regular officers and superintending pastors, so that they were men of ability and virtue. He would not himself appear in the various notifications, litigations, and in precautionary measures of government. There were the officers and pastors to attend to them, whom he simply required to be obedient and not disobedient. Yea, as to litigations and precautionary measures he would seem as if he did not presume to know about them. He was followed by King Woo, who carried out his work of settlement who did not dare to supersede his righteous and virtuous men; who entered also into his plans, employing as before his forbearing and virtuous men. It was thus that they unitedly received this vast inheritance."—*Shu ching*, Pt. V. Bk. XIX. 12–15; *Legge*, III. ii. 516–8.

The officers, &c., addressed by King Wu before going into battle were: hereditary rulers of friendly States, managers of affairs, ministers of instruction, of war, and of public works, "the many officers subordinate to them," the master of body-guards, the captains of thousands, and captains of hundreds (see MILITARY). "A great State, such as Chow was before the extinction of the Shang dynasty, had only *three* principal ministers, whose names are here given. But we may inquire what the ministers of instruction and works had to do in the camp. Ying-ta says that the former superintended all orders given to the troops, and the latter all the business of intrenchments. Ts'ae seems to have thought that they were there as the generals of the three armies of the State. This is not likely:—see Ch'in Sze K'ae, *in loc.* We can only form a vague idea on this, as on many other points in the Shoo." "I do not find it possible to say whether we are to understand . . . the 'multitude of inferior officers' generally or two distinct classes of such. Gan-Kwŏ had the former view. He says:— . . . 'The phrase denotes all the great officers, whose posts were inferior to those of the ministers.' Ts'ae on the other hand supposes that the 亞 were the 大夫 or 'great officers,' below, but next in rank to, the ministers, and five of whom filled up the space between each minister and his 士, or 'officers,' of whom there were 27, denoted in the text by the term 旅. 師氏,—'the Instructor.' The functions of an officer thus designated are given at length in the 13th Book of the Chow Le. . . . He was a ta-foo or great officer of the second grade, and the Tutor of the heir-apparent, at the same time executing various duties about the Sovereign, and specially having charge of the guard of foreign—barbarian—mercenaries who kept watch outside the royal gate. In time of war, or when the sovereign went abroad for any other cause, he followed in attendance, with the whole or a portion of that guard."—*Legge, Ch. Class.*, III. ii. 300–1, note.

"In close attendance on your Majesty there are the regular presidents, the regular high officers, and the officers of the laws: the keepers of the robes also, and the guards" (*Shu ching*, Pt. V. Bk. XIX. 1; *Legge, Ch. Class.*, III. ii. 508, note, quoting the *Tung Ting* of the Yüan (Mongol) dynasty, says: "the appointment of the officers of business, of pastoral oversight, and of the law . . . is the great theme of the whole Book."

"常伯常任準人,—'the regular chiefs, the regular holders of office, and the equalizing men'" may have been "other names for the high nobles and assistants about the imperial court. . . . We may . . . understand by 常伯 the chiefs or presidents who had a pastoral charge of the people (牧民之長); by 常任, the high ministers of War, Instruction, Works, &c., in the imperial domain; and by 準人, the law officers. . . . The officers called 綴衣, 'Connected Robes,' and 虎賁, 'Tiger Braves,' are not known to have existed under these names in the previous dynasties; this Book [*Shu ching*, Pt. V. Bk. XIX] shows that they were an institution in the times of Wăn and Woo. We do not find the name of 綴衣 in the Chow Le, but there are enumerated the 'master of the furred robes' (司裘), the 'master of robes to the Empress' (內司服), the 'tailor' (縫人), and the 'master of robes' (司服) which must have been kindred appointments. See Books VI., VII., and XXI. The 虎賁 are expressly mentioned in Bk. XXXI. They were guards, amounting, according to K'ang-shing, to 800 men, generally in attendance on the emperor's person; but might be detailed off to other services."—*Legge, Ch. Class.*, III. ii. 510, note.

"The son of Heaven had three dukes [Grand Tutor, Grand Assistant, and Grand Guardian], nine high ministers [Prime Minister, Ministers of Instruction, Religion, War, Crime, and Works, with the Junior Tutor, Junior Assistant, and Junior Guardian added], twenty-seven Great Officers, and eighty-one officers of the chief grade."—*Li chi*, iii. ii. 4; *Legge*, i. 213. The various ministries, etc., are described in detail below.

Castration was enumerated among the five punishments decreed by Chou-kung and we learn from history that such criminals were afterwards made to serve the royal family. Later, "boys were either bought from their relations, or obtained from other sources, and castrated to fill the various posts in the palace, till what had been originally a punishment only became . . . an established rule."—*Journ. N.-C.B.R.A.S.*, N.S. xi. 147–8. [Several are mentioned as occupying prominent positions under the Chou Dynasty (*ibid.* pp. 149–50).]

"Choo He remarks that anciently and in the Han dynasty, 'all who were even in mean offices about the sovereign were officers of some rank' (士, 大夫)."—*Legge, Ch. Class.*, III. ii. 585, note.

[Confucius said that there was a woman among Wu's ten able ministers (*Analects*, viii. xx.); but the matter seems open to doubt (*Legge, Ch. Class.*, III. ii. 292, note).]

[*T'ai Shih* (太師), Grand Tutor, *T'ai Fu* (太傅), Grand Assistant, *T'ai Pao* (太保), Grand Guardian. These were the *San Kung* (三公), Three *Kung*, statesmen of the first rank who assisted the monarch. "They discourse of the principles of reason, and adjust the States; harmonizing also and regulating the operations of Heaven and Earth" (*Shu ching*, V. xx. 5). The *San Kung* existed under the Shang dynasty (see previous Period). To assist them there were appointed the *Shao Shih* (少師), Junior Tutor, *Shao Fu* (少傅), Junior Assistant, and *Shao Pao* (少保), Junior Guardian. These were the *San Ku* (三孤), *lit.*, "Three Conspicuous Ones." They were assistant to the *Kung*, but were not subordinate officers of their departments, and were higher in dignity than the *Ch'ing* (卿) (see below). The *San Ku* were first appointed under the Chou dynasty. They "seem to have been intended rather as officers of the palace,—a sort of lords in waiting, or personal attendants on the sovereign, than for rulers of the country" (*Morrison, Dic.*, i. 808). Legge, however, says the terms are "names of office" (*Ch. Class.*, III. ii. 527, note). Probably the palace officers and the Executive proper were not clearly separated. If King Ch'êng appointed the 'Officers of Chou' in order, then they took precedence of the Prime Minister, but the latter post was tenable jointly, as in the case of the duke of Chou, with that of Grand Tutor (*ibid.* p. 528, note). See also *Kang chien, c.* 3.]

"'I appoint the Grand Tutor, the Grand Assistant, and the Grand Guardian. . . . These offices need not *always* be filled:—there must first be the men for them.'" "'*I appoint* the Junior Tutor, the Junior Assistant, and the Junior Guardian. . . . They assist the *Kung* to diffuse widely all transforming influences; they with reverence display brightly *the powers of* heaven and earth:—assisting me, the one man.'"—*Shu ching*, Pt. V. Bk. XX. 5; *Legge, Ch. Class.*, III. ii. 527–8. These, the Grand Tutor, Grand Assistant, and Grand Guardian, were the principal officers attached to the sovereign (*Shih ching*, II. iv. VII. 2, 3; III. i. II. 8, etc.), forming with the Junior Tutor, Junior Assistant, and Junior Guardian, a privy council, composed of 6 officials of higher rank. Their duties are described as instructing the people, explaining the correspondence between celestial phenomena, and the events of this world, and, in general, acting in concert with, and supporting, the sovereign. This council was the prototype of the *Nei Ko* of the Manchu Period (*Mémoirs présentés . . . à l'Académie*, etc., Sér. I. Tome II. p. 19).]

"The Chow Le does not contain the ministers called [in the *Shu ching*, Pt. v. Bk. xx.] . . . the 'three *Kung*,' and the 'three Koo.' Some have said that the *Kung* and *Koo* were dignities, enjoyed by other ministers, and were not specific offices; but if we refer to paras. 5 and 6, where it is said that 'the three *Kung* discourse of the principles of reason, and adjust the States,' and that 'the three *Koo* assist the *Kung* to diffuse widely all transforming influences,' these are specific duties, belonging to offices to which there can be none superior."—*Legge*, III. ii. 523–4, note.

[The *T'ien Kuan* (天官) and *Ti Kuan* (地官) with the *Ssŭ Shih Kuan* (四時官), *viz.*, *Ch'un Kuan* (春官), *Hsia Kuan* (夏官), *Ch'iu Kuan* (秋官), and *Tung Kuan* (冬官), formed the *Liu Ch'ing* (六卿), or Six Ministers (see *ibid.* p. 10*a*). Their place in the feudal hierarchy was their order as administrative officers: see following extracts.]

"The son of Heaven appoints the officers of Heaven's institution [i.e. the 'Powers that be ordained' by the will of Heaven], the precedence among them belonging to the six grandees:—the Grand-governor; the Grand-minister of the ancestral temple; the Grand-historiographer; the Grand-minister of prayers; the Grand-minister of justice; and the Grand-diviner. These are the guardians and superintendents of the six departments of the statutes."—*Li chi*, i. ii. ii. 2. 2; *Legge* i. 109.

"Nearest the Emperor in power is the prime minister (*ta-tsai*), who has general charge of the six divisions of government." He . . . "was head of the 'Board of Heaven,' the highest board, which had supervision over all government affairs, and control of the appointment of officers. The president of this board has always had precedence over his colleagues of the other boards."—*Hirth*, pp. 110–11.

[The *Ta Tsai* (大宰) or *Chung Tsai* (冢宰), Prime Minister, who was the *T'ien Kuan* (天官), Officer of Heaven, "presides over the ruling of the (various) regions, has the general management of all the other officers, and secures uniformity within the four seas."]—*Shu ching*, V. xx. 3; *Kang chien, c.* 2, p. 2.

"I appoint the prime minister, who presides over the ruling of the empire" (*Shu ching*, V. xx. 7; *Legge*, III. ii. 528–9). ". . . The prime minister or general regulator has authority over all the other officers, though he is more particularly concerned with the imperial household, revenues and records. His department is called the Ministry of Heaven in the Book of Rites, and is now (see Manchu Period) represented by the Board of Civil Office."—*Simcox*, ii. 23, note.

The prime minister had "joint responsibility for the five other boards. It was he who fixed the amounts to be levied under the heads of dues, local tribute, and taxes of all kinds, which constituted the imperial revenue; he regulated the public expenses; the entire inner and outer government service, both civil and military, was under his jurisdiction; so also was the management of the several imperial households, those of the emperor himself, of the empress, of the crown prince, and of the imperial concubines. The great number of the last named had even in those early days led to the employment, in personal attendance on the imperial ladies, of a special class of court officials—those pests of the Oriental court life, the eunuchs. . . . Eunuchism has proved a curse to public life in China at all times; and many a catastrophe must be ascribed to its intrigues which have raised unworthy men to high positions and worked much harm in an underhand manner. It appears that the early legislators of the Chou dynasty cannot be held responsible for such a degeneration of court life as that, for instance, of the Ming dynasty, whose downfall is ascribed to the infamous power attained by the court eunuchs as a class." Though officials of the court, they were at this time in no way connected with administrative duties: see *supra*, RANKS.—*Hirth*, pp. 113–4.

"(The office of) the accountants [which was under the board of the chief minister, and consisted of sixty-two men of different grades: see *Chou Li*, i. 38,] prepared the complete accounts of the year to be submitted to the son of Heaven which were reverently received by the chief minister. The Grand director of Music, the Grand minister of Crime, and the (Chief) superintendent of the Markets, these three officers, followed with the completed accounts of their departments to be submitted to the son of Heaven. The Grand minister of Instruction, the Grand minister of War, and the Grand minister of Works, reverently received the completed accounts of their several departments from their various subordinates, and examined them, then presenting them to the son of Heaven. Those subordinates then reverently received them after being so examined and adjudicated on. This being done, the aged were feasted and the royal sympathy shown to the husbandmen. The business of the year was concluded, and the expenditure of the states was determined."—*Li chi*, iii. iv. 19; *Legge*, i. 239.

[The *Ssŭ T'u* (司徒), Minister of Education, who was the *Ti Kuan* (地官), Officer of Earth, "presides over the education in the States (empire), diffuses a knowledge of (inculcates) the duties belonging to the five relations of society, and trains the millions of the people to obedience." His duties included the study of the celestial signs and preparation of the calender as an aid to agriculture.]—*Shu ching*, V. xx. 8; *Legge*, III. ii. 529; *Kang chien, c.* 2, p. 2.

"The Shoo describes the second department as that of the Minister of Instruction. The Chow Li includes that function in the same department, but also describes the 'Minister of Earth' as Director of the Multitudes, and his function as those of a Minister of Agriculture."—*Simcox*, ii. 23, note.

"Since the broad masses of the people were not supposed to know how to behave in the various conditions of life, the second among the administrative divisions, that of instruction, headed by the Mandarin of Earth, had to take precautions for their welfare. The mandarin's jurisdiction extended to all relations in life: the occupations of the people, their trade, civil services, religious duties, family matters, &c. The ordinary subject was, even in his private life, under government control. Thus a special mandarin was in charge of marriages. He had to see that no man remained unmarried after the age of thirty, girls being subject to marriage at twenty. The chief duty of this department was the levying of taxes in accordance with a budget drawn up by the prime minister. The Mandarin of Earth acted also as a kind of justice of the peace. Thousands of little rules had been made to prevent disorders of any kind; and in order to see that they were duly observed both by the government agents charged with their execution and the people who had to obey them, there were officers who had to watch public life and denounce any irregularity. . . . All these measures were calculated to maintain the nation in a state of general goodness; and lest the government itself should fail in its sacred duties, there were the *pau-shi*, an officer endowed with power to reprimand the emperor himself if he was at fault; the *ssi-shi*, who had to instruct the emperor and the sons of the empire (*kuo-tzi*), *i.e.*, the elder sons of high officials, in all that is good and virtuous; and the *ssi-kien*, or public remonstrator, who was expected to mix with the people in order to study their lives, correct their faults, and report on any evils he might discover. These officials, dependent on the Mandarin of Earth, may be said to have performed the functions of preachers; though their duties had nothing to do with religion, but merely with morality, virtue, and goodness, pure and simple. Their subordination to a higher board seems to indicate that they had not the political influence exercised later on by the institute of Public Censors (*yü-shi*), which was not developed before the Ts'in and Han dynasties."—*Hirth*, pp. 115–6.

"The minister of Instruction defined and set forth the six ceremonial observances [capping; marrying; mourning rites; sacrifices; feasts; and interviews]:—to direct and control the nature of the people; clearly illustrated the seven lessons (of morality) [(the duties between) father and son; elder brother and younger; husband and wife; ruler and minister; old and young; friend and friend; host and guest], to stimulate their virtue; inculcated uniformity in the eight objects of government [food and drink; clothes; business (or, the profession); maintenance of distinctions; measures of length; measures of capacity; and definitely assigned rules], to guard against all excess; taught the sameness of the course (of duty) and virtue, to assimilate manners; nourished the aged, to secure the completion of filial piety; showed pity to orphans and solitaires, to reach those who had been bereaved; exalted men of talents and worth, to give honour to virtue; and dealt summarily with the unworthy, to discountenance wickedness." Those who disobeyed were, if still found defective after several further examinations, banished to a remote region.—*Li chi*, iii, iv. i.; *Legge*, i. 230–1.

"To what degree the government solicitude for the life of the people went into detail, may be seen from the fact that eight out of the forty-four books in the great code of the Chou dynasty are devoted to the functions of the Mandarin of Earth and his subordinate officers. One of these was charged with the duty of making tours of inspection in order to ascertain the merits of individuals qualifying them for office; for, with the exception of the Emperor, his princes, and the several feudal lords, the incumbents of all, even the highest, government officials were selected from among the people. Merely the elder sons of the higher officials enjoyed certain privileges under the name 'Sons

of the Empire' (*kuo-tsi*), inasmuch as they were given the chance of a higher education under a special officer. They had their special uniforms and were admitted to court ceremonies as pages."—*Hirth*, pp. 116–7.

"Exceptions were also made with regard to heredity of office in cases where certain qualifications, required for its duties, were likely to be confined to certain families and had become traditional, having been transmitted from generation to generation, such as the practice of certain arts which were treated as family secrets."—*Ibid.* p. 117. See also following Period.

[The *Tsung Po* (宗 伯), Minister of Religion, who was the *Ch'un Kuan* (春 官), Officer of Spring, "presides over the (sacred) ceremonies of the country, regulates the services rendered to the spirits and manes, and makes a harmony between high and low."]—*Shu ching*, V. xx. 9; *Legge*, III. ii. 529; *Kang chien*, *c.* 2, p. 2.

"There is no difficulty in identifying the third department, 'the Ministry of Spring' of the Chow Li, with the modern Board of Rites and the Minister of Religion in the 'Officers of Chow.'"—*Simcox*, ii. 23, note.

"The Mandarin of Spring, who was in charge of religious ceremonies, was a characteristic creation of the Chinese nation. If . . . the emperor addressed himself to God, or Heaven, as the supreme ruler, his subjects sacrificed to beings of a lower order; sun, moon, and stars, hills, rivers, and forests, and last, not least, the departed souls of their ancestors. The manner in which sacrifice was to be brought was regulated by thousands of petty rules. In recording such rules the *Chou-li* places us in a position to form an idea of the spiritual life of the people, which was full of superstition. The art of obtaining an omen from the unseen spirit was cultivated in every possible detail. The chief means of auguration was, of course the time-honoured system of *Pa-kua*, as explained in Wön-wang's *I-king*. In many cases the scales of the tortoise scorched by fire were used as oracles. The fissures thus created on the surface of a scale were of great variety; and a regular system had been invented for the interpretation of what may be called tortoise palmistry. There were scientists for the interpretation of dreams, and sorcerers, male and female, who could bring on fine weather or rain. Observation of the stars was, of course, a great means of ascertaining man's fate. The position of court astronomer, with functions distinct from those of the astrological experts, was hereditary. The astronomer did good work in connection with the calendar, and what we learn in the *Chou-li* about his duties betokens an advanced state of scientific development. The astrologer held a different office from that of his colleague just mentioned. The latter had to watch the position and movements of the heavenly bodies; the astrologer was required to interpret their forebodings, since numbers of ceremonies were connected with the seasons. Both of these officers were of great importance in connection with the Board of Ceremonies."—*Hirth*, pp. 117–9. See also *Divination*.

"In the Book of the Chow Le . . . we have the 太 卜, or 'grand diviner'; the 卜 師, or 'master of divination'; the 龜 人, or 'keeper of the tortoises'; the 華 氏, or 'preparer of the wood'; and the 占 人, or 'the observers and interpreters of the prognostics.' They were all, observe the critics, required to be men far removed from the disturbing influence of passion and prejudice. Only such could be associated with the methods of communication between higher intelligences and men."—*Legge*, *Ch. Class.*, III. ii. 336, note.

"Under the department of the minister of Religion we find the various officers styled *Sze* (史), a term which has been translated 'Recorders,' 'Annalists,' 'Historiographers,' and simply 'Clerks.' There are the Grand Recorder, the Assistant Recorder, the Recorder of the Interior, the Recorder of the Exterior, and the Recorder in attendance on the emperor. Arranged under the department of the minister of Religion, they were advisers also of the prime minister of the government, and of Heads of Departments generally, on all subjects which required reference to history and precedent. Among the duties of the Recorder of the Interior were the following:—'In case of any Charge given by the emperor to the prince of a State, to an assistant Grand counsellor, to a minister, or to a great officer, he writes the Charge on tablets'; 'In case of any Memorials on business coming in from the different quarters of the empire, he reads them *to the emperor*'; 'It is his business to write all Charges of the emperor, and to do so in duplicate.' Of the duties of the Recorder of the Exterior it is said:—'He writes all Commands for the exterior domains'; 'He has charge of the Histories of the States in all parts of the empire'; 'He has charge of the Books of the three great sovereigns and the five rulers'; 'It is his business to publish in all parts of the empire the Books and the characters in them.'" "The Recorders mentioned in the 'Officers of Chow' belonged of course to the imperial court; but there were similar officers though not so numerous, at the courts of the various feudal princes."—*Ibid.* III. I. Prol. pp. 10–1.

"The duties of the 太 史 and 內 史, with other officers of the same department, are described in the Chow Le, Bk. XXVI. They were very honourable and extensive, and such as brought them into frequent contact and consultation with the 太 宰 or prime minister ('grand administrateur général': *Biot*). It is said in general that the 太 史 had the management of what Biot calls 'the six constitutions (六 典), the eight regulations (八 法), and the eight statutes (八 則).' These six constitutions were the various departments of the administration,—of rule, of instruction, of ceremonies, of prescripts, of punishments, and of business; the regulations and statutes embraced all connected with the working of those departments. The 內 史 again had the management of 'the eight powers or prerogatives' of the emperor (掌 八 柄 之 法). These duties branched off into a great variety of minor functions. The 史 kept all the records which were to be appealed to in connection with them, so that we may consider them as having been confidential secretaries and advisers of the prime minister. Biot calls the 太 史, 'le grand annaliste,' and 內 史, 'l'annaliste de l'intérieur.' I prefer to call them 'recorders,' as being a more general term. The various princes had their 'grand Recorder,' but the 'Recorder of the interior' belonged, it is maintained, only to the imperial court; and the individual mentioned in the text is supposed, therefore, to have been the old minister of the court of Shang, now superseded under the new dynasty and living in Wei."—*Ibid.* III. ii. 410, note.

"The Grand recorder had the superintendence of ceremonies. He was in charge of the tablets of record, and brought before the king what (names) were to be avoided, and what days were unfavourable (for the doing of particular affairs). The Son of Heaven received his admonitions with reverence [according to the *Chou li*, some of these functions belonged to the assistant recorder, but the two were of the same department.]"—*Li chi*, iii. iv. 18; *Legge*, i. 238–9.

"While the Recorder of the Interior was required to take notes of the speeches or edicts of the ruling emperor, the Recorder of the Exterior was supposed to keep the books of the chronicles of the past, and to record the histories of the states in all the parts of the empire. The importance of the department as a sign and instrument of imperial supremacy may be guessed from the significance attached to the control of the Calendar. Mencius complained that in his day the feudal princes destroyed ancient records to favour their own usurpations; and in China it seems always to have been peculiarly impossible for any prince to make history who was not also in a position to write or have it written. One of the earliest signs of the rebellious pretensions entertained by the State of T'sin, which superseded Chow, was the establishment of a bureau of historians to keep the State records."—*Simcox*, ii. 24.

"The chronicling of affairs of State by unofficial persons may have been regarded at first as an audacity, like the first publication of a newspaper in countries where the general public is not expected to desire any knowledge of State affairs. If so, however, the power and pretensions of the literary class must have grown apace, since the commentators soon begin to puzzle themselves over the phrase of Confucius, and seek for indications of praise and blame in trifling variations of expression, such as speaking of a bad prince by his personal name instead of by the complimentary periphrasis required by custom in the case of the dead. On the whole it seems probable that for a private person to write history in the 5th century B.C. was an innovation of the same kind and degree as that effected in the 10th century, when private persons presumed to give currency to their political sentiments in classic verse. And Mencius himself directs attention to the change in a way significant of its import: 'The traces of imperial rule were extinguished, and the odes ceased to be made; when the odes ceased to be made, the Ch'un Ts'ew was produced' (*Mencius*, *Life and Works*, iv. 2, xxi. §1)."—*Ibid.* ii. 25–6.

"The historian's claim was not exactly for freedom of the pencil; it was taken for granted that kings would object to uncomplimentary records if they knew of them; what was demanded was that the chronicles of the Record Office should be regarded as 'privileged' and their privacy respected. Dynasties in China are not expected to live for ever, and the official history of each royal house is usually compiled and published by its successor. For a reigning prince to enquire curiously into the records made respecting his own life and character has been recognised for at least the last thousand years as a grave indiscretion."—*Ibid.* ii. 26.

[The *Ssŭ Ma* (司 馬), Minister of War, who was the *Hsia Kuan* (夏 官), Officer of Summer, "presides over the (military) administration of the country, commands the six hosts, and secures the tranquillity of all the regions (States)."]—*Shu ching*, V. xx. 10; *Legge*, III. ii. 529; *Kang chien*, *c.* 2, p. 2.

"The fourth department is that of the Ministry of War or the executive power, whose chief is called the 'Officer of Summer' in the Book of Rites."—*Simcox*, ii. 23, note.

"The fourth of the six boards, represented by the Mandarin of Summer, corresponded to the present Board of War. The Chinese in those days had no standing army, but when soldiers were required for the purpose of fighting external enemies, suppressing rebellions, or in assisting in the emperor's hunting expeditions, the necessary numbers were enlisted. The Mandarin of Earth in charge of the People's Board made the levies; and his subordinates placed them at the disposition of the Mandarin of Summer, who was a kind of Commander-in-chief of the empire. Minute instructions were issued in connection with the levy of troops; the number of able-bodied men each family had to keep in readiness was prescribed by law, and for this purpose a general census was taken of the entire population once every three years, when males and females, adults and children, were distinguished and note was taken of domestic animals and of tools used for work. Statistics had developed into a regular science even in those early days. How the statistical method was made use of for government purposes, apart from the levy of troops, will be shown later on [see infra, *Revenue*] by the work of the philosopher Kuan-tsï, who died 646 B.C. The levying of troops thus laid the foundation of vital statistics as a science, and it also became a great stimulus in improving the records of the geographical condition of the empire."—*Hirth*, p. 119.

"The 太 馭, under whom . . . appear to have been the 戎 僕, etc., . . . had charge of the grand carriage of the emperor, and drove him in it to sacrifices."—*Legge, Ch. Class.*, III. ii. 584, note.

The duties of the 太 僕 正 *T'ai P'u Chêng*, High Chamberlain, are described in the *Shu ching* (Pt. V. Bk. xxvi). "He, or they—for there were two officers so denominated—regulated the dress of the emperor on different occasions, and the positions where he should stand or sit. He received the great commands of the emperor, and delivered them to those for whom they were intended; and conveyed on the other hand to the emperor memorials from without. He went before the emperor to and from audiences. These details are sufficient to show how close were his relations with the emperor, and how intimate were the services which he rendered." "There were two 太 僕, under whom were 4 petty servants (小 臣), 6 servants for sacrifices (祭 僕), 12 special servants (御 僕), 2 treasurers (府), 4 clerks (史), 2 helps (胥), 20 waiters (徒), with perhaps others." "The 太 馭 were great officers of the second degree (中 大 夫) while the 太 僕 were only of the third (下 太 夫)," but the one office was not under the other.—*Ibid.* III. ii. 584, note.

[The *Ssŭ K'ou* (司 寇), Minister of Crime, who was the *Ch'iu Kuan* (秋 官), Officer of Autumn, "presides over the prohibitions of the country, searches out the villainous and secretly wicked, and punishes oppressors and disturbers of the peace."]—*Shu ching*, V. xx. 11; *Legge*, III. ii. 529–30; *Kang chien*, *c.* 2, p. 2.

"The Minister of Autumn answers to the Minister of Crime, whose office survives in the present Board of Punishments."—*Simcox*, ii. 23, note. For procedure, etc., see *infra*, *Judicial*.

"The fifth great governmental division was the Board of Justice, presided over by the Mandarin of Autumn, who was supposed to be 'in charge of the brigands.' He and his subordinates had to mete out justice in criminal cases."—*Hirth*, pp. 123–4. For procedure and character of the administration of justice, and the part taken by the people in judicial and administrative deliberations, see *infra*, *Judicial*.

"Certain officials subordinate to the Mandarin of Autumn were, conjointly with the delegates of the Board of Ceremonies, charged with the responsibility of legalizing state contracts, such as the agreements made between the Emperor and his feudatory princes, or between the latter themselves. Other officials had to superintend the ceremonial connected with contracts among the people, the main feature of which was an oath in which the blood of an animal sacrifice was an important factor. Also subordinate to this board was the official called *ta-hing-jön*, the 'Great Traveller,' as Biot translates, the chief authority in charge of ambassadorial matters, who, together with his staff, performed functions somewhat resembling those of a foreign office. He was in charge of the ceremonial connected with the reception of visitors to the court, whether from the feudatory states or from abroad. The most minute details regarding these court receptions have been placed on record in the *Chou-li*. The 'Great Traveller' and his junior colleague, the 'Small Traveller' (*siau-hing-jön*) were, moreover, charged with police duties, inasmuch as their subordinates had to inspect the condition of the feudatory states and their population. They had to keep the emperor informed of all that was going on within his dominions. The emperor himself travelled through his dominions to see for himself where his authority was called upon to interfere. In his journeys through the empire, he was accompanied by an official provided with charts of his provinces, which gave him the information he desired in connection with the countries he visited. Another officer had to keep himself posted on historical, social, and economical questions concerning the localities visited."—*Ibid.* pp. 124–5.

"The son of Heaven employed his Great officers as the Three Inspectors,—to inspect the states under the Chiefs of Regions [but this department may not have been instituted until the Han dynasty, see *Legge*, *Lî Kî*, i. 214, note]. For each state there were three inspectors."—*Ibid.* iii. ii, 6; *Legge*, i. 214. This may have been the origin of the modern censorate. When they were inspecting a state, their salary was equal to one of its ministers, and their rank was that of a ruler of a state of the second class. Their salaries were derived from the territories under the chiefs of regions (Ref. *Li chi*, iii. i. 9)."—*Li chi*, iii. v. 25; *Legge*, i. 247.

"The Great Traveller also convened periodical meetings of the court interpreters, the musicians, and the official historians. The interpreters (*siang-sü*) had to be familiar with the languages of the surrounding nations, and to assist at the court receptions; the musicians are called *ku*, 'blind,' because the performers on the various musical instruments and the singers at court were selected from blind men. The court historians are represented by a large and complicated staff of officials, one of whom, the *siau-shï* or 'Small Historian,' was in charge of the documents containing the material for the history of the states of the empire, whereas another, the *wai-shï*, the 'Historian of the Exterior,' was charged, among other duties, with the record of the history of foreign nations as well as of that of the Three Emperors and the Five Rulers (*san-huang-wu-ti*). It is probably one of these officials who, on higher inspiration, is responsible for the fabrications placed on record in connection with the fabulous Fu-hi, Shön-nung, and Huang-ti, the fine speeches of Yau and Shun, and the engineering exploits of the great Yü."—*Hirth*, p. 125.

[The *Ssŭ K'ung* (司 空), Minister of Works, who was the *Tung Kuan* (冬 官), Officer of Winter, "presides over the land of the country (empire), settles the four classes of the people, and secures at the proper seasons the produce of the ground."]—*Shu ching*, V. xx. 12; *Legge*, III. ii. 530; *Kang chien*, *c.* 2, p. 2.

"The present Board of Works corresponds to the sixth ministry described in the Shoo, and to the account of the Ministry of Winter, or official works in the Book of Rites; but the section descriptive of the latter department is missing, and the fact that in the 'Officers of Chow' the Minister of Works is described as undertaking great part of the functions which in the Book of Rites are assigned to the Director of the Multitudes (whom we have called Minister of Agriculture) may explain how it came to be lost owing to its seeming redundance. According to the Shoo-king, the Minister of Works . . . acts as 'overseer of the unoccupied,' allotting lands for cultivation and townships. The modern Board which takes the place of the Ministry of Instruction, is the Board of Revenue."—*Simcox*, ii. 23, note. See also *Li chi*, i. ii. ii. 2, 3; *Legge*, i. 109–10.

"The sixth great board was that of Public Works. The section of the *Chou-li* describing the organization of this department is lost and has been replaced under the Han dynasty by a work called *Tung-kuan-k'au-kung-ki*, 'Records of the Public Works of the Mandarin of Winter,' or *Ssï-kung*, 'Superintendent of Works.' We learn from it nothing about the administrative functions of this important division of government life; but the work contains an enormous mass of detail concerning the arts and industries of the period, of which so few remnants have come down to later generations."—*Hirth*, pp. 125–6.

"'These six ministers, with their different duties, lead on their subordinates, and set an example to the nine pastors of the provinces, enriching and perfecting the condition of the millions of the people.'"—*Shu ching*, Pt.V. Bk. XX. 13; *Legge*, *Ch. Class.*, III. ii. 530. For the periodical attendance of the lords at court and the king's tours of inspection, see *infra*.

[Between these Ministers and the military officers (see MILITARY) there were also the *Nei Shih* (內 史), a Minister in charge of secret archives, and the *T'ai P'u Chêng* (太 僕 正), a Minister in charge of the royal stud and wardrobe.]—*Kang chien*, *c.* 2, p. 2.

"The six treasuries of the son of Heaven are under the charge of the superintendent of the land; the superintendent of the woods; the superintendent of the waters; the superintendent of the grass; the superintendent of articles of employment; and the superintendent of wares. These preside over the six departments of their charges."—*Li chi*, i. ii. ii. 2, 4; *Legge*, i. 110.

"The six manufactures of the son of Heaven are under the care of (the superintendents of) the workers in earth; the workers in metal; the workers in stone; the workers in wood; the workers in (the skins of) animals; and the workers in twigs. These preside over the six departments of stores."—*Li chi*, i. ii. ii. 2, 5; *Legge*, i. 110.

[The secondary chiefs, feudatories of the sovereign, had the general designation of *chu hou* (諸侯). They were divided into 5 principal classes]—*Shih ching*, II. iv. VII. 2. 3.

"The (appointed) heir-sons [a son, generally the eldest by the wife proper, had to be recognized by the king before he could be sure of succeeding to his father] of the feudal princes inherited their states. Great officers (in the royal domain) did not inherit their rank. They were employed as their ability and character were recognized, and received rank as their merit was proved. Till their rank was conferred (by the king), (the princes) were in the position of his officers of the chief grade, and so they ruled their states. The Great officers of the states did not inherit their rank and emoluments."—*Li chi*, III. v. 27; *Legge*, i. 248.

"In the various States there were the minister of Instruction, the minister of War, and the minister of Works; with the many officers subordinate to them."—*Shu ching*, Pt. V. Bk. XIX. 10; *Legge, Ch. Class.*, III. ii. 516.

"In a great state there were three high ministers [Ministers of Instruction, War, and Works. The first had also the duties of Premier, the second those of minister of Religion, and the third those of minister of Crime], all appointed by the son of Heaven; five Great officers of the lower grade; and twenty-seven officers of the highest grade. In a state of the second class there were three high ministers, two appointed by the son of Heaven and one by the ruler; five Great officers of the lower grade; and twenty-seven officers of the highest grade. In a small state there were two high ministers, both appointed by the ruler; five Great officers of the lower grade and twenty-seven officers of the highest grade."—*Li chi*, III. ii. 5; *Legge*, i. 213–4.

"'In six years the chief of the five tenures attend once at court. When this has been done a second six years, the king makes his tours of inspection in the four seasons, and examines the regulations and measures at the four mountains. The princes attend on him, each at the mountain of his quarter, and promotions and degradations are awarded with great intelligence.'"—*Shu ching*, Pt. V. Bk. XX. 13–14; *Legge, Ch. Class.*, III. ii. 530–1.

"In their relation to the son of Heaven, the feudal princes were required to send every year a minor mission to the court and every three years a greater mission; once in five years they had to appear there in person."—*Li chi*, iii. ii. 12; *Legge*, i. 216.

"It was the rule, under the Chow dynasty, that the princes should repair to the court every five years, to give an account of their administration of their governments; and that the emperor should make a general tour through the country every twelve years, to see for himself how they performed their duties. We read in the Canon of Shun (par. 9), that he made a tour of inspection once in five years, and that the princes appeared at court during the intermediate four. As the empire enlarged, the imperial progresses would naturally become less frequent. By this arrangement, it was endeavoured to maintain a uniformity of administration and customs throughout the States. The various ceremonies to be observed in marriages, funerals and mourning, hospitalities, religious worship, and the conduct of hostilities; the measures of capacity, length, weight, &c.; and the written characters of the language:—these were all determined by imperial prerogative. To innovate in them was a capital offence (See the Canon of Shun, par. 8; and the Doctrine of the Mean, Ch. XXVIII)."—*Legge, Ch. Class.*, III. i. Prol. p. 198.

"The son of Heaven, every five years, made a tour of inspection through the fiefs." "In the second month of the year, he visited those on the East, going to the honoured mountain of Tâi. There he burnt a (great) pile of wood, and announced his arrival to Heaven; and with looks directed to them, sacrificed to the hills and rivers. He gave audience to the princes; inquired out those who were 100 years old, and went to see them: ordered the Grand music-master to bring him the poems (current in the different states), that he might see the manners of the people; ordered the superintendents of markets to present (lists of prices), that he might see what the people liked and disliked, and whether they were set on extravagance and loved what was bad; he ordered the superintendent of rites to examine the seasons and months, and fix the days, and to make uniform the standard tubes, the various ceremonies, the (instruments of) music, all measures, and (the fashions of) clothes. (Whatever was wrong in these) was rectified," (and the neglectful ruler punished.)—*Li chi*, iii. ii. 14; *Legge*, i. 216–7. The tour was continued in the same manner to the Southern, Western, and Northern quarters.

[The princes and officers received their appointments from the sovereign.]—*Legge, Ch. Class.*, III. ii. 310, note.

"The rule was that the abilities of all put into offices over the people should first be discussed. After they had been discussed with discrimination, the men were employed. When they had been (proved) in the conduct of affairs, their rank was assigned; and when their position was (thus) fixed, they received salary."—*Li chi*, iii. ii. 10; *Legge*, i. 215.

"Under the Chow dynasty, it was the business of every head of a department, to select all the members of it. There were, no doubt, general principles for his guidance, but it was his to choose the men."—*Legge, Ch. Class.*, III. ii. 586, note.

"It was in the court that rank was conferred, the (already existing) officers being (thus) associated in the act. It was in the market-place that punishment was inflicted; the multitude being (thus) associated in casting the criminals off. Hence, fleither the ruler, nor (the head of) a clan, would keep a criminal who had been punished about him; a Great officer would not maintain him; nor would an officer, meeting him on the road, speak to him. Such men were sent away to one of the four quarters, according to the sentence on each. They were not allowed to have anything to do with affairs of government, to show that there was no object in allowing them to live." The Ch'ien Lung editors maintain that these rules were followed by all the three feudal dynasties.—*Li chi*, iii. ii. 11; *Legge*, i. 215–6.

"Within the domain of the son of Heaven the princes enjoyed their allowances; outside it they had their inheritances." Comp. REG. OF LABOUR.—*Li chi*, iii. ii. 7; *Legge*, i, 214.

"The ancients in allotting the emoluments of office allowed Great Ministers and Ministers sufficient to present to or treat well worthy men or treat scholars and to nourish their [own] bodies as well as [to provide for] their family."—*Huan K'uan Yen t'ieh lun, Tzŭ shih ching hua*, c. 44, p. 15*a*.

"In the Chou dynasty below the rank of the great ministers, they had *kuei* (圭) fields (for salary) without paying any tax; in the Chin, the *ch'ü kao* (芻 藁) field; in the later Wei, the officers governing the people had *kung* (公) fields; in the N. Ch'i, officers below the first grade had *kung* fields, but somewhat different [from the last]. Under the T'ang system, officials inside or outside the capital had their *chieh* (職) fields."—*Sung shih Chih kuan chih, ibid.* c. 44, p. 15*a*.

"The officers of the lowest grade in the feudal states had an emolument equal to that of the husbandmen whose fields were of the highest quality; equal to what they would have made by tilling the fields. Those of the middle grade had double that of the lowest grade; and those of the highest grade double that of the middle. A Great officer of the lowest grade had double that of an officer of the highest. A high minister had four times that of a Great officer; and the ruler had ten times that of a high minister. In a state of the second class, the emolument of a minister was three times that of a Great officer; and that of the ruler ten times that of a minister. In small states, a high minister had twice as much as a Great officer; and the ruler ten times as much as a minister."—*Li chi*, iii. i. 5; *Legge*, i. 210–1.

"The officers of the lowest grade in the feudal states received salary sufficient to feed nine individuals; those of the second grade, enough to feed eighteen; and those of the highest, enough for thirty-six. A Great officer could feed 72 individuals; a minister, 288; and the ruler, 2880." "In a state of the second class, a minister could feed 216; and the ruler, 2160." "A minister of a small state could feed 144 individuals; and the ruler, 1440." "In a state of the second class, the minister who was appointed by its ruler received the same emolument as the minister of a small state."—*Li chi*, iii. v. 25; *Legge*, i. 247.

"Among the wild tribes of the Wei, the Loo, and the Ching; in the three Pŏ; and in dangerous places; they had warders."—*Shu ching*, Pt. V. Bk. XIX. 11; *Legge, Ch. Class.*, III. ii. 516.

2. *Legislative.*—The king was the law-giver, ordering the making of laws and issuing them when made. "We may suppose that the prince of Leu had received charge to digest the subject of punishments in accordance with his own views and those of King Muh; that he had done so; and that the king published the result as is subsequently narrated" (*Shu ching*, V. xxvii).—*Legge, Ch. Class.*, III. ii. 589, note. In the Ch'in State circ. 350 B.C., Wei Yang, in the service of King Hsiao, drew up and promulgated a severe code of laws. During the *Ch'un Ch'iu* Period, the criminal laws of the States of Chin and Chêng were engraved on brass vessels for the sake of permanence and accessibility.—*Yüan chien lei han, Chêng shu pu, Hsing fa*, p. 96*a*.

3. *Judicial.*—"The minister of Crime adapted the punishments (to the offences for which they were inflicted), and made the laws clear in order to deal with criminal charges and litigations. He required the three references as to its justice (before the infliction of a capital punishment. See the *Chou li*, xxxvii. 45–6). If a party had the intention, but there were not evidence of the deed, the charge was not listened to. Where a case appeared as doubtful, it was lightly dealt with; where it might be pardoned, it was (still) gravely considered." "In all determining on the application of any of the five punishments [see LAWS], it was required to decide according to the judgment of Heaven. Inadvertent and redeemable offences were determined by (the circumstances of) each particular case." "When hearing a case requiring the application of any of the five punishments, (the judge) was required to have respect to the affection between father and son [which might make either party conceal the guilt of the other], or the righteousness between ruler and minister (which might have been in the mind of the defendant) [and in a similar way affect the evidence], to balance his own judgment. He must consider the gravity or lightness (of the offence), and carefully try to fathom the capacity (of the offender) as shallow or deep, to determine the exact character (of his guilt). He must exert his intelligence to the utmost, and give the fullest play to his generous and loving feeling, to arrive at his final judgment. If the criminal charge appeared to him doubtful, he was to take the multitude into consultation with him; and if they also doubted, he was to pardon the defendant. At the same time he was to examine analogous cases, great and small, and then give his decision." "The evidence in a criminal case having thus been all taken and judgment given, the clerk reported it all to the director (of the district), who heard it and reported it to the Grand minister of Crime. He also heard it in the outer court [lit., 'under the Zizyphus trees,' which were planted in the outer court of audience, and under which the different ministers of the court had their places], and then reported it to the king, who ordered the three ducal ministers, with the minister and director, again to hear it. When they had (once more) reported it to the king, he considered it with the three mitigating conditions [ignorance, mistake, or forgetfulness], and then only determined the punishment."—*Li chi*, iii. iv. 11–14; *Legge*, i. 235–7.

"The penal code of the Chou dynasty represents a system full of detail which may be called humane when compared with other Asiatic systems. Before capital punishment could be pronounced on a criminal, the most minute and rigid rules had to be observed; appeals were made first to a board of high officers, then to a commission composed of officers of lower rank, and lastly to the people themselves; and it appears that the people's verdict was final, somewhat like that of the juries of modern civilized nations, the sovereign alone having the right to pardon. The people were also consulted in cases of punishment for minor offences. All subjects were equal before the law; but members of the imperial house and the administrative officers enjoyed the privilege of being punished behind the scenes, as it were, so that the dignity of their positions might be maintained. The people had also to deliberate and decide under the authority of government justices what was to be done in the case of invasion of the country by an enemy; or, when a part of the population had to be transferred to another province owing to a failure of the means of subsistence in their original homes; also when a new king had to be elected, there being no heir to the throne,—in brief, we find traces of parliamentary power."—*Hirth, Anc. Hist.*, pp. 123–4. See also *Parker, Anc. Ch. Simpl.*, p. 311, and following extracts.

"In all inflictions of punishments and fines, even light offenders (that were not doubtful) were not forgiven."—*Li chi*, iii. iv. 15; *Legge*, i. 237. See also *Yüan chien lei han, Shê kuan pu, Hsing pu érh*, p. 65*b*. Pictures of the various punishments are said to have been posted up at Hsiang Wei for general inspection on the first day of each year (*Ibid., Chêng shu pu Hsing fa*, p. 96*a*).

Respect was to be had to the decisions of the law, and to the end of all law; and to nothing else. "When any of the people of Yin are amenable to the laws, if I say 'Punish,' do not you therefore punish; and if I say 'Spare,' do not you therefore spare. Seek the due course. Those who are disobedient to your government, and uninfluenced by your instructions, you will punish, remembering that the end of punishment is to make an end of punishing. Those who are inured to villainy and treachery, those who violate the constant duties of society, and those who introduce disorder into the public manners:—those three classes you will not spare, though their particular offences be but small."—*Shu ching*, Pt. V. Bk. XXI. 8–10; *Legge, Ch. Class.*, III. ii. 541–2, and note.

"The king says, 'Oh! Fung, deal reverently and understandingly in your infliction of punishments. When men commit small crimes, which are not mischances, but purposed, themselves doing what is contrary to the laws, intentionally, though their crimes be but small, you may not but put them to death. But in the case of great crimes, which are not purposed, but from mischance and misfortune, accidental, if the offenders confess unreservedly their guilt, you may not put them to death.'"—*Ibid.* Pt. V. Bk. IX. 8; *Legge*, III. ii. 388.

"The king says, 'Oh! Fung, there must be the right regulation in this matter. When you show a great discrimination, subduing men's hearts, the people will admonish one another, and strive to be obedient. Deal with evil, as if it were a sickness in your person, and the people will entirely put away their faults. Deal with them as if you were guarding your infants, and the people will be tranquil and orderly. It is not you, Fung, who inflict a severe punishment or death upon a man; you may not of yourself so punish a man or put him to death.' Moreover, he says, 'It is not you, Fung, who cut off a man's nose or ears; you may not of yourself cut off a man's nose or ears.'"—*Ibid.* 9–10; *Legge*, pp. 389–90. See also *Shu ching chieh yao*, c. 4, *K'ang kao*, p. 11*a*.

"The king says, 'In things beyond your immediate jurisdiction, have laws set forth which the officers may observe; and those should be the penal laws of Yin, which were right-ordered.'" "He also says, 'In examining the evidence in criminal cases, reflect upon it for five or six days, yea for ten days, or three months. You may then boldly carry your decision into effect in such cases.'"—*Shu ching*, Pt. V. Bk. IX. 11–12; *Legge*, p. 390.

"The king says, 'In setting forth the business of the laws the punishments will be determined by the regular laws of Yin. But you must see that those punishments, as well as the penalty of death, be righteous. And you must not let them be warped to agree with your own inclinations, O Fung. Then shall you be entirely accordant with right, and may say, "These are properly ordered;" yet you must say at the same time, "Perhaps they are not yet entirely accordant with right."'"—*Ibid.* 13; *Legge*, p. 391. See also LAWS.

"If you regularly in giving out your orders say, 'My instructors whom I am to follow, my minister of Instruction, my minister of War, and my minister of Works; my Heads of departments, and all ye, my officers, I will on no account with oppressions put men to death;' let the prince also set the example of respecting and encouraging the people, and these will proceed to respect and encourage them. Let him go on in dealing with those who have been traitors and villains, murderers and harbourers of criminals, to exercise pardon, and these, when they observe the prince's conduct, will likewise pardon those who have assaulted others and injured their property" (*Shu ching*, Pt. V. Bk. XI. 2). "戕 敗 人 are individuals guilty of lighter offences than those mentioned above, whose cases should be summarily dealt with by his ministers and officers, without their being appealed to the ruler himself. We cannot suppose that this charge to Fung to pardon offenders—even murderers, was to be taken without qualification. He could only be required to note and act upon all mitigating circumstances in his punishment of crime."—*Legge, Ch. Class.*, III. ii. 415, note.

"The object of the emperors in delegating authority to princes and officers is the kindly and benevolent rule of the people" (*ibid.* p. 415, note). "An inspector is to eschew the use of punishments."—*Shu ching*, Pt. V. Bk. XI. 3.

"One instance of the manner in which he [Confucius] executed his functions is worth recording. When any matter came before him, he took the opinion of different individuals upon it, and in giving judgment would say, 'I decide according to the view of so and so.' There was an approach to our jury system in the plan, Confucius' object being to enlist general sympathy, and carry the public judgment with him in his administration of justice." He punished a father who had brought a charge against his son for not having taught his son to be filial.—*Legge, Ch. Class.*, i. Prol. pp. 74–5.

"Everything relating to individuals is officially recorded, down to their private character, their happiness and misfortune, health and resource, for the Emperor's paternal use. A minister protects the people against oppressive chiefs, but no mercy is shown subjects who expel their prince. Disputes are settled by testimony of persons of the same group with the parties. The great drum hangs at the palace gate for those who desire justice at the imperial hands."—*Johnson, Or. Rel.—Ch.*, p. 332.

"The Heads of districts are all supposed to keep a register of the characters of the people, in reference to the laws generally."—*Legge, Ch. Class.*, III. i. 82, note.

4. *Revenue.*—"The question how to defray the expenses of government has, of course, occupied the sovereigns of China at all periods of its history, and when Mencius devoted his attention to the subject, several systems of taxation had already been tried; but, with that complexity which has at all times prevailed in the sources of revenue, it seems natural that in ancient China, at a time when foreign trade was still inconsiderable and agriculture was by far the most important basis of public wealth, the taxation of land (*fu*) and personal services (*i*) should form the backbone of taxation."—*Hirth*, pp. 296–7.

"The radical idea at the bottom of Chinese financial methods is 'feeding the people, and feeding on the people'; in accordance with this notion all salaries were once calculated in hundredweights of rice."—*Parker, China*, p. 195.

"Wu Wang distributed the riches and stores accumulated by Chou among the people, and what had been taken from them was also restored. Thus general peace again prevailed in the kingdom." "Wu Wang divided his kingdom into nine provinces,

and fixed the amount of tax the people ought to contribute for the various public sacrifices, and also the number of ladies they had to send in for the domestic service in the palace." "These ladies were ordered to do all kinds of female labour in order to produce a certain amount of cloths and silk as their tribute." "The males were also required to look after all kinds of industry, and they had to send in various articles as their tribute." "There were three kinds of tribute, the tribute of cloth, that is, coarse silk and cotton; the tribute of money, that is, shells of the tortoise, and the like; and the tribute of goods, that is, pieces of silk and hemp." "Taxes were levied on each acre of cultivated land, and premises attached thereto, and all classes of people, such as artisans, merchants, fishermen, and foresters, were all liable to the taxes." "Out of the common land, only 10 per cent. of its productive value was paid in the shape of tax; all estates that were granted to officials, as a special mark of favour, and all buildings that belonged to the State, were exempt from taxation." "Conservatories were liable to a tax of 5 per cent. of their value; of 10 per cent., if they were just close to a town; and 12 per cent., if they were situated far away, and no higher tax than this was paid either in suburban districts or in a place which was thousand *li* away from the place where the sovereign was living." "With regard to forests, where varnish was collected, a 25 per cent. tax was levied." "Any residential estate where nothing was produced was liable to pay a certain quantity of cloth; any uncultivated land, a certain quantity of grain; any people who had no occupation, a poll tax." "Statistics were kept of the number of the population and cattle in the kingdom, and its frontier provinces for the information of the Government for the purpose of taxation at various times." It was the duty of the Prime Minister to estimate the amount of taxes (see *supra.*). "In the chapter on the officials of the Chou Dynasty in the Book of Rites, it is said that an officer called *T'ai Fu*, Chief Treasurer, was charged with the work of collecting supplementary revenues."—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 50*b*; *Shê kuan pu, Hu pu*, p. 56*b*; *T'ai Fu*, p. 117*a*.

"According to one text, a tithe of the revenue was set apart for sacrifices, and the rites of mourning for parents were allowed to absorb this tithe during the three years devoted to them. This is nearly the only recognition of a tithe for religious or quasi religious purposes in China, and probably represents a very ancient fragment of tradition. The king received a tithe of the national produce, and he may have been anciently expected to spend a tithe of the revenue so obtained upon the rites of public worship; but an earlier passage in the same book describes the Son of Heaven as retaining nine-tenths of the produce of his domains for his own use, and employing the other tenth to defray the charges of the public offices."—*Simcox*, ii. 36.

"Lavishness, like that of the Egyptian kings in the service of the gods, is entirely contrary to Chinese ideas of propriety and justice; and there was no spiritual hierarchy to be endowed apart from the Boards of Government. The appropriateness of all offerings to spiritual beings was held to lie in their abundance. Each class of the community is supposed to sacrifice a specimen of that in which their wealth consists, and kings, princes, and great officers were warned rather against sacrificing too much than too little. 'Without sufficient cause a prince did not kill an ox, nor a great officer a sheep' (*S.B.*, xxvii. 227); and as private festivities were restricted to the scale of expenditure thought proper for sacrifices, the latter conformed to the national standard of frugality."—*Ibid.* ii. 36.

"From the various States he [king Wên] received only the correct amount of contribution."—*Shu ching*, Pt. V. Bk. XV. ii.

"Under the Chow dynasty, according to Mencius, a chief minister received as much territory as a How, a great officer as much as a Pih, and a scholar of the first class as much as a Tsze or a Nan. Perhaps the arrangement made by Yu was much the same."—*Legge, Ch. Class.*, III. i. 145, note.

Under the Chow, revenue was derived from the towns. Duke Ching proposed to assign to Confucius the town of Lin-Ch'iu, "from the revenues of which he might derive a sufficient support."—*Ibid.* I. Prol. p. 68.

"By the rites of the *Tsew*, there were instituted nine different boards of administration for the revenues and expenses of the crown and the State 九府園法."—*Vissering*, p. 21.

"The *ts'uen-fu* (who according to the *Tseu-li* is the collector of taxes) manages the money which is paid as taxes on the market. He collects the goods which are not sold in the market, which are preserved for the use of the people. He publishes and puts down the commodities which he has bought, according to their market-price, and waits for the buyers who may at any time wish to buy them. . . . He consults the justices of the market about those persons who borrow money from him, and reckons the interest according to the wants of the State. He uses to receive and gather all the treasures on behalf of the state-service. At the end of the year he makes the balance of revenues and expenses, and delivers the surplus (to the 職幣 according to the *Tseu-li*)."—*Ibid.* p. 22.

"The *wei jên*, deputies, . . . had charge of collecting the taxes of the wastes, collecting fuel and straw, all vegetable material, wood material, and all things they (the people) kept in store."—*Wên hsien t'ung k'ao hsiang chieh, c.* 5, *Ch'êng Ch'üeh k'ao*, p. 5*b*.

"The *chüan jên* (廛人) had charge of collecting the *tz'ŭ* cloth of the market, *chih* cloth (also money), *fa*, cloth paid as fines, and *ch'an*, cloth paid as poll tax, to put in the *Ch'üan Fu*, Money Treasury, collecting from butchers leather, horns, sinews, and bones to put in the *Yü Fu*, Jade Treasury, and collecting delicacies for accumulating as stores in the *Shan Fu*, Treasury for Savory Foods."—*Wen hsien t'ung K'ao hsiang chieh, c.* 5, *Chêng chüeh K'ao*, p. 1*a*.

"The chief minister determined the expenditure of the states, and it was the rule that he should do so at the close of the year. When the five kinds of grain had all been gathered in, he then determined the expenditure; according to the size of each territory, as large or small, and the returns of the year, as abundant or poor. On the average of thirty years he determined the expenditure, regulating the outgoing by the income." "A tenth of the (year's) expenditure was for sacrifices . . . . A tithe of three years' expenditure was allowed for the rites of mourning. When there was not sufficient for the rites of sacrifice and mourning, it was owing to lavish waste; when there was more than enough, the state was described as affluent . . . ." "If in a state there was not accumulated (a surplus) sufficient for nine years, its condition was called one of insufficiency; if there was not enough for six years, one of urgency. If there was not a surplus sufficient for three years, the state could not continue. The husbandry of three years was held to give an overplus of food sufficient for one year; that of nine years, an overplus sufficient for three years. Going through thirty years (in this way), though there might be bad years, draught, and inundations, the people would have no lack or be reduced to (eating merely) vegetables, and then the son of Heaven would every day have full meals and music at them."—*Li chi*, iii. ii. 26-8; *Legge*, i. 221-2.

"In the first chapter of the third book of the Li Ki this theory of public expenditure [adjustment of expenditure to revenue] is expressly formulated; the years' receipts are to be calculated as soon as possible after harvest, and the expenditure regulated accordingly [see also Reg. of Lab.]. The general rate of expenditure ought, it was held, to be determined upon the average revenue for thirty years—a period long enough to allow good and bad years to balance each other. A thriving State was one in which a surplus had been accumulated sufficient to provide for a series of six bad years; a State that had not a surplus sufficient for three years was doomed to prompt extinction. Apparently a third of the produce in normal years was assumed to be available for accumulation, so that the nine years' store represents the savings of twenty-seven years; and it seems that the sages who chose thirty years as the period for which an average should be struck, only expected three really bad years to occur in the time. At least they regarded the three bad years as certain to befall, six as sufficiently probable to need guarding against, and nine as the utmost limit of possible calamity. Those who had nine years' stock in hand were virtually secure against want. (*S.B.* xxvii. p. 222)."—*Simcox*, ii. 36.

"Light taxation, Mencius observes, is indispensable if the objects of a sage's government are to be attained, for this is only done when grain and pulse are made to be as abundant as water and fire, which, necessary as they are, are yet so plentiful that the poorest can afford to give them away if a stranger asks for them at nightfall. In his time, three taxes were levied—one of hempen cloth and silk, one of grain, and one of personal service. To exact all three at the same time of year was regarded as an intolerable oppression, as the first ought to be paid in summer, the second after the autumn harvest, and the third during the winter leisure (*Works*, vii. i. xxiii., §3 and ii. xxvii)."—*Ibid.* ii. 38.

"A low rate of taxation never ceased to be regarded as an essential part of good government; the minister who increased the royal revenue by increased exactions from the people was denounced; and to combine low taxes with a sufficient revenue, it was necessary for the taxpayers to be numerous. Hence, with brief exceptions, the influence of the Government was steadily employed to perpetuate the conditions favourable not to the accumulation, but to the substantially equal distribution of wealth."—*Ibid.* ii. 41.

"(The contributions from) the first hundred *lî* (square) of the son of Heaven served to supply (the needs of) the (various) public officers; (those from the rest of) the thousand *lî* were for his own special use."—*Li chi*, iii. ii. i.; *Legge*, i. 212.

"The tax collected from the people within the States of the Feudal Princes—in a large state they paid to the Government half of whatever was collected; in the next sized state, one-third; and in a small state, one quarter."—*Chou li T'ien kuan, P'ei wên yün fu, c.* 67, p. 15*b*.

"In the 'Rites of Chow,' one of the recognised methods of regulating prices is for the State to issue money when prices are high, and to withdraw from circulation the cash received in payment of taxes when they are low. One of the arguments urged against free coining is based on the inexpediency of surrendering this part of the supreme power. 'Riches are the handle held by the rulers of men,' and to give up the handle is to endanger the rule."—*Simcox*, ii. 158; see also *Vissering*, p. 36.

"The first land-tax was imposed by the State of Lu in the year B.C. 592. Under the tithing system (清法) of the Chows, the Ruler took about 1/10 all round; but in addition to this, from the time of Duke 宣 of Lu, the State took 10% on each acre. This was called 稅畝."—*Ch. Rev.* xii, 202. See also *P'ei wên yün fu, c.* 67 *hsia*, p. 101*a*.

"In the 12th year of Hsiao Kung of the Ch'in State, taxation was begun. In the *T'ung tien* of Tu Shih it says, 'when Hsiao Kung employed Shang Yang, the latter thought that the land of San Chin was narrow and the people poor, and those of Ch'in broad and the people few, and the weeds therefore were not wholly [removed and the land] not wholly cultivated and the wealth produced by the earth not rendered wholly available. So he advised the people of San Chin to seek benefit by [cultivating] the fields and [by erecting] dwelling places; and resumed the method of the three dynasties, who did not care about war, but the resources of a country. As he caused the men of Ch'in to meet the enemy abroad, so the well-field system [in that State] was abolished, but the roads were dug up between the fields and the people allowed to cultivate them on easy terms without restriction. In a few years time the country became powerful and wealthy, and was unequalled by any other. Wu Shih said: 'The well-field [*i. e.*, under the well-field system before it was abolished] was the property of the government and could not be sold by an individual; therefore, it is said in the *Wang chi* [of the *Li chi*] that the field could not [originally] be sold; only since the Ch'in dug up the roads between the fields, was it allowed to sell or buy them. Hence arose the abuse of monopolies [of the cultivated land]."—*Wen hsien t'ung k'ao hsiang chieh, c.* i. *T'ien fu k'ao*, p. 2*b*.

"When Shang was Prime Minister of the Ch'in State, he devised a means of increasing wealth a hundredfold by imposing a tax on forests and marshes."—*Hsin lun, P'ei wên yün fu, c.* 67*b*, p. 104*a*.

"At the beginning of summer, when silkworm rearing stopped, the Queen and Royal concubines offered up cocoons to the throne. At that time the cocoon tax began to be collected."—*Li chi, ibid. c.* 67*b*, p. 100*b*.

"'Establish also three hundred depôts of courtezans for the traders, who will thereby be induced to bring all kinds of merchandise to your country, and thus have a sufficiency of funds to meet the expenses of your army.' Such were some of the principles of finance and political economy among the Chows, customs' duties being apparently, even at that early date, a recognised part of the revenue."—*Giles, Historic China*, p. 9.

Kuan Chung (700-645 B.C.), premier of the State of Ch'i (Shan Tung) was "the first to conceive the notion of a Government monopoly in salt and iron, based upon an average annual minimum consumption per individual of 30 lbs. of salt, and upon the indispensability of ploughshares, axes, pans, knives, and needles. Thus it is plain other people knew how to make money out of salt, iron, and women before the shrewd men of the Ordos Desert. The wealth thus brought to one petty state was shared by the feudatory powers in the vicinity who soon took to imitating so lucrative a policy. It was under this stimulus that the Sz Ch'wan salt wells were discovered (B.C. 330), and possibly the Ghilen-tai industry also: a large export to the steppes of the Hiung-nu grew up, and to those States as well which were dependent upon Ts'i for their salt supply. By the time the first emperor came into power, the salt and iron revenues of China had increased twenty-fold."—*Parker, China*, p. 223.

"The extreme west of China used to consume this [Ho-tung] lake salt until the Sz Ch'wan wells were discovered, and it remained a Government monopoly until A.D. 506."—*Ibid.* p. 225.

"*Yen-jên, lit.* salt-men, are mentioned in a list of the court officials during the [Chou] period; but since they appear among a list of apparently inferior employés, such as butchers, tailors, and shoe makers, and since Ma-twan-lin, in his list of Chow officials . . . includes them in his *wu-ming-kuan* (無命官), who appear to have been officers of a lower order, as opposed to the *yu-ming-kuan* (有命官) . . . it looks as if in the early days of the dynasty, they had merely to regulate the purchase and consumption of salt for the Imperial kitchen, or for sacrificial purposes. We learn, however, from the *Liang-kung-yen-fa-chih*, that the earliest salt-officers in this dynasty were palace officers, who had the control of certain gifts to the court payable in salt, although no preventive measures approaching anything like a system were in existence. The idea of the salt monopoly as a regular branch of government administration, must be ascribed to the celebrated Kuan Chung, *alias* Kuan I-wu [管仲; 管夷吾, also known as the philosopher Kuan-tzu 管子] who died B.C. 645. . . . [He advised Duke Hwan to levy a tax on salt] payable by the dealers in this article; this, he said, would be an impost which nobody could escape. . . . He [also] recommended a tax upon the iron produced in the country. The officials in charge of the iron-works had reported that every woman in the country must have a needle and a knife, that every field labourer must have a plough, a spade, and a cooking pan, a cart, a hatchet, &c., all these being necessaries of life, a tax on which would be a regular source of public revenue. This conversation of Kuan Chung's with his Duke led to the institution of the salt and the iron monopolies, both of which not only yielded the desired revenue, but also became a great stimulus for the succeeding governments to do all in their power to stimulate production as well as consumption. . . . The salt produced on the Shantung coast during the Chou dynasty was not only consumed in the country of Ch'i, but we are informed that the states of Liang, Chou, Sung, Wei and T'u-yang were in great trouble when the usual supply of salt did not come forward from Ch'i, not to speak of the frontier nations, the Hsuing-nu, etc., who were then entirely dependent upon it. The salt monopoly . . . thus became the source of immense wealth collected in the state of Ch'i, and was the basis of a regular system of administration known as *yen fa, i.e.*, 'the method of salt administration.' It appears that there are no records to show that a similar system existed in other parts of the coast during the Chou dynasty."—*Journ. C.B.R.A.S.*, xxii. 54-8.

Under the Chow dynasty, the offerings presented by the princes to the sovereign were of nine kinds:—" 'Offerings available for sacrifice' (祀貢), victims, etc.; 'offerings for the ladies of the harem' (嬪貢), as silk and hemp; 'offerings available for vessels' (器貢), metal, sounding stones, varnish, etc.; 'offerings available for presents' (幣貢), gems, silk, horses, etc.; 'building materials' (材貢); 'offerings of commodities' (貨貢); 'dresses, and materials for dresses' (服貢); 'feathers and hair' (斿貢); 'sundries' (物貢), as fish, fruits, etc.; (see the 'Rites of Chow,' 天官, 冢宰, i, 2)."—*Legge, Ch. Class.*, III. i. 101, note.

"Soon after . . . the Chow Dynasty took the throne, . . . some of the tribes of Keaou-chow (which then included Canton) 'brought crabs and frogs, others brought snakes and crickets.'"—*Ch. Rep.*, ii. 147.

"About 630 B.C., Ching Wang-yun . . . became master of the country of Tsoo, and sent tribute to the emperor, who directed him to subdue his disorderly neighbours on the south. . . . Tsoo was then a powerful state, and the tribes of the south soon submitted."—*Ibid.* ii. 147.

"Men and women bring their baskets full of azure and yellow silks, to show forth the virtue of us the kings of Chow."—*Shu ching*, Pt. V. Bk. III. 7.

[Metals were extracted from the mines in the south, and sent in tribute by the still barbarous tribes of central China. They also sent elephants' teeth. (*Shih ching*, IV. ii. III. 8).]

"The people of the western tribe of Leu sent in as tribute some of their hounds."—*Shu ching*, Pt. V. Bk. V. i.

"The nearer and more remote [wild tribes] have all made offerings of the productions of their countries—clothes, food, and vessels for use."—*Ibid.* 2.

[Independent townships coined money.]—*Simcox*, ii. 59-60.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Ranks.—*Sovereign* (皇帝 *Huang Ti*).—[When the Ch'in united the empire under one sovereign, they established the title of *huang ti* (皇帝), emperor, and the system of officials. They did not follow the old system. They were the first to abolish the feudal lords].—*Wên hsien t'ung k'ao, c.* 11, *Chih kuan i*, p. 2*a*.

"Speaking generally, there has been but one great political revolution in China, when the centralized form of government was substituted for the feudal, about 2000 years ago."—*Meadows, Chinese and their Rebellions*, p. 25.

[Ch'in Shih Huang, having conquered all the other States, united them into one empire. He revolutionized the doctrines of previous ages. This method was to rule by brute force. He ordered all books, with few exceptions, to be burnt and scholars to be put to death. The number of the latter beheaded was more than 460. For remonstrating against his cruelty his eldest son was banished to the frontier.]—*Shih lun lüeh*, p. 2*a*.

"In general, it may be doubted whether the usurpation of T'ain, and the accession of the Hans, did not together do more to restore the monarchy to the position it occupied under the

first kings of Chow than to alter or revolutionize the national constitution. T'sin-chi-hwang-ti certainly aimed at reviving the ancient Empire in fact and name, and the performance of the *fong* and *chan* ceremonies, with which he vainly sought to consolidate his dynasty, was evidently regarded as meritorious, when affected by the Emperor Wu in 110 B.C." The idea of these ceremonies was "to worship heaven upon a site naturally and artificially raised, and earth upon one artificially levelled."—*Simcox*, ii. 106, 107. See also *Legge, Ch. Class.*, I. Prol. p. 7.

"The emperors of the Ts'in dynasty and the Han dynasty evidently started from the principle, always recognized in China as the leading article of public law, that 'everything underneath the heavens belongs to the Son of Heaven as his personal property' (天子有天下), not even excepting the bodies of his subjects, who are his slaves in the most absolute sense of the word. There can scarcely be a doubt that the same principle prevailed in times prior to Shi Hwâng."—*De Groot, Rel. Syst.*, ii. i. 433.

"In the Han dynasty . . . the Emperor was to be distinguished from, and not named along with, the feudal princes."—*Legge, Lî Kî*, i. 19.

"Freedom of speech was . . . restored under Han Wên Ti" (179–156 B.C.).—*Ch. Rev.*, xii. 444.

"Notwithstanding his enlightened policy, the Emperor [Wu Ti, 140–87 B.C.] was personally an ardent student of Taoist mysteries . . . and patronised the numerous quacks who pretended to have discovered the transmutation of metals and the elixir of life."—*Giles, Bio. Dic.*, p. 492.

[The right of *succession* was hereditary. Shih Huang-ti's eldest son was put to death and his younger son proclaimed as the Crown Prince.]—*Kang chien*, *c.* 8.

[Under the Han dynasty it was for the first time enacted that the eldest son of the Emperor should assume the title of Heir Apparent, and the eldest son of a feudal lord the title of *Shih Tzŭ*, the eldest son of a prince.]—*Ibid. c.* 10.

[An Empress could now, for the first time, hold the reins of government.]—*Ibid. c.* 10.

[The wives of the emperor were divided into several classes; amongst the highest in dignity were the *Chieh Yü* (婕妤), who had the rank of a lord, the *Ying O* (媵娥), who were next to them, and, one degree lower, the *Jung Hua* (容華) (*cf. Mem. hist.*, *c.* xlix., p. 6*b*, summary of Ch'u Chao-Sun). The women who bore any of these three titles seem all to have belonged to the class of *Fu Jên* (夫人); beneath the *Fu Jên* there were, in order of diminishing importance, the following classes: the *Mei Jên* (美人); the *Liang Jên* (良人); the *Pa Tzŭ* (八子); the *Ch'i Tzŭ* (七子); the *Chang Shih* (長使); the *Shao Shih* (少使) (*cf. Mem. hist.*, *c.* x., p. 8*b*, commentary of Ying Shao). There were probably also further degrees below these. The daughters of the emperor were designated by the title of *Kung Chu* (公主); his sisters, by the name of *Chang Kung Chu* (長公主); his paternal aunts, by the name of *Ta Chang Kung Chu* (大長公主) (*cf. Mem. hist.*, *c.* viii., p. 2*b*, commentary of Chang Shou-chieh). The daughter of a king was designated by the name of *Wêng Chu* (翁主) (*cf. Mem. hist.*, *c.* lii, p. 3*b*, commentary of Ssŭ-ma Chêng).]—*Chavannes*, ii. 533.

[For the decay of imperial power at the end of the later Han dynasty, see POLITICAL].

[For the relation of the Sovereign to the class of scholars, see *infra.*]

A. *Scholars* (*Shih*).—[Scholasticism was condemned, and many scholars were ordered to be put to death by the Emperor Shih Huang of the Ch'in dynasty.]—*Kang chien*, *c.* 8, p. 26.

Ch'in Shih Huang Ti "found that his bitterest opponents were men of letters. . . . Instead of ignoring this opposition or seeking to overcome it by the same agency, Hwangti expressed his hatred and contempt, not only of the literary class, but of literature itself, and resorted to extreme measures of coercion." This led to further opposition on the part of the literati, who cast aspersions on the Emperor's origin, and caused him to determine to make himself the "first Emperor" of all China and order that all records of previous times should be destroyed. "All books were proscribed, and orders were issued to burn every work except those relating to medicine, agriculture, and such science as then existed. The destruction of the national literature was carried out with terrible completeness, and such works as were preserved are not free from the suspicion of being garbled or incomplete versions of their original text. The burning of the books was accompanied by the execution of five hundred of the literati, and by the banishment of many thousands."—*Boulger, Short Hist.*, pp. 7–8.

"The premier [under Ch'in Shih Huang], Le Sze, said, 'The five Emperors were not one the double of the other, nor did the three dynasties accept one another's ways. Each had a peculiar system of government, not for the sake of the contrariety, but as being required by the changed times. Now, your Majesty has laid the foundations of imperial sway, so that it will last for 10,000 generations, . . . the empire is in a stable condition, and laws and ordinances issue from one *supreme authority*. Let those of the people who abide in their homes give their strength to the toils of husbandry, and those who become scholars should study the various laws and prohibitions. Instead of doing this, however, the scholars do not learn what belongs to the present day, but study antiquity. They go on to condemn the present time, leading the masses of the people astray, and to disorder.' 'When they hear that an ordinance has been issued, every one sets to discussing it with his learning. In the court, they are dissatisfied in heart; out of it, they keep talking in the streets. While they make a pretence of vaunting their Master, they consider it fine to have extraordinary views of their own. And so they lead on the people to be guilty of murmuring and evil speaking. If these things are not prohibited, your Majesty's authority will decline, and parties will be formed. The best way is to prohibit them. I pray that all the Records in charge of the Historiographers be burned, excepting those of Ts'in; that, with the exception of those officers belonging to the Board of Great Scholars, all throughout the Empire who presume to keep copies of the She-king, or of the Shoo-king, or of the books of the Hundred Schools, be required to go with them to the officers in charge of the several districts, and burn them; that all who may dare to speak together about the She and the Shoo be put to death, and their bodies exposed in the market place; that those who make mention of the past, so as to blame the present, be put to death along with their relatives; that officers who shall know of the violation of those rules and not inform against the offenders, be held equally guilty with them; and that whoever shall not have burned their Books within thirty days after the issuing of the ordinance, be branded and sent to labour on the wall for four years. The only Books which should be spared are those on medicine, divination, and husbandry. Whoever wants to learn the laws may go to the magistrates and learn of them.' The imperial decision was—'approved.'"—*Legge, Ch. Class.*, i. Prol. pp. 7–9.

"In the year after the burning of the Books, the resentment of the Emperor was excited by the remarks and flight of two scholars who had been favourites with him, and he determined to institute a strict inquiry about all of their class in Hëen-yang, to find out whether they had been making ominous speeches about him, and disturbing the minds of the people. The investigation was committed to the Censors, and it being discovered that upwards of 460 scholars had violated the prohibitions, they were all buried alive in pits, for a warning to the empire, while degradation and banishment were employed more strictly than before against all who fell under suspicion. The Emperor's eldest son, Foo-soo, remonstrated with him, saying that such measures against those who repeated the words of Confucius and sought to imitate him, would alienate all the people from their infant dynasty, but his interference offended his father so much that he was sent off from court, to be with the general who was superintending the building of the great wall."—*Ibid.* i. Prol. p. 9.

[The Emperor Wu Ti (140–86 B.C.) had a great regard for the literati, and was a follower of Confucius. In the reign of Kwang Wu (A.D. 25–58) all the scholars devoted their time to the study of the classics.]—*Kang chien*, *c.* 11, p. 27.

"One traditional classification gave us the four sources of disorder 'equal queens' (or the concubine put on a level with the first wife), 'equal sons' (younger or half-brothers put on a level with the heir), 'two governments' (*i.e.*, favourites on a level with ministers), and 'equal cities' (*C.C.*, v. 71), or provincial towns allowed to rival the capital. The orthodox doctrine was distinctly in favour of a strong central government, and though it was also in favour of a benovolent government, the Han dynasty soon came to understand that they could afford not to oppress the masses of the people, if they could succeed in abolishing the feudal aristocracy and establish themselves as its only heir. The soldierly Emperor paid a solemn visit to the grave of Confucius and rendered imperial honours to his memory (195 B.C.), 'which had never been done before'; he employed scholars to prepare official treatises on government, music, tactics, and the like, and his successors not only had the ancient texts restored, edited and commented by the learned, but also listened favourably to the advice of scholars, who wished to have all doctrines save those of Confucious proscribed, and to have the doors of office closed against all who had not passed through the schools established for the study of orthodox learning."—*Simcox*, ii. 105.

[The attack upon the scholars by Ch'in Shih Huang Ti was made with the object of establishing his position as First Emperor, and is described above.] "The temporary misunderstanding which had led to the scholars appearing as the champions of feudalism was cleared up, and they began again to take the position which they regarded as their due, as advisers and spiritual auxiliaries of the strongest depository of temporal power."—*Simcox*, ii. 105.

"The men of letters of the Han period were by no means mere formalists. The 'Record on the Subject of Education,' which forms one of the books of the Li Ki, is evidently the work of a time when the theory and practice of education were a subject of discussion and reflection. There are, it is said, teachers who content themselves with multiplying questions, and humming over the tablets which they see before them, who speak of the learners making rapid advances and pay no regard to their 'reposing' (in what they have learnt). The authors of the Record do not value this mere mechanical instruction or 'cram,' the effects of which, moreover, are superficial and evanescent. Their description of the superior man who is fit to become a teacher of others (*S.B.*, xxviii. 87) is mature and graphic. 'In his teaching he leads, and does not drag: he strengthens, and does not discourage; he opens the way, but does not conduct to the end (without the learner's own efforts). Leading and not dragging produces harmony. Strengthening and not discouraging makes attainment easy. Opening the way and not conducting to the end makes (the learner) thoughtful. He who produces such harmony, easy attainment, and thoughtfulness may be pronounced a skilful teacher.'" "Different studies require different methods, and so do different students; the teacher must be able to adapt himself to both; but after all, much rests with the pupil," &c. These and other passages show that the learned class looked upon instruction as a part of education, and that "a teacher aimed at being the Master of a school rather than a schoolmaster. . . . The best witness to the skill of the teachers of the age is to be found in the success with which their ideas *have* been perpetuated, even to the present day, by generations of teachers trained out of this 'Record.'"—*Simcox*, ii. 118–9.

"The literati had no such compensation [as that obtained by the eunuchs; *v. supra*], and their disaffection showed itself in cabals, not to say conspiracies, of which the importance may be measured by the fact that a private 'authors' association' was made the subject of criminal prosecution in the year 166 A.D. (*Biot, L'Instruction publique*, p. 189; *De Mailla*, iii. 473). The party, however, was not broken up by the attack, for twelve years later the attempt to form a new imperial academy broke down, because of the refusal of all the leading scholars to take part in the project, private schools under their direction being preferred to the imperial establishment with a staff of mediocrities. The discontent was not limited to the orthodox school, for the insurrection of the 'yellow caps,' which was not suppressed without great bloodshed, was headed by three brothers, who professed an ardent devotion to the doctrines of Lao-tsze."—*Ibid.* ii. 121.

Officials (*Ch'ên*).—[Ch'in instituted twenty degrees of *nobility* to reward the meritorious services of his officers. He made twenty nobles called *Ch'ê Hou* (徹侯); and nineteen at his court who were called, from the region of Shen Si, *Kuan Nei Hou* (關內侯). These latter nobles or princes had no states or cities granted to them: they had titles by patent, but no cities to supply them with food,—no territorial revenue.]—*Yüan chien lei han*, *c.* 118, *Fêng chüeh pu*, p. 2.

"The Marquises were divided into three classes: *Hsien* (縣), *Hsiang* (鄉), and *T'ing* (亭) Marquis."—*Huang ch'ao Wên hsien t'ung k'ao hsiang chieh, Chih kuan k'ao*, *c.* 11, p. 4*b*.

[Women, though but seldom, received fiefs and had the title of marchioness. (The title of *Hou* is the only one which the Ch'in retained out of the five titles of nobility of the Chou period: see LATER FEUDAL PERIOD; there was, in fact, no longer any relation between the nobility of the Chou, which was an almost independent feudalism, and the Marquis of the time of the Ch'in and Han, whom the emperor maintained in a state of strict obedience).]—*Chavannes*, ii. 527–30.

[When the Han dynasty arose, it instituted two degrees of nobility, viz., *Wang* (王) and *Hou* (侯). The emperor's sons were created *Wang*, or kings (the *Chu Hou* of the Feudal Periods). The statesmen generally, who were not of the imperial name, and who were created nobles on account of their merit, were called *Ché Hou*: the greater of these nobles had not more than ten thousand houses, and the inferior ones five or six hundred families. In ancient times, land was shared out to the nobles, but not the people. It was in the time of Han that the people began to be shared out to the nobles, and each kingdom had several tens of cities connected with it.]—*Yüan chien lei han*, *c.* 118, *Fêng chüeh pu*, pp. 2*b*–3*b*.

[The Han dynasty, besides the titles of nobility, added other appellations of excellence; and conferred the privilege of *special admission* to the imperial presence, and a seat amongst his majesty's ministers. Inferior statesmen, who were created nobles by patent, were called *Ch'ao Hou* (朝侯), Court Nobles. These all wore crowns, with a flat parallelogram-shaped board laid upon the head, and embroidered garments; and from their attendance at great sacrifices, they were designated *Shih Tz'ŭ Hou* (侍祠侯). *Wei Chu Hou* (隈諸侯) denoted those who were related to the imperial family, although their rank was small.]—*Ibid.* p. 3*a*.

"Perpetual hereditary rank was conferred upon the senior descendant of Confucius in the male line, and the succession has continued unbroken to the present day. The head of the 'K'ungs,' or Confucian clan, is now [see MANCHU PERIOD] a 'duke,' and resides in a palace, taking rank with, if not before, the highest provincial authorities."—*Giles, Historic China*, p. 42.

"The T'sin dynasty was allowed to bear all the odium of the change from a feudal to a centralized government, but the Han emperors surrendered none of the ground gained by their unpopular predecessor. They made no attempt to restore the fendal system, the destruction of which was counted among the ten great follies of the fallen dynasty. On the contrary, they were on their guard against the growth of a new aristocracy of royal kinsfolk, and when the great Emperor Wu-ti was warned that many princes of the imperial house held territories of 1000 li in extent, he issued an edict (128 B.C.), compelling all the feudal nobles to divide half their domains equally amongst their younger sons, leaving only the other half to the eldest, whose portion would be again sub-divided in the next generation."—*Simcox*, ii. 105.

"In the reign of 光武 [A.D. 25–58] . . . all the princelets [王] were reduced to the status of nobles [公侯]."—*Ch. Rev.*, xii. 444.

[In the time of the later Han dynasty, nobilities were also divided into two classes. The area of land enfeoffed to the nobles could not be more than four *hsien* (districts.) A new system sprang up in the time of Ts'ao Ts'ao, when there were six kinds of marquisate, and only those who had rendered military service could be created marquises. The titles of marquis and prince were hereditary.]—*Kang chien*, and *Yüan chien lei han*, *c.* 118, *Fêng chüeh pu*, p. 3*b*.

"During the Han and Tsin dynasties the Chinese and Tartar courts had a class called 特進 or 'right honourables,' without any post necessarily attached, but entitling them to court rank above the 車騎 or *equites*, and below the 三公 or three chief Secretaries of State, the *magister equitum* [太尉] *atque militum*, the *præfectus annonarum* [司空], and the *præfectus urbi* [司徒], of the Roman Empire at the same date."—*Ch. Rev.*, xiii. 121.

[Besides the nobles, there were between the sovereign and the people (*min*), 20 grades of *administrative officials* (see INSTITUTIONS), some of whom, though holding the highest rank, were only palace officials discharging no executive functions towards the State beyond that of attendance upon and support of the sovereign. The main divisions were: (1) the *San Kung*, three highest Ministers, discharging the functions of Prime Minister; (2) The Secretaries of State, later, the heads of Departments or Boards; and (3) The *Chiu Ch'ing*, or Nine Ministers. They were altogether divisible into 10 ranks, increasing in number as the rank became lower.]

[Wang Mang (A.D. 9–23) confiscated four-fifths of the unlawful profits of officials.]—*Simcox*, ii. 116.

[The measures of A.D. 25–89 for the suppression of official corruption are referred to under *Executive.*]

"Up to this time the jealousy felt by the race of practical politicians for the trained men of letters, who had begun to compete with them for the spoils of office, seems to have resembled the natural rivalry between the lay and the clerical elements in other countries. But towards the close of the second century the intrusion of a third set of competitors resulted in a sort of triangular duel, for which it would be hard to find a parallel or precedent in history. The Emperor Ho-ti (89–105 A.D.) was the first to raise eunuchs to the highest office ["The eunuch 莫衆 who aided the Emperor to kill Tou Hsien was the first eunuch ever made an earl—the Chinese Narses" (*Ch. Rev.*, xiii. 123)], and for long afterwards their employment as generals or in other posts of authority outside the capital was regarded as a grave scandal. But the elaborate forms and ceremonies of the Chinese court gave these official chamberlains peculiar opportunities for entangling their imperial master in a maze of etiquette, of which none but themselves had the clue, so that even duly appointed ministers could only obtain access to the emperor's person by their favour. The literati had more reason to resent this innovation than the nobles, because the weakness of the royal power, of which the influence of these palace slaves was a symptom, gave to the holders of provincial governorships the very opportunity they most desired, for re-establishing the hereditary character of their charges and therewith their own feudal independence."—*Simcox*, ii. 120–1. Under Shun Ti (126–145) the "sons" of eunuchs began to inherit rank: see *infra.*

"In the twenty-fifth year [A.D. 214] of the Eastern Han Emperor 獻 the nine degrees were invented [立九品法] by Ts'ao Ts'ao [魏]."—*Ch. Rev.*, xii. 444.

[For the alternative classifications of the official hierarchy, and the system of honorary ranks instituted by the Ch'in, see under *Executive*, and for the *Gentry* see *supra*, *Scholars*.]

B. *Agriculturists* (*Nung*); C. *Artizans* (*Kung*); D. *Merchants* (*Shang*); E. *Servants* (*Yung*); F. *Slaves* (*Nu Pu*).—[With the exception of the last, members of these classes could legally become officials, firstly by recommendation, and later, on the introduction of the examination system, by going through the schools. Sovereigns occasionally employed eunuchs in high official posts. See *Wên hsien t'ung k'ao*, c. 11.]

"In the reign of the after Han Emperor 順 [A.D. 126–145], the custom began of allowing eunuchs to 'rear' sons to inherit rank."—*Ch. Rev.*, xiii. 123.

"In the palace [A.D. 168] the eunuchs, always numerous at the Chinese Court, obtained the upper hand, and appointed their own creatures to the great governing posts."—*Boulger*, *Short Hist.*, p. 19.

INSTITUTIONS.—1. *Executive.*—[The *capital* was Hsien-yang (in Hsi-an Fu) up till 200 B.C.]—*Oxenham*, *Atlas*, map 7.

Kao Ti (206–194 B.C.) "removed his capital, which he had first established in Loh-yang, to Ch'ang-ngan in Shensi."—*Macgowan*, *Hist.*, p. 90.

[Chang-an was the capital from 206 B.C. to A.D. 25, and Lo-yang from A.D. 25 to 220.]—*Oxenham*, *Atlas*, maps 8 and 9.

Shih Huang Ti "mapped out the empire into 36 *territorial divisions*."—*Giles*, *Bio. Dic.*, p. 653.

"'Chün' originally meant a feudal fief; the name was then applied by the first Emperor to the 36 provinces into which he divided the State Empire of ancient China."—*Oxenham*, *Atlas*, Pref. p. iii.

[The Ch'in were the first to divide the empire into *chün* (郡), provinces, each comprising several *hsien* (縣), districts. In ancient times, the name *hsien* indicated a larger district than that termed *chün*: "According to the regulations of the Chou, the territory of the Son of Heaven, which was 1,000 *li* square, was divided into 100 *hsien*, each *hsien* comprising 4 *chün*" (*Shuo wên*). The Ch'in inverted the relation of the two terms, and, from their time, the *chün* was of larger extent than the *hsien*. Ch'in Shih Huang divided the empire into thirty-six *chün* (for their names, see *Chavannes*, *Mem.*, ii. 132, note; *Oxenham*, *Atlas*, map 7); the Han increased this number to 108 (in the time of Wu: *Ch'ien Han shu*, c. xxviii.; see also *Oxenham*, maps 8 and 9). The *chün* was a smaller division than the "province" of Manchu times; whilst the *hsien* was a prefecture proper, there being between the *hsien* and the *chün* no intermediary division such as, in modern times, is constituted by the *fu* and *chou* between the *shêng* and the *hsien*. Under the Ch'in and Han the *hsien* was the administrative and judicial unit, and continued to be so to modern times. The *Ling Chang* was also over a small *hsien* district. See *Yüan chien lei han*, *Chih kuan pu*, c. 115, p. 32.]

"China has seldom approached more to the ordinary type of oriental monarchy than during the decadence of the Han dynasty. The influence of eunuchs, and of the favoured relations of successive empresses, gave occasion to frequent complaints. The bonds of alliance, it was said, were preferred to those of blood; and the wealth accumulated by the favourite of a single reign reached such an amount that its confiscation seemed rather a judicial penalty on extortion than a fresh oppression. By the time the dynasty was thoroughly enfeebled and discredited it was overthrown for a time by Wang-mang, a usurper who reigned from 9–23 A.D., after ten years of virtual supremacy, during which he had followed the policy of the unjust steward at the expense of the titular sovereign."—*Simcox*, ii. 115.

"Like most of the Chinese rulers who have got a bad name as innovators, Wang-mang professed to aim at restoring the Rites of Chow; and Chinese scholarship points to passages in that sacred text which were interpolated by him to justify his measures. As prime minister, he had advised the Empress, to whom he was related, and by whose favour he had been raised to power, to reduce the expenses of her household, while he himself set an example of economy and simplicity, distributing large sums of money to the poor, and ceding to them 3,000 acres of his own land for cultivation. He showed his respect for antiquity by proposing, in our year 1, to revive the names of the ancient astronomical clans as honorary titles for the imperial board of mathematicians. And his first extraordinary measures for raising money might have seemed to be dictated by a real concern for the welfare of the impoverished masses."—*Ibid.* ii. 115.

[For Wang-mang's offence against the moral sense of the people by opening of tombs and prohibition of burial of valuables, see FUNERAL RITES.]

"Wang-mang was finally defeated and put to death in 23 A.D., the Han dynasty restored, and its lustre revived by a succession of able and enlightened rulers. Between 25 and 89 A.D. three emperors of good repute occupied the throne, though the second, Han-ming-ti, is held to have tarnished his glory by formally introducing the worship of Fo (Buddha) in 65 A.D. Official corruption was dealt with in the most efficient manner by raising the salaries of responsible officers, while oppression or peculation were punished with instant dismissal, or death. For more than half a century the country enjoyed one of those periods of peace and prosperity which recur often enough in the history of China to furnish each great dynasty with a standard of comparison within itself."—*Simcox*, ii. 116–7.

[In A.D. 147 the opening of tombs and removal of valuables dedicated to the spirits of departed ancestors is recorded without censure.]—*Ibid.* ii. 115.

"Wu ti (140–86 B.C.) of the Han Dynasty . . . advanced men according to merit."—*Kang Yu-wei*, quot. *N.-C. Herald*, Aug. 14, 1899, p. 339. (*Cf.* MING PERIOD).

"[Ts'ui] Lieh, cousin of Shih, obtained the vice-presidency of the Board of Civil Office by paying 500,000 cash to the government."—*Hou Han shu Ts'ui Shih chuan*, *P'ei wên yün fu*, c. 52, p. 67*a*.

221–206 B.C.—*Central Administration.*—[The sovereign was ruler of the nation, the central administration being in the hands of high functionaries appointed by him and assisted by subordinates. Palace officials having duties pertaining only to the Emperor, his family or palace, were mixed up with those discharging public functions proper, and often held higher rank than some of the latter. Executive, judicial, revenue, military, and ecclesiatical duties or institutions were not completely differentiated. The main divisions of the executive were (1) the Prime Ministers (*San Kung*), (2) the Secretaries of State, afterwards heads of departments (*Shang Shu*, *Ts'ao Pu*), and (3) the "Nine Ministers" (*Chiu Ch'ing*), who discharged various palace and public duties. See *Wên hsien t'ung k'ao*, c. 11.]

[The six highest Ministers received the honorary titles of *T'ai Shih*, *T'ai Fu*, *T'ai Pao*, *Shao Shih*, *Shao Fu*, and *Shao Pao*, *i.e.*, Senior and Junior Preceptor, Tutor, and Guardian respectively of the Emperor (there being similar honorary posts for the Heir Apparent), but these titles were not always conferred, and did not carry any executive duties, *i.e.*, were in abeyance, when not conferred on one or other executive minister. The first three were collectively referred to as the *San Kung* and the last three as the *San Ku*. During the Ch'in dynasty, and until the Han Emperor P'ing Ti, there was no *T'ai Shih*, and under the Eastern Hans the title was again in abeyance. They were bestowed, or laid aside, capriciously, as suited the will of the monarch. (See *Wên hsien t'ung k'ao*, c. 11. *Chih kuan êrh*, pp. 7*a*–8*b*).]

[To their esteem for militarism was due the Ch'ins appointment at the head of the administration of the *T'ai Wei* (太尉), Great Pacifier (see MILITARY). He was a Commander-in-Chief, ranking with the Ministers of State, and discharging both civil and military duties.]—*Wên hsien t'ung k'ao*, c. 11, *Chih kuan êrh*, p. 9*b*; see also *Kang chien* and *Yüan chien lei han*, c. 66, *Shê kuan pu*, pp. 8*a*–23*a*.

[The Prime Minister, or Secretary of State, who had been known as *Ch'êng Hsiang* (丞相), *lit.*, Assistant Ruler, under the Ch'in princes, there being Left (*Tso*) and Right (*Yu*) *Ch'êng Hsiang*, became under the first Emperor, *Hsiang Kuo* (相國), Ruler or Administrator of the Nation's affairs, or Prime Minister, being, like the *T'ai Wei*, but a little lower than the Emperor, and assisting him in all the affairs of the empire. The office was instituted by the Ch'in on the abolition of the *Ssü T'u*, and later was called both *Ch'êng Hsiang* and *Hsiang Kuo*. Under Erh Shih Huang Ti (209–206 B.C.) there was added the post of *Chung Ch'êng Hsiang* (中丞相), Middle Secretary of State, with extensive powers.]—*Wên hsien t'ung k'ao*, c. 11, *Chih kuan êrh*, pp. 9*b*–12*a*; *Yüan chien lei han*, c. 64, pp. 1–3.

[The Prime Minister was assisted by the *Yü Shih Ta Fu* (御史大夫), called also *Yü Shih Chung Ch'êng* (中丞), the Imperial Historiographer, whose duty was originally to take down in writing the will of the monarch and preserve records of the transactions of the Court (see *infra*, 206 B.C.).]—*Wên hsien t'ung k'ao*, c. 11, *Chih kuan êrh*, p. 9*b*.

[The above three posts were rather one triple than three separate offices, the *T'ai Wei*, *Hsiang Kuo*, and *Yü Shih Ta Fu* being of equal rank and all discharging the duties of Prime Minister.]

[The Generals (*Chiang Chün*), who are placed by Chinese writers with the Civil Executive, are referred to under MILITARY.]

[Under the Ch'in, the duties performed in the Later Feudal Period by the Ministers of Heaven (Prime Minister, or Civil Office), Earth (Education, *sc.* in Agriculture = Revenue), Spring (Ceremonies), Summer (War), and Autumn (Crime or Justice), were performed by five *Shang Shu* (尚書), Secretaries of State, but the records do not more particularly specify their respective spheres of action. There was no Secretary or Minister corresponding to the Minister of Winter (Works).]—*Wên hsien t'ung k'ao*, c. 11, *Chih kuan wu*, p. 27*b*.

"Shang-shoo [*Shang Shu*], 尚書, is the title of an office that originated in the time of Tsin [Ch'in]. . . . Four officers were appointed to remain in the palace to superintend the issue of papers. . . . The office of *Shang-shoo* is thought to have been similar to the office sustained by Shun (2176 B.C.) and called in history the receiver and recorder of the affairs of the empire; which duty the Chow dynasty called 司會, Sze-huouy."—*Morrison*, *Dic.*, i. i. 810. See also *infra*.

[Besides the Prime Ministers and the *Shang Shu*, or Secretaries of State, the other high executive officers were the *Chiu Ch'ing*, or "Nine Ministers," and the palace, metropolitan, and provincial officials. Of the *Chiu Ch'ing* some were palace officers. See *infra*.]

[The *Chiu Ch'ing* (九卿), "Nine Ministers," consisted of the following:—The *Fêng Ch'ang* (奉常), or superintendent of the rites and ceremonies of the ancestral temple. (For origin of name, see *Yen Shih-ku*, *Sui shu*.) He had an assistant (丞 *ch'êng*), and eight subordinates, viz. (1) *T'ai Yo Ling* (太樂令), Director of Music, or Chief Musician; (2) *T'ai Chu Ling* (太祝令), Chief Prayer or Priest; (3) *T'ai Tsai Ling* (太宰令), Chief Sacrificer; (4) *T'ai Shih Ling* (太史令), Chief Astrologer; (5) *T'ai Pu Ling* (太卜令), Chief Diviner; (6) *T'ai I Ling* (太醫令), Chief Physician; (7) two *Chün Kuan Chang* (均官長), Directors of Officials; and (8) two *Tu Shui Chang* (郎水長), Directors of Canals and Dykes. The first six had one *ch'êng* each, and the last two, two each. Under the *Fêng Ch'ang*, formerly and also later known as *T'ai Ch'ang* [*Ssü*] *Ching* (太常[寺]卿), or simply, *T'ai Ch'ang*, were all the officials set over the various imperial temples and sanctuaries.]—*Yüan chien lei han*, *Shê kuan pu*, *T'ai Ch'ang*, p. 99*b*.

[The *Lang Chung Ling* (郎中令) was the palace superintendent, being in command of all the officers therein (*Yüan chien lei han*, *Shê kuan pu*, *Kuang lu*, p. 111*a*). "The word 郎 *Lang*, was the name of an ancient 亭 *T'ing*, or pavilion; and persons who were received into the superior offices about court, as secretaries and superintendents of departments, were called *Lang-kuan* 郎官, officers of the pavilion; and the term *Lang-chung* 郎中, 'in the pavilion,' came to denote a manager or superintendent; in the sense that the word 司 *Sze* is now used."—(*Morrison*, *Dic.*, p. 813; *cf.* RESP. OF UNITY.) The *Lang* had five classes of subordinates: see *Ch'ien Han shu*, c. xix.]

[The *Wei Wei* (衛尉) was the commander-in-chief of the palace guards (*Yüan chien lei han*, *Shê kuan pu*, *Wei wei ch'ing*, p. 110*a*). Four classes of subordinates are mentioned in the *Ch'ien Han shu*, c. xix.]

[The *T'ai P'u* (太僕) was the superintendent of the imperial equipages, and had fifteen subordinates, or classes of subordinates (see *Ch'ien Han shu*, c. xix.; *Yüan chien lei han*, *Chia ling*, p. 140*a*). The *T'ai P'u Ch'ing* (太僕卿) were officers who attended to the royal or imperial carriages, horses, and stables. The title *T'ai P'u*, under the Chou dynasty, denoted 衆僕之長, the senior or first of all the royal domestics. The Ch'in dynasty applied the title to the superintendents of the carriages and horses (*Morrison*, *Dic.*, p. 816).]

[For the *T'ing Wei* (廷尉), see *infra*, JUDICIAL.]

[Duties similar to those of a Colonial Secretary were discharged by the *Tien K'o* (典客). He was a Master of Ceremonies, who presented feudal princes at court and dealt with all matters concerning the submission of barbarians (*Wên hsien t'ung k'ao*, c. 11, *Chih kuan pu*, pp. 62*a*-63*a*). He had one assistant (*ch'êng*) and, at this period, three subordinates (*Ch'ien Han shu*, c. xix.).]

[The *Tsung Chêng* (宗正) was the superintendent of the members of the imperial family. He was the *Shao Tsung Po* of the Later Feudal Period, corresponding to the *Tsung Jên Fu* of the Manchu Period. He settled the distinctions in the *san tsu* (三族), "three clans" (*i.e.*, grandfather, father, and self), separating the "near" (*ch'in*) from the "distant" (*su*) (*Yüan chien lei han*, *Shê kuan pu*, *Tsung Chêng Ch'ing*, 105*b*). He had three classes of subordinates (*Ch'ien Han shu*, c. xix.).]

[The *Chih Su Nei Shih* (治粟內史) was the Minister of Agriculture and Commerce. He corresponded to the *Hou Chi* of Shun's time and the *T'ai Fu Hsia Ta Fu* of the Chou (*Yüan chien lei han*, *Shê kuan pu*, *Ssü nung ch'ing*, p. 112*a*). He was assisted by two *Ch'êng*, and had as subordinates seven classes of officers, there being besides, in the various military districts and states, sixty-five officers set over matters relating to grain, agriculture, and waters (*Ch'ien Han shu*, c. xix.). The office corresponded to the *Hu Pu* of the Ming Period.]

[The *Shao Fu* (少府) was in charge of the emperor's rents, &c. (禁錢 *chin ch'ien*, lit., prohibited money, *sc.* money used in the prohibited part of the capital, *i.e.*, the palace). He was a *Shang Shu*, and collected the duties arising from, or payable in, the products of hills, lakes, and other waters, to be appropriated to the private expenses of the sovereign and imperial household (*Wên hsien t'ung k'ao*, c. 11, *Chih kuan shih i*, p. 69*a*; see also Yen Shih-ku of the T'ang dynasty). National expenses were under the charge of the *Ta Ssü Nung*. To the *Shao Fu* were attached twenty-three classes of subordinates, of which the last six were the eunuch classes, who were all dependents of this office (*Ch'ien Han shu*, c. xix.). The *Shao Fu* was the equivalent of the *Nei Wu Fu* of the Manchu Period (*Li tai chih kuan piao*).]

[To the various administrative departments were attached officials designated *P'u Yeh* (僕射) (*shê* here read *yeh*), who were formerly important military officials selected from the most skilful archers (*sc.* soldiers) to undertake administrative duties (*Wên hsien t'ung k'ao*, c. 11, *Chih kuan wu*, p. 29*b*); but under the Ch'in and Han the name was applied to certain officials of medium rank not having any duties as a class, but assisting in the functions of the various offices to which they were attached (*Ch'ien Han shu*, c. xix.).]

[There were 70 *Po Shih* (博士), Learned Scribes, whose duty was to give advice to the Emperor. They were the prototype of the *Kuo Tzü Chien* (Imperial Academy of Learning) of Sui and later times. Under the "First Emperor," owing to the destruction of literature and the sovereign's hatred of scholars, they "were content to possess their titles and were not employed" (*Shih chi*, c. vi., *Ch'in Shih Huang*).]

[In addition to the above, there were other palace and metropolitan officers, of whom the following are given as discharging important duties:—The *Chung Wei* (中尉) was the chief of the Metropolitan Police, who was aided by four classes of assistants and seven classes of subordinates (*Ch'ien Han shu*, c. xix.; *Yüan chien lei han*, *Shê kuan pu*, *Chih chin wu*, p. 160*b*). The *Chiang Tso Shao Fu* (將作少府) was the Surveyor of Imperial Buildings—a kind of Court Architect. He had two classes of assistants and 8 classes of subordinates (*Ch'ien Han shu*, c. xix.). He corresponded to the *Kung Kung* of Yao and Shun and the *K'ao Kung* of the *Chou Kuan* (*Wên hsien t'ung k'ao*, c. 11, *Chih kuan shih i*, p. 70*a*). The *Chan Shih* (詹事) was the Manager of the Households of the Empress and Heir Apparent. He had one assistant and two main classes of subordinates, subdivided into seven classes each, all being eunuchs (*Ch'ien Han shu*, c. xix.; *Yüan chien lei han*, *Chan Shih*, p. 136*a*). The *Tien Shu Kuo* (典屬國), or "Regulator of Dependencies," was concerned with barbarous tribes which submitted to China (see *Ch'ien Han shu*, c. xix. and *infra*). The *Nei Shih* (內史) was the Prefect of the Capital, doing the justice's work of the *ti fang kuan* of Manchu times (*ibid.*). He was adopted from the Chou system (*Kuang shih lei fu*, c. 7, *Chih kuan pu*, p. 7*b*). The *Chu Chüeh Chung Wei* (主爵中尉), *Hu Chün Tu Wei* (護軍都尉), several classes of *Hsiao Wei* (校尉), and the *Fêng Chü Tu Wei* (奉車都尉), were military and police officers charged with the superintendence of the nobles, keeping order in the capital, care of the imperial carriages, &c. (see *Ch'ien Han shu*, c. xix.; *Yüan chien lei han*, *Shê kuan pu*, p. 190*a*, &c.). Various other officers discharging palace duties, *e.g.*, the *Shih Chung* (侍中), "attendants in the inner palace," who superintended the Emperor's food, medicine, clothing, &c.; the *Huang Mên Shih Lang* (黃門侍郎), "attendants at the yellow door," personal butlers of the sovereign; *Chi Shih Chung* (給事中), imperial messengers; *San Ch'i Shêng* (散騎省) and *Chung Ch'ang Shih* (中常侍), mounted attendants, &c. (*Wên hsien t'ung k'ao*, c. 11, *Chih kuan ssü*, pp. 18*a*–19*a*; *Yüan chien lei han*, *Shê kuan pu*, p. 82*a*).]

Provincial administration.—[At the head of the provincial administration the Ch'in appointed a *Chien Ch'a Yü Shih* (監察御史), or *Chien Yü Shih*, a Superintendent, who was invested with the power of controlling the acts of the *Chün Shou* (郡守), or Administrator, the ruler of the largest administrative district (see *supra*, *Divisions*). The former was apparently an imitation of the *Chien* of the mythological Huang Ti, corresponding to the *Chou Mu*, *Ming*, and *Mu* of feudal times. The latter was the same as the *Chih Fu*, Prefect, of the Manchu Period. He had as assistants a *Ch'êng* (丞), who was in charge of the Provincial Treasury, and a *Chang Shih* (長史), who corresponded to the modern *T'ung Chih*, Sub-Prefects. Another or subordinate official of

the prefectural class was the *Ts'ang Ts'ao Shih* (倉 曹 使), the equivalent of the *Ts'ang Ta Shih*, Granary Keeper, of the Manchu Period.]—*Li tai chih kuan piao* and *Yüan chien lei han, Tz'ü shih*, p. 184*b*, *T'ai shou*, p. 193*b*.

[The troops of each *chün* were under a military governor, or *Chün Wei* (郡 尉): see MILITARY.]

[The Magistrates of *Hsien* districts of more than 10,000 homes or families were called *Ling* (令); those of districts with less than this number, *Chang* (長). Their subordinates were officials divided into two classes: (1) *Chang Li* (長 吏), consisting of *Ch'êng* (丞), Assistants, and *Ling* (令), Captains; and (2) *Shao Li* (少 史), consisting of *Tou Shih* (斗 食) and *Tso Shih* (佐 吏) (see *infra*). There were also *Tu Shui Chang Ch'êng* (都 水 長 丞), officials of the class of sub-prefects, in charge of river works, &c.]—*Ibid.*, *Hsien ling*, p. 206*b*.

206 B.C.—A.D. 221. *Central Administration.*—[The system of the Ch'ins was adopted, on their accession to power, by the Hans. This is ascribed to the necessities of the time. The *T'ai Wei*, *Ch'êng Hsiang*, or *Hsiang Kuo*, and *Yü Shih Ta Fu* filled the highest posts in the administration. Both *Tso* and *Yu Ch'êng Hsiang* are mentioned, the statement in the Han books that during the reign of Kao Tsu (206–194 B.C.) and part of that of Wên Ti there was only one (since Wên Ti "returned to the practice of having only one *Ch'êng Hsiang*") being probably an error.]—*Yüan chien lei han*, *c.* 64, *Shê kuan pu*, pp. 11-14.

[Under the Hans, the duties of the *Yü Shih Ta Fu* (v. *supra*) began to be of the same nature as under the Manchu Period, viz., 糾 察 之 任 an office of search and investigation. "They are scattered over the empire to collect information for the sovereign, and to write directly to him, communicating to him facts or reports with their opinions and advices. They are commonly called 言 官 *yen kuan*, 'word officers': persons whose sole duty it is to *speak* to the sovereign; for they possess no authority, either over other officers of government, or over the people. They are spies upon the people, upon the provincial governments, and upon the conduct of the sovereign himself. Several of them have suffered death for their too free remarks on their master's public or private character."—*Morrison, Dic.*, i. i. 815.]

[Changes, however, soon began to be made. In 187 B.C., the *T'ai Fu* (太 傅), Grand Preceptor, was instituted, being suppressed and re-established at intervals. In 178 B.C. Wên Ti, as stated above, returned to the practice of having only one *Ch'êng Hsiang*, who received 60,000 *ch'ien* per month as salary. Ching Ti (156–140 B.C.) changed the name of the *T'ai Wei* to *Ta Ssü Ma* (大 司 馬), the *Chiang Tso* of the Ch'in to *Ta Ch'ang Ch'iu* (大 長 秋), Minister in charge of the Empress' Palace, employing in the post either palace officials (中 人 *Chung Jên*) or scholars (士 人 *Shih Jên*), instituted a *Tso* and *Yu Nei Shih* (左 右 內 史) in place of the single *Nei Shih*, Metropolitan Prefect, of the previous Period, and changed (145 B.C.) the *Chu Chüeh Chung Wei* to *Tu Wei* (都 尉). In 144 B.C. the *Fêng Ch'ang* was changed to the *T'ai Ch'ang* (太 常), the *Chiang Tso Shao Fu* to the *Chiang Tso Ta Chiang* (將 作 大 匠), the *Tien K'o* to the *Ta Hang Ling* (大 行 令), and, in 143 B.C., the *Chih Su Nei Shih* to the *Ta Nung Ling* (大 農 令). Wu Ti, at the beginning of his reign (140 B.C.), abolished the *T'ai Wei* and instituted the *Ta Ssü Ma* (大 司 馬), giving him the additional title of *Chiang Chün* (將 軍), General. In the same year, the *Wei Wei* was changed to the *Chung Ta Fu Ling* (中 大 夫 令), but was soon changed back again. Wu Ti, also, adopted the custom of employing a eunuch to transact official business in the inner palace (which the four *Shang Shu*, inherited by the Hans from the Ch'ins, might not enter), Ssü-ma Ch'ien being appointed to the post. In the post of *Shang Shu Ling* he also employed eunuchs, changing the name to *Chung Shu Yeh Che Ling* (中 書 謁 者 令). The *Chung Ta Fu* adopted from the Ch'ins was also supplanted by the *Kuang Lu Ta Fu* (光 祿 大 夫), assisted by a *Kuang Lu Hsün* (光 祿 勳), whose duty was to present business matters to the sovereign and give information when required. A *Tso* and *Yu Tu Shui Shih* (左 右 都 水 使), Left and Right Official Superviser of Waters, was appointed to control the unwieldy class of *Tu Shui* officers. The *Yu Nei Shih* of *Ching Ti* (see *supra*) became the *Ching Chao Yin* (京 兆 尹), Metropolitan Prefect, the *Tso Nei Shih* the *Tso Fêng I* (左 馮 翊), and the *Tu Wei* (see *supra*) the *Yu Fu Fêng* (右 扶 風), making with the *Tso Fêng I* and *Ching Chao Yin*, three *Fu* (輔) or "Supporters," *i.e.*, officials at the head of the districts "supporting," or surrounding, the metropolis. The three *Fu* lived in the capital, Ch'ang An. In 139 B.C. Wu suppressed the *T'ai Wei*. In 136 B.C. he instituted the *Wu Chin Po Shih* (五 經 博 士), scholars learned in the Five Classics. The *Ch'êng Hsiang* (see *supra*) is now said to have united in one man the duties of the *San Kung*, this name not being used after this time. In 120 B.C. the *Shu Kuo Chih Tu Wei* (屬 國 置 都 尉) was added to the *Tien Shu Kuo*, and in 118 B.C. Wu instituted the *Ta Ssü Ma* in the place of the former *T'ai Wei*. In 116 B.C. a *Shui Hêng Tu Wei* (水 衡 都 尉), with Assistants, was appointed to take care of the palace grounds. About the same time Wu also abolished the eunuch post of *Lu Shang Shu* above-mentioned, the rank (or official name) only being retained. In 104 B.C. he instituted further changes: the *Lang Chung Ling* became the *Kuang Lu Hsün* (光 祿 勳); the *Tien K'o* the *Ta Hung Lu* (大 鴻 臚); the *Chih Su Nei Shih* the *Ta Ssü Nung* (大 司 農); the *Chung Wei* the *Chih Chin Wu* (執 金 吾); whilst the name and duties of the *Tu Wei*, formerly the *Chu Chüeh Chung Wei*, were fundamentally altered: he received the name of *Yu Fu Fêng* (右 扶 風), and administered the western part of the metropolitan prefecture, the *Tso Fêng I* being in charge of the eastern, and the *Ching Chao Yin* of the central part. These three officials were known as the *San Fu* (三 輔), Three Supporters, the same name being applied to their districts. The feudal lords were assigned to the *Ta Hung Lu* (see *supra*), who thus acquired the principal function of the former *Chu Chüeh Chung Wei*. Hsüan Ti (73–48 B.C.) continued the post of *Ta Ssü Ma*, but did not add the title of *Chiang Chün*, nor grant him a seal, nor give him assistant officers. This emperor also instituted the *Ching Yen Kuan* (經 筵 官), a post occupied by learned men summoned to discourse on the ancient classical books. For many years there were no permanent appointments to the office, the sovereign calling upon any scholar he chose to read and explain the ancient books. Ch'êng Ti (32–6 B.C.) changed the *Yü Shih Ta Fu* to *Ta Ssü K'ung* and appointed a *Ta Ssü Ma* and a *Ta Ssü K'ung* to discharge the duties of Prime Minister. The *San Kung* (these two and the *Ch'êng Hsiang*) were thus *Tsai Hsiang*. The *Ta Ssü Ma* now occupied a slightly better position than he had under Hsüan Ti: he was not styled *Chiang Chün*, but he had a seal and assistants, and his salary was the same as that of a *Ch'êng Hsiang*. The office of eunuch in charge of the chief Ministers was abolished and the five *Shang Shu* re-established. They were charged with the care of all plans, books, secret records, memorials to the throne, and the promulgation of imperial commands, both in the capital and provinces. The duties of the post are, however, described as being of a very light nature compared with what they became under the following dynasty. To the *Ta Ch'ang Ch'iu* (see *supra*), the Great Officer in charge of the Empress' household, Ch'êng Ti added a *T'ai P'u* (太 僕), who had charge of the imperial carriages and horses. These officers were generically known as *T'ai Hou Ch'ing* (太 后 卿), Empress Dowager's Ministers, and ranked above the *Ch'êng Ch'ing* (正 卿), first-class Ministers. The name *Ch'ang Ch'iu* was taken from the Empress Dowager's palace. There was also a *Ch'ang Hsin Chan Shih* (長 信 詹 事), Supervisor of the *Ch'ang Hsin* Palace, *Ch'ang Hsin Shao Fu* (長 信 少 府), and *Ch'ang Lo Shao Fu* (長 樂 少 府), all having control of the affairs of the Empress' palace. Their office was the same as that of the *Ch'ang Ch'iu*, their position above his.]—*Ch'ien Han shu*, *c.* xix.; *Yüan chien lei han*, *Shê kuan pu*, *c.* 61, etc.; *Wên hsien t'ung k'ao*, *c.* 11.

[From the accession of the Hans, the chief administrative functions, following the system adopted from the Ch'ins, had been in the hands of the *Shang Shu*. Ch'êng Ti, in the first year of his reign (32 B.C.), appointed five *Shang Shu*, one of whom was made *P'u Yeh*, the other four being called *Ssü Ts'ao* (四 曹), the Four Boards (lit. classes, *sc.* of officials under a chief or president, *i.e.*, administrative boards). To these a fifth was afterwards added. These *Ts'ao*, now first introduced, corresponded to the *Pu* of later times. Their names and functions were as follows:—(1) *Ch'ang Shih Ts'ao* (常 侍 曹), controlling all the Ministers, and corresponding to a Board of Civil Office; (2) *Êrh Ch'ien Shih Ts'ao* (二 千 石 曹), with similar duties in relation to the provincial adminstration; (3) *Min Ts'ao* (民 曹), controlling and presenting to the throne all matters relating to the people, corresponding to the Board of Revenue of subsequent times; (4) *K'o Ts'ao* (客 曹), superintending foreigners in the empire and (?) the eastern (*i*) and northern (*ti*) barbarians of the outer kingdoms; and (5) *San Kung Ts'ao* (三 公 曹), established later, and controlling judicial matters, and corresponding to the *Hsing Pu* of T'ang and later times.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan wu*, pp. 27*b*–32*a*.

[At a subsequent period there were six *Ts'ao*, and to these Kuang Wu added a *Ling* (令) and a *P'u Yeh* (僕 射). These eight officers altogether were spoken of under the designation of *Pa Tso* (八 座), Eight Thrones.]—*Yüan chien lei han*, *c.* 73, *Shê kuan pu*, pp. 1*b*–2*a*.

[Appointment to office had hitherto been by recommendation (*chien*), but Ch'êng Ti in the 4th year of his reign (29 B.C.), instituted a system of civil service examinations. The management of these was placed under the *Ch'ang Shih Ts'ao* and carried on under rules drawn up by the *K'o Ts'ao*. In order not to interrupt the account of the executive structure, a description of it is placed at the end.]

[In the time of Ai Ti (6 B.C.–A.D. 1), the post of *Ch'êng Hsiang* was abolished, the *Ssü T'u*, which had lapsed under the earlier Han emperors, was re-established, and the *Ta Ssü Ma* (大 司 馬), *Ta Ssü T'u* (大 司 徒), and *Ta Ssü K'ung* (大 司 空), now formed the *San Kung* (三 公). Ai Ti also deprived the *Ta Ssü Ma* of his seal, but he retained the title of *Chiang Chün*, which, however, was taken away when, in the reign of *Yüan Shou* (2 B.C.–A.D. 1) the seal and assistants were again restored to him. His status was higher than that of the *Ta Ssü T'u*. During the same reign the title *Ch'êng Hsiang* was changed to *Ta Ssü T'u*. In the middle year of Ai Ti (4 B.C.), public affairs were transacted by the *T'ai Ko* (臺 閣), Prime Minister's Office (equivalent to the *Nei Ko* of the Manchus). Thus the *Shang Shu* came to have the responsibility in very secret and important affairs. The *T'ai Shih* and *T'ai Pao* were instituted in A.D. 1 (see *supra*, *T'ai Fu*). When Wang Mang was carrying on the government for the youthful emperor (*circ.* A.D. 1–9) he instituted four *Fu* (輔), "Supporters," ordaining that the *T'ai Shih*, *T'ai Fu*, *Kuo Shih* (國 師), and *Kuo Fu* (國 傅) (the *Wên hsien t'ung k'ao* has *Kuo Chiang* 將), should fill those posts, having the rank of *Shang Kung* (上 公), "Upper Duke." He appointed the *Ta Ssü Ma*, *Ta Ssü T'u*, and *Ta Ssü K'ung* as the *San Kung*. He also instituted the *Chung San Ta Fu* (中 散 大 夫), who was the same as the Ch'in's *T'ai Chung Ta Fu*. When he usurped the government (A.D. 9) he endeavoured to remodel the official system on the basis of that existing in the ancient times. But the disapproval of his officers, combined with the harshness of his rule, only threw everything into confusion].—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan êrh*, pp. 7*a*–10*b*; *Chih kuan san*, p. 12*b*; *Yüan chien lei han*, *Shê kuan pu*, p. 131*b*.

[On the accession of the Later Hans (A.D. 25–221), Kuang Wu (25–58), practised economy, abolishing many posts. Offices were united and officials reduced in number. Having done away with the posts of *Ch'êng Hsiang* and *Yü Shih*, he ordained that the affairs of the government should be administered by the *San Ssü* (*Ta Ssü Ma*, *Ta Ssü T'u*, and *Ta Ssü K'ung*). Thus the *San Kung* again became *Tsai Hsiang*. The *T'ai Shih* was set aside, being only re-appointed towards the close of the dynasty. In the 27th year of the reign *Chien Wu* (52) the old name of the *T'ai Wei*, viz., *T'ai Wei Kung* (太 尉 公), was restored. Most sovereigns on their accession gave to the *T'ai Fu* (太 傅) the joint management of the *Shang Shu's* affairs (the principal affairs of State). He controlled the military affairs of the empire, supervising the work of the military officers. The *Ta Ssü T'u* had control of the affairs of the people, teaching them ceremony and right conduct (or loyalty). When the government had any matter of doubt or importance to be decided, he discussed it with the *T'ai Wei*. In the same year the *Ta Ssü K'ung* became the *Ssü K'ung Kung*. All matters concerning the building of city walls, official yamêns, repairing of drains, ditches, graves, embankments, &c., were under his charge. He and the *T'ai Wei* acted together in important matters. The *Ta Ssü Ma* was abolished, the duties of the post being discharged by the *T'ai Wei*. Thus the changes were often rung on the *T'ai Wei* and the *Ta Ssü Ma*, they not being simultaneously appointed.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan san*, p. 12*b*; *Chih kuan êrh*, pp. 7*a*–10*b*; *Chih kuan wu*, pp. 27*b*–31*a*.

[Under the later Han dynasty the *Shang Shu* had become very important, issuing from their boards the emperor's commands, and presenting to the sovereign national affairs of the utmost importance. All government affairs were controlled by them, the *San Kung* only receiving "completed" affairs. The five *Ts'ao* (曹) were under six *Shang Shu*, the *San Kung Ts'ao* (三 公 曹) having two *Shang Shu*, who received the annual reports of all the *Chou* and *Chün* officials. The *Li Ts'ao* (吏 曹), Board of Civil Office, called in the *Topography of the Later Han*, *Ch'ang Ssü Ts'ao* (see *supra*) and *Hsüan Pu* (see *infra*), had control of the selection and recommendation of officials and of the imperial fasting and worship. The *Erh Ch'ien Shih Ts'ao* (see *supra*) is called *Tsei Ts'ao* (賊 曹), indicating the judicial nature of some of its functions. The *Min Ts'ao* was continued as under the previous dynasty. Kuang Wu Ti (25–58) converted *Erh Ch'ien Shih Ts'ao* and the *K'o Ts'ao* into the *Nan Chu K'o Ts'ao* (南 主 客 曹) and *Pei Chu K'o Ts'ao* (北 主 客 曹), Southern and Northern Boards.]—*Wên hsien t'ung k'ao*, *Chih kuan wu*, pp. 27*b*–31*b*.

[Under the Hou Han there were 36 *Shang Shu Shih Lang* (尚 書 侍 郎) (see *supra*, *Shang Shu Lang*). This dynasty also employed eunuchs in the offices of *Chan Shih* and *Shao Fu* in the empress' palaces (see *supra*). The *Shih Chung* of the Ch'in had been followed by the *Shih Chung* (侍 中) and *Chung Ch'ang Shih* (中 常 侍) of the Earlier Hans. Their duty was to inspect the work of the *Shang Shu*. Under the later Hans, the *Chung Ch'ang Shih* assisted in the management of palace affairs (such as laying out gardens, preparations for feasts, &c.), and furnished information to the emperor when required. In the reign of *Yung P'ing* (58–76) the number of officers thus employed was fixed at four. In the reign of Chang Ti (76–89) the title of *Lu Shang Shu* (錄 尚 書), Director of State Affairs, began to be used, that monarch employing the *T'ai Fu* and *T'ai Wei* jointly in this office (cf. *supra*, *Shang Shu*). Huan Ti (147–168) instituted a *Mi Shu Chien* (祕 書 監), Controller of Secret Documents. Ling Ti (168–190) re-instituted the *Ta Ssü Ma*, and the *Hsüan Pu* (選 部), Board of Official Recommendations, was first established. It was also called *Shang Shu T'ai* (尚 書 臺), and *Chung T'ai* (中 臺). At the end of this reign the *Ta Ssü Ma* and *T'ai Wei* existed together. In the 13th year (208) of the reign of Chien An the office of *San Kung* was abolished. By Hsien Ti's time (190–221) the *Ch'êng Hsiang* was re-appointed, and there was also a *Hsiang Kuo* (220). *Tso* and *Yu P'u Yeh* (左 右 僕 射) were also appointed.]—*Wên hsien t'ung k'ao*, *Chih kuan wu*, pp. 27*b*–31*b*; *Chih kuan êrh*, pp. 7*a*–10*b*; *Chih kuan san*, p. 12*b*; *Yüan chien lei han*, *Shê kuan pu*, p. 118*a*.

[The *provincial administration* under the Ch'ien Han was carried on by *Chou Mu* (州 牧), Governors-General, corresponding to the Viceroys of the Manchu Period. Under these were the *Chang* (長) (officials receiving under 10,000 *hu* were called *Chang*, those receiving over 10,000 being called *Ling*), *T'ai Shou* (太 守), *Nei Shih* (內 史), and *Kuo Hsiang* (國 相), four classes of officials of equal rank, corresponding to the modern *Chih Fu*, or Prefect. Next in order were the (Prefectural) *Ch'êng* (丞) and *Chih Chung* (治 中), equivalent to the modern Sub-Prefect (*T'ung Chih*). Following these were the *Pieh Chia* (別 駕) (modern *T'ung P'an*), *Chu Pu* (主 簿) (modern *Ching Li*), *Chüeh Ts'ao Tsei Ts'ao Yüan* (決 曹 賊 曹 掾) (modern *Ssŭ Yü*), *Ling Chang* (令 長) and *Hsiang* (相), these two being both District Magistrates, the latter in an appanage of an imperial relative. The (Magisterial) *Ch'êng* (丞) discharged the duties of Assistant District Magistrate (the modern *Hsien Ch'êng*), and other less important posts were the *Chu Pu* (主 簿) and *Wei* (尉) (modern *Tien Shih*). The modern *Ho Tao Tsung T'u*, Director-General of River Embankment Works, was not a post existing under the Ch'in, but under the Ch'ien Han similar duties were in the hands of a *Tu Shui Shih Chê* (都 水 使 者), *Tu Shui Chang Ch'êng* (都 水 長 丞), and *Ho Ti Yüan hi* (河 隄 員 史).]—*Li tai chih kuan piao*, vol. iii.

[The provincial administration of the Hou Han was similar. The difference was that in the class of Prefects there were no *Chang*, *Nei Shih*, *Chih Chung*, *Pieh Chia*, or *Chüeh Ts'ao Tsei Ts'ao Yüan*, the *Ch'êng* being supplanted by a *Chang Shih* (長 吏). In the *Hsien* class the *Chu Ts'ao* (諸 曹) took the place of the *Chu Pu*, and the *T'u Kuan* (土 官) and *Shui Kuan* (水 官), officials in charge of the duties accruing from lands and waters, were instituted. The *Ho Ti Yeh Chê* (河 隄 謁 者) supplanted the *Tu Shui Shih Chê*, and the *Tu Shui Ts'an Chün* (都 水 參 軍) the *Tu Shui Chang Ch'êng*.]—*Ibid.* vol. iii.

[The size of the administrative machinery may be judged from the statement that, under the Han, reckoning from the *Ch'êng Hsiang* down to the *Tso Li*, there were in all 130,285 officials, reduced under the Hou Han to 7,567.]—*Wên hsien t'ung k'ao*, c. 11, *Chih kuan i*, p. 6*b*.

[A classification of the official hierarchy is frequently used in the Chinese histories under which officials are mentioned, not by their specific title, but by reference to the amount of salary (in money and kind) drawn by the various ranks. (This would be equivalent to mention of classes of English officials drawing, *e.g.*, £1,000 *per annum*, £800 *per annum*, etc.) According to the *Hou Han shu* (*c.* xxxviii.) these classes were as follows (some of the officials included in each class being added):—(1) *Chung Erh Ch'ien Tan* (中二千石), officials who received 350 *hu* (斛) of grain per month, paid, as in all the other grades, partly in money and partly in kind, *i.e.*, 9,000 pieces of money (錢 *ch'ien*) and 72 *hu* of rice. Those included in this class were the *Chiu Ch'ing*, "Nine Ministers." (2) *Erh Ch'ien Tan* (二千石): 120 *hu* (6,500 *ch'ien* and 36 *hu*). The second class included the *T'ai Tzŭ T'ai Fu* and *T'ai Tzŭ Shao Fu*, *Chiang Tso Ta Chien*, *Tien Shu Kuo*, *Shui Hêng Tu Wei*, *Ching Chao Yin*, etc. (3) *Pi Erh Ch'ien Tan* (比二千石): 100 *hu* (5,000 *ch'ien* and 34 *hu*). This class included the *Kuang Lu Ta Fu*, *Fêng Chü Tu Wei*, *Fu Ma Tu Wei*, and *Chün Wei*. (4) *Ch'ien Tan* (千石): 80 *hu* (4,000 *ch'ien* and 30 *hu*). Those drawing this amount were the classes of *Ch'êng Hsiang Chang Shih*, *Ta Ssŭ Ma Chang Shih*, *Yü Shih Chung Ch'êng*, and *Chiu Ch'ing Ch'êng*. (5) *Pi Chien Tan* (比千石): (amount not stated). In this class were the *Kuang Lu Tu Chung Ta Fu* and the classes of *Kuang Lu Yeh Che* and *Kuang Lu P'u Yeh*. (6) *Pa Pai Tan* (八百石): (amount not stated), including the *T'ai Tzŭ Chia Ling*. (7) *Pi Pa Pai Tan* (比八百石): (amount not stated), including the *Chien Tu Fu* of the *Kuang Lu Hsün*. (Nos. 6 and 7 existed under the Ch'ien Han, but not under the Hou Han.) (8) *Liu Pai Tan* (六百石): 70 *hu* (3,500 *ch'ien* and 21 *hu*). This class included the *Kung Chü Ssŭ Ma Ling* of the *Wei Wei*, the *Wei Shih Ling*, the class of *T'ing Wei Tso Yu P'ing*, *T'ai Tzŭ Shu Tzŭ*, and *T'ai Tzŭ Chiang Tso Ta Chiang Ch'êng*. (9) *Pi Liu Pai Tan* (比六百石): 60, later 50 *hu*, including the *Po Shih* under the *T'ai Pu* who was under the *T'ai Ch'ang*, and the *I Lang* and *Chung Lang* under the *Kuang Lu*. (10) *Wu Pai Tan* (五百石): (amount not stated), including the class of *Hsien Chang*. (11) *Ssŭ Pai Tan* (四百石): 45 *hu* (2,500 *ch'ien* and 15 *hu*), later, 30 and 45 *hu*, in which class were the *T'ai Tzŭ Chung Hsün* and the class of *Hsien Ch'êng*. (12) *Pi Ssŭ Pai Tan* (比四百石): later, 40 *hu*, comprising the class of *Kuang Lu Shih Lang*. (13) *San Pai Tan* (三百石): 40 *hu* (2,000 *ch'ien* and 12 *hu*), including the class of *Kuang Lu Lang Chung*. (14) *Pi San Pai Tan* (比三百石): 37 *hu*. This rank did not exist under the Ch'ien Han, but was added by the Hou Han. It included the *Yü Yüan* in the *T'ai Wei's* and all the *Ts'ao* (Boards), the *Lang Chung* of the *Wu Kuan*, 5 principal officials, of the *Kuang Lu's* Office, as well as his *Tso* and *Yu Lang Chung*. (15) *Erh Pai Tan* (二百石): 30 *hu* (1,000 *ch'ien* and 9 *hu*), including the class of *Hsien Wei*. (16) *Pi Erh Pai Tan* (比二百石): 27 *hu*. This rank also did not exist under the Ch'ien Han. It included the *Ta Chiang Chün's T'un Chang* (Captains of 10 soldiers) and the *T'ai Wei Shu*, officers under the *T'ai Wei*. (17) *I Pai Tan* (一百石): 16 *hu* (800 *ch'ien* and 4 *hu* 8 *tou* 斗). Of this rank were the *T'ai Wei's Ling Shih* (lesser officials than the *T'un Chang*, and the *Chiu Ch'ing's Li*, official employés of the Nine Ministers. (18) *Tou Shih* (斗食): 11 *hu*. These were small underlings of the *Chia Ch'ing*. (19) *Tso Shih* (佐史): 8 *hu*. The *Tso* and *Shih* were also classes of underlings. The Hou Han abolished Nos. (6), (7), and (10), added Nos. (14) and (16), and changed the *Tou Shih* to the *Tou Tan* (斗石) and the *Tso Shih* to the *Tso Li* (佐吏).—See also *Wên hsien t'ung k'ao*, *c.* 11, p. 140*a*–*b*.]

[Under the rule of the Ch'ins there was instituted a system of honorary ranks which has been continued to modern times. An official, in addition to his substantive duties, took rank also in a hierarchy which was simply of an honorary character. This institution originated with Wei Yang, Prince of Shang, Minister to Duke Hsiao (361–338 B.C.), who organized a hierarchy of eighteen degrees. When Ch'in Shih Huang had put an end to feudalism, two new degrees were added, which were conferred on those lords who had become high dignitaries of the empire. Beginning with the lowest, the twenty degrees of this hierarchy were as follows:—(1) *Kung Shih* (公士), a title distinguishing the bearer from ordinary people (*Shih* 士). (2) *Shang Tsao* (上造), *i.e.*, the emperor 上 has made 造 the decree ennobling those who bear this title. (3) *Tsan Niao* (簪裊), a title taken from the horse with silk harness which those who had this title were allowed to ride (coloured bridles are still conferred by the emperor as honorific distinctions). (4) *Pu Kêng* (不更), bearers of this title are not subject to police corvées. All persons invested with one of these four degree constituted the class of *Ch'i Shih* (齊士). (5) *Ta Fu* (大夫), or, as they are called in the *Yüan chien lei han*, c. ccxxi., p. 7*b*, *Hsiang Ta Fu* (鄉大夫), were the first who had the rank of *Ta Fu*. (6) *Kuan Ta Fu* (官大夫). (7) *Kung Ta Fu* (公大夫). (8) *Kung Ch'êng* (公乘), who the right to ride in a government chariot. (9) *Wu Ta Fu* (五大夫), or *Ta Fu* of the fifth rank. Nos. 5 to 9 together constituted the class of *Ta Fu* (大夫). (10) The *Tso Shu Chang* (左庶長). (11) The *Yu Shu Chang* (右庶長) (*Shu Chang* meaning the chief of a multitude). (12) The *Tso Kêng* (左更). (13) The *Chung Kêng* (中更). (14) The *Yu Kêng* (右更) (*Kêng* means here commander of officers of the police class). (15) *Shao Shang Tsao* (少上造). (16) *Ta Shang Tsao* (大上造) (15 and 16 were chiefs of the *Shang Tsao*, or dignitaries of the second degree). (17) The *Ssŭ Chü Shu Chang* (駟車庶長), who had the right to ride in a four-horsed chariot. (18) The *Ta Shu Chang* (大庶長). These nine categories together constituted the class of *Chiu Ch'ing* (九卿), Nine Chief Ministers. (19) *Kuan Nei Hou* (關內侯), Marquis of the country inside the passes, so called because though they had the title of Marquis, they had no fiefs of their own and resided at the capital. The title *Lun Hou* (倫侯), also, occurs in an inscription erected in 219 B.C. by Ch'in Shih Huang on the Lang Ya Terrace, and is said, but this open to doubt, to be identical with the *Kuan Nei Hou*. (20) *Ch'ê Hou* (徹侯), lords who had fiefs and resided in them. Wu's personal name being Ch'ê, the title from his time was changed to *T'ung Hou* (通侯) or *Lieh Hou* (列侯).—*Chavannes*, ii. 527–30. See also *supra*, RANKS.

[For the feudalism which survived into, and was gradually suppressed during the earlier part of, the Han period, see POLITICAL.]

Civil Service Examination System.—"The best known of Chinese institutions, the system of literary examinations, dates from the Han dynasty. The revival of letters was followed, or rather accompanied, by the restoration of schools, where the literati were once more free to discuss the principles of government. In 170 B.C. Wen-ti repealed the law of T'sin, which made it a crime to speak against the government, on the ground that without free criticism the Emperor could not tell what to amend in his administration. The existing schools seem to have enjoyed some degree of official recognition, as Wu-ti was asked, in 140 B.C., to cause all officers to be taken from them. The imperial college called Thai-hio, however, was not founded till 124 B.C.; it was to admit fifty scholars, 18 years old or upwards, chosen from lists presented by the Minister of Rites on the one hand, and the provincial officers on the other (*Biot, Essai sur l'Instr.*, &c., p. 97). These pupils were regularly examined and promoted according to merit. Admission to these scholarships, as they may be called, was by nomination; but unsuitable or incapable candidates were dismissed at the first examination, and the patron was punished for a bad choice as for corruption in levying the taxes."—*Simcox*, ii. 118.

"The introduction of the 'Competition Wallahs' into the public service must have been effected gradually. It was specified what offices they were at each stage qualified to hold—those, for instance, who could write 9,000 characters or more were eligible as annalists,—but as offices of the same grade were already filled by non-collegians, the grades reached by examination are liable to be confused with the functions of equal profit and dignity not so reached. While only a few scholars were turned out every year, they were naturally absorbed by the teaching and examining bodies employed by the State, so that the first effect of the literary revival seems to have been mainly the addition of some endowed schoolmasters to the ranks of the official hierarchy."—*Ibid.* ii. 119.

"Shortly before the usurpation of Wang-mang, the number of scholars on the imperial foundation was raised to 3,000, in memory of the number of disciples said to have followed the teaching of Confucius. The revival of a systematic scheme of local instruction is ascribed to a governor of Ching-tu-fu, about 140 B.C., and the example of this distant and isolated settlement was recommended for general imitation throughout the empire. There were two grades of local schools and two of higher colleges, and many scholars are commemorated in later ages in connection with their care for these schools in their native places or in the districts under their government. In less than 150 years, twenty edicts were issued, urging the importance of employing capable persons in the public service; and the informal review of all the talents and all the virtues of a district, which would enable a provincial governor to 'present' such persons to the Emperor, seems to have been the germ out of which the present examination system grew."—*Ibid.* ii. 119–20.

"There was an intermediate stage, when the State aimed at conducting the higher education of its future employees; and then success in the provincial examinations was the most obvious qualification for selection as an imperial scholar. Subsequently the examination test was retained and used more and more widely, without reference to the imperial colleges. The number of students allowed to be recommended for examination was limited in proportion to the population, as the number of degrees to be conferred annually is now. In the reign of Ping-t (1–6 A.D.), we are told that forty of the first class of competitors became officers, twenty of the second class were joined to the household of the Heir Apparent, and forty of the third class entered the department of the Minister of Rites. One of the innovations of Wang-mang was that he obliged the sons of superior officers to pass the public examination as a condition of receiving office."—*Ibid.* ii. 120.

"It is clearly explained that under the Eastern Hans there were two alternative modes of entry to the public service:—promotion from inferior posts, in which the aspirant was the employee of an officer, not of the State; and appointment to office as a reward for success in the examinations, besides the casual admissions granted on the ground of birth or favour. An empress in the 2nd century A.D. founded a school for the education of royal children of both sexes, and as it was to be open to the 'four families' of external relations [see *Simcox, Prim. Civ.*, ii. 492–5], it would seem that the empress had some intention of assailing the established mode of tracing relationships in the male line only; and as the logical result of this would have been to enable women to reign in their own right—which the empress mothers often felt well able to do—it is not surprising that the scheme for the higher education of women met with little favour, and was allowed to perish with its originator."—*Ibid.* ii. 120.

In 136, "the degree of 五經博士 Scholar in the Five Classics [see *supra*, *Executive*] was instituted; and in 134 followed the degree of 孝廉 *hsiao lien*, which is equivalent to the modern *chü jên*. A proclamation was issued calling for men of genius to present themselves at Court."—*Giles, Bio. Dic.*, p. 492.

[For the various grades of schools, see ACCESSORY INSTITUTIONS.]

Embassies.—[The first embassy to Khotan was sent in the reign of Wu-ti, 140-87 B.C. It was apparently semi-military, semi-commercial, and not permanent.]—*Simcox*, ii. 108, note.

2. *Legislative.*—[The sovereign was legislator, commanding laws to be made or revised. Hu Hai (the Second Emperor) appointed Chao Kao, a eunuch, chancellor for the purpose of revising the criminal law.]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, p. 96*a*.

[When Kao Ti entered the capital Hsien Yang, he proclaimed to the people that he would enforce only three punishments, namely, death for murder, wilful wounding, and robbery. Nevertheless, the law by which the relatives of a criminal were punished remained in force. When he found that the above three punishments were not sufficient to suppress disorders, he ordered Hsiao Ho to study the laws of the Ch'in dynasty and adopt what was suitable to his own time. Nine laws were accordingly enacted.]—*Ibid.* p. 96*b*.

3. *Judicial.*—[Judicial administration was not completely differentiated, the officers charged with these functions having at times also control of fiscal and postal matters. Under the Ch'in (221–206 B.C.) the officer charged with the administration of the criminal law was called *T'ing Wei* (廷尉), and to him all criminal cases were submitted for investigation. The modern Board of Punishments was represented by a *Shang Shu*, Secretary of State. The *T'ing Wei* was continued by the Earlier and Later Hans (the name being changed to *Ta Li* (大理) in the time of Ching Ti (156–140 B.C.), the duties of the judicial *Shang Shu* of the Ch'in being discharged under the Ch'ien Han by the *San Kung Ts'ao Shang Shu*, and under the Hou Han by the *Êrh Ch'ien Tan Ts'ao Shang Shu*, this officer (whose office was also called *Tsei Ts'ao*, "Robbers' Office") being charged with the administration of laws governing the use of water and fire, burglary, and also civil cases. The provincial officers who held judicial powers under the Ch'in were the *Chün Shou*, *Chang Shih*, *Ling Chang*, and *Ch'êng*; under the Ch'ien Han, the *T'ai Shih*, *Nei Shih*, and *Kuo Hsiang*, the *Chih Chung*, and the *Pieh Chia*; under the Hou Han, the *T'ai Shou* and *Kuo Hsiang*, and the *Chang Shih*.]—*Li tai chih kuan piao*, and *Yüan chien lei han, Shê kuan pu*, pp. 65*a*, 107*a*, *&c.*

[Following the system laid down by Shang Yang (Wei Yang: see previous Period) the Ch'in rulers enacted many horrible punishments, such as cutting off extremities, taking out ribs, etc., and passed laws by which the relatives and neighbours of a criminal could also be punished for his crime. In the time of Shih Huang Ti, there were the punishments of decapitation and tearing asunder by horses (see LAWS). The practice of executing dead bodies was also coming into existence at this time.]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, p. 96*a*.

"Under the Ch'ins learning was at a discount; brute force carried everything before it. Those who cultivated a spirit of charity and duty towards their neighbour were despised. Judicial appointments were the prizes coveted by all. He who spoke out the truth was stigmatised as a slanderer, and he who strove to expose abuses was set down as a pestilent fellow. Consequently all who acted up to the precepts of our ancient code found themselves out of place in their generation, and loyal words of good advice to the sovereign remained locked up within their bosoms, while hollow notes of obsequious flattery soothed the monarch's ear and lulled his heart with false images, to the exclusion of disagreeable realities."—*Lu Wên-shu's Memorial*, *Giles*, *Hist. of Ch. Lit.*, pp. 89–90.

[Kao Tsu's popularity was great because he improved the administration of justice.]—*Boulger*, *Short Hist.*, p. 11.

Wên Ti "began his reign by remitting taxes and by appointing able and honest governors and judges. He ordered that all old men should be provided with corn, meat, and wine, besides silk and cotton for their garments."—*Ibid.* p. 12.

Wên Ti "purified the administration of justice by declaring that prince and peasant must be equally subject to the law; he abolished the too common punishment of mutilation, and had the satisfaction of seeing crime reduced to such low proportions in the Empire that the gaols contained only 400 prisoners."—*Ibid.* p. 12.

One of the first acts of Hsüan Ti was to moderate the harshness of criminal administration. "Such was the reputation of Siuenti [Hsüan Ti] for justice that several of the Tartar chiefs carried their grievances to the foot of his throne, and his army became known as 'the troops of justice.'"—*Ibid.* p. 15.

"At the present moment [67 B.C.] the State rests upon the immeasurable bounty and goodness of your Majesty. We are free from the horrors of war, from the calamities of hunger and cold. Father and son, husband and wife, are united in their happy homes. Nothing is wanting to make this a golden age, save only reform in the administration of justice. . . . 'Rather than slay an innocent man, it were better that the guilty escape.' Such, however, is not the view of our judicial authorities of to-day. With them, oppression and severity are reckoned to be signs of magisterial acumen and lead on to fortune, whereas leniency entails naught but trouble. Therefore their chief aim is to compass the death of their victims; not that they entertain any grudge against humanity in general, but simply that this is the shortest cut to their own personal advantage. Thus, our market-places run with blood, our criminals throng the gaols, and many thousands annually suffer death. These things are injurious to public morals and hinder the advent of a truly golden age." "Beneath the scourge what is there that cannot be wrung from the lips of the sufferer? His agony is overwhelming, and he seeks to escape by speaking falsely. The officials profit by the opportunity, and cause him to say what will best confirm his guilt. And then, fearing lest the conviction be quashed by higher courts, they dress the victim's deposition to suit the circumstances of the case, so that, when the record is complete, even were Kao Yao [a famous Minister of Crime in the mythical ages] himself to rise from the dead, he would declare that death still left a margin of unexpiated crime. This, because of the refining process adopted to ensure the establishment of guilt." "Our magistrates indeed think of nothing else. They are the bane of the people. They keep in view their own ends, and care not for the welfare of the State. Truly they are the worst criminals of the age. . . . Imprisonment has become the greatest of all misfortunes, while among those who break the law, who violate family ties, who choke the truth, there are none to be compared in iniquity with the officers of justice themselves."—*Lu Wên-shu's Memorial*, *Giles*, *Hist. of Ch. Lit.*, pp. 90—1.

4. *Revenue, Finance, and Coinage.*—Shih Huang substituted the present civil service system for the feudal system, and from that time the ruler could appropriate everything in his realm to his own use, from a peck of grain and a foot of cloth to the personal service of a man. In spring and autumn he often travelled about over a wide area of thousands of *li*. Under such a system, though his gain was small, the sufferings of the people were great. They were in such a state of oppression that they did not know what to do. Groans were heard in every

corner of the Empire. By the system of taxation which existed in the times of Hsia, Yin, and Chou, the amount of tax depended on the area of the land, but under the Ch'in system, land was not taxed, but the tax was levied on the individual. As a natural consequence, all the poor people emigrated from the country to evade the payment of the poll tax, and the personal service, while the rich purchased all the lands they could, and their condition remained unaffected by the new system. In addition to all this, public works were started everywhere, and war was incessantly carried on between Ch'in and the barbarians. Taxes as heavy as 50 per cent. were levied, and personal service was also requisitioned. In a word, Shih Huang endeavoured to get all the money he could within his Empire for the purpose of carrying out his own policy. When the second Emperor came to the throne he made no improvement, but things grew worse than ever. At this time there was an officer called Shao Fu (少府), whose duty was to collect taxes on owners of mountainous lands and of the seashore. There was also an officer called *Chih Su Nei Shih* (治粟內史) who was charged with the duty of inspecting grain.—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*.

"The tithe-tax of cocoons generally is collected [in the first month of summer], according to the number of mulberry trees; for noble and mean, for old and young, there is one law." "In this month [second of autumn], they regulate and reduce the charges at the frontier gates and in the markets, to encourage the resort of both regular and travelling traders, and the receipt of goods and money; for the convenience of the business of the people." In the first month of winter, "orders are given to the superintendent of waters and the master of fishermen to collect the revenues from rivers, springs, ponds and meres."—*Li chi*, iv. ii. i. 19; iii. ii. 17; iv. ii. 21; *Legge*, i. 271, 289, 301.

"[The *Liang-kwang-yen-fa-chih* (Canton, 1835)] states that the revenue derived from the salt and iron monopolies had, during the Ts'in dynasty (255–209 B.C. [*sic*]) grown to about 20 times the amount gained during the Chou period."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 58. See also *infra*.

"When the House of Han arose, the evils of their predecessors had not passed away. Husbands still went off to the wars. The old and the young were employed in transporting food. Production was almost at a standstill, and money became scarce. So much so that even the Son of Heaven had not carriage-horses of the same colour; the highest civil and military authorities rode in bullock-carts, and the people at large knew not where to lay their heads."—*Ssü-ma Ch'ien*, quot. *Giles, Hist. of Ch. Lit.*, p. 103.

"At this epoch, the coinage in use was so heavy and cumbersome that the people themselves started a new issue at a fixed standard of value. But the laws were too lax, and it was impossible to prevent grasping persons from coining largely, buying largely, and then holding against a rise in the market. The consequence was that prices went up enormously. Rice sold at 10,000 *cash* per picul; a horse cost 100 ounces of silver. But by and by, when the empire was settling down to tranquillity, his Majesty Kao Tsu gave orders that no trader should wear silk or ride in a carriage; besides which, the imposts levied upon this class were greatly increased, in order to keep them down. Some years later these restrictions were withdrawn. . . ." "Meanwhile, certain levies were made on a scale calculated to meet the exigencies of public expenditure; while the land-tax and customs revenue were regarded by all officials, from the Emperor downwards, as their own personal emolument. Grain was forwarded by water to the capital for the use of the officials there, but the quantity did not amount to more than a few hundred thousand piculs every year."—*Ibid.* pp. 103–4.

"Gradually the coinage began to deteriorate and light coins to circulate; whereupon another issue followed, each piece being marked 'half an ounce.' But at length the system of private issues led to serious abuses, resulting first of all in vast sums of money accumulating in the hands of individuals; finally, in rebellion, until the country was flooded with the coinage of the rebels, and it became necessary to enact laws against any such issues in the future."—*Ibid.* p. 104.

"As a rule, taxation was light under the Hans;" and it being "contrary to propriety for the imperial taxes to exceed a tithe," this moderation had "the incidental advantage of discouraging fraudulent understatements of population, so that the census returns of the period may be relied on."—*Simcox*, ii. 114. It was sometimes as low as one-hundredth: see *P'ei wên yün fu*, *c.* 67*b*, p. 104*a*.

[When the Han Dynasty was established, it inherited all the abuses that had existed in the time of the Ch'in dynasty. Most people lost their occupation. For this reason, the tax on land was reduced to little more than 5 per cent. Estimates of the salaries for the civil officers, and of the national expense, were made to be used as the basis for the taxation of the people.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*.

[In the 4th year (202 B.C.) of Kao Tsu the poll tax was first levied. Every male from the age of 15 to the age of 56 was liable for it.]—*Ibid.* p. 51*a*.

"The *Li tao yao chüeh* says: 'In the time of the Emperor Kao (206–194 B.C.) of Han the annual poll tax was 120 cash.'"—*Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu*, *c.* 2, p. 9*a*.

"During the reign of Kao-ti, we are informed in the *Shih-ki*, the people of *Wu-chih*, a district city in the ancient principality of An-ting, somewhere in the present Kan-su province, became rich from salt and iron, and the *Liang-kuang-yen-fa-chih* remarks that at the time the two articles were not forbidden. It appears therefrom that the salt and iron monopolies introduced by Kuan Chung had been abandoned."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. pp. 58–9.

"Twenty years after the establishment of the Han Dynasty, another attempt at an enlarged issue was made with eight-tchu pieces; eleven years later Han-wu-ti issued cash of four tchu again; but free trade in coin was already permitted (177 B.C.) in the hope of putting down illicit coining. It was only stipulated that private mints should conform to the official standard of weight, shape, and purity (*Journ. Asiat.*, 1837, p. 447). Under the Chow, kings and princes had coined money in such quantities as suited themselves, leaving traders and towns to provide for their own needs as they pleased. It was not till the central authority was powerful enough for its issues to be generally preferred that the temptation to fraudulent coining began; and the toleration of free trade in money, which seems so paradoxical, all through the financial history of China, is really to be explained by this early experience, that it would not pay to counterfeit the money of the State, if there were a number of equally popular mints open."—*Simcox*, ii. 155–6.

Wên Ti [179–156 B.C.] "built no palaces and laid out no parks, in order that his subjects might not be oppressed by taxation."—*Giles, Bio. Dic.*, p. 500. He also reduced the poll-tax to 40 cash, every male adult being liable to service once in three years. See *Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*, and *Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu*, *c.* 2, p. 9*a*.

"During the reign of the Han Emperor King-Ti [156–140 B.C.], the land-tax remitted by his father was again imposed one-half [民田半租], in addition to which over three per cent. transfer fees [?三十而稅一] were charged."—*Ch. Rev.*, xiii. 52. See also *infra*.

[The *Ta Nung Ling*, a minister appointed in the time of Ching-Ti (156–140 B.C.), and the *Ta Ssŭ Nung*, a minister appointed in the time of Wu Ti (140–86 B.C.), both had control over all the granaries in the Empire. They had *Nung Chien Tu Shui* as their subordinates, and a staff of sixty-five other officers.]—*Yüan chien lei han, Shê kuan pu, Hsien ling*, pp. 206*b*–207*a*; *Ssŭ nung*, p. 112*a*.

[The two high ministers, mentioned above, were also charged with the administration of the national revenue, and the amount of gold and money which existed in the Empire. But this duty was afterwards transferred to prefects and district magistrates.]—*Ibid.* p. 112*a*.

"About the middle of the 2nd century B.C., a prince of Wei issued a successful round money with rimmed edges; and a coinage, of which no specimens remain, was cast at the same time in North Sz'chuen, by Teng T'ung," the Chinese Crœsus. "He had a concession to work the copper mines of Ya-chu-fu in that province, and, while his money was preferred on account of its purity to that of the Government, the great wealth he had accumulated was regarded as a warning against the toleration of such monopolies in private hands."—*Simcox*, ii. 156.

"Free coining caused princes under the Hans to be as rich as the Emperor."—*Vissering*, p. 110.

[In the time of Hsiao Wu (140–86 B.C.) the taxes on land, salt and iron, and the poll tax, were twenty times bigger than what was levied in the early days. Taxes were both numerous and heavy, and generally more was collected than the law allowed (*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*). Everyone who had a son three years old had to pay the poll-tax for him (*Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu*, *c.* 2, p. 9*a*).]

"Customs taxes [算商車] were first instituted in the reign of Han Wu Ti, 140–86 B.C."—*Ch. Rev.*, xiii. 50. But see LATER FEUDAL PERIOD.

So great was the annual yield of iron in Shansi "that a large tax or excise duty was levied upon it for the government." The taxes on salt and iron "had been imposed by Han Wu Ti . . . . These excise taxes were an innovation. The former Emperor Han Wen Ti had not thought of imposing them."—*Journ. P.O.S.*, i. 2.

In 135 B.C. "free coining was again forbidden, and ancient coins, knife, leaf, saddle, and other old currencies were demonetized."—*Simcox*, ii. 156.

"At this period the Huns were harrassing our northern frontier and soldiers were massed there in large bodies; in consequence of which food became so scarce that the authorities offered certain rank and titles of honour to those who would supply a given quantity of grain. Later on, drought ensued in the west, and in order to meet necessities of the moment, official rank was again made a marketable commodity, while those who broke the laws were allowed to commute their penalties by money payments. And now horses began to reappear in official stables, and in palace and hall signs of an ampler luxury were visible once more."—*Ssü-ma Ch'ien*, quot. *Giles, Hist. of Ch. Lit.*, pp. 104-5.

"Thus it was in the early days of the dynasty, until some seventy years after the accession of the House of Han. The empire was then at peace. For a long time there had been neither flood nor drought, and a season of plenty had ensued. The public granaries were well stocked; the Government treasuries were full. In the capital, strings of *cash* were piled in myriads, until the very strings rotted, and their tale could no longer be told. The grain in the imperial storehouses grew mouldy year by year. It burst from the crammed granaries, and lay about until it became unfit for human food. The streets were thronged with horses belonging to the people, and on the highroads whole droves were to be seen, so that it became necessary to prohibit the public use of mares. Village elders ate meat and drank wine. Petty government clerkships and the like lapsed from father to son; the higher offices of state were treated as family heirlooms. For there had gone abroad a spirit of self-respect and of reverence for the law, while a sense of charity and of duty towards one's neighbour kept men aloof from disgrace and shame."—*Ibid.* p. 105.

"During the several wars carried on by Wu-ti, with the Hsiung-nu and other nations in Central Asia, . . . the resources of even so rich a country as that of the Han were bound to dwindle down, and when, in the Yüan-shau period (122–116 B.C.), the imperial prince had been placed in command of armies all over the empire, a financial crisis demanded immediate steps towards an improvement, two of the advisers of the great monarch were then specially named as having created an efficient system based on the revival of the salt and iron monopolies, viz., Tung-Kuo, Hsien-Yang, and K'ung Chin. In their memorial to the Emperor, they advanced the following arguments: 'Whatever treasures may be concealed in the ground or in the depths of the sea are *a priori* the property of the Crown. If your Majesty be so disinterested as to place them at the disposal of the State treasury in support of the public revenue, the people will thereby be able to appropriate the produce of the land and the sea, and thus become rich and prosperous; but salt and iron officers should be appointed with authority to summon the people for boiling salt with implements and vessels belonging to government, the clandestine manufacture being punished by the culprit's left foot being put in irons, and the vessels and implements . . . forfeited to government.' The originators of this plan were thereupon called on to organize a new system carrying out this idea, and the service of salt as well as of iron inspectors (*yen-kuan, t'ieh-kuan*), it is stated, dates from that period."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 59-60.

"In 119 a white metal currency of tin and silver was tried, and in the following year Han-wu-ti issued the favourite *tchu* coinage, which remained a standard down to the T'ang dynasty. The new cash were made with a rim to prevent forgery."—*Simcox*, ii. 156.

"The edict of 135 must have been disregarded, for Wu-ti issued another in 112 B.C., suppressing private mints, and ordaining that the most skilful of the coiners should be employed in the Imperial Mint. He at the same time appointed three officers to watch over the currency, and the money issued at this period became, and long continued, exceedingly popular. It must be admitted that the Chinese Government was hardly dealt with in the matter of coining, for if it issued good money it was clipped, and base coin made of the clippings, while if it issued bad coins the people declined to use them, multiplying instead imitations of the earlier issues it preferred."—*Ibid.* ii. 156.

"It is almost incomprehensible that the nation which first invented letters of credit, exchequer bonds and bank notes, should have been so slow to adopt the use of money at all, and should have continued to limit its currency to the tiny copper pieces of which a hundred pounds worth weighs a ton. Yet, if the question is looked at, as the advisers of the best emperors always sought to look at it, from the point of view of the small cultivator's interest, it is not so evident what this class had to gain by the introduction of a gold or silver coinage. So long as the Government allowed the taxes to be paid in kind, the villagers only needed money to effect occasional exchanges of produce, or for small marketings, both of which might at times take the form of simple barter. The value of the coins could hardly be too trifling when their chief function was to enable one villager to pay another for a handful of seed or a pair of sandals." "The transactions of the merchant, who bought the produce of one district in order to sell it in another, were normally upon something the same scale."—*Ibid.* ii. 156.

"In 110 B.C., the Censor Sang Hung-yang recommended the appointment of collectors of salt and iron taxes, on the principle of adjusted taxation [均輸鹽鐵官] according to which system 28 *chün* or principalities out of the 110 which constituted the 13 provinces or *chou*, of the Western Han, were each to have an administrator of salt matters, or *yen kuan*."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 60.

"From the following passages I conclude that Sang Hung-yang's system, though likewise a sort of monopoly, differed from [that] adopted during the Chou dynasty in this respect, that formerly private people paid a tax for being permitted to work salt and iron, which they sold at pleasure, whereas now the Government monopolized the manufacture as well as the sale; the sale, on the plea of adjusting the price, which, however, was maintained at such a high rate as to yield a high tax, for, as we shall see hereafter, the poor were thereby forced to live upon unsalted meals."—*Ibid.* p. 60, note.

"At length, under lax laws, the wealthy began to use their riches for evil purposes of pride and self-aggrandisement and oppression of the weak. Members of the imperial family received grants of land, while from the highest to the lowest, everyone vied with his neighbour in lavishing money on houses, and appointments, and apparel, altogether beyond the limit of his means. Such is the everlasting law of the sequence of prosperity and decay."—*Ssü-ma Ch'ien*, quot. *Giles, Hist. of Ch. Lit.*, p. 105.

"Then followed extensive military preparations in various parts of the Empire; the establishment of a tradal route with the barbarians of the south-west, for which purpose mountains were hewn through for many miles. The object was to open up the resources of those remote districts, but the result was to swamp the inhabitants in hopeless ruin. Then, again, there was the subjugation of Korea; its transformation into an Imperial dependency; with other troubles nearer home. There was the ambush laid for the Huns, by which we forfeited their alliance, and brought them down upon our northern frontier. Nothing, in fact, but wars and rumours of wars from day to day. Money was constantly leaving the country. The financial stability of the Empire was undermined, and its impoverished people were driven thereby into crime. Wealth had been frittered away, and its renewal was sought in corruption. Those who brought money in their hands received appointments under Government. Those who could pay escaped the penalties of their guilt. Merit had to give way to money. Shame and scruples of conscience were laid aside. Laws and punishments were administered with severer hand. From this period must be dated the rise and growth of official venality."—*Ibid.* pp. 105–6.

"The fact . . . that the revenue collected in silk stuffs alone amounted at times to 5,000,000 pieces, and apparently in one year:—collected, too, from only half the area of modern China,—points to a settled population of at least 20,000,000."—*Parker, China*, p. 182. *Cf.* POLITICAL.

"But the levy of a salt-tax was [unpopular]. . . . We read that under the Emperor Chao-ti (86–73 B.C.) stress was laid, in a prize essay, on the dislike shown by the people against the salt and iron taxes, [which says]. . . 'In ancient times the price of salt was equal to that of grain or rice, but since the government has monopolised production in order to render prices uniform, salt has become dear and the poorer classes have to work their fields with wooden ploughs and use their hands in lieu of weeding-hooks [because of the new tax upon iron] and live upon unsalted meals.' The Government remained deaf to such complaints, and the salt and iron monopolies were kept in force for a century, when, under the Emperor Yüan-ti (48–32 B.C.) they were suspended for three years. What became of them after this period is not quite clear, but it appears that some sort of taxation existed."—*Journ. N.-C.B.R.A.S., N.S.* xxii. 60–1.

[In the time of Hsiao Chao (86–73 B.C.) the duties on wine were abolished, and people could appeal against any tax in accordance with the law.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*.

[In the fourth year of Yüan Fêng (76 B.C.) of Chao Ti there was a new poll tax, called *Ch'u K'ou Fu*, for the payment of which every person from the age of 7 to 14 was liable.]—*Ibid.* p. 51*a*.

In "Hsiao Hsüan's time [73–48 B.C.] the poll-tax was reduced to 30 cash."—*Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu*, *c.* 2, p. 9*a*.

"The law of *tsu chu* (租銖) was imposed on the trader in the time of Yüan Ti (48–32 B.C.). The Commentary [says]: '*Tsu chu* means to estimate the selling price in order to collect the tax according to weight.'"—*Han shu Shih huo chih, Tzŭ shih ching hua*, *c.* 53, p. 29*b*.

[In Hsiao Ch'êng's time (32–6 B.C.) the poll-tax was reduced to 40 cash.]—*Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu*, *c.* 2, p. 9*a*.

[In the time of Ai Ti (6 B.C.–A.D. 1) all the taxes to which every county was liable were paid by instalments in autumn and winter, and in those counties there were appointed revenue officers, such as *Hsien Kuan, T'ieh Kuan, Kung Kuan*, and *Tu Shui Kuan*.]—*Yüan chien lei han, Shê kuan pu, Hsien ling*, pp. 206*b*–207*a*.

[In every county where salt or iron was produced and where there was a fishing industry, those officers were appointed for the purpose of taxation.]—*Ibid.* pp. 206*b*–207*a*.

"Shortly before the innovations of Wang-mang, the cash in the imperial treasury amounted to about 2,000,000, according to Ma-twan-lin, who thought the total small. But as the proportion of the revenue which consisted of contributions paid in kind, went on diminishing, and was greater under the Hans than at any later time, the two millions would represent a much larger gross revenue then than in the 13th century. The custom of benevolent English landlords of making returns out of rent was followed in regard to the taxes by popular princes. A year's taxes were frequently excused if bad weather or epidemics had impoverished a neighbourhood, while in prosperous times the same grace was accorded as often as the treasury could afford the indulgence. An accession or marriage was considered a suitable occasion for remitting taxes, as well as for amnestying prisoners under sentence for minor offences."—*Simcox*, ii. 114.

[In Kuang Wu's time (A.D. 25–58) every son 3 years of age had again to pay the poll-tax.]—*Yüeh Yü T'ang ts'ung shu, Hou Han shu pu chu, c.* 2, p. 9*a*.

[The land tax now amounted to only a little more than 3 per cent. of its productive value.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*.

[One of the four Ministers called *Shang Shu* was charged with the administration of finance and taxes. There was also an officer called *Shao Fu*, whose duty was the same as in the time of the Ch'in (see *supra*).]—*Ibid., Shang Shu*, p. 57*a*; *Shao Fu*, p. 126*a*.

"The salt question, it seems, came to the front again under Ming-ti of the Eastern Han dynasty (A.D. 58–76). It was again a financial crisis which summoned the inventive genius of the then prominent statesmen to advance arguments for and against the several remedies suggested. Chang Lin, president of a board of government, came to the conclusion that salt, being one of those necessaries of life which none, not even the wealthy, could do without, was the fittest subject of taxation, and he proposed that its sale should again be taken in hand by the authorities. . . . [These] proposals were accepted and remained in force during the Emperor's lifetime."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 61-2. According to the *Wang hsing t'ung pu*, quot. in *T'u shu chi ch'êng*, III. 14, *c.* 234, p. 26, Chang Lin merely revived the system introduced during the reign of Wu Ti.

"In A.D. 78 financial difficulties were beginning to be felt again. Grain was dear and scarce, and money depreciated, so that the land tax was required to be paid in pieces of silk or cloth."—*Simcox*, ii. 117.

"Chang-ti (A.D. 76–89) changed the system [of Ming Ti] again by creating something similar to the former salt and iron officers. . . . Under Ho-ti (89–106) the prohibition of the manufacture of salt and iron was again abolished."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 62.

"In the latter half of the 2nd century A.D., the double demand for copper for religious images and weapons of war left so little available for the currency that its depreciation followed as a matter of course. At the same time (165–185) the land tax had been raised to 10 tsien per mow, which would make the burden of the tenant, with 100 mow, five times as heavy as in the earlier years of the dynasty (*Journ. As.*, March, 1837, p. 279)."—*Simcox*, ii. 121.

The suspension of the prohibition of the manufacture of salt and iron "seems to have lasted till close to the end of the Han dynasty, when, during the Chien-an period (196–220), commissioners were again appointed to control the sale of salt, on the plea that buffaloes should be bought from the net proceeds; these it was intended should be placed at the disposal of the people as an encouragement to agricultural labour, with a view to get emigrants and vagrant folks to return to their homes. It is remarked in our account that, although salt was not forbidden at the time, a tax had to be paid which could not be remitted."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 62.

[For private coining see also EXCHANGE; and for land-tax REG. OF LAB.]

Period of Disruption (221–589).—*Table IV.*

RANKS.—*Sovereign* (帝 *Ti*).—[The monarchy was unstable. The ruling families of various races who placed themselves on the throne by means of war and usurpation giving rise to a succession of short-lived dynasties, each having for its object the conquest of the whole country, are described under POLITICAL. The sovereign was at times in the hands of his ministers, and eunuchs interfered with government affairs. Regents (uncles, ministers, etc.) acted during minorities of rulers. Sovereigns were often murdered, but established monarchy was hereditary in the royal family.]—*Kang chien, c.* 24, etc.; *Kuang chih p'ing lüeh hsü chi, c.* 2, p. 3*b*, etc.

"Ch'ung-hwa was succeeded by his son Yao-ling 曜靈, but being then a boy of 10 years, he was superseded by an uncle of his named Tsu 祚, A.D. 354. . . . The latter was assassinated after one year's reign, and replaced by a brother of Yao-ling, named Hüan-tsing 玄靚. He being only 7 years old, his uncle Chang Kwan 張瓘 reigned in his stead, A.D. 355."—*Ch. Rev.*, xii. 357.

"The court was in . . . rigid subjection to the Rites and their interpreters."—*Simcox*, ii. 128.

Officials (*Ch'ên*).—[Nobles. At the beginning of the Wei Kingdom the eldest son of a prince was called *Hsiang Kung* (鄉公) and the eldest grandson, *Hsiang Hou Kung* (鄉侯公). All the other sons were called *T'ing Po* (亭伯). Under the system of later ages, the nobles were divided into six classes: (1) Prince (*Wang*); (2) Duke (*Kung*); (3) Marquis (*Hou*); (4) Earl (*Po*); (5) Viscount (*Tzŭ*), and (6) Baron (*Nan*). After these came the *Hsien Hou* (縣侯), *Hsiang Hou* (鄉侯), *T'ing Hou* (亭侯), and *Kuan Nei Hou* (關內侯). Their official designations were *Kuan Chung Hou* (關中侯) and *Kuan Wai Hou* (關外侯). From the *Kuan Nei* downwards, all other classes merely had a title, but no land of enfeoffment. This system was founded by the Wei, the Shu and Wu adopting the Han system. Under the Chin, there were also six ranks of nobles. Although they had enfeoffed lands they resided in the metropolis. In the 2nd year of Hsien Ning (276) they were all ordered to go to their own lands. Their titles were hereditary unless they committed a crime, in which case their land was escheated. This system remained in force from the Han dynasty onwards. The Sungs (420–79) followed the system of the Chins. If the son of a Prince was given a marquisate, he was entitled to an estate with one thousand householders. There is no record as to the method of creation in the time of the Ch'i (479–502). The Liang dynasty (502–57) adopted the system of the Sung and Chin. Under the Ch'ên dynasty (557–88) there were nine orders of nobility, viz., *Wang* (王), *Ssŭ Wang* (嗣王), *Fan Wang* (藩王), *K'ai Kuo Chün Hsien Kung* (開國郡縣公), *K'ai Kuo Chün Hsien Hou* (侯), *K'ai Kuo Hsien Po* (伯), *Hsien Tzŭ* (子), *Hsien Nan* (男), and *Mo Shih Hou* (沐食侯), making with the *Hsiang T'ing Hou* (鄉亭侯), *Kuan Nei Hou* (關內侯), and *Kuan Wai* (外) *Hou*, 12 grades. In the time of the Later Wei dynasty (386–534) there were, besides the *Wang*, the *K'ai Kuo Chün Kung*, *San Kung Hou* (散公侯), *San Hou Po*, *San Po Tzŭ*, and *San Tzŭ Nan*. The *San Nan* were also of 12 grades. The system of five classes of nobles was first established by Tao Wu (386–409). Under the Northern Ch'i dynasty (550–77), there were the prince, duke, marquis, earl, viscount, and baron. The Prince took rank with the *Ssŭ Ma* (see *Executive*), but if he was not of the blood royal, he came after the *San Kung*. Under the Later Chou (557–89), there were also the five orders (*Kung, Hou, Po, Tzŭ, Nan*), and they received lands with their titles.]—*Tzŭ shih ching hua, cc.* 37–44, pp. 1–33; *Kang chien, c.* 24, p. 15.

[Nobility was conferred as a reward for military service.]—*Tzŭ shih ching hua, c.* 44, p. 14*a*.

[It was complained that not one in forty of the dignitaries employed at court knew how to handle a pencil.]—*Biot*, p. 211.

"Under the reign of Ming Ti [227–40] of the Wei dynasty 'women were for the first time admitted to official life, and several actually rose to high office. No women officials, however, have been known since the eighth century.'"—*Giles, Bio. Dic.*, p. 758.

[Instances occur of persons deliberately preferring private life to official rank: see *Simcox*, ii. 128.]

[Ts'ao P'ei (188–227), son of Ts'ao Ts'ao, Emperor of Wei, organized the administration, arranging among other things the nine degrees of official rank (in 220). See *Shih wu chi yüan*, iv. The *T'ung chien kang mu* places the introduction of the division of officials into nine ranks in 554.]

"In the 9th moon the Wei Kingdom established a law that from that time all relatives of the Queen should have no right to take [high] office [or to interfere] in the government."—*Tzŭ chih t'ung chien kang mu, c.* 14, *Chêng p'ien*, p. 93*b*.

"By the ancients rank was set according to virtue (or merit) and emolument according to service"—reflecting on the present demoralization.—*Chin shu Wu Ti chi, Tzŭ shih ching hua, c.* 44, p. 14*b*.

"Pi Chung-ching was appointed Department Magistrate of Yen Chou, and afterwards his son Yuan-pin became his successor. The people rejoiced that father and son had taken the same office in the same Department."—*Pei shih, Yüan chien lei han, c.* 243, p. 9*b*.

[Hsiao Wên Ti (471–500) reformed the civil administration.]—*Giles, Bio. Dic.*, No. 2552.

"In 484 A.D. the system of paying officers by salaries instead of land grants was introduced."—*Journ. Asiat.*, March, 1837, p. 288.

[Though the state schools degenerated and the private schools were officially discountenanced, *scholars* were numerous and many famous names are recorded. They may have been stimulated by the religious and classical rivalry. Their position seems to have been much the same as under the previous period. See *Simcox*, ii. 126, and *cf.* ACCESSORY INST.]

"No material change in the condition of the *industrial population* took place during this period. The T'sin (280–419 A.D.) divided able-bodied workers into classes according to age, giving each a certain allowance of land, with extra quantities for nobles and princes. This example was followed by the northern Wei dynasty, and in 485 the latter made a serious attempt to revive the agrarian policy of the ancients" [see REG. OF LABOUR]. *Agriculturists* were encouraged by conferring of government distinctions on those families who had oxen for the plough. "It is curious that those who had no oxen were expected to have slaves." "By the legislation in force between 477 A.D. and 499 A.D., all cultivators had a certain share of land allotted to them."—*Simcox*, ii. 126.

[The position of *artizans* and *merchants* remained the same: see REG. OF LABOUR.]

[For the restrictions on intermarriage between different classes see MARITAL and LAWS OF INTERCOURSE.]

INSTITUTIONS.—1. *Executive.*—[The capital of the kingdom of Wei was Lo-Yang; of Shu, Ch'êng-Tu; and of Wu, Kien-Kang or modern Nanking.]—*Oxenham, Atlas*, map 10.

[The capital of Chin was Lo-Yang, afterwards, under the E. Chin (A.D. 317), Kien-yeh, now Nanking.]—*Ibid.* map 11.

[The capital of the Southern Sung dynasty was Hang-chow; of the Southern Ch'i dynasty, Nanking; and of the Northern Wei dynasty, Ta-tung, and later Lo-yang.]—*Ibid.* maps 12–14.

The state of Wei transferred "its capital from the northern city of Pingching [P'ing Ch'êng in Shansi] to [Lo Yang in] Honan, while the Leang capital remained at Nankin."—*Boulger, Short Hist.*, p. 24; see also *Giles, Bio. Dic.*, No. 2552.

"Kiangning fu [Chien Yeh under the Chin] (better known abroad as Nanking), the capital of the province [of Kiangsu] . . . was the metropolis from A.D. 317 to 582. . . . This city is the natural location of an imperial court, accessible by land and water from all quarters, and susceptible of sure defence."—*Williams, Midd. King.*, i. 100–1.

Wu Ti (265–90) divided his dominions into "nineteen 州 [*chou*] provinces containing one hundred and seventy-three 郡 [*chün*] (or 國 [*kuo*]) districts and 1,231 *hsien*."—*Giles, Bio. Dic.*, p. 675. Under the Nan Sung there were 22 *chou*, 278 *chün*, and 1,341 *hsien*; under the Nan Ch'i, 23 *chou*, 380 *chün*, and 1,454 *hsien*; and under the Pei Wei, 113 *chou* cities, 522 *chün* cities, and 1,462 *hsien* cities.

[The *executive* and *administrative systems* were generally the same as in the Han dynasty, but under the Chin, in the reign T'ai Yüan (376–97), economical measures were adopted and many offices were abolished. The number of officials thrown out of employment was about 700. Under the Sung and Ch'i, about 100 new posts were created, and the precedence of all officials clearly defined. The Liang mostly followed the system of the Ch'i, but they appointed many military officers among the chief Ministers (*Chu Ch'ing*) (*cf.* MILITARY). The Ch'ên followed the system of the Liang. Under the Later Wei, the administrative system was very imperfect, the names of offices being loosely applied. In the first year of Huang Shih (396) a Censorate of 100 officials was instituted. Many new dukes, marquises, and commanders were created, scholars being appointed to these posts. During the period of disorder which followed this reign, frequent changes were made in the administrative system up till the time of Hsiao Wên Ti (471–500), when the old system of Nan Ch'ao was reverted to. Regulations were then also drawn up for the rewarding and punishing of officials. The Northern Ch'i followed the system of the Later Wei. Hou Chu (*i.e.*, Wên Kung, 565–76) was extravagant in ennobling and rewarding officials. The Hou Chou at first adopted the Wei system, but after its conquest of Chiang Ling, made a new system based on the *Chou li*, instituting six ranks of officials (*T'ien Kuan*, &c.) and adding some of the posts of the Ch'in and Han. As regards "other officers" (*Chiang Chün, Tu Tu, Tz'ŭ Shih, T'ai Shou*, &c.) the Ch'in and Han system was adopted.]—*Kang chien, c.* 24; *Wên hsien t'ung k'ao, c.* 11, *Chih kuan i*, pp. 2*a*–6*b*.

221–265. *Ministers.*—[During the period of the Three Kingdoms (221–265) the *San Kung* were the *T'ai Wei* (太尉), *Ssŭ T'u* (司徒), and *Ssŭ K'ung* (司空). Their duties were also the same as under the previous period. The titles *T'ai Fu* (太傅), styled *Shang Kung* (上公), and, in 227, *T'ai Pao* (太保), were in use.]—*Wên hsien t'ung k'ao, c.* 11, *Chih kuan êrh*, p. 7*b*.

[The heads of the military administration ranked above the *San Ssŭ* (三司). In the reign Huang Ch'u of Wên Ti of Wei, a *Ta Ssŭ Ma* (大司馬) was appointed, the *T'ai Wei, Ta Ssŭ Ma*, and *Ta Chiang Chün*, each having separate offices.]—*Ibid.* p. 10*b*.

[At the beginning of the Wei Kingdom, the *Ch'êng Hsiang* (丞相), Prime Minister, was changed to *Ssŭ T'u* (司徒). The Shu Kingdom had a *Ch'êng Hsiang*, and in Wu there were *Tso*, Left, and *Yu*, Right, *Ch'êng Hsiang*. Wên Ti of Wu re-established the *Chung Shu Chien Ling* (中書監令), who, together with the *Ch'êng Hsiang*, transacted secret and important affairs of state. Later on, a *Ta Ch'êng Hsiang* (大丞相) of the 1st rank was established, and later still there was a *Hsiang Kuo* (相國). These were all officials of the highest rank. Their office was the same as in the Han dynasty.]—*Wên hsien t'ung k'ao, c.* 11, *Chih kuan êrh*, pp. 7*a*–12*a*.

[Wu Ti, whilst Prince, had instituted a *Mi Shu Ling* (秘書令), who had charge of secretarial and memorial business. Wên Ti changed the post to *Chung Shu Ling* (中書令) and instituted a *Chung Shu Chien Ch'êng* (中書監丞). These together had control of secret and important state affairs. By the time of Ming Ti (227–40), the *Chung Shu Chien Ling* (中書監令) was a post by itself (no longer joined with another), and had great powers attaching to it.]—*Wên hsien t'ung k'ao, Chih kuan wu*, p. 23*b*.

Executive.—[As in the previous Period, there were administrative Boards in charge of the main divisions of the executive. The Wei had a *Li Pu* (吏部), the equivalent of the *Li Ts'ao* of the Han period, the name given to a similar department by the Wu being *Hsüan Pu* (*cf.*, Hou Han). The duties of the Revenue Board were, under the Wei, discharged by the *Tu Chih Shang Shu* (度支尚書), *Tso Min Shang Shu* (左民尚書), and *Min Ts'ao Shang Shu* (民曹尚書), the Wu having a *Hu Ts'ao Shang Shu* (戶曹尚書). Ceremonies, as under the Han, were controlled by a *K'o Ts'ao* (客曹) in all three Kingdoms, there being in addition a *Tz'ŭ Pu Shang Shu* (祠部尚書). Military matters were under the general control of the *Wu Ping Shang Shu* (五兵尚書). He had control of "the soldiers of the Palace, the soldiers in and outside the capital, the cavalry, and others, and corresponded to the *Ta Ssŭ Ma* of the *Chou li*." There seems to have been no Board, properly so called, of Punishments, but the *Êrh Ch'ien Tan Lang* (二千石郎), *Tu Kuan Lang* (都官郎), and *Pi Pu Lang* (比部郎), discharged the duties of this office. Similarly, there was no regularly established Board of Works, the duties of that department belonging to the *Yu Chiao Ling* (右校令) and *Ts'ai Kuan Chiao Wei* (材官校尉).]—*Li tai chih kuan piao*, and *Wên hsien t'ung kao, Chih kuan liu*, pp. 31*b*–32*a*.

"The *Chiu Ch'ing*, 'Nine Ministers,' of the Wei were the same as those of the Han."—*Yüan chien lei han, c.* 90, *Shê kuan pu san shih*, p. 1*b*.

Provincial administration.—[At the head of the provincial administration there was, as in the Han period, a *Chou Mu* (州牧), who, with the assistance of the *Tu Tu Chu Chou Chün Shih* (都督諸州軍事), Provincial Commander-in-Chief, discharged the duties of the *Tsung Tu*, or Governor-General, of Manchu times. There was no post corresponding to the modern Governor (*Hsün Fu*). The educational authorities were, in the Kingdom of Shu, a *Tien Hsüeh Ts'ung Shih* (典學從事), Director-General of Education, and a *Ch'üan Hsüeh Ts'ung Shih* (勸學從事), Director of Studies; and in Wei, a *Wên Hsüeh Ts'ung Shih* (文學從事), who combined the duties of both these posts. The *T'ai Shou* (太守) and *Kuo Hsiang* (國相) filled posts similar to that of the modern Prefect (*Chih Fu*), whilst the *Ch'êng* (丞) corresponded to the Sub-Prefect (*T'ung Chih*). The *Ling Chang* (令長) and *Hsiang* (相) were the District Magistrates (corresponding to the *Chih Hsien* of the Sung, Ming, and Ch'ing). There do not appear to have been any appointments corresponding to those which, in the Han and some of the later dynasties, ranked below that of District Magistrate.]—*Yüan chien lei han, cc.* 107–117.

265–420. *Central administration.*—[When Chin Wu Ti ascended the throne, he instituted the *Pa Kung* (八公), consisting of the *T'ai Tsai* (太宰), *T'ai Fu* (太傅), *T'ai Pao* (太保), *T'ai Wei* (太尉), *Ssŭ T'u* (司徒), *Ssŭ K'ung* (司空), *Ta Ssŭ Ma*

(大司馬), and *Ta Chiang Chün* (大將軍). There was no *Ch'êng Hsiang* (丞相). The *Pa Kung* "all mounted to the clouds on even wings," *i.e.*, were simultaneously appointed; subsequently the *T'ai Fu* and *T'ai Pao* were selected as *Shang Kung* (上公). They deliberated on the government policy and guided the affairs of the nation, making harmonious the *yin* and the *yang* (to further agriculture, etc.). When there were no capable officers, the posts were left vacant. The *T'ai Wei*, *Ssŭ T'u*, and *Ssŭ K'ung* continued to form the *San Kung* as before. The *T'ai Tsai* was the *T'ai Shih*, the name having been altered owing to Ching Ti's personal name being Shih. The other names are mostly the same as in the Han dynasty.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan êrh*, pp. 7*b*–8*a*.

[At the beginning of the Chin dynasty, there were six Boards (*ts'ao*): the *Li Pu* (吏部), *San Kung* (三公), *K'o Ts'ao* (客曹), *Chia Pu* (駕部), *T'un T'ien* (屯田), and *Tu Chih* (度支). There was no *Wu Ping Ts'ao*. In the reign T'ai Kang (280–90) the six Boards were the *Li Pu* (吏部), *Tien Chung* (殿中), *Wu Ping* (五兵), *T'ien T'sao* (田曹), *Tu Chih* (度支), and *Tso Min* (左民). There were no *Chia Pu*, *San Kung*, and *K'o Ts'ao*. When the capital was moved to the east, there were five Boards: the *Li Pu* (吏部), *Tz'ŭ Pu* (祠部), *Wu Ping* (五兵), *Tso Min* (左民), and *Tu Chih* (度支). The *San Kung* controlled judicial matters, the *Chia Pu*, carriages and horses (the modern *Ch'ê Chia Ssŭ*), the *T'un T'ien* and *Tien Ts'ao*; population and agricultural matters. The duties of the *Tien Chung* are not clearly stated, but it probably had charge of the soldiers, horses, storehouses, and treasuries of the outer palace. The other offices were the same as those of the Wei.]—*Wên hsien t'ung k'ao*, *Chih kuan liu*, *Li tai shang shu*, p. 32*a*; *Kuang shih lei fu*, *c.* 5, *Chih kuan pu*, p. 7*a*, etc.

[There was an office called *Kuo Tzŭ Chi Chiu* (國子祭酒), Imperial Libationer, the *Po Shih Chi Chiu* of the Hou Han (*q.v.*). As with the *Shih Chung* of the Han, so with the *San Ch'i Ch'ang Shih* of the Wei, when they had exceptional merit, they were promoted to be *Chi Chiu*. The post was one of the first rank. At the beginning of the reign *Hsien Ning* (275) of Wu Ti of the Chin dynasty, the Imperial Academy (*Kuo Tzŭ Chien*) was established, and a *Kuo Tzŭ Chi Chiu* appointed. This is the office of *Shih Shih*, Instructor, of the *Chou Kuan*. In the *Chou li* the *Shih Shih* taught the sons of the *Ch'ing Ta Fu*, who were pupils in the Imperial Academy, the three virtues and three rules of conduct.]—*Yüan chien lei han*, *Shê kuan pu*, *Kuo tzŭ chi chiu*, p. 122*b*.

[The *Chiu Ch'ing* remained the same as under the Kingdom of Wei.]—*Ibid.*, *Chu ch'ing tsung tsai*, p. 1*b*.

Provincial administration.—[A military official, the *Ssŭ Li Chiao Wei* (司隸校尉), a sort of Inspector-General, the *Ssŭ Li* of the Feudal Chou, was at the head of the provincial hierarchy, which consisted of the *Chou Mu* and *Tu Tu Chu Mu Chün Shih* (see Three Kingdoms) and a *Tz'ŭ Shih* (see Han). The *Shih Chieh Tz'ŭ Shih* (持節刺史) occupied the post of Governor, educational matters being controlled by the *Ju Lin Chi Chiu* (儒林祭酒). The *T'ai Shou* (太守) (*cf.* Han) and *Nei Shih Hsiang* (內史相) were Prefects, assisted by *Ch'êng* (丞), Sub-Prefects. The District Magistrates were the same as under the Three Kingdoms, but there were also below them two minor posts, the *Chu Pu* (主簿), Archivist, and *Wei* (尉), District Police Superintendent.]—*Yüan chien lei han*, *cc.* 107–17.

[The Chin official ranks were mostly the same as those of the Han and Wei. The total number of officials was 6,836.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 6*b*.

[Prefects were ordered by imperial decree to make tours in their districts once every three years, in the spring. This was the ancient *shu chih* (述職)—performing the duty of propagating rules of good conduct, etc.]—*Tzŭ shih ching hua*, *c.* 42, p. 7*a*.

Wang Jung (235–306), when President of the Board of Civil Office, "instituted a system under which the administrative powers of men were tested before they were actually appointed to office."—*Giles*, *Bio. Dic.*, p. 826. See also *P'ei wên yün fu*, *c.* 67*b*, p. 112*b*.

420–589. *Central administration.*—[The minor dynasties which held sway between 420 and 589 adopted the Han system of administration with few variations. As regards the chief Ministers next to the sovereign, at the beginning of the (Liu) Sung, there were in all eight *Kung* (公), but they were not designated *Pa Kung*. Under the Ch'i of the *San Kung*, there was only a *T'ai Fu* (太傅). Under the Liang, there were *Ch'êng Hsiang* (丞相), *T'ai Tsai* (太宰), *T'ai Fu* (太傅), *T'ai Pao* (太保), *Ta Ssŭ Ma* (大司馬), *Ta Chiang Chün* (大將軍), *T'ai Wei* (太尉), *Ssŭ T'u* (司徒), *Ssŭ K'ung* (司空), *K'ai Fu I T'ung San Ssŭ* (開府儀同三司), and other officials. The Ch'ên regarded the *Ch'êng Hsiang* (丞相), *T'ai Tsai* (太宰), *T'ai Fu* (太傅), *T'ai Pao* (太保), *Ta Ssŭ Ma* (大司馬), and *Ta Chiang Chün* (大將軍) as offices bestowed by favour. The Hou Wei called the *T'ai Shih* (太師), *T'ai Fu* (太傅), and *T'ai Pao* (太保), the *San Shih* (三師); they were officers of the first rank. The *Ta Ssŭ Ma* (大司馬) and *Ta Chiang Chün* (大將軍) were called the *Êrh Ta* (二大), "Two Great Ones." The *T'ai Wei* (太尉), *Ssŭ T'u* (司徒), and *Ssŭ K'ung* (司空) were called the *San Kung* (三公). The N. Ch'i had the *San Shih* (三師), *Êrh Ta* (二大), and *San Kung* (三公). The Hou Chou, besides appointing the *Liu Ch'ing* (六卿), changed the *San Shih* (三師) to the *San Kung* (三公), appointing also the *San Ku* (三孤) to assist them. The *Ssŭ T'u* (司徒) was employed as *Ti Kuan* (地官), Revenue Officer; the *Ta Ssŭ Ma* (大司馬) as *Hsia Kuan* (夏官), Superintendent of Military Affairs; and the *Ssŭ K'ung* (司空) as *Tung Kuan* (冬官), President of Works, as was the case under the Chi Chou (Chi being the personal name of the Feudal Chou). They did not restore the offices of *T'ai Wei* (太尉) or *San Shih* (三師). Hsüan Ti (578–580) re-instituted the *Ssŭ Fu* (四輔), Four Supporters (*I*, *Ch'ên*, *Fu*, and *Pi*) (see EARLY FEUDAL PERIOD). The Sung appointed a *Ssŭ T'u* (司徒) to manage the affairs of the people. He attended upon the emperor at sacrifices, and had charge of arrangements in connection with the emperor's funeral. He reported annually to the emperor on all the officials in the empire. His office existed simultaneously with that of the *Ch'êng Hsiang* (丞相). Under the Ch'i, the *Ssŭ T'u* (司徒) had general control of the records of families and individuals in all the *chou* and *chün* districts in the empire. Under the Sung, the duties of the *Ssŭ K'ung* (司空) included the control of waters and lands (*i.e.*, rivers, etc., and the cultivation of new ground, etc.), imperial worship of ancestors and of heaven, arrangement of temples, and setting in order of musical instruments. When an emperor died, he also had control of the heaping-up of earth on the grave. Most of the above offices, besides the re-adoption of the Chou system by the Hou Chou, were copied from the Chin system.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan pu*, p. 7*b*.

[A system of registration of official documents (red ink being used for those sent and black for those received) with models of despatches was introduced by Su Ch'o (498–546), whilst he was Confidential Adviser to the Throne.]—*Tzŭ shih ching hua*, *c.* 52, p. 28*b*.

[Administrative departments: The Sung had six Boards, each under a *Shang Shu*, President or Secretary, *viz.*, *Li Pu* (吏部), *Tz'ŭ Pu* (祠部), *Tu Chih* (度支), *Tso Min* (左民), *Tu Kuan* (都官), and *Wu Ping* (五兵). The *Tu Kuan* had sole control of military affairs and also managed judicial matters. The *Tso Min* controlled the *Yu Min* (右民), Sub-department of the Board of Revenue, and the *Chia Pu* (駕部), Sub-department of the Board of War. The remaining officials are similar to those of the Wei and Chin. The Boards under the Ch'i and Liang were the same as under the Sung. There was besides a *Ch'i Pu* (起部), Board of Works, which was not permanently established (see following extract). The Ch'ên Boards were the same as those of the Liang. The Hou Wei had at first five Boards or Secretaries, *viz.*, *Tien Chung* (殿中), in charge of soldiers, horses, granaries, and treasuries in the palace; *Yo Pu* (樂部), controlling the musicians and 500 blowers of wind instruments; *Chia Pu* (駕部), controlling cattle, horses, asses, and mules; *Nan Pu* (南部), controlling the *chou* and *chün*, prefectures and districts in the south; and a *Pei Pu* (北部), controlling those in the north. Later there was also a *Li Pu* (吏部), at first called *Hsüan Pu* (選部), a *Ch'i Ping* (七兵) *Shang Shu*, *etc.*, as well as about twenty other Boards or Secretaries, whose duties are only partially recorded. The N. Ch'i had the same Boards as the Ch'i, Liang, and Sung, except that there was a *Tien Chung* and no *Tso Min*. The Later Chou had no *Ts'ao*. (For the scope of the *Wu Ping*, see *Yüan chien lei han*, *c.* 80.)]—*Wên hsien t'ung k'ao*, *Chih kuan liu*, p. 32*a*; *Yüan chien lei han*, *Shê kuan pu*, *Ping pu*; *Kuang shih lei fu*, *c.* 5, *Chih kuan pu*, p. 16*a*, etc.

[The *Ch'i Pu Shang Shu* (起部尚書), President of the Board of Works, under the Sung, Ch'i, Liang, and Ch'ên, is said not to have been a permanent appointment. When an imperial temple, palace, or residence was to be built, he was appointed for that purpose only, his office lapsing on completion of the work. Assisting the President was a *Ch'i Pu Lang* (郎), an officer of the same name having been Assistant to the *T'un T'ien Shang Shu* (*q.v.*) under the Chin.]—*Yüan chien lei han*, *Shê kuan pu*, *Kung pu shang shu*, p. 68*a*.

[Besides the Boards, there were, as in former periods, administrative Ministers (*Ch'ing* 卿) discharging various functions, similar in most cases to those discharged by the officers of former times after whom they were named. The Sung, Ch'i, and Liang all followed the Chin system. Liang Wu Ti, in 508, appointed altogether twelve *Ch'ing*, classifying them as *Ch'un*, *Hsia*, *Ch'iu*, and *Tung Ch'ing*, Spring, Summer, Autumn, and Winter Ministers (see *Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan chiu*, pp. 54*a*–54*b*). Each *Ch'ing* was, in most cases, assisted by *Shao Ch'ing* (少卿) and *Ch'êng* (丞). The Later Wei had nine *Ch'ing*, dividing them into the *San Ch'ing* (三卿), Three Ministers, and *Liu Ch'ing* (六卿), Six Ministers. The former were the *T'ai Ch'ang*, *Kuang Lu Hsün*, and *Wei Wei*, and the latter the *T'ai P'u*, *T'ing Wei*, *Ta Hung Lu*, *Tsung Chêng*, *Ta Ssŭ Nung*, and *Shao Fu*. Under the N. Ch'i there were also nine *Ch'ing* (called *Chiu Ssŭ* 九寺), they being the same as those of the Later Wei, except that the *Ta Li Ssŭ Ch'ing* took the place of the *T'ing Wei Ch'ing*, and the *T'ai Fu Ssŭ* of the *Shao Fu Ch'ing*. The *T'ai Ch'ang*, under the N. Ch'i, had control of imperial tombs and temples, sacrifices, music, official regulations, astronomy, divination, etc. The Hou Chou employed the *Ta Tsung Po Ch'ing* (大宗伯卿) to supervise state ceremonial, and assist the sovereign to bring all the States into harmony. The *Kuang Lu*, after Wei and Chin times, did not live in the imperial city, but only attended when provincial officials had audience; and it was also his duty to decide when two Boards disagreed. The gate-keepers of the inner and outer palace were still under his charge in the time of Wên Ti of the Liu Sung (425–54). In the Liang dynasty, the *Kuang Lu Ch'ing* ranked with the Presidents of the Boards. Under Wu Ti (502–20) he was of equal rank with the *Chung Shu Tzŭ* (中庶子). The offices were the same as in the Han. Under the N. Ch'i, the *Kuang Lu Ssŭ* had, in addition, the control of matters concerning imperial banquets, etc. The *Wei Wei*, under the S. Ch'i, had charge of the palace gates; under the Liang, he ranked with the *Shih Chung* (侍中). His office was the same as in the Han. When the emperor travelled, he had to take steps to see that his life was not endangered by traitors, either official or lay. The Ch'ên adopted this system, and the N. Wei and N. Ch'i both had this official. The *Tsung Chêng* was not appointed by the Sung and Ch'i. In the Liang and afterwards he had charge of the records of the imperial family, a member of the imperial clan being appointed to the post. The Later Chou had a *Tsung Shih Chung Ta Fu* (宗師中大夫) controlling the affairs of the imperial clan, deciding matters of inheritance, precedence in sacrificing, etc., and instructing the imperial clan in the principles of filiality and fraternity. The *Ta Li*, under successive dynasties, was called *T'ing Wei*, but the N. Ch'i changed the name to *Ta Li*, although the office was the same. The Hou Chou had a *Hsing Pu Chung Ta Fu* (刑部中大夫) in charge of criminal matters. He was under the direction of the *Ta Ssŭ K'ou* (see LATER FEUDAL PER.). The *Hung Lu*, from the time of the E. Chin to the Sung and Ch'i, was only appointed to discharge ceremonial duties when necessity arose. His duties remained the same as formerly. Under the Liang, the *Hung Lu Ch'ing* acted as guide and protector to the emperor when away from the palace and as assistant at sacrifices. Under the N. Ch'i, he had control of foreigners who came to audience on occasions of rejoicing, mourning, etc. The Later Chou had a *Ssŭ K'ou* and *Fan Pu Chung Ta Fu* (蕃部中大夫) who performed similar duties at audiences of the feudal princes, and a *Pin Pu Chung Ta Fu* (賓部中大夫) in charge of the ceremonies relating to "stranger guests," *i.e.*, envoys of other nations, etc. The office of the *Ssŭ Nung* was similar to that of preceding dynasties. He controlled agricultural matters and granaries. The Ch'ên and N. Wei adopted the office; under the N. Ch'i his duties were somewhat more extensive. Under the Hou Chou there was an officer with similar duties called *Ssŭ Nung Shang Shih* (司農上士), under the direction of the *Ta Ssŭ T'u* (*q.v.*). The *T'ai Fu Ch'ing* was not appointed during these successive dynasties, his duties being performed by the *Ssŭ Nung* and *Shao Fu*. The post was, however, filled by a *T'ai Fu Ch'ing* in the reign T'ien Chien (502–20) of the Liang, he having charge of revenue, fiscal, and commercial matters (markets and shops). The Ch'ên adopted the same system. The duties of the post were similar under the Hou Wei and N. Ch'i, but under the latter he had in addition charge of the makers of utensils (*ch'i wu*). The Hou Chou had a *T'ai Fu Chung Ta Fu* (太府中大夫) in charge of tribute and taxes. He was under the direction of the *Ta Chung Tsai* (大家宰). His office was the same as that of the *T'ai Fu Hsia Ta Fu* of the Feudal Chou. The *Ta Chiang Ch'ing* (大匠卿) of the Sung, Ch'i, and Liang, was the *Kung Kung* of Yao and Shun, and the *K'ao Kung* of the *Chou Kuan*. The Ch'ên and Hou Wei adopted it. The N. Ch'i had a *Chiang Tso Ssŭ* (將作寺), of which the chief was called *Ta Chiang* (大匠). Under the Later Chou, there was a *Chiang Shih Chung Ta Fu* (匠師中大夫), in charge of the building of city walls, palaces, etc. There was also a *Ssŭ Mu Chung Ta Fu* (司木中大夫), who had control of the workers in wood.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan chiu*, pp. 54*a*–76*a*.

Provincial administration.—[The Sung, Ch'i, Liang, and Ch'ên had a *Tu Tu* (see *supra*) as provincial Governor-General, the post of Governor being the same as under the Chin. The Director of Education, corresponding to the modern *Chiao Shou*, Director of Studies, was the *Ju Lin Ts'an Chün* (儒林參軍), several of the sub-departments of the Three Kingdoms being also adopted. The posts of Prefect, Sub-Prefect, and Magistrate were the same as under the Chin, the Magistrate, however, having a *Ch'êng* (丞), and there was a *Wei* (尉), but no *Chu*. The Pei Wei administered the provinces through military officials as Governors-General, viz., the *Tu Tu Chu Chou Chün Shih* (都督諸州軍事), *Tu Tu San Chou Chu Chün Shih* (都督三州軍事), *Tu Tu I Chou Chu Chün Shih* (都督一州諸軍事), next to them being the *Shang Shu Ta Hsing T'ai* (尚書大行臺), and the *Ssŭ Chou Mu* (司州牧). The Governor, Prefect, Sub-Prefect, and District Magistrate were the same as under the Sung, Ch'i, etc., educational matters, however, being now under the control of the *Chün Po Shih* (郡博士), and there was no *Ch'êng* either under this or the two following dynasties. The only change made by the N. Ch'i was in placing the *Shang Shu Ta Hsing T'ai* and the *Ssŭ Chou Mu* at the head of the provincial administration. The highest provincial posts under the Hou Chou were the *Yung Chou Mu* (雍州牧) and the *Tsung Kuan Ta Tu Tu* (總管大都督). The *Tsung Kuan Tz'ŭ Shih* (總管刺史) was the Governor, there was no Director of Education, the Prefect and Magistrate remained the same as under the Pei Wei, and the Sub-Prefect hitherto called *Ch'êng*, was now styled *Chün Ch'êng* (郡丞).]—*Yüan chien lei han*, *cc.* 107–117.

[Under the reign of Wu Ti (483–93) the term of three years' service for provincial officials was instituted.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 2*b*.

[The Sung officials numbered 6,172; the Ch'i, 2,103; the Later Wei, 7,764; the N. Ch'i, 2,322; and the Later Chou, 2,989.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 6*b*.

Embassies.—"Wen-ti of the Wei dynasty received ambassadors from three kings—of Khotan, of another district on the river Ili, and one near Lop-nor—and published a decree in honour of the event, in which he quoted the Shi and Shoo for the praise of submissive barbarians, and concluded: 'Now that the strangers of the western lands come with sincerity to solicit reunion with the empire, let the ambassadors they send be received and supported' (*Remusat*, *Hist. de la ville de Khotan*, p. 10). Other embassies were received in 461 and 466 A.D., and one was sent (509 A.D.) with presents by the Persian king, Kobad." They were lay, commercial or tributary, and not permanent.—*Simcox*, ii. 128.

2. *Legislative.*—[Laws were revised by order of the sovereign. In the kingdom of Wei, Chia Ch'ung (217–82) was ordered to revise the laws and statutes on the basis of the Nine Articles of the Han dynasty. He added eleven articles to them. He kept the order in which they had originally stood, but had them properly classified. There is no record as to the legislation in the kingdoms of Shu and Wu. In the 3rd year (267) of T'ai Shih of the reign of Wu Ti, Chia Ch'ung and others were ordered to revise the law. In the following year new laws were proclaimed, and later on, the law officer, Chang Ch'iung, made a commentary on all the laws, and submitted it to Wu Ti for approval. The law officer at this time was designated *Ming Fa Yüan*, Law Exponent.

In the time of Sung Wen Ti (424–54), Liu Hsiu-chih, a President of a Board, asked for permission to have the laws revised. Ch'i Wu Ti (483–94) ordered Wang Chih-chih, a Revising Secretary, to add explanatory notes to the old laws made by the Ministers Chang and Tu, and have them codified. This project was not successfully carried out, and his work was afterwards lost for ever. The laws of the Liang dynasty (502–57) were the same as in the time of Han. They were revised by Ts'ai Fa-tu, Wang Liang, and others. Ch'ên Wu Ti (557–60) ordered Fan Kao to revise the laws under the superintendence of Hsü Ling, and they enacted some very rigorous laws with regard to making irresponsible speeches, as well as some regulations governing imprisonment. In the time of the Later Wei dynasty (386–534) severe laws were enacted for the punishment of criminals. When Tao Wu (386–409) had conquered the whole country, he was disgusted at the severity of the law. He therefore ordered the Under Secretary Wang Tê to repeal the harsh laws and institute a fixed punishment for each crime. T'ai Wu (424–52) also ordered Ts'ui Hao to revise the laws, and one year's punishment was substituted for that of four or five years. Hsiao Wên (471–500) followed the example of T'ai Wu, the work being done by Kao Lü, who made some additions to, and substractions from, the old code in accordance with the law existing at that time. When Ch'i Chêng Wu conquered the Eastern Wei there was such a large number of robbers that he had to enact very rigorous laws for their suppression. The ruler Wên Hsüan (550–60) of the Northern Ch'i dynasty ordered all his ministers to have the laws of Wei revised, and also proposed to call his enactments the laws of Ch'i, but his efforts were unsuccessful, although he had endeavoured to proceed with the work for several years. Hence, all criminal cases continued to be decided in accordance with the laws of Wei. In the third year (564) of the reign Ho Ch'ing of Wu Ch'êng Ti, a president named Wang Ching submitted to him twelve chapters of law named after the Ch'i dynasty. The ruler Wên Ti of the Later Chow dynasty ordered his ministers to study first the conditions of various times, ancient and modern, and then revise the laws of the country in accordance with the knowledge thus acquired. In the 3rd year (563) of the reign Pao Ting of Wu Ti, the Principal Law Administrator named Topeidi, submitted a set of laws to the throne, and they were called the "Great Laws."]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, pp. 97*a*-97*b*.

3. *Judicial.*—[In the kingdom of Wei, there was an officer called *Tu Kuan Ts'ao*, who was charged with the administration of the criminal as well as the civil law. This officer was sometimes a *Shih Lang* and sometimes a *Lang Chung* (see *Executive*). The *T'ing Wei* was a hereditary office for the aristocratic class, and more members of the family of Kuo held the office than of any other family. In the time of Chien An (196–220) the *T'ing Wei* was called *Ta Li*, but in the time of Huang Ch'u (220-7) the old name was restored.]—*Yüan chien lei han Hsing pu chang*, p. 66*b*; *Ta Li*, p. 107*a*.

[Under the Chin it was still the rule that the three Ministers of State (*San Kung*) and the Shang Shu were the persons charged with the administration of the criminal law.]—*Ibid. Hsing Pu*, p. 65*a*.

[In the time of the Sung, the *San Kung* and *Pi Pu* were the officials entrusted with the administration of the law. Besides them there was a new official called *Tu Kuan Shang Shu*, who administered the military law, and this post had also existed in the times of the Ch'i, Liang, Ch'ên, and Later Wei. In the time of the Northern Ch'i the official called *Tu Kuan* had five boards under him, namely *Pu Kuan, Êrh Ch'ien Shih, Pi Pu, Shui Pu*, and *Shan Pu*, and besides there was also another under the name of *San Kung Ts'ao*, by which all matters relating to prisons, decision in criminal cases, and the proper dates on which petitions for the pardon of criminals could be entertained. In the time of the Later Chow dynasty the *Ta Ssŭ K'ou* was the administrator of the criminal law. He had the secretaries of the Criminal Law Board as his subordinates, the assistant secretaries of the Lower Criminal Law Board being also under his control. In the times of the Sung, Ch'i, Liang, Ch'ên, and Wei, there was the Criminal Law Administrator, called *Ting Wei* or sometimes *Ta Li*.]—*Ibid., Hsing Pu*, p. 65*a*; *Ta Li*, p. 107*a*.

Toba Tao, 3rd Emperor of the Northern Wei dynasty "improved the administration of justice."—*Giles, Bio. Dic.*, p. 741.

Wu Ti "became *Wei* (尉), Judge of the *Pei Pu* (see *supra, Executive*), in Lo Yang. The Commentary [says]: 'When T'ai Tsu entered the Magistrate's Yamên (took up his post), he repaired the 4 gates and made the 5-coloured clubs hung on both sides of the gate—on each side more than 10 of them. Anyone who broke the laws, though he be brave and strong, was to be beaten or killed with them.'"—*Tzŭ shih ching hua*, *c.* 44, p. 12*a*.

4. *Revenue.*—"The leading ideas and recurring difficulties of Chinese financiers did not undergo any material change between the Han and the Tang dynasties. One of the chief difficulties of the Goverment, the prevalence of illicit coining, was mainly owing to the simplicity of the mode, still in use, of casting money—a process which was easily imitated."—*Simcox*, ii. 155.

"It appears that each of the three governments [220–65] . . . had its own system. Kuang-tung, as part of the Kingdom of Wu, had its salt administrated by an officer residing at Tung-kuan on the East River, whose title was *Ssŭ-yen-tu-wei* (司鹽都尉)."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 62.

[In the beginning of the reign of Wei Wu, a tax of four bushels of grain was levied on each acre of land, two pieces of silk and two pounds of cotton, on each family; and no other taxes than these could be arbitrarily levied.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*.

[For the ministers in charge of revenue matters (*Ssŭ Nung, T'ai Fu, Tu Chih Shang Shu*, &c.), see *ibid., Shê kuan pu, Ssŭ Nung*, p. 112*a*; *T'ai Fu*, p. 117*a*, and *cf. Executive.*]

"The empire [of Chin] had no constant taxation, and so had not sufficient funds to meet expenditure—[which was met by] collecting from rich families and merchants. If the funds were sufficient, no further collection was made."—*Chin shu, P'ei wên yün fu, c.* 67*b*, p. 101*a*.

"When Wei Wu [Ts'ao Ts'ao] had settled the capital at Yeh [in Honan], he instituted a system of taxation, by which each family paid 2 rolls of lustring and 2 catties of cotton."—*Wên hsien t'ung k'ao hsiang chieh, c.* 3, *Hu K'ou k'ao*, p. 2*a*. There was also a field-tax, every *mou* paying 4 pecks of rice.—*Ibid. c.* i., *T'ien fu k'ao*, p. 4*a*.

[In 284, owing to failure of crops in Jên Ch'êng, Liang Kuo, and Chung Shan, the revenue of the empire was reduced by one-third.]—*Tzŭ shih ching hua, c.* 52, p. 26*b*.

"During the Tsin [Chin] Dynasty (265 to 420) salt and iron taxes were under the special control of a board of finance called *tu-chih* (度支), with local officers in the different principalities." See *supra, Executive.—Journ. N.-C.B.R.A.S.*, N.S. xxii. 63. See also *Tzŭ shih ching hua, c.* 39, p. 13*a*; *Kuang shih lei fu, c.* 5, *Chih kuan pu*, p. 12*b*.

[Soon after his conquest of the kingdom of Wu, Wu Ti (265–90) established a new system of taxation, by which every adult male paid annually a tax of three pieces of silk, and three *chin* (4 lb.) of cotton; younger sons and daughters paid only half of the tax. With regard to the frontier districts some paid two-thirds, while distant places paid only one-third, either in cloth, grain, or money.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*; see also *Wên hsien t'ung k'ao hsiang chieh, c.* 1, *T'ien fu k'ao*, p. 4*a*, where it is added that no family being without fields, everybody could be taxed.

[The sea-salt prepared at a dozen or so places along the coast has, from the fourth century onwards, all been concentrated under one management for revenue purposes.]—*Parker, China*, p. 210.

[Ch'êng Ti (326–43) was the first emperor who had the lands surveyed. He ordered that each acre of land should pay 10 per cent. of its productive value as tax. This system was abolished by Wu Ti in the second year (377) of T'ai Yüan. From the princes downward, everyone was to pay thirty bushels of grain as poll tax; those in actual service of the State were exempt from such a tax. In the 8th year (383) the grain tax was further increased to fifty bushels.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*a*; see also *P'ei wên yün fu, c.* 67*b*, p. 101*a*, and *Wên hsien t'ung k'ao hsiang chieh, c.* 1, *T'ien fu k'ao*, p. 4*b*.

[Every *mou* paid three pecks of rice. This was reduced to 2 pecks by *Ai Ti* (362–6).]—*Wên hsien t'ung k'ao hsiang chieh, c.* i, *T'ien fu k'ao*, p. 4*b*.

[The Chin abolished the *Ssŭ Nung* and *Tu Shui*, but had a *Tu Chih Shang Shu:* see *Executive.*]—*Ibid., Shê Kuan pu, Hu pu*, p. 57*a*, *Ssŭ Nung*, p. 112*a*.

"In the 1st year [373] of the period *Ning K'ang* of the Emperor Hsiao Wu of Chin, the tax on *ssŭ hang*, 'four beams,' which was the tax on Tan Yang bamboos, poles, and the like, was abolished."—*Yüan ching, P'ei wên yün fu, c.* 67*b*, p. 104*a*.

"Since the Chin crossed the river down to the Liang and Ch'ên, anyone selling a slave, maid, horse, cow, field, or house with a deed, had to pay to the government 400 cash out of 10,000, the seller paying 300 and the buyer 100. Where there was no deed, they paid 4 out of 100 according to the value of the thing, which tax was called *san ku* (散估)."—*Wên hsien t'ung k'ao hsiang chieh, c.* 5, *Chêng ch'üeh k'ao*, p. 1*b*.

"The currency continued to be a source of great embarrassment, and from time to time the Government was on the point of reverting to the use of silk and grain as a medium of exchange instead of copper, though a very short experience showed that it was as easy to tamper fraudulently with the natural weights of these substances as to manufacture copper money with an undue proportion of the alloy. One of the nameless emperors, whom history knows only as 'the Deposed,' in 465 A.D., reverted to the experiment of Wen-ti, and allowed the people to cast their own money; the result was seen in the production of diaphanous tokens, fit, according to the contemporary phrase, to 'float on water or fly in the wind,' of which it took ten thousand to pay for a bushel of rice (*Journ. Asiat.*, Aug., 1837, p. 100; *Catalogue of Ch. Coins*, p. 425). This license was nominally withdrawn in 494; but there was still no uniformity, and each district did the best it could for itself, using silk and grain whenever the copper money was hopelessly depreciated."—*Simcox*, ii. 158.

"The Leang dynasty used iron money, which was open to all the same objections as the copper; and, for a short time, tin was used in addition to grain and silk. This dynasty has also the credit of a curious device for testing the value of the coin in circulation in different districts. It was proposed to send silk worth two hundred good copper coins for sale in different parts of the country, which in some places fetched as much as three hundred coins, 'not because the silk was higher valued, but because the money was debased' (*Vissering*, p. 91). In the Northern Empire at the same time the salaries of officers were paid alternately in silk or copper, while private coining was allowed, providing the Government standard of purity was adhered to."—*Ibid.* ii. 158.

"If the coinage was scarce, inconvenient, or unpopular, the people readily improvised standards of value and used handfuls of grain for small change, and lengths of silk for larger values, as, to this day, salt is used in Yunnan and brick tea in Mongolia. Additional taxes, however oppressive, did not increase the demand for coin, as salt, iron, wine, and other articles, on which duties were from time to time imposed, were all as acceptable to the treasury as the normal payments of grain. A small token coinage seemed to meet the practical needs of the people, and the ideal of the Government thenceforward seems to have been, more or less consciously, to bar the way to accumulation by not recognising money as a commodity at all."—*Ibid.* ii. 157.

"The Chinese emperor had less to gain than most European princes by tampering with the currency, because there was no public debt, and most Government expenses were borne locally, while salaries still consisted partly in allowances of grain."—*Ibid.* ii. 157.

"Some of the economic heresies of the Chinese seem to have been on the whole original and peculiar to themselves. The words used to describe money as cheap or dear have reference to weight, not price or scarcity. Money is 'heavy,' *i.e.* dear, when a coin of fixed nominal value will buy a larger weight of commodities than usual, and it is 'light,' or cheap, when the reverse is the case. But by a confusion of ideas, such as abound in the history of economic speculation, it seems to have been thought that the value of the money, or its purchasing power, could be increased by the simple increase of its weight; in fact, it was proposed to aim at the desirable result of cheap commodities and 'heavy' money by raising the value of the money issued. The quantity of copper coin in circulation remaining the same, of course, the people suffered inconvenience from not having money small enough to serve for trifling transactions; but the error of the Government was not more gross, and certainly more disinterested, than the far more common mistake made in the opposite direction, by rulers who have expected to enrich themselves, without impoverishing their subjects, by issuing 'light' money at the nominal price of 'heavy.'"—*Ibid.* ii. 157–8.

"At that time Kuan Chung suffered from a great famine, and the rice and food of the people were impounded in order to maintain the troops."—*Pei shih Wang P'i chuan, P'ei wên yün fu, c.* 67*b*, p. 100*a*.

"The population of Lin Tzŭ of Ch'i consisted of 100,000 families, and the market tax was 1,000 [taels] of gold. The people were more numerous and richer than those of Ch'ang An. The Commentary [says]: 'The market tax means the tax imposed on selling goods from which 1,000 [taels] of gold could be collected in a day.'"—*Tzŭ shih ching hua, c.* 53, p. 29*a*.

"The people imitated the corrupt ways of the Ch'in and Chin. They had a system of falsifying the registration. Sometimes 100 houses united together to form a family and 1,000 males to take a census, in order to avoid the taxes and government service and to do wickedness."—*Chin shu Mu Jung Tê tsai chi, Tzŭ shih ching hua, c.* 52, p. 28.

[In the time of Wên Ti (424–54), every family, no matter of how many adults it consisted, was liable to pay a certain quantity of rice. The ruler Hsiao Wu (454–65) of the Sung dynasty ordered that every family should pay four pieces of cloth as tax.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 51*b*. In 454 a tax was put on the settlers in Hsü Chou: see *Nan shih Sung Hsiao Wu Ti chi, Tzŭ shih ching hua, c.* 52, p. 27.

[No alterations were made in the laws of the Eastern Chin by the various dynasties of Sung, Ch'i, Liang, and Ch'ên; what was required for military and other national expenses was provided for out of the tax on the produce of the land, but there was no fixed rule.]—*Yüan chien lei han, Fu shui*, p. 51*b*.

[In the time of the Ch'i (479–502) a tax was levied on males of twenty feet of cloth, three ounces of silk, eight ounces of cotton, and five piculs of rice. Female adults were liable to pay half of what was paid by the males, who had to do 20 days' corvée per annum. Every piece of land was liable for two bushels of rice. This was the general system of taxation at that time.]—*Ibid.* p. 51*b*.

[In the time of the Later Wei, the taxes and services required of the male adults were various, and in consequence of the confusion respecting the number of families in the country, Mu Ti abolished the system, and transferred this work to prefects and district magistrates.]—*Ibid.* p. 51*b*.

[According to the Wei system of taxation, when recruiting took place only one adult could be drafted from each family, and every married woman was liable to pay a tax of one piece of silk and two piculs of rice. This system was altered by Hsiao Wên (471–500), who ordered that in every county and district one adult could be drawn from every ten, and fifty instead of two piculs of rice were to be levied.]—*Ibid.* p. 51*b*.

The lake salt of the Ho-tung area "remained a Government monopoly until A.D. 506, when the Tungusic dynasty then ruling North China threw open to free exploitation a number of the works."—*Parker, China*, p. 225; see also *Journ. N.-C.B.R.A.S.*, N.S. xxii. 70.

"When China was again ruled over by two courts, a deficit in the public revenue caused the Government of the southern part under Wên-ti in A.D. 561 to levy a tax on 'the boiling of sea-salt'; and after the empire had been re-united, we find under the year 583 the record of an edict which places the free use of the 'salt-marshes' (鹽池 *yen-ch'ih*) and of the 'salt-springs' (鹽井 *yen-ching*) at the disposal of the people. It seems doubtful whether the sea-coast participated in this privilege."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 63.

"In the 2nd year [526] of Hsiao Ch'ang of Ming Ti of the Later Wei they levied one cash from every person who entered the market. The taxes imposed on shops and houses were of 8 different kinds."—*Wên hsien t'ung k'ao hsiang chieh, c.* 5, *Chêng ch'üeh k'ao*, p. 1*b*. The market tax was abolished in 557 (*Pei shih Chou Min Ti chi, P'ei wên yün fu, c.* 67*b*, p. 104*a*) and reimposed by the Northern Chou in 581 (*Pei shih Hsüan Ti chi, Tzŭ shih ching hua, c.* 53, p. 29*b*).

"Those [*c.* 550, under the Pei Ch'i] who were rich paid the tax in money, and those who were poor in labour and services."—*Tzŭ shih ching hua, c.* 52, p. 28*b*.

[In the 3rd year [564] of Ho Ch'ing (of the N. Ch'i) it was enacted that when a youth came to the age of 18 years, he was to receive a certain grant of land, for which he had to pay a certain tax as rent; when he was 20 years old he was required to enter the military service as a soldier; and when he was 66 years old he was exempt from both military service and tax.]—*Yüan chien lei han, Fu shui*, p. 51*b*.

[The *Pa Fu*, a kind of revenue office, was first established in the time of Wên Ti of the Later Chou dynasty. According to the system existing at that time, the *Ssŭ Fu*, Revenue Office, was a department for transacting all matters connected with taxation, while the *Ssŭ Ti*, Conscription Office, was a department for the adminstration of the military law respecting conscription. Everyone between the ages of 18 and 64, and those who were slightly infirm, were all liable to various taxes.]—*Ibid.* p. 51*b*; *Shê kuan pu*, pp. 117*a*, 57*a*.

[As to military service, everyone between the ages of 18 and 59 was liable to serve. The term of service was 30 days, if there had been a good harvest; 20 days, if there had been a medium one; and 10 days, if there had been a bad one.]—*Ibid.* p. 51*b*; *Shê kuan pu*, pp. 117*a*, 57*a*.

[In the time of the Liang (502–57) the official who kept accounts of the national wealth, that is gold, silk, and the like, was called *T'ai Fu Ch'ing*. He also had control over toll barriers and ordinary shops. This official also existed in the time of the Ch'ên (557–88). In the time of the Later Wei (386–534) there were both a *T'ai Fu Ch'ing* and a *Shao Ch'ing* in charge of revenue matters.]—*Ibid.* p. 51*b*; *Shê kuan pu*, pp. 117*a*, 57*a*.

[In the time of the Northern Ch'i (550–77) there was a *Ts'ang Pu Tso Hu*, a department charged with the preparation of budgets and censuses. In addition to this, there were two other departments—one called *Yu Pu*, charged with the collection of land tax, and another called *T'ai Fu Ssŭ*, charged with the manufacture of various articles for government use. Similar departments also existed in the time of the Later Chou (557–81).]—*Ibid.* p. 51*b*; *Shê kuan pu*, pp. 117*a*, 57*a*.

[For *exemptions* (youth, age, government service, &c.) see *supra.*]

From the Restoration of Unity to the end of the Five Dynasties (589–960).—*Table V.*

589–907.

RANKS.—*Sovereign* (*Huang Ti*).—[The general character of the kingship remained the same as before. Under Hsien Tsung, eunuchs gained much influence, and eventually slew him.]—*Kang chien, c.* 35, p. 40.

The Sui dynasty "did a good deal to facilitate its work by consolidating the imperial authority."—*Simcox*, ii. 130.

"The prosperity of different parts of the empire was unequal, but all the rich towns, which Tai-tsong-tang was shortly to gain credit for refusing to sack, could not have existed, if the individual life of the people had not gone on its tranquil course, habitually unmolested even by the weak and tyrannical rulers whom he superseded."—*Ibid.* ii. 131.

The reign of Hsien Tsung (805–820) "began with virtuous protestations that 'not a piece of silk is used in the palace without being recorded' (De Mailla, vi. 381), whereby he was enabled to use the more liberality in dealing out grain to the distressed; but later in the reign he is accused both of wasting his treasures in lavish gifts to unworthy favorites, and of accepting large gifts (one of a million pieces of silk) from officers, who it was notorious could only have obtained them by oppressing the people."—*Ibid.* ii. 136.

Hsien Tsung "re-established the control of the Court over the provincial Governors by a war which lasted from 814 to 819."—*Giles, Bio. Dic.*, p. 463.

"His [Wên Tsung, 827–41] power was restricted by his nearest ministers."—*T'ang tai ti hsi Kuang chih p'ing lüeh hsü chi*, *c.* 2, p. 4*b*.

The short reign of Wu Tsung (841–847) "was marked by the enforcement of a more extended control over several of the provincial governors."—*Giles, Bio. Dic.*, p. 473.

"The Emperor had long been treated only as a puppet, the charge of whose person gave a certain advantage, in the game of civil war, to the leader who secured it. The chief of the movement against the eunuchs had fallen out amongst themselves, and in 904 A.D. the emperor's gaoler, the general Tchu-wen, put him and his family to death, sparing only one younger son, whom he proclaimed emperor. Then follow massacres of the best remaining nobles and as the patriotic clubs or secret societies, which had tried to stem the disorders of the last reign or to pave the way for a new order, had been stamped out, no further resistance was possible. The titular monarch abdicated in favour of his father's murderer, and so the dynasty ends; but the usurper was not held to have succeeded by the appointment of heaven, as his elder brother condemned his disloyalty and refused to accept rank or honours at his hands."—*Simcox*, ii. 138.

[The gradual decay of the imperial authority, which led to the fall of the T'ang dynasty, was held to begin with the surrender of direct influence over the peasantry.]—*Simcox*, ii. 151. See also *T'ang tai ti hsi, Kuang chih p'ing lüeh hsü chi*, *c.* 2, p. 4*b*, and *cf.* REG. OF LAB.

[Succession was hereditary, but usurpations by violent methods were the rule rather than the exception. See *ibid.* pp. 4*a*–4*b*, and following extract.]

"The T'ang dynasty lasted altogether 289 years under 20 kings. Amongst the latter were 3 whose thrones were usurped by their sons; 3 whose thrones were seized by women; 5 who were dethroned by rebels; one who was killed by his wife; 9 who were placed upon the throne by eunuchs; 3 who were murdered by eunuchs; 1 who was dethroned by a eunuch; 7 who were destroyed by priests; 1 who was killed by a powerful minister. The calamities of this dynasty were worse than of those which preceded it."—*Ibid.* p. 4*b*.

The usurping empress Wu, in 689, "had the unparalleled audacity, in her own womanly person, to offer sacrifices in the imperial robes."—*Simcox*, ii. 133.

[During the T'ang dynasty, before the time of Chung Tsung the eldest son had not succeeded, but in Tai Tsung's time (763) the eldest son began to succeed to the throne.]—*Hai Shan Hsien Kuan ts'ung shu, Ku chung sui pi*, p. 63*a*.

"The reign of the last T'ang Emperor [昭 宣] is a singular instance in Chinese history of the reign style not changing at a new monarch's accession. The invariable custom is to change it on expiry of the year in which the last monarch died [踰 年 改 元]."—*Ch. Rev.*, xiv. 223.

"It may be doubted whether the political influence of the *literati* stood as high during this period as under the Hans. They had to contend for the maintenance of their spiritual authority against Buddhists and Taoists, and both they and their rivals had comparatively little to do with the other struggle being waged meanwhile between courtiers, condottieri, and feudalizing nobles for the spoils of empire. Confucianism alone was not compromised in the disasters of the dynasty, since it alone had not contributed to produce them. The system of examination as a means of selecting officers was not condemned, for it had not been fairly tried, though the machinery of the examinations themselves had been elaborated, as if in preparation for a time when its importance would be more fully recognized."—*Simcox*, ii. 142.

"Now six classes have to be maintained by three, so who can wonder if crime and beggary prevail?" "Though a scholar might lead a life of studious contemplation if his means allowed, or if his philosophy was sturdy enough to put up with peasant fare, such a life was not the highest ideal of a Chinese statesman. Self-culture was a part of the duty of every citizen, but the proof of eminence in that art was the production of a self admirably adapted for the service of society, a 'man useful to others' (*Li chi*, xxix), and such service was the duty as well as the privilege of the select few. For individuals, who did nothing but try to save their own souls, to demand to be maintained at the expense of the community while so engaged, was not only absurd, but anti-social; and in fact, so long as the quarrel between religious asceticism and political secularism continued in China, the secularists posed consistently as the champions of social duty as opposed to spiritual egotism."—*Ibid.* ii. 148.

[Scholarship was ill-paid. For the effect of the transfer of the control of public examinations to the Board of Rites, see *infra, Examination System.*]

Officials (*Ch'ên*).—[The class of nobles consisted, according to the system which prevailed in the reign *K'ai Huang* of Sui Wên Ti, of nine ranks: the *Kuo Wang* (國 王), *Chün Wang* (郡 王), *Kuo Kung* (國 公), *Chün Kung* (郡 公), *Hsien Kung* (縣 公), *Hou* (侯), *Po* (伯), *Tzŭ* (子), and *Nan* (男). In the time of Yang Ti (605–17) all these titles were abolished except those of *Wang*, *Kung*, and *Hou*. The title of Prince could be borne by the emperor's son, and by all members of the royal family, including elder and younger uncles, and brothers and cousins of the emperor. Under the T'ang there were also nine ranks of nobles, but nobility was now only conferred for life and was not hereditary. Princes of the blood were all styled *Ch'in Wang* (親 王). *Cf.* SUNG PERIOD.]—*Tzŭ shih ching hua; Yüan chien lei han*, *c.* 118.

[Between the sovereign and the people was the hierarchy of officials (ennobled or otherwise): the *San Shih*, *San Kung*, *Chiang Chün*, the executive and administrative officers, &c. Wên Ti abolished the official system of the Chou, and adopted that of the Han and Wei. The new system (see *Executive*) was put in force in the year Ta Yeh (605). At this time the empire prospered, but after a few years the laxity of the ruling classes brought about a state of disorder. At the end of the seventh century, wars were frequent, and robbery common. The treasury thus became depleted, and the government could only reward deserving officials with official rank. Generals who had been on military expeditions were given ranks lasting only for life. The title of Prince was bestowed even on those who were not of royal blood. Military officers were placed under the control of those who commanded them, their precedence not being decided by seniority. After the defeat of the army at Ch'ing Ch'ü, official ranks were even offered to the common soldiers who had been dispersed for purposes of retrenchment. From this time forward, ranks were looked down upon, and money was the sole object. The licence for bearing the title of *Ta Chiang Chün*, Commander-in-Chief, was only worth as much wine as would make one drunk. Those who enlisted were entitled to wear robes made of gold tapestry or of violet colour. The servants of a statesman might be seen wearing such robes and bearing high official rank, although they were engaged in menial work. Hence at this time the dignity of official rank was of no account.]—*Tzŭ shih ching hua*, *cc.* 37–44, pp. 1–33.

Kao Tsu "had made all members of his family princes of the first rank, and complaints were heard of the expense thus imposed on the country. Tai-tsong accordingly reduced the number of princes, allowing those only to retain the first rank who had deserved their place by services rendered to the State."—*Simcox*, ii. 132.

Hsüan Tsang returned from India in 645 "with twenty-two horse-loads of books and statues, and relics innumerable. He was favourably received at court, where the best emperors were always eager to cross-examine intelligent travellers about the customs, products, and government of foreign lands; and he was even invited to lay aside the 'yellow mantle' and abandon the religious life, so that he might be employed as a minister of State."—*Ibid.* ii. 145.

"Ming Huang appreciated the officials in the palace (eunuchs). Those who could meet the imperial wishes had immediately bestowed upon them the title of general of the 3rd grade and had the right to erect an ornamental lance on the door."—*Tzŭ shih ching hua*, *c.* 44, p. 15*a*.

"A determined attempt was made, especially in Honan, Shantung, and Petcheli, to restore the hereditary character of provincial governorships, and in 784 A.D., a number of these governors united together to force the emperor to appoint the sons of all the allies to succeed on their fathers' death. The fate of the provinces at this time depended much on the local governors, who for good or evil were able to make themselves tolerably independent of the empire."—*Simcox*, ii. 134. Boulger (*Short Hist.*, p. 31) says "the surrender of the Imperial prerogative entailed the usual deterioration of the central power which preceded a change of dynasty."

"The unsatisfactory state of the revenue, even in time of peace, led to an enquiry; and the ministers reported that there were at that moment (811 A.D.) 800,000 troops in the empire, and that a full half of the rest of the population consisted of merchants, priests, and others, who did not cultivate the ground, so that really three-tenths of the population did the work necessary to feed and clothe the remaining seven (*De Mailla*, vi. 29). The number of officials had increased to no less than 10,000, and their salaries had been gradually increased by raising towns of the third rank to the second, and so on, in order that their governors might be paid the salaries belonging to the higher grade. Formerly, mandarins of the first rank received a monthly allowance of 1,000 large measures of grain, and 3,000 strings of cash; but in the reign of Tai-tsong (762–778 A.D.) the latter amount was trebled, and now the governor of the least third-class town received several thousand strings monthly. While learning was thus honoured—for these posts of growing value were being granted in larger measure than before to the successful candidates in the examinations—the literati in and out of office must have watched with comparative equanimity the spread of Buddhism, a doctrine which, in the words of a writer of the period, 'admits no envious rivalry for place or power.' The remedy proposed by the censors was . . . merely to reduce the number and the salaries of the official class; but after this display of impartiality, there was a notable revival of anti-Buddhist zeal."—*Simcox*, ii. 146–7.

"[When the Emperor Hsien-tsung sent a number of officials to escort a relic of Buddha into the capital, in 819,] Han Yü, better known [as] Han Wên-kung, at that time President of the Board of Punishments, . . . denounced the Emperor's conduct in a very free and indignant memorial, which so much enraged the Emperor that he wanted to have [him] put to death, [He was spared at the intercession of] two high officers, who begged for mercy to him as a loyal servant, though rash of speech, and in order to *keep open the road of words—that is, to preserve liberty of address to the throne;* [but] degraded and banished to the pestilential district of Chao-chou-foo (near Swatow). The next emperor recalled [him] and gave him a high office."—*Ch. Rec.*, ii. 40.

Transfer "in virtual exile to the barbarous South," was "a favourite way of punishing inconveniently scrupulous officials. . . . The local popularity which, then as now, rewarded a disinterested administrator was a sort of compensation, and there was always the probability of the exile being recalled. . . . We are almost tempted to see a kind of Macchiavellian cunning in this way of employing honest officials wherever their honesty was not inconvenient to the corruption at head-quarters. Whether the policy was deliberately followed or not, it was certainly one of the causes which contributed to the spread and consolidation of a civilized order in the more distant parts of the empire during this and other dynasties."—*Simcox*, ii. 147.

"In 834 A.D. the Emperor complained that the dissensions of the nobles gave him more trouble than the raids of Tatars or Tibetans. He attempted to reduce the power of the chamberlains by degrees, but with so little success, that in 835 he joined in a kind of conspiracy with two officers to have them massacred. The plot failed, apparently because the officers in command of the palace guard were not in the secret; and the eunuchs' party was so strengthened by the abortive attack, that they compelled the Emperor to decree that henceforward all affairs should be discussed and decided in their tribunal (that of the interior), and the rest of the Government reduced to purely ministerial functions."—*Ibid.* ii. 136. See also *Executive.*

[Whether the policy of employing honest officials wherever their honesty was not inconvenient to the corruption at head-quarters was deliberately followed or not, it was certainly one of the causes which contributed to the spread and consolidation of a civilized order in the more distant parts of the empire during this and other dynasties.]—*Ibid.* ii. 147.

"*Artisans* and *traders* (工 商) were first forbidden to take high official rank (不 得 仕 進) in the year A.D. 596."—*Ch. Rev.*, xiii. 430.

[In 841–64, 265,000 monks and nuns and 150,000 slaves of monasteries resumed their places in the producing classes; see *infra, Taxation.*]

Slaves (*Nu*).—[The Emperor Yang (about 600 A.D.) placed a eunuch in charge of his six palaces and all his women. Yang also had a great favourite in a dwarf named Wang-i, who was sent to him with tribute from some southern tribe, and became a eunuch. He always used his influence for the public good.]—*Journ. N.-C.B.R.A.S.*, N.S. xi. 154.

[Eunuchs were appointed to official posts by Hsüan Tsung.]—*Giles, Bio. Dic.*, p. 451.

[There are at least two notable instances, under the T'ang dynasty, of eunuchs attaining great power and influence.]—*Journ. N.-C.B.R.A.S.*, N.S. xi. 155. *Cf. Ch. Rep.*, xviii. 356.

Hsien Tsung's reign is "memorable for the revival of the political power of the eunuchs, with results to the dynasty like those of a similar development in the last century of the Han rule. In 809 A.D. an eunuch was appointed general, in defiance of public opinion, and the division between the officers of the interior and those of the exterior began to assume importance. The eunuchs succeeded in nominating a majority of the officers of State, and resented as an interference with their rights the attempt of Wen-tsong (826–40 A.D.) to promote meritorious officers for their services without money or interest."—*Simcox*, ii. 136.

[In 828 an elaborate but unsuccessful attack on the eunuchs was made by means of an essay handed in at the public examination, with an appeal to the Emperor to suppress their brigandage and cruelty.]—*De Mailla*, vi. 453.

[In the reign of I Tsung the influence of the eunuchs was greater than ever. It was to them that this Emperor owed his throne.]—*Giles, Bio. Dic.*, p. 469.

"The corruption and insolence of the eunuchs still increased" in spite of the vigorous resistance of the palace officials; and their "parasitic clutch . . . proved fatal to the imperial house, to which they clung and which buried them in its fall."—*Simcox*, ii. 136-7.

"Formerly the eunuchs had been content with personal influence within the palace, and the opportunities of enriching themselves so afforded. For them to form a political party shows the weakness of other interests, as well as the Chinese aptitude for association under the least encouraging conditions." "To make themselves formidable beyond the palace as well as in it, it was indispensable for them to obtain adherents outside their own body; and about this time the chief eunuchs set themselves to strengthen their party by *adopting* young men of promise as their sons, whose promotion they were of course able to ensure and who, as great officers or generals, were entirely devoted to their 'fathers'' interests. In 891 there were as many as 600 of these adopted sons, most of whom held office. The adherence of other officers and troops, and especially of the palace guards was secured by largesses, while the soldiery were instigated to mutiny against hostile nobles."—*Ibid.* ii. 137. See also *infra., Examination System.*

"The climax was reached in 900 A.D., when the Emperor was imprisoned in his own palace by the eunuchs. He was released by force of arms the next year, but even then the proposal to exterminate the rebels was rejected on the ground of the immense number of them employed about the palace. They thought themselves powerful enough to refuse all offers, even of honourable employment, which would take them away from the court; but in 903 the coalition between a successful general and a loyal minister prevailed. An edict was published abolishing the custom of reporting affairs of State, first to an 'inner tribunal' of eunuchs, who were, it was claimed, able to discuss them more intimately with the Emperor, and therefore decide them better, though in fact the only decision taken was often to keep the whole matter from the Emperor's knowledge. The ministers were now required to report direct to the Emperor himself, and the Emperor's new masters demanded the abolition of all the 'interior tribunals,' and the recall of the provincial inspectors employed by the eunuchs to terrorize the local officials."—*Ibid.* ii. 137-8.

"As in the days of the Warring States, local governors seized provinces for themselves, only asking formally for the Emperor's sanction to the *fait accompli*. The country was desolated by their private wars, and these revolts too were laid to the eunuchs' charge, since they were caused by impatience of the authority exercised by such unfit menials. After this the massacre began, and thousands were put to death; only a few boys and old men were spared to sweep the courts of the palace, and the Emperor's orders were conveyed directly to the nobles; but so deeply rooted had the habit of employing go-betweens become, that women were employed in the mechanical office of receiving the memorials to be handed to the Emperor, and of transmitting his replies to the ministers."—*Ibid.* ii. 138.

[Women were less secluded.]—*Ch. Rev.*, xiv. 108.

[For Wên Ti's attempt to introduce a division of the people into castes, see REG. OF LAB.]

INSTITUTIONS.—1. *Executive.*—[The capital of the Sui was Ch'ang An (Hsi An Fu) and of the T'ang, Lo Yang (Ho Nan Fu).]—*Oxenham, Atlas*, maps 15, 16; *Boulger, Short Hist.*, p. 26.

[T'ai-yuan-fu in Shansi was the capital of the T'ang dynasty in the 8th century A.D.]—*Yule, Marco Polo*, ii. 8 (note) (1st ed.).

[The Sui Empire consisted of 9 *chou*, provinces, 190 *chün*, and 1,248 *hsien*.]—*Oxenham, Atlas*, map 15.

T'ai Tsung (627–49) "introduced an improved division of the empire into provinces with sub-divisions" and "reformed the civil and military services."—*Giles, Bio. Dic.*, 461–2. The chief provincial division was now called *tao*, and the sub-divisions *fu*, *chou*, and *hsien*. See *Oxenham, Atlas*, map 16.

"In the same year [627] the Empire was divided into ten Provinces, namely, 關 內 (metropolitan); 河 南 (as now); 河 東 (Shan Si); 河 北 (Chih Li); 山 南 (Shen Si); 隴 右 (parts of Kan Suh and Shen Si); 淮 南 (parts of An Hwei); 江 南 (parts of Kiang Su); 劍 南 (parts of Sz

Ch'uan); 嶺 南 (Kwang Tung, etc.); no doubt Hu Kwang was distributed between one or more of these, as also Shan Tung; whereas Fu Kien, Yün Nan, and Kwei Chou were still half-known outlying regions. Even Canton was under native chiefs (酋 長), who kept up a perpetual internecine war. In the year 627, the most prominent of these, 馮 盎, sent his son to do homage at the Chinese Court."—*Ch. Rev.*, xiii. 401.

[Under Hsüan Tsung (713–56) the empire was divided into fifteen provinces (*Giles, Bio. Dic.*, p. 451). The names of the new provinces were Ching Chi, Tu Chi, Shan Nan Tung, Shan Nan Hsi, Kiang Nan Tung, Kiang Nan Hsi, and Ch'ien Chung (*Oxenham, Atlas*, map 16). The date of increase from 10 to 15 is given as 734 in *ibid.*, Pref. pp. ii–iii.]

From the accession of Ming Huang (713) "until 740 the country was fairly prosperous. The administration was improved, the empire was divided into fifteen provinces, and schools were established in every village." The Emperor's "love of war, however, and his growing extravagance, led to increased taxation . . . . Eunuchs were appointed to official posts, and the grossest forms of religious superstition were encouraged. Women ceased to veil themselves as of old. Gradually the Emperor left off concerning himself with affairs of State; a serious rebellion broke out, and his Majesty sought safety in flight to Ssŭch'uan, returning only after having abdicated in favour of his son."—*Giles, Hist. of Ch. Lit.*, p. 168.

[Suleyman says that in China there are over 200 chief cities (métropoles), each ruled by a prince and a eunuch, and having other towns subject to it. Khanfu (anciently, port of Hang Chow) has 20 other towns under it. No place is entitled to rank as a "town," unless it has the *djadem*—a kind of trumpet—sounded at the gates at certain hours of the day and night.]—*Relation des Voyages, &c.*, i. 32-3.

[*Ministers.*—The chief Ministers next to the sovereign, under the Sui, were first the *San Shih* (三 師): the *T'ai Shih*, *T'ai Fu*, and *T'ai Pao*. They did not transact official business, but sat with the sovereign and discussed principles of government. Yang Ti (605–17) abolished them and appointed the *San Kung* (三 公), viz., the *T'ai Wei*, *Ssŭ T'u*, and *Ssŭ K'ung*, who deliberated on important affairs of State. When there were none capable of transacting these affairs the posts were left vacant. They assisted the emperor on occasions of sacrificing and worship. Being mostly unoccupied, they acted in other capacities in addition to their own. Under the Sui and afterwards, there were no *Ta Ssŭ Ma* and no *San Ku*.]—*Wên hsien t'ung k'ao*, c. 11, *Chih kuan érh*, pp. 7*a*–11*a*.

[*Nei Shih Na Yen* (內 史 納 言), Imperial Historiographer, and Imperial Promulgator. The Sui had no *T'ai Tsai* or *Ch'êng Hsiang*, but in their place were the *Nei Shih* and *Na Yen*, who were the *Chung Shu Ling* and *Chung Shu*, *i.e.*, *Ch'êng Hsiang*, Prime Ministers. At the beginning of the Sui, the *Chung Shu* became the *Nei Shih* and the *Shih Chung* the *Na Yen*. By Yang Ti's time the *Na Yen* was changed to *Shih Nei*.]—*Ibid.*, *Chih kuan san*, p. 12*b*; *Chih kuan ssŭ*, pp. 17*b*–18*a*; *Chih kuan wu*, p. 23*b*.

[The *Tso* and *Yu P'u Yeh* (左 右 僕 射), Left and Right Directors of Archery. The *Tso P'u Yeh* had control of the decisions of the three Boards: *Li Pu*, *Li Pu*, and *Ping Pu*. In addition to his own duties he checked the reports of the Censors (*Yü Shih*), investigating the case and impeaching the Censor. The *Yu P'u Yeh* had similar control of the *Shang Shu* of the three Boards: *Tu Kuan*, *Tu Chih*, and *Kung Pu*. He also controlled the government revenue.]—*Ibid.*, *Chih kuan wu*, pp. 29*a*–30*a*.

[The T'ang re-instituted the *San Shih*. They "moulded the actions of the Emperor," transacted state affairs, discussed public policy, and regulated the *yin* and the *yang*, the system of imperial worship being the same as under the Sui. The posts were only filled when suitable men could be found: they were vacant during the period *T'ien Pao* (742–56) of the reign of the Emperor Hsüan Tsung.]—*Yüan chien lei han*, *Shê kuan pu*, *San shih*, p. 5*b*.

[The *San Kung* were the same as under the Sui.]—*Ibid.*, *San Kung*, p. 5*b*.

[About 835 the eunuchs' party had been so strengthened by the Emperor's abortive attack, that they forced the Emperor to decree that all affairs should be discussed and decided in their tribunal (that of the interior), and the rest of the Government reduced to purely ministerial functions.]—*Simcox*, ii. 136.

[In the T'ang dynasty, the *Shih Chung* (侍 中) and *Chung Shu Ling* (中 書 令) were the real Prime Ministers (*Tsai Hsiang*). The *Shang Shu P'u Yeh* was not a *Tsai Hsiang*. During this period the name was variously changed to *Na Yen* (納 言), *Nei Shih* (內 史), *Tso Hsiang* (左 相), *Yu Hsiang* (右 相), *Huang Mên Chien* (黃 門 監), and *Tzŭ Wei Ling* (紫 徵 令); these originally were the *Shih Chung* and *Chung Shu Ling*, of whom there were four in all. At the end of the reign Chêng Kuan (627–50) of T'ai Tsung, there was added to the *P'u Yeh* the title of *P'ing Chang Shih* (平 章 事), and he then became a Prime Minister (*Tsai Hsiang*). Other officials were also employed in transacting the affairs of the latter post, there being no definite number of *Tsai Hsiang*; only when one or other of various titles was added, such as *T'ung Chung Shu Mên Hsia San P'in* (同 中 書 門 下 三 品), *Chih Chêng Shih* (知 政 事), etc., did they become Prime Ministers.]—*Yüan chien lei han*, *Shê kuan pu*, *Tsai Hsiang*, pp. 4*b*–11*a*.

[The T'ang followed the preceding dynasty as regards the *Tso Yu P'u Yeh*, originally assistants to the *Shang Shu Ling*. When the *Shang Shu Ling* were abolished, the *Tso* and *Yu Erh P'u Yeh* were *Tsai Hsiang*.]—*Ibid.*, *Shang Shu P u Yeh*, p. 44*a*.

[There were six *Executive Boards*, each under a *Shang Shu*, President. The *Li Pu Shang Shu*, President of the Board of Civil Office, controlled four departments, viz., the *Li Pu* (吏 部); *Chu Chüeh* (主 爵), Department of Nobility; *K'ao Kung* (考 功), Department of Scrutiny; and *Ssŭ Hsün* (司 勳), Department of Merit (*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan liu*, pp. 34*b*–40*a*). Records were kept of ability, merit, antecedents, etc., of officers, who had to pass examinations before appointment (*Tzŭ shih ching hua*, *c.* 40, p. 16*b*).]

[Board of Revenue. At the beginning of the Sui, there was a *Tu Chih Shang Shu* (度 支 尙 書), who had similar duties to those of the *Min Pu* of the Later Chou (see previous Period). In 583, the *Tu Chih* had been changed to *Min Pu*, and controlled four Boards called *Tu Chih*, *Min Pu*, *Chin Pu*, and *Ts'ang Pu*.]—*Wên hsien t'ung kao*, c. 11, *Chih kuan liu*, pp. 34*b*–40*a*. For the placing of the collection of taxes upon the salt-marshes, salt-springs, and salt-works, see *infra*, *Taxation*.

[The *Li Pu* (禮 部), Board of Ceremonies. The *Li Pu Shang Shu*, President of the Board of Ceremonies, besides having charge of the Li Pu, controlled also the *Tz'ŭ Pu* (祠 部), Board of Temples, etc., *Chu K'o* (主 客), Ceremony, and *Shan Pu* (膳 部), Records.]—*Ibid.* pp. 34*b*–40*a*.

[The *Ping Pu* (兵 部), Board of War. The President (*Shang Shu*) of this Board had control also of the *Chih Fang* (職 方), Supervisor of Provincial Military Officials, *Chia Pu* (駕 部), Marine Board, and *K'u Pu* (庫 部), Military Board.]—*Ibid.* pp. 34*b*–40*a*.

[The *Hsing Pu* (刑 部), Board of Punishments. In the period *K'ai Huang* (581–601), the *Tu Kuan Shang Shu* (都 官 尙 書), had been changed into the *Hsing Pu*, and had charge of the *Tu Kuan* (都 官), Officials of the Boards, *Hsing Pu* (刑 部), Board of Punishments, *Pi Pu* (比 部), Department of Cases, and *Ssŭ Jih* (司 日), Secretaries in charge of Records.]—*Ibid.* pp. 34*b*–40*a*.

[*Kung Pu* (工 部), Board of Works. The President of this Board controlled the affairs both of the *Kung Pu* and the *T'un T'ien* (屯 田), as well as discharging the duties of the *Ch'i Pu* of former times (see previous Period).]—*Ibid.* pp. 34*b*–40*a*.

[The T'ang Boards were the same as those of the Sui (*Ibid.*, *Liu Ts'ao Shang Shu*, p. 46*a*). In 662 the President of the *Ping Pu*, Board of War, was called *Ssŭ Jung T'ai Ch'ang Po* (司 戎 太 常 伯). The 3 Presidents and Vice-Presidents made the *San Ch'üan* (三 銓), "Three Choosers"—having reference to their selection of officials by merit (*Kuang shih lei fu*, *c.* 8, *Chih kuan pu*, p. 1*a*; *Tzŭ shih ching hua*, *c.* 39, p. 13*b*). For the *Hsing Pu*, *Kung Pu*, etc., and changes of name, see *Tzŭ shih ching hua*, *c.* 39, p. 14*a*; *Kuang shih lei fu*, *c.* 6, *Chih kuan pu*, pp. 1*b*, 6*a*, 12*a*, 15*b*, etc. "The T'ang appointed numerous officials, mostly following the Sui system; although slight changes were made, the general system was the same (*Yüan chien lei han*, *Chih kuan tsung tsai*, p. 1*b*).]

[The *Shang Shu* of the six Boards had the direction of 24 *Ssŭ* (司), and controlled in all 36 *Shih Lang* (侍 郎), Vice-Presidents, who resided officially in rotation in the imperial city. The Sui called the *Shih Lang* of all the *Ssŭ* merely *Lang*, so as to distinguish them from the *Shih Lang* of the Boards. The numbers of *Shih Lang* and *Lang* attached to each *Pu* and *Ssŭ* are given in the *Wên hsien t'ung k'ao*, *Chih kuan liu*, pp. 33*a*–33*b*.]

[The *Chiu Ch'ing* (九 卿), Nine Ministers, Presidents of the Nine *Ssŭ* (寺), were the same, both in name and duties as under the N. Ch'i (see preceding Periods). Yang Ti (605–17) added to each two *Shao Ch'ing* (少 卿). Under the T'ang they were also the same.]—*Wên hsien t'ung k'ao*, c. 11, *Chih kuan liu*, p. 54*b*. See also *Kuang shih lei fu*, *c.* 7, *Chih kuan pu*, p. 11*a*.

In 845 "the control of the surviving monasteries was put under the Chinese Foreign Office, for the very logical reason that 'the religion of Fo came from India.' The official religion was a part of the internal polity of the realm, and the Board of Rites could no more be asked to look after foreign superstitions than a European minister of religion to look after secular education."—*Simcox*, ii. 149.

[No change was made, after the Ch'in and Han dynasties, in the duties of the *Yü Shih T'ai* (御 史 臺), Censorate. The name *Yü Shih Chung Ch'êng* was, however, owing to a "national taboo," changed to *Yü Shih Ta Fu*.]—*Yüan chien lei han*, *Shê kuan pu*, *Yü Shih pu*, p. 88*b*.

"In the *Ta Li Ssŭ* (Grand Court of Revision) there were one Director and two Vice-Directors who had charge of deciding criminal cases and punishments. They had to lay all cases of guilt, forfeit, banishment and capital offences before the Board of Punishments. They had to be revised by the *Chung Shu Wên Hsia*, Chief Secretary. Prisoners were to be examined once every five days."—*Tzŭ shih ching hua*, *c.* 40, p. 15*b*.

"The famous Han-lin college, which now furnishes the imperial historiographers, examiners, and directors of public instruction, was founded in 740 A.D. to 'answer the Emperor's questions about language and literature.'"—*Biot, L'Instruction*, p. 305. Pauthier gives 712 A.D. as the date of the foundation. "Its complete constitution might easily occupy a generation."—*Simcox*, ii. 143.

"At the close of the reign Chêng Yüan (785–805) the office of Reader of the Han-lin became more important. The people at that time called it Nei Hsiang (Inner Prime Minister)."—*Tzŭ shih ching hua*, *c.* 38, p. 7*a*.

[The *Kuang Lu Ta Fu* (光 祿 大 夫), and *Tso* and *Yu Kuang Lu Ta Fu* (左 右 光 祿 大 夫) under the Sui were honorary titles of meritorious officers, as under the Han. The *Kuang Lu Hsün* (光 祿 勳), Director of Imperial Entertainments, had no longer, as under the N. Ch'i, anything to do with the palace gate.]—*Yüan chien lei han*, *Shê kuan pu*, *Kuang Lu*, p. 130*b*; *Kuang shih lei fu*, *c.* 7, *Chih kuan pu*, p. 9*a*.

[*Kuo Tzŭ Chien* (國 子 監), Imperial Academy of Learning. In the period *Jên Shou* (601–5) of the reign of Kao Tsu, the *Kuo Tzŭ Hsüeh* (國 子 學), State College, was abolished, and a *T'ai Hsüeh* (太 學), Great College, established. The offices of *Kuo Tzŭ Chi Chiu* and *Po Shih* were also abolished and *T'ai Hsüeh Po Shih* (太 學 博 士) instituted, with general control of educational matters. When Yang Ti ascended the throne (605), the *Kuo Tzŭ Hsüeh* was changed to *Kuo Tzŭ Chien*, and the *Chi Chiu* re-instituted. They had charge of the national literature and education.]—*Yüan chien lei han*, *Shê kuan pu*, *Kuo Tzŭ*, p. 122*b*; *Tzŭ shih ching hua*, *c.* 40, p. 17*a*.

[*Pi Shu Chien* (祕 書 監). The Sui had a *Pi Shu Shêng* (祕 書 省), Controller of Secret Archives, who supervised the two Boards *Chu Tso* (著 作) and *T'ai Shih* (太 史), which compiled and revised the national histories.]—*Yüan chien lei han*, *Shê kuan pu*, *Pi shu*, p. 118*a*; *Tzŭ shih ching hua*, *c.* 38, p. 6*b*.

[A large number of new honorary posts were instituted.]—*Yüan chien lei han*, *Shê kuan pu*, pp. 131*a*–132*a*.

"The Empress Wu (684) of the T'ang dynasty established both left and right *Su Chêng T'ai* (肅 政 臺), Court of Censors—the former examined the officials in Court to see if they were good or bad; the latter quieted the provincial officials (or prefects) and the magistrates. Both had the duty of examining officials to find out their qualities, but the left one was considered the more honourable office."—*Kuang shih lei fu*, *c.* 7, *Chih kuan pu*, p. 3*b*.

"In the period *Chui Kung* (685–9) a *Kuei Shih Yüan* (匭 使 院), Office of Transmission, was established. It had charge of clearing obstructions (*e.g.*, in mercantile transactions, &c.) and resolving the people's feelings (grievances)."—*Kuang shih lei fu*, *c.* 7, *Chih kuan pu*, p. 4*b*.

Provincial Administration.—[The Sui appointed a *Mu* (牧), "Pastor" or Governor-General, in Yung Chou; over all the other *chou* there were *Tz'ŭ Shih*, Governors (see *infra*).]

[*Ta Tsung Kuan* (大 總 管), Governor-General. Wên Ti (589–605) appointed one of these officers over each of the four districts of Ping, I, Ching, and Yang. *Tsung Kuan Fu* (總 管 府), Offices of Governors, were established in all the *Chou* districts. They were ranked in three classes, upper, middle, and lower. The incumbents received staffs of office from the emperor on appointment. Their duties were the same as those of the *Tu Tu* of the Wei dynasty. They had charge of the military affairs of their districts. In Yang Ti's time they were styled *Shuai* (帥). The *Tu Tu* was styled *Lü Shuai* (旅 帥).]—*Yüan chien lei han*, *Shê kuan pu*, p. 170*b*.

[Over all the *chou* districts, except Yung Chou, there were *Tz'ŭ Shih* (刺 史), Governors. There was a system of nine classes as in the N. Ch'i dynasty. The General *Tz'ŭ Shih* (總 管 刺 史 *Tsung Kuan Tz'ŭ Shih*) received a staff of office from the sovereign. In 583, the *chün* had been done away with, and the *chou* put over the *hsien*, or magistrates' districts. The name *Tz'ŭ Shih* was preserved, but their power waned, and later on, although there were *Tz'u Shih*, the name became interchangeable with the *T'ai Shou* (see *infra*), and they, like the *T'ai Shou*, controlled only one district. There was now no *Tz'u Shih* official who, as of old, received a high post by favour of the sovereign. The *Tz'ŭ Shih* and *Hsien Ling* were transferred to other posts every three years. Whenever warlike operations were to be carried on, the *Tz'ŭ Shih*, in addition to his own work, transacted military matters and took command of the troops. Yang Ti, however, separately appointed a *Tu Wei* (都 尉) to command the troops. In the beginning of his reign *Ta Yeh* he abolished the *chou* districts, and re-introduced the *chün*, appointing a *Ssŭ Li T'ai Ta Fu* (司 隸 臺 大 夫) as inspector within the capital. The *Tz'ŭ Shih* were 14 in number, and inspected all the *chün* districts outside the capital.]—*Yüan chien lei han*, *Shê kuan pu*, *Tz'ŭ Shih*, p. 184*b*; *Kuang shih lei fu*, *c.* 8, *Chih kuan pu*, p. 3*a*.

[In the *chün* and *chou* districts there were Directors of Education styled *Chün Po Shih* (郡 博 士), Doctor of Learning in a *chün*, and *Chou Po Shih* (州 博 士), ditto in a *chou*, respectively.]—*Li tai chih kuan piao*, *c.* 5, p. 10*b*.

[A *Ching Chao Yin* (京 北 尹) was appointed to the metropolitan district with assistants (*tso*) and subordinates (*li*)—244 in all. Their duties were the same as under the Wei and Chin.]—*Yüan chien lei han*, *Shê kuan pu*, *Ching yin*, p. 190*a*.

[When the *chou* were changed to *chün* in the reign Ta Yeh (605–17) of Yang Ti, *T'ai Shou* (太 守), Prefects, were appointed to the latter districts. Their duties were the same as those of the *Tz'ŭ Shih*.]—*Yüan chien lei han*, *Shê kuan pu*, *T'ai Shou*, p. 193*b*. For Sub-Prefects, and other officials subordinate to the Prefect, amounting to as many as 310 in the largest *chün* districts, and the changes made by the Sui, see *ibid.*, *Chün Tso*, p. 200*a*. See also *Kuang shih lei fu*, *c.* 8, *Chih kuan pu*, p. 12*a*.

[Officials of the class later known as *Shou Tao* (守 道) and *Hsün Tao* (巡 道) also took their rise at this time. In the 2nd year (706) of the period *Shên Lung* of Chung Tsung, the empire was divided into four circuits, and 20 *Hsün Ch'a* (巡 察), Inspectors, were appointed. In the *K'ai Yüan* period (713–42) a change was made and the *Ts'ai Fang Ch'u* (採 訪 處), Boards of Enquiry, instituted, and officials appointed to them. In the 9th year (750) of the period *T'ien Pao* of Hsüan Tsung, an imperial decree was issued placing all the appointed *Ts'ai Fang Shih* or *Ts'ai Fang Chih Shih* (採 訪 支 使) in charge of important duties, the remaining affairs of the districts being given over to the *Chün Shou*, or Prefects.]—*Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan shih érh*, *Tz'ŭ shih*, p. 85*a*.

[Of this class were the *Chuan Yün Fu Shih* (轉 運 副 使) corresponding to the *Yen Yün Shih Ssŭ* of the Manchu administration.]

[The Magistracies (*Hsien*) were under *Hsien Ling* (縣 令) or *Ling*, Head Magistrates, and *Chang* (長), Secondary Magistrates, with (as in the Ch'in, Han, Sung, Ch'i, Liang, and Ch'ên) *Ch'êng* (丞), Assistant Magistrates. In Yang Ti's time the Magistracies were classified as "Busy" "Not Busy," "Important," and "Less Important."]—*Yüan chien lei han*, *Shê kuan pu*, *Hsien Ling*, p. 207*a*.

[The *Chu Po Lu Shih* (主 簿 錄 事), the *Chu Po*, Deputy Assistant Magistrate, of the Manchu Period, was the lowest official of the general administrative hierarchy.]—*Li tai chih kuan piao*, *c.* 5, p. 19*b*.

[The T'ang provincial administration was carried on on the same system as that of the Sui, the principal differences being the following:—The duties of Governor-General were in the hands of the *Mu* (牧), *Ta Tsung Kuan* (大 總 管), *Ta Tu Tu* (大 都 督), *Chieh Tu Shih* (節 度 使), and *Ching Lüeh Shih* (經 略 使). The Governors were now called *Tsung Kuan Tu Tu* (總 管 都 督) instead of *Tsung Kuan Tz'ŭ Shih*, and two new officials, the *Chieh Tu Fu Shih* (節 度 副 使), and *Ching Lüeh Fu Shih* (經 略 副 使), also discharged governmental functions. As Directors of Education, the *Fu Wên Hsüeh* (府 文 學) and *Chou Wên Hsüeh* (州 文 學) took the place of the *Chün*

Po Shih and *Chou Po Shih*. An important change was the institution of the posts of *Chuan Yün Shih* (轉運使) and *Tu Chih Ying T'ien Shih* (度支營田使)—who discharged duties similar to those of the modern Provincial Treasurer (*Pu Chêng*)—and the *Kuan Ch'a Shih* (觀察使), the root of the modern *An Ch'a*, Provincial Judge.]—*Ibid.* c. 5, pp. 9–13.

[Under the head of *Hsün Tao* was the *Kuan Ch'a Fu Shih* (觀察副使), corresponding to the official known as *Fên Hsün Tao* or *Kuan Ch'a* (coll. Taot'ai) under the Manchu régime. The *Ping Pei*, etc., Taot'ais were represented by the *Kuan Ch'a Chih Shih* (觀察支使), administrator of military affairs in a Prefecture, *T'uan Lien Shih* (團練使), Superintendent of Militia, and *Fang Yü Shih* (防禦使), Superintendent of Police.]—*Ibid.* p. 14.

[The office of Prefect remained the same as under the Sui, though changes were made in the Sub-Prefects, but a *Chou Tz'ŭ Shih* (州刺史), occupying the post of the modern *Chih Li Chou Chih Chou* was instituted, as well as a *Pieh Chia* (別駕), the modern *Chou P'an*.]—*Ibid.* pp. 15–19. See also *Kuang shih lei fu*, c. 8, *Chih kuan pu*, pp. 12*a*–*b*.

[The *Hsien Ling* (縣令) and *Ch'êng* (丞) were the District and Assistant District Magistrates, discharging the same duties as the *Ling* and *Chang* of the Sui.]—*Li tai chih kuan piao*, c. 5, p. 19.

"The duties of the magistrates in the capital and in all districts were to renew and purify the manners and customs of the people and to tranquillize them; to encourage the professions of the Four Classes (scholars, farmers, artizans, and merchants) and to increase the wealth of the [lit. five kinds of] land."—*T'zŭ shih ching hua*, c. 43, p. 11*a*.

[The last tendril of the central government under the T'ang was to be found in the *Wei* (尉) and *Tien Yü* (典獄), the District Police-Master and Jail Warden.]—*Ibid.* p. 19*b*.

Civil Service Examinations.—"It was about A.D. 600 that Taitsung, of the Tang dynasty, instituted the present plan of preparing and selecting civilians by means of study and degrees, founding his system on the facts that education had always been esteemed, and that the ancient writings were accepted by all as the best instructors of the manners and tastes of the people. According to native historians, the rulers of ancient times made ample provision for the cultivation of literature and promotion of education in all its branches. They supply some details to enable us to understand the mode and the materials of this instruction, and glorify it as they do everything ancient, but probably from the want of authentic accounts in their own hands, they do not clearly describe it."—*Williams, Midd. King.*, i. 521.

It was "in A.D. 606 that the examination for *chin shih* was instituted."—*Giles, Bio. Dic.*, p. 908.

The usurping Empress Wu "is said to have established examinations for women, with a view to admitting them to the civil service."—*Simcox*, ii. 133.

"In the middle of the 8th century orthodoxy was exposed to a danger like that which threatened under the Souy dynasty, when public examinations were held in the works of Buddhist theology. Hiouen-tsong's partiality for Taoism showed itself by the attempt to add the works of Lao-Tze to the official literature, and between 741 and 763 A.D., students were allowed to 'take up' the works of this philosopher, either instead of or in addition to the regular classics (*Biot*, p. 289). In the next reign this concession was revoked, and we hear no more of Taoist degrees till the beginning of the 12th century; but learning was affronted by the appointment of an ambitious eunuch as examiner, and scholarship was so ill paid, that professors complained they had to eke out their salaries by taking to agriculture. That the importance of success in the examinations on the whole continued to increase is proved by the precautions first taken at this time, by order of the Empress Wu . . ., to prevent favouritism or corruption, by concealing the authorship of the papers given in."—*Ibid.* ii. 144.

The "school of laws had only 50 students, and the school of writing and arithmetic only 30 each, all of whom were taken either from among the people or the sons of the lower officers, and these were doubtless intended to provide a kind of technical training for clerks on the permanent staff of Government boards."—*Biot, L'Instruction*, p. 256.

"In 736 A.D. an important change was made, which on the one hand raised the standard of the examinations and on the other diminished the chances of the successful candidates obtaining office. The direction of the examinations was transferred from the 'Minister of Offices' to the Minister of Rites, presumably because the former allowed extraneous circumstances to weigh in the bestowal of degrees. But as the bestowal of office still rested with the department by which the officers were employed, a constant feud between the two was kept up for several centuries. Candidates who had passed successfully the examination conducted by the Board of Rites were only thereby qualified for appointment to office; their actual nomination for active service rested with the Board of Offices, which, not being able to employ all the successful candidates, used its discretionary powers of rejection in a way which the mass of graduates resented as unfair, even when preceeded by a third examination."—*Ibid.* p. 310.

Embassies.—"In 632 the ancient settlement of Khotan, or the 'breast of the world,' reappears in Chinese history as sending an ambassador."—*Simcox*, ii. 138.

"The neighbouring kingdom of Tibet is first mentioned in the annals for 634 A.D. as sending ambassadors with tribute and being able to raise a large and formidable army. . . . In 669 the intercourse with China is still of a friendly character. . . . but half a century later, when in reply to an embassy from Cashmere, the Chinese Government had sent to assist Cashgar and the neighbouring states against the troops of the Caliphs, the Tibetans formed an alliance with the Turks against China. The relations were, however, more friendly than not. . . . In 787 A.D. China was actually induced to seek alliances in Yunnan and India, with the Caliph and the Uigours against the Tibetans, whose incursions were felt in Shensi and the settlements north of the desert as well as in Sz'chuen, till peace was restored in 821 A.D., by a treaty, which is said to be still preserved in Lhassa."—*Ibid.* ii. 139.

[An embassy arrived from Constantinople, and one, in 798, from a Caliph Galun (the famous Harun al Raschid, A.D. 786-808).]—*Gaubil, Hist. des Thang; Mém. conc. les Chinois*, xvi. 144.

[Further embassies arrived about A.D. 648 from unidentified countries in the north-west. Ambassadors were lay and non-permanent.]

2. *Legislative.*—[The Emperor Wên Ti ordered Kao Ying and others to revise the laws. Yang Ti, considering the laws too numerous and too severe, ordered a further revision, but the heavy taxation necessitated by his numerous expeditions having caused large numbers of the poor to take to robbery, vigorous laws were again put in force. Kao Tsu on entering the capital, proclaimed his laws to the people (see LAWS). They modified the severity of previous legislation. After he had ascended the throne he proclaimed a further code of 53 laws. Tai Tsung regulated the punishment of strangulation, and finding more than 40 laws impracticable, ordered the code to be revised. In Kao Tsung's, the Empress Wu's, and Yüan Tsung's reigns, the forms of legal documents were regulated by legislation, the forms decided upon being known as the "*K'ai Yüan* formulæ."]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, pp. 98*b*-99*a*.

3. *Judicial.*—[In the time of Wên Ti, there was instituted a class of young men with the title of *Lü Po Shih Ti Tzŭ*, that is, Students learned in the Law. When there was any criminal case of great importance, an indictment was first drawn up, then preferred, and judgment passed according to its merits. But it was found that there was too much argument between these learned students, and although the crime was the same, their views differed widely. An Imperial Order was therefore issued that the capital sentence could not be passed until the case had been referred to the *Ta Li Ssŭ* (see *supra, Executive*), which department was in turn to report its finding to the Throne for final decision.]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, p. 98*b*; *Shê Kuan pu, Hsing pu*, pp. 65*a*, 66*b*; *Ta li*, p. 107*a*.

[For the *Tu Kuan Shang Shu* and *Hsing Pu shang shu* (at the beginning of the Sui dynasty), see *supra, Executive.*]

[The minister who administered the Criminal Law in the T'ang dynasty was the *Hsing Pu T'ai Ch'ang Po*, or President of the Board of Punishments. He had control over all the affairs of the departments: *Hsing Pu, Tu Kuan, Pi Pu*, and *Ssŭ Mên*. All criminal cases were heard and decided by the minister who was also entitled to hear cases reserved for the highest court and give his decision thereon.]—*Ibid.*, *Shê Kuan pu, Hsing pu*, pp. 65*a*, 66*b*; *Ta li*, p. 107*a*.

"In the beginning of the reign Ch'ang Ch'ing (821) the Emperor considered that punishments were [a matter of] importance. Whenever a judge decided a principal case, a member of the Grand Secretariat was also appointed to consult with him about it. For this reason all the officers called that office the *Ts'an Cho Yüan* (Court of Consultation)."—*Tzŭ shih ching hua*, c. 40, p. 15*b*.

[Suleyman says that when cases are decided by governors of a lower rank than "dyfou" (? *ta fu*) all pleadings must be presented in writing: no one is allowed to represent his case, or make a request, in person. A man called the "*leykhou*" stands behind the governor, to prompt the latter if he makes mistakes. Written statements have to be presented at the door of the court to a man who reads them and returns them if not in correct form.] "The governor only sits in court, after having eaten and drunk, so that he may the better be able to attend to business. [N.B. Mendoza says exactly the opposite in Ming period.] Every governor is paid out of the revenues of the town he commands."—*Relation des Voyages*, &c., i. 37-9.

The Arab accounts of China in the 9th century (*Ancient Accounts of India and China*, ii., trans. *Renaudot*, p. 26) state that "the Chinese administer justice with great strictness in all their tribunals, and both parties to a suit are warned that they will be beaten if guilty of perjury."

Tê Tsung [780-805] "ordered exact registers to be kept of all that was brought into the imperial treasuries to check waste and peculation, and he won great popularity by establishing a special tribunal to hear appeals from the people who considered themselves wronged by any of the officers of State. He also revived the legendary use of the drum, by which those who had vainly sought to obtain justice elsewhere made their appeal resound in the ears of the Emperor himself. But the time for this primitive remedy was found to have gone by, and so many frivolous cases were brought before the Emperor that he ordered all causes to be first considered by the new tribunal and only those of importance finally referred to himself."—*Simcox*, ii. 135.

[The later accounts by the Arab travellers (*Renaudot*, p. 62), state that by 877 the internal troubles in China had "put a stop to the justice and righteousness there formerly practised."]

Scarth says (*Twelve Years in China*, p. 88), somewhat indefinitely, that before the Sung dynasty "the courts of justice were, if possible, more cruel than we now see them. Criminals were boiled and roasted, and flayed, and thrown on spikes, and were forced to fight with tigers and elephants."

The Arab accounts of China in the 9th century (*Ancient Accounts of India and China*, &c., trans. *Renaudot*, p. 26) state that every traveller "is furnished with a pass for himself and his goods, so that the latter cannot be carried off."

"At Khanfu, which is the meeting-place of traders, a Mussulman is charged by a sovereign of the country with the decision of disputes between those of that religion who arrive in the country."—*Relation des Voyages*, &c., i. 13.

4. *Taxation.*—[Every adult male had to provide one bed and pay 30 bushels of grain. The Mulberry Tax consisted of silk and 3 ounces of cotton, and the Hemp Tax of cloth and 3 pounds of hemp. If there was only one adult in a household, he paid only half, as did also ordinary servants.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 52*a*.

[In the 3rd year of *K'ai Huang* (583) the term of service of 12 times a year had been altered, and each male adult had only to serve for 30 days.]—*Ibid.* p. 52*a*.

[Kao Tsu (589–605), the first emperor of the Sui dynasty, "lightened the burden of taxes."]—*Giles, Bio. Dic.*, p. 898.

[When Su Wei became *Na Yen*, Privy Counsellor, he induced Wên Ti to reduce taxation and remit personal service—which is said to have led to a long period of peace and prosperity. In spite of floods and droughts the population increased every year. When Yang Ti ascended the throne the treasuries were full, so that it was possible to abolish all taxes on female servants, slaves, etc., further reduction in the number of taxpayers being made after the establishment of the *Chün Fu*, Military Board. Costly wars, however, soon put an end to this happy state of things, causing rebellion and the fall of the dynasty.]—*Ibid.* p. 52*a*.

"The people in the north of China . . . never took kindly to the taxation of salt, which was now abolished and now re-established for various reasons by dynasty after dynasty; but there is specific mention of salt-works near Tientsin when North China became reunited in the seventh century; and a century after that the great financier Liu Yen so developed the Government monopoly in salt that it produced half the total revenues of the empire."—*Parker, China*, p. 225. See also *infra*.

"The founder of the T'ang dynasty fixed (619) the taxation of each able-bodied male (丁) at two peculs of 租, two pieces of 絹, and three ounces of cotton."—*Ch. Rec.*, xiii. 400. The tax on fields was 2 *hu* of grain and 3 *hu* of rice for each adult male (*i.e.*, of 16 years of age).—*T'ang shu Shih huo chih, Tzŭ shih ching hua*, c. 52, p. 27*b*. In the various districts of Ling Nan (Kuang Tung) taxes were paid in rice.—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 53*a*.

626. "The local officers were . . . commanded to ascertain the number of the religious orders, with a view to reducing it, and they were instructed to tolerate one temple only in each town of the first class, and presumably, none elsewhere."—*Simcox*, ii. 146.

"The tribute of the kingdom of Ha-mi in 631 and 647 was partly paid in peach-trees."—*Mém. Conc. les Ch.*, xi. 284.

"The central government was apt to transfer unpopular duties like this [labour tax; see REG. OF LAB.] to the village authorities in other cases. Thus, for example, in 683 A.D., when the issue of counterfeit money was punished by death, the neighbours in towns and villages were made responsible for each other, so as to prevent tacit complicity."—*Simcox*, ii. 151.

After 713, "the collection of taxes upon the salt-marshes, of which there were eight, of the salt-springs, of which there were 640, and of the salt-works in Yu-chou (the country about Peking), in Ta-t'ung (in Shensi) and Hêng-yeh was placed under the control of the To-chih or Board of Finances. . . . A transit tax of 10 per cent. was to be levied on the market price." [Salt and iron were then worked entirely on Government account.] . . . This was afterwards changed to "a system similar to that existing up to the present day with regard to rice and grain, according to which salt was to be transported by Government from the place of production to the consuming districts, and there stored up in quantity. . . . The salt thus held ready for the market by Government was styled *ch'ang p'ing yen, i.e.*, 'salt at never-changing prices.' Liu Yen, like some of his predecessors, declared it as the chief principle of administration, that 'the budget must be covered by the taxation of indispensable necessaries.' . . . Liu Yen's system implied the abolition of the provincial salt-tax and of certain dues, previously levied upon the salt-junks trading to the interior. Whatever the details of this new scheme may have been, we are told that when Liu Yen took charge of the finances the annual net proceeds of the gabel amounted to 400,000 *mien* (about as many dollars); till up to the period Ta-li (A.D. 766-80) they had risen to six millions and constituted about one half of the entire revenue of the Empire."—*Journ. N.-C.B.R.A.S.*, *N.S.* xxii. 64–6.

[In the 25th year of *K'ai Yüan* (737), it was enacted that all taxes paid in money could thenceforward be paid in rice, and the price of rice was to be calculated at the marked value. It was to be sent to the capital, and if this could not be done in distant districts, it was to be stored in those districts for the use of the troops stationed in the neighbourhood.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 53*a*.

[In the time of Chien Chung (780–4) changes were introduced into the old system of taxation, and taxes were paid twice a year. The abuse which arose from this practice was that the people were required to pay the taxes at a time of year not convenient to them. The taxes also were too heavy.]—*Ibid.* p. 53*a*.

[In the first year of Chien Chung, it was enacted that native and alien tenants of lands should be equally taxed, but the taxes were to be divided into different grades. Payment was to be made twice a year. The Summer Tax was to be paid before the end of the 6th moon, and the Autumn Tax before the end of the 11th moon. All the other taxes then existing were abolished. Officials were sent everywhere to collect the taxes, and great oppression was thus caused to the people. Most of the poor became slaves to the rich, who seized this opportunity of making encroachments upon their lands. At this time there was also a house tax.]—*Ibid.* p. 52*b*.

[The *Hu Pu* Board of Revenue controlled the *Tu Chih, Chin Pu*, and *Ts'ang Pu*, questions being submitted to the President for final decision. The Departments *Chin Pu, Ts'ang Pu*, and *Chung Shu Mên Hsia* were charged with the work of administration of the revenue of the country, and officers were selected from them to carry on the work in accordance with fixed regulations. [The *T'ai Fu Ch'ing* was, according to the *Liu Tien*, the Minister to whom the regulation work of taxation was entrusted.]—*Ibid.*, *T'ai Fu*, p. 117*a*.

[Five households made a *Ling*, and five *Ling* made a *Pao*. In a district, just beyond the boundary of a city, an officer called *Fang Chêng* was appointed. An officer called *Li Chêng* was appointed in a village community. It was called *Hsiang*, a rural district, when its population rose to a certain number. This was for the purpose of taking the census, in order to facilitate the work of collecting the revenue. It was just the same as in the time of the Chou dynasty, statistics being revised once in every three years, the numbers of the population, animals, carriages, products, all being recorded for the purpose of taxation.]—*Ibid.* p. 117*a*.

"Not more than one person in each household could have been taxed, . . . some households were not taxed at all and . . . only one-seventh part of the persons not ranked as householders paid taxes; for, out of the . . . figures for 755, only 5,301,044 householders and 7,662,800 non-householders paid scot." Shortly after 821, the total revenue was 35,000,000 (? taels), of which one-third went to the Emperor and two-thirds was local.—*Parker, China*, pp. 183–4.

"Now all the taxes of Yang Chou were paid in money; of Ling Nan in rice; of An Nan in silk; and of Yi Chou, in dress-silk, pongee, thin satin, and lustring, with which to provide the Court with spring embroideries. So an Imperial Decree was issued, ordering Kiang Nan to pay their tax in cloth."—*T'ang Shu Shih huo chih, Tzŭ Shih ching hua*, c. 52, p. 27*b*.

"When Su Tsung ascended the throne [756], he appointed the censor Chêng Shu-ching and others to investigate the rich merchants and wealthy families of Kiang, Huai, Shu, and Han, to collect 20 per cent. from their properties."—*Ibid.* c. 53, p. 30*a*.

"In the 2nd year [764] of the period *Kuang Tê*, it was decided that all liquor shops in the Empire should pay their taxes monthly [instead of yearly]."—*Ibid.* c. 67*b*, p. 102*a*.

"In the 4th year [769] of the period *Ta Li*, an Imperial decree was issued ordering the Ching Chao Prefect to divide the tax into 2 classes—superior fields to pay 1 peck of rice yearly for

every *mou*, and inferior ones 6 pints per *mou*. Those who could cultivate the waste land were allowed to pay [only] 2 pints per *mou*."—*Chiu T'ang shu Tai Tsung chi, Tzŭ shih ching hua, c.* 52, p. 27*a*.

In spite of revolts the country prospered, "and the annual revenue increased until it reached twelve million strings of *cash*, more than half being derived from the salt tax."—*Giles, Bio. Dic.*, p. 475.

[In 780, the revenue is given at 20,557,000 measures of grain, of 100 lbs. each, and 30,898,000 taels.]—*Simcox*, ii. 135.

"Tê Tsung [780–805] of the T'ang dynasty borrowed money from rich merchants, strictly investigating all places where they could be found. Through this many of them committed suicide. The funds thus procured were only 2,000,000 *min* (1,000 cash?), which was insufficient to meet the military expenditure. So the taxes on the framework of rooms and enumerated *ch'u mo* (? mounds dividing fields) were instituted. By this system, a house having 2 frames was called one room. A superior room paid 2,000 cash; a middle one, 1,000 cash; and an inferior one, 500 cash. Some of the people, having many houses but no other property, frequently paid several hundred *min*. This was called the system of *ch'u mo*."—*Wên hsien t'ung k'ao hsiang chieh, c.* 5, *Chêng ch'üeh k'ao*, p. 6*a*.

"On the day *Ping Ch'ên* in the 2nd moon [in the reign of Tê Tsung: 780–805] the duplicate tax began to be levied."—*T'ang shu Tê Tsung chi P'ei wên yün fu, c.* 67*b*, p. 100*a*.

"In the period *Chêng Yüan* [785-805] the sale of liquor in the capital and in metropolitan districts was forbidden. Keepers of wine-shops had to pay 150 cash per peck. Families selling wine were freed from any kind of Government service."—*Wên hsien t'ung hsiang chieh, c.* 5, *Chêng ch'üeh k'ao*, p. 4*a*.

"House-taxes were first introduced by" Tê Tsung "to defray the expenses of his wars. A tax of 5 per cent. on all transfers and mercantile transactions was also invented by the Finance Minister Chao Tsan, who instituted a system of informers' rewards and penalties. The taxes collected and sent to the capital in 779 (when the Empire had been half depopulated by rebellions) amounted to 12,000,000 strings of cash, of which the salt revenue brought one good half. At this time, the successive Chief Lords of the Treasury [*Tu Chih*] had for some years been most rapacious officers. Yang Yen [*Mayers*, No. 898] reformed the Chinese finances . . . under which landowners were liable for 租, able-bodied men . . . for 庸, and house-holders . . . for 調. Under the new system, taxes were collected twice a year. Wealth was the criterion instead of age [丁 中], and visible habitations instead of settlements. Ambulatory traders paid 3 per cent. in each town through which they passed, and all other taxes and corvées were remitted. After a year or two, however, things fell back into their old grooves. Previous to the able administration of Lin Yen, the Chinese empire only contained about 2,000,000 officially reported households, and derived thence an annual revenue of 4,000,000 strings of cash; but by the year 780, the households had increased to 3,000,000, and the revenue to over 10,000,000. He raised the profit from the salt trade of 江 淮 . . . from 400,000 to 6,000,000 strings. It seems that, previous to this period, the grain tribute was taken from east China up the Hwang-ho, to Ch'ang-an, but the journey was so dangerous that 8 斗 were considered good receipts for each nominal 斛 (which was apparently there equal to the modern 石); but Lin Yen utilized the river Yang-tsz . . . and other rivers, and improved boat-transport in such wise that over 1,000,000 *kuh* of grain were safely received annually at the capital. . . . At this period the military satraps of China were almost independent of the court."—*Ch. Rev.*, xiv. 108-9.

"In 793 a tax was for the first time levied on tea."—*Simcox*, ii. 135. "Ten per cent. was levied on all the tea produced on the tea hills and found passing the main roads leading therefrom."—*Ch. Rev.*, xiv. 109. See also *Shih lu, Ko chih ching yüan, c.* 21, *Yin shih lei*, p. 4*b*.

"Unpopularity was incurred by the imposition of taxes on the principal articles of production and consumption, such as tea."—*Boulger, Short Hist.*, p. 33. See also *T'ang shu Wang Yai chuan, P'ei wên yün fu, c.* 106, p. 39*a*.

"The taxes in Lu Shou and Huai Nan were increased one-half, and illicit traders provided with 'self-confession' certificates. The tax on tea throughout the Empire was doubled."—*T'ang shu Shih huo Chih, ibid. c.* 67*b*, p. 104*a*.

"Land pays no tax, but a capitation-tax is demanded from all males, according to their means. Arabs and other foreigners pay a duty for the preservation of their goods."—*Relations des Voyages*, etc., i. 39.

[Suleyman adds that the Emperor reserves to himself a duty on *salt* and one on *tea*. All the money which comes into the public treasury comes from the poll-tax and the salt and tea taxes. He estimates that 50,000 dinars were paid every day into the treasury at Khanfu, though that is not the most important town in the Empire.]—*Ibid.* p. 40. See also p. 46.

[Suleyman says that all male children born are entered on "the Sultan's registers." They pay the capitation-tax on reaching the age of 18, and continue till they are 80, after which they cease to pay and receive a pension from the government.]—*Ibid.* i. 46.

In 809 "the revenue was regulated" by Hsien Tsung.—*Giles Bio. Dic.*, p. 463. He also remitted taxes.

"When Lu Chün was promoted to be Governor-General of Ling Nan [Kuang Tung] he abolished the tax on gold-digging"—thereby earning the gratitude of "several thousands of foreigners and natives."—*T'ang shu Lu Chün chuan, P'ei wên yün fu, c.* 67*b*, p. 104*a*.

K'ung Kuei, another occupant of the same post, "imposed a tax on the anchorage of foreign vessels"—[or vessels of large type].—*T'ang shu K'ung Kuei chuan, ibid.* p. 104*a*.

[A tax of 50 cash on every string of 10,000, levied in 820, which produced 1,500,000 strings, was abolished in deference to popular opposition.]—*Tzŭ shih ching hua, c.* 53, p. 30*a*.

825-7. "In the 3rd moon, the tax on grain sprouting up from the field [*i.e.*, without waiting to see if it would fructify], was abolished throughout the capital of Houan."—*Tang shu Ching Tsung chi, P'ei wên yün fu, c.* 67*b*, p. 104*a*.

"All private wool [*i.e.*, wool from privately-owned sheep] must pay the tax."—*Chang Yü ta Shan Hsi Yang Hsien-fu shih, ibid.* p. 104*b*.

"Rearing silkworms just covered the government tax, but selling a calf did not produce sufficient to pay the poll-tax."—*Kao Chi shih, ibid.* p. 101*a*.

"The *p'ai*, board, tax in Huang Chou was very heavy. A *p'ai* was a large board. Every four pieces were called a set. It was material used for a coffin."—*Hsü* [*Ch'ên*] *Ming-tao tsa chih, ibid.* p. 102 *b*.

"When Wu Tsung ascended the Throne [841], Ts'ui Hung, the Salt and Iron Comptroller, again increased the tea-tax in Chiang and Huai."—*T'ang shu Shih huo chih, ibid.* p. 102*a*.

"The inmates . . . of . . . monasteries, male and female, to the number of 265,000, were commanded [by Wu Tsung, 841–64] to return to their homes, and resume their place in the taxpaying community." "The slaves of the monasteries, to the number of 150,000, were set free, and, like the monks, added to the ranks of the common people, who were liable to the payment of land and labour tax."—*Simcox*, ii. 149.

[Suleyman, the Arab traveller, says that the kings of Mabed (? Cochin-China) exchanged presents with the Emperor of China.]—*Reinaud, Relation des Voyages*, i. 31, 32.

"In the 7th moon of the 4th year [863] the house and poll-tax in Annam was abolished for 2 years."—*T'ang shu I Tsung chi, P'ei wên yün fu, ibid.* p. 100*a*.

"When a roll of silk had [formerly] been taxed 3,000 *cash* it was now [768–824] to pay 800 only."—*Han Yü Lun pien yen shih i chuang, ibid. c.* 67, p. 15*b*.

"The full amount of revenue was posted up on the city gate and in the lanes of the villages for general information."—*T'ang shu Shih huo chih, Tzŭ shih ching hua, c.* 52, p. 27*b*.

Exemptions.—[Dutiful sons and grandsons, faithful husbands, and married women were exempt. (For partial exemptions see preceding extracts).]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 52*a*.

[For officers in charge of revenue matters, see *Executive*.]

Coinage and Finance.—"The short-lived Souy dynasty set itself seriously to do away with the multiplicity of coins of every degree of worthlessness. Payment for officers' salaries, taxes, octroi and market duties were accepted in the old money, which, as it came in, was broken up and the metal appropriated by the administration. Five of the old issues were tolerated, but any other money found in circulation was confiscated. Unfortunately for the success of these reasonable measures, the trade of the coiner was always briskest when the copper coinage was unadulterated; and it was in vain that the State prohibited the working of tin and lead mines, which had hitherto been free, so as to monopolize the illicit as well as the lawful materials used. Before the fall of the dynasty, things were as bad as ever, and the people practically used for purposes of exchange any article—cloth, grain, paper, or metal—which was in common demand and easily divisible."—*Simcox*, ii. 158–9.

"The fact that the copper tsien had always been cast, instead of stamped or hammered, of course made the coiners' work easier; but this would not of itself make the work so profitable, as to explain why the offence continued for ages to be so common, that the Government was again and again compelled to condone it. In 713 A.D. a million bushels of grain were issued from the public storehouses and sold to the people, payment being accepted in the counterfeit coins, which it was desired to call in and destroy, an end which could not be secured by penal measures."—*Ibid.* ii. 159.

"The explanation of the forgers' persistency is so simple that nothing but force of habit can have prevented its discovery by Chinese financiers. The State charged 25 per cent. for manufacture. The copper coinage was never really adequate to the commercial requirements of the people, so that private coiners of good money were meeting a real want while realizing a satisfactory profit to themselves. The trade was therefore not regarded as essentially discreditable, and to allow private issues of copper coin was no more considered as a concession to the criminal classes than the license given to bankers to issue private notes. But the mistaken habit of charging 25 per cent. on the cost of the metal and labour (*Journ. Asiat.*, Aug., 1837, p. 118) clung to the private mints, and hence free competition did nothing to put down forgery."—*Simcox*, ii. 159.

"The total supply of copper was not materially increased by the abolition of the Government monopoly, and the comparative scarcity of good money made the manufacture of bad money always a possible source of profit, till the competition of private debasers forced other private issuers to lower their standard of quality. So that an increase of the currency, which was not excessive in quantity, led to its depreciation, because needlessly associated with its debasement. It seems simply not to have occurred to anyone that the whole difficulty would disappear, if the State issued at cost price as much money as was required for circulation, and allowed free trade in copper for other purposes. As it did neither, the two mistakes aggravated each other. Copper was largely in demand for the construction of Buddhist images, and increasingly so for the manufacture of various domestic utensils. As the copper mines were a Government monopoly, metal for these purposes could only be obtained by melting down the best of the current coins. This was illegal, but of course even more impossible to prevent than the manufacture of base coin, and, being illegal, its results in making good money scarce were not provided against by fresh issues."—*Ibid.* ii. 159–60.

"The first decree limiting the amount of copper, lead, or tin, to be possessed at one time by a single person, was issued in 769 A.D.; and it seems to have been aimed merely at the coiners on the supposition that no one else would think of hoarding a large stock of such metals. The small coiners, who carried on their trade in river boats, had a stock worth at most a few pounds, and it was thought feasible to prevent the storage of metal in quantities sufficient to make more than ten or twelve taels, or strings of a thousand *tsien*. The forger's industry, like all others, was carried on upon a modest scale, and any larger stock would have been sufficient for a brisk trade."—*Ibid.* ii. 160.

"The accumulations attacked in the second edict are on a much larger scale. Whether at the expense of the suffering peasantry or the imperial treasury, or from the profits of foreign trade, large fortunes had by this time begun to be amassed by individuals, who, unmindful of the lessons of Chao-tso, had transmuted them into the most precious metals in reach, so that there were actually individuals whose hoards of copper money were worth, according to M. Biot's estimate, something like £150,000 sterling (*Journ. Asiat.*, Aug. 1837, p. 128). When the purchasing power of money at this time is considered, the amount seems incredible; however, only five officers are said to have had as much as this, and they may have held lucrative governments and taken toll of the taxes. These moneys, we are told, were intended to be used in buying lands, and the alleged motive of the edict was to prevent the accumulation of large estates in the hands of a few, who could turn the cultivators into mere servants or tenants."—*Simcox*, ii. 160.

"No person, of whatsoever class, noble, scholar, merchant, or priest, was to be allowed henceforward to keep in his own hands more than 5,000 strings of cash, or at the same rate of valuation as before, about £1,500. A month's grace was given to put the surplus coin in circulation, while the officers were condemned offhand to surrender one-fifth of their, probably ill-gotten, gains. Some of the hoards consisted of old metal issues, since proscribed, and kept by speculators in the hope of their being again tolerated, and therefore worth more as coin in future than as metal at the moment. This, of course, tended to defeat the intention of the Government in calling in these coins."—*Ibid.* ii. 160. See also *P'ei wên yün fu, c.* 67*b*, p. 102*a*.

[The financial decrees of the government are ridiculed in a poem of the period: see *Po Chü-i shih, P'ei wên yün fu, c.* 67*b*, p. 104*a*.]

"All the economic ideas of the time, and especially those relating to the currency, are so much at variance with European usages and principles that it is difficult to be sure of our ground in any interpretation; but it seems as if the speculators of the period had been addicted to 'forestalling,' or something of the kind, in relation to the copper currency. Money being scarce, prices were always low; but for some purposes money was indispensable, especially when the Government interfered with the popular attempts at self-defence against the scarcity, by forbidding the use of silk and grain for exchanges. On such occasions one may feel sure that copper money was not to be bought in small quantities by the people from the capitalists—who were aggravating the scarcity by locking up the coin—at a cost at all proportioned to the value of the copper regarded as a commodity, or even to the price at which it came from the mint."—*Simcox*. ii. 160–1. These measures were criticized as ill-judged by Ma Tuan-lin, for whose argument see *ibid.* p. 161.

"The Tang emperors felt their own prerogative and the common weal to be menaced by the accumulation in private hands of wealth, vast enough to affect the general range of prices by its use or withdrawal from use. They seem to have suspected the moneyed classes of conspiring to 'bear' the price of land and agricultural commodities, which was in effect to aim at undermining the national wealth; and no measures taken to prevent such a result were likely to be thought arbitrary in China. The Government, by forcing all the holders of capital to realize at the same time, certainly obliged them to do so on disadvantageous terms, as shown by a passage referring to the legislation of 817 A.D., which concludes: 'Then the people bought on a large scale farms and houses to convert their fortune, and precious things fetched a high price' (*Vissering*, p. 123); a result which must have been satisfactory to the Government, as the coffers of the accumulators were drained by the high prices they had to pay."—*Simcox*, ii. 161.

"The mutual denunciations of officers and merchants, jealous of each other's wealth, also helped to make it easier for the Government to 'squeeze' both in succession. At one moment foundries were granted to princes and high ministers, like the Stuart monopolies, as a sort of license to grow rich. At another (738) the old experiment of free trade in coining was revived. The arguments formally adduced on both sides of the latter question have been preserved, and the balance of opinion seems unfavourable to the course. (See *Vissering*, p. 110.)"—*Simcox*, ii. 161–2.

"Many of the phrases used show that the value of the copper coins ran up simply because there were not as many of them as required for use. The quality remained good in the capital, but vast loads of it were transported, and rich merchants were accused of gradually collecting the good money to sell it to the false coiners of Kiang-hoai. The Government could not make up its mind whether to suppress or take part in the financial speculations of the age. The Government monopoly of copper, as already observed, had the effect of compelling those who required that metal, for any other purpose than as money, to melt down the copper coinage and recast the metal. As the nominal value of the copper money was 25 per cent. above its cost, this was a serious tax upon the coppersmith's trade; and as the trade flourished nevertheless [the profit on copper utensils made from cash being 360 per cent.], while the Government had to issue fresh coins to make up for what was melted, it occured to some inventive Chancellor of the Exchequer that the State itself had better turn coppersmith, and sell manufactured articles at the advanced price fixed by its own fancy valuation of the raw material."—*Ibid.* ii. 162.

"It was not proposed to increase the output of copper from the State mines, but the amount of metal formerly allotted to make coin for a certain district was ordered instead to be delivered at court and worked up into articles for ordinary use. The profit on this undertaking was so large that the State was tempted to over-reach itself, and so many provincial copper foundries were opened that supply began to overtake demand, and the price of copper fell. Then attempts were made to suppress all private foundries, and on their failure a still more absurd enactment was passed, requiring all manufactured articles of copper, however elaborate the workmanship, to be sold by weight at the same rate as the current coin. This, of course, could not be carried out, and trade was still further disturbed by vexatious checks on the circulation of money between different provinces, octroi duties being imposed on its exportation."—*Ibid.* ii. 162.

"This fresh blunder seems to have led the way to a valuable innovation, and the first use of a kind of paper money in the shape of treasury bonds. In 807, ten years before the edict against hoarding coin, the Emperor Hien-tsong required all merchants to deposit their available specie in the Imperial treasury in exchange for bonds called *fey tsien*, or 'light money,' which were payable on demand in the chief towns of the province. The main object of the Government was, no doubt, to obtain an immediate supply of cash, though the measure may also have been a first step in the campaign against moneyed monopolists. But it was really useful as increasing the currency to the extent of a moderate issue of bank notes, and as saving the merchant trouble and expense in transporting large quantities of the cumbrous medium of exchange."—*Ibid.* ii. 163.

"The gain to the merchants was more obvious than that to the court, and when the fey tsien were abolished, provincial governors sent in memorials begging for their continuance, with a special view to prevent hoarding and low prices. . . . The hoarding of copper money was about to be attacked more directly, but fey tsien were issued again in return for deposits of salt and iron, and they were allowed to serve as a medium of exchange between the merchants of the capital and the provinces."—*Ibid.* ii. 163.

"The 2nd year [807] of the period *Yüan Ho* was the year in which Li Chi-fu revised the records dealing with finance. The total number consisted of 48 provinces, 295 prefectures, 453 districts. Fêng Hsiang, Lu Fang, Ping Ning, Chêng Wu, Ching Yüan, Yin Hsia, Ling Yen, Ho Tung, I Ting, Wei Po, Chêng I, Fan Yang, Ts'ang Ching, Huai Hsi, and Tzŭ Ch'ing were 15 circuits with 71 departments, the population of which was not entered in the account. But the taxes of each year depended on Che Kiang, E. and W. Hsüan Hsi, Huai Nan, Kiang Si, Ao yo, Fu Kien, Hu Nan, 8 circuits with 49 departments, and only a population of 144,000. Compared with the taxes of the period *T'ien Pao* [742–56], this was a diminution of three-fourths." 800,000 soldiers were dependent for supplies upon the magistrates.—*Yü lan t'ung chien lei tsuan*, *c.* 16, *Wu pei pu*, p. 10*b*.

"All this time gold and silver were too scarce to count for much in the financial problems of the time. In 683 A.D. the exportation of grain to foreign parts had been prohibited, ostensibly because the strange money received in payment interfered with the ordinary exchanges, but more probably because the immediate result of such an export trade was to increase the treasure hoards of rich traders, and diminish the grain reserves of the cultivators. In the 9th century gold and silver were put into circulation to a limited extent by the Government itself, apparently with the intention of raising prices, but with the result of lowering them still further, it is hard to say why, unless copper was withdrawn from circulation faster than the gold was brought into it. This may well have been the case as, in 825 A.D., new edicts forbade the melting copper money into statues of Buddha, under the same penalties as those attached to coining; and shortly afterwards, by way of conciliating the obstinate devotees, they were permitted to make their statues of any metal except copper, such as gold, silver, lead, or tin."—*Simcox*, ii. 163.

"The following year, 830 A.D., the regulation of 817 was renewed in a milder form. The limit of coin allowed to be hoarded by a single person was raised to something over £2,000, and a respite of a year was granted to those whose stores reached £30,000, and two years to those with twice as much. A curious provision is added, that in transactions involving a sum of £30 and upwards, half the price shall be payable in silk, rice, or other grain; and this device, if it could have been carried out, would have ruined the game of those who were speculating for a fall of prices, which at this rate would have told disadvantageously on their own bargains."—*Ibid.* ii. 163.

"The suppression of the monasteries in the 9th century set so much copper free that foundries were opened in every district, and money was again abundant. The supply was thus for a time independent of the Government mines, and the provincial Governments took advantage of this circumstance to propose that each province should cast its own money at discretion, only adhering to the Goverment standard of size. After this arrangement was adopted we hear no more of economical questions amid the wars and tumults which lasted till the close of the dynasty Notwithstanding the chronic complaints of low prices, the cost of necessaries seems to have doubled since the Hans."—*Ibid.* ii. 163–4.

907–960.

[T'ai Tsu, of the Later Liang, was originally one of the common people. Succession was hereditary. T'ai Tsu of the Later Chou adopted the son of the empress's brother as heir.]—*Hsü kuang chih p'ing lüeh*, *c.* 2, p. 5*a*.

The first Emperor of the Hou T'ang dynasty "was an enthusiast for the stage, and comedians are mentioned as taking the place of eunuchs in his favour. They not only enjoyed the license accorded to court fools in mediæval Europe, but (924 A.D.) one of them was appointed to an important governorship, and they and the eunuchs together had influence enough to discredit any statesman who sought to reduce the expenditure of the court."—*Simcox*, ii. 165. The influence of palace ladies was great. *Shih lun*, pp. 16*a*–17*b*.

[The capital was at Pi, the modern K'ai Fêng Fu. The country was divided into nine States:—Ching Nan, Pei Han, Hu Nan, Ch'ien Hou Shu, Nan Han, Wu, Nan T'ang, Min, Wu Yüeh. The number of *chou* districts varied in the different states, from 3 in Ching Nan to 60 in Nan Han, and under the different dynasties, the Liang, Han, Chin, Chou, and T'ang having respectively 78, 106, 109, 111, and 123.]—*Oxenham, Atlas*, map 17; *Shih lun*, pp. 16*a*–17*b*.

[The Five Dynasties followed the T'ang administrative system. See *Wên hsien t'ung k'ao*, *c.* 11, *Chih kuan i*, p. 6*b*. Some references to official institutions have been given above.] See also *Kuang shih lei fu*, *Chih kuan pu*, *cc.* 5, 7.

"In 924, the Turkish house representing Central China placed an official taxing superintendent over the official ponds of Anyih and Kiai city—names which exist to this day—near what is known as the Lake of Kiai [in the Ho-tung salt area]."—*Parker, China*, p. 225.

A measure of far-reaching consequences "was the sub-division of provincial governorships, which increased the number of officers who could look to the Crown for profitable employment, while it lessened each governor's power of making himself dangerously formidable. The Sung Dynasty subsequently reaped the advantage of this change; it fell by attacks from without, not from internal disorganization, and its feebleness in resisting the foreign foe could not seriously be attributed to the decay of feudalism, since the local potentates, who flourished at the expense of the empire, had never been famous for patriotic resistance to alien armies."—*Simcox*, ii. 165.

[The laws were revised on the suggestion of Ministers, the Board of Punishments, the Censorate, or other departments. In 957, when a proposal to distribute law books to make the laws generally known was made, they were found too numerous, full of errors and tautology, and a complete revision was accordingly undertaken.]—*Yüan chien lei han*, *Chêng shu pu*, *Hsing fa*, pp. 98*b*–99*a*.

[In 955, owing to a miscarriage of justice, magistrates and *Kuan Ch'a* (the modern Taot'ai) were ordered to personally investigate cases before giving their decision. If this did not satisfy the parties, the case could be appealed against at the Censorate. In 925, it was decreed that no executions should take place between the Spring and Autumn equinoxes. Robbery, irrespective of the amount of booty, was punished with death (947).]—*T'ung chien lei tsuan*, *c.* 6, *Chêng shih pu*, p. 8*a*; *Yüan chien lei han*, *Chêng shu pu*, *Hsing fa*, p. 99*a*.

[The revenue system was the same as in the T'ang dynasty.]—*Yüan chien lei han*, *Chêng shu pu*, *Fu shui*, p. 53.

[The burden of over-taxation was very serious in the time of the Five Dynasties.]—*Ibid.* p. 52*b*.

[In 928, in San Ching and Nieh Tu, the tax on leaven was 5 cash per *mou*; the leaven on liquor was also increased; there were different names for the tax as levied on articles (*Tzŭ shih ching hua*, *c.* 52, p. 27*b*). In 931, the prohibition on iron-smelting was removed, and a tax imposed on agricultural implements (*P'ei wén yün fu*, *c.* 67b, p. 104*a*). Wang Chang increased the rent tax from 2 pints to 2 pecks per *shih* (*Tzŭ shih ching hua*, *c.* 52, p. 27).]

"Among other expedients for raising revenue, he [Prince of Ch'in under Later T'ang Dynasty] put a tax upon lamps and oil, and refused to allow pine-splints to be brought into the city, lest they should be used to give light."—*Giles, Bio. Dic.*, p. 452.

"In the time of Li Shih, people living on rafts had to pay a tax according to the measurement in *chang* and *shih* (area). This was called 'Water Department Fund.' The Grain Intendant, Chang Ch'i-hsien, memorialized the Throne requesting its abolition."—*Tzŭ shih ching hua*, *c.* 53, p. 31*a*.

Sung Period (960–1280).—*Table VI.*

RANKS.—*Sovereign* (*Ti*).—[T'ai Tsung, from being Assistant Reader in the Grand Council, became emperor. This is ascribed to the will of Heaven and the united strength of the people: see *Sung tai ti hsi*, *Hsü kuang chih p'ing lüeh*, *c.* 2, p. 5*a*.]

"The person of the Emperor counted for very little in the sacredness of his office; the office remained, as the rules of good government remained, but any *de facto* emperor who adhered to the rules became invested with its sacredness."—*Simcox*, ii. 179.

"Although he [T'ai Tsu] had sons, in obedience to the command of his mother he left his throne to his brother, the arrangement being that his own son should be Heir Apparent, and succeed upon his brother's death."—*Giles, Bio. Dic.*, p. 70. For other instances, see *Hsü kuang chih p'ing lüeh*, *c.* 2, p. 5*b*, &c.

[The emperor's position was greatly strengthened, and that of the Viceroys weakened, by T'ai Tsu's withdrawal from the provincial governors of the power of inflicting capital punishment. See *Boulger, Short Hist.*, p. 36, and *infra*.]

Chêu Tsung, when he died (1023), had "impaired the position and power of the imperial office."—*Ibid.* p. 38.

[Only members of the royal family could be made princes, but the father of the Empress, though of a different family, could bear this title, and there were cases in which the followers of the founder of the dynasty and his great Generals did so also, but only those who had rendered exceptional service. In other matters the T'ang system was adopted. See *Tzŭ shih ching hua*, *cc.* 37–44, pp. 1–33.]

"Throughout the first century of the Sung Dynasty, the legitimate influence of the women of the imperial house seems to have stood high." "It is . . . a curious illustration of the clannish tendency of the Chinese, that the ladies of the harem should be found ready to unite in quasi-political alliances, like the literati and the eunuchs."—*Simcox*, ii. 169.

Scholars (*Shih*).—[The scholars of the Sung dynasty were far superior to those who preceded them. Their learning was based upon the teachings of Mencius. They rendered great service to the country, as far as public morality and the influence of literature were concerned. Since the rise of the schools of Ch'êng Tzŭ, Chu Tzŭ, and Chou Tzŭ (Chou Tun-i) the scholars began to know what doctrines they ought to follow. Although different kinds of learning were much discussed by different schools, yet very little was done to put them into practice.]—*Tzŭ shih ching hua*, *cc.* 65–71, pp. 1–28.

[Under T'ai Tsu only literary men were appointed Magistrates (see *supra*). As to the *chin shih* see *infra*, *Competitive Examinations*.]

Officials (*Ch'ên*).—The founder of the Sung dynasty "honoured only literature, and did not esteem military exploits; all the ministers of state during this dynasty were created nobles with the title *Kuo Kung* (國公); whereas, by the laws of the Han dynasty no man could be ennobled without military merit."—*Yüan chien lei han*, *c.* 118, *Fêng chüeh pu*, *Fêng chüeh tsung tsai*, pp. 8*b*–9*a*.

[The degrees of nobility were: (1) *Ying Kuo Kung* (英國公) or *Kuo Kung*, *Chün Kung* (郡公), *K'ai Kuo Kung* (開國公), *K'ai Kuo Chün Kung* (開國郡公), and *K'ai Kuo Hsien Kung* (開國縣公), titles of Dukes having reference to the assistance given in establishing the dynasty, and the administrative divisions of the empire; (2) *K'ai Kuo Hou* (開國侯); (3) *K'ai Kuo Po* (伯); (4) *K'ai Kuo Tzu* (子); and (5) *K'ai Kuo Nan* (男), "National Founder" Marquis, Earl, Viscount, and Baron. See *ibid.* pp. 8*b*–11*b*.]

One of T'ai Tsung's "first measures was to restore the privileges of the descendant of Confucius, which included an hereditary title and exemption from taxation, and which are enjoyed to the present day."—*Boulger, Short Hist.*, p. 37.

Li Tsung honoured "the descendants of Confucius with the hereditary title of Duke, which still remains in that family, and is the only title of its kind in China."—*Ibid.* p. 59.

"The power of the satraps was taken away [by T'ai Tsu], and Magistrates were appointed by the Emperor only. . . . He would have no Magistrates who were not literary men. He chose his officials with anxious care, and let them remain long in office. Personally frugal, he forbade luxury in the Palace, declaring that he held the empire as a great trust."—*Giles, Bio. Dic.*, p. 70.

T'ai Tsu withdrew from provincial Governors the power of inflicting capital punishment, and from provincial officers "the command of provincial troops, and required them to pay all tribute in full to the Imperial treasury, through which disbursements for local purposes were in future to be made. Without control of money or troops, the highest officers became powerless for evil, and their ambition was driven to content itself with the prizes that a powerful prince could bestow, in return for loyal and diligent service."—*Simcox*, ii. 167.

Chu Hsi (1130–1200) "himself as minister selected all the superior officials except the prefects and district superintendents, who were nominated by the Crown. The higher officers were allowed to select their subordinates, but the minister dismissed any who misbehaved and only bestowed promotion on those who deserved it by their services (*Journ. R.A.S.*, Apr., 1888, pp. 219–71)."—*Simcox*, ii. 211.

[In 1256, sanction was given to a request of a Censor Chu I for the dismissal of 24,000 supernumerary officers, on account of the extra strain put upon the people. In 1004–8 and 1041–9, it was alleged, 320 prefectures supplied the salaries of 10,000 officers; now 100 prefectures supported 24,000 supernumerary officers.]—*Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 11 *shang*, *Chih kuan k'ao shang*, p. 3*a*.

Slaves (*Nu*).—"A rising in Ssüch'uan in 994 led to the appointment of a eunuch General, 王繼恩 Wang Chi-ên; but the Emperor, warned, as he said, by his historical studies, refused to admit eunuchs to the Central Government."—*Ibid.* p. 65.

[Ch'ên-lin is mentioned as a eunuch who rendered eminent services during the Sung dynasty (A.D. 1000).]—*Journ. N.-C.B.R.A.S.*, N.S. xi. 156.

"It was the policy of the Sung dynasty . . . to reduce the number of slaves in the households of the rich."]—*Parker, China*, p. 185; and *cf.* POLITICAL.

INSTITUTIONS.—1. *Executive.*—[The capital of Sung from 960 to 1129 was Pien Liang, or K'ai Fêng Fu, the capital of modern Honan. Lo Yang was the metropolis at three different intervals.]—*Oxenham, Atlas*, map 18; *Williams, Midd. King.*, i. 99.

Lin An, the modern Hangchow, "was the metropolis of the country during the nine latter princes of the Sung dynasty (1129–1280), when the northern parts were under dominion of the tribe of Kin Tartars."—*Williams, Midd. King.*, i. 117.

"Prince Kang Wang, on becoming emperor (1127), took the name of Kaotsong, and finally removed the southern capital to Nankin."—*Boulger, Short Hist.*, p. 43.

[The Liao capital was Liao Yang, later (about 920), Yen Ching (modern Pekin).]—*Oxenham, Atlas*, p. 19.

[The Kin capital was Ta Hsing Fu, or Chung Tu, *i.e.*, modern Pekin.]—*Ibid.* map 20.

"When Utubu saw the Mongols retreating, he thought to provide against the most serious consequences of their return by removing his capital to a greater distance from the frontier, and with this object he transferred his residence to Kaifong."—*Boulger, Short Hist.*, p. 52.

"In 987 the empire, which, since the suppression of the Northern Han State in 979, had almost equalled in extent the China of the T'ang dynasty, was divided into fifteen provinces, each under a Governor; and thus the power of the former great provincial Governors finally ceased."—*Giles, Bio. Dic.*, p. 65.

"In the year 993, the Empire [郡縣] was divided into ten 道; to wit, Ho Han, capital K'ai-fêng; Ho Tung, capital T'ai-yüan; Kwan Si, capital Si-ngan; Kien-nan [劍南], capital Ch'êng-tu; Hwai Nan, capital Yang-chou; Kiang Nan (divided into East and West), capitals at Soo-chou and Kiang-ning; Chê (divided into East and West), capitals at Shao-hing and Hang-chou; Kwang-nan, capital at Kwang-chou."—*Ch. Rec.*, xv. 54.

"In the year 996, the 州軍 of the Empire were divided into 13 路 each under 轉運使. These were 京東 and 西, Ho Peh, Ho Tung, Shen Si, Hwai Nan, Kiang Nan 南兆兩浙, Fu Kien, 川陝 and 廣南東西 and 荆湖." —*Ibid.* xv. 54.

[The system of administration established by the Sung, both as regards names and ranks, was inherited from the T'ang.]—*Yüan chien lei han*, *Shê kuan pu*, *Chih kuan tsung tsai*, p. 2*a*.

[To the office of Prime Minister the Sung appointed the *T'ung P'ing Chang Shih* (同平章事). This was not a substantive post, and there was no fixed number of incumbents. When there were more than one, they discharged the duties in turn. The chief minister was called *Chao Wén Kuan Ta Hsüeh Shih* (大學士), and the second one, *Chi Hsien Tien Ta Hsüeh Shih*. When there were three Ministers, these two revised the national histories. The duties of Prime Minister might be entrusted to anyone from the *Ch'êng* and *Lang* up to the *San Shih*. The Assistant Prime (or Chief) Minister was called *Ts'an Chih Chêng Shih* (參知政事). He assisted in the transaction of important government affairs, and transacted affairs in general (of a less important nature) jointly with others. His rank was one below that of the Chief Minister.]—*Yüan chien lei han*, *Shê kuan pu*, *Tsai Hsiang*, p. 11*a*; *Kuang shih lei fu*, *c.* 5, *Chih kuan pu*, p. 2*a*.

[The executive Boards were the same as in the T'ang dynasty, except that there was (as in the Hou Chou, though under a different name) a regular Board of Music, a department of the Li Pu, Board of Ceremonies, called *Ta Yen Fu Ta Ssü Yüeh Tien Yüeh* (大晟府大司樂典樂), instead of only the *Ta Yüeh Ling* of the Five Dynasties, and the *Ta Yüeh Shu Ling* of the T'ang and Sui.]—*Chih kuan piao*, *c.* 1, p. 21; see also *Tzŭ shih ching hua*, *c.* 39, p. 13*b*.

[The *Li Pu*, Board of Civil Office, was also entrusted with the selection of military officers.]—*Kuang shih lei fu*, *c.* 6, *Chih kuan pu*, p. 1*b*.

"Under the Sung system, all matters relating to population, property, grain, and money, were in charge of the 3 *Ssŭ*, Controllers—*Yen T'ieh*, *Hu Pu*, and *Tu Chih*. But in the period *Yüan Fêng* [1078–86], on changing the system of officials, the 3 *Ssŭ* were abolished, and these matters were controlled by the Left and Right Vice-Presidents of the *Hu Pu*."—*Kuang shih lei fu*, *c.* 5, *Chih kuan pu*, p. 12*b*. In the period *Shao Hsing* (1131–63) of Kao Tsung, a Revenue Secretary was established under the same Board, with charge of the accounts of the whole empire. He reported to the throne once a year, in the autumn.—*Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 11 *shang*, *Chih kuan k'ao shang*, p. 8*a*.

"The affairs of the *Li Pu*, Board of Ceremonies, of the Sung dynasty, were under two principal officials. On all rules for bestowing patents and revising history, the Office of Belles Lettres and the State Historiographers Office consulted with the *T'ai Ch'ang* (Director of the Court of Sacrificial Worship). The selection of students from the colleges, and examinations for filling vacancies amongst them, were also included in their duties.—*Wén hsien t'ung k'ao*, quot. *Kuang shih lei fu*, *c.* 5, *Chih kuan pu*, p. 16*a*.

[The posts of *Chiu Ch'ing* (九卿) existed, but only in the period *Yüan Fêng* (1078–86) did the holders have official duties to perform. At the most flourishing period of the dynasty, all official posts without duties were abolished. The *T'ai Ch'ang* and *Ta Li* were retained, but the *Tsung Chêng's* duties were added to those of the *T'ai Ch'ang;* the *Wei Wei's* and *T'ai P'u's* to those of the Board of War; the *T'ai Fu's* and *Ssŭ Nung's* to those of the Board of Revenue; and the *Kuang Lu's* and *Hung Lu's* to those of the Board of Ceremonies. In the period *Shao Hsing* (1131–63) of Kao Tsung the *T'ai Fu*, *Tsung Chêng*, and *Ssŭ Nung* were re-instituted, the rest being

abolished.]—*Yüan chien lei han, Chu Ch'ing*, p. 99*a*; see also *Sung shih Chih kuan chih, Tzŭ shih ching hua, c.* 39, p. 13*b*.

"Of old there was no such office as that of Censor. From the highest statesman down to the artisan and trader, every man was free to admonish the Throne. From the time of the Han dynasty onwards, this prerogative was vested in an office, with the weighty responsibility of discussing the government of the empire, the people within the Four Seas, successes, failures, advantages, and disadvantages, in order of importance and of urgency. The sole object in this arrangement was the benefit of the State, not that of the Censor, from whom all ideas of fame or gain were indeed far removed. In 1017, an edict was issued, appointing six officers to undertake these Censorial duties, and in 1045 their names were for the first time written out on boards; and then, in 1062, apparently for better preservation, the names were cut on stone. Thus posterity can point to such an one and say, 'There was a loyal man'; to another, 'There was a traitor'; to a third, 'There was an upright man'; to a fourth, 'There was a scoundrel.' Does not this give cause for fear?"—*Ssŭ-ma Kuang*, quot. *Giles, Hist. of Ch. Lit.*, pp. 218–9.

[For the *Ta Hsüeh Shih* (大學士), Imperial Secretaries, who held very high and honourable positions, but had no districts assigned to them and no regular duties to perform beyond that of accompanying the Emperor when he went out and furnishing him with any information required, see *Yüan chien lei han, Shê kuan pu, Ta Hsüeh Shih*, p. 15*a*.]

[For the official compilers of historical records called *Pien Hsiu* (編修), instituted in the period *T'ai P'ing Hsing Kuo* (976–84) of T'ai Tsung, and similar posts, see *Yüan chien lei han, Shê kuan pu, Pien hsiu*, p. 39*b*; etc.]

[The remaining administrative offices, such as the Censorate, etc., were the same, except with occasional variations in name, as under the previous Period. The lines, as in former times, were not always distinctly drawn between civil, military, and ecclesiastical duties. See *Yüan chien lei han, Shê kuan pu; Tzŭ shih ching hua, c.* 38, pp. 7*a*–9*b*; and *Kuan shih lei fu, c.* 7, *Chih kuan pu*, pp. 10*a*, 19*b*, etc.]

[The *provincial administration* was similar to that of the previous Period. A new post, the *T'i Tu Hsüeh Shih Ssŭ* (提督學事司), Provincial Director of Education, was instituted, holding a higher place than the official educational authorities of former times. The Provincial Treasurer and Provincial Judge were now known as *Tu Chüan Yün Shih* (都轉運使) and *T'i Tien Hsing Yü Kung Shih* (提點刑獄公事) respectively; the Prefects as *Ch'uan Chih Fu Chou Chien Chün* (權知府州監軍); the Department Magistrate, *Chih Chou* (知州), came into existence (corresponding to the *Chou Chang* of the Feudal Period); and the District Magistrate was now first called *Chih Hsien* (知縣).]—*Kuang shih lei fu, c.* 8, *Chih kuan pu.*

1234–56. "The country was overrun with superfluous officials; the people were ground down with taxes, and the expenses of the war; the high officials neglected their duties and spent their time in intriguing."—*Giles, Bio. Dic.*, p. 84.

"The system of *competitive examinations* and literary degrees had been still more fully elaborated."—*Giles, Historic China*, p. 84.

[T'ai Tsu ordered that all *chin shih* were to be re-examined and to pass the final palace examination.]—*Giles, Bio. Dic.*, p. 70.

"In 982 the *chin shih* were first ranged in the existing three classes."—*Ibid.* 64–5.

"In 1066 triennial examinations were decreed."—*Ibid.* p. 78.

Wang An-shih "attempted to reform the examination system, requiring from the candidate not so much graces of style as a wide acquaintance with practical subjects. 'Accordingly,' says one Chinese writer, 'even the pupils at village schools threw away their text-books of rhetoric, and began to study primers of history, geography, and political economy.'"—*Giles, Hist. of Ch. Lit.*, p. 221.

Legislative.—[In 963, the President of the *Ta Li Ssŭ*, submitted 30 volumes (*chüan*) of criminal law for the Emperor's approval.]—*Yüan chien lei han, Chêng shu pu, Hsing fa tsung*, p. 99*a*.

Judicial.—[There were two officials in the Board of Punishment, called *P'an Pu Shih*, charged with the control of the affairs of the Board. All officials such as Censors and Prefects or Court Officials were eligible for such posts. In the second year (991) of *Shun Hua*, capital cases, before execution, were to be re-examined by the said Board. At this time, there were also established two departments, one called *Shên Hsing Yüan*, Criminal Trial Department, and the other *Hsing Yü Ssŭ*, Criminal Investigation Department. To the former, the various provinces sent their criminal cases for re-examination, and to the latter was entrusted the duty of making inquiries into every criminal case which took place in the metropolis. There were two *Lang Chung*, Board Secretaries, each of whom had an office under his charge, respectively called the Right Office and the Left Office, where all cases respecting grievances were heard and redressed. All cases, whether criminal or civil, were first sent to the Department *Ta Li Ssŭ*, and thence to the Criminal Trial Department, and afterwards a report was made conjointly by them to be submitted to the Throne. The transfer of criminal cases from the provinces to the capital was carried out by the *Chüan Yün Shih*, the Criminal Transportation Department, to which Department, officials such as the *Ssŭ Mên Yüan Wai Lang* were appointed.]—*Yüan chien lei han, Shê Kuan pu, Hsing pu*, pp. 65*a*–66*b*; *Ta Li*, p. 107*a*; *Kuang shih lei fu, c.* 6, *Chih kuan pu*, 3*b*; *Tzŭ shih ching hua, c.* 40, p. 15*b*.

T'ai Tsu instituted "a great reform in the civil administration of the Empire, and one which struck at the root of the evil arising from the excessive power and irresponsibility of the provincial governors. Up to this date the governors had possessed the powers of life and death without reference to the capital. It had enabled them to become tyrants, and had simplified their path to complete independence. Taitsou resolved to deprive them of this prerogative and to retain it in his own hands, for, he said, 'As life is the dearest thing men possess, should it be placed at the disposal of an official who is often unjust or wicked?' This radical reform greatly strengthened the Emperor's position, and weakened that of the provincial viceroys; and Taitsou thus inaugurated a rule which has prevailed in China down to the present day, where the life of no citizen can be taken without the express authority and order of the Emperor."—*Boulger, Short Hist.*, p. 36.

T'ai Tsu thus "gave a right of appeal to the emperor from the judgment of all provincial officers."—*Simcox*, ii. 167.

T'ai Tsu "ordered that the gates and doors of his palace should always be left open, so that the humblest of his subjects might have access to him at any time. His own words were that 'his house should resemble his heart, which was open to all his subjects.'"—*Boulger, Short Hist.*, p. 35.

[The Emperor said:] "'The officers of the Board of Punishments in the Sung dynasty have charge of the hearing of lawsuits. Some officers apply too heavy punishments and some too light and if there is anyone who points out where errors have been made or justice done the parties are to be punished or rewarded accordingly. When an order of pardon is issued they must examine the officers as to whether they have delayed or opposed it. . . . In pardoning criminals on account of the great ceremonies (ascending the throne, Emperor's marriage, etc.) the Vice President of the Board delivered the written pardon to the magistrate to read and pardon the criminal accordingly.'"—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 9*b*.

"Administration of justice is said to have flourished under the incorrupt officials of this dynasty; and the acumen of Judge Pao, of the 'Dragon Face,' is still a household word. The functions of magistrates acting in their capacity as coroners were now more fully defined; while the study of medical jurisprudence was stimulated by the publication of a volume which, although combining the maximum of superstition with the minimum of scientific research, is still the officially recognised text-book on all subjects connected with murder, suicide, and accidental death."—*Giles, Historic China*, p. 85.

Revenue, Coinage, &c.—[In the time of the Sung, there were five classes of taxes: (1) The tax on the public land. The land was let out to individuals for cultivation, and the tax was paid in the shape of rent; (2) The tax on private land owned by the people; (3) The tax on municipal property, that is, the house tax and land tax; (4) The poll-tax annually paid by each individual, either in service, money, or rice; (5) The Miscellaneous Tax paid on various articles of consumption, such as cattle, leather, silkworms, salt, and so forth.]—*Yüan chien lei han, Chêng shu pu, Fu shui*, p. 53*a*.

[From the time of the T'ang, taxes, as a rule, were paid by the people in accordance with the area of the land under cultivation, but it was of common occurrence that articles other than the taxes were exacted, and having exacted them, the authorities commuted their value into money equivalents and ordered them to be paid as taxes. Hence the name "Miscellaneous Commutation Tax." The number of articles was so great that it was impossible to classify them, and taxes of that kind went on increasing so steadily that eventually they became many times heavier than the taxes of the Han and T'ang.]—*Ibid.* p. 53*a*.

[All matters relative to taxation, population, land, and food, were under the control of the three departments, the Salt and Iron Supervision Department, Budget Preparation Department, and the Board of Finance.]—*Ibid., Hu Pu*, p. 57*a*.

[When the new Official Regulations were published in the reign of Shên Tsung (1068–86), government affairs were properly allotted to various departments. In the period *Yüan Fêng* (1078–86) there were the officials *T'ai Fu Ch'ing* and *Shao Ch'ing*, on whom devolved all work in connection with the preparation of statistics of the national wealth in various forms, expenditure and revenue, tariff measures, and commerce. All district magistrates were also allowed to have control over all matters relating to population, taxation, revenues, and relief of the poor, &c.]—*Ibid., T'ai Fu Ch'ing*, p. 107*a*; *Hsien Ling*, p. 207*a*.

"On the accession of Tai-tsou [960] under a million families paid tribute to the empire; but on the accession of his son, Tai-tsong (977), the number had increased to nearly four millions, not so much by growth of population or vigilance of the revenue officers, as by the addition of whole provinces to the Imperial territory."—*Simcox*, ii. 168.

"Pearls were first sent as tribute from Kwang Si in the year A.D. 977; possibly (as there can be no pearls inland), this signifies trade through Annam with India. Wine was also first taxed this year." Tribute fruit was sent from Uliasutai.—*Ch. Rev.*, xv. 183.

[Coining of small cash in Chiang Nan and other departments was forbidden in 977.]—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 2*b*.

"M. Biot (*Journ. Asiat.*, 3me sér., vi. 315–9) gives, after Ma-twan-lin, tables showing the total revenue from direct taxation in the years 997, 1021, and 1077 A.D. Besides the large contributions of grain, copper money, silk of various qualities, and fodder, mention is also made of hempen cloth, gauze, tea, firewood, coal, feathers, iron, and wood suitable for arrows; in 1021, leather, salt, paper, and undressed hemp are also added. It would be useless to attempt an exact valuation where there are so many necessary elements of uncertainty, but the copper money received in 997 may be taken as worth under 1½ millions sterling, and the grain for the same year, while worth perhaps twice as much in money, would have served as rations for nearly five million persons for a twelvemonth."—*Simcox*, ii. 192–3.

The proportion between tribute-paying families and others is mentioned in the "last record of three departments added to the empire in 985. . . . The district was occupied by 125 different families, to whom 16,000 other households paid tribute or rent. The proportion is doubtless mentioned because it is exceptional, as the same proportion, throughout the empire, would give an incredibly large population; but it is a sufficient reason for doubting whether the population ever declined as much as the decline in the number of tax-paying householders implies."—*Ibid.* ii. 168; see also *De Mailla*, viii. 95.

[The old poll-tax in the two Chê, Fukien, Ching nan, and Kuang Nan, was abolished by Chên Tsung in 1011.]—*Wên hsien t'ung k'ao hsiang chieh, c.* 3, *Hu k'ou k'ao*, p. 3*a*.

"In 1021 there is a slight increase in the grain receipts and a very material increase (nearly 35 per cent.) in the copper money. By 1087, when the area of tax-paying land had fallen off, the receipts in grain had fallen from 21 and 22 million chi to 18 million, and the money receipts were intermediate between those of the two former periods: in other words, the growth of the revenue had been arrested, but there was no positive falling off in its amount if the eighty years are taken together."—*Simcox*, ii. 193.

"The increase of the receipts in copper seem to show that the Government had not been unsuccessful in its first attempts to deal with the standing difficulty of the currency. The first innovation was the introduction of iron money in addition to the familiar copper. Though it was even more cumbrous—a shilling's worth of iron cash weighed over 2 lbs.—yet it was found less laborious to use iron money in remote provinces, where iron was found and copper was not, than to import the necessary quantity of copper from a distance. On this ground the use of iron money was first sanctioned in Fokien and Sz'chuen, where it had been invented. So long as the iron money was in use alone, no fresh inconvenience was felt except from its great weight, and to meet this a first experiment in private banking was tried in Sz'chuen. A certain Tchang-yang invented the idea of notes or coupons exchangeable for metal money at a specified date: 'this was not a money; it was only a means of transporting the value of metal money.' (*Journ. Asiat.*, 3me sér., iv. 217.) After 997 this invention received further development."—*Simcox*, ii. 193.

"Sixteen leading firms associated themselves for the purpose of issuing *kiao-tsze*, or bills of exchange, which were to be repayable at intervals of three years over a total period of sixty-five years. The bills were at first in great favour," but were suppressed on the compulsory winding-up of the company in 1017. In 1023, "the Government itself established a bank for the issue of bills of exchange, and private persons were prohibited from engaging in the same business."—*Ibid.* ii. 193.

"In other parts of the empire the 'flying money' of the Tang had already been re-introduced under the name of *pien-tsing*, or 'convenient money.' These bonds when given in exchange for metallic deposits were of course repayable on demand; and they only served to increase the amount of money in circulation, in so far as they passed from hand to hand oftener than the money they represented would have done. Similar bonds seem to have been given, as previously, on the security of tea, salt, or other recognised values, and these were only repayable in kind, so that they passed from hand to hand as money and could only be cashed by someone in want of the commodities specified on the bill. The *pien-tsing* thus, though a great convenience when money was scarce, were not a real paper money; they could not be issued in excess, as the quantity in circulation was regulated by the deposits of private persons; according to Biot, it never exceeded the moderate proportion of one in thirteen of the copper money in use."—*Ibid.* ii. 193–4.

"To set against this security, however, there was the inconvenience of the original deposit which had to be reclaimed to time, and in the case of the salt and tea bonds the necessity of converting the paper into goods within a limited period. For all these reasons the *pien-tsing* disappeared from use with the introduction of the Government bills of exchange, a real paper money, which, like that of the first private banks, was to run for sixty-five years, covering twenty-two triennial terms of repayment. In the middle of the century the amount due for repayment at each term is said to have been between £300,000 and £400,000."—*Ibid.* ii. 194.

The Government "had not realized that the object to be aimed at was a permanent addition to the currency, limited only by the credit of the State; for the triennial cash payments seem to have been made regularly for nineteen terms, so that the paper currency must have contracted considerably before it was proposed (early in the administration of Wang-ngan-shi) to redeem the expiring bonds with a new issue to run for twenty-five terms, or seventy-five years in all."—*Ibid.* ii. 194.

The "fresh issue of *kiao-tsze* to run for thirteen years, making in addition to the original term seventy-five years in all, was made in 1072 A.D.; these were to be exchangeable for the expiring bills of the first issue. But in 1076 they were suspended on the pretext . . . that the merchants realized too large a profit on their purchases and sales at the expense of the Government. This may mean only that, by the help of the Government paper, private commerce continued to realize a return which the Innovator coveted in vain. We are not told exactly what happened on the expiry of the *kiao-tsze* at the close of the 11th century, but the first years of the next century witnessed the issue of a new kind of paper, issued in excessive quantities in the vain hope of so providing for the expenses of the war against the Leao. This paper was not much in request, and to mend matters the Government, which was in the hands of Wang's successors, ordered that all payments above a certain value should be made half in it and half in copper. The only result was the paper fell to a tenth and then to a hundredth of its nominal value."—*Ibid.* ii. 195.

"Meanwhile the introduction of paper had done nothing to lessen the evils arising from the joint use of iron and copper, or from the dearth of both. To save the expense of carriage and to meet the cost of border wars, mines and foundries were opened in the neighbourhood of the armies, and the local metal, whatever it might be, was put into circulation. Unfortunately, however, when copper and iron were used together, the nominal value of the two coinages was not proportioned to their real comparative value in exchange; even that proportion fluctuated, and speculators exaggerated the fluctuation, so that all the disadvantages of a bimetallic currency were introduced with little corresponding benefit."—*Ibid.* ii. 194.

"In 1023 . . . the Empress mother's first measure was to appoint a commission, with a view to a general reduction of taxes, and meanwhile the duties on tea and salt were remitted [see also *Boulger, Short Hist.*, p. 38]. . . . The census of 1029 A.D. for the first time records a number of tax-paying families slightly in excess of the highest figure reached in the middle of the 8th century (*Journ. Asiat.*, 1836, p. 461)."—*Simcox*, ii. 169.

[Under Chao Chên (=Jên Tsung: 1023–63) the revenue was carefully fostered, and in 1059 the tea monopoly was abolished.]—*Giles, Bio. Dic.*, p. 55.

"The Nüchên Tartars and the Sung dynasty used to have a customs and salt station on the Hwai."—*Parker, China*, p. 215.

The administration of the Fu Kien salt industry "can only be traced historically back to times when a good political hold upon the land had been first obtained by advancing Chinese civilization (say A.D. 1000). I find that, when changes were made in 1157, the dues produced 80,000 'strings' a year."—*Ibid.* p. 211.

"The Earth at Ho So was mostly salt. The taxed fields of the people could not grow grain, so they scraped the salt from the land and boiled it for sale in order to pay the two kinds of taxes."—*Sung shih Shih huo chih, Yün fu shih i, c.* 67, p. 15*b*.

"The salt-control departments imposed 5 bags of salt on every hundred bags—which was called '5 per cent. salt.' No sooner did the Inspector of the Salt Department think he had hit upon the right number than the people became yet poorer by his arrangement. So [Sun] Tzŭ-hsiu memorialized the Throne requesting the abolition of the tax"—*Tzŭ shih ching hua, c.* 53, p. 30*b*.

"In Fang Chou the people were called on to refine alum, the tax on which became heavier as years went on. Being unable to pay this tax, people sometimes sold all their property or were put in prison. On this account [Hsieh] Yen memorialized the Throne to abolish [the tax on] alum in Fang."—*Ibid.* p. 30*b*.

"In the 2nd year [1079] of the period *Yüan Fêng*, Liu Hsüan, Inspector of the Salt Department of Ch'ang P'ing in Kuang Hsi, said: 'The population of Kuang Hsi is only 200,000, but the people pay Service Money [pay money instead of taking government service] up to 190,000 *min* [string of cash]. Formerly the income from taxes was sufficient for expenditure. Since the amount of taxes has fallen it has been supplemented with rice from the fields; and when the rice from the fields was still insufficient, the poll-tax was imposed on people of 16 years of age. Thus, the people of Kuang Hsi pay the tax first in money and then in rice—that is, each person pays two taxes. As the defective laws of former dynasties cannot now be abolished the "service money" (tax) was again increased. Indeed, it is pityful.'"—*Wén hsien t'ung k'ao hsiang chieh*, *c.* 3, *Hu Kou K'ao*, p. 3*a*.

"The laws against the hoarding and exportation of metal were repealed by Wang-ngan-shi, who seems to have been an advocate for as much free trade as could survive the competition of the State as the greatest trader."—*Simcox*, ii. 195.

"Another unobjectionable measure was the revival of the special Tribunal employed to regulate the value of the money in use, by always issuing just as much as was necessary to keep it at the same price."—*Ibid.* ii. 186.

"After the expulsion of the Tartars, the Sung dynasty placed eighteen of the marshes [in the Ho-tung salt area] under Government control. In 1010 and 1116 the 'red salt' of this locality is spoken of officially. In 1178 the Sung dynasty prohibited the import of Shan Si salt from the Nüchên dominions into Ho Nan."—*Parker*, *China*, p. 225.

"The Ch'iung [Chou] officials memorialized the Throne proposing to collect the duty of Hai Nan on an estimate of the size of all vessels—this was called Mark Payment (格納 *ko na*)."—*Tzŭ shih ching hua*, *c.* 53, p. 30*b*.

"North China depended on Central China for its tea then [11th century] as now, and the Sung dynasty Emperors levied a tax on it at custom-houses in a line running east and west through these four provinces [Hupeh, Honan, Anhui and Kiangsu]."—*Edkins*, *Chinese Currency*, p. 27.

"The taxation of Sz Ch'uan tea is mentioned in A.D. 1074."—*Ch. Rec.*, xv. 53.

"In the year 1132, what was called the Hwai-Chêh salt system or systems was put on an Excise basis. From Shanghai, all down the coast, half of the province to the Fuh Kien frontier, was the division of Eastern Chêh; and the inner parts, including Chinkiang, Nanking, and Hangchow, was the Western division of the Two Chêh."—*Parker*, *China*, pp. 212–3.

The military collapse of the Empire diverted attention from its financial failure, and as this money had been mainly used in the Northern provinces, the Southern Sung left their creditors behind them. The credit of the Government was not improved by the diminution in its territory, for barrier bonds, issued 1131, for the sake of saving carriage, in payment of provisions delivered to the troops in Sz'chuen, were redeemed by the Government at only one-third of the price of issue, which of course made the tradesmen unwilling to accept payment in such coin in future. After this, one depreciated and inconvertible paper succeeded another, till in 1166 a vigorous attempt was made to revert to specie payment, and a million ounces of silver were employed to buy up the *hoei tsze* in circulation."—*Simcox*, ii. 195-6.

"This is the first time so large a sum of silver is mentioned, and we may infer from it that the metal was already used, as now, in private commerce as a medium of exchange by weight but no attempt was made to introduce silver money. From time to time attempts were made to apply the precedents derived from the history of base copper money to the depreciated paper. Sometimes it was accepted in payment of taxes, though more often the Government helped to discredit it by only accepting it at its lowest rates. The acme of perversity was perhaps reached in 1167 A.D., when it was proposed to buy up the depreciated hoei-tsze at 10 per cent. of their original value. Apparently this offer so far improved their credit that private dealers were willing to take them at a less severe discount, but this was forbidden under heavy penalties. In 1133 the Emperor Kao-tsung, in speaking of the depreciated bills, naïvely suggested that Government officials, who had a million strings of cash in their storehouses, should keep up the credit of the paper by timely purchases; but we do not learn that their patriotism took this form, and in 1160 the laws against hoarding metal were revived: £6,000 was the *maximum* allowed to a Government official, and half that sum for private persons."—*Ibid.* ii. 196.

"The celebrated K'wei Kwan taxing station at the upper end of the gorges first began to levy duties on tea in the year 1154."—*Parker*, *China*, p. 241.

"Copper plates were used at this time for printing the notes instead of wood, and the constant issues of fresh paper may be excused to a certain extent by the flimsiness of the material which caused them to wear out rapidly. In 1210 a quantity of bonds were again bought up in Sz'chuen by the Government, which despatched gold and silver from the Treasury for the purpose. Meanwhile the complaints about the exportation of the precious metals continued, though the Kin had long proved their civilization, by issuing paper money themselves and reproducing most of the inconveniences of Chinese finance; that is to say, as soon as their convertible paper money had become popular and its conversion was seldom demanded, they hastened to discredit it by omitting to keep any cash reserve at all."—*Simcox*, ii. 196.

"This would make the civilized subjects of the Northern Empire as anxious to borrow copper from the South as their predecessors had been and the Mongols still were; unfortunately, also, the first provinces to fall into the hands of the Mongols were those whence the chief supply of copper was derived, so that the material difficulties in the way of establishing a satisfactory currency were really great. Special bills of exchange were issued to serve as a means of communication between districts, like those on the two sides of the Hwai, which used respectively iron and copper money; and all the perplexities of the Government were aggravated by its habit of treating the paper money as naturally and necessarily destined only for local circulation."—*Ibid.* ii. 196.

["After having tried for years and months to support and maintain (the depreciated notes), the people had no longer any confidence in them." Practically every payment was made in paper. "Copper money, which was seldom seen, was considered a treasure." As a result of the depreciation of paper money, coiners were encouraged to debase what was left of the copper money (*Vissering*, *On Ch. Currency*, p. 207). "But we certainly hear less of this grievance under the Sung than before the introduction of paper for general use." "It may also be doubted whether the national loss and suffering caused by the depreciated paper can have been as great in proportion as it would in a community not already accustomed to every kind of monetary inconvenience" (*Simcox*, ii. 197–8).]

"We have the categorical assurance of Marco Polo, which counts for something, that the paper money was taken readily by both native and foreign traders. No doubt trade and commerce suffered from the confusion, but the loss was probably more equally spread over the community than would be the case in any European country with a large and helpless wage-receiving class. The political consequences were not the less disastrous on this account. The Southern Empire was not ruined economically; but in proportion as the cost of the depreciation of the paper was borne by the richer classes, their loyalty to the existing régime was impaired, and disorganization began, which was not less dangerous than that of feudalism, though of a different kind."—*Ibid.* ii. 198.

"'Riches are the handle held by the rulers of men,' according to a minister of Wen-ti, who was urging his master not to allow private mints. The issues of provincial notes, not available throughout the empire, probably did more than any other single measure to counteract the centralizing policy by which the first Sung emperors hoped to save their empire from dismemberment. The dynasty was not destroyed by a discontented commercial class, but it was not defended with loyalty by any class."—*Ibid.* ii. 198–9.

Wang An-shih (1069), Shên Tsung's Minister, "exempted the poor from all taxation."—*Boulger*, *Short Hist.*, p. 40.

[The descendants of Confucius were exempted from taxation. See above, RANKS.]

LIAO.

[The Liao nobility seems to have consisted only of the *Kuo Kung* of the Sung and previous Periods.]—*Li tai chih kuan piao*, *c.* 6, pp. 13–14.

[The office of Grand Secretary was occupied by the *Nan Pei Fu Tso Tsai Hsiang* and *Yu Tsai Hsiang* (南北府左宰相右宰相).]—*Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 11 *shang*, *Chih kuan k'ao shang*, p. 4*b*.

[Officials representing Presidents of Boards were the *Nan Yüan Shu Mi Shih* (南院樞密使), discharging the duties of President of the Board of Civil Office; the *Pei Yüan Ta Wang* (北院大王), Revenue; the *To Lo Lun Mu T'êng* (多囉倫穆騰), Ceremonies—a *T'ai Yüeh Shu Ling* (太樂署令) being in charge of State Music; the *Pei Yüan Shu Mi Shih* (北院樞密使), War; *I Lo Hsi Pa* (伊勒希巴), Punishments; and *Nan Pei Yüan Hsüan Chêng Shih* (南北院宣徽使), Works. Matters relating to colonies were in charge of the *Nan Pei Ta Wang Yüan Chih Yüan Shih* (南北大王院知院事). The Censorate was under the *Yü Shih Ta Fu* (御史大夫), and the *Têng Wên Ku Shih* (登聞鼓使) was the functionary corresponding to the Director of the Office of Transmission of the Manchus, the Court of Revision being represented by the *T'i Tien Ta Li Ssŭ* (提點大理寺). The remaining chief administrative functionaries, metropolitan and provincial, were practically all the same as in the Sung.]—*Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 11 *shang*, *Chih kuan k'ao shang*, pp. 7*b*–14*b*.

"[As regards] the number of officials in the Liao dynasty—it is found in the *History of the Titles of the Liao* that such as the Shu Mi, Tsai Hsiang, and others of the North and South Departments consisted of 111 odd; the *Yü Chang*, *Chu Chang* and others of the Northern part of 1,500 odd; and the officials in Court, in the capital and others of the Southern part of 800 odd, but the number is not fully stated."—*Ibid.* p. 3*a*.

[On the establishment of the dynasty, in the reign of T'ai Tsu (907–27), judicial procedure was unsettled, and "criminals were punished according to their crimes."]—*Yüan chien lei han*, *Chêng shu pu*, *Hsing fa tsung*, p. 99*a*.

[At the beginning of the Liao dynasty, justice was loosely administered.]—*Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 1*b*. *Cf.* LAWS.

[Owing to the influence of the Empress Dowager Jui Chih, leniency and justice characterized the administration of the laws in the time of Shêng Tsung (983–1031).]—*Ibid.* p. 1*b*.

[In the northern part of the Liao Kingdom there was a department called *Ti Li Pi Yüan*, somewhat like the Board of Punishments, which was charged with all the work in connection with the control of prisons. In its southern part, there was the *Ta Li Ssŭ*, which department was constituted as follows:—One *Ch'ing*, Chief Minister, one *Shao Ch'ing*, Assistant Minister, *Ch'êng* and *Chu Pu*, Secretaries and Record Keepers; besides these there were two other officials called *T'i Tien Ta Li Ssŭ*, Criminal Transportation Officer, and *Ta Li Chêng*, a kind of secretary.]—*Ibid.*, *Yüan chien lei han*, *Shê kuan pu*, *Hsing Pu*, pp. 65*a*–66*b*; *Ta Li*, p. 107*a*.

[The Liao dynasty established the department called *T'ai Fu Chien*, and the Kin dynasty retained this post, appointing two ministers called *Chên Chien* and *Shao Chien*, that is Principal Superintendent and Assistant Superintendent.]—*Yüan chien lei han*, *Shê kuan pu*, *Hu Pu*, p. 57*a*; *T'ai Fu*, p. 117*a*; *Hsien Ling*, p. 207*a*.

KIN.

[The ranks of nobles were the *Kuo Kung* and *Chün Kung*, Dukes, as in the Sung dynasty, the Marquis, Earl, Viscount, and Baron being designated *Chün Hou*, *Chün Po*, *Hsien Tzŭ*, and *Hsien Nan*, respectively.]—*Li tai chih kuan piao*, *c.* 6, pp. 13–14.

[The posts of *San Shih* and *San Kung* were filled, the *T'ai Shih*, *T'ai Fu*, and *T'ai Pao* being appointed to the former, and the *T'ai Wei*, *Ssŭ T'u*, and *Ssŭ K'ung* to the latter.]—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 11 *shang*, *Chih kuan k'ao shang*, p. 4*b*.

[The Left and Right Prime Ministers and their Assistants belonged to the *Shang Shu Shêng*, Grand Secretariat, and ranked below the *Shang Shu Ling*.]—*Ibid.* p. 5*a*.

[The Boards were practically the same as in the Sung Period (*q.v.* and *Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 11 *shang*, *Chih kuan k'ao shang*, pp. 9*b*, 10*b*, etc.).]

"The Department of the Imperial Stud of the Kin dynasty was in charge of the collecting and breeding of horses and mares."—*Yüan chien lei han*, *c.* 358, *Shou yeh pu*, p. 19*a*.

"The *Tu Shui Chien* of the Kin dynasty had charge of the fording and bridging of streams and marshes, and of the ships and boats on the rivers and canals, and also of the grain canal and transport of grain."—*Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 11 *hsia*, *Chih kuan k'ao*, p. 2b.

[*Provincial administration: Tsung Kuan Fu Tu Tsung Kuan* (總管府都總管), Governor-General; *T'ung Chih Tu Tsung Kuan* (同知都總管), Governor; *T'i Tu Hsüeh Chiao Kuan* (提督學校官), Director of Education; *Tu Chüan Yün Shih* (都轉運使), Treasurer; *An Ch'a Shih* (按察使), Judge; *T'ung Chih Chüan Yün Shih Fu Shih* (同知轉運使副使), and *An Ch'a Fu Shih Chien Shih* (按察副使僉事), Taot'ai's; *Chou Tz'ŭ Shih* (州刺史), Prefect; and *Hsien Ling* (縣令), District Magistrate; the *Hsün Chien* (巡檢), Sub-district Deputy Magistrate, and *Wei* (尉), District Police Superintendent, being the tail-ends of the central administrative system.]—*Yüan chien lei han*, *Shê kuan pu*, 48–57.

"In the 28th year [1188] of the reign *Ta Ting* of Shih Tsung of the Kin dynasty the officials in office numbered 19,700; in the four seasons those who offered themselves for selection numbered more than 1,000; and the commissioned officers in a year numbered 3,000."—*Hsü wén hsien t'ung k'ao hsiang chieh*, *c.* 11 *shang*, *Chih kuan k'ao shang*, p. 3*a*.

[The law was "simple" showing no respect for rank and making no provision for various degrees of punishment. In the period *Huang T'ung* (1141–9) an edict was issued commanding the Ministers to compile a code of laws based on the old law of the kingdom and incorporating what was considered good in the laws of the Sui, T'ang, Liao, and Sung. The book was named *Huang t'ung chi*, Laws of the Empire, and these were ordered to be put in force in every part of the realm.]—*Yüan chien lei han*, *Chêng shu pu*, *Hsing fa tsung*, p. 99*a*.

[In the time of the Kin, the Board of Punishments had only one *Shang Shu*, the President, of the 3rd rank. There were *Lang Chung* and *Yüan Wai Lang*, two kinds of secretaries, both in the times of the Liao and the Kin. The department *Ta Li* then consisted of a Chief Minister From the Assistant Minister down to the Secretary there were only six persons. This number was reduced to four in the time of the Kitan. All reports from the various provincial authorities were sent to them for final decision, and they also had the duty of hearing criminal cases involving doubtful points of law. The official *Ssŭ Chih*, Upholders of Justice, also took part in such a trial, and gave his opinion thereon. The duty of the *Ping Shih*, clerks, was somewhat similar to that of the Upholders of Justice. The number of the officials called *Chih Fa*, Doctors of Law, was eleven, and their duty was to prepare cases according to legal principles and precedents. Besides these there were two other officials, called *Ming Fa*, Exponents of Law.]—*Yüan chien lei han*, *Shê kuan pu*, *Hsing Pu*, pp. 65*a*–66*b*; *Ta Li*, p. 107*a*.

[The system of taxation was adopted from the T'ang and Sung.]—*Tzŭ shih ching hua*, *c.* 53, p. 30*b*.

Mongol Period (1280–1368).—*Table VII.*

RANKS.—Mangu Khan (1208–1259), one of the founders of Mongol rule in China, "put down all opposition, reduced oppressive burdens, curbed the power of the nobles, and ruled with a strong hand."—*Giles*, *Bio. Dic.*, p. 574.

"It [Genghis] is still a name to conjure with when recording the great revolutions of a period which beheld the death of the old system in China, and the advent in that country of a newer and more vigorous government which, slowly acquiring shape in the hands of Kublai and a more national form under the Mings, has attained the pinnacle of its utility and strength under the influence of the great emperors of the Manchu dynasty."—*Boulger*, *Short Hist.*, p. 55.

[Kublai declared himself the patron of learning and of Buddhism, and liberated all the literati class among his Chinese prisoners.]—*Ibid.* p. 63.

[Kublai Khan, called Shih Tsu in the Chinese histories, was very broad-minded, and his policy was far reaching. He was an ardent follower of Confucianism. He commanded Hsü Hêng, Chao Mêng Fu, and others to compile the calendar for the use of his people. He drew up Court Regulations, printed bank notes for circulation, abolished the practice of imprisoning debtors, and often granted pardon to those who were condemned to death. His government after the foundation of his empire was exemplary.]—*Shih lun*, p. 22*a*.

"Kaisun [Wu Tsung] was anxious to distinguish himself as a ruler, and was lavish of rewards and titles; but he achieved few noteworthy reforms beyond forbidding irregular official appointments, restoring the military colonies, and causing the children sold in the frequent famines to be redeemed by government."—*Giles*, *Bio. Dic.*, p. 356.

"Odoric . . . touches on one of the grievances of the Chinese when he mentions the exceeding numerousness of the Imperial family."—*Simcox*, ii. 232.

In 1323 a Chinese minister "gave voice once more to the classic Chinese horror of the undue influence at court of women, eunuchs, and the ministers of strange religions. Wu-tching, the president of the Han-lin College, was actually invited to write a preface to the edition of Buddhist works, written in letters of gold, on which nearly 4,000 ounces of the precious metal had been spent; and, though he refused to do so, the request itself shows how wide was the gulf between the ruler and his most independent subjects (*Bazin*, *Le Siècle des Youen*, p. 467)."—*Simcox*, ii. 230. For an unsuccessful attempt to subvert the influence at court of Taoists and Buddhists see ECCLESIASTICAL.

[*Succession* was hereditary. All the members of the royal clan and sons-in-law of the emperor were entitled to be addressed as Prince. Princes who had no enfeoffment were called *Tsung Wang*, Princes of the Clan. At first, Princes of the Blood Royal were appointed to reside in the north-west of the empire, and, being at a great distance from the capital, no details respecting their condition have been recorded.]—*Tzŭ shih ching hua*, *cc.* 37–44, pp. 1–33.

[Changes took place in the training of *scholars*. The number of educational institutions was greatly increased. Scholars were appointed to office.]—*Ibid. cc.* 65–71, pp. 1–28.

"The relation between the Yuen emperors and the literati never became really cordial, and the introduction of Mongols into the Han-lin College did not prevent that body from offering an effective passive resistance, when it was required to prepare a collection of Mongol customs corresponding to those published by the Tang and Sung dynasties. To conciliate one nation was to offend the other, and, in 1337, there seems to have been a reaction among the Mongol magnates, jealous of the Chinese who in their turn declared that all the existing discontent arose from the avarice and corruption of the Mongols

employed in the chief offices of state. The political ineptitude of the ruling faction may be gauged from the fact that the Chinese were now forbidden to keep horses or learn Mongol."—*Simcox*, ii. 230.

[As soon as Shih Tsu (Kublai) ascended the Throne he studied the necessities of early times, and compared them with those of his own, establishing, on the basis of this knowledge, a new *official system* for governing his empire.]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, p. 100*a*.

Jên Tsung's "practice of confining the highest posts to Mongols of birth worked ill, and the people were ground down with exactions."—*Giles, Bio. Dic.*, p. 5.

In 1314 Jên Tsung "forbade *eunuchs* to hold civil office, but broke the prohibition in the following year."—*Ibid.* p. 5.

INSTITUTIONS.—1. *Executive.*—["His (Kublai's) capital Cambulac or Khanbalig—'the city of the Khan'—stood on or near the present site of Pekin" (*Boulger, Short Hist.*, p. 70). The court was first established there in 1264 (*Williams, Midd. King.*, i. 62). The name of the city under the Mongols was Shun T'ien Fu (*Oxenham, Atlas*, map 21).]

"This empire hath been divided by the lord thereof into twelve parts; each one whereof is termed a *Sing*. And of those twelve parts that of Manzi forms one which hath under it two thousand great cities. And, indeed, so vast is that empire of his, that if one wished to visit each of these provinces he would have enough to do for six months; and that exclusive of the islands, five thousand in number, which are not comprehended in the number of the twelve provinces. Moreover there be four chief ministers to govern the empire of this great lord."—*Odoric*, in *Yule, Cathay*, i. 136–7.

[Pauthier and Klaproth give the correct divisions of the empire into 12 *Sing* (*Shêng*) from the Yüan annals. It differs somewhat from Rashiduddin's list: 1. Central Province (Tatu); 2. Northern Mountains (Mongolia); 3. Liaoyang (including Manchuria); 4. Honan; 5. Shensi; 6. Szechuen; 7. Kansuh; 8. Yunnan; 9. Kiangche; 10. Kiangsi (cap. Lunghing); 11. Hukwang; 12. Chingtung (Corea). Fuhkien was a separate province before 1285, and again later. Kiangsi included Canton before 1293, according to Klaproth.]—*Yule, Cathay*, ii. 270.

"The modern division of the Empire into provinces, called *Shêng*, dates from the period of the Yüan dynasty (14th century), when, in addition to the departments of the central government which were designated *Chung Shu Shêng* 中書省, thirteen provincial Governorships were established under the title of 'ambulatory' departments, or *Chung Shu Hsing Shêng* 中書行省."—*Mayers, Ch. Gov.*, p. 31. The difference between this and Pauthier's statement is explained by Fu Kien having been a separate province before 1285.

"'Chow,' in early history used to denominate a province, has since the Sung dynasty been applied to districts next in size to a magistracy. 'Tao' or 'Loo,' in the T'ang and Sung, and Kin dynasties used to denote a province, has since been used for a circuit including three or more *chows*. . . . . One constant quantity alone continues, . . .—the 'Hsien,' or district magistracy. The cities thus called are the lowest in rank of the higher official hierarchy."—*Oxenham, Atlas*, Pref. pp. iii–iv.

"Under the Yüan dynasty, prefectures (府) seem to have been usually termed 路."—*Ch. Rev.*, xi. 62.

"According to M. Pauthier's Chinese authorities, the administrative province of Che-kiang included thirty circuits, and in 1290 the circuit of Hang-chow alone (presumably the area enclosed by the city walls) had a recorded population of 360,850 householders, and 1,834,719 persons of all ages. Hang-chow was likely, as the Sung capital, to have reached dimensions unequalled by any single town of modern China; it was the centre of domestic trade, like Canton; of foreign trade, like Shanghai; and of government, like Peking; so Ser Marco's millions must have had at least a colourable foundation in fact."—*Simcox*, ii. 221.

[Shanghai became a *hsien* or third rate city in the fourteenth century.]

[Marco Polo says that Tenduc (*i.e.*, the northern part of Shansi, outside the Great Wall) was held under the Great Kaan, by a king "of the lineage of Prester John, George by name." These kings always married princesses of the Kaan's family.]—*Yule, Marco Polo*, i. 275.

Nayan, descended from a brother of Chinghiz (on whom both Chinghiz and Kublai bestowed "large territories in Eastern Tartary") was, according to Marco Polo, "the Great Kaan's liegeman, . . . bound to hold his lands of him like all his ancestors before him."—*Ibid.* i. 326, 331.

[The neglect of men of ability is said to have been a marked feature of the administration of the Mongols.]—*Giles, Hist. of Ch. Lit.*, p. 292.

Kublai "not merely adopted the Chinese system of taxation and the form of administration to which the larger portion of his officials, being of Chinese race, had been accustomed, but he declared himself the patron of learning and of Buddhism, which had gained a hold on the minds of the Mongols that it has not lost to the present day. One of the most popular of his early measures had been the order to liberate all the literati class among his Chinese prisoners, and they had formed the nucleus of the civil service Kublai attached to his interests and utilised as his empire expanded."—*Boulger, Short Hist.*, p. 63.

[The Yüan appointed as the *San Kung*, the *T'ai Shih*, *T'ai Fu* and *T'ai Pao*.]—*Yüan chien lei han, c.* 62, *Shê kuan pu, San kung tsung tsai*, p. 6*a*.

"Pauthier's extracts from the Chinese annals of the dynasty . . . show the council of ministers usually to have consisted of 12 high officials, viz.: 2 *Ching-siang* or (chief) ministers of state, one styled "of the Right," and the other "of the Left"; 4 called *P'ing-chang-ching-ssé*, which seems to mean something like ministers in charge of special departments; 4 assistant ministers; 2 counsellors."—*Yule, Marco Polo*, i. 418 (note) (2nd ed.); see also following extract.

[The Chief Ministers were the *Chung Shu Ling* (中書令), the *Tso Ch'éng Hsiang* (左丞相) and *Yu Ch'éng Hsiang* (右丞相), Right and Left Prime Ministers. The Ministers, *Tsai Hsiang* (宰相), of the 8 departments of the Court, introduced princes to audience and received guests. They were as near the Emperor as the *Mên Hsia* (門下), High Court Officials. The office was bestowed by favour and carried no patent. Besides these, there were also the *P'ing Chang Chêng Shih* (平章政事), Ministers in charge of special departments, and *P'ing Chang Chün Kuo Chung Shih* (平章軍國重事), Counsellors, as well as 2 assistant Ministers. The arrangement, names, and order of these posts varied: see *Yüan chien lei han, Shê kuan pu, Tsai Hsiang*, p. 11*a*.]—*Hsü wén hsien t'ung k'ao, c.* 11 *shang, Chih kuan k'ao shang*, p. 5*a*.

Rashid-eddin (1247–1318) "describes the six Boards of Administration, the nine grades of towns which give their names and rank to the officer in charge of them (*Cathay*, p. 262), and . . . the function of an official, whose duty it is to examine all the drafts of memorials that are presented to the Emperor."—*Simcox*, ii. 231.

[The Boards were practically the same as under the Kin. The *Li Pu*, Board of Civil Office, "selected and appointed all officials in the empire, arranged transfers, conferred nobility and honours." The *Hu Pu*, Board of Revenue, had charge of "all matters relating to population, taxation, and agriculture." The *Li Pu*, Board of Ceremonies, of "the regulation of precedence, worship, distinctions, tribute, banquets, etc." The *Ping Pu*, Board of War, of "the building of city-walls and moats, plans of important places in hills and rivers, registers of soldiers, the tilling of ground by soldiers, guards, the surrender of distant countries, pasturage, collection of feathers and skins of camels, horses, oxen, sheep, eagles, &c., as taxes, the postal service, and yamên police." The *Hsing Pu*, Board of Punishments, of "all cases of capital punishment, consultation on and revision of criminal cases, registers of fines and confiscation of property, rewards for the capture of criminals, deciding as to false accusations and doubtful cases, &c." The *Kung Pu*, Board of Works, of "repairs of city-walls and moats, renewing earth- and wood-work, receiving and distributing materials, regulating workmen, appointing of overseers, &c."]—*Hsü wén hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, pp. 8*a*–10*a*; *Yüan chien lei han, Shê kuan pu*, pp. 50*a*–69*a*.

"In the Yüan dynasty there was a *Tiao Mu Chü* (雕木局), Wood-carving Department, which was in charge of the work of building the palace, hall, and tower (or women's pavilion)."—*Hsü Wên hsien t'ung k'ao, Yüan chien lei han, c.* 357, *Ch'an yeh pu*, p. 29*a*.

"The supervision of Works Office, *Chiang Tso Yüan* (將作院) . . . was in charge of making ornaments for the crown and girdles and utensils of gold, jade, pearls, fine plumage, rhinoceros horn, ivory, and precious stones; as well as weaving and knitting clothes of various figures and colours."—*Ibid.* p. 30*b*.

"The name of the Weaving and Silk-dyeing Office of the Yüan dynasty was changed in the reign of Yüan Chung to *T'i Chü Ssŭ* (提舉司)."—*Ibid. c.* 358, p. 24*b*.

"The *Tu Shui Chien* (都水監) . . . had charge of affairs relating to rivers and canals and watching the facilities of rivers [for regulating the water supply] and the condition of bridges and dams."—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11 *hsia, Chih kuan k'ao*, p. 2*b*.

"In the 1st year (1312) of the period *Huang Ch'ing* . . . the Emperor spoke to the ministers in Court saying: 'Some one said that the office of the *Yü Shih T'ai* (御史臺), Censorate, is important; I think the *Kuo Shih Yüan* (國史院), Archive office, still more so, for the former discusses a thing only for a time but the latter for all generations.' Accordingly he promoted the *Han Lin* officials to transact affairs of the *Kuo Shih Yüan* in addition to their own duties, giving them the secondary first grade. In the 2nd year (1331) of the period *Chih Shun* of the reign of Wên Tsung, the Emperor wished to inspect the archives, but Lü Ssŭ Ch'ên, a Han Lin 2nd class compiler, said: 'The archives are to record the good or bad deeds of the Emperors of the present dynasty. From ancient times to the present day it has been impossible for the Emperor to look at them.' The Emperor accordingly ceased from pressing his request."—*Ibid.* p. 12*b*.

"The *T'ai Ch'ang Li I Yüan* (大常禮儀院), Court of Sacrificial worship . . . had charge of great ceremonies and music, sacrificing at the ancestral temple and to the gods of the land and grain, and bestowing titles and posthumous honours."—*Ibid.* p. 13*a*.

"The *Ta Li Ssŭ* (大理寺), Grand Court of Revision . . . was called the *Tu Hu Lu* (都護府) and had charge of governing the old province and *Hui Ho Êrh* who lived in China. When lawsuits occurred it heard the cases."—*Ibid.* p. 15*a*.

[The *Han Lin Hsüeh Shih Ch'êng Chih* and *Pi Shu Chien Ch'ing* were the same as the corresponding posts in the Sui dynasty (the *Wên Yüan Ko* of the Manchu Period), the duties of the *Chan Shih Fu* being discharged by the *Chu Chêng Yüan Yüan Shih* (儲政院院使) and *Tso Yu Chan Shih* (左右詹事), and of the *T'ai Ch'ang* by the *T'ai Ch'ang Li I Yüan Shih* (太常禮儀院使) and *T'ai Ch'ang Ssŭ Ch'ing*.]—*Wên hsien t'ung k'ao, c.* 11, *Chih kuan shih*, p. 66, etc.

"The *Kuang Lu Ssŭ* (光祿寺), Court of Imperial Entertainments . . . had charge of the affairs of transporting rice and leaven, of the departments of drinking and of fermented spirits, of wine shops en route, and of sowing in all the provinces. It belonged to the *Hsüan Hui Yüan*."—*Hsü wén hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 13*b*.

"The *T'ai P'u Ssŭ* (太僕寺), Court of Imperial Stud, . . . had charge of receiving and distributing the horses of Ogotai [the Kaan] and of making bridles and saddles."—*Ibid.* p. 14*b*.

"In the 1st year [1260] of Chung T'ung, there was established the *T'ai I Yüan*, [College of Imperial Physicians], and the sovereign bestowed upon it a silver seal. After the lapse of 20 years, its name was changed to *Shang I Chien*."—*Yüan shih Po kuan chih, P'ei wén yün fu, Ssŭ chih yün, c.* 4 *hsia*, p. 15*a*.

[The Board of Astronomy was the same as in the Sung Period, the College of Physicians being called *T'i Tien* (提點) *T'ai I Yüan*. The *Hung Lu Ssŭ Ch'ing* of the Sui, etc., became the *Shih I Ssŭ Shih I Shih* (侍儀司侍儀事).]—*Wên hsien t ung k'ao, c.* 11, *Chih kuan shih*, p. 63, etc.

"The [*Mêng Ku*] *Kuo Tzŭ Chien* ([蒙古]國子監) [Mongol] Imperial Academy of Learning . . . belonged to the *Chi Hsien Yüan* (集賢院), Court of Assembled Worthies, which had charge of Education."—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11 *hsia, Chih kuan k'ao*, p. 2*a*.

[For officials in charge of hunting arrangements, see *Yule, Marco Polo*, i. 356, 361.]

"Marco's description of the city watch or night police is very like that given by Davis, 500 years later, though the latter makes a gratuitous mistake in supposing its strictness to be the expression of a despot's fears for his own safety."—*Simcox*, ii. 222.

[The *Shao Fu Ch'ing* of the Han, corresponding to the *Tien Nei Chien* of the Sui, was represented by the *Ta Tu Lui Shou Ssŭ So Hsia* (大都留守司所轄).]—*Wên hsien t'ung k'ao, c.* 11, *Chih kuan shih i*, p. 69, etc.

"In the 30th year [1293] of the period *Chih Yüan* of Shih Tsu the public offices numbered 2,733, and those at court, 221; the officials numbered 16,425, and those at court, 1,684."—*Hsü wén hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 3*a*.

Provincial administration.—[The Governor-General was named *Hsing Chung Shu Shêng Ch'êng Hsiang P'ing Chang Tsung Kuan Fu*, and *Ta Lo Ho Ch'i Tsung Kuan* (行中書省丞相平章總管府達嚕噶齊總管) having reference to the ministerial functionaries in the capital, the Governor being the *Hsing Chung Shu Shêng Tso Yu Ch'éng* (行中書省左右丞). The Provincial Director of Education was the *Ju Hsüeh T'i Chü* (儒學提舉), with Sub-Directors. The Provincial Treasurer was named *Hsing Shêng Ts'an Chih Chêng Shih Hsüan Wei Shih* (行省參知政事宣慰使), and the Provincial Judge, *Su Chêng Lien Fang Shih* (肅政廉訪使). There were several *Shou Tao* and *Hsün Tao*: the *T'ung Chih Hsüan Wei Shih Fu Shih* (同知宣慰使副使), *Lien Fang Fu Shih* and *Chien Shih* (廉訪副使僉事), *T'un T'ien Shih* (屯田使), etc. The Prefects were called *Lu Shih Ssŭ* (錄事司), the Department Magistrates *Ta Lo Ho Ch'i Chou Yin* (達嚕噶齊州尹), and the District Magistrates, *Ta Lo Ho Ch'i Hsien Yin* (縣尹), the tail-end of the central officialdom being the *Chu Pu, Hsün Chien, Wei*, as in the Kin dynasty, and *Tien Shih* (典史).]—*Chih kuan piao, c.* 5.

The Great Kaan entrusted to "twelve great Barons . . . all the necessary affairs of thirty-four great provinces; . . . [they] reside all together in a very rich and handsome palace, . . . inside the city of Cambaluc. . . . To every province is assigned a judge, several clerks, [all resident in the same palace, who] administer all the affairs of the province to which they are attached under the direction of the twelve Barons. [Affairs of great importance were referred by them to the Emperor for decision. They appointed the governors of the provinces, their nominations being afterwards confirmed by the Emperor. They could control the movements of the army. They were called *Shieng*.]"—*Yule, Marco Polo*, i. 417 (2nd ed.).

"In 1313 the *literary examinations* were restored, and the Chinese admitted in greater numbers to a share in the administration."—*Simcox*, ii. 229.

Jên Tsung "instituted regular triennial official examinations, and the first list of Mongol *Chin shih* was published in 1315."—*Giles, Bio. Dic.*, p. 5. For suspension by Shun Ti see *infra, Revenue*.

"In the period *Yüan Chêng* [1295–7] of the emperor Ch'êng Tsung . . . ambassadors to foreign countries were forbidden to engage in mercantile pursuits."—*Hsü Wên hsien t'ung k'ao, Yüan chien lei han, c.* 357, *Ch'an yeh pu*, p. 19*a*.

2. *Legislative.*—[At first there was no fixed law, and all criminal cases were decided in accordance with the law of the Kin, which was of a somewhat barbarous character. After Kublai Khan conquered Sung, all parts were consolidated into one empire, and then a new law, "brief and beneficent," was enacted.]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, p. 100*a*.

[The Emperor ordered the *Chung Shu Shêng* (see *Executive*) to compile the laws.]—*Tzŭ shih ching hua, c.* 39, p. 14*a*.

3. *Judicial.*—[In the time of the Yüan, the Board of Punishments was composed of three presidents, who administered the criminal law for the whole empire, and all such duties as the final examination of those who were condemned to death, examination of the inmates of prisons, sequestration of property, rewards for those who arrested escaped criminals, hearing of doubtful cases, the use of instruments of torture, and criminal legislation were entrusted to them. On their staff there were two *Lang Chung*, First Secretaries, and five *Yüan Wai Lang*, Second Secretaries. The latter were afterwards called *Chu Shih*, and their number reduced from five to two. In the period *Ta Tê* (1297–1308) there were four other officials appointed, called *Ssŭ Ch'êng Kuan*. Besides these, there was also another official, called *T'i Hsing An Ch'a Shih*, now called Provincial Judge. The *Ta Li Ssŭ* was raised by Kublai to a higher status, and was called *Tu Hu Fu*, the Universal Protection Department.]—*Yüan chien lei han, Shê kuan pu, Hsing Pu*, pp. 65*a*, 66*b*; *Ta Li*, p. 107*a*.

The *hsien* "are the residence of the Magistrate, and here is held the Court of First Instance for all civil and criminal cases."—*Oxenham, Hist. Atlas*, Pref. pp. iii–iv.

"There are in every principal city throughout all these provinces thirteen prisons, inclosed and compassed about with high walls, and of so great largeness within that besides the lodgings of the keeper and his officers, and for a garrison of soldiers that are there continually, there are fish ponds, gardens and courts, whereas the prisoners do walk and recreate themselves all the day, such as are in for small matters. Likewise there are victualling houses and shops, whereat is sold all manner of such things as the prisoners do make for to sustain themselves: which if they did not use their whole substance were not sufficient for their maintenance, the time is so long that they be there, although it be for a small matter: the occasion [reason ?] is for that the judges take deliberation in their sentences: and again, their cities are great and full of other matters."—*Mendoza*, i. 116–7.

"In Peking different inns were assigned for the use of travellers of different speech or nation, and throughout China the hotel-keepers were required to report to the officials the names and destination of their guests. This sort of police supervision was, and is, intended rather for the protection of travellers against the dangers of the road, than for the detection of evil-disposed conspirators against the public peace."—*Simcox* ii. 222.

4. *Revenue.*—[The system of taxation which existed in the T'ang dynasty was generally followed by the Yüan dynasty. The tax levied on inner districts was of two kinds, the poll tax and the land tax (adopted from the T'ang dynasty) called *Tsu*

yung tiao. The tax imposed on the people to the south of the Great River was also of two kinds, the Summer tax and the Autumn tax: which also existed in the time of T'ang.]—*Yüan chien lei han, Chêng shu pu, Fu shui,* p. 53*b*.

[T'ai Tsung was the first ruler of this dynasty who imposed the poll tax and land tax, by which every household paid twenty bushels (2 *shih*) of grain. In consequence of insufficiency of the food supply for the army, this tax was increased from twenty to forty bushels.]—*Ibid.* p. 53*b*.

[On the conquest of Sung, Kublai abolished the Autumn tax in all places except Kiang Tung and Chê Hsi.]—*Ibid.* p. 53*b*.

[In the first year of his reign, it was ordered that the tax levied on the people of Kiang-Nan for various articles made by them should be paid in money in accordance with the old system of the Sung dynasty.]—*Ibid.* p. 53*b*.

[The amount of the Summer tax to be paid by the people of Kiang Nan was first fixed in the time of Ch'êng Tsung (1295–1308); from that time onward the Autumn tax was paid in money, and the Summer tax in silks and other products, the amount paid bearing a certain ratio to the Autumn tax. The tax of ten bushels (1 *shih*) of grain was commuted to 2000 or 3000 cash.]—*Ibid.* p. 53*b*.

[In the time of the Yüan, the Board of Finance was composed of three presidents, to whom were entrusted all matters relating to population, revenue, land, tribute from vassal states, income and expenditure, and circulation of money. *Cf. Executive.*]—*Ibid., Hu Pu,* p. 57*a*.

[The Department *T'ai Fu Chien* was composed of six *T'ai Ch'ing*, Principal Ministers, six *T'ai Chien*, Principal Superintendents, and six *Shao Chien*, Assistant Superintendents, who kept an account of all the money received and expended. These posts were all abolished in the Ming dynasty (see following Period).]—*Ibid., T'ai Fu,* p. 117*a*.

"Notwithstanding the popular dislike of the system, and Kublai's efforts to put it down, the Mongols resorted to the old plan of farming the revenue, and the extortion of those who purchased the right drove the Chinese to the verge of rebellion, and made the whole Mongol *régime* hateful."—*Boulger, Short Hist.,* p. 75.

"The financial straits of the time may be inferred from the fact that one of the Buddhist priests, who had gained the ear of Kublai, plundered the graves of the Sung Emperors, and when arrested for the crime by a local official, the Emperor not only ordered him to be released, but allowed him to retain possession of his ill-gotten plunder. The declining years of Kublai's reign were therefore marred by the growing discontent of his Chinese subjects, and by his inability or unwillingness to put down official extortion and mismanagement."—*Ibid.* p. 76.

The emperor sent officials to every part of the country "to ascertain if the people are afflicted by any dearth through unfavourable seasons, or storms, or locusts, or any like calamity; and from those who have suffered in this way no taxes are exacted for that year; nay, more, he causes them to be supplied with corn of his own for food and seed. . . . And when winter comes . . . such persons [as have lost their cattle by murrein, &c.] not only go scotfree, but get presents of cattle. . . . If a chance shot from [the emperor's] bow strike any herd or flock . . . he takes no tithe thereof for three years . . . [and] if the arrow strike a boat full of goods, that boat-load pays no duty."—*Yule, Marco Polo,* i. 425 (2nd ed.).

[When corn is cheap, the Emperor buys up large quantities, and has it stored in granaries in all the provinces, where it will keep for three or four years; and when there is any scarcity of a particular kind of corn, he causes that kind to be sold from the public stores at a quarter of the current price, "or at whatever price will produce general cheapness."]—*Ibid.* i. 429–30. See also *Yule, Cathay,* i. 240.

[The imperial mint was at Cambaluc (Peking), and money was made of the inner bark of the mulberry tree. The pieces were of about twelve different sizes, and various values, computed up to "one Bezant of gold." "On every piece, a variety of officials, whose duty it is, have to write their names, and to put their seals. And when all is prepared duly, the chief officer deputed by the Kaan smears the seal entrusted to him with vermilion, and impresses it on the paper, . . . the money is then authentic. Any one forging it would be punished with death. . . . With these pieces of paper, he causes all payments on his own account to be made, and he makes them to pass current universally over all his . . . territories. And nobody . . . dares to refuse them on pain of death."—*Yule, Marco Polo,* i. 409–10.

"When any of those pieces of paper are spoilt, the owner carries them to the mint, and by paying 3 per cent. on the value, he gets new pieces in exchange." "Any one requiring bullion or jewels may buy them at the mint, for paper-money; while foreign traders are forbidden to sell those articles to any one but the Emperor."—*Ibid.* i. 411.

"The Mongols commenced their issues of paper money in 1236, long before they had transferred the seat of their government to China. Kublai made such an issue in the first year of his reign (1260, the year from which he claimed the throne) and continued to issue notes copiously till the end. . . . The paper money was called *Chao.*" "In 1309, a new issue took place . . . each note to exchange against five of the old of the same nominal values. It was at the same time prescribed that the notes should exchange at par with metals, which of course it was beyond the power of government to enforce, and so the notes were abandoned. The paper-currency is spoken of by Odoric (1320–30), by Pegolotti (1330–40), and by Ibn Batuta (1348) as still the chief, if not the sole currency of the empire. According to the Chinese authorities, the credit of all these issues was continually diminishing."—*Ibid.* i. 412–4.

"Marco is not able to assure us that the paper money is taken at the same valuation in the two cases; but . . . a limited amount of paper was readily accepted by private dealers because of its convenience in use. The enormous amount of paper issued by the Mongols, amounting in the 34 years of Kubla's reign to little less than £125,000,000 sterling in nominal value, can obviously not have been in circulation except at a much depreciated rate. Yet we may believe Marco that the goods were taken readily in exchange for goods at the current rate, whatever that might be. The uncertainty which attaches to Marco's rendering of Chinese money values makes it impossible to use his information as to the revenue drawn from Hang-chow and the surrounding provinces, with any confidence. He puts this at 14,700,000 *saggi* of gold, which Sir Henry Yule's estimate of the Venetian saggio makes equivalent to over 9½ millions sterling, for only one, albeit the richest of the provinces of the empire."—*Simcox,* ii. 226.

In the absence of tables like those which show the total revenue under different heads under the Sung Emperors, "the simplest explanation of the great apparent inflation of the revenue is to suppose that Marco gives it in paper money without allowance for depreciation (*Yule, Marco Polo,* i. 379, 380)."—*Simcox,* ii. 226–7.

"The presence of Mahomedan money-lenders gave rise to a grievance in Northern China which illustrates the fatal results of a mixture of the institutions characteristic of nations of a totally different type. Not unnaturally, in a newly conquered country, cases of brigandage arose; and by Chinese custom the fine for that offence was levied on the district where it was committed, according to the ancient rule of 'mutual responsibility.' It was now complained that the local magistrates had to borrow the money for these fines from Mahomedan usurers who doubled the sum by usurious interest, and then insisted on selling up their insolvent clients. The evil reached such dimensions that Yeliu-tache persuaded the emperor to pay off the usurers with 760,000 ounces of silver, which, however, of course came ultimately from the pockets of the conquered people."—*Ibid.* ii. 227.

"From 1284 to 1291 Kublai encouraged extortionate taxation, and discontent and disorder resulted."—*Giles, Bio. Dic.,* p. 387.

"The land tax was heavier under Kubla than it had been under Ogatai, and besides this a number of special taxes were levied, not, as heretofore, upon special sources of profit, but merely to meet particular items of expense, as a tax for the public examinations, a tax for the medical dispensaries, for the granaries, and even a tax for the relief of distress. As some of all these monies unquestionably stuck to the fingers of the tax collectors, we need not wonder that the Mongols had a shorter tenure of power than any other dynasty founded by soldiers and administrators of such eminence as Genghis, Ogatai, and Kubla."—*Simcox,* ii. 227.

"The fall of Ahmed took place in 1282; but only three years later, before the departure of Marco Polo, similar complaints began to be made of a successor and former protégé of his, who was accused of reviving the same malpractices, under cover of elaborate regulations not unlike those of Wang-ngan-shi. This minister proposed to coin copper money, which was to be issued to the inhabitants of the southern trading ports, for exchange against foreign merchandise, subject to a charge of seven-tenths of the profits thus made, which was to be paid to the imperial treasury. The rich, who apparently profited by the scarcity of metal to sell weapons at a fancy price, were forbidden to engage in that manufacture, and the profits to be derived from it by the State were ordered to be spent in replenishing the granaries, so that corn and rice should be sold at moderate prices. The tax on wine was raised, and wine-sellers' licenses put up to auction. It was a part of the plan to farm out the charge of the imperial stables and cattle to Mongols, in return for payments equal to one-fifth of the breeder's profits, and the trade between China and the steppes was in the same way to be retained in the hands of the government. But the attempt at once to multiply and to monopilize the opportunities of corruption raised a storm of enmity against the ingenious financier, and he was finally condemned to be cut in pieces, by the tribunal before which he was accused of fraudulently enhancing the tea duties."—*Ibid.* ii. 227–8.

"The duty on tea, salt, wine, and bamboos of Ssŭ Ch'uan were collected to meet the military allowances."—*Yüan shih Shih Tsu chi, Tzŭ shih ching hua, c.* 53, p. 30*b*.

"The salt . . . brings in a great revenue. For it produces every year in round numbers, fourscore tomans of gold. . . . Sugar alone again produces an enormous revenue. . . . All spicery pays three and one third per cent on the value; and all merchandize likewise. . . . But sea-borne goods from India and other distant countries pay ten per cent. The rice-wine also makes a great return, and coals, of which there is a great quantity; and so do the 12 guilds of craftsmen . . . for every article they make pays duty. . . . Silk pays ten per cent., and many other articles also. . . . Marco Polo was several times sent by the Great Kaan to inspect the amount of his customs and revenue from this province [Fukien], and he found it to be, exclusive of the salt revenue, . . . 210 tomans of gold."—*Yule, Marco Polo,* ii. 171–2. (1st ed.) [A toman is probably equal to a tael or Chinese ounce of gold.]

"Kublai Khan's villainous 'Saracen' (Ouigour) adviser Achmac, mentioned by Marco Polo, increased the dues [on the salt of the Ho-tung area] very heavily; but still a few ponds were left free to the public."—*Parker, China,* pp. 225–6.

At Iamzai (Yang-chu) there are "good forty-eight to fifty-eight tumans of fireplaces, each tuman being ten thousand, . . . The lord of this city hath from salt alone a revenue of five hundred tumans of *balis*; and a *balis* being worth a florin and a half, thus a tuman maketh fifteen thousand florins. But as a grace to this people the said lord made a remission to them of two hundred tumans, lest distress should be created."—*Odoric,* in *Yule, Cathay,* i. 123. [*Tuman* is Mongol for 10,000.]

"The Mongol dynasty made several [administrative] . . . changes [in the supervision of the Shantung salt gabelle], . . . and recast more than once the organisation established by the Sung house in 1181. I have no doubt the vagaries of the Yellow River often decided to which administration this or that part of the distribution service should belong."—*Parker, China,* pp. 222–3.

"In 1285 Kublai Khan 'once more divided the Ho-kien (Chih Li) and Shan Tung interests' [salt areas], which . . . are really one in working principle."—*Ibid.* p. 224.

"It had been the intention of Kubla to reduce the amount of taxation to what had been exacted during the Sung Dynasty; now, however, the increased number and expensiveness of the imperial family compelled the abandonment of this design, and the utmost that could be conceded was immunity from further burdens. Then, as always, the lawful demands of the tax-collectors formed the least part of the sums exacted, and in 1293 the number of bureaux and revenue officials was largely reduced, as a means of relief even more practical than a nominal reduction of taxation."—*Simcox,* ii. 228.

An edict of Ch'êng Tsung's [Timour's] first year [1295] "mentions the allowances of grain made at the public expense, for the support of students in the State colleges."—*Ibid.* ii. 229.

[For Marco Polo's description of the system of public granaries (then some 3,000 years old), and the liberalities of the great Kaan, see *Yule,* i. 393, 396.]

"The insufficiency of the revenue was lamented, and attributed partly to defective receipts, owing to the exemption of Buddhist and Taoist priests from taxation, which caused laymen to adopt the dress; and partly to the cost of pensions granted to members of the imperial family."—*Simcox,* ii. 229.

[Priests, Christian, Buddhist, and Taoist, were, in 1308, ordered "to pay taxes in future like anyone else."]—*Parker, China,* p. 288–9.

"While the Mongol Government . . . complained of the unprofitableness of its empire, the rich provinces in Southern China had, during the forty years of peace after the Mongol conquest, recovered much of their former wealth and splendour. So long as the revenue returns sufficed for the wants of the administration, the condition of the subject population received little further attention. And, under cover of this indifference, while the number of brigands, vagabonds, and refugees had multiplied, so as to cause a serious falling off in the roll of tax-payers, the great families in Kiang-nan had become so rich as to own as serfs more than 'ten thousand' subject households. In 1309 the increase of such agglomerators was denounced, on the score of the political danger to the dynasty likely to arise, when subjects of alien races attained such a degree of power and opulence."—*Simcox,* ii. 229.

"To check the aggrandizement of these large landowners, they were required to furnish an exact return of their property, and each family with a revenue exceeding 50,000 measures of grain was required to pay a tax of 10,000 measures, half of which was allotted to the support of the troops, and half to the public granaries. Odoric of Pordenone describes the revenue of a fabulously rich and luxurious citizen as amounting to 300,000 sacks of rice, and the figure may be accepted as representing the contemporary idea of wealth *à la Monte Cristo.* Besides the above substantial income tax (equivalent to 4*s.* in the pound), the same families were required to send one son as a sort of hostage, to serve in the Mongol armies."—*Ibid.,* ii. 229.

"The people of Chien K'ang of 20,000 families were divided [into districts] to cultivate rice, and had to send 30,000 *shih* of rice as tribute. The local officials transported the same for them to the capital."—*Yüan shih Shih tsu chi, Tzŭ shih ching hua, c.* 52, p. 27*b*.

"They have an edict from their Lord that every fire shall pay to the great Khan annually a tax of one *balis, i.e.* of five pieces of paper like silk, a sum equal to a florin and a half. . . . Ten or twelve households will unite to have one fire, and so pay for one fire only. Now of these fires there are reckoned eighty-five *tumans,* and with four more of Saracens, making eighty-nine *tumans.* Now one *tuman* is equal to ten thousand fires. And besides these, there are the Christians, and the merchants, and others only passing through the country."—*Yule, Cathay,* i. 115–17.

[The revenue for the year 1360 was, in corn, 29,433,350 *shih,* in money (copper coin and *ch'ao* paper money), 45,330 *ting* of 5 oz. each, and 288,546 pieces of silk stuff.]—*Journ. Asiat.,* III, vi. 1330.

Ibn Batuta describes "the custom by which, whenever a Chinese junk is about to undertake a voyage, 'the admiral of the port and his secretaries go on board and take note of the number of soldiers, servants, and sailors, who are embarked. The ship is not allowed to sail till this form has been complied with. And when the junk returns to China, the same officials again visit her and compare the persons found on board with the numbers entered on their register. If any one is missing, the captain is responsible and must furnish evidence of the death or desertion of the missing individual or otherwise account for him' (*Yule, Cathay,* ii. 483). *Cf. Ta Tsing lü li,* 225, §31. *Ch. Rev.,* viii. 13."—*Simcox,* ii. 235.

[The want of funds was shown by Shun Ti's suspending the public examinations until 1340 to devote the money to the Imperial Body-guard, and by the introduction of the sale of office in 1344 as a means of raising funds, as well as by other measures.]—*Giles, Bio. Dic.,* pp. 741–2.

Ming Period (Restoration of Chinese Supremacy) (1368 *to* 1644).—*Table VIII.*

RANKS.—*Sovereign (Ti).*—[The founder of the Ming dynasty was first a priest, and then a soldier. (*Simcox,* ii. 230). "From duke he was promoted to be prince, and from prince to emperor." (*Hsü kuang chih p'ing lüeh, c.* 2, p. 5*b*).]

Wan Li "made what may be termed a divided selection. He proclaimed his eldest son heir-apparent, and declared the next brother to be in the direct order of succession, and conferred on him the title of Prince Fou Wang."—*Boulger, Short Hist.,* p. 101. As a general rule succession was hereditary: see *Shih lun,* p. 24*a*.

"The noblest and most populous town is one where the king resides, which is called Paquin; the natives (for I did not see it) say that it takes seven days to traverse it by a direct road, and 13 to go round it. It is surrounded by three enclosures and a very copious river, which entirely encompasses it, forming, as it were, the interior enclosure. Marvellous things are reported of the riches and structure of the royal residence; the designs are taken from many provinces of the same kingdom, none being allowed to go out of it. Before entering the palaces, seven or eight very strong gates have to be passed, where there are very tall and stout men for guards. The king (according to what they say) never goes out of that town, and everything he eats is produced within the walls; he does not go to the outer enclosures; and they say he is never seen except by those who attend upon him, who are all eunuchs, sons of noblemen, and who, when once they enter there into the residence, never more depart from it until death."—*Mendoza,* Introd. p. xlvii.

"It hath been a customable use among the kings of that country, that it is as a thing inherited by succession never to go forth. They say their reason . . . is to conserve the mighty estate of their [position] and also for to avoid being slain by treason . . . and besides this, their close keeping, yet have they ten thousand men continually in guard of the palace, both day and night, besides others that are in the courts, stairs and halls, and other places."—*Ibid.* i. 78–9.

"The tours of inspection ascribed to the emperors of the first dynasties had long been forgotten, and, as in the Tso Chuen, it was now taken for granted that an imperial progress can only be an expensive amusement for which the people will have to pay. The utmost to be expected from the Court is to do no mischief, and with that object it is best at home." Wu Tsung, the reigning emperor (1506–21), who wished to visit Southern China, was only allowed to pass several months at Nanking.—*Simcox,* ii. 246.

[The *literati* of the Northern provinces, who had apparently fallen behind the subjects of the Southern Sung in literary culture, complained that all the highest degrees were taken at the examinations by candidates from the South. It was proposed, as a compromise, that one-third of the whole number of doctors' degrees awarded should be reserved to the North, and two-thirds kept by the South.]—*Ibid.* ii. 241.

[The literati were exempted from taxation. See *Revenue.*]

"He-wăn, the 56th in descent from Mencius, was, in the reign of Kea-tsing (1522–66), constituted a member of the Hanlin college, and of the Board in charge of the Five King, which honour was to be hereditary in the family, and the holder of it to preside at the sacrifices to his ancestor."—*Legge, Ch. Class.*, ii, Prol. p. 39.

Officials (*Ch'ên*).—"The king has noblemen about him, very learned and of great prudence, with whom he transacts all the business of the kingdom. These also never go without the enclosure on any account; they are called Vlaos. The manner of choosing them for that dignity is this: when there is a vacancy, the king inquires for someone distinguished in learning, and for discretion, and inclined to justice; if there be one who is commonly held of this reputation, he orders him to be summoned from any province of the kingdom where he may be, and invests him with the office of Vlaos."—*Mendoza*, Intro. p. xlviii.

"In the Ming dynasty, 5 degrees of nobility were bestowed upon meritorious ministers, viz.:—duke, marquis, earl, viscount, and baron. Afterwards the titles viscount and baron were not bestowed. Those who had done meritorious service had bestowed upon them the patents of duke, marquis, and earl. Whether the title was to be hereditary or not [was decided by] the degree of the merit."—*Hsü wén hsien t'ung k'ao hsiang chieh, c.* 11 *hsia, Chih kuan k'ao*, p. 13*a*.

"The civil officials of the Ming dynasty consisted of 44 grades. The *Ming hui tien* says: 'From the *Jung Lu Ta Fu* (榮祿大夫), down to the *Tso Lang* (佐郎) were nine classes with 18 grades."—*Ibid.* p. 12*b*.

"The governmental system of the Yüan dynasty was generally followed by the Ming dynasty. T'ai Tsu abolished the office of *Ch'êng Hsiang*, and transferred his functions to the officials of the Six Boards, of which the Presidents and Vice-Presidents were all under the control of the Department called *Chung Shu Shêng*."—*Wên hsien t'ung k'ao, c.* 11, *Chih kuan wu*, p. 23.

[In 1380 mention is made of an exchange or transfer of officers in the North and South,—a tentative measure in the same direction as the present fixed rule, which forbids an officer to be employed in his native place.]—*Simcox*, ii. 241. See also *supra, Literati.*

"The names and standing of all officers are published quarterly by permission of government in the *Red Book* . . . called the 'Complete Record of the Girdle Wearers' (*Chin Shên Ch'üan Shu*), comprised in four volumes, 12mo, to which are added two others of the Army and Bannermen. This publication was first issued at the command of Wan Li, of the Ming dynasty, about 1580, and mentions the native province of each person, whether Chinese, Manchu, Mongol, or enrolled Chinese, describes the title of the office, its salary, and gives much general information. The publishers of the book expect that officers will inform them of the changes that take place in their standing, and sometimes omit to mention those who do not thus report themselves."—*Williams, Midd. King.*, i. 452.

Eunuchs.—"Eunuchs were prohibited [by T'ai Tsu] from holding official posts."—*Giles, Bio. Dic.*, p. 194.

"In 1409 eunuchs were appointed to official posts, and set to watch the doings of the regular staff."—*Ibid.* p. 187. Their power was curtailed by Hsiao Tsung (1488–1505) but the system continued through the reign of Mu Tsung, 1567–72. Ch'ung Chêng (1628–44) promptly suppressed them, but his fear of parties led him later to reappoint eunuchs to watch his Generals.

Eunuchs continued to occupy prominent positions at court: one, the general Kan-ping, was deified at death; another "built the celebrated stone road leading to the Lu-k'ou bridge." Several were infamous for their cruelty and rapacity.—*Journ. N.-C.B.R.A.S.*, N.S. xi. 158–61.

"By organising within the palace a school for youthful eunuchs, he [Hsüan Tsung] fostered their growing power."—*Giles, Bio. Dic.*, p. 169.

"The ascendancy of the eunuchs showed itself in the usual way. In 1504 the historiographers complain that their occupation will be gone if the Emperor sees functionaries in private with no officer present to take down his words. . . . The Emperor was finally requested to order the mandarins who were at court to write the accounts of their interviews, and to hand the record on to the historians after submitting it to him. Even if this recommendation was followed, we need not wonder that there is some want of vigour and variety in the annals of this dynasty."—*Simcox*, ii. 246.

"After 1471 no audience was given to Ministers, and the eunuch Wang Chih practically ruled the country."—*Giles, Bio. Dic.*, p. 171.

"For a quarter of a century before 1610, when one single public Court was held to celebrate the reconciliation of the Emperor with his heir, no one but eunuchs ever saw the sovereign. The Court was torn by several parties, half the offices were left vacant, memorials were not answered, and distress in the provinces went unrelieved. Meanwhile, the empire was harassed with special taxes, inquisitorially collected on petty household articles by eunuchs, to pay for mines, the proceeds of which went into the Privy Purse. The middle class were mostly ruined, and the people finding life unendurable, took to brigandage [*Cf.* POLITICAL]. . . . The avaricious monarch left a ruined country to his feeble successors."—*Ibid.* p. 178.

INSTITUTIONS.—1. *Executive.*—The founder of the Ming dynasty "fixed his capital at Nanking, where it remained until the accession of the third Emperor [Ch'êng Tsu = Yung Lo, 1403–25], the conqueror of Cochin-China and Tonquin, who transferred [1411] the seat of government back to Peking, the capital of the Mongols."—*Giles, Historic China*, p. 99; see also *Williams, Midd. King.*, i. 62–3, 100–1; *Oxenham, Atlas*, map 22.

[Mendoza (*Hist.*) says "the province of Tolanchia, there whereas the king is resident, and is the biggest of them all" (p. 81), but on p. 23 he says that "ordinarily the king and his council is [*sic*] resident" in that of Paguia [Pequim?] which Staunton, in his notes identifies (p. 22) with Chihli, while he says Tolanchia is Shansi. See also p. 25, where he says: "the king is always resident in the city of Suntien," *i.e.* Shun T'ien Fu, the imperial prefecture. "It is also called Quinsay, as Marcus Paulus doth call it," and "should be the greatest in all the world in these days."]

"The fifteen provinces of the Ming dynasty were Shan-tung, Shansi, Ho-nan, Shen-si, Fuh-kien, Chêh-kiang, Kiang-si, Hukwang, Sze-ch'wan, Kwang-tung, Kwang-si, Yün-nan, and Kwei-chow, with the two 'metropolitan' provinces, Chih-li (or Peh Chih-li) and Kiang-nan (or Nan Chih-li), in which the northern and southern capitals, Peh King and Nan King, were respectively situated."—*Mayers, Ch. Gov.*, p. 31.

The empire was divided into 15 provinces, of which the names are as follows:

"Paguia, where as ordinarily the king and his council is resident, hath 14 cities and 150 towns.

Foquien hath	33	cities and	99	towns.	
Canton	„ 37	„	190	„	
Olam	„ 90	„	130	„	
Synsay	„ 38	„	124	„	
Sisuan	„ 44	„	150	„	
Tolanchia	„ 51	„	123	„	
Cansay	„ 24	„	112	„	
Ochian	„ 19	„	74	„	
Ancheo	„ 25	„	29	„	
Honan	„ 20	„	102	„	
Xaton or Xanton	„ 37	„	78	„	
Quicheu	„ 45	„	113	„	
Chequeam	„ 39	„	95	„	
Susuan	„ 42	„	105	„	

—*Mendoza, Hist.*, i. 23–4.

Chih Li "was originally the Peh (North) Chih Li of the Ming dynasty, to distinguish it from Nan (South) Chih Li, at a time (1400) when Nanking was a rival capital with Peking."—*Parker, China*, p. 165.

Hung Wu "very carefully avoided giving his government a military character, knowing that the Chinese resent the superiority of military officials, and he devoted his main efforts to placing the civil administration on its old and national basis. In this he received the cordial support of the Chinese themselves, who had been kept in the background by their late conquerors, whose administration was essentially military."—*Boulger, Short Hist.*, p. 81.

Mendoza says that all officials were appointed by the Emperor "by consent of his council, who do inform themselves with a particular diligence of the quality and behaviour of the person that shall be elected."—*Hist.*, i. 105–6.

"Offices are given for merit, not descent; but, it is added, correctly, while the higher offices of justice are bestowed 'after trial made of their learning,' the lower posts in the administration, as of 'constables, sergeants, receivers and the like' are given by favour. No man governs in his native place, or for more than three years, so that the king is well served without fear of treason. There are no nobles, as in Europe and Japan, except the emperor's kinsmen, and these are not allowed to take any part in public affairs. They take all possible pains to avoid condemning any to death, and it is thought cruel to issue more than six or eight death-warrants at a time, though prisoners liable to sentence of death, who are not executed, and who have no friends to pay for their support, are in danger of being allowed to die of starvation instead."—*Mendoza*, quot. *Simcox*, ii. 264.

[When Ming T'ai Tsu first went to (*i.e.*, set up his capital at) Chien K'ang the official system he adopted was mostly the same as that of the Mongol dynasty.]—*Yüan chien lei han, Shê kuan pu, Chih kuan tsung tsai*, p. 2*a*.

"The *Tsung Jên Fu* (宗人府), Imperial Clan Court, of the Ming, controlled the nine imperial clans; it revised their register at the proper time, wrote down the sons and daughters of the imperial relatives who were born by wife or concubine, their lineage, life and death, marriage, posthumous title, and funeral. If some relative sent a memorial to the throne it offered the same to the Emperor, introduced those of ability to the throne, and recorded faults. There was one Director and one right and one left Sub-Director."—*Hsü wén hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 14*a*.

[When the Ming kingdom was established a *San Kung Fu* (三公府) was instituted, and when, later on, it was abolished, two of its members who were *Ch'êng Hsiang*, Prime Ministers, took also the duties of *T'ai Shih* and *T'ai Fu*, and the *Shang Kung* those of *T'ai Pao*. T'ai Tsu created 5 degrees of nobility to reward those who had assisted him in overthrowing the Mongol dynasty, the titles being bestowed on worthy ministers as well as on civil and military officials who had died in battle. After this there were the *Wang, Kung, Hou*, and *Po*, the *Tzŭ* and *Nan* being abolished; but the *San Kung* and *San Ku* could not be bestowed by favour, but had to be attained by merit. Jên Tsung in the reign Hung Hsi (1425) re-established the *T'ai Shih, T'ai Fu*, and *T'ai Pao* under the name of *San Kung*, and the *Shao Shih, Shao Fu*, and *Shao Pao* under the name of *San Ku*. As before, they attended on the Emperor, to give him information or consult on important government affairs. The offices were of great importance, but were not necessarily always filled.]—*Yüan chien lei han, Shê kuan pu, San Kung tsung tsai*, p. 5*a*; *Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 4*b*.

Under the Ming dynasty, the *Nei Ko*, Grand Secretariat or Imperial Chancery, was the "Supreme Council of the Empire."—*Mayers, Ch. Gov.*, p. 13.

"In the beginning of the reign Yung Lo [1403], the *Nei Ko* (Grand Secretariat) was simply [an office] for the Hanlin to ask information [from]. Before the reign Ching T'ai [1450–7], the *Shang Shu* had not the right to become members of the *Nei Ko*, but after the reign Chêng Tê [1506–22], the post of *Shang Shu* was a step in promotion to the *Nei Ko*. Hence the authority of the *Nei Ko* increased."—*Kuan chih yen ko, Kuang shih lei fu, c.* 5, *Chih kuan pu*, p. 2*a*.

"At the beginning of the Ming dynasty, the Right and Left *Hsiang Kuo* and Right and Left *Ch'êng Hsiang* [following the Yüan dynasty the right was more esteemed than the left] *P'ing Chang Chêng Shih* (平章政事) and *Ts'an Chih Chêng Shih* (參知政事), Grand Secretaries, and other officials, belonged to the *Chung Shu Shêng* (中書省), Grand Secretariat. Afterwards the *Ta Hsüeh Shih* (大學士), Grand Secretary, of the *Tien* (殿), 'Throne-Hall,' and *Ko* (閣), 'Hall' or 'Cabinet, were established, and ranked above the Six Boards. Then it became the title of Prime Minister."—*Hsü wén hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 5*a*.

"In the 13th year [1380] of the reign Hung Wu of the Ming dynasty the *Chung Shu Shêng* was abolished, and the *Liu Pu* (Six Boards) established."—*Hui yao*, quot. *Kuang shih lei fu, c.* 6, *Chih kuan pu*, p. 1*b*. See also *Kuan chih yen ko, ibid. c.* 5, *Chih kuan pu*, p. 7*b*.

[The six Executive Boards (*Liu Pu*) were the same as in the Mongol Period. The *Li Pu*, Board of Civil Office, was considered of more importance than the others. It had, as before, charge of the selection and appointment of officials, bestowing of rewards for meritorious service, examinations, &c. There were 4 Sub-Boards named *Tsung Pu*, to this and the *Ping Pu*. The functions of the other Boards also remained the same.]—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, pp. 8*a*—10*a*; *Kuang shih lei fu, c.* 5, *Chih kuan pu*, pp. 7*b*, 13*b*; *c.* 6, p. 1*b*.

"The king hath in the city of Tabin, where he is resident, a royal council of twelve councillors and a president, chosen men throughout all the kingdom, and such as have had experience in government many years. . . . For to be one of this council, it is not sufficient that they be expert and learned in the laws of the country, and in moral and natural philosophy, but they must also be expert in astrology and judgements. . . . These twelve do sit in council ordinarily in the king's palace, for the which there is a hall appointed, and in the same thirteen chairs. . . . In [the thirteenth] chair, the president doth sit when the king is not in presence, but if he be there (as seldom he is) then doth the president sit in the first and highest of the chairs on the right hand." . . . [The seats were arranged in order of seniority; if the president died, he was succeeded by the occupant of the next chair on his right.] Vacancies were filled up by the election of the council, confirmed by the Emperor. Only the president of the council (or, in his absence, the senior member) communicated direct with the Emperor. Monthly reports were sent to the council from the governors of the fifteen provinces, by special messengers, for whom relays of horses (or of boats), were arranged at fixed stations along the route.]—*Mendoza, Hist.*, i. 96–9.

[Of the Nine Ministries, the Censorate was now under the direction of the *Tso Yu Yu shih Ta Fu* (左右御史大夫) and other ministers (see *Chih kuan piao, c.* 2, p. 22; *Kuang shih lei fu, c.* 7, *Chih kuan pu*, 15*b*). The *Chi Shih Chung*, as in the Han. N. Ch'i, &c., inspected and criticized the acts of the Boards. The *T'ung Chêng Ssŭ*, Office of Transmission, had the duty "of opening, recording, and transmitting to the Council of State all memorials received from the provinces," (*Mayers, Ch. Gov.*, p. 23). The *Ta Li Ssŭ*, Grand Court of Revision, "controlled the 13 treasuries in the capital and revised criminal cases" (*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 15*a*). The *Han Lin Yüan Hsüeh Shih* were at the head of the Imperial *Han Lin* College. The *T'ai Ch'ang Ssŭ* "had charge of sacrifices, ceremonies, and music, carrying out the instructions of the Board of Ceremonies" (*Ibid.* p. 13*a*), and with the *T'ai P'u Ssŭ* and *Kuang Lu Ssŭ*, remained the same as in the previous Period, the *Hung Lu Ssŭ*, Court of State Ceremonial, represented under the Mongols by the *Shih I Ssŭ Shih I Shih*, now bearing the name it had had in the Sui and following dynasties. The *Kuo Tzŭ Chien*, Imperial Academy of Learning, had charge of education in the Imperial Colleges, the chief functionaries being as before the *Chi Chiu* and *Ssŭ Yeh* (*ibid.* p. 2*a*).]

"The Ming dynasty inherited [their system of *provincial government*] . . . from their Mongol predecessors, and continued it with slight alteration, changing, however, the title of the provincial governors in the first instance to *Ch'êng Hsüan Pu Chêng Shih* 承宣布政使, who became superseded later by Inspectors or *Hsün Fu* 巡撫, the Provincial Governors of the present day. To these, in the 16th century, Governors-General, *Tsung-tu* 總督, began to be added."—*Mayers, Ch. Gov.*, p. 31.

"*Hsing Yü Shih T'ai* (行御史臺). Provincial Censorate.—In the two dynasties Liao and Kin there were no *Hsing Yü Shih T'ai*, but the Yüan dynasty had them. In the Ming dynasty the *Tsung Tu*, Governor-General, and *Hsün Fu*, Governor, took the duties of this office. It is found in the history that the name *Tsung Tu* was introduced in the 4th year of the reign of Chêng T'ung [1439] when Wang Ch'i invaded Lu Ch'uan. Afterwards when the military came to power, *Tsung Tu* were added in each territory. The name *Hsün Fu* (which means to go round and soothe people) was introduced in the reign of Hung Wu, when the Heir Apparent was sent to Shen Hsi as *Hsün Fu*. In the 19th year of the reign of Yung Lo an official was sent on a tour of inspection round the Empire [and afterwards] whenever there were important affairs or great natural calamities,—so he was called *Hsün Fu*. As soon as the affair was performed the post was abolished, so there was no fixed official. In the reign of Hsüan Tê the territories of Kuan Chung, Kiang Nan and others were large and important, and officials were ordered to take the post of *Hsün Fu* in turn. Since that time Hsün Fu have been appointed throughout the country. After this, the post could only be held by a member of the *Tu Ch'a Yüan*, Censorate."—*Hsü wén hsien t'ung k'ao hsiang chieh, c.* 11 *shang, Chih kuan k'ao shang*, p. 11*a*.

"The Tutam or Viceroy doth make a general council . . . once a month at the least [at the provincial capital]."—*Mendoza, Hist.*, i. 114.

"In the 10th year of the reign Hung Wu [1377] . . . a *Chien Ch'a Yü Shih* (監察御史), Censor, was sent to make a tour of inspection throughout all departments and districts."—*Hui tien, Kuang shih lei fu, c.* 7, *Chih kuan pu*, p. 2*b*.

"At one time the Treasurer was the highest provincial official; but nearly 500 years ago it became the practice to send eunuchs or other Court functionaries on 'soothing circuit,' and gradually these officers became a permanent institution. The modern name for a governor is therefore 'Circuit Soother.' The Treasurer and the Judge have each an historical pedigree in the same way."—*Parker, China*, p. 164.

[Mendoza speaks of "judges and visitors . . . called Leachis," who are sent annually to make secret inquisition into the conduct and character of all officials throughout the empire. The visitor for each province, after collecting sufficient information incognito, reads his report before the general council of the Viceroy, assembled at the provincial capital, and promotes, punishes, or reprimands the officials accordingly.]—*Hist.*, i. 113–5.

[Mandarins often lived in the capital, leaving their provincial posts to be farmed by cunning stewards.]—*Parker, John Chinaman*, p. 256.

"The *Pu Chêng Ssŭ* (布政司), Lieutenant-Governor or Treasurer, was the *Fang Po* (方伯) of ancient times, who was a leader of a department. It was taken from the example of the *Ssŭ Yüeh* of Yao, the 12 *Mu* (牧), Rulers of Districts,

of Shun, the 9 *Mu* of the 9 Departments of Yü, and the 8 *Ming* (命) of the Chou, who took the place of the *mu.*"—*Ch'i-tsung Chih kuan chih, Kuang shih lei fu, c.* 8, *Chih kuan pu*, p. 2*b*.

"The *Pu Chêng*, Provincial Treasurer, had charge of the census and registering of the population."—*Ming chih, ibid.* p. 3*a*.

[The Ming did not appoint any *Chou Tz'ŭ Shih*. They had *Chih Chou, T'ung Chih, P'an Kuan*, and other officials.]—*Yüan chien lei han, Shê kuan pu*, p. 206*b*.

"As to the magistracy of the Ming dynasty, there was one Magistrate, one Sub-Magistrate, and one Deputy-Assistant Magistrate; his subordinates had a police master and gaol warden. Wu Yüan-nien distinguished districts into 3 classes: those whose taxes were about 100,000 *shih* and under were classified as superior districts; those whose taxes were about 60,000 *shih* or less, as medium districts; and those which paid 30,000 *shih* or less, inferior districts. Every newly appointed magistrate was supplied with travelling funds by the government. There were no *Chün* and the *Chou* did not control the *Hsien.*"—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11*b*, *Chih kuan k'ao*, p. 11*b*.

[For the numerous officials discharging various duties under the *Hsien* see *Yüan chien lei han, Hsien Ling*, p. 207*a*. The Hsien had charge of matters relating to the education and training of the people in his district; every year he selected, after examination, scholars from the people, sending the best to the capital every third year (as could be done at the beginning of the Ming dynasty after one examination only); sending also every tenth year a "yellow register" containing a complete list of selected scholars; he had to supply corvée labour when required; to decide legal cases; to see to the worship of the spirits, to aiding the poor, rewarding the meritorious, directing merchandize to places where it was likely to be in demand, keeping registers of the products of hills, seas, rivers, and marshes, for the most advantageous levy of taxation (*ibid.* p. 207*a*).]

"The *Hsün Chien Ssŭ* (巡檢司), Sub-District Deputy Magistrate, of the Ming had charge of searching and watching robbers and thieves, and rigidly examining wicked and fraudulent men. In every important place in a prefecture, department, or district, there were established *Hsün Chien* and Assistant *Hsün Chien*. They had police and soldiers to guard against accidents."—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11 *hsia*, *Chih kuan k'ao*, p. 12*a*.

"The officials of the Ming dynasty altogether numbered 24,683. In Peking there were 1,416; in Nanking, 558; and in the provinces, 22,709. At first the officials in the palace numbered 187, and the *Nü Shih* (女史), female officials, who had charge of the ceremonies of the Empress, 96. After the reign of Yung Lo, all that remained were 4, under the command of the *Shang Fu*, Superintendent of the Imperial Wardrobe."—*Ibid.* p. 4*a*.

Public Examinations.—"The first Emperor [1368–99] of the Ming dynasty . . . organised the great system of competitive examinations which prevails at the present day."—*Giles, Hist. of Ch. Lit.*, p. 291.

T'ai Tsung (1627–44), to aid his conquest of China, "instituted public examinations for appointments in the public service on the lines laid down by Confucius."—*Boulger, Short Hist.*, p. 113.

[Mendoza (*Hist.*, i. 124–6) says that the examinations for degrees were held annually, in the provincial capitals, before the official who was making his visit of inspection. Herradu and his companions witnessed the graduation ceremony, of which a description is given, at Foochow. He distinguishes three classes of officials: (1) the Literates proper: "Those of the royal council, viceroys, governors and visitors, are made Loytias by disputation in learning." (2) "The general captains, majors, bailiffs and testators, are a gift of the king's in recompence of some good service that they have done. These . . . are never preferred to greater honours, as the other Loytias are." (3) Military officials; who are "put in the second degree, and are . . . made by desert in the wars, and . . . chosen by the generals in authority of the king for some act or worthy deed done in the wars."]

[Mendoza says that the Imperial palace at "Suntien" (*i.e.* Peking) contained four halls, for the reception of *ambassadors*, each being differently decorated; the first with "metal, very curiously wrought," the second with silver, the third with gold, enamelled, and the fourth, in which the most important envoys were received, more richly still. Here "the king giveth audience unto such ambassadors as come to him from other kingdoms or provinces, or unto his own people, when they call any court of parliament (which is very seldom), for that he is not seen by his commons out of his own house but by great chance, and yet when they do see him, for the most part it is by a glass window." Their character is not stated, but they were evidently either tributary or commercial, and not yet permanent.]—*Mendoza, Hist.*, i. 78–9.

2. *Legislative.*—[In the sixth year (1373) of the reign Hung Wu, he (T'ai Tsu) ordered Liu Wei-chien, the President of the Board of Punishments; and Sung Lien, a learned scholar, and others to revise the existing law (owing to the failure of Li Shan-chang and others to accomplish the work). Sung Lien studied the Law of the T'ang dynasty with four others from the Board of Punishments. Each chapter, on completion, was copied out in clear handwriting and submitted to the Emperor for his approval. This he would not give unless he found that the revised law was based on principles of equity. The work was finished in the following year, and the book was indexed in the same way as that of T'ang. It consisted of 606 articles, and having written a preface to it, Sung Lien submitted it to the Emperor for his perusal. In the autumn of the 22nd year (1389), the members of the Han Lin Academy and of the Board of Punishments were again ordered to examine all the enactments made in various years, and select what was equitable and just for incorporation into a book called *Ming li lü*, meaning Revised Statutes, to be printed as a preface in law books. This was published soon after. In the 5th year (1430) of Hsüan Tê, the Governor of Chihli suggested to the Empress in a memorial that laws were the best principles wherewith to govern the country, so the Emperor, after hard study, made the *Law of the Ta Ming Dynasty*, which was based upon the old laws of various periods, some unauthorized codes being destroyed.]—*Yüan chien lei han, Chêng shu pu, Hsing fa*, p. 100*a*.

3. *Judicial.*—According to the system of the Ming dynasty, the three Departments,—the *Hsing Pu*, Board of Punishments, *Tu Ch'a Yüan*, Censorate, and *Ta Li Ssŭ*, High Criminal Investigation Board, were called *San Fa Ssŭ*, the Three Law Departments. The Board of Punishments was a place to administer punishment; the High Criminal Investigation Board was a place to try law-breakers, whether princes of the royal blood, aristocrats, officials, soldiers, civilians, or barbarians, in accordance with the law, and then to decide as to their guilt; while the Censorate was a place to watch the procedure and the working of the law, to correct irregularities, if any, by impeachment, and redress any grievances which were found.]—*Ibid., Hsing Pu*, pp. 65*a*–66*b*; *Ta Li Ssŭ*, p. 107*b*.

[Following the system of the T'ang Dynasty, the Ming dynasty adopted the posts of President and Vice-President of the Board of Punishments. They alone administered the Criminal law, had all the government runners under their control, and attended to all matters in connection with the execution of death sentences, the issue of injunctions, etc.]—*Ibid., Hsing Pu*, pp. 65*a*–66*b*.

[The department, called *Chung Shu Shêng*, Chancellerie, was afterwards abolished, and replaced by the Six Boards, each of which consisted of four subsidiary departments. The four subsidiary departments of the Board of Punishments were called *Hsien Pu, Pi Pu, Ssŭ Mên*, and *Tu Kuan*. In addition to these, there were thirteen other departments all of which were called *Ch'ing Li Ssŭ*, in which there were *Lang Chung* and *Chu Shih*, First and Second Secretaries, among whom the work from various provinces, the metropolis, and Chili, was apportioned. Each of them concerned himself only with the work apportioned to his own department.]—*Ibid.* pp. 65*a*–66*b*.

[The Department *Ta Li Ssŭ* was composed of *Ch'ing, Shao Ch'ing, Chêng*, and *Ping Shih*, that is, Ministers, Assistant Ministers, Secretaries, and Record Keepers. There were also other officials from such departments as *Mo K'an Ssŭ, Shên Hsing Ssŭ*, and *Hsing Pu Tu Ch'a Yüan* to assist the others in the examination of criminal cases.]—*Ibid.* pp. 65*a*–66*b*.

[In the 20th year (1367) of Hung Wu, there were created 41 posts of *An Ch'a*, the holder of these posts, called *An Ch'a Shih*, being the sole administrator of the criminal law in each province, with the right of impeaching any one in his province to the Throne.]—*Ibid., An Ch'a*, p. 180*a*.

Pinto "would set China by itself above the whole of Europe . . . most of all for the exact observance of justice."—*Simcox*, ii. 263.

"Like Pinto, he [Perera] is filled with admiration for the way in which justice was administered in the Chinese Courts; and as the experience of both was gained as prisoners, their evidence is sufficiently impartial."—*Ibid.* ii. 264–5. See an instance in *T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 8*b*.

"Perera thinks that the great security of justice was the publicity of the trials; no witnesses would dare to perjure themselves *coram populo*; but he also describes with admiration how the 'loutea,' great men as they are, 'be patient above measure in giving audience'; in another place he speaks of the Chinese as 'more ready in their dealings, after their manner, than any other Gentiles or Moors.' And it is probably to their own share of this 'readiness,' mixed with little dignified self-respect, that the prisoners were indebted to the substantial justice they received. 'We might say what we would,' continues Perera, and notwithstanding the omission of the usual ceremonies (of prostration), 'yet did they bear with us so patiently that they caused us to wonder, knowing specially how little any advocate or judge is wont in our country to bear with us."—*Simcox*, ii. 265.

Precautions were taken to ensure publicity in legal proceedings. "In all matters of law, as civil as criminal, the judges do nothing but by writing, and do pronounce the sentences and examine witnesses in public, before all the rest of the officers, because no subtilty nor falsehood shall be used . . . to set down other than the truth."—*Mendoza, Hist.*, i. 109.

[In important cases, the judge takes down the declarations of the witnesses with his own hand.]—*Ibid.* p. 109.

Torture is used, if the truth cannot be arrived at, but not "except first they have good information, or at the least semiplena, or else so many indicions [indications?] that it is a sufficient information for the same."—*Ibid.* pp. 109–11.

[The torture is of two kinds—squeezing the fingers and the ankles—the description of the apparatus is not very clear, but it appears to be the same as that mentioned by Williams—*Middle Kingdom*, i. 507—as "legal instruments of torture."]—*Ibid.* pp. 111–2.

[Mendoza says "the supreme judges are always present" at the application of the torture, which, however, rarely takes place. It is not clearly stated whether it is inflicted on witnesses, or defendants, or both.]—*Ibid.* pp. 111–2.

[On p. 107 it is stated that there is a strict rule that judges "must go fasting into the hall of audience or judgement, without drinking of any wine," for "they esteem it a less evil to leave the hearing of any matter, than to give any sentence after that they have eaten or drunk." This is the reverse of what is stated by Suleyman, in the T'ang period. (See extract from *Relation des Voyages*).]

"The custom of this country of China is, that every man who administers justice cannot belong to that province; . . . and they are interchanged, so that those of one province govern another; he cannot be a judge where he is a native. This is vested in the literates; and every literate when he obtains a degree begins in petty posts, and thence goes on rising to higher ones, without their knowing when they are to be moved. . . . These changes are made in Pequim; this takes place throughout the whole country, and each one goes on being promoted. Hence . . . no judge in China does equity, because he does not think of the good of the district, but only of stealing, because he is not a native of it, and does not know when he may be transferred to another province. . . . They form no alliances and are of no service where they govern, nor have any love for the people, they do nothing but rob, kill, whip, and put to torture the people. . . . The people have no love for the king and for the mandarins, and every day they go on rising and becoming robbers [being forced to do so], because they have no vineyards, nor any source of food. . . . In places where there are no rivers, many people rise; those that are between rivers where they can be caught remain quiet; but all are desirous of every change, because they are placed in the lowest depth of subjection."—*Ferguson, Lett. fr. Port. Capt.*, pp. 123–4.

[According to Ricci even the highest magistrates found it difficult to resist the undue influence of the eunuchs.]—*Simcox*, ii. 269.

"The king remained at a town two leagues from Peking, to pass judgment on a relative of his, who had risen against him, and commanded him to be burnt after being hanged."—*Ferguson, Lett. fr. Port. Capt.*, p. 105.

[No official can be punished while wearing the insignia of office—the girdle and cap—and these are taken from him before the sentence is executed. If there is any doubt as to the justice of the sentence, it is re-considered by nine judges. The punishment decreed for officials who misconduct themselves is not stated.]—*Mendoza, Hist.*, i. 115.

"Many times these visitors do visit the colleges and schools, such as the king hath ordained of his own cost in every province . . . and do examine the scholars of the same, animating them to promotion all such as do profite themselves in their studies, and do whip and put in prison, yea and thrust out of the schools all such as are to the contrary."—*Ibid.* p. 116.

"According to Perera, the Government examinations and the periodical gaol deliveries were done by the same officers on circuit. He was told that many of the students were maintained at the emperor's expense [*i.e.* in the Government colleges], and he made the acquaintance in gaol of some who had been disgraced for failing to pass their examinations."—*Simcox*, ii. 264.

[Mendoza (*Hist.*, i. 66) says that all beggars are reported to a special 'justice of the poor.' See Access. Inst.]

"The system of reports to the Emperor, and of periodical visits of inspection by his delegates . . . and the custom of offering all memorials or petitions in writing" are noticed by Mendoza.—*Simcox*, ii. 264.

[No death sentence could be executed in the provinces till it had been confirmed by the emperor and his council, except in time of actual war, when] "they do permit the captain-general, or his lieutenant, to behead or hang whatsoever soldier that shall offend or do any ill thing; this they may do without consentment of the king or his council, only with [that] of the king's treasurer [and] of the general of the field. [No sentence was valid unless pronounced by *both* these officials.]"—*Mendoza, Hist.*, i. 100.

"The only unpopular measure associated with his [Hsien Tsung's] name was the creation of a Grand Council of Eunuchs, to which were referred all questions of capital punishment, and this body soon acquired a power which made it resemble our own tyrannical and irresponsible Star Chamber. After five years this institution became so unpopular, and was so deeply execrated by the nation, that Hientsong, however reluctantly, had to abolish his own creation, and acquiesce in the execution of some of its most active members."—*Boulger, Short Hist.*, p. 92.

[Mendoza says there were thirteen prisons in every "principal city" (provincial capital?) of which four contained prisoners condemned to death. They were kept in prison so long that it was not uncommon for them to die before their sentence was executed. They were chained down to the floor at night, but released in the day time in order that they might work for their living—those unable to do so, and who had no friends to support them, received "a pittance of rice" from the Emperor. Executions only take place "at the coming of the visitors or judges of residence, whom they do call Chenes and Leuchis." Fifty men are chosen for execution, their cases being thoroughly inquired into, and any whose guilt does not appear quite certain are remanded.] "The deaths that they do execute is hanging, setting upon stakes, quartering and burning, but there is none burned but such as are traitors to the king." [On the following day the sentences for theft are carried out by beating with "a broad and thick cane of four fingers broad, and as thick as a man's finger."]

"The most part of these thieves do die in the punishments, and many times there is whipped together of thieves two hundred." [Altogether it is computed that 6,000 persons die in prison annually in each "principal city." The judges are always present at executions and other punishments. Adultery is a capital crime, and a man conniving at his wife's unfaithfulness is punished.]—*Hist.*, i. 116–120.

"As soon as we arrived at Canton they brought us before the pochaçy, and he ordered us to be taken to certain jail-houses that are in the storehouses of foodstuffs, and Thome Pirez did not wish to enter them, and the jailers put us into certain houses in which we were thirty and three days, and thence they took Thome Pirez with six persons to the prison of the *pochaçy*, which they call *libanco*, and me with four persons to the prison of the *tomeçi*, where we were imprisoned ten months. All the goods remained in the power of Thome Pirez. They treated us like free people; we were closely watched in places separate from the prisoners."—*Ferguson, Lett. fr. Port. Capt.*, pp. 106–7.

"I am certain that in the prisons of Cantão there are constantly as many as four thousand men imprisoned, and many women, and every day they imprison many and release fewer; and they die in the prisons of hunger like vermin. Hence the people come to have a hatred of the mandarins, and desire changes in order to obtain liberty."—*Ibid.* pp. 127–8.

"No man can go from one province to another without taking a licence of the governor, and he who is found without one is punished; and no traveller can be (by law of the kingdom) more than three or four days in a town where he has not business; there is a man whose office it is to go about looking to this, and, if any such is found, he is taken up, for they presume him to be a thief and a man of bad life."—*Mendoza, Hist.*, p. xlix.

4. *Revenue.*—[In the 14th year (1381) of Hung Wu, it was ordered by proclamation that a table should be made of various taxes and printed on yellow paper. No exact census had ever been made of the population of the empire, and this was the first move in that direction. The table was to be revised once every ten years, and was to state the acreage of land ploughed by each household. The land was of two classes, government land paying tax in accordance with the regulations. All these points were to be clearly stated in the Yellow Table, and personal service was to be proportioned on this basis.]—*Yüan chien lei han, Fu shui*, pp. 53*b*–54*a*.

[In the 24th year (1391), the question of the form to be adopted in making the Yellow Table was settled. The authorities first made out a form for each household, to be filled in and given to the heads of the division *Fang*, the larger division *Hsiang*, and the still larger division *Li*; and also to the headman of the *Ch'ia*. Every householder filled in details of the number of residents, their occupation and property, and returned it to the headman of the ten householders, and he then filled up the form for his own household and put together all the forms filled up by the other ten householders, and sent them on to the headman of the *Fang, Hsiang*, or *Li*, as the case might be. These then put together all the forms received from the various headman of ten householders and sent them on to their immediate superiors in the same way. The magistrates sent them to the *Pu Chêng Ssŭ*, Provincial Treasurer, who arranged them under different headings with a separate statement of the total amount of the

number of population, their occupation, and their property in various countries and districts under his jurisdiction, and put them together to be submitted to the Throne at the end of each year.]—*Ibid.* pp. 53*b*–54*a*.

[At first, the system of the T'ang dynasty was adopted, so the ministers were the *Hu Pu Shang Shu*, *Hu Pu Shih Lang*, the Presidents and Vice-Presidents of the Board of Finance. They had charge of all affairs connected with the population and revenue.]—*Ibid.*, *Shé kuan pu*, *Hu Pu*, p. 57*a*.

[In the 13th year (1380) of Hung Wu, the department *Chung Shu Shêng* was abolished, and its place taken by the Six Boards. The four subsidiary departments of the Board of Finance were *Min Pu*, Population Register Department; *Tu Chih Pu*, Budget Department; *Chin Pu*, Gold Department, and *Ts'ang Pu*, Food Supply Department. As the volume of work increased, there were afterwards established twelve other departments, and each department administered only its own affairs and also had four subsidiary offices bearing similar names to those mentioned above.]—*Ibid.* p. 57*a*.

[There was only one *Pu Chêng Ssŭ* for the administration of financial matters, and his duty was to collect revenue for the national expenditure on the basis of the degree of the fertility of the soil, and to keep the records of population. He had to balance the national expenditure against the revenue, and practice economy.]—*Ibid.*, *Pu Chêng*, p. 178*b*.

T'ai Tsu "drew up a kind of Domesday Book under which taxation was regulated."—*Giles*, *Bio. Dic.*, pp. 193–4.

"An organisation for taxing and *corvée* purposes was perfected in the reign of Hung-wu, Founder of the Ming dynasty, under the name of 賦役黃冊, a copy of which was supplied to each district, and revised every ten years. One 里 consisted of 110 戶 or land-tax payers, and the 10 who paid most were 里長 on alternate years: the other hundred formed 10 甲. In the city instead of 里 the term 坊 was used, and in the suburbs the term 廂. A 冊 was a 里 thus booked and registered, and the term 圖 seems to have been alternately used. The proletarians attached to each 圖 who were not liable to *corvée* were called 畸."—*Ch. Rev.*, x. 221.

"Wang-tchi-tchang, a commentator of the Ming dynasty, . . . praises the kings of Chow for adjusting their expenditure to their revenue, instead of, like his own contemporaries, regulating the taxation of the people by the expenditure of the prince (*Cf. Tcheou-li*, i. 392–4)."—*Simcox*, ii. 35.

In 1370, "a census of the cultivated lands was taken, and the tax brought in about 29½ million measures of grain, or slightly more than in the palmiest days of the Sung dynasty; but silk and money are the only other objects mentioned in the table of revenue, so that fewer commodities and thus on the whole an amount of less value was received in kind."—*Ibid.* ii. 238.

"Every person that has *lands*.—The whole country of China is divided up into lots; they call each lot *quintei* [*kêng ti*]: it will be sowing land of four *alqueires* of rice [1 *alqueire* = 13 *litres*]. Every husbandman is obliged to pay from this land of his a certain quantity of rice. . . . When the seasons are not favourable, they become poor, and sell their children in order to pay; if this is not sufficient they sell the properties themselves. They are obliged, every person that has this acreage of land, to give certain persons for the service of the mandarins, or for each person twenty *cruzados*. They are obliged to supply all furniture . . . for the houses of the mandarins. Those who have not lands are obliged to give certain persons, and, if he have no person, money; and, if he have no person or money, he in person has to serve and eat at his own cost and fee the person he serves. Besides these duties they are liable for the following." "If any one refuses, he is immediately imprisoned, and everything is sold, and he dies in prison. No one refuses what the mandarin demands, but with head to the ground and face to the earth, listens to and regards the mandarin. . . . Hence it is that the people come to be poor; moreover, for any cause whatever they are at once beaten and put in prison, and the least penalty is seven *quintals* of rice and two or three maces [? Ferguson conjectures 'maces' from unintelligible abbreviation in the original] of silver to them, and of these they pay five hundred and a thousand taels."—*Ferguson*, *Letters from Port. Captives*, pp. 126–7.

"Although this kingdom is great and very rich, yet there is none that doth pay so little tribute ordinarily unto their king as they do, neither amongst Christians, Moors nor Gentiles that we know. The extraordinary and personal service is very much, that in some respect we may say that they are more slaves than free men, for that they do not possess one foot of land. . . . The ordinary tribute that every one doth pay that doth keep house is two Maces every year, which is as much as two Spanish rials of plate. This tribute is very little, yet [officials and soldiers] pay none . . . : the multitude of the people is so great, and the kingdom so big, that alonely that which they give for expenses of the king and his court is wonderful, with customs, duties, portages and other rents; not accounting that which is paid unto garrisons and soldiers of that kingdom, neither that which is spent in repairing of walls of particular cities, and in men of war at sea, and camps by land, to governors and justices, which doth not enter into this account. The rent which remaineth unto the king ordinarily is this that followeth, and is taken with great regard out of the book of his exchequer. Yet the Chinos do say that it is much less than that they do pay at this time; for that this is of old antiquity, when as the tributes were less. . . ." "Of pure gold, from seventeen to two and twenty killates [= carats], they give him four millions and two hundred fiftie sixe thousand and nine hundred Taes: everyone is worth ten rials and four and twenty maravedies, Spanish money." "Of fine silver, three millions one hundred fiftie three thousand two hundred and nineteen Taes." "The mines of pearls, whereof you have many in this kingdom (although they are not very round), is worth unto him commonly two millions, six hundred and thirty thousand Taes." "Of precious stones of all sorts, as they come from the mines, one million four hundred threescore and ten thousand Taes." "Of musk and amber, one million and thirty-five thousand Taes. Of earthen dishes and vessels, fourscore thousand Taes. Besides all this, the king doth put forth very much ground to his subjects, and they do pay him with part of the crop that they gather, or with the cattle that they bring up on the same ground. . . . Of clean rice . . . they pay him threescore millions, one hundred threescore and eleven thousand, eight hundred thirty and two hanegs." [= Spanish fanega = about 1⅗ bushel. The remaining quantities are as follows:—

Barley	29,391,982	fanegas.
Wheat "like unto that in Spain"	33,120,200	,,
Salt ("which is made in his own salt-pits, and is of a great rent")	340,400	,,
Maize	20,250,000	,,
Millet	24,000,000	,,
"Panizo" (panic-grass)	14,200,000	,,
Other grain and seeds	40,002,000	,,]

"They do pay him in pieces of silk, of fourteen vares [Sp. *vara* = 2·782 feet] long the piece, two hundred five thousand and five hundred ninety pieces." "Of raw silk in bundles, five hundred and forty thousand pounds. Of cotton wool, three hundred thousand pounds. Of mantles wrought of all colours, eight hundred thousand and four hundred mantles. Of Chimantas [? blankets] made of raw silk [weighing 12 lb. each], three hundred thousand six hundred and eighty of them. [678,870 cotton mantles, 40 varas long; 304,648 cotton chimantas.] All this aforesaid is for expenses of the court, which is great. The Chinos that come unto the Philippinas do affirm the same, and do not differ in the report, which is a sign to be true."—*Mendoza*, *Hist.*, i. 82–4.

"Local tributes consisting of articles of costly luxury, such as ginseng, wine, and scented rice, were declined by the Emperor, lest the collection should become unduly burdensome."—*Simcox*, ii. 238.

"Perhaps the most durable result of the Mongol Empire was the opening of Tatary to the tea trade. This beverage had in the course of a century begun to take its present place as a necessary of life upon the steppes. The trade was important enough to attract the attention of financiers, and a tax of a tenth was levied on the tea which was sold in exchange for horses, and which all the tribes of the West rushed to buy. In 1375 an attempt was made to limit the currency to paper and copper cash, to the exclusion of tea; but on the introduction of paper the supply of horses fell off, and the export of silk and tea had to be renewed to obtain them. The regulation price for a first-class horse was eighty pounds of tea, and for the next hundred years or so, in fact, until the Chinese Empire deliberately abandoned the use of carriage horses, in the middle of the 16th century, the regulation of the trade was a constant anxiety to the native administrators."—*Ibid.* ii. 238.

[To avoid taxation people sought the protection of rich persons, lived in boats, or pretended to be workmen or traders: see *Parker*, *China*, pp. 188–9, and *cf.* POLITICAL.]

"Yung-lo followed his father's [Hung Wu's] example in attempting to give a penal character to the land tax. In his first assessment, Tai-tsou had punished certain southern towns for their adherence to another leader by confiscating the territory of all the great families and rich inhabitants, and had taken their annual rent as the standard for the tax. This tax had again been raised on account of the fertility of the district, so that Su-chow, Hang-chow, and three other towns were disproportionately burdened; and the former alone, in 1381, paid as much as the whole province of Tche-kiang. In 1400, as a measure of relief, the land tax on the towns of Kiang-nan and Tche-kiang was equalized, and the maximum tax apparently fixed at one measure of grain per acre. Yung-lo, however, renewed the attempt to tax personal opponents, and after putting one such to death for loyalty towards his deposed nephew, he increased the taxes upon his family property, 'that all future generations may curse his memory,'—an edict which was doubtless among those that his son earned credit by rescinding."—*Simcox*, ii. 240.

"Peculation followed as a natural consequence from the attempt to keep the trade [at the frontier horsefairs] in the hands of officials; and in 1409 an officer was accused of giving 80,000 lbs. of tea for seventy indifferent horses, or more than 11,000 lbs. for what was priced in Tai-tsou's tariff at 80 lbs. There must, however, still have been some honest and capable officials, for in 1411 the Yellow River was successfully conducted back into one of its old channels, after a flood at Cai-fong-fu, in which 14,000 families perished."—*Ibid.* ii. 240.

"The vicinity of the court [on removal to Peking] was not regarded as a boon by the townspeople. The town had to be remodelled, and the modern walls, enclosing a much smaller city than Kubla's, built. Besides the necessary expense of such public works, the workmen oppressed the people, demolishing and removing their houses arbitrarily and without need, either wantonly or for the sake of bribes." A memorialist (see *De la Marre*, p. 193) "repeats the complaint that products are taxed twice over; the people live on roots and bark, while 10,000 priestly idlers are maintained at court. Every year the Emperor gives largesses of precious wares and money to obtain a few horses from the adjoining subject tribes, and when obtained they are apportioned amongst the people, who have to make good whatever losses occur amongst them."—*Ibid.* ii. 240–1.

"During the reign of Yung-loh [1403–25], some zebras were sent to Peking from Ts'ao *Hsien* in Shan Tung. These animals (騶虞) are described as being like a white tiger with black stripes, with very long tails."—*Ch. Rev.*, x. 72.

"Chinese history states that early in the [same] reign . . . some giraffes (*K'ilin*) were sent as a present from Bengal"; and from "Annam or thereabouts," as a present or tribute, during the reign of Hsüan Tê (1426–36).—*Ibid.* x. 72. See also POLITICAL.

In 1424, by Hsia Yüan-chi's advice, "the taxes were lightened, distress relieved, expeditions to foreign countries stopped, and charges on the acquisition of precious stones in Yünnan and Annam abolished."—*Giles*, *Bio. Dic.*, pp. 273–4.

Hsüan Tsung, "a well-meaning monarch, . . . lightened the grain tribute, allowed commutation in rice for all penalties, and in 1429 established custom-houses at important centres."—*Ibid.* p. 169.

[The financial state of the country, on the fall of the Mongols was such that the Ming emperors found themselves not only unable to abolish the paper currency, but forced to make a fresh issue. In 1375, six different denominations were issued, from 1,000 cash (= 1 ounce of silver) downward. By 1448, the paper was so depreciated that three copper cash were given for a note of a thousand. The use of copper cash was forbidden, and in 1455 an edict was issued, ordering taxes to be paid in paper. This does not seem to have had the desired effect, and we hear no more of the paper currency, in Chinese history, after 1455.]—*Journ. Asiat.*, i. 266–7.

"The empire was not in a very flourishing condition. . . . A similar failure attended the new tax imposed on market gardens in the two capitals, with the same object, in the hope that if the gardeners were taxed, and compelled to pay in paper, a demand for the unpopular currency would be created and its value raised. From time to time benevolent edicts were published remitting taxes or arrears, but such action no longer met with universal approbation, as the Chancellor of the Exchequer of the period allows himself to protest, or at least to enquire where else he is to get the means of meeting other necessary expenses."—*Simcox*, ii. 243.

"As this is the first time that such a difficulty is noticed in the annals, it is not without reason that Wang-tchi-tchang contrasts the modern policy with that recognised in the Rites of Chow. It was probably a real innovation for the fixed expenses of the Court and Government in time of peace to be so considerable that it was impossible to remit taxes without danger of a deficit. China . . . in the 15th century . . . had already fallen from the state of economic innocence in which a surplus is the rule, simply because money is not spent on account of the Government until it is received in the Treasury."—*Ibid.* ii. 243.

1488. Hsiao Tsung's "care for his people, and his desire to alleviate the misfortunes that might befall his subjects, was shown by his ordering every district composed of ten villages to send in annually to a State granary, a specified quantity of grain, until one hundred thousand bushels had been stored in every such building throughout the country."—*Boulger*, *Short Hist.*, p. 93.

"For this period we miss the careful comparative tables of Ma-twan-lin and his continuator. In the latter half of the 16th century, the money revenue is stated at 43 million taels,—say £15,000,000 sterling,—but the value of money at the time is uncertain. All we can be sure of is that the revenue was still moderate, and yet the rate of taxation per head of the population stood higher than at present. The wealth of the empire was meanwhile evidently on the increase, to judge from the treasures confiscated on the fall of a chief eunuch; 24 million taels in gold, 251 million silver taels, two measures of precious stones, suits of armour, rings, etc., of precious and other metals, with furniture and dresses described as fit for an emperor, represented the accumulations of a single favourite during his short term of office."—*Simcox*, ii. 245–6.

"Other writers dilate on the enormous revenue derived by the Emperor from the provinces; but he [Gaspar da Cruz] is more struck by the smallness of the individual tax-payer's contributions, the chief of which is a poll-tax of 9*d.*, paid by the heads of households for the members of their family. [Mendoza puts this tax at about half as much again."]—*Ibid.* ii. 263.

1620. "On his [Kuang Tsung's] accession the mining taxes were abolished, and the eunuch collectors were recalled."—*Giles*, *Bio. Dic.*, p. 169.

Mendoza gives the following numbers of those that pay tribute in every province of China, adding, "It is affirmed that there are as many more [that] pay no tribute. The loytians [*v. supra*] and ministers of justice, all sorts of soldiers, both by sea and land . . . are free and do pay nothing" . . .

Mendoza, *Hist.*, i. 106.

Ferguson ("*Portuguese Captives*," p. 119) says, "The editor of the Hak. Soc. ed. does not seem to have noticed that the name Saxij which occurs at the end of the first list in the English translation [*i.e.* on p. 22] is an interpolation, to supply the accidental omission of 'Cãton' in the original."

"In one town, with a water supply that is supposed to yield the brightest hues for dyeing silk, he [Pinto] is told that there are 13,000 dyers at work, who pay 300,000 taels yearly to the Emperor (say about £100,000). As they proceed up the river, the country grows more and more populous; pagodas stood within a stone's throw of each other, and for the last eleven days 'cities,' towns, villages, boroughs, forts and castles, not a flight shot distant from one another,' gave the Portuguese the same impression of Northern China in the 16th century as had been carried away from Southern China by the Arab travellers of the 9th and the 14th centuries."—*Simcox*, ii. 262.

"The best indication of the prosperity of the realm is furnished by the revenue, which steadily increased until it reached the great total in cash, excluding the grain receipts, of fifteen millions of our money. But a large revenue becomes of diminished value unless it is associated with sound finance. The public expenditure showed a steady increase; the Emperor and his advisers were incapable of checking the outlay, and extravagance, combined with improvidence, soon depleted the exchequer."—*Boulger*, *Short Hist.*, p. 97.

1575. "In every city the king doth ordain a justice, and giveth him great rents, only to visit [the walls] and make them to be renewed and repaired where as is requisite, and is done upon the king's cost; for out of his rents in such cities and towns, is given them all that is needful to be asked."—*Mendoza*, *Hist.*, i. 25.

"Semedo enumerates three causes which facilitate the collection of the taxes in China, and these also are connected with the fundamentally democratic character of the Constitution. They are, first, 'that the officers, great and small, are not so absolute as ours'; secondly, that 'the cultivators live in the fields, not in towns or villages,' by which perhaps he means that they live on the plots they till; and, thirdly, that the 'houses are grouped in tens under a decurion,' a phrase which no doubt includes all the system of administration by local elders, which has been in force, more or less, since the first inception of the Rites of Chow."—*Simcox*, ii. 271.

"The conjectural estimates of the whole revenue of the Empire, given by different fathers, do not differ much from the statistics of the Ming, published under the present dynasty. According to them, the money revenues alone may have amounted to about £14,000,000, though this statement is not of much use without a more exact estimate than can be made of the amount and value of the contributions in kind, which were, if anything, more considerable than under the Mongols. But in population and revenue the Ming empire was certainly far inferior to that of the Mantchus, and its palmiest days were far

from witnessing such a development of wealth and population as took place in the 18th century."—*Ibid.* ii. 271.

[Besides the soldiers the literati were exempt from taxes. In 1605, the Jesuit Fathers, on being allowed to buy a house in Peking, were also exempted.]—*Ibid.* ii. 269.

[For the postal service and for horses, rowers, and travelling necessaries to be supplied to officials on a journey, see DISTRIBUTION.]

Manchu Period (1644 *to* —).—*Table IX.*

RANKS.—*Sovereign* (*Ti*).—"The Emperor is at the head of the whole; and if the possession of great power, and being the object of almost unbounded reverence, can impart happiness, he may safely be considered as the happiest mortal living; though to his power there are many checks, and the reverence paid him is proportioned somewhat to the fidelity with which he administers the decrees of heaven. 'The Emperor is the sole head of the Chinese constitution and government; he is regarded as the vice-gerent of heaven, especially chosen to govern all nations; and is supreme in everything, holding at once the highest legislative and executive powers, without limit or control.'"—*Williams, Midd. King.*, i. 393.

"*Huang Ti* 皇帝.—The Emperor. Ordinary designation *Huang Shang* 皇上; *Shang* 上. Title of respect, *T'ien Tzŭ* 天子, the Son of Heaven. Popular appellation, *Tang-chin Fo Yeh* 當今佛爺, the Buddha of the present day. Also *Chu Tzŭ* 主子, *i.e.*, the Master, or Lord; and, in adulatory addresses, *Wan Sui Yeh* 萬歲爺, *i.e.*, Lord of Ten Thousand years."—*Mayers, Ch. Gov.*, p. 1. And see pp. 1–2 for female members of the imperial family.

"A Chinese Emperor has many religious and secular duties to perform which no one else can discharge, and which, if not discharged, would reduce the office of Emperor to a nonentity."—*Boulger, Short Hist.*, p. 307.

"The Emperor, in his character of vicegerent of heaven, occasionally imposes the duty of self-confession upon himself. Kiaking issued several public confessions during his reign, but the *Gazette* has not contained many such papers within the last thirty years. These confessions are drawn from him more by natural calamities, such as drought, freshets, epidemics, etc., than by political causes, though insurrections, fires, ominous portents, etc., sometimes induce them. The personal character of the monarch has much to do with their frequency and phraseology."—*Williams, Midd. King.*, i. 465–6.

"The Emperor is the fountain of power, rank, honor, and privilege to all within his dominions, which are termed *tien hia*, meaning all under heaven, and were till recently, even by his highest officers, ignorantly supposed to comprise all mankind. As there can be but one sun in the heavens, so there can be but one *hwangti* on earth, the source and dispenser of benefits to the whole world. The same absolute executive power held by him is placed in the hands of his deputies and governor-generals, to to be by them exercised within the limits of their jurisdiction. He is the head of religion and the only one qualified to adore heaven; he is the source of law and dispenser of mercy; no right can be held in opposition to his pleasure, no claim maintained against him, no privilege protect from his wrath. All the forces and revenues of the Empire are his, and he has a right to claim the services of all males between sixteen and sixty. In short, the whole Empire is his property, and the only checks upon his despotism are public opinion, the want of an efficient standing army, poverty and the venality of the agents of his power."—*Ibid.* i. 395.

"Nothing is omitted which can add to the dignity and sacredness of the Emperor's person or character. Almost everything used by him, or in his personal service, is tabued to the common people, and distinguished by some peculiar mark or color, so as to keep up the impression of awe with which he is regarded, and which is so powerful an auxiliary to his throne."—*Ibid.* i. 402. v. LAWS OF INTERCOURSE.

"One observable feature of the Chinese political world is the great age of the high officers, and it is not easy to account for their being kept in their posts, when almost worn out, by a monarch who wished to have efficient men around him, until we learn how little real power he can arbitrarily exert over the details of the branches of his government. It is somewhat explainable on the ground that, as long as the old incumbents are alive, the Emperor, being more habituated to their company and advice, prefers to retain those whose competency has been proven by their service. The patriarch, kept near the Emperor, is moreover a kind of hostage for the loyalty of his following; and the latter, scattered through the provinces, can be managed and moved about through him with less opposition; he is, still further, a convenient medium through which to receive the exactions of the younger members of the service, and convey such intimations as are thought necessary. The system of clientelage which existed among the Gauls and Franks is also found in China with some modifications, and has a tendency to link officers to one another in parties of different degrees of power. The Emperor published an order in 1833 against this system of patronage, and it is evident that he would find it seriously interfering with his power were it not constantly broken up by changing the relations of the parties and sending them away in different directions. Peking is almost the only place where the 'teacher and pupils,' as the patron and client call each other, could combine to much purpose; and the principal safeguard the throne seems to have against intrigues and parties around it lies in the conflicting interests arising among themselves, though a long-established or unscrupulous favourite, as in the cases of Duke Ho and Sushun in 1855–61, can sometimes manage to engross the whole power of the crown."—*Ibid.* i. 460–1.

"The surname of the reigning family is *Gioro*, or 'Golden,' derived from their ancestral chief, Aisin Gioro, whom they feign was the son of a divine virgin. They are the lineal descendants of the Kin [v. POLITICAL]. . . . The . . . Emperor's personal name is . . . deemed to be too sacred to be spoken or the characters to be written in the common form. The same reverence is observed for the names after death, so that twelve characters have been altered since the Manchu monarchs began to reign."—*Ibid.* i. 396–8.

"The internal arrangements of the court are modelled somewhat after those of the Boards, the general supervision being under the direction of the *Nei-wu-fu*, composed of a president and six assessors, under whom are seven subordinate departments. It is the duty of these officers to attend upon the Emperor and Empress at sacrifices, and conduct the ladies of the harem to and from the palace; they oversee the households of the sons of the Emperor, and direct, under his Majesty, everything belonging to the palace and whatever appertains to its supplies and the care of the imperial guard. The seven departments are arranged so as to bear no little resemblance to a miniature state: one supplies food and raiment; a second is for defence, to regulate the body-guard when the Emperor travels; the third attends to the etiquette the members of this great family must observe towards each other, and brings forward the inmates of the harem when the Emperor, seated in the inner hall of audience, receives their homage, led by the Empress herself; a fourth department selects ladies to fill the harem, and collects the revenue from crown lands; a fifth superintends all repairs necessary in the palace, and sees that the streets of the city be cleared whenever the Emperor, Empress, or any of the women or children in the palace wish to go out; a sixth department has in charge the herds and flocks of the Emperor; and the last is a court for punishing the crimes of soldiers, eunuchs, and others attached to the palace."—*Ibid.* i. 407.

"The Emperor ought to have three thousand eunuchs, but the actual number is rather less than two thousand, who perform the work of the household. His sons and grandsons are allowed from thirty down to four, while the iron-crown princes and imperial sons-in-law have twenty or thirty; all these nobles are constrained to employ some eunuchs in their establishments, if not able to maintain the full quota, for show. . . . There is a separate control for the due efficiency of these servants of the court, who are divided into forty-eight classes; during the present dynasty they have never caused trouble. The highest pay any of them receive is twelve taels a month."—*Ibid.* i. 407–8.

Eunuchs are only allowed in the households of the imperial family and the Manchu princes. The emperor is supposed to have 3,000. The princes are *compelled* to employ some, "to keep up the dignity of their station." In the reign of Ch'ien Lung, they are described as "very arrogant and overbearing." In 1814 a number of the palace eunuchs belonged to the "White Feather" Society, and joined in a plot to overthrow the Manchu dynasty. Princes of certain ranks are expected every 5th year to supply 8 boys each for the palace; others are bought from their relations. 18 Lama priests belonging to this class live in the palace to act as spiritual directors to the ladies. Eunuchs are employed in the palace theatricals.]—*Journ. N.-C.B.R.A.S.*, N.S. xi. 147–84.

[The Emperor had a body-guard composed of the 3 superior Banners and called *Ch'in Chün Ying* (親軍營). It was under the control of the Department of the Imperial Body Guard (*Shih Wei Ch'u*, 侍衛處).]—*Mayers, Ch. Gov.*, p. 8; *Ch. Repos.*, xx. 259.

[For the *Wang Fu*, Establishment of Princes of the Imperial Lineage, see *Mayers, Ch. Gov.*, pp. 4–6.]

Imperial Clansmen (*Tsung Shih* 宗室) and Gioro (*Kioh lo* 覺羅), or collateral relatives of the imperial house. "The management of the imperial clan appertains entirely to the Emperor, and has been conducted with considerable sagacity. All its members are under the control of the Tsung-jin fu, a sort of clansmen's court, consisting of a presiding controller, two assistant directors, and two deputies of the family. Their duties are to regulate whatever belongs to the government of the Emperor's kindred, which is divided into two branches, the direct and collateral, or the *tsung-shih* and Gioro. The *Tsung-shih*, or 'Imperial House,' comprise only the lineal descendants of Tienming's father, named Hien-tsu, or 'Illustrious Sire,' who first assumed the title of Emperor A.D. 1616. The collateral branches, including the children of his uncles and brothers, are collectively called Gioro. Their united number is unknown, but a genealogical record is kept in the national archives at Peking and Mukden."—*Williams, Midd. King.*, i. 404–5. See also *Mayers, Ch. Gov.*, p. 4. For the constitution and functions of the *Tsung Jên Fu*, Imperial Clan Court, and *Nei Wu Fu*, Imperial Household, see *Mayers, Ch. Gov.*, pp. 6–8; *Wên hsien t'ung k'ao hsiang chieh, Chih kuan k'ao, c.* 11, p. 4*b*, etc. For the titles conferred on members of the Imperial House, and the *Pa Fên*, Eight Privileged Ranks, see *Mayers, Ch. Gov.*, pp. 2–4, 3 (note); *Ta ch'ing hui tien;* and *cf.* LAWS OF INT.

"The right of succession is hereditary in the male line, but it is always in the power of the sovereign to nominate his successor from among his own children. The heir-apparent is not commonly known during the lifetime of the incumbent, though there is a titular office of guardian of the heir-apparent. During the Tsing dynasty the succession has varied, but the bloody scenes enacted in Turkey, Egypt, and India to remove competitors are not known at Peking, and the people have no fear that they will be enacted. . . . One good result of not indicating the heir-apparent is that not only are no intrigues formed by the crown-prince, but when he begins to reign he is seldom compelled, from fear of his own safety, to kill or imprison his brothers or uncles."—*Williams, Midd. King.*, i. pp. 403–4. For the titles, etc., of the heir-apparent, see *Mayers, Ch. Gov.*, p. 2. On the death of T'ung Chih, "for the first time since the Manchu dynasty occupied the throne, it was necessary to depart from the due line of succession, and to make the election of the sovereign a matter of individual fancy or favour instead of one of inheritance."—*Boulger, Short Hist.*, p. 333.

"The Empress-dowager is the most important subject within the palace, and his Majesty does homage at frequent intervals, by making the highest ceremony of nine prostrations before her. When the widow of Kiaking reached the age of sixty in 1836, many honors were conferred by the Emperor."—*Williams, Midd. King.*, i. 409. During the sickness or on the death of an Emperor she would assume the administration (*Boulger, Short Hist.*, pp. 332–3).

[The hereditary nobles were too few to form a separate class of any importance (*v. infra*).]

"Under the Emperor is the whole body of the people, a great family bound implicitly to obey his will as being that of heaven, and possessing no right or property *per se;* in fact, having nothing but what has been derived from or may at any time be reclaimed by him. The greatness of this family, and the absence of an entailed aristocracy to hold its members or their land in serfdom, have been partial safeguards against excess of oppression. Liberty is unknown among the people; there is not even a word for it in the language. No acknowledgment on the part of the sovereign of certain well-understood rights belonging to the people has ever been required, and is not likely to be demanded or given by either party. . . . Emigration abroad, and even removal from one part of the Empire to another, are prohibited or restrained by old laws, but at present no real obstacle exists to changing one's place of residence or occupation. Notwithstanding the fact that Chinese society is so homogeneous when considered as distinct from the sovereign, inequalities of many kinds are constantly met with, some growing out of birth or property, others out of occupation or merit, but most of them derived from official rank."—*Williams, Midd. King.*, i. 411.

A. *Scholars* (*Shih*).—(i). *Officials* (*Ch'ên*).—"According to the ideas which we have in Europe, the commoners form the whole of the Chinese people and there are no nobles, except the Princes of the blood, a small number of Tartar Princes, and some particular families on whom the Emperor has conferred a title of honour."—*Lettres édifiantes*, p. 87.

"Hereditary nobles are without influence, unless their rank is combined with personal merit."—*Tchéng-ki-tong, Chinese Painted by Themselves*, p. 13.

"Most of the nobility of China are Manchus, and none of the hereditary dignities existing previous to the conquest were recognized, except those attached to the family of Confucius."—*Williams, Midd. King.*, i. 387.

"The titular nobility of the Empire, as a whole, is a body whose members are without power, land, wealth, office, or influence, in virtue of their honors; some of them are more or less hereditary, but the whole system has been so devised, and the designations so conferred, as to tickle the vanity of those who receive them, without granting them any real power. The titles are not derived from landed estates, but the rank is simply designated in addition to the name. . . . The twelve orders of nobility are conferred solely on the members of the imperial house and clan: 1. *Ch'in Wang* [Prince of the 1st order] 'kindred prince,' *i.e.*, prince of the blood, conferred usually on his Majesty's brothers or sons. 2. *Chün Wang* [Prince of the 2nd order], or 'prince of a princedom'; the eldest sons of the princes of these two degrees take a definite rank during their father's lifetime, but the collateral branches descend in precedence as the generations are more and more remote from the direct imperial line, until at last the person is simply a member of the imperial clan. These two ranks are termed *regulus* by the Jesuit writers, and each son of an Emperor enters one or other as he becomes of age. The highest princes receive a stipend of about $13,300, some rations, and a retinue of three hundred and sixty servants, altogether making an annual tax on the State of $75,000 to $90,000. The second receive half that sum, and inferior grades in a decreasing ratio, down to the simple members, who each get four dollars a month and rations. 3 and 4. *Beile* and *Beitse* [*Pei-lé* and *Pei-tzŭ*, Princes of the 3rd and 4th orders], or princes of and in collateral branches. The 5th to 8th are dukes [Imperial Dukes of the 1st, 2nd, 3rd, and 4th degrees], called Guardian and Sustaining, with two subordinate grades not entitled to enter the court on state occasions. The 9th to 12th ranks are nobles, or rather generals, in line of descent [Nobles of Imperial lineage 9th, 10th, 11th, and 12th in line of descent]. The number of persons in the lower ranks is very great. Few of these men hold offices at the capital, and still more rarely are they placed in responsible situations in the provinces, but the government of Manchuria is chiefly in their hands." "Besides these are the five ancient orders of nobility, *kung, hou, po, tzŭ, nan*, usually rendered duke, count, viscount, baron, and baronet [or duke, marquis, earl, viscount, and baron], which are conferred without distinction on Manchus, Mongols, and Chinese, both civil and military, and as such are highly prized by their recipients as marks of honor. The three first take precedence of the highest untitled civilians, but an appointment to most of the high offices in the country carries with it an honorary title. The direct descendant of Confucius is called *Yen-shing Kung*, 'the Ever-sacred duke,' and of Koxinga *Hai-ching Kung*, or 'Sea-quelling duke'; these two are the only perpetual titles among the Chinese, but among the Manchus, the chiefs of eight families which aided in settling the crown in the Gioro line were made hereditary princes, who are collectively called princes of the iron crown. Besides the above-mentioned, there are others, which are deemed even more honorable, either from their rarity or peculiar privileges, and answer to membership of the various orders of the Garter, Golden Fleece, Bath, etc., in Europe."—*Ibid.* i. 405–7. See also *Huang ch'ao Wén hsien t'ung k'ao hsiang chieh, Chih kuan k'ao, c.* 11, p. 4*b*.

"*Chüeh Yin* 爵蔭.—Hereditary Ranks. The existing Chinese system of conferring patents of nobility and honorary titles is linked by an unbroken chain of descent with the history of the feudal states of the sixth century before Christ, perpetuating in its nomenclature, on the one hand, the titles of the semi-independent Princes of that era, and, on the other, the names of official degrees which have ceased for many centuries to exist in practical operation. Inasmuch, however, as the feudal system has scarcely at any period shown symptoms of revival since it was laid low by Shih Huang Ti in the 3rd century B.C., the titles now conferred are not to be regarded as other than official distinctions of a peculiar class, and cannot rightly be considered as bestowing aristocratic position or privilege in the European sense. The nine degrees of nobility, indeed, which are conferred at the present day, and which are either heritable within certain limits—*Shih hsi* 世襲—or hereditary for ever,—*shih hsi wang t'i* 世襲罔替—are granted exclusively as rewards for military services. The titles from the highest to the third degree, as set forth in the following table, are designated *Ch'ao P'in* 超品, or 'excelling rank':—*Shih Chüeh* 世爵.—Hereditary Nobility. Ranks—i. *Kung* 公; ii. *Hou* 侯; iii. *Po* 伯; iv. *Tzŭ* 子; v. *Nan* 男; vi. *Ch'ing Ch'ê Tu-yü* 輕車都尉; vii. *Ch'i Tu Yü* 騎都尉; viii. *Yün Ch'i Yü* 雲騎尉; ix. *Ên Ch'i Yü* 恩騎尉 [*i.e.*, 5 *chüeh* and 4 *yü*, the latter being military nobility]. Of each of the first five ranks, which are sometimes rendered in English by the titles duke, marquis, earl, viscount, and baron, there are three classes or degrees. To the titles of the first, second, and third ranks, laudatory [names] (*chia ming* 嘉名) are appended, significative of the special services by which the rank has been earned. All the above titles, the ninth excepted, are hereditary during a specified number of lives, ranging from 26 for a *Kung* of the first class to 1 for a *Yün Ch'i Yü*. The lower titles, beginning with No. 6, have occasionally the degree next above them 'annexed' (*Chien* 兼), the bearer being thus enabled to rank 'with, but after,' possessors of the title immediately preceding. Any one of the above titles may be conferred posthumously (*tsêng* 贈) on officers killed in battle, and thus become hereditary. Beside this, a form of reward for meritorious public servants is provided in the shape of hereditary official rank bestowed upon the sons, grandsons, younger brothers, or nephews, with due regard to seniority, of the person whom it is thus seen fit

to distinguish. This form of reward is termed *Ên Yin* 恩 蔭. By a special enactment, moreover, officials who may lose their lives at sea or on any of the inner waters whilst engaged in the public service, are entitled to receive posthumous titles of honour according to their degrees of rank, and official rank is furthermore bestowed upon the eldest son of any such individual. This is designated *Nan Yin* 難 蔭 (hereditary distinction conferred as a reward for suffering in the public service)."—*Mayers, Ch. Gov.*, pp. 62–3.

"When the nobility conferred is not 'perpetually hereditary' each descendant takes one rank lower than his father; so that the son of a *kung* becomes *hou*, the son of a *hou* becomes *po*, and so forth, nobility ceasing altogether with the son of a *tzŭ*. 侯 *hou* . . . has generally been translated by marquis. But this title is of limited use and does not express the rank of a *hou* as well as prince; as in former times the 諸 侯 *chu-hou* were feudal princes and not feudal marquises."—*Journ. N.-C.B.R.A.S.*, N.S. xxvii. 150, *note*.

"The nobility of the nation in the 4th and 5th orders have military rank; so have officers in the *Lw'an-i Wei*, a court in charge of the Imperial carriages, and responsible for the processional etiquette of His Majesty's movements; the numerous subordinates of this Court have also military designations; but neither these, nor the military officers or subordinates of the *Nui-wŭ Fŭ*, the Court of the Household, are recognized by the Inquiry in such form as to justify us in including them in the ranks performing military duties."—*Ch. Repos.*, xx. 256.

[For hereditary military "nobles" see MILITARY.]

"The bureaucracy which forms the most active and important element in the national life of China is a subject . . . not easily to be dealt with in a narrow compass. As the outcome of the history of two thousand years, and inspired with traditions descending from periods of fabulous antiquity, the huge fabric which is revered as the depository of all honour and all authority may well be thought capable of defying attempts at analysis on any but the broadest scale. Such particulars, at the same time, as are needed for a general comprehension of the methods pursued in the existing organization, . . . may nevertheless be briefly assembled. The Chinese official hierarchy, as it is found established in the *Ta Ch'ing Hui Tien* or Collected Institutes of the Empire, is in all its leading features a continuation of the system gradually established under the Ming dynasty, whose tenure of power was marked, in the fifteenth and sixteenth centuries of our era, by the introduction of the principle of universal competition for literary degrees as the means of obtaining access to rank and office, and by the mapping out of the territories of the Empire in the divisions which still, for the most part, subsist. . . . The system of classification ordained for the ranks of the public service [is as follows]: Under the head of *shih chin* 仕 進 or the 'official career,' it is laid down that the privilege of *ch'u shên* 出 身 or 'advancement'—in other words, of public employ—may be obtained from eight different starting-points—i. *Chin Shih* 進 士.—Metropolitan Graduate. ii. *Chü Jén* 舉 人.—Provincial Graduate. iii. *Kung Shêng* 貢 生.—Senior Licentiate. iv. *Yin Shêng* 廕 生.—Honorary Licentiate. The holder of a certificate granted in consideration of services rendered to, or suffering undergone on behalf of, the State by a progenitor of a person thus distinguished. According to the circumstances of the case, the holder of such a certificate is termed either *én yin shêng* 恩 廕 生 or *nan ying shêng* 難 廕 生. v. *Chien Shêng* 監 生.—Collegian of the Imperial Academy [v. *supra*]. Distinguished as *Ên Shêng* 恩 生, receiving the degree after an examination, and *Li Shêng* 例 生, obtaining the same privilege by purchase, according to the now almost invariable usage. vi. *Shêng Yüan* 生 員.—Licentiate. viii. *Kuan Hsüeh Shêng* 官 學 生.—Pupil of the Banner Schools pertaining to the Manchu military organization, or of the schools established for the benefit of imperial clansmen. viii. *Li* 吏.—Government Clerk. The two higher classes of graduates, the *chin-shih* and *chü-jén*, are collectively designated as *k'o chia ch'u shên* 科 甲 出 身, and these, with the two next following classes, take rank in what is officially designated the *chêng t'u* 正 途 or 'proper path,' *i.e.*, the duly constituted avenue of advancement. By courtesy, also, the remaining classes, candidates from which obtain employment through the system of *pao chü* 保 舉 or 'recommendation,' *i.e.*, selection by competent authority, are also recognized as having entered the public service on a similar footing. A subsidiary means of obtaining rank and office, the *chüan shu* 捐 輸 or purchase system, which has now almost hopelessly overshadowed the 'proper path,' although recognized in the Institutes and periodically resorted to since the days of the Ming dynasty, owes the prodigious development it has now arrived at to the necessities imposed on the Government by the first war with Great Britain and, a few years later, by the outbreak of the T'aip'ing rebellion. The year 1843 saw the introduction of a sale of official titles, to a limited extent, which furnished a precedent for the extension of the system throughout the Empire by a Decree dated December 13th, 1850, sanctioning proposals to this effect on the part of the Board of Revenue (see *Ch'ou Hsiang Shih Li* 籌 餉 事 例, Memorials and Regulations of the Board of Revenue, 1850). Immense sums of money have been obtained, since that period, by the sale of patents of rank or of steps of advancement in actual employ; and although, as a result of this policy, the Empire has been flooded with hosts of titular officials, beyond all proportion to the need of the public service, it is undeniable that in some respects advantage has accrued from it to the public interest. The purchase-system, whilst admitting thousands of corrupt and incapable persons to official positions, has at the same time opened avenues of advancement to a class which is unfettered by literary traditions and prejudices, and has tended to weaken the hold of the narrow maxims of antiquity upon the conduct of public affairs. In continuance of the regulations enacted under the Ming dynasty, the existing system classifies all civil and military offices under nine degrees of rank, or, more properly, under eighteen, inasmuch as each rank or class—*p'in* 品—is divided into principal, *chêng* 正, and secondary, *ts'ung* 從. To these must be added a nineteenth, or supplementary, class, embracing some of the lowest offices, to which the name of *wei ju liu* 末 入 流 (*lit.* 'the stream-not-yet-entered') is assigned. A distinction, something analogous to which may be discovered in the Russian institution of the *tchin*, is drawn between *rank*, the *p'in* 品 as above mentioned, with its accompanying *office*, or *chih* 職, and the actual *post* or official charge, *jên* 任, to which appointment may be obtained. Although the three conditions are co-ordinated, in theory, by a series of minute regulations, rank and official employ are practically distinct and may be held irrespectively one of the other. . . . Once invested with office in any degree of rank, as the result of competition or purchase, a Chinese official is placed upon the list of candidates for employment in the category to which he has been admitted, unless, indeed, as now habitually occurs, he has purchased a simple brevet—*hsien* 銜—without pretensions to official employ. Whether admitted to his official position by competition or by purchase, the candidate is required to seek presentation in imperial audience, *yin chien* 引 見, before his claim for employment is recognized by the Board of Civil Office or of War as the case may be. This formality having been accomplished, the candidate takes his turn in the periodical 'drawings' which are held in the course of each month at the offices of the Board, when the province of the empire in which each individual among the successive batches of candidates shall serve is determined by lot. When nominated in this wise to a provincial staff, the candidate, be he District Magistrate, Sub-Prefect, or Prefect by rank, on presenting his credentials to the local government, is enrolled upon the list of 'expectants,' the *hou-pu-pan* 候 補 班, and resigns himself to a period of unattached service which may last for a considerable number of years. During this period of expectancy, however, a variety of forms of temporary employment, in connection with the judicial or revenue administration or upon special missions, are accessible to the class of unattached officials, who discharge the duties confided to them in this manner under the generic designation of *wei yüan* 委 員 or delegates. From this expectant stage, the duration of which may be abridged by purchase or by recommendations on account of special services, the candidate at length emerges into substantive employ, which is prefaced by a year of probation—*shih yung* 試 用—made obligatory in all ranks from that of Intendant of Circuit (Taot'ai) downwards. Above the rank of Taot'ai, beyond which the operation of purchase scarcely extends, the system of 'expectancy' ceases to operate, officials of the higher grades being either in continuous active employ or in retirement. This last-named condition is frequently brought about by means of a striking peculiarity of the Chinese system, in accordance with which every official is liable to be withdrawn from active service by the death of either of his parents. On the occurrence of such an event he is required by a stringent regulation to retire at once for the observance of the mourning rites—*ting yu* 丁 憂—during a period of nominally three years, in reality twenty-seven months. On the part of Manchu officials, the national custom restricts this period of mourning to one hundred days."

"Among the many devices which have been introduced in the Chinese system, with indifferent success, to provide a check upon corruption and misconduct, two may be especially noticed here. One of these is the rule prohibiting civil employés of whatever degree, with the exception of the local directors of instruction, from holding office in their native provinces; and another is the practice of vacating office by the junior of two relatives who may be brought into contact with each other, within certain prescribed limits, in the same provincial area. This is designated *hui pi* 廻 避 or 'respectful withdrawal' in the presence of a superior. When to these checks upon the tenure of office is added the virtually uncontrolled power which is wielded by the provincial governor over his subordinates of the class *ti-fang kuan* 地 方 官, or 'local authorities,' *i.e.*, the Prefects, Sub-Prefects, and Magistrates or Assistant Magistrates of various degrees, in the exercise of his functions of 'impeachment' or 'denunciation'—*ts'an hê* 參 劾—as a result of which wholesale removals or degradations continually occur, it will be seen that the position of a Chinese official, especially in the lower ranks, is at all times eminently insecure."—*Mayers, Ch. Gov.*, pp. 115–20.

"The Chinese hierarchy is not founded upon seniority, but upon merit. The degree fixes the position; and, the higher the position, the higher must be the merit of its occupant. No one in China would think of laughing at the head of a department, for the simple reason that the head of a department is necessarily more capable than those under him."—*Tcheng-ki-tong, Chinese Painted by Themselves*, p. 69.

Notwithstanding the "startling corruptions, which seem to involve the principle on which the harmony and efficiency of the whole machinery of state stand, it cannot be denied, judging from the results, that the highest officers of the Chinese government do possess a very respectable rank of talent and knowledge, and carry on the unwieldy machine with a degree of integrity, patriotism, industry, and good order which shows that the leading minds in it are well chosen."—*Williams, Midd. King.*, i. 570.

"The position of an officer in the Chinese government can hardly be ascertained from the enumeration of his duties, nor can we easily appreciate, from a general account of the system, his temptations to oppress inferiors and deceive superiors. His duties as indicated in the code, are so minute, and often so contradictory, as to make it impossible to fulfil them strictly; it is found accordingly that few or more have ascended the slippery heights of promotion without frequent relapses. Degradation, when to a step or two and temporary, carries with it of course no moral taint in a country where the award for bribery is graduated to the amount received, without any reference to moral violation; where the bamboo is the standard of punishment as well for error in judgment or remissness as for crime—only commuted to a fine in honour of official rank; where, as a distinction in favour of the imperial race, the bamboo is softened to the whip and banishment mitigated to the pillory. The highest officers have of course the greatest opportunity to oppress, but their extortions are limited by the venality and mendacity of the agents they are compelled to employ. Inferiors also can carry on a system of exactions if they keep on the right side of those above them. The whole class form a body of men mutually jealous of each other's advance, where every incumbent endeavours to supplant his associate; they all agree in regarding the people as the source of their profits, the sponge which all must squeeze, but differ in the degree to which they should carry on the same plan with each other. Although sprung from the mass of the people, the welfare of the community has little place in their thoughts. Their life is spent in ambitious efforts to rise upon the fall of others, though they do not lose all sense of character or become reckless of the means of advance, for this would destroy their chance of success . . . . life is seldom sacrificed for political crime or envious emulation; no officer dreads a bowstring or a poisoned cup from his lord paramount, nor is he on the watch against the dagger of an assassin hired by a vindictive competitor. Whatever heights of favour or depths of umbrage he may experience, the servant of the Emperor of China need not, in unproved cases of delinquency, fear for his life; but he not unfrequently takes it himself from conscious guilt and dread of just punishment."—*Ibid.* i. 451–2.

"Notwithstanding the heavy charges of oppression, cruelty, bribery, and mendacity which are often brought against officers with more or less justice, it must not be inferred that no good qualities exist among them. Thousands of them desire to rule equitably, to clear the innocent and punish the guilty, and exert all the knowledge and power they possess to discharge their functions to the acceptance of their master and their own good name among the inhabitants. Such officers, too, generally rise, while the cruelties of others are visited with degradation. The pasquinades which the people stick up in the streets indicate their sentiments, and receive much more attention than would such vulgar expressions in other countries, because it is almost the only way in which their opinions can be safely uttered. The popularity which upright officers receive acts as an incentive to others to follow in the same steps, as well as a reward to the person himself."—*Ibid.* i. 461–2.

"Connected with the triennial schedule of official merits and demerits is the necessity the high officers of state are under of confessing their faults of government; and the two form a peculiar and somewhat stringent check upon their intrigues and malversation, making them, as Le Comte observes, 'exceeding circumspect and careful, and sometimes even virtuous against their own inclinations.' The confessions reported in the *Peking Gazette* are, however, by no means satisfactory as to the real extent or nature of these acts; most of the confessors are censors, and perhaps it is in virtue of their office that they thus sit in judgment upon themselves. . . . The rarity of these confessions compared with the actual sins, shows either that they are, like a partridge's doublings, made to draw off attention from the real nest of malversation, or that few officers are willing to undergo the mortification."—*Ibid.* i. 465.

"Roughly speaking, all Chinese society may be divided into two classes—rulers and ruled. An official career, including all the highest and most lucrative posts, is open to every man who can pass successfully through the ordeal of the great public competitions. This fact, taken as a set-off against the practically democratic spirit of the Chinese people, goes far to reconcile them with their form of government, which in all outward form is essentially despotic. The Chinese, as a nation, recognise the necessity of being governed, and they believe in the divine right of their emperors. They throw open the public service to competition, and agree to regard successful competitors as their masters rather than their servants. Hence, they think it right to put up with a great deal that would not be tolerated in the extreme West. Still, there is a point beyond which the mandarin advances at his peril; for riots inevitably follow, and the mandarin in whose district any demonstration of the kind has been made may as well 'hang up his hat and go home.' His career, if not actually at an end, is at any rate temporarily checked. This possibly may disabuse the minds of some of a most egregious misconception, namely, that the Chinese are a down-trodden people to be compared with the Egyptian fellah."—*Giles, Historic China*, pp. 122–3.

[For titles of honour and distinctions for merit see LAWS OF INT.]

(2). *Gentry* (*Shên Shih*).—The "unemployed *literati* form a powerful middle class, whose members advise the work-people, who have no time to study, and aid their rulers in the management of local affairs. Their intelligence fits them to control most of the property, while few acquire such wealth as gives them the power to oppress. They make the public opinion of the country, now controlling it, then cramping it; alternately adopting or resisting new influences, and sometimes successfully thwarting the acts of officials, when the rights of the people are in danger of encroachment; or at other times combining with the authorities to repress anarchy or relieve suffering." "This class has no badge of rank, and is open to every man's highest talent and efforts, but its complete neutralization of hereditary rights, which would have sooner or later made a privileged oligarchy and a landed or feudal aristocracy, proves its vitalizing, democratic influence. It has saved the Chinese people from a second disintegration into numerous kingdoms, by the sheer force of instruction in the political rights and duties taught in the classics and their commentaries."—*Williams, Midd. King.*, i. 562–3.

B. *Agriculturists* (*Nung*).—"Agriculture holds the first place among the branches of labor, and the honors paid to it by the annual ploughing ceremony are given from a deep sense of its importance to the public welfare."—*Ibid.* ii. 1.

C. *Artizans* (*Kung*).—[There was apparently no change in the condition of this class.]

D. *Merchants* (*Shang*).—"The trading class as a whole is considered to stand lowest of the four generally recognised. . . . The general opinion of Chinese authors is that commerce should be as far as possible restricted to the satisfaction of the real wants of the community; and the profits of trade are viewed askance as soon as they seem to exceed the fair wages of a carrier, apparently because of a confused feeling that a man who lives by profits only is a kind of usurer."—*Simcox*, ii. 323.

"There are local prejudices against associating with some portions of the community, though the people thus shut out are not remnants of old castes. The *tankia*, or boat-people, at Canton form a class in some respects beneath the other portions of the community, and have many customs peculiar to themselves. At Ningpo there is a degraded set called *to min*, amounting to nearly three thousand persons, with whom the people will not associate. The men are not allowed to enter the examinations or follow an honorable calling, but are play-actors, musicians, or sedan-bearers; the women are match-makers or female barbers and are obliged to wear a peculiar dress, and usually go abroad carrying a bundle wrapped in a checkered handkerchief. The *tankia* at Canton also wear a similar handkerchief on the head, and do not cramp their feet. The *to min* are supposed to be descendants of the Kin, who held Northern China in A.D. 1100, or of native traitors who aided the Japanese, in 1555–1563, in their descent upon Chehkiang. The

tankia came from some of the Miaotsz' tribes so early that their origin is unknown." "The modern classifications of the people, recognised, however, more by law than custom, are various and comprehensive. First, natives and aliens; the latter include the unsubdued mountaineers and aboriginal tribes living in various parts, races of boat-people on the coasts, and all foreigners residing within the Empire, each of whom are subject to particular laws. Second, conquerors and conquered; having reference almost entirely to a prohibition of intermarriages between Manchus and Chinese. Third, freemen and slaves; every native is allowed to purchase slaves and retain their children in servitude, and free persons sometimes forfeit their freedom on account of their crimes, or mortgage themselves into bondage. Fourth, the honorable and the mean, who cannot intermarry without the former forfeiting their privileges; the latter comprise, besides aliens and slaves, criminals, executioners, police-runners, actors, jugglers, beggars, and all other vagrant or vile persons, who are in general required to pursue for three generations some honorable and useful employment before they are eligible to enter the literary examinations. These four divisions extend over the whole body of the people, but really affect only a small minority." "It is worthy of note how few have been the slaves in China, and how easy has been their condition in comparison with what it was in Greece and Rome. Owing chiefly to the prevalence of education in the liberal principles of the Four Books, China has been saved from this disintegrating element. The proportion of slaves to freemen cannot be stated, but the former have never attracted notice by their numbers nor excited dread by their restiveness. Girls are more readily sold than boys; at Peking a healthy girl under twelve years brings from thirty to fifty taels, rising to two hundred and fifty or three hundred for one of seventeen to eighteen years old. In times of famine orphans or needy children are exposed for sale at the price of a few cash."—*Williams, Midd. King.*, i. 411–3.

"The normal Chinese government is essentially based on moral force; it is not a despotism. A military and police is maintained sufficient to crush merely factious risings, but totally inadequate, both in numbers and in nature, to put down a disgusted and indignant people. But . . . this same government is in form and machinery, a pure autocracy. In his district, the magistrate is absolute; in his province, the governor; in the empire, the Emperor. The Chinese people have no right of legislation, they have no right of self-taxation, they have not the power of voting out their rulers, or of limiting or stopping supplies. *They have therefore the right of rebellion.*"—*Meadows, Chinese and their Rebellions*, pp. 23–4.

The first act of the co-regents who ruled during K'ang Hsi's minority "was to impeach the principal eunuchs who had acquired power over Chuntche, and to issue a decree prohibiting the employment of any of that unfortunate class in the public service. . . . the Manchu rulers have ever since remained faithful to the pledge taken by these Manchu regents in the name of the young Emperor Kanghi."—*Boulger, Short Hist.*, pp. 131–2.

"The number of human beings suffering from cold and hunger is relatively far smaller than in England; and, in this relation, which is of the greatest importance, it must be acknowledged that the condition of women of the lower classes is far better than that of their European sisters."—*Giles, Chinese Sketches*, p. 12.

"It must not . . . be assumed . . . that Chinese women take no part in affairs. A Governor's wife is always supposed to be the keeper of his official seal."—*Little (Mrs. A.), Int. Ch.*, p. 177.

INSTITUTIONS.—1. *Executive.* — [Peking has remained the capital since 1411. See *Williams, Midd. King.*, i. 62–3, and *cf.* MING PER.]

"This name [Chihli] is descriptive, rather than technical, and means 'Direct Rule,' denoting that from this province the supreme power which governs the empire proceeds; any province, in which the Emperor and court should be fixed, would therefore be termed *Chihli*, and its chief city *King*, 'capital,' or *King-tu* or *King-sz'*, 'court of the capital.'"—*Ibid.* i. 60.

"Aigun, opposite Blagoveschtschensk, . . . was made the local Manchu capital in 1684."—*Parker, China*, p. 97.

"In the reign K'ang Hi, of the present dynasty, the province of Ngan-hwei was separated from Kiang-nan, which thenceforward took the name of Kiang-su; and Kan-suh was similarly formed by the partition of Shen-si. By dividing Hu-kwang into two provinces, which received the designations Hu-peh and Hu-nan, moreover, the number was brought up to eighteen. In contradistinction to the *Chung Shu Shêng* or Central Departments of State of the Yüan dynasty, the provinces to which the same title was, with a certain degree of modification, subsequently transferred, became entitled *Chih Shêng* 直省, or 'departments under government,' and by this designation they are now generically recognized."—*Mayers, Ch. Gov.*, p. 31.

"The eighteen provinces received their present boundaries and divisions in the reign of Kienlung [1736–96]. . . . The following table shows their present divisions and government. The three columns under the head of *Departments* contain the *fu*, *chihli ting*, and *chihli chau*, all of which are properly prefectures; the three columns under the head of *Districts* contain the *ting*, *chau*, and *hien*.

Provinces.	Area in English sq. mls.	Departments.			Districts.			Capital.	Government.
		Fu.	Ting.	Chau.	Ting.	Chau.	Hien.		
NORTHERN PROVINCES.									
Chihli	58,949	11	...	6	3	17	124	Pauting fu ...	Ruled by a governor-general or *tsungtuh*.
Shantung	65,104	10	...	2	...	9	96	Tsinan fu ...	Each separately ruled by a lieutenant-governor or *fuyuen*.
Shansi	55,268	9	...	10	3	6	85	Taiyuen fu ...	
Honan	65,104	9	...	4	...	6	97	Kaifung fu ...	
EASTERN PROVINCES.									
Kiangsu	92,961	8	1	3	2	3	62	Kiangning fu ...	Each under a lieutenant-governor, subordinate to one governor-general, called *Liang Kiang tsungtuh*.
Nganhwui		8	...	5	...	4	50	Nganking fu ...	
Kiangsi	72,176	13	...	1	2	1	75	Nanchang fu ...	
Chehkiang	39,150	11	...	...	1	1	76	Hangchau fu ...	Each under a lieutenant-governor, subordinate to a governor-general, called *Min Cheh tsungtuh*.
Fuhkien	53,480	10	...	2	3	...	62	Fuhchau fu ...	
CENTRAL PROVINCES.									
Hupeh	144,770	10	...	1	...	7	60	Wuchang fu ...	Each under a lieutenant-governor, subordinate to a governor-general, called *Liang Hu tsungtuh*.
Hunan		9	3	4	...	3	64	Changsha fu ...	
SOUTHERN PROVINCES.									
Kwangtung	79,456	9	2	4	3	7	79	Kwangchau fu or Canton	Two lieutenant-governors, subordinate to a governor-general, called *Liang Kwang tsungtuh*.
Kwangsi	78,250	11	...	1	3	16	47	Kweilin fu ...	
Yünnan	107,969	14	3	4	5	27	39	Yunnan fu ...	Two lieutenant-governors, subordinate to a governor-general, called *Yün Kwei tsungtuh*.
Kweichau	64,554	12	3	1	5	13	34	Kweiyang fu ...	
WESTERN PROVINCES.									
Shensi	154,008	7	...	5	5	5	73	Singan fu ...	Under a governor-general, called *Shen Kan tsungtuh*, and one lieutenant-governor over Shensi.
Kansuh		9	...	6	7	7	51	Lanchau fu ...	
Sz'chuen	166,800	12	6	8	9	11	111	Chingtu fu ...	Ruled by a governor-general."

—*Williams, Midd. King.*, i. 59–61. See also following extracts.

"The provinces are divided into *Fu* 府 or Prefectures; *T'ing* 廳 or Independent Sub-Prefectures; *Chih-li Chou* 直隸州 or Independent Departments; *Chou* 州 or Departments subject to a *Fu;* and *Hsien* 縣 or Districts subject to a *Fu* or *Chih-li Chou*."—*Mayers, Ch. Gov.*, p. 32.

"The Chinese are the only people who have, by means of a term added to the name of a place, endeavoured to designate its relative rank. Three of the words used for this purpose, viz., *fu*, *chau*, and *hien*, have been translated as 'first,' 'second,' and 'third' rank; but the gradation is not quite correct, for the terms do not apply to the city or town alone, but to the portions of country of which it is the capital. The nature of these and other terms, and the divisions intended by them are thus explained: The Eighteen Provinces are divided into *fu*, *ting*, *chau*, and *hien*. A *fu* is a large portion or department of a province, under the general control of one civil officer immediately subordinate to the heads of the provincial government. A *ting* is a division of a province smaller than a *fu*, and either like it governed by an officer immediately subject to the heads of the provincial government, or else forming a subordinate part of a *fu*. In the former case it is called *chih-li*, *i.e.*, under the direct rule of the provincial government; in the latter case it is simply called *ting*. A *chau* is a division similar to a *ting*, and like it either independent of any other division, or forming part of a *fu*. The difference between the two consists in the government of a *ting* resembling that of a *fu* more nearly than that of a *chau* does: that of the *chau* is less expensive. The *ting* and *chau* of the class to which the term *chih-li* is attached, may be denominated in common with the *fu*, *departments* or *prefectures*; and the term *chih-li* may be rendered by the word *independent*. The subordinate *ting* and *chau* may both be called *districts*. A *hien*, which is also a *district*, is a small division or subordinate part of a department, whether of a *fu*, or of an independent *chau* or *ting*." "Each *fu*, *ting*, *chau*, and *hien*, possesses at least one walled town, the seat of its government, which bears the same name as the department or district to which it pertains. Thus Hiangshan is the chief town of the district Hiangshan hien; and Shanking, that of the department Shanking fu. By European writers, the chief towns of the *fu* or departments have been called cities of the first order; those of the *chau*, cities of the second order; and those of the *hien*, cities of the third order. The division called *ting*, being rarely met with, has been left out of the arrangement—an arrangement not recognised in China. It must be observed that the chief town of a *fu* is always also the chief town of a *hien* district; and sometimes, when of considerable size and importance, it and the country around are divided into two *hien* districts, both of which have the seat of their government within the same walls: but this is not the case with the *ting* and *chau* departments. A district is not always sub-divided; instances may occur of a whole district possessing but one important town. But as there are often large and even walled towns not included in the number of chief or of district towns, consequently not the seat of a regular *chau* or *hien* magistracy, a sub-division of a district is therefore frequently rendered necessary; and for the better government of such towns and the towns surrounding them, magistrates are appointed to them, secondary to the magistrates of the departments or the districts in which they are comprised. Thus, Fuhshan is a very large commercial town or mart called a *chin*, situated in the district of Nanhai, of the department of Kwangchau, about twelve miles distant from Canton. The chief officer of the department has therefore an assistant residing there, and the town is partly under his government and partly under that of the Nanhai magistrate, within whose district it is included, but who resides at Canton. There are several of these *chin* in the provinces, as Kingteh in Kiangsi, Siangtan in Hunan, etc.; they are not enclosed by walls. Macao affords another instance: being a place of some importance, both from its size and as the residence of foreigners, an assistant to the Hiangshan hien magistrate is placed over it, and it is also under the control of an assistant to the chief magistrate of the *fu*. Of these assistant magistrates, there are two ranks secondary to the chief magistrate of a *fu*, two secondary to the magistrate of a *chau*, and two also secondary to the magistrate of a *hien*. The places under the rule of these assistant magistrates are called by various names, most frequently *chin* and *so*, and sometimes also *chai* and *wei*. These names do not appear to have reference to any particular form of municipal government existing in them; but the *chai* and the *wei* are often military posts; and sometimes a place is, with respect to its civil government, the chief city of a *fu*, while with respect to its military position it is called *wei*. There are other towns of still smaller importance; these are under the government of inferior magistrates who are called *siun kien:* a division of country under such a magistrate is called a sz', which is best represented by the term township or *commune*. The town of Whampoa and country around it form one such division, called Kiautang sz', belonging to the district of Pwanyu, in the department of Kwangchau." "In the mountainous districts of Kwangsi, Yunnan, Kweichau, and Sz'chuen, and in some other places, there are districts called *tu sz'*. Among these, the same distinctions of *fu*, *chau*, and *hien* exist, together with the minor division *sz'*. The magistrates of these departments and districts are hereditary in their succession, being the only hereditary local officers acknowledged by the supreme government." "There is a larger division than any of the above, but as it does not prevail universally, it was not mentioned in the first instance. It is called *tau*, a *course* or *circuit*, and comprises two or more departments of a province, whether *fu*, or independent *ting* or *chau*. These circuits are subject to the government of officers called *tau-tai* or intendants of circuit, who often combine with political and judicial powers a military authority and various duties relating to the territory or to the revenue."—*Ch. Repos.*, iv. 54.

"The *Tung San Shêng* 東三省, or Three Eastern Provinces, comprise the territory originally inhabited by the Manchu race, which is divided into three provinces. The two most northerly of these, *Hei-lung Chiang* or *Tsitsihar* (the Amur), and *Kirin*, are organized upon a purely military basis, whilst *Fêng-t'ien*, the southernmost, including the Manchu capital, named *Shêng Ching* or Moukden, approximates more closely in its form of administration to that of the eighteen provinces of China Proper. The system of government of the province of *Fêng-t'ien*, indeed, was remodelled in 1876, bringing it even more nearly than before into harmony with that of the rest of China. Its distinctive mark in the past was the control exercised by the Five local Boards, corresponding to the Boards of Revenue, Ceremonies, War, Punishments, and Works, at Peking, over the affairs of the province in general. The authority heretofore vested in these boards has now been concentrated in the hands of the Military Governor, to whom the position and title of a Governor-General [see *Provincial Admin.*] have been accorded."—*Mayers, Ch. Gov.*, pp. 48–50. For its administrative system see *ibid.*

"The extensive region beyond the Wall occupied mostly by the Tsakhar Mongols, is now included within the jurisdiction [of the province of Chihli] and placed under the administration of officers residing at one of the garrisoned gates of the Great Wall; the area of this part is about half that of the whole province. The chief department in the province, that of

Shuntien, being both large and important, as containing the metropolis, is divided into four *lu* or circuits, each under the rule of a sub-prefect, who is subordinate to the prefect living at Peking."—*Williams, Midd. King.*, i. 60.

"The Chusan archipelago forms a single district of which Tinghai is the capital; it is divided into thirty-four *chwang* or townships, whose officers are responsible to the district magistrate."—*Ibid.* i. 123.

Each of the "Eighteen Provinces is a complete state in itself, whose corporate existence is in no way dependent upon any other State, except in so far that the poor ones dun the rich ones for the money which the Central Government 'appropriates to them.' Each province has its own army, navy, system of taxation, and its own social customs. It is only in connection with the salt trade and the navy that mutual concessions have to be made under a certain modicum of imperial control. In nearly all other matters the viceroys and governors 'move' each other; and occasionally different provinces jointly interested in special questions, after thus 'moving' to a preliminary understanding, address the Emperor or the Board together. . . . Of late years foreign affairs have caused a further development, which practically creates two viceregal high commissioners with tacit diplomatic powers over other viceroys and governors. Thus the Viceroy at Tientsin, in his capacity of Imperial High Trade Commissioner for the North Sea Board, practically takes the lead for all 'Old China'; whilst his colleague at Nanking, bearing the same title for the South Sea Board, represents the riverine and coast authorities for all the rest of China. In this way there is a tendency to unify the navy at least, if not the army; to place foreign affairs of wide importance in two leading hands; and to make commercial capitals with metropolitan rank out of Tientsin and Shanghai (the latter being in close sympathy with Nanking)."—*Parker, China*, pp. 167–8.

"A short inspection will show that the great leading principles by which the present administration preserves its power over the people, consist in a system of *strict surveillance* and *mutual responsibility* among all classes. These are aided in their efficiency by the geographical isolation of the country, a remarkable spirit of loyal pride in their own history, and a general system of political education and official examinations." "These two principles are enforced by such a minute gradation of rank and subordination of offices as to give the government more of a military character than at first appears, and the whole system is such as to make it one of the most unmixed oligarchies now existing. It is like a network extending over the whole face of society, each individual being isolated in his own mesh but responsibly connected with all around him. The man who knows that it is almost impossible, except by entire seclusion, to escape from the company of secret or acknowledged emissaries of government, will be cautious of offending the laws of the country, knowing, as he must, that though he should himself escape, yet his family, his kindred, or his neighbours will suffer for his offence; that if unable to recompense the sufferers, it will probably be dangerous for him to return home; or if he does, it will be most likely to find his property in the possession of neighbours or officials, who feel conscious of security in plundering one whose offences have forever placed him under a ban." "The effect of these two causes upon the mass of the people is to imbue them with a great fear of the government, both of its officers and its operations; each man considers that safety is best to be found in keeping aloof from both. This mutual surveillance and responsibility, though only partially extended throughout the multitude, necessarily undermines confidence and infuses universal distrust; while this object of complete isolation, though at the expense of justice, truth, honesty, and natural affection, is what the government strives to accomplish and actually does to a wonderful degree. The idea of government in the minds of the uneducated people is that of some ever-present terror, like a sword of Damocles; and so far has this undefined fear of some untoward result when connected with it counteracted the real vigor of the Chinese, that to it may be referred much of their indifference to improvement, contentment with what is already known and possessed, and submission to petty injustice and spoliation." "Men are deterred, too, as much by distrust of each other as by fear of the police, from combining in an intelligent manner to resist governmental exactions because opposed to principles of equity, or joining with their rulers to uphold good order. . . . They dread illegal societies quite as much from the cruelties this same distrust induces the leaders to exercise over recreant or suspected members, as from apprehension of arrest and punishment by the regular authorities. Thus with a state of society at times on the verge of insurrection, this mass of people is kept in check by the threefold cord of responsibility, fear, and isolation, each of them strengthening the other, and all depending upon the character of the people for much of their efficiency. Since all the officers of government received their intellectual training when commoners under these influences, it is easy to understand why the supreme powers are so averse to improvement and to foreign intercourse—from both of which causes, in truth, the monarch has the greatest reason to dread lest the charm of his power be weakened and his sceptre pass away." There is, however, "a further explanation for the general peace which prevails to be found. . . . It is owing partly to the diffusion of a political education among the people—teaching them the principles on which all government is founded, and the reasons for those principles flowing from the patriarchal theory—and partly to their plodding, industrious character."—*Williams, Midd. King.*, i. 382–4.

"From the injudicious system which exists of combining fiscal, legislative, and judicial functions and control in the same person, the temptations to defraud are strong, and the peculations proportionably great."—*Ibid.* i. 293.

"In order to enable the superior officers to exercise greater vigilance over their inferiors, they have the privilege of sending special messengers, invested with full power, to every part of their jurisdiction. The Emperor himself never visits the provinces judicially, nor has an Emperor been south of the capital during the present century; he therefore constantly sends commissioners or legates, called *ch'inch'ai*, to all parts of the Empire, ostensibly entrusted with the management of a particular business, but required also to take a general surveillance of what is going on. The ancient Persians had a similar system of commissioners, who were called the eyes and ears of the prince, and made the circuit of the empire to oversee all that was done. There are many points of resemblance between the structures of these two ancient monarchies, the body of councillors who assisted the prince in his deliberations, the presidents over the provinces; the satraps, etc.; but the Persians had not the elements of perpetuity which the system of common schools and official examinations give to the Chinese government." "Governors in like manner send their deputies and agents, called *weiyüan*, over the province; and even the prefects and intendents despatch their messengers. All these functionaries, during the time of their mission, take rank with the highest officers according to the quality of their employers; but the imperial commissioners, who for one object or another are constantly passing and repassing through the Empire in every direction, exercise great influence in the government, and are powerful agents in the hands of the Emperor for keeping his proconsuls at their duty."—*Ibid.* pp. 446-7.

"In addition to the division of power and the restrictions upon Chinese officers already mentioned, there are other means adopted in their location and alternation to prevent combination and resistance against the head of the state. One of them is the law forbidding a man to hold any civil office in his native province, which, besides stopping all intrigue where it would best succeed, has the further effect of congregating aspirants for office at Peking, where they come in hope of obtaining some post, or of succeeding in the examinations for the highest literary degrees. The central government could not contrive a better plan for bringing all the ambitious and talented men in the country under its observation before appointing them to clerkships in the capital, or scattering them in the provinces." "Moreover, no officer is allowed to marry in the jurisdiction under his control, nor own land in it, nor have a son, brother, or near relative holding office under him; and he is seldom continued in the same station or province for more than three or four years. Manchus and Chinese are mingled together in high stations, and obligations are imposed on certain grandees to inform the Emperor of each other's acts. Members of the imperial clan are required to attend the meetings of the Boards at the capital, and observe and report what they deem amiss or of interest to the Emperor and his council; while in all the upper departments of the general and provincial governments, a system of espionage is carried out, detrimental to all principles of honourable fidelity, such as we look for in officials, but not without some good effects in a weak despotism like China. There is, besides this constant surveillance, a triennial catalogue made out of the merits and demerits of all officers in the Empire, which is submitted to imperial inspection by the Board of Civil Office. In order to collect the details of this catalogue, it is incumbent upon every provincial officer to report upon the character and qualifications of those under him, and the list, when made out, is forwarded by the governor to the capital. The points of character are arranged under six different heads, viz.: those who are not diligent, the inefficient, the superficial, the untalented, superannuated and diseased. According to the opinion given in this report, officers are elevated or degraded so many steps in the scale of merit, like school-boys in a class, and whenever they issue an edict are required to state how many steps they have been advanced or degraded, and how many times recorded. Officers are required to accuse themselves, when guilty of crime, either in their own conduct or that of their subordinates, and request punishment. . . . The effect of such confessions and examination of character is to restrain the commission of outrageous acts of oppression; it is still further enforced by the privilege, common alike to censors and private subjects, of complaining to the Emperor of misdeeds done to them by persons in authority. Fear for their own security has suggested this multiplicity of checks, but the Emperor and his ministry have no doubt thereby impeded the efficiency of their subordinates, and compelled them to attend so much to their own standing that they care far less than they otherwise would for the prosperity of the people."—*Ibid.* i. 448–51.

"Sz Ch'wan is notorious for the fewness of its civilian officials (all of whom, under the universal rule, must go elsewhere to serve): in other words, it is the one province in the Empire where it pays well-to-do persons better to stay at home than to 'trade' abroad as mandarins; and that trade, as we all know, is one of the most lucrative in China, and the one patronised by the most highly educated persons."—*Parker, China*, p. 194.

"The government of Peking differs from that of other cities in the empire, the affairs of the department being separated from it, and administered by officers residing in the four circuits into which it is divided. 'A minister of one of the Boards is appointed superintendent of the city, and subordinate to him is a *fu yin* 府尹, or "mayor" otherwise called "Governor" of (the Imperial Prefecture of) *Shun-t'ien Fu* 順天府, *i.e.*, the region enclosing the imperial capital. . . . Besides the actual Governor, there is a Governor Adjoint, or *Chien Yin* 兼尹, appointed from among the Presidents and Vice-Presidents of Boards, who exercises a concurrent authority.'" In addition to these there are a Vice-Governor and a Sub-Prefect of *Shun-t'ien Fu*, and the usual subordinate ranks appertaining to a Prefecture are also represented within the jurisdiction. "Their duties consist in having charge of the metropolitan domain, for the purpose of extending good government to its four divisions."—*Ibid.* i. 82. See also *Ch. Repos.*, iv. 181; *Mayers, Ch. Gov.*, pp. 44–7.

In 1631 the Manchu emperor "adopted the Chinese methods of administration."—*Simcox*, ii. 249.

A Dutch embassy which reached the Court of Peking in 1656 "found that the change of dynasty had made little difference even in the *personnel* of the administration. Most of the civil officers with whom they came in contact were Chinese."—*Ibid.* ii. 272.

"The central government of China, so far as a system of this nature is recognised in the existing institutions, is arranged with the object rather of registering and checking the action of the various provincial administrations, than that of assuming a direct initiative in the conduct of affairs. . . . Regulations, indeed, of the most minute and comprehensive character, are on record for the guidance of every conceivable act of administration; and the principal function of the central government consists in watching over the execution of this system of rules. The bestowal of the higher appointments of the civil and military services, and the distribution of the superior literary degrees as rewards for proficiency in the studies upon which the entire polity of the Empire is based, comprise the remainder of the attributes reserved to the government established at Peking. The Central Government may be said to criticize rather than to control the action of the twenty-one provincial administrations, wielding, however, at all times the power of immediate removal from his post of any official whose conduct may be found irregular or considered dangerous to the stability of the State."—*Mayers, Ch. Gov.*, p. 12.

"Although there is nominally no deliberative or advisatory body in the Chinese Government, and nothing really analogous to a congress, parliament, or *tiers état*, still necessity and law compel the Emperor to consult and advise with the heads of tribunals. There are two imperial councils, which are the organs of communication between the head and the body politic; these are the Cabinet, or Imperial Chancery, and the Council of State; both of them partake of a deliberative character, but the first has the least power. Subordinate to these two councils are the administrative parts of the supreme government, consisting of the six Boards, the Colonial Office, Censorate, Courts of Representation and Appeal, and the Imperial Academy; making in all thirteen principal departments. . . . It need hardly be added that there is nothing like an elective body in any part of the system; such a feature would be almost as incongruous to a Chinese as the election of a father by his family."—*Williams, Midd. King.*, i. 415–6.

"The following are the departments of the Central administration: The *Chün Chi Ch'u* (軍機處).—Council of State, or Grand Council (literally, Place of Plans for the Army) [instituted 1644]. This department is the actual privy council of the sovereign, in whose presence its members daily transact the business of the State, at a meeting held between the hours of 4 and 6 a.m. It is a Cabinet composed of Ministers holding other substantive offices, and who are known as *Chün Chi Ta Ch'ên* (軍機大臣). Their number is undetermined" but probably varies according to the Emperor's pleasure; "for many years past it has not exceeded five. A body of sixty secretaries, *Chang Ching* (章京), also called *Hsiao Chün Chi* (小軍機), attends to the clerical work of the Council. The institution derives its origin from the practice instituted by the earlier emperors of the present dynasty of treating public affairs on the footing of a military council, whence the title adopted, in about the year 1730, for the council as it at present exists. The title *chang ching* corresponds to the Manchu word *chan-yin*, or *chan-kyin*, signifying an 'assistant,' in either civil or military employ."—*Mayers, Ch. Gov.*, pp. 12–13.

"The *Nei Ko* (內閣).—Grand Secretariat or Imperial Chancery (literally, Inner Cabinet or Hall). This department, which, under the preceding dynasty, was the Supreme Council of the Empire, has within the last century and a half, become superseded in active importance by the Grand Council. It now forms the Imperial Chancery or Court of Archives, and admission to one of the six posts which constitute its superior ranks confers the highest distinction attainable by Chinese officials, although with functions that are almost purely nominal. The most distinguished Governors-General are usually advanced to the dignity of Grand Secretary while continuing to occupy their posts away from the capital. The constitution of the office is as follows: *Ta Hsüeh Shih* (大學士), Grand Secretary, colloquial designation *Chung T'ang* (中堂); epistolary style, *Tsai Hsiang* (宰相), and *Hsiang Kuo* (相國). Of the four Grand Secretaries, two are Manchus and two Chinese. Each of the four is designated as *Ta Hsüeh Shih* of one or other of the 'throne-halls' or pavilions of the Imperial palace. The names of these are: *Wên Hua Tien* (文華殿); *Wu Ying Tien* (武英殿); *T'i Jên Ko* (體仁閣); *Tung Ko* (東閣): [the *Ta Hsüeh Shih* of the first being the real Prime Minister]. *Hsieh-pan Ta Hsüeh Shih* (協辦大學士), or Assistant Grand Secretaries (one Manchu and one Chinese); [subordinate to these six chancellors are six grades of officers, amounting in all to upwards of two hundred persons, of whom more than half are Manchus]. Under the six chancellors are ten assistants called *Nei Ko Hsüeh Shih* (內閣學士), or Sub-Chancellors of the Grand Secretariat."—*Ibid.* pp. 14–15. "Attached to the Cabinet are ten subordinate offices, one of which is for translating documents into the various languages found in the Empire." "The duties of these supreme councils are general, comprising matters relating to all departments of the government, and serving to connect the head of the state with the subordinate bodies, not only at the capital, but throughout the provinces, so that he can, and probably does to a very great degree, thereby maintain a general acquaintance with what is done in all parts, and sooner rectify disorders and malpractices."—*Williams, Midd. King.*, pp. 417, 419. See also *Huang ch'ao Wên hsien t'ung k'ao hsiang chieh, Chih kuan k'ao*, c. 11, p. 7*a*.

[The six honorary titles of *T'ai Shih, T'ai Fu, T'ai Pao*, Grand Preceptor, Tutor, and Guardian, and *Shao Shih, Shao Fu, Shao Pao*, Junior Preceptor, Tutor, and Guardian, corresponding to "the titles of the six highest Ministers of State of antiquity, designated the *San Kung* and *San Ku* . . . are now seldom conferred, with the exception of" the last, which "is especially bestowed as the (nominal) 'Guardianship of the Heir Apparent,' *T'ai Tzŭ Shao Pao*. It entitles the bearer to be addressed as *Kung Pao*."]—*Mayers, Ch. Gov.*, p. 14; and see EARLY and LATER FEUDAL PERIODS.

"*Tsung-li Ko Kuo Shih Wu Yamên* (總理各國事務衙門).—The Yamên of Foreign Affairs. This department, like the *Chün Chi Ch'u* or Grand Council, is considered not so much a separate organization, with ranks and promotion specially appertaining to itself, as a species of Cabinet formed by the admission of members of other departments of State. It owes its institution to proposals laid before the Throne by a special Council convened after the conclusion of peace in 1860, to decide upon the manner in which foreign affairs should thenceforward be conducted. In reply to the memorial presented by this Council, headed by the Prince of Hui, a Decree was issued on the 19th January, 1861, commanding the formation of a new department under the title given above." Additions were at various times made to the number of members up to 1869, when there were ten, "consisting of Presidents and Vice-Presidents of the different Boards (see *infra*), including a majority of the members of the Grand Council. . . . In December, 1876, the Yamên became more closely than ever identified with the Grand Council, by the admission into its ranks of the two members of that body who had not previously been introduced to it. Their admission raised the number of Ministers of the Yamên to eleven [one having died in May, 1876]. They are spoken of collectively as *Wang, Ta, Ch'ên* 王大臣—the Prince and Ministers. The departmental work of the Yamên is conducted by secretaries, *Chang Ching* 章京, who were in the first

instance drafted from the staff of the Grand Council. Their ordinary official designation is *ssŭ yüan* 司員 or *ssŭ kuan* 司官. The six Chief Secretaries, all of whom hold either substantive or expectant rank, are usually designated *tsung pan* 總辦. In accordance with the scheme proposed in 1861, the office of Minister Superintendent of Trade, *T'ung Shang Ta Ch'ên* 通商大臣, is held at Nanking and Tientsin respectively by the Governor-General of the Two Kiang provinces and the Governor-General of Chihli. As Superintendents of Trade for the Northern ports (Tientsin, Newchwang, and Chefoo) and the Southern ports (including the remainder of those open to trade) respectively, these functionaries are commonly referred to as the *Nan* and *Peh Yang Ta Ch'ên* 南北洋大臣." *Ibid.* pp. 15-16.

Prince Kung—and the credit of the measure belongs exclusively to him—will always be gratefully remembered by any foreign writer on modern China as the founder of the department known as the Tsungli Yamên, which he instituted in January, 1861. "This department, during the thirty years of its existence, has very fully answered all the expectations formed of it; and, although it is erroneous to represent it as in any case identical with the Chinese government, or as the originating source of Chinese policy, it has proved a convenient and well-managed vehicle for the despatch of international business."—*Boulger, Short Hist.*, p. 308.

"The principal executive bodies under the two Councils are the *Luh Pu* 六部, or *Six Boards*, which were modelled on much the same plan during the ancient dynasties."—*Williams, Midd. King.*, i. 421. "The official constitution of each . . . is, with few exceptions, the same throughout. They control, each in its allotted department, the execution of that system of minute regulation for the conduct of all public affairs which" . . . is "the principal attribute of the Central Government. The Presidents and Vice-Presidents of the Boards, in fact, with the heads of the Censorate and the Hanlin College, may be said to constitute the central administration."—*Mayers, Ch. Gov.*, p. 17. "At the head of each Board are two Presidents, called *Shang Shu* (尚書), and four Vice-Presidents, called *Shih Lang* (侍郎), alternately a Manchu and a Chinese; and over three of them—those of Revenue, War, and Punishments—are placed superintendents, who are frequently members of the Cabinet; sometimes the President of one Board is superintendent of another. There are three subordinate grades of officers in each Board . . . with a great number of minor clerks, and their appropriate departments for conducting the details of the general and peculiar business coming under the cognizance of the Board." —*Williams, Midd. King.*, i. 421. "*Pu Yüan Ta Ch'ên* (部院大臣).—Heads of Departments" is the generic designation embracing "the Presidents of the Six Boards and of the Superior Courts. Presidents and Vice-Presidents are further described as *T'ang Kuan* (堂官), or heads of departments." [The Six Boards are (1) *Li Pu* (吏部).—Board of Civil Office. Subdivided into four bureaux. Directs the various officers in the civil service of the Empire. (2) *Hu Pu* (戶部).—Board of Revenue. Directs the territorial government of the Empire. Has fourteen subordinate departments, each of which corresponds with the treasury department in its respective province. (3) *Li Pu* (禮部).—Board of Ceremonies or Rites. Directs the performance of the five kinds of ritual observances, literary distinctions, and religious matters. Four subordinate departments. Connected with this Board is the *Yüeh Pu* (樂部), or Board of State Music. (4) *Ping Pu* (兵部).—Board of War. Directs military affairs in the metropolis and provinces. The navy and postal service are under its control. Divided into four bureaux. The conception of all government with the Manchus being military and not civil, they have developed this Board more than was the case during the last dynasty, the possessions in Central Asia having drawn greatly on their resources and prowess. (5) *Hsing Pu* (刑部).—Board of Punishments. Divided into several subordinate departments. Entrusted with the due administration of the laws. Partakes of the nature of both a criminal and civil court, and co-operates with the Censorate and Grand Court of Revision, the three forming the *San Fa Ssŭ*, or "Three Law Chambers." The union in the autumn of these three with members of six other courts constitutes a "Court of Errors" for revising the decisions of provincial judges before reporting them to the Throne. (6) *Kung Pu* (工部).—Board of Works. Has the direction of public works throughout the Empire. Four sub-departments. Has many miscellaneous duties.]—*Williams, Midd. King.*, i. 421–8.

"Though the order in which the Boards are mentioned is 吏戶禮兵刑工, yet the 兵 ranks second, the 刑 fourth (after the 戶 and the 禮 before the 工)."—*Ch. Rev.*, xiii. 57.

"*Li Fan Yüan* (理藩院).—The Mongolian Superintendency. This department, which has sometimes been called the *Colonial Office*, is specially charged with the control of the tribes of Mongolia, including the multifarious and complicated relations with their princes and various ranks of nobles, with the affairs of Tibet, and with the supervision of the Lamaist hierarchy in all its ramifications. Until within the present generation, it also conducted the relations of the Chinese Government with that of Russia. Its organization is similar to that of the Six Boards, with the exception that it has but one President and two Vice-Presidents."—*Mayers, Ch. Gov.*, p. 22; and see pp. 80–114. Besides the usual Secretaries there are six departments, which have jurisdiction over the affairs of Inner and Outer Mongolia, the Mohammedan begs, and the tributary tribes.—*Williams, Midd. King.*, i. 429–30.

"A public office peculiar to China, which is specially charged with one of the functions performed by our parliament . . . is . . . the *Censorate*. It consists of a large number of members whose duty is to inspect or watch the proceedings of all the other mandarins, provincial and metropolitan; and to make reports to the Emperor, pointing out their misdeeds and failures, and recommending remedies. The check on these officers . . . is curious and efficient. He puts them in the places of the mandarins who have failed, gives them full powers, and says: 'Now you succeed, or ——.' I may add that this practice not only acts as a check against malicious attacks, but, where the censor really understands the business he reports on, leads directly to its efficient transaction."—*Meadows, Chinese and Their Reb.*, p. 15.

"*Tu Ch'a Yüan* (都察院).—The Censorate, or Court of Censors. Entrusted with the 'care of manners and customs, the investigation of all public offices within and without the capital, the discrimination between the good and bad performance of their business, and between the depravity and uprightness of the officers employed in them.' The Censorate, when joined with the Board of Punishments and Court of Appeal, forms a high court for the revision of criminal cases and hearing appeals from the provinces; and, in connection with the Six Boards and the Court of Representation and Appeal, makes one of the *Chiu Ch'ing* (九卿), or 'Nine Courts' (v. *Mayers, Ch. Gov.*, p. 24) which deliberate on important affairs of Government. The officers are two censors and four deputy censors, besides whom the governors, lieutenant-governors, and the governors of rivers and inland navigation are *ex-officio* deputy censors. A class of censors is placed over each of the Six Boards."—*Williams, Midd. King.*, i. 430. "They are privileged to censure the Emperor for any act which they consider illegal, extravagant or unjust, without risk of losing their lives, though they are sometimes degraded for unpalatable advice. Also called 'the ears and eyes' of the Emperor (耳目官)." —*Giles, Glossary*, p. 33. "But in a despotic government . . . the fear of offending the imperial ear, and consequent disgrace, will usually prove stronger than the consciousness of right or the desires of a public fame and martyrdom for the sake of principle. The usual mode of advising is to send in a remonstrance against a proposed act."—*Williams, Midd. King.*, i. 431–2.

"*T'ung Chêng Ssŭ* (通政司).—Office of Transmission. At present takes cognizance only of the *t'i pên* 題本, or memorials on routine business received from the provinces. All memorials on special business go to the Council unopened."—*Mayers, Ch. Gov.*, p. 23. "Consists of a small body of six officers. . . . Is the channel through which the people can directly appeal to his Majesty."—*Williams, Midd. King.*, i. 433.

"*Ta Li Ssŭ* (大理寺).—Grand Court of Revision. This department exercises a general supervision over the administration of the criminal law."—*Mayers, Ch. Gov.*, p. 24. "Forms the nearest approach to a Supreme Court in the government, though the cases brought before it are mostly criminal. When the crimes involve life, this and the Office of Transmission unite with the Censorate to form one court, and if the judges are not unanimous in their decisions they must report their reasons to the Emperor, who will pass judgment upon them."—*Williams, Midd. King.*, i. 433.

"*Han Lin Yüan* (翰林院).—The College of Literature, or Imperial Academy. Is entrusted with 'the duty of drawing up governmental documents, histories, and other works; its chief officers take the lead of the various classes, and excite their exertions to advance in learning in order to prepare them for employments and fit them for attending upon the sovereign.' This body has, it is highly probable, some similarity to the collection of learned men to whom the King of Babylon entrusted the education of promising youths, for although the members of the Han Lin Yüan do not, to any great degree, educate persons, they are constantly referred to as the Chaldeans were by Belshazzar. Sir John Davis likens it to the Sorbonne, inasmuch as it expounds the sacred books of the Chinese. Its chief officers are two presidents or senior members, called *Chang Yüan Hsüeh Shih* (掌院學士), who are usually appointed for life; they attend upon the Emperor, superintend the studies of graduates, and furnish semi-annual lists of persons to be 'speakers' at the 'classical feasts,' where the literary essays of his Majesty are translated from and into Manchu and read before him. Subordinate to the two senior members are four grades of officers, five in each grade, together with an unlimited number of senior graduates, each forming a sort of college, whose duties are to prepare all works published under government sanction. . . . Subordinate to the Han Lin Yüan is an office consisting of twenty-two selected members, who in rotation attend on the Emperor and make a record of his words and actions. There is also an additional office for the preparation of natural histories. The situation of a member of the Hanlin is one of considerable honour and literary ease, and scholars look forward to a station in it as one which confers dignity in a government where all officers are appointed according to their literary merit, but much more from its being the body from which the Emperor selects his most responsible officers. A graduate of this rank is most likely to be nominated to a vacant office, though the possession of the title does not of itself warrant a place."—*Williams, Midd. King.*, i. 434–5.

"The Four Minor Courts are: *T'ai Ch'ang Ssŭ* (太常寺).—Court of Sacrificial Worship. Directs sacrificial observances. Its duties are of importance in connection with the state religion. *T'ai P'u Ssŭ* (太僕寺).—Court of the Imperial Stud. An office for 'rearing horses, taking account of their increase, and regulating their training'; large tracts of land beyond the Great Wall are appropriated to this purpose, and the clerks of this office, under the direction of the Board of War, oversee the herdsmen and grooms." "The Stud Office . . . manages the breeding-grounds under the four banners of the Two Live Stock Superintendents, whilst the Palace Stud (上駟院) manages those of the Ta-ling River (Liao Tung), Kalgan, and Tu-shih K'ou" (*Journ. N.-C.B.R.A.S.*, N.S. xxii. 101). "*Kuang Lu Ssŭ* (光祿寺).—Court of Imperial Entertainments (or Banqueting Court). Has the charge of 'feasting the meritorious and banqueting the deserving'; it is somewhat subordinate to the Board of Rites, and provides whatever is necessary for banquets given to literary graduates, foreign ambassadors, etc. *Hung Lu Ssŭ* (鴻臚寺).—Court of State Ceremonial. Regulates the forms to be observed at these banquets." The above-named departments, with the Court of Revision, constitute the *Wu Ssŭ* (五寺). The officials consist of Directors, Sub-Directors, Secretaries, etc., the titles in each case being nearly identical.—*Mayers, Ch. Gov.*, p. 27; *Williams, Midd. King.*, i. 435.

"*Kuo Tzŭ Chien* (國子監).—Imperial Academy of Learning. This, like the Han-lin College, is rather an assemblage of titled literary dignitaries than a body of officials with active functions. The 'Imperial Academy' has its nominal seat in a vast range of buildings adjacent to the Temple of Confucius, near the north-eastern angle of Peking, but, like most of the official institutions of the capital, it is visited only as a matter of form, at infrequent intervals, by the functionaries connected with it by their titles. The great quadrangle occupied by the institution is bounded east and west by a long arcade within which the monumental slabs erected to perpetuate the authorized text of the whole of the Confucian Books are arranged in rows. In the centre stands one of the most striking specimens of Chinese architecture, consisting of a lofty pavilion-shaped building, erected upon a platform of white marble placed in the midst of a circular piece of water itself walled in with marble, and across which access is given to the building, by four marble bridges at the cardinal points. In this building, which represents the *Pi Yung* (辟雍) or Imperial College of antiquity, each sovereign is held bound to enthrone himself once in the course of his reign, to preside over a solemn assemblage of all the scholars of the capital, in whose hearing a classical essay, nominally composed by His Majesty, and hence designated *Yü Lun* (御論), is recited. The department of study is divided into six classes *Liu T'ang* (六堂), the students connected with which receive a stipend from Government and are periodically examined. The schools for the instruction of Russians and Liu-Ch'iuans in the Chinese language, forming part of this institution, have ceased to exist. The Liu-Ch'iuan class was known as the *Nan Hsüeh* (南學). The students of the Imperial Academy are designated *Chien Shêng* (監生), a title which is purchaseable throughout the Empire as the lowest literary degree." The officials of the department are a Chancellor, Libationers, Tutors, etc.—*Mayers, Ch. Gov.*, pp. 28–9.

"*Nan Shu Fang* (南書房).—The Imperial College of Inscriptions. This is a committee formed by special appointment, at the sovereign's pleasure, of an indeterminate number of high literary officials, who are said to 'do duty'—*hsing tsou* (行走)—in connection with the College. Their functions consist in preparing transcripts of inscriptions in the imperial hand, for presentation to favoured personages, or for bestowal upon temples erected in honour of different deities whose supernatural interposition is thus from time to time acknowledged. They are also liable to be called upon to discharge the duties of a poet laureate, in preparing odes or similar compositions which it is intended to confer upon distinguished public servants."—*Ibid.* pp. 29–30.

"*Ch'in T'ien Chien* (欽天監).—Imperial Board of Astronomy, or Imperial Astronomical College. As might be expected, is much more astrological than astronomical; its duties are defined to be 'to direct the ascertainment of times and the movements of the heavenly bodies, in order to attain conformity with the celestial periods and to regulate the notation of time among men; all things relating to divination and the selection of days are under its charge.' The preparation of the almanac, in which, among other things, lucky and unlucky days are marked for the performance of all the important acts of life, and astrological and chiromantic absurdities inserted for the amusement of fortune-tellers and others, the instruction of a few pupils, and care of the observatory, occupy most of the time of its officers. It is now of no practical use, and as the *T'ung-wên Kuan* develops into a learned and efficient college, including astronomy and medicine and their kindred branches, these native Boards will gradually pass away."—*Williams, Midd. King.*, i. 436. The staff of officials comprises a Chancellor, Directors, Sub-Directors, Assistant Sub-Directors, Secretary, etc. "The *Ta Ch'ing Hui Tien* contains the proviso that the posts of Sub-Director and Assistant Sub-Director shall be filled by Europeans (referring to the missionary astronomers of the eighteenth century)."—*Mayers, Ch. Gov.*, p. 30.

"*T'ai I Yüan* (太醫院).—College of Imperial Physicians. Staff-Commissioner, Senior and Junior Proctors, and Imperial Physicians."—*Ibid.* p. 30.

"The other local courts of the capital seem to have been subdivided and multiplied to a great degree for the purpose of affording employment to a larger number of persons, especially Manchus and graduates, so that the Emperor can attach them to himself and be surer of their support in case of any insurrection on the part of the people, and also that he may have them more under his control. The number of clerks and minor offices in all the general departments of state is doubtless more numerous than it would be in a European government. In the mutual relations of the great departments of the Chinese government the principles of responsibility and surveillance among the officers are plainly exhibited, while regard has been paid to such a division and apportionment of labour as would secure great efficiency and care, if every member of the machine faithfully did his duty. Two presidents are stationed over each Board to assist and watch each other, while the two presidents oversee the four vice-presidents; the president of one Board is sometimes the vice-president of another; and by means of the Censorate and General Council every portion is brought under the cognizance of several independent officers, whose mutual jealousy and regard for individual advancement, or a partial desire for the well-being of the state, affords the Emperor some guarantee of fidelity. The seclusion in which he lives makes it difficult for any conspirator to approach his person, but his own fears regarding the management of such an immense Empire compel him to inform himself respecting the actions of ministers, generals, and proconsular governors. . . . The total number of civilians holding office is estimated at about fourteen thousand persons, but those dependent on the government are many times this amount."—*Williams, Midd. King.*, i. 436–7.

Provincial administration.—"The Manchu power is a mere absorptive machine, whose very existence . . . is a matter of comparative unconcern to the provinces, each of which is sufficient unto itself, and exists as an independent unit."—*Parker, China*, p. 161.

"'In the Chinese government,' observes Dr. Morrison, 'there appears great regularity and system. Every district has its appropriate officers, every street its constable, and every ten houses their tything man.'"—*Williams, Midd. King.*, i. 282.

The dealings of the local governments "with Peking are of an extremely limited kind. It is perfectly well known to the shrewd accountants of the Boards what revenue each province can raise, or, what is more to the point, how much it will confess to; and the Board of Revenue towards the end of each year has only to 'appropriate' on beaten lines, varying a little each year according to the state of prosperity or dearth in each

province, and with an eye to the urgency of war requirements, as 'moved' to their cognizance by the Boards of War and of Works."—*Parker, China*, p. 168.

"So long as the provincial government sends its Peking supplies, administers a reasonable sop to its clamorous provincial duns, quells incipient insurrections, gives employment to its army of 'expectants,' staves off foreign demands, avoids 'rows' of all kinds, and, in a word, keeps up a decent external surface of respectability, no questions are asked; all reports and promotions are passed; the Viceroy and his colleagues 'enjoy happiness,' and everyone makes his 'pile.' The Peking Government makes no new laws, does nothing of any kind for any class of persons, leaves each province to its own devices, and, like the general staff of an army organisation, both absorbs successful men, and gives out needy or able men to go forth and do likewise. Hence every man, be he squeezer, middle-man, or squeezed, has, or hopes to have, a finger in the pie. There is no snobbery in China, though there is plenty of priggishness. Any peasant or greengrocer can study or bribe his way up, and no Chinaman is ashamed of his poor relations. Thus, there is a sort of live and let live feeling all round. The fat is there, and the fire is there: it is for each man to burn his fingers or feast withal, as luck and wriggling may have it. There are no passports, no restraints on liberty, no frontiers, no caste prejudices, no food scruples, no sanitary measures, no laws except popular customs and criminal statutes. China is in many senses one vast republic, in which personal restraints have no existence. The Manchus, as the ruling race, have certainly a few privileges, but, on the other hand, they suffer just as many disabilities. Barbers, play-actors, and policemen are under a mild tabu—more theoretical than real; but aboriginal 'barbarians' can easily become Chinese by reading books and putting on breeches. Indeed, there is an official expression for this transmogrification called 'changing the autochthonous into the current.' All men are equal before the Emperor, and all have fairly equal chances of his smiles and frowns. The only thing is to adhere to custom, and not to overdo things: above all, to respect the person of the Emperor as represented by the official uniform (always worn in public) of a mandarin, be he great or small. This being the happy-go-lucky condition of high office in China, there is (apart from special causes) no jealousy or class feeling in the country: it is simply a question of big fish feeding on little fish, unless and until the little fish can keep out of the way, eat their way up, and become big fish themselves."—*Ibid.* pp. 169–70.

"The rulers of China have contrived the system of provincial governments in an admirable manner, considering the character of the people and the materials they had to work with; no better proof of their sagacity in this respect can be required than the general degree of good order which has been maintained for nearly two centuries, and the great progress the people have made in wealth, numbers, and power. By a well-arranged plan of checks and changes in the provincial authorities, the chances of their abusing position and power and combining to overthrow the supreme government have been reduced almost to an impossibility; the influence of mutual responsibility among them does something to prevent outrageous oppression of the people, by leading one to accuse another of high crimes in order to exonerate himself or obtain his place. The sons and relatives of the Emperor being excluded from civil office in the provinces, the high-spirited and talented native Chinese do not feel inclined to cabal against the government because every avenue to emolument and power is filled and closed against them by creatures and connections of the sovereign; nor when in office are they disposed to attempt the overthrow of the reigning family, lest they lose what has cost them many years of toilsome study and the wealth and influence of friends to attain. The examination of these pashaliks is furthermore entitled to notice from the degree of power delegated to their highest officers, and the shrewd manner in which its exercise has been circumscribed and rendered amenable to its imperial source."—*Williams, Midd. King.*, i. 437–8.

"The main idea which runs throughout the provincial organisation is as follows: Each province has a Governor, who reports on all formal matters to the Boards at Peking, and memorialises the Emperor on affairs of a less routine kind. But about 300 years ago pairs or triplets of provinces began to have a temporary Viceroy or Governor-General in addition to the governors; and when the Manchus came to consolidate their power, in 1640–50, such Viceroys became permanent until, after various re-shufflings, they settled down to a definite distribution, very much as they are now. The original motive in appointing a viceroy was . . . that . . . military or other urgent considerations rendered it expedient for one strong man to deal with some wide question, involving more than one gubernatorial or divisional interest. But although the Viceroy's 'button' is a shade higher than the Governor's, he is in no way the superior official; and in most cases neither of the two can move without 'moving' for the consent of the other. There is not even the degree of subordination which exists between the lieutenant-governors and the Viceroy of India. In most matters the Viceroy, in endorsing a report with his views or commands, adds the words: 'But you will at the same time await the instructions of His Excellency the Governor'; and, of course, the Governor is equally cautious. In the majority of cases the Viceroy and the Governor memorialise the Emperor jointly. . . . Custom so ordains that in each group of provinces certain special matters fall under the Viceroy's peculiar care; for instance, at Canton and Nanking the two Viceroys look after the gabelle, have general military control, and manage foreign affairs; whilst in all provinces the Governor is practically sole arbitrator in matters of civil promotion and land-tax."—*Parker, China*, pp. 162–3.

The following were the principal provincial administrative officials and departments with their respective duties:—"*Tsung-tu* (總督).—Governor-General. . . . Being *ex-officio* invested with the title of President of the Board of War, he styles himself *Pu T'ang* (部堂). Is also *ex-officio* a Junior President of the Court of Censors. The Governor-General is the highest in rank of the civilian functionaries of the provincial administration, and is at the same time invested with special powers of control over the military forces within his jurisdiction. In the cases of Chihli, Ssŭch'uan, and Kansu, he administers affairs without the intervention of a Governor [see following extract]; whilst in the remaining cases a Governor-General is placed, as a superior colleague, beside the Governors of two, or, in the case of the Liang Chiang, of three separate provinces. For the administration of his military supervisorate, each Governor-General is provided with a special bureau, or Military Secretariat, entitled *Ying Wu Ch'u* (營務處). His adjutant, entitled *Chung Chün* (中軍), is the Colonel commanding the *Tu piao* brigade [see MILITARY]. He is entitled in addition to employ a staff of civil and military orderly officers, entitled *Wên Hsün-pu* (文巡捕), who are usually officers of the rank of district magistrate (in expectancy), and *Wu Hsün-pu* (武巡捕), of the rank of lieutenant."—*Mayers, Ch. Gov.*, pp. 32–3. "The duties of the governor-general consist in the collective control of all affairs, civil and military, in the region under his jurisdiction; he occupies, in his sphere, under correction, the same authority that the Emperor does over the whole Empire."—*Williams, Midd. King.*, i. 438.

"*Hsün-fu* (巡撫).—Governor. . . . *Ex-officio* invested with the title of *Ping Pu Shih-lang* or Vice-President of the Board of War, and *Yu Fu Tu Yü Shih* or Vice-President of the Censorate. Each of the eighteen provinces is under the control of an officer of this rank, with the exception of the provinces of Chih-li, Kan-su, and Ssŭ-ch'uan, which are administered by Governors-General. The Governor is in all cases a colleague rather than a subordinate of the Governor-General. Shan-tung Shan-hsi, and Ho-nan have no Governors-General over them. The Governor-General and the Governor, jointly, are spoken of as *Tu-Fu* (督撫), or *Liang Yüan* (兩院)."—*Mayers, Ch. Gov.*, p. 33.

"In some provinces the Viceroy, in others the Governor, has the chief say in army matters or questions of salt gabelle. In many other matters, though in different degrees, one or the other is sole or chief spokesman. Where this is so, it is not necessary for both jointly to advise the Emperor or the Board. These being the general principles, it may be added specifically that a powerful viceroy often eclipses his governor or governors; on the other hand, a masterful governor sometimes leads on or terrorises his viceroy."—*Parker, China*, p. 163. For the various Viceroyalties and their jurisdictions, etc., see *ibid.* pp. 165–7.

"The following provinces have no Viceroy, the Governor (in each instance with his Treasurer and Judge) being the highest official:—Shan Tung, Shan Si, and Ho Nan, the oldest parts of China. The Viceroy of the largest single province, Sz Ch'wan, has no Governor, but rules alone, assisted by his Treasurer and Judge."—*Parker, China*, pp. 166–7.

"The three officers, *tsung-tu*, *fu-t'ai*, and *chiang-chün* (if there be one), form a supreme council, and unite in deliberating upon a measure, calling in the subordinate officer to whose department it particularly belongs, and to whom its execution is to be committed, the whole forming a deliberative board, though the responsibility of the act rests with the two highest officers. By this means the various members of the provincial government become better acquainted with each other's character and plans, though their intercourse is much restricted by precedence and rivalry. . . . The authority of the governor-general extends to life and death, to the temporary appointment to all vacant offices in the province, to ordering the troops to any part of it, issuing such laws and taking such measures as are necessary for the security and peace of the region committed to his care, or any other steps he sees necessary. The *fu-t'ai* also has the power of life and death, and attends to appeals of criminal cases; he oversees, moreover, the conduct of the lower civilians."—*Williams, Midd. King.*, i. 440.

Wei I-chieh (1616–86) "persuaded the Emperor Shun Chih not to confine Governorships to Manchus."—*Giles, Bio. Dic.*, p. 862.

"Although these two exalted provincial functionaries [Viceroy and Governor] are in general the sole medium of communication between Court and locality, yet in most routine matters they are bound to act 'on the proposition' of two other dignitaries, usually known to Europeans as the Provincial Treasurer and the Provincial Judge. In matters of civil advancement the Judge is only nominally associated with the Treasurer, and the Viceroy with the Governor; it is the Governor who, under ordinary circumstances, arranges privately with the Treasurer what string the latter shall pull. . . . The above four functionaries form the executive, consultative, and in a measure even the judiciary and legislative body of each provincial unit:—in short they are the 'Government.'"—*Parker, China*, p. 164.

"The departments of the civil government are five, viz.: administrative, literary, gabel, commissariat, and excise; the first being also divided into the territorial and financial and the judicial branches. At the head of the first branch is the *Pu-Chêng Shih-Ssŭ*, who is usually called the treasurer; the *An-Ch'a Shih-Ssŭ*, or 'criminal judge' presides over the second."—*Williams, Midd. King.*, i. 439.

"*Pu-Chêng Shih-Ssŭ* (布政使司).—Lieutenant Governor, or Financial Commissioner (commonly called Treasurer). . . . The head of the civil service in each province, and treasurer of the provincial exchequer. Represents the earlier class of provincial governors as appointed under the Ming dynasty."—*Mayers, Ch. Gov.*, p. 33.

"*An-Ch'a Shih-Ssŭ* (按察使司).—Provincial Judge or Judicial Commissioner. . . . The two foregoing officials are frequently classed together as *Fan-Nieh Liang Ssŭ* (藩臬兩司) or the two Chief Commissioners of the provincial Government."—*Ibid.* p. 33.

"*Yên Yün Shih Ssŭ* (鹽運使司).—Salt Comptroller. . . . Chief Commissioner of the revenue derived from the provincial gabelle or salt monopoly." Minor ranks are Assistant Salt Comptroller, Deputy Assistant Salt Comptroller, Inspector of the Salt Department, etc., etc. (v. *Mayers*, pp. 38–9).—*Ibid.* p. 34.
